The ERH system was shut down on 10/15/2009. The SVE will continue to operate until it achieves the SVE shutdown criteria.

                  Project Revenue Source Desc:      The DHS will be issuing a remedial action order or entering into an enforceable agreement with the PRPs. DHS has budgeted \$50,000 for oversight/monitoring of the PRPs' activities. DHS will recover 100 percent of the costs plus staff costs and overhead related to this project. The PRPs will pay all costs associated with remedial investigation and cleanup activities.

Site Description:      The 1.4 acre site is the former location for Cornell-Dubilier Electronics which operated from 1955 to 1971. The property has changed ownership several times since Cornell-Dubilier ceased operations at the site.

Hazardous Waste Desc:      Solvents including trichloroethylene (TEC) and 1,1,1 trichloroethane (TCA) were used as degreaser agents to clean finished electronic equipment and were disposed of onsite. Polychlorinated biphenyls (PCBs) were also used at the site and have been detected in surface soils in concentrations as high as 1200 parts per million (ppm).

Threat To Public Health & Env:      The site is located close to residential areas. There is surface contamination which may result in offsite migration through storm water runoff. There is potential for wind blown dispersal of PCBs.

Site Activity Status:      A Preliminary site investigation was initiated by the potentially responsible parties (PRPs) in September, 1987. Soil samples have been obtained and ground water monitoring wells are currently being installed.

**Environmental Interest/Information System:**

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

released from the dry cleaning operation. RWQCB has been overseeing soil and groundwater investigation, and remediation of shallow contaminated soil since February 2003. Site remedial activity includes intermittent soil vapor extraction. On November 10, 2008, RWQCB has approved work plan for a soil gas survey, additional soil matrix sampling, installation of one offsite groundwater monitoring well, and chemical injection at 3 locations. The property owner requested one-year time extension in February 2009. Per RWQCB staff's suggestion, the property owner conducted a limited soil gas survey in April 2009. Results of the April 2009 soil vapor data discovered chemicals in the vapor at concentration levels have potential human health risk to the residences along Carter Avenue. In May 2009, RWQCB transferred the oversight to Cal EPA - Department of Toxic Substances Control.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

##### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

### DEED: Deed Restriction Listing

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## 1.0 EXECUTIVE SUMMARY

An Environmental Site Assessment - Phase I was prepared for the subject property located at 13400 through 13450 (even) Maxella Avenue and 4325 Glencoe Avenue, Los Angeles, California 90292. The scope of work for the Phase I meets ASTM E 1527-13 *Standard Practice for Environmental Site Assessments*. The purpose of the Phase I report is to provide information regarding the potential for hazardous material impacts to the soil and groundwater beneath the subject property. Such threats or material threats are identified in this report as Recognized Environmental Conditions (RECs). The presence of Historical Recognized Environmental Conditions (HRECs) and Controlled Recognized Environmental Conditions (CRECs) was also evaluated. The extent of this evaluation in conjunction with owner/client-supplied data is intended to satisfy the requirements of all appropriate inquiry into the previous ownership and uses of the property. The scope of the work included a site reconnaissance, research of land use records and other sources for preliminary indications of hazardous material use, storage, or disposal at the property and/or on contiguous parcels. It is proposed to redevelop the site with residential/commercial structures over subterranean parking levels.

The subject property consists of two irregular shaped parcels of land that encompass approximately 6.8 acres. The property is currently developed with three (3) structures. The structure located at 4325 Glencoe Avenue was constructed in 1973. The structures located at 13400 and 13450 Maxella Avenue were constructed in 1977. Commercial tenants including restaurants, retail shops, a coffee shop, and a movie theater occupy the buildings. The remainder of the property is asphalt paved with landscaping at the property boundaries and in the parking areas. Access to the property is via Maxella Avenue to the northwest and Glencoe Avenue to the northeast.

Historical site utilization research indicates that the subject property was undeveloped from at least 1896 until the early 1970s. Historical aerial photograph research indicates that the subject property was undeveloped from at least 1928 through 1963. The subject property appeared in its current configuration by 1977. Historical city directories indicate primarily commercial tenant listings.

The subject property is identified on the standard environmental government sources researched in this report. The Villa Marina Market Place is listed on the CA HAZNET database for generating 3.37 tons of asbestos containing waste, 0.2 tons of unspecified organic liquid mixture, and 0.3 tons of organic solids with halogens between 1993 and 1995. Building permit records indicate multiple units were remodeled in the 4325 Glencoe Avenue structure during that time period. The generation of the wastes is assumed to be attributed to the remodeling activities and is considered unlikely to have impacted the subject property subsurface. No USTs were found associated with the subject property.

The nearest listed contaminated site to the subject property is located approximately 200 feet to the east on the southwest corner of the Glencoe Avenue and Mindanao Way. This offsite property is occupied by USA Gasoline Corporation #98. A gasoline release impacting soil and groundwater was discovered on February 3, 1989 and a case was opened with the LAFD. No documentation was found that indicates any testing beneath or around the gas station was conducted prior to case closure on January 14, 1997. The case was reopened on May 16, 2000. In October 2011, three single-walled 12,000-gallon USTs, located west of the pump islands were removed from the site and two double-walled 20,000-gallon USTs were installed northeast of the pump islands. During the UST upgrade activities, approximately 1,929 cubic yards of impacted soil was removed from the site. In March 2012, the case was referred to the RWQCB. In June 2013, one groundwater extraction well and four groundwater monitoring wells were installed. The case is undergoing final closure review by the LARWQCB as of November 2016. Impact to the subject property from this offsite property is considered unlikely because the subject site is up-gradient from the release. The groundwater gradient is towards the south-southeast

A second release site is located to the west-southwest at 4300 Lincoln Boulevard, approximately 400 feet from the subject property. An active 76 Station occupies this offsite property. A leak impacting groundwater was first reported in 1988 with concentrations of MTBE in groundwater up to 1,800 µg/L. The case was closed on June 18, 1997. In March and April 2009, five monitoring wells were installed. The groundwater monitoring wells were sampled from 2009 through April 2012. During the April 2012 sampling event, TPHg, benzene, MTBE, and TBA concentrations were reported up to

## 1.0 EXECUTIVE SUMMARY - Continued

910 µg/L, 58 µg/L, 140 µg/L, and 83 µg/L, respectively. The site was issued case closure by the RWQCB on September 19, 2012. Impact to the subject property is considered unlikely because the subject property is up-gradient from the release.

