CHAPTER 1
Introduction

This document indicates the revisions to the Draft EIR providing new text in double underline and deleted text in strikethrough. The City of El Segundo believes that these procedures will identify those areas where the 2017 Draft EIR has been revised while creating a readable, stand-alone document accessible to the public.

A. Purpose of the Recirculated Partial Draft EIR

Pursuant to California Environmental Quality Act (CEQA) Guidelines, Section 15088.5(a), the City of El Segundo is required to recirculate a Draft Environmental Impact Report (EIR) when significant new information is added to the Draft EIR after public review of the Draft EIR, but before certification. Significant new information can include changes in the project or environmental setting, as well as additional data or other information. New information added to a Draft EIR is not significant unless the Draft EIR is changed in a way that deprives the public of a meaningful opportunity to comment upon a substantial adverse effect of the project or a feasible way to mitigate or avoid such an effect (including feasible alternatives) that the project's proponents have declined to implement.

The City issued a Notice of Availability (NOA) on September 21, 2017 as required under Section 15086 of the State *CEQA Guidelines* requesting comments on the Draft EIR for the Continental Grand Campus Specific Plan. The NOA, and in some instances a hard copy or CD of the Draft EIR, were distributed to public agencies and other interested parties. In compliance with State *CEQA Guidelines*, Section 15087, the NOA was posted in the office of the Los Angeles County Clerk on September 21, 2017 to be published from September 21, 2017 to November 6, 2017. The City extended the comment period in response to a request for additional time to review the Draft EIR. A Notice of Extended Public Comment Period was mailed out to all of the agencies and interested parties on the distribution list for a one-month extension until December 6, 2017. The Notice was sent to the State Clearinghouse and was posted in the office of the Los Angeles County Clerk.

The City determined that as a result of comments received, additional analyses were necessary to address comments related to the Traffic Study and the health risk assessment. The purpose of this document is to recirculate for public review the revisions to portions of the Draft EIR to address the comments that would result in additional new information that warrants review by the public and/or that results in potentially significant impacts that were not previously disclosed.

There have been no changes to the Project. However, Chapter 2, Project Description, from the 2017 Draft EIR is included to provide context and to provide a readable, stand-alone document for the public. Given the passage of time, the related projects associated with the cumulative analyses have been reviewed to determine if there are other reasonably forseeable projects that have emerged since the publication of the Draft EIR. Chapter 3, Basis for Cumulative Analyses, reflects the addition of five projects in the Project vicinity. In addition, Section 4.B, Air Quality has been revised to include a quantitative refined construction health risk assessment (HRA). Finally, Section 4.J, Transportation and Traffic, has been revised to provide an analysis of four additional intersections as well as to update the cumulative analysis.

These changes to the Draft EIR for the Project are being recirculated for public review and comment in accordance with CEQA Section 15088.5(a). Pursuant to CEQA, if revisions to the Draft EIR are limited to a few chapters or portions of the EIR, the lead agency need only recirculate the chapters or portions that have been modified (CEQA Guidelines Section 15088.5(c)). Recirculation of an EIR requires notice pursuant to CEQA Guidelines section 15087 and consultation pursuant to *CEQA Guidelines* section 15086.

B. Summary of Revisions

The following summarizes the revisions to the prior Draft EIR for the Project:

Introduction. This chapter contains a discussion of the purpose of the Recirculated Partial Draft EIR (RPDEIR), CEQA requirements for recirculation of portions of a Draft EIR, a description of the organization of the EIR, and a discussion of the CEQA public review process.

2.0 Project Description. While no revisions have been made to this chapter, the project description is included to provide context and a readable, stand-alone document.

3.0 Basis for Cumulative Analyses. This chapter provides an updated list and figure of the locations of past, present, and probable future projects considered in the analysis of potential Project contributions to cumulative impacts.

4.B Air Quality. This section is revised to provide an update of potential health effects of pollutants based on recent research, provide more recent ambient air quality data, and summarize a Refined Construction Health Risk Assessment that has been prepared for the Project.

4.J Transportation and Traffic. This section is revised to expand the traffic study area to include four additional intersections located within the City of Hawthorne to the east of the Project Site.

The analysis in this RPDEIR are supported by the following appendices:

- Appendix A – Refined Construction Health Risk Assessment
- Appendix B – Air Quality Worksheets from the 2017 Draft EIR
- Appendix C – Revised Traffic Impact Study

C. New Comments

Agencies, organizations and individuals are invited to comment on the information presented in this RPDEIR during the public review period. The scope of the comments submitted during the public comment period on the RPDEIR should be limited to the above sections or portions of sections included in this document that were revised from the 2017 Draft EIR, in accordance with CEQA Guidelines Section 15088.5(f)(2). For the comments received during this recirculation period, the City need only respond to those that relate to the sections or portions of sections of the RPDEIR that were revised from the 2017 Draft EIR. The Final EIR will include responses to all comments received on the Draft EIR and to those comments received during the recirculation period for the RPDEIR that are properly limited to scope as explained above. All comments are a part of the administrative record. The Final EIR will be considered by the City for certification prior to any permitting actions for the project.

