Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Title: Addendum to the FY 2016/2017 Gravity Sewer Improvements Project Final IS/MND

Lead Agency: Ross Valley Sanitary District

Contact Name: Steve Moore

Email: smoore@rsvd.org Phone Number: (415) 870-9764

Project Location: Town of San Anselmo, Marin
City *County*

Project Decription (Proposed actions, location, and/or consequences).

This Project involves the rehabilitation of existing gravity sewer mains along Butterfield Road in San Anselmo, California. The Project consists of two areas: 1) the Lower Butterfield alignment located between Meadowcroft Drive and Arroyo Avenue, and 2) the Upper Butterfield alignment located between Arroyo Avenue and Kenrick Avenue. The objective of the Project is to relieve hydraulic and structural deficiencies. Amendments to the IS/MND for the include: 1) a change of construction methods, and 2) fulfilling requirements for submittal of a State Revolving Fund application. Amendments do not significantly alter the findings of the IS/MND or require major revisions.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

Based on the Initial Study, it has been determined that the proposed project, with biological and cultural mitigation measures listed below, would not have any significant effects on the environment.
ARCH 1. All ground disturbance excavation shall be monitored by a qualified archaeologist. The archaeologist shall develop a monitoring plan that provides for full-time monitoring of open cut pipe segments, insertion and extraction pits, and construction of new manholes, as well as spot-checking of specific areas when archaeological resources are less likely to be impacted. If resources are encountered, ARCH 2 shall be implemented.
ARCH 2. If resources are encountered, their potential significance will be evaluated and data can be recovered accordingly. Areas in proximity to shell mounds often have redeposited pockets or sparse shell middens resulting from removal/transport of shell materials. If such shell is found in the absence of any other cultural materials or human remains, or other cultural materials are present but deemed not historically significant, such materials shall be photographed and recorded. If the archaeologist identifies an intact and potentially significant archaeological resource, he or she shall develop a treatment plan in consultation with the RVSD, the SWRCB, the FIGR (in the event of a prehistoric site), and the State Historic Preservation Officer. This plan would likely entail a program of systematic data recovery in which cultural materials are documented and removed.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

None

Provide a list of the responsible or trustee agencies for the project.