An historical solvent (PCE) release site is located to the north-northwest at 4144 Glencoe Avenue, approximately 1,200 feet from the subject property. This offsite property was formerly occupied by Cornell-Dubilier Electronics Division, which operated from 1955 through 1971. During a 1988 investigation of this offsite property, elevated concentrations of PCBs, TCE, and PCE were detected in the site soils up to 2,910 mg/kg, 130 mg/kg and 2,100 mg/kg, respectively. PCBs, TCE, and PCE were also detected in groundwater beneath the site up to 2,100 µg/L, 110,000 µg/L, and 1,300 µg/L, respectively. Extensive soil and groundwater investigations of the offsite property resulted in a DTSC approved Remedial Action Plan dated February 2006. As of 2015, DTSC has determined permanent groundwater monitoring wells are necessary in the down-gradient direction to monitor VOCs due to the presence of PCE and TCE concentrations in the dewatering system located in the Marina Marketplace at 13455 Maxella Avenue. The subject site is located down gradient of this release. Therefore, it is considered probable that the groundwater beneath the subject property has been impacted (PCE) by this offsite release.

A potential vapor intrusion condition (VI) was evaluated at the property. The subject parcels are within the LA City Methane Buffer Zone. Carlin Environmental Consulting (CEC) performed a methane investigation at the subject property during February 2017 in accordance with the LA City Methane testing requirements. Eleven soil gas probes were placed and tested for methane gas over a two-day period. Low concentrations of methane (20-1050 ppmV) were detected in soil gas. The CEC testing report determined that a methane mitigation system is not required for the property. A second potential source for vapor intrusion is the regional VOC (PCE/TCE) release to groundwater associated with Cornell-Dubilier Electronics Division located up gradient of the subject site. The potential for vapor intrusion caused by degassing of VOCs from impacted groundwater can be mitigated by incorporation of a VOC barrier within the required waterproofing membrane for the future subterranean garage levels.

A data failure was encountered during the preparation of this report. The LAFD has not yet responded to our request for UST/HazMat records. This data failure does not alter the conclusions or recommendations made in this report.

A Preliminary Title Report prepared by Ticor Title dated August 14, 2014 for the property addressed as 4325 Glencoe Avenue and 13400 Maxella Avenue, Los Angeles, California was reviewed by CE. No environmental liens or environmental activity use limitations (AULs) were identified in the report.

California Environmental has prepared an Environmental Site Assessment - Phase I in conformance with the scope and limitations of ASTM 1527-13 for the property located at 13400 through 13450 (even) Maxella Avenue and 4325 Glencoe Avenue, Los Angeles, California 90292. **The presence of VOCs in shallow groundwater from an offsite up-gradient location is considered a Recognized Environmental Condition (REC). The identified REC can be mitigated by the use of a VOC membrane incorporated into the required waterproofing system. No Controlled Recognized Environmental Conditions (C-RECs) or Historical Recognized Environmental Conditions (H-RECs) were identified in connection with the subject property.**

The user of the report indicates that future testing of the soil (export from onsite excavations) and groundwater (for construction dewatering via an NPDES permit) is planned prior to commencement of the future grading operations. CE recommends that a certified asbestos consultant conduct a pre-demolition asbestos/lead survey prior to renovation or demolition of the subject buildings.

## 2.0 INTRODUCTION

The following report presents the findings of the Environmental Site Assessment - Phase I prepared for the subject property located at 13400 through 13450 (even) Maxella Avenue and 4325 Glencoe Avenue, Los Angeles, California 90292. The scope of the Phase I study meets ASTM E 1527-13 *Standard Practice for Environmental Site Assessments* and included research of available land use records and other sources for preliminary indications of hazardous material use, storage or disposal at the property. The findings of this study are intended to provide information to the client regarding potential hazardous material impacts to the soil and groundwater beneath the site.

The scope of the investigation was conducted in general accordance with ASTM Standard Practice for Environmental Site Assessments – Phase I, Environmental Site Assessment Process ASTM E 1527-13. The steps outlined in this process are intended to permit a user (client) to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide purchaser limitations on CERCLA liability. Specifically, this report along with certain obligations of the client, constitutes All Appropriate Inquiry (AAI) into the previous ownership and uses of the property consistent with the standard of care as practiced in this area by environmental professionals. A main component of the assessment is to identify recognized environmental conditions, controlled recognized environmental conditions, and historical recognized environmental conditions, as they may affect the subject property. As defined by ASTM E 1527-13, a recognized environmental condition (REC) means “*the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property.*” A controlled recognized environmental condition (C-REC) is defined as “*a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).*” An historical recognized environmental condition (HREC) is defined as “*a past release of any hazardous substances*

*or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”*

An important component of complying with the ASTM E 1527-13 Standard is information to be obtained or in the possession of the client and/or seller of the property. Such information includes obtaining and review of a recent title report, any specialized information regarding the site or surrounding area which may give rise to identification of a recognized environmental condition, and/or reasons given by the seller should the purchase price be significantly lower than what would be reasonably expected for a property of similar size and value. Often a real estate appraiser is commissioned to evaluate the purchase or sale price of a property. Such an appraisal is outside the scope of this Phase I Assessment report.

The independent conclusions represent California Environmental’s (CE) professional judgment based on the conditions that existed and the information and data available during the course of study. Factual information regarding operations, conditions, and test data provided by the client, the owner or their representatives have been assumed to be correct and complete. This report includes **GENERAL FINDINGS** and **CONCLUSIONS AND RECOMMENDATIONS**, which together with the remainder of this report are subject to the **NOTICE** at the end of the report. **This report was prepared for the sole use and reliance by the client as identified on the title page of this report. Use of this report by other entities is expressly forbidden unless the client and CE grant permission.**

No other evidence of onsite disposal or landfill of solid waste material was observed on the subject property at the time of the site reconnaissance.

### **3.2.9 Poly-Chlorinated Biphenyl's (PCBs)**

Potential PCB-containing equipment observed on the subject property included three vaulted transformers. The transformers are owned and maintained by the Los Angeles Department of Water and Power. The vaults were sealed by the utility company and were not accessible. The transformer vaults appeared to be in good condition with no evidence of leaks and/or spills observed on the pavement. In the event of a release of dielectric fluid from one of its transformers, the utility company typically performs the cleanup.

### **3.2.10 Heating/Cooling Equipment**

Heating and cooling equipment was not observed, as access to the roofs of the structures was not possible at the time of the site reconnaissance.

### **3.2.11 Asbestos Containing Building Materials (ACM)**

Sampling of suspect asbestos containing material (ACM) was not included in the scope of work for this study. Suspect ACM was observed in the form of floor tiles, linoleum, ceiling tiles, and wallboard. Due to the age of construction of the subject buildings in 1973 and 1977, it is recommended that a certified asbestos consultant prior to renovation or demolition of the subject buildings conduct an asbestos survey.

### **3.2.12 Wastewater Disposal Systems**

No evidence of wastewater treatment or disposal systems was observed on the subject property at the time of the site reconnaissance.