D. Public Review of the Recirculated Partial Draft EIR

The RPDEIR is subject to a 45-day review period in which the document is made available to responsible and trustee agencies and interested parties. In compliance with the provision of Sections 15085(a) and 15087(a)(1) of the State CEQA Guidelines, the City, serving as the Lead Agency: (1) published a Notice of Availability (NOA) of a RPDEIR which indicated that the RPDEIR was available for review at the City‘s Planning Department at 350 Main Street, El Segundo, California 90245; (2) provided copies of the NOA and RPDEIR to the City of El Segundo Public Library, 111 West Mariposa Avenue, El Segundo, California 90245; (3) posted the NOA and the RPDEIR on the City’s website at www.elsegundo.org; (4) prepared and transmitted a Notice of Completion (NOC) to the State Clearinghouse; and (5) sent a NOA to all property owners within 300 feet of the Project Site. Proof of publication is available at the City. The public review period for the RPDEIR commenced on May 23, 2019 and will end on July 8, 2019 for a total of 47 days.

Any public agency or members of the public desiring to comment on the Draft EIR must submit their comments in writing or send them via email to the following address prior to the end of the public review period:

Mail: Eduardo Schonborn, Senior Planner
City of El Segundo
Planning and Building Safety Department
350 Main Street
El Segundo, California 90245
Email: eschonborn@elsegundo.org

Upon completion of the public review period, written responses to all comments on environmental issues discussed in the RPDEIR will be prepared. These comments and responses, together with comments received on the Draft EIR and associated responses, will be included in the Final EIR. After the Final EIR is completed and at least 10 days prior to its certification, responses to comments made by public agencies on the Draft EIR and the RPDEIR will be provided to the commenting agencies.

CHAPTER 2
Project Description

No changes have been made to the Project since the circulation of the 2017 Draft EIR. However, this chapter is included to provide context for the recirculated sections.

A. Introduction

The Project Applicant, Mattel, Inc. (Mattel), proposes to expand its corporate headquarters, located on an approximately 12.5-acre campus (Campus or Project Site) in the City of El Segundo (City). Plans include development of an approximately 328,612 square foot (sf), 14-story office building and an eight-level parking structure on the 455 Continental Parcel, as well as up to 174,240 sf of new office floor area and a surface parking lot on the 1955 East Grand Avenue Parcel (Project). The existing improvements at 333 Continental Boulevard would remain unchanged. The Project includes a Development Agreement, approval of the Continental Grand Campus Specific Plan (CGCSP), a General Plan Amendment, and a Zone Text Amendment (the Project Approvals).

The Project would support Mattel's goal to manage its businesses more efficiently by relocating and consolidating operations that are currently conducted in a number of other cities throughout the country to El Segundo, while also accommodating expansion of its current headquarters in the City.

B. Project Location and Surrounding Uses

The approximately 12.5-acre Project Site (546,587 sf) consists of three contiguous parcels: Lot 25 (1955 East Grand Avenue Parcel), Lot 41 (333 Continental Boulevard Parcel), and Lot 42 (455 Continental Boulevard Parcel). The site is located in the northeast quadrant of the City of El Segundo, approximately 2.5 miles east of the Pacific Ocean and approximately 10 miles southwest of downtown Los Angeles, as shown on **Figure 2-1**, *Regional and Vicinity Location Map*. Regional access to the project site is provided from the I-405 and I-105 freeways, and local access is provided from Continental Boulevard and Grand Avenue.

The Project Site is located in an area of the City characterized by "super block" development with a mix of office, research and development, retail and hotel uses, as well as the Los Angeles Air Force Base, as shown in **Figure 2-2**, *Aerial Photograph of the Site and Project Vicinity*. The DoubleTree Hotel is located immediately to the south of the site. To the north as well as to the east across Continental Boulevard are low to mid-rise office buildings.

C. Site Background

In 1985 the City of El Segundo certified the Final Environmental Impact Report (Final EIR) for and approved the Grand Way Project (EA 32), a mixed-use commercial complex on an approximately nine-acre parcel at the northwest corner of Continental Boulevard and Grand Avenue. The Grand Way Project consisted of two 14-story office towers (482,768 sf), a 300-room hotel (193,500 sf), a retail complex (94,500 sf), and two eight-level above ground parking structures with 2,310 parking spaces plus 60 short-term surface parking spaces for a total of 770,818 sf of floor area and a total site FAR of 2.0.[1] The project was to be developed in two phases. The original approval also included Subdivision 85-1 for Tentative Parcel No. 16854, which divided the property into a three parcel configuration.

