Project Description:

Caltrans proposes to replace the Arroyo de la Laguna Bridge (Bridge No. 33-0043) to address scour and seismic concerns and meet current design standards for safety. Structural maintenance inspections completed in October 2013 identified scour at piers 4 and 5 of the bridge. Scour is undermining the footing at Pier 5. The bridge is currently classified as "scour critical," which means it has pier foundations that are rated unstable due to scour. Additionally, in 2016, the Office of Earthquake Engineering Analysis and Research identified the bridge to be seismically vulnerable and a candidate for seismic retrofit. The purpose of this project is to maintain reliable connectivity and provide an improved highway facility for the traveling public along SR 84 by replacing the existing bridge over Arroyo de la Laguna.

This is to advise you that a finding of No Significant Impact (FONSI) has been made for this project by the California Department of Transportation as assigned by the Federal Highway Administration pursuant to 23 USC 327. A copy of the FONSI and the attached Environmental Assessment can be obtained from the California Department of Transportation office located at the above address.