### **3.2.13 Radon**

Radon hazard assessment was not included in the scope of this study. However, the EDR research report indicates the levels of radon at 86 sites located within the 91406 zip code in Los Angeles County were below four picoCurie per Liter (pCi/L), the Federal Action level.

### **3.2.14 Lead**

Sampling of suspect lead in paint was not included in the scope of work for this project. Lead content in paint was significantly reduced in 1977. Due to the date of construction of the subject buildings in 1973 and 1977, it is possible that lead based paint was utilized onsite. The paint coatings of the structures were in good condition at the time of the site reconnaissance.

### **3.2.15 Wells**

No evidence of dry wells, irrigation wells, injection wells, abandoned wells, monitoring wells or other wells was observed on the subject property at the time of the site reconnaissance.

### **3.2.16 Odor**

No evidence of strong, pungent or noxious odors was noted on the subject property at the time of the site reconnaissance.

### **3.2.17 Stressed Vegetation**

No evidence of stressed vegetation was observed on the subject property at the time of the site reconnaissance.

### **3.2.18 Staining or Residue**

No evidence of significant staining or residue was observed on the subject property at the time of the site reconnaissance.

### **3.2.19 Pits, Ponds, or Lagoons**

No evidence of pits, ponds, and/or lagoons was observed on the subject property at the time of the site reconnaissance.

### **3.2.20 Potable Water Supply**

Water is supplied to the subject property by the Los Angeles Department of Water and Power.

### **3.2.21 Sewage Disposal System**

The subject property is connected to the public sewage disposal system.

### **3.2.22 Other Conditions of Concern**

No other conditions of environmental concern regarding potential sources for soil and groundwater contamination were observed on the subject property at the time of the site reconnaissance.

### **3.3 SITE DRIVE-BY**

A drive-by of the area within one-quarter mile of the property was conducted to help identify nearby sites that possibly use, store or generate hazardous materials. The area surrounding the subject property consists of residential and commercial properties. No service stations are located on the properties adjacent to the subject property. A list of selected environmental risk sites identified within a one-quarter mile radius of the subject property is included in the **STANDARD ENVIRONMENTAL RECORDS SOURCES** section of this report.

## **4.0 PREVIOUS WORK**

LFR Incorporated prepared a Phase I Environmental Site Assessment Report dated June 23, 2006 for the Villa Marina Marketplace, which includes the subject property parcels. The Phase I report was prepared using the ASTM 1527-2000 standard. The report provides a summary of a site reconnaissance and related interviews, historical and current maps, historical aerial photographs, the environmental setting, and recommendations. This assessment revealed recognized environmental conditions with the site including:

- TPH and/or VOC impacted groundwater from offsite sources that underlies the site.
- The subject property is located within a Methane Zone.
- A 55-gallon drum of unknown materials at Vons expansion area.
- Leaking HVAC and stained walls in the Vons expansion area.

LFR concluded that any renovations to the subject property that involve the removal of foundation pads will need to follow the appropriate methane mitigation protocols. LFR recommended the contents of the 55-gallon drum be determined and disposed of properly.

## **5.0 GEOLOGY AND HYDROGEOLOGY**

The subject property is located approximately 0.87 miles northwest of the Ballona Gap in the southern portion of the Santa Monica Groundwater Basin. The site is underlain by silt, sand, and gravel deposits of fluvial origin. The regional direction of groundwater flow is towards the south-southwest. The Marina Del Rey marina is approximately 1,500 feet to the southwest and the Pacific Ocean is approximately 1.6 miles southwest of the subject property. Historical groundwater elevation data from nearby sites and onsite borings indicate the depth to groundwater beneath the site ranges from 5-17 feet bgs.

The Los Angeles County Department of Public Works Hydrological Records Division maintains well information for the County of Los Angeles. The nearest well to the subject property is well no. 1251V located on the north side of Princeton Drive, between Jefferson Way and Thatcher Avenue, approximately 1,500 feet west of the site. The most recent well measurement on October 15, 2008 showed depth to groundwater to be 8.80 feet below ground surface. More recent groundwater data was obtained from technical reports in the Geotracker file maintained by the RWQCB for the 76 Unocal Gas Station located approximately 400 feet to the southwest of the subject property. Groundwater data from April 26, 2012 for this offsite facility indicates a depth to groundwater ranging from 14.61 – 15.99 feet below ground surface with a groundwater gradient to the south-southeast.

## **6.2 BUILDING AND GRADING PERMIT RESEARCH**

The City of Los Angeles Department of Building and Safety online database was reviewed for the purpose of researching building permits and Certificates of Occupancies for the property. New Construction building permits were issued for 4325 Glencoe Avenue on January 18, 1973 and November 26, 1974. Certificates of Occupancy for 4325 Glencoe Avenue, issued between 1977 and 2016, indicate commercial tenants have historically occupied the structure. Copies of the permits are included in **APPENDIX III**.

## **6.3 UNDERGROUND STORAGE TANK PERMIT RESEARCH**

The City of Los Angeles Fire Department Underground Storage Tank and Hazardous Materials Divisions was contacted by our personnel to research their files for underground storage tank (UST) permits and industrial waste records for the subject property. The LAFD has not yet responded to our request for records. The response letter will be forwarded once received should a file exist for the property. The inquiry letter is attached in **APPENDIX IV**.

## **6.4 STATE REGULATORY AGENCY FILE REVIEW**

Inquiry letters were sent to the State of California Department of Toxic Substances Control (DTSC) and the California Regional Water Quality Control Board – Los Angeles Region (RWQCB). Responses from both the DTSC and RWQCB indicate that no files are maintained for the subject property addresses. The agency inquiries and response letters are included in **APPENDIX IV**.

CalEPA DTSC and RWQCB online databases were also reviewed. The DTSC Envirostor lists Federal Superfund, State Response, Voluntary Clean-ups, School Clean-ups and Investigations, Military

Evaluations and Geotracker LUFT/SLIC databases. The subject property is not listed on the databases researched for this report.

## **6.5 LACHD AND SCAQMD FILE REVIEW**

An inquiry letter was sent to the Los Angeles County Health Department (LACHD) for any information they may have regarding soil, water or air contamination at the subject property. A response from the LACHD indicated no files are maintained for the subject property. The agency inquiry and response letters are included in **APPENDIX IV**.

The SCAQMD online FIND database was researched for any active and/or inactive records related to the subject property. A review of the SCAQMD Facility Information Detail (FIND) database indicates that records are maintained for the subject property addresses. The SCAQMD records are summarized below. No notices of violations or notices to comply were noted in the files reviewed. The SCAQMD records are included in **APPENDIX IV**.