Phase 1 was developed prior to the expiration of the original Development Agreement (DA-1), which was approved in 1985 and was valid until August 31, 1990. Phase I included the 215-room DoubleTree Hotel, the 328,612 gross square foot (gsf), 14-story office tower, the 7-level parking structure as well as the approximately 11,793 sf fitness center, and approximately 29,710 gsf of commercial uses including a cafeteria and child care center for Mattel employees. Phase II, which was included in the original approval, was never built.

In 1993 the City and the Applicant entered into the First Amended and Restated Development Agreement (the "Amended Development Agreement") (EA 312 and DA 93-1) revising Phase II of The Grand Way Project. Phase I was not affected by the Amended Development Agreement. The Amended Development Agreement allowed a commercial structure with a maximum of 300,000 sf of floor area and a height not to exceed 14 stories. The permitted uses were those allowed under the existing General Plan and zoning ordinances in effect in 1993, and included, without limitation, general office and technical services, including research and development. The uses in the Amended Development Agreement superseded the uses in the original Development Agreement, which identified retail and financial or professional office uses.

After the 1993 approval was granted, no new development occurred. However, the Phase II property, approximately 3.5 acres (or 152,460 sf), was improved with interim temporary uses including private recreational facilities for use by Mattel employees and landscaping featuring the Mattel logo. The interim recreational facilities include a basketball court, baseball field, and two volleyball courts. The Mattel logo is integrated into the ground-level landscape in the northeast corner of the property.

Prior to the expiration of the First Amended Development Agreement, Mattel applied to the City to extend the term of the Amended Development Agreement in order to preserve Mattel's rights to develop the uses proposed for Phase II of The Grand Way Project in the Agreement. A Subsequent EIR was prepared and was certified by the City (State Clearinghouse No. 2003061104).[2] The Applicant was granted approval of the Second Amended and Restated Development Agreement (EA 559, DA 01-003) in February 2004, which preserved the development rights granted in 1993

[1] Floor area ratio, or FAR, is the square footage of a building relative to the site area. For example, an FAR of 2.0 is 2 square feet of building floor area to each square foot of lot area.

[2] The EIR certified in 2004 is hereby incorporated by reference.

and expanded the approval to allow the addition of the 1955 Grand Avenue Parcel. The Agreement extended the approval of the 300,000 sf, 14-story office tower with an 8-level parking structure on Parcel 3 and added the provision for 174,240 sf of development (0.8 FAR), restricted to four-stories on the 1955 Grand Avenue Parcel. This project was never built.

At the time the City approved The Grand Way Project in 1984, the Site was zoned C-3, a special commercial zone. As indicated in the Final EIR, a maximum FAR of 2.0 and a 200-foot height limit were established for the C-3 zone. Uses allowed at that time included retail and service commercial outlets, transient lodging, general and specialized office activities, various public facilities, public and commercial recreation, and food-serving establishments.[3] Over the years the General Plan designations and zoning in the area have changed. Currently, the Project Site is designated in the General Plan as Corporate Office and is zoned CO. The CO zone allows a mixture of office and food-serving uses in single-tenant or multi-tenant buildings with limited retail uses permitted in the lobby area. In addition, Policy LU4-3.5 of the Land Use Element of the General Plan provides for research and development uses within the Corporate Office designation east of Sepulveda Boulevard. The maximum allowable FAR is 0.8 and the maximum building height within the CO zone east of Sepulveda Boulevard is 200 feet.

D. Existing Conditions

The Project Site consists of three contiguous parcels, which are owned and occupied by Mattel (see **Figure 2-3**, *Existing Site Plan*).

The 333 Continental Boulevard Parcel (Lot 41) is located at the south side of the Project Site and is an approximately four-acre (175,982 sf) property that is currently occupied by a 14-story, approximately 328,612 gsf tower housing the Mattel corporate headquarters offices. In addition, a two-story Pavilion Building occupies the southeastern portion of the parcel. The existing FAR on Lot 41 is 2.13. The Pavilion Building, which is approximately 29,710 gsf, is occupied by a cafeteria and child care center for Mattel employees, and a retail outlet store that is open to the public. The cafeteria is open from 7:30 a.m. to 1:30 p.m. and the child care center is open from 6:00 a.m. to 7:00 p.m. Monday through Friday. The retail store is open from 10:00 a.m. to 6:00 p.m. Monday through Saturday. A bridge that is approximately 4,175 square feet connects the Pavilion Building to the 14-story tower. The 333 Continental Boulevard Parcel also includes an eight-level above grade parking structure with 1,132 parking spaces. An approximately 11,793 square foot fitness center (Fitness Center) for employees is located at the ground level of the parking structure.