- Inactive permits to operate a natural gas charbroiler were issued to Adal Corporation (Baja Fresh) at 13424 Maxella Avenue on October 26, 1995 and May 17, 2000.
- An inactive permit to operate a natural gas charbroiler was issued to former tenant Koo Koo Roo located at 4325 Glencoe Avenue on February 2, 2004.
- An inactive permit to operate a natural gas charbroiler was issued to former tenant Lean Chick Incorporated located at 4325 Glencoe Avenue on February 2, 2004.

## 7.0 NEARBY CONTAMINATED SITES

### 7.1 LANDFILLS

The Major Waste System maps for Los Angeles County, the Solid Waste Information Systems (SWIS), and the Waste Management Unit Database (WMUD) were reviewed to identify landfills and transfer stations located near the property. Map no. 184-117 and the EDR database report indicate that the active Thatcher Street (Facility ID: 19-AR-1217) processing and transfer station is located approximately 1,750 feet west-southwest of the subject property. The transfer yard processes and stores construction/demolition, inert, and mixed municipal waste. No active hazardous waste landfills are located within Los Angeles County.

## **7.2 OIL FIELD MAPS/METHANE HAZARD ZONES**

Oil field maps published by the State of California Division of Oil, Gas and Geothermal Resources (DOGGR) and online mapping systems (DOGGR Well Finder) were researched to determine if oil production occurred on or near the subject property. The DOGGR Well Finder database indicates the subject property is located within a 2000-foot radius of the Playa del Rey oil field. The database also indicates there are two (2) oil wells located within a 2,000-foot radius of the property.

The exploratory oil well (API 03705868) owned by Sharby Oil Company, located approximately 1,800 feet southeast of the subject property, is listed as plugged and inactive. The DOGGR file for the well was obtained for review. The well was spudded to a depth of 856 feet, then drilled to a total depth of 7,522 feet in July 1937. The well was abandoned on September 20, 1937 with mud followed by a cement plug from 876 feet to 818 feet due to lack of production.

The exploratory oil well (API 03705612) owned by Marathon Oil Company, located approximately 1,800 feet southwest of the subject property, is listed as plugged and inactive. The DOGGR file for the well was obtained for review. The well was spudded to a depth of 905 feet and drilled to a total depth of 6,210 feet in March 1929. The well was abandoned on May 30, 1929 with heavy mud followed by a steel cap welded on the top of the casing due to lack of production.

Parcels 4212-004-015 and 4212-004-021 of the subject property are located within the LA City Methane Buffer Zone as identified on the City of Los Angeles website (ZIMAS – Zone Information and Map Access System). Carlin Environmental Consulting (CEC) performed a methane investigation at the subject property during February 2017 in accordance with the LA City Methane testing requirements. Eleven soil gas probes were placed and tested for methane gas over a two-day period. Low concentrations of methane (20-1050 ppmV) were detected in soil gas. The CEC testing report determined that a methane mitigation system is not required for the property.

### 7.3 STANDARD ENVIRONMENTAL RECORD SOURCES

In addition to the above records, agency database lists were reviewed for known or suspected contaminated sites and for sites that store, generate or use hazardous materials near the subject property. The subject property is identified on the standard environmental government sources researched in this report. The Villa Marina Market Place is listed on the CA HAZNET database for generating 3.37 tons of asbestos containing waste, 0.2 tons of unspecified organic liquid mixture, and 0.3 tons of organic solids with halogens between 1993 and 1995. Building permit records indicate multiple units were remodeled in the 4325 Glencoe Avenue structure during that time period. The generation of the wastes is assumed to be attributed to the remodeling activities and is considered unlikely to have impacted the subject property subsurface.

Forty (40) environmental sites, listed on the LUST, Cortese, LOS ANGELES CO. HMS, SLIC, WIP, SWRCY, RCRA-SQG, RCRA-LQG, FINDS, CLEANERS, HAZNET, EMI, UST, CA FID UST, SWEEPS UST, HIST UST, EDR Hist Auto, CA WDS, and ERNS databases, are located within a one-quarter mile radius of the subject property. The nearest listed environmental concern site is located at 4241 Glencoe Avenue, approximately 189 feet to the northwest. This offsite property, formerly occupied by Transco Products Incorporated, is listed on the RCRA-SQG, CA SWEEPS UST, CA HIST UST, CA FID UST, FINDS, and ECHO databases for prior generation of more than 100 and less than 1000 kg of hazardous waste during any calendar month and operating a 500-gallon waste oil UST. No hazardous waste violations were found in connection with this offsite property. It is unknown if the waste oil UST was removed prior to redevelopment of the site.

The nearest listed contaminated site to the subject property is located approximately 200 feet to the west on the southwest corner of the Glencoe Avenue and Mindanao Way. This offsite property is occupied by USA Gasoline Corporation #98. A gasoline release impacting soil and groundwater was discovered on February 3, 1989 and a case was opened with the LAFD. No documentation was found that indicates any testing beneath or around the gas station was conducted prior to case closure on January 14, 1997. The case was reopened on May 16, 2000. In October 2011, three single-walled 12,000-gallon USTs, located west of the pump islands were removed from the site and two double-walled 20,000-gallon USTs were installed northeast of the pump islands. During the UST upgrade activities, approximately

1,929 cubic yards of impacted soil was removed from the site. In March 2012, the case was referred to the RWQCB. In June 2013, one groundwater extraction well and four groundwater monitoring wells were installed. The case is pending closure as it is currently under review by the RWQCB. Impact to the subject property is considered unlikely due to the south-southeast groundwater gradient.

Another release site is located to the west-southwest at 4300 Lincoln Boulevard, approximately 400 feet from the subject property. An active 76 Station occupies this offsite property. A leak impacting groundwater was first reported in 1988 with concentrations of MTBE in groundwater as high as 1,800 µg/L. The case regarding the release was closed on June 18, 1997. In March and April 2009, five monitoring wells were installed. The groundwater monitoring wells were sampled from 2009 through April 2012. During the April 2012 sampling event, TPHg, benzene, MTBE, and TBA concentrations were reported up to 910 µg/L, 58 µg/L, 140 µg/L, and 83 µg/L, respectively. The site was issued case closure by the RWQCB on September 19, 2012. Impact to the subject property is considered unlikely due to the south-southeast groundwater gradient.

A solvent release site is located to the north-northwest at 4144 Glencoe Avenue, approximately 1,200 feet from the subject property. This offsite property was formerly occupied by Cornell-Dubilier Electronics Division, which operated from 1955 through 1971. During a 1988 investigation of this offsite property, elevated concentrations of PCBs, TCE, and PCE were detected in the site soils up to 2,910 mg/kg, 130 mg/kg and 2,100 mg/kg, respectively. PCBs, TCE, and PCE were also detected in groundwater beneath the site up to 2,100 µg/L, 110,000 µg/L, and 1,300 µg/L, respectively. Extensive soil and groundwater investigations of the offsite property resulted in a DTSC approved Remedial Action Plan dated February 2006. As of 2015, DTSC has determined permanent groundwater monitoring wells are necessary in the down-gradient direction to monitor VOCs due to the presence of PCE and TCE concentrations in the dewatering system located in the Marina Marketplace at 13455 Maxella Avenue. Therefore, it is likely that the groundwater beneath the subject property has been impacted by this offsite release.

Selected environmental risk sites found to exist within one-quarter mile radius of the property are listed in **TABLE IV**. The EDR Radius Map with GeoCheck is attached in **APPENDIX V**.

#### **7.4 POTENTIAL VAPOR ENCROACHMENT CONDITION (p-VEC)**

The State of California has adopted Indoor Air Quality Guidelines (CHHSLs) issued by CALEPA in 2005/2010. Potential sources for vapor intrusion to indoor air include degassing of solvents and other compounds from contaminated soil and contaminated groundwater. A potential vapor intrusion condition (VI) was evaluated at the property. The subject parcels are within the LA City Methane Buffer Zone. Carlin Environmental Consulting (CEC) performed a methane investigation at the subject property during February 2017 in accordance with the LA City Methane testing requirements. Eleven (11) soil gas probes were placed and tested for methane gas over a two-day period. Low concentrations of methane (20-1050 ppmV) were detected in soil gas. The CEC testing report determined that a methane mitigation system will not be required for the property. A second potential source for vapor intrusion is the regional VOC (PCE/TCE) release to groundwater associated with Cornell-Dubilier Electronics Division located up gradient of the subject site. The potential for vapor intrusion caused by degassing of VOCs from impacted groundwater can be mitigated by incorporation of a VOC barrier within the required waterproofing membrane for the future subterranean garage levels.

### **8.0 GENERAL FINDINGS**

During the research phase of this study, the following information was obtained:

- The elevation of the subject property is approximately 19 feet above mean sea level.
- Topographic contour lines in the vicinity of the subject and adjacent properties indicate a gentle slope to the southwest.
- No Sanborn Fire Insurance Map coverage is available for the subject property.
- Historical aerial photograph research indicates that the subject property was undeveloped from at least 1928 through 1963. The subject property appeared in its current configuration by 1977.

- New Construction building permits were issued for 4325 Glencoe Avenue on January 18, 1973 and November 26, 1974. Certificates of Occupancy for 4325 Glencoe Avenue, issued between 1977 and 2016, indicate commercial tenants have historically occupied the structure.
- Historical city directories indicate that commercial tenants have occupied the subject property.
- No records are maintained at LACHD for the subject property.
- No records are maintained at DTSC for the subject property.
- No records are maintained at RWQCB for the subject property.
- No records are maintained at LACHD for the subject property.
- The SCAQMD online database indicated inactive permits to operate a natural gas charbroiler were issued to Baja Fresh in 1995 and 2000, to Koo Koo Roo in 2004, and to Lean Chick in 2004.

## **9.0 CONCLUSIONS AND RECOMMENDATIONS**

The subject property consists of two irregular shaped parcels of land that encompass approximately 6.8 acres. The property is currently developed with three (3) structures. The structure located at 4325 Glencoe Avenue was constructed in 1973. The structures located at 13400 and 13450 Maxella Avenue were constructed in 1977. Commercial tenants including restaurants, retail shops, a coffee shop, and a movie theater occupy the buildings. The remainder of the property is asphalt paved with landscaping at the property boundaries and in the parking areas. Access to the property is via Maxella Avenue to the northwest and Glencoe Avenue to the northeast.

Historical site utilization research indicates that the subject property was undeveloped from 1896 until the early 1970s. Historical aerial photograph research indicates that the subject property was undeveloped from at least 1928 through 1963. The subject property appeared in its current configuration by 1977. Historical city directories indicate primarily commercial tenant listings. The subject property is identified on the standard environmental government sources researched in this report. The Villa Marina Market Place is listed on the CA HAZNET database for generating 3.37 tons of asbestos containing waste, 0.2 tons of unspecified organic liquid mixture, and 0.3 tons of organic solids with halogens between 1993 and 1995. Building permit records indicate multiple units were remodeled in the 4325 Glencoe Avenue structure during that time period. The generation of the wastes is assumed to be attributed to the remodeling activities and is considered unlikely to have impacted the subject property subsurface. No USTs were found associated with the subject property.

The nearest listed contaminated site to the subject property is located approximately 200 feet to the east on the southwest corner of the Glencoe Avenue and Mindanao Way. This offsite property is occupied by USA Gasoline Corporation #98. A gasoline release impacting soil and groundwater was discovered on February 3, 1989 and a case was opened with the LAFD. No documentation was found that indicates any testing beneath or around the gas station was conducted prior to case closure on January 14, 1997. The case was reopened on May 16, 2000. In October 2011, three single-walled 12,000-gallon USTs, located west of the pump islands were removed from the site and two double-walled 20,000-gallon USTs were installed northeast of the pump islands. During the UST upgrade activities, approximately 1,929 cubic yards of impacted soil was removed from the site. In March 2012, the case was referred to the RWQCB. In June 2013, one groundwater extraction well and four groundwater monitoring wells were installed. The case is undergoing final closure review by the LARWQCB as of November 2016. Impact to the subject property from this offsite property is considered unlikely because the subject site is up gradient from the release. The groundwater gradient is towards the south-southeast

A second release site is located to the west-southwest at 4300 Lincoln Boulevard, approximately 400 feet from the subject property. An active 76 Station occupies this offsite property. A leak impacting groundwater was first reported in 1988 with concentrations of MTBE in groundwater up to 1,800 µg/L. The case was closed on June 18, 1997. In March and April 2009, five monitoring wells were installed. The groundwater monitoring wells were sampled from 2009 through April 2012. During the April 2012 sampling event, TPHg, benzene, MTBE, and TBA concentrations were reported up to 910 µg/L, 58 µg/L, 140 µg/L, and 83 µg/L, respectively. The site was issued case closure by the RWQCB on September 19, 2012. Impact to the subject property is considered unlikely because the subject property is up gradient from the release.

An historical solvent (PCE) release site is located to the north-northwest at 4144 Glencoe Avenue, approximately 1,200 feet from the subject property. This offsite property was formerly occupied by Cornell-Dubilier Electronics Division, which operated from 1955 through 1971. During a 1988 investigation of this offsite property, elevated concentrations of PCBs, TCE, and PCE were detected in the site soils up to 2,910 mg/kg, 130 mg/kg and 2,100 mg/kg, respectively. PCBs, TCE, and PCE were also detected in groundwater beneath the site up to 2,100 µg/L, 110,000 µg/L, and 1,300 µg/L, respectively. Extensive soil and groundwater investigations of the offsite property resulted in a DTSC

approved Remedial Action Plan dated February 2006. As of 2015, DTSC has determined permanent groundwater monitoring wells are necessary in the down-gradient direction to monitor VOCs due to the presence of PCE and TCE concentrations in the dewatering system located in the Marina Marketplace at 13455 Maxella Avenue. The subject site is located down gradient of this release. Therefore, it is considered probable that the groundwater beneath the subject property is impacted (PCE) by this offsite release.