The 455 Continental Boulevard Parcel (Lot 42) is the northernmost parcel and is approximately 3.51 acres (152,895 sf) in size. The parcel is improved with interim temporary uses that include recreational facilities for Mattel employees, a landscaped area featuring a Mattel logo, and surface parking spaces. The interim recreational facilities include a basketball court, baseball field, and two volleyball courts. The Mattel logo is integrated into the ground-level landscape in the northeast corner of the property.

SOURCE: Salas O'Brien Architects & Engineers, 2016

Continental Grand Campus Specific Plan

Figure 2-3
Existing Site Plan

ESA PCR

The 1955 East Grand Avenue Parcel is the westernmost parcel and is five acres (217,800 sf) in size. Lot 25 was developed in 1989 with a two story, approximately 57,082 gsf office building. The existing FAR on Lot 25 is 0.26. The building is located on the southern portion of the parcel fronting Grand Avenue. The 1955 East Grand Avenue Parcel serves as the location for the Toy Fair which occurs twice a year for three weeks in June and October. The Toy Fair occurs over a three-week period with up to about 100 non-Mattel people in attendance per day. The rest of the year, the 1955 Grand Avenue building is occupied by a small staff and is used for training and internal meetings. Access to the 1955 East Grand Avenue Parcel is via Grand Avenue from either of two driveways at the eastern or western side of the property. Guest parking and mature trees are located along Grand Avenue. Parking for the building is provided in a surface parking lot to the north of the building and occupies the remainder of the site. The parking lot provides 365 parking spaces. There is no vehicular access between the 1955 East Grand Avenue Parcel and The Grand Way site.

Mattel currently leases space in three separate buildings in the project area, including Mattel's Design Center at 2031 Mariposa Avenue, 2043 E. Mariposa Avenue, and 2031-2041 E. Maple Street. The uses in the Design Center include office and research and development (R&D). The uses in the 2043 E. Mariposa Avenue building include warehouse, and the uses in the 2031-2041 E. Maple Street buildings include video production, sound stage and office. A shuttle is provided between the existing office tower on the 333 Continental Boulevard parcel and these three leased locations. The shuttle runs every seven minutes between 7:30 a.m. and 5:30 p.m. on weekdays. Shuttle service is also provided to the Maple Street facility on request, which typically consists of seven to 10 times a day. The shuttles are currently operating under capacity.

E. Statement of Project Objectives

Section 15124(b) of the CEQA Guidelines states that a project description shall contain "a statement of the objectives sought by the proposed project." In addition, Section 15124(b) of the CEQA Guidelines further states that "the statement of objectives should include the underlying purpose of the project." The intent of the Continental Grand Campus Specific Plan is to ensure a desirable and functional community environment, including the provision of infrastructure and public services by the City, and to assure the attainment of maximum effective utilization of resources within the City at the least economic and environmental cost to its citizens.

In order to achieve this purpose, the Applicant has developed the following set of objectives after careful consideration of relevant goals, objectives, and policies established in the City's General Plan:

- Create a corporate campus environment that is internally self-supporting and functional.
- Develop the property in a manner that is compatible with the existing development and consistent with previously approved plans for the site.
- Contribute to the expansion of the City's economic base through the provision of high quality office space.
- Provide for the consolidation and expansion of Mattel through the development of an integrated corporate campus to allow for more efficient operations.

F. Description of the Project

Project Design

Figure 2-4, *Proposed Site Plan*, shows the proposed development envisioned in the Continental Grand Campus Specific Plan. **Table 2-1**, *Continental Grand Campus Specific Plan Existing and Proposed Development*, shows the uses and square footage currently existing on the Site and the proposed modifications to the Site.

As shown in Table 2-1, the Continental Grand Campus Specific Plan would result in a net increase of 445,766 gsf of floor area on the 12.5-acre site. More specifically, the Project would consist of the development of an approximately 328,612 gsf office building (293,160 net sf) on the 455 Continental Boulevard Parcel. Approximately 219,870 net sf would be used for office space and approximately 73,290 net sf would be used for design and development. The building would be 14-stories and approximately 200 feet in height.[4]

The design intent is to create a cohesive, united campus feel in which the Site, office buildings and parking structure would maintain the existing architectural and landscaping language. The building design of the proposed tower would mirror the existing tower in all aspects. The proposed office tower would be compatible with the existing office tower in terms of setbacks, massing, architecture, fire lanes, external color scheme and landscaping treatment. As with the existing office tower, the new building would be oriented toward Continental Boulevard. The building setbacks of the proposed tower along Continental Boulevard and the northern and western property lines would meet or exceed the minimum of 25 feet required in the CO zone.