A potential vapor intrusion condition (VI) was evaluated at the property. The subject parcels are within the LA City Methane Buffer Zone. Carlin Environmental Consulting (CEC) performed a methane investigation at the subject property during February 2017 in accordance with the LA City Methane testing requirements. Eleven soil gas probes were placed and tested for methane gas over a two-day period. Low concentrations of methane (20-1050 ppmV) were detected in soil gas. The CEC testing report determined that a methane mitigation system is not required for the property. A second potential source for vapor intrusion is the regional VOC (PCE/TCE) release to groundwater associated with Cornell-Dubilier Electronics Division located up gradient of the subject site. The potential for vapor intrusion caused by degassing of VOCs from impacted groundwater can be mitigated by incorporation of a VOC barrier within the required waterproofing membrane for the future subterranean garage levels.

A data failure was encountered during the preparation of this report. The LAFD has not yet responded to our request for UST/HazMat records. This data failure does not alter the conclusions or recommendations made in this report. A Preliminary Title Report prepared by Ticor Title dated August 14, 2014 for the property addressed as 4325 Glencoe Avenue and 13400 Maxella Avenue, Los Angeles, California was reviewed by CE. No environmental liens or environmental activity use limitations (AULs) were identified in the report.

California Environmental has prepared an Environmental Site Assessment - Phase I in conformance with the scope and limitations of ASTM 1527-13 for the property located at 13400 through 13450 (even) Maxella Avenue and 4325 Glencoe Avenue, Los Angeles, California 90292. **The presence of VOCs in shallow groundwater from an offsite up-gradient location is considered a Recognized Environmental Condition (REC). The identified REC can be mitigated by the use of a VOC membrane incorporated into the required waterproofing system. No Controlled Recognized**

**Environmental Conditions (C-RECs) or Historical Recognized Environmental Conditions (H-RECs) were identified in connection with the subject property.**

The user of the report indicates that future testing of the soil (to characterize export from onsite excavations) and groundwater (for construction dewatering via an NPDES permit) is planned prior to commencement of the future grading operations. CE recommends that a certified asbestos consultant conduct a pre-demolition asbestos/lead survey prior to renovation or demolition of the subject buildings.

### 10.0 NOTICE

All properties are subject to some element of environmental risk and the risk cannot be eliminated. Industrial and commercial properties developed prior to modern environmental laws are especially risk prone to environmental hazards which include, but are not limited to, wastes which may be toxic, ignitable, corrosive or reactive. The potential for these environmental hazards to impact the use of the property can be reduced by the identification and mitigation of the hazards prior to development or redevelopment of the property. Due to the difficulty in locating underground wastes, in some cases it is not always possible to ascertain that hazardous wastes are present on the property prior to development.

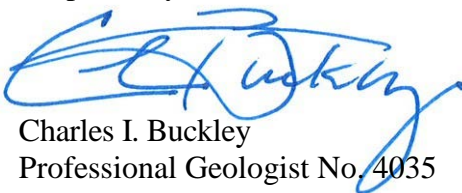

A Phase I environmental site assessment does not utilize subsurface exploration to check for the presence of hazardous wastes on the property. The experience of the assessor, along with the research of available reports, aerial photographs and land use records are used to evaluate the potential for hazardous wastes to occur on the site. Based on the information gained from the historical research, subsurface exploration may be recommended to check for the presence of hazardous wastes. Preexisting environmental problems such as the presence of hazardous wastes in the soil or groundwater, can be concealed by grading activities and site improvements. If such wastes are present these wastes cannot be observed.

The undersigned, Charles I. Buckley declares that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in Section 312.10 of 40 CFR 312 and I have the specific education, training, and experience necessary to exercise professional judgment to develop opinions and conclusions regarding conditions indicative of releases or threatened releases on, at, in, or to a property, sufficient to meet the objectives and performance factors in §312.20.

This report was prepared with the skill and competence as commonly used by environmental professionals in this area. No warranty, expressed or implied, of any kind is made or intended in connection with this report, or by the fact you are being furnished this report, or by any other oral or written statement.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2013. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

**17. OWNER-BUILDER DECLARATION**

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the following reason (Section 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. OR

I, as the owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.)

**OWNER'S ACKNOWLEDGMENT AND VERIFICATION OF INFORMATION**

**(OWNER-BUILDER DECLARATION)**

Application Number: X 14016-30000-24396

Project Address: 4325 S. Glencoe Ave Unit C-5

DIRECTIONS: Read and initial each statement below to signify you understand or verify this information.

- off 1. I understand a frequent practice of unlicensed persons is to have the property owner obtain an "Owner-Builder" building permit that erroneously implies that the property owner is providing his or her own labor and material personally. I, as an Owner-Builder, may be held liable and subject to serious financial risk for any injuries sustained by an unlicensed person and his or her employees while working on my property. My homeowner's insurance may not provide coverage for those injuries. I am willfully acting as an Owner-Builder and am aware of the limits of my insurance coverage for injuries to workers on my property.
- off 2. I understand building permits are not required to be signed by property owners unless they are responsible for the construction and are not hiring a licensed Contractor to assume this responsibility.
- off 3. I understand as an "Owner-Builder" I am the responsible party of record on the permit. I understand that I may protect myself from potential financial risk by hiring a licensed Contractor and having the permit filed in his or her name instead of my own.
- off 4. I understand Contractors are required by law to be licensed and bonded in California and to list their license numbers on permits and contracts.
- off 5. I understand if I employ or otherwise engage any persons, other than California licensed Contractors, and the total value of my construction is at least five hundred dollars (\$500), including labor and materials, I may be considered an "employer" under state and federal law.
- off 6. I understand if I am considered an "employer" under state and federal law, I must register with the state and federal government, withhold payroll taxes, provide workers' compensation disability insurance, and contribute to unemployment compensation for each "employee." I also understand my failure to abide by these laws may subject me to serious financial risk.
- off 7. I understand under California Contractors' State License Law, an Owner-Builder who builds single-family residential structures cannot legally build them with the intent to offer them for sale, unless all work is performed by licensed subcontractors and the number of structures does not exceed four within any calendar year, or all of the work is performed under contract with a licensed general building Contractor.
- off 8. I understand as an Owner-Builder if I sell the property for which this permit is issued, I may be held liable for any financial or personal injuries sustained by any subsequent owner(s) that result from any latent construction defects in the workmanship or materials.
- off 9. I understand I may obtain more information regarding my obligations as an "employer" from the Internal Revenue Service, the United States Small Business Administration, the California Department of Benefit Payments, and the California Division of Industrial Accidents. I also understand I may contact the California Contractors' State License Board (CSLB) at 1-800-321-CSLB (2752) or www.cslb.ca.gov for more information about licensed contractors.

OWNER'S ACKNOWLEDGMENT AND VERIFICATION OF INFORMATION

(OWNER-BUILDER DECLARATION, cont.)

Application Number: 14016 - 30000 - 24396

Project Address: 4325 S. Glencoe Ave Unit C-5

*PJB* 10. I am aware of and consent to an Owner-Builder building permit applied for in my name, and understand that I am the party legally and financially responsible for proposed construction activity at the following address: 4325 S. Glencoe Ave Unit C-5.

*PJB* 11. I agree that, as the party legally and financially responsible for this proposed construction activity, I will abide by all applicable laws and requirements that govern Owner-Builders as well as employers.

*PJB* 12. I agree to notify the issuer of this form immediately of any additions, deletions, or changes to any of the information I have provided on this form. Licensed contractors are regulated by laws designed to protect the public. If you contract with someone who does not have a license, the Contractors' State License Board may be unable to assist you with any financial loss you may sustain as a result of a complaint. Your only remedy against unlicensed Contractors may be in civil court. It is also important for you to understand that if an unlicensed Contractor or employee of that individual or firm is injured while working on your property, you may be held liable for damages. If you obtain a permit as Owner-Builder and wish to hire Contractors, you will be responsible for verifying whether or not those Contractors are properly licensed and the status of their workers' compensation insurance coverage. Before a building permit can be issued, this form must be completed and signed by the property owner and returned to the agency responsible for issuing the permit.

Note: A copy of the property owner's driver's license, form notarization, or other verification acceptable to the agency is required to be presented when the permit is issued to verify the property owner's signature.

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal CERCLIS list***

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has

determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 03/07/2016 has revealed that there is 1 SEMS-ARCHIVE site within approximately 0.5 miles of the target property.

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/09/2015 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 05/02/2016 has revealed that there are 7 CA ENVIROSTOR sites within approximately 1 mile of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/09/2015 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2014 has revealed that there are 2 CA HAZNET sites within approximately 0.001 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### **EDR Exclusive Records**

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 4 EDR Hist Auto sites within approximately 0.125 miles of the target property.

CA BOND EXP. PLAN:

Responsible Party: RESPONSIBLE PARTY-LEAD SITE CLEANUP WORKPLAN

Project Revenue Source Company: Not reported

Project Revenue Source Addr: Not reported

Project Revenue Source City,St,Zip: Not reported

Project Revenue Source Desc: The DHS will be issuing a remedial action order or entering into an enforceable agreement with the PRPs. DHS has budgeted \$50,000 for oversight/monitoring of the PRPs' activities. DHS will recover 100 percent of the costs plus staff costs and overhead related to this project. The PRPs will pay all costs associated with remedial investigation and cleanup activities.

Site Description: The 1.4 acre site is the former location for Cornell-Dubilier Electronics which operated from 1955 to 1971. The property has changed ownership several times since Cornell-Dubilier ceased operations at the site.

Hazardous Waste Desc: Solvents including trichloroethylene (TEC) and 1,1,1 trichloroethane (TCA) were used as degreaser agents to clean finished electronic equipment and were disposed of onsite. Polychlorinated biphenyls (PCBs) were also used at the site and have been detected in surface soils in concentrations as high as 1200 parts per million (ppm).

Threat To Public Health & Env: The site is located close to residential areas. There is surface contamination which may result in offsite migration through storm water runoff. There is potential for wind blown dispersal of PCBs.

Site Activity Status: A Preliminary site investigation was initiated by the potentially responsible parties (PRPs) in September, 1987. Soil samples have been obtained and ground water monitoring wells are currently being installed.

Potential Media Affected: Aquifer used for drinking water supply, Soil Vapor  
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Trichloroethylene (TCE)  
Site History: The former dry cleaner is located within the Marina Waterside Shopping Center from approximately 1970 to 1987 and is now part of the Ralphs supermarket. Site assessments conducted in 2003 and 2004 identified volatile organic compounds (VOCs) impacted soil, soil vapor, and groundwater beneath the Site. Groundwater was encountered at a depth of 9 to 10 feet below ground surface (bgs). Tetrachloroethene (PCE) and trichloroethene (TCE) were detected in soil at maximum concentrations of 33 milligrams per kilogram (mg/kg) and 24 mg/kg, respectively, at a depth of 5 feet bgs. PCE and TCE in soil vapor were detected at a maximum concentration of 23,777 micrograms per liter (ug/L) and 457 ug/L, respectively. PCE and TCE were detected in groundwater at a maximum concentration of 250 ug/L and 80 ug/L, respectively.

Lead Agency Case Number: 60001112  
Latitude: 33.9895233938598  
Longitude: -118.447213768959  
Case Type: Cleanup Program Site  
Case Worker: Not reported  
Local Agency: Not reported  
RB Case Number: Not reported  
File Location: DTSC  
Potential Media Affected: Other Groundwater (uses other than drinking water), Soil, Soil Vapor, Under Investigation  
Potential Contaminants of Concern: Tetrachloroethylene (PCE)  
Site History: The property is an active shopping center located in a mixed commercial and residential area. The former tenant operated a dry cleaning machine on the site until July 2003. Carter Avenue runs along the western boundary of the property, beyond which there are residential properties. Depth to groundwater is approximately 12-17 feet bgs. Groundwater flows westly. Soil and groundwater beneath the site have been contaminated by tetrachloroethene (PCE) that had been released from the dry cleaning operation. RWQCB has been overseeing soil and groundwater investigation, and remediation of shallow contaminated soil since February 2003. Site remedial activity includes intermittent soil vapor extraction. On November 10, 2008, RWQCB has approved work plan for a soil gas survey, additional soil matrix sampling, installation of one offsite groundwater monitoring well, and chemical injection at 3 locations. The property owner requested one-year time extension in February 2009. Per RWQCB staff's suggestion, the property owner conducted a limited soil gas survey in April 2009. Results of the April 2009 soil vapor data discovered chemicals in the vapor at concentration levels have potential human health risk to the residences along Carter Avenue. In May 2009, RWQCB transferred the oversight to Cal EPA - Department of Toxic Substances Control.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. # GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

#### **US BROWNFIELDS: A Listing of Brownfields Sites**

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. ## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