As with the existing building, the new high-rise would be white, modern, and feature symmetrically spaced and sized windows on all exterior walls. The proposed tower in combination with the existing tower would create a semi-circular auto court with access on Continental Boulevard. More specifically, the "V" created by the two facing diagonal walls of the towers would form and complete the driveway courtyard at the main entrance. The existing entry features a circular, landscaped driveway that would be further defined by new landscaping associated with the proposed 14-story building. **Figure 2-5**, *Rendering from East of Continental Boulevard Looking West*, shows the relationship of the proposed tower to the existing high-rise building and to the surrounding existing campus.

In addition to the new tower, an eight-level parking structure would be developed west of the tower and immediately north of the existing parking structure. The parking structure would be separated from the tower by about 40 feet. However, the proposed parking structure would be connected to the existing parking structure and would provide a total of 1,087 new parking spaces. Access to the parking structure would be provided from Continental Boulevard and Grand Avenue.

[4] The proposed development on 333 and 455 Continental Boulevard Parcels would result in a 2.13 FAR. However, the FAR is being evaluated collectively with the 1955 Grand Avenue Parcel.

Figure 2-5

Rendering from East of Continental Boulevard Looking Northwest

ESA PCR

The existing tower, the Pavilion Building, and the parking structure and Fitness Center located on the 333 Continental Boulevard Parcel would not be subject to change as part of the Project. The existing FAR of 2.13 would remain as would the surface parking lot with a total of 38 spaces, with 26 being handicapped parking and 12 regular spaces.

The Project would involve demolition of the existing two-story, approximately 57,082 sf office building located on the 1955 East Grand Avenue Parcel, followed by development of a new six-story, approximately 102-foot high office building with up to 174,236 gsf of new office floor area (166,754 net sf) with a resulting FAR of 0.8.

As shown in **Figure 2-6**, *Rendering from Grand Avenue Looking East*, the new building would be designed with the same fenestration modules as the towers, which would allow for the same window bay patterns and finish material. The proposed exterior materials would consist of anodized window systems and wall tile. The tile would be grey with white tile used for highlight banks. The tile would be placed in a series of different patterns to add visual interest and textural differences. The modern design and light color of the building would be consistent campus's modern theme.

With regard to parking for the proposed office building, a surface parking lot with up to 465 parking spaces would be provided to the north of the building. As with the existing building, the new building would be located on the southern portion of the 1955 Grand Avenue Parcel and would be parallel to Grand Avenue. A small parking lot with 15 parking spaces would be provided in the front of the building for guests and/or delivery and pick-up.

With the proposed development on the 455 Continental Boulevard and 1955 Grand Avenue Parcels and the existing development on the 333 Continental Boulevard Parcel, a 1.6 FAR would result on the 12.5-acre Site. As previously indicated, the requested Project Approvals would include a General Plan and Zoning Code Amendment to allow exceedance of the allowable 0.8 FAR on the site as a whole.

New construction would comply with Green Building code standards. The existing recycling program would be expanded for recycling paper, aluminum, cans, magazines, cardboard, electronic waste, and plastic.

Mattel would retain the existing leased spaces in the Project area. After development of the proposed buildings, the shuttle service between the headquarters and the other facilities would remain. There is no anticipated change in the frequency and timing of the shuttle service. If the shuttles were to reach capacity, Mattel would use larger shuttles to accommodate more people.

Continental Grand Campus Specific Plan

Figure 2-6

Rendering from Grand Avenue Looking Northeast

ESA PCR

Landscaping

The Project would include the removal of the landscaping and recreational areas on the 455 Continental Boulevard Parcel. New landscaping would be planted and would be similar to the landscaping provided in association with the existing office tower to the south. The landscaping would be developed to visually tie the two parcels together. Landscaping would be concentrated at the entrance to the building, parallel to Continental Boulevard. In addition, landscaping would be installed along the northern parcel boundary to the north of the building. More specifically, landscaping would be installed at the northwest corner of the tower, as well as along the eastern perimeter of the parking structure. Landscaping at the northern boundary (north of the tower) would be centered on a bioswale approximately 30 feet in depth, which would extend westerly from the Continental Boulevard right-of-way approximately 240 feet.

Landscaping on the 1955 Grand Avenue Parcel would be planted parallel to Grand Avenue as well as on the eastern and western perimeters of the parcel. The existing landscaping on the edges of the surface parking lot would be maintained, while approximately 20 new planters and trees would be planted within the surface parking lot located to the north of the building. New landscaping would also be installed at the periphery of the proposed building. The existing approximately 30-foot-deep landscape strip along E. Grand Avenue would remain as under existing conditions.

Signage, Lighting, and Security

The Project would include the installation of new signage on the corporate campus. New signage would consist of non-illuminated building identification and wayfinding signage consistent with existing signage and Municipal Code requirements.

Exterior on-site lighting would be provided along all pedestrian walkways and vehicular access ways. The proposed lighting would be consistent with the existing lighting on the campus. Fixtures would be shielded to prevent light from spilling onto adjacent properties.

Existing security measures include security cameras, 24-hour security guards, and controlled building access. Security for the proposed expansion would be consistent with existing security measures.

G. Project Design Features

The Applicant proposes to implement a number of Project Design Features (PDFs), which are specific design elements proposed as part of the Project to prevent the occurrence of or to minimize the significance of potential environmental effects. Because these features have been incorporated into the Project, they do not constitute mitigation measures, as defined by Section 15126.4 of the California Code of Regulations, Title 14. However, PDFs would be included in the Mitigation Monitoring and Reporting Program (MMRP) to ensure their implementation as a part of the Project. The Project would implement the PDFs listed below.

Aesthetics

PDF AES-1 (Construction Screening): During construction, protective fencing shall be installed. Debris, rubbish, garbage, trash, overgrown vegetation or other similar material shall be removed daily. Fencing shall be monitored for graffiti which, if it occurs, shall be removed. Materials delivered and/or stored on site, including stockpiling of soils shall not be located within the public right of way. Delivery trucks shall not park or queue within the public right of way. Construction worker parking shall be located on the Project Site or in approved off-site locations.

PDF AES-2 (Lighting): All exterior light fixtures, whether free-standing or attached to building walls, shall be shielded and directed to the intended illuminated surface. No light fixture or light source (such as a floodlight) shall be directed at an off-site use or cause an increase in illumination or glare at an off-site location.

Air Quality

PDF AQ-1 (Green Building Measures): The Project would be designed and operated to meet or exceed the applicable requirements of the California Green Building Standards Code and the City's Green Building Code. Green building features would include, but are not limited to the following:

- Expansion of existing recycling program for recycling paper, aluminum, magazines, cardboard, electronic waste, and plastic.
- Installation of low-flow water fixtures that meet the U.S. Environmental Protection Agency WaterSense standards or equivalent.
- Installation of lighting controls with occupancy sensors in indoor common areas to conserve energy and to take advantage of available natural light
- The parking structure on the 455 Continental Boulevard Parcel would be designed with occupancy-sensor controlled lighting that would place lighting fixtures in a low power state in unoccupied zones. A demonstration project by the United States Department of Energy indicated that the use of occupancy-sensor controlled lighting achieved a reduction of greater than 50 percent in lighting energy use compared to a similarly lighted parking structure without occupancy-sensor controls.[5] For the purposes of this assessment, compliance with this feature is assumed to achieve a minimum 50 percent reduction in the energy required for the parking structure.
- Use of reclaimed water for landscaping.
- Installation of efficient heating, ventilation, and air conditioning (HVAC) systems.
- Provision of designated parking for any combination of low-emitting, fuel efficient, and carpool/vanpool vehicles.
- Installation of bicycle parking for employees.

[5] United States Department of Energy, Building Technologies Office, SSL Demonstration: Parking Garage Lighting, Washington DC, June 2013. Available at https://www1.eere.energy.gov/buildings/publications/pdfs/ssl/deptoflabor_brief.pdf. Accessed May 2017.

Cultural Resources

There are no specific Project Design Features relative to archaeological, paleontological, or tribal cultural resources.

Greenhouse Gas Emissions

There are no specific Project Design Features relative to greenhouse gas emissions. However, PDF AQ-1 would also reduce potential greenhouse gas emissions.

Hazards and Hazardous Materials

There are no specific Project Design Features relative to hazards and hazardous materials.

Hydrology and Water Quality

PDF HYDRO-1 (Water Quality): The Project shall include the development of bioswale(s) to help meet stormwater quality design requirements through biofiltration. To maximize on-site retention of the Stormwater Quality Design Volume (SWQDv), a minimum of 20,526 sf of bioswale area with a ponding depth of 1.5 feet shall be provided for the Continental Parcels, and a minimum of 13,448 sf of bioswale area with a ponding depth of 1.5 feet shall be provided for the 455 Grand Avenue Parcel.[6] The bioswales shall be planted with native, drought-tolerant plant species that do not require fertilization and can withstand wet soils for at least 24 hours. Pretreatment, such as hydrodynamic separation devices and catch basin inserts, shall also be provided to reduce the sediment load entering the bioswales, and shall be cleaned out periodically.

Alternatively, infiltration ponds shall be used, with the size, depth and design of the infiltration ponds to be determined once actual infiltration rates at the Project Site are determined through field percolation tests.