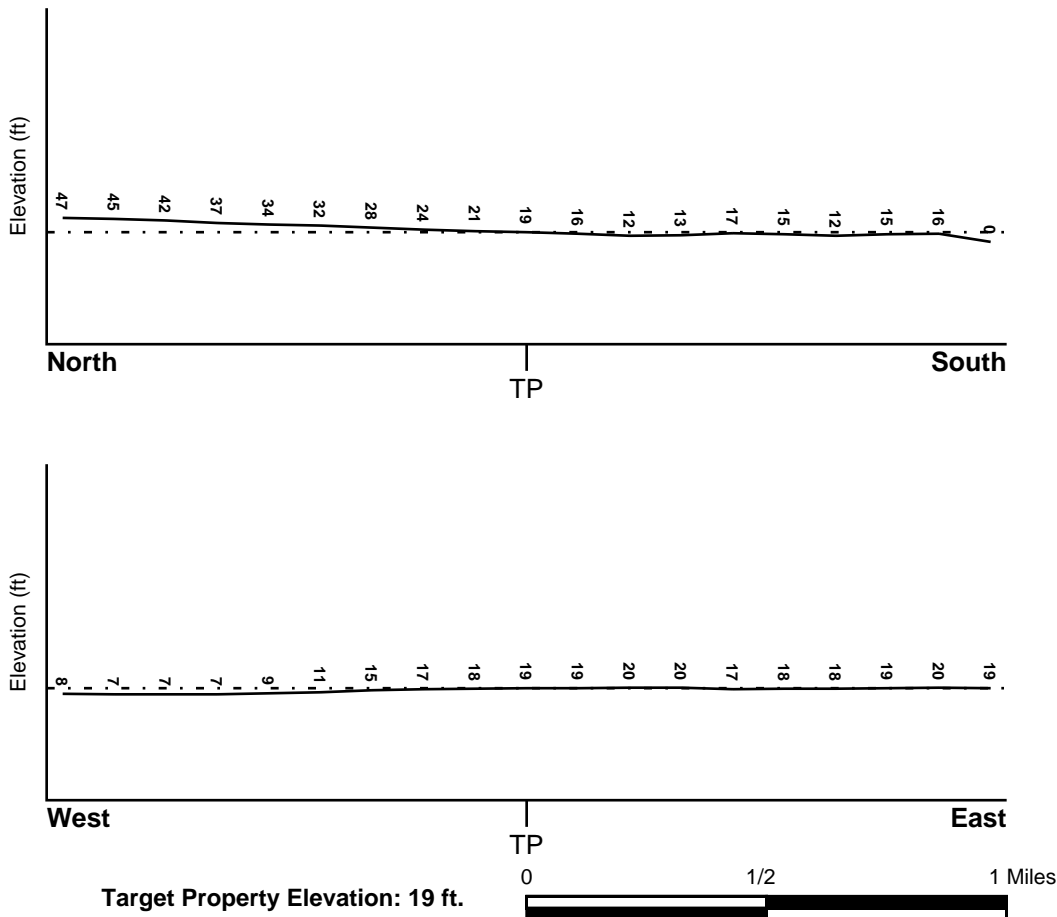

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

## GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: DELHI  
Soil Surface Texture: sand  
Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.  
Soil Drainage Class: Somewhat excessive. Soils have high hydraulic conductivity and low water holding capacity. Depth to water table is more than 6 feet.  
Hydric Status: Soil does not meet the requirements for a hydric soil.  
Corrosion Potential - Uncoated Steel: MODERATE  
Depth to Bedrock Min: > 60 inches  
Depth to Bedrock Max: > 60 inches

**Subject: Methane Investigation Report – Report on Methane Investigation conducted at 13400 Maxella Ave. Marina Del Rey, California.**

Introduction:

Carlin Environmental Consulting, Inc. (CEC) is pleased to prepare this report regarding the methane investigation conducted at 13400 Maxella Avenue in the City of Marina Del Rey, Los Angeles County, California, 90292, hereafter referred to as the Site. The property identified for this investigation consists of two parcels (APN: 4212-004-015 and 4212-004-021). A previous Phase I Environmental Site Assessment Report conducted by California Environmental and published in September 2016 was reviewed by CEC for relevant information regarding this methane investigation.

The Site consists of approximately 6.81 acres combined over two parcels located at the intersection of Maxella Ave and Glencoe Ave. Currently, the Site is occupied with three commercial use buildings, and one building contains multiple tenants. The remainder of the site is covered with asphalt for parking, sidewalks, or landscaping planters.

Methane Probe Installations and Sampling:

On February 3<sup>rd</sup>, 2017, CEC personnel installed 11 soil vapor probes to depths of approximately 5 feet below ground surface throughout the Site (Figure 1). Borings were hand augured. Probes were placed according to the LADBS Site Testing Standards for Methane (Figure 2).

Soil gas measurements were taken from an RKI Instruments Eagle Series multi-gas detector. This instrument was utilized to determine the methane concentrations from the probes. The rental company, Geotechnical Services of Tustin, California, which is certified by the manufacturer of the instrument to conduct calibration, calibrated it prior to the days of usage. The instrument was

calibrated by the rental company to 25,000 ppm and thus has a +/- accuracy range of 250 ppm. Soil gas measurements were taken on February 8<sup>th</sup> and 9<sup>th</sup>.

The field instrument was connected to the probe and allowed to measure methane concentrations continuously as vapor was extracted from the probe. It has been CEC's experience over the last 10+ years that field instrument readings provide equal or better accuracy than laboratory results when measuring methane concentrations. Thus, we recommend no laboratory analysis.

The recorded readings are presented on Table 1 were the highest readings shown by the instrument on each probe. That is some of the values reached a steady state that was slightly lower than the peak value. Nevertheless, we consider the values shown, as indicating that methane in this area of the site needs to be address at the appropriate level.

#### Investigation Results:

This section provides the results of each of the 11 probes. Each probe was tested twice with at least 24 hours in between. Probe #4 was disturbed and removed between installations and first testing, thus no readings are available.

Table 1 – Methane Probe Readings

<b>Methane Probe Readings (ppm)</b>										
	#1	#2	#3	#5	#6	#7	#8	#9	#10	#11
First Reading 2-8-17	1000	630	15	10	80	460*	440*	n/a*	220*	20
Second Reading 2-9-17	700	1050	40	110	15	300*	230*	290*	380*	120

\*Immediate water in tube and unable to acquire reading or immediate water with initial recording.

#### Conclusions and Recommendations:

The Site is located in a Methane Buffer Zone, as designated by the LADBS. Based on the LADBS Standard Plan for Methane Hazard Mitigation, the Site would be categorized as a Level III Site Design as a result of the highest methane readings being between 1,001 and 5,000 ppm (high of 1,050 ppm) and Design Methane Pressure (inches of water column)  $\leq 2''$ .

Under these qualifications, the Site would require, under LADBS Methane Code, no methane mitigation requirements. See the attached Table 1B – Mitigation Requirements for Methane Buffer Zone from Sheet 4 of the LADBS Standard Plan for Methane Hazard Mitigation.