Alternatively, rainwater harvesting and use may be used if a minimum of 47,765 sf of on-site planting area is provided. If available, a rainwater cistern with a volume of 257,048 gallons shall be provided on-site, and planting areas shall be planted with plants with a moderate (0.4) water use factor. Whether sufficient planting area is available under the Project to provide sufficient grey water demand shall be confirmed during the design phase.

The above three structural Best Management Practice (BMP) options are conceptual at this stage. The ultimate option selected, and the design of that option, shall be determine during the design phase.

[6] According to the County of Los Angeles 2014 LID Manual, water quality requirements are based on treating a specific volume of stormwater runoff from a project site (the SWQDv). By treating the SWQDv, it is expected that pollutant loads, which are typically higher during the beginning of storm events, will be reduced in the discharge to or prevented from reaching the receiving waters.

PDF HYDRO-2 (BMPs): The following source control BMPs shall be implemented to prevent pollutants from contacting stormwater runoff and prevent discharge of contaminated stormwater runoff to the storm drain system:

- Storm Drainage Message Signage: Stenciled signs shall be affixed near the storm drain inlets and catch basins to alert and remind the public about the effects of and the prohibitions against waste disposal into the storm drain system.
- Landscape Irrigation Practices: Effective irrigation practices shall be implemented to ensure less runoff is produced resulting in less potential for pollutants to enter the storm drain system.
- Building Materials: Alternative building materials shall be considered in order to reduce pollutant sources in stormwater runoff by eliminating compounds that can leach into stormwater runoff.

Land Use and Planning

There are no specific Project Design Features relative to land use and planning.

Noise and Vibration

There are no specific Project Design Features relative to noise and vibration.

Public Services (Police and Fire)

PDF POL-1 (Security and Access During Construction): Project construction sites shall be enclosed with security fencing, lit with security lighting, and patrolled periodically by Campus security personnel during the construction period. Also, emergency access on and within the vicinity of the Project Site shall be maintained during construction.

PDF POL-2 (Security and Access During Operation): The existing on-site security measures, including 24-hour security guards, security cameras, controlled building access, and exterior security lighting, shall be expanded to the proposed uses. In addition, exterior on-site lighting shall be provided along all pedestrian walkways and vehicular access ways consistent with existing on-site lighting. ESPD shall review and approve plans during plan check to ensure that plans are in compliance with applicable requirements. In addition, development fees shall be paid in accordance with City requirements.

PDF FIRE-1 (Fire Sprinklers and Fire Alarms): New Project buildings shall be fully sprinklered and equipped with fire alarms.

PDF FIRE-2 (On-Site Fire Lanes): On-site fire lanes shall be provided around the proposed office tower consistent with those around the existing office tower. Furthermore, emergency access within the Project Site shall be maintained during Project operation including providing El Segundo Fire Department (ESFD) with the ability to open gates and exterior door locks through the provision of gate codes and key boxes).

PDF FIRE-3 (Submittal of Plans to ESFD for Review/Approval): Plans for the proposed new buildings, fire lanes, fire hydrant locations, and associated fire prevention/suppression equipment, shall be submitted to the ESFD for review and approval.

Transportation and Traffic

PDF TRAF-1 (Construction Management Plan): Prior to the issuance of a building permit for the Project, a detailed Construction Traffic Management Plan (CTMP) shall be reviewed and approved by the City Public Works Department. The CTMP would formalize how construction would be carried out and identify specific actions that would be required to reduce traffic/transportation effects on the surrounding community. The CTMP shall be based on the nature and timing of the specific construction activities and other projects in the vicinity of the Project Site. The CTMP shall include, but not be limited to, the following elements as appropriate:

- Temporary pedestrian and vehicular traffic controls during all construction activities adjacent to the Project Site to ensure traffic safety on public right of ways. These controls shall include, but are not limited to, flag people trained in pedestrian safety.
- Temporary traffic control during all construction activities adjacent to public rights-of-way to improve traffic flow on public roadways (e.g., flag men).
- Scheduling of construction-related deliveries, haul trips, etc., so as to occur outside the commuter peak hours to the extent feasible.
- Construction-related vehicles shall not park on surrounding public streets.
- If needed during the peak construction periods, off-site parking would be provided, and workers would carpool or be shuttled to the worksite.
- Coordination with public transit agencies to provide advanced notifications of stop relocations and durations, if necessary.
- Provide detour plans to address temporary road closures during construction.

Utilities and Supply Systems (Water Supply and Wastewater)

PDF WS-1 (Water Infrastructure Improvements): Any existing water meters, potable water service connections, fire backflow devices and potable water backflow devices shall be upgraded to current City Water Division standards. These devices shall be placed or relocated onto private property.

PDF WS-2 (Plans for Water System Upgrades): The Project Applicant shall submit a Utility Plan to the City of El Segundo Public Works Department for review and approval which shows all existing and proposed utility improvements (sewer, water, gas, storm drain, electrical, etc.), their sizes and associated easements around the Project Site, and traffic control plans for work in the public right-of-way. In addition: (1) any unused water laterals shall be abandoned and properly capped at the City main; (2) the contractor shall obtain necessary permits and licenses, and provide traffic control plans and shoring plans.

PDF WW-1 (Sewer Upgrades): The Project shall extend and improve the existing on-site wastewater collection infrastructure to serve the proposed land uses consistent with applicable City requirements.

PDF WW-2 (Wastewater Discharges): Project wastewater discharges shall comply with applicable CWA and RWQCB waste discharge requirements.

H. Construction Schedule

Project buildout would occur in two phases and is anticipated to be complete by the end of 2023. Phase 1 would consist of the proposed improvements on the 455 Continental Boulevard Parcel and would take approximately 15.5 to 19.5 months. Phase 1 would commence during the first quarter of 2020 and would be complete by the third quarter of 2022. Phase 1 would have three stages of activity: demolition, site preparation/excavation, and construction. Demolition would involve removal of the existing private recreational facilities, landscaping and other minor improvements, which would take approximately two weeks. Approximately 4,000 cubic yards of dirt would be excavated and exported from the property. Site preparation and excavation for the proposed tower and parking structure would take from three to five months and construction is projected to take approximately 12 to 14 months.

Phase 2 of the Project would be the development of the 1955 East Grand Avenue Parcel and would take about 13 to 18 months. Phase 2 would start upon completion of Phase 1 and be complete by the end of 2023. Similar to Phase 1, there would be three stages of activity: demolition, site preparation/excavation, and construction. Demolition of the existing building and surface parking lot would take approximately one month. Site preparation and excavation for the new structure would take approximately three to five months. Approximately 23,200 cubic yards of dirt and other material would be excavated and exported from the property. Construction on the new building is projected to take approximately nine to 12 months.

Construction staging and construction worker parking would be provided on site. Prior to commencement of construction, the City would approve construction haul routes. Construction would occur between 7:00 AM to 6:00 PM Monday through Saturday in compliance with the City's Municipal Code requirements.

I. Project Approvals

Required approvals for the proposed project would include, but may not be limited to, the following:

- Approval of the Continental Grand Campus Specific Plan;
- Approval of a Development Agreement;
- Approval of a General Plan Amendment to exceed the allowable floor area ratio of 0.8 to 1 and to establish the Continental Grand Campus Specific Plan (CGCSP) land use designation;
- Approval of a Zone Text Amendment to establish the Continental Grand Campus Specific Plan (CGCSP) zoning designation;

- Certification of an Environmental Impact Report;
- Issuance of various ministerial permits (e.g., grading, demolition, building, etc.) by the City of El Segundo; and
- Other permits and approvals as deemed necessary.

CHAPTER 3
Basis for Cumulative Analyses

This chapter includes an updated Related Projects list and figure. In addition, given the new related projects an evaluation of potential cumulative impacts is included for issue areas included in the 2017 Draft EIR.

The California Environmental Quality Act (CEQA) requires that an EIR analyze cumulative impacts. As defined in CEQA Guidelines Section 15355, a cumulative impact consists of an impact that is created as a result of the project evaluated in the EIR together with other foreseeable projects causing related impacts in the vicinity of the project or the project otherwise contributing to the impact. The cumulative impact is the change in the environmental impact that results from the incremental effect of the project when added to other past, present and future probable projects. CEQA Guidelines Section 15130(a) states that an EIR must discuss cumulative impacts of a project when the project's incremental effect is cumulatively considerable, as defined in Section 15065(c)(a)(3). Where a lead agency is examining a project with an incremental effect that is not "cumulatively considerable," a lead agency need not consider that effect significant, but must briefly describe its basis for concluding that the incremental effect is not cumulatively considerable. However, an EIR should not discuss impacts which do not result in part from the project evaluated in the EIR. Furthermore, when the combined cumulative impact associated with the project's incremental effect and the effects of other projects is not significant, the EIR must briefly indicate why the cumulative impact is not significant and is not discussed in further detail in the EIR. A lead agency must identify facts and analysis supporting the lead agency's conclusion that the cumulative impact is less than significant.

In addition, CEQA Guidelines Section 15130(b) indicates that the analysis of cumulative impacts shall reflect the severity of the impacts and the likelihood of occurrence, but the discussion need not provide the same level of detail as is provided for the impacts attributable to the project alone. Instead, the discussion of cumulative impacts is guided by the standards of practicality and reasonableness, and should focus on the cumulative impact to which the identified other projects contribute rather than the attributes of the other projects which do not contribute to the cumulative impact.

For an adequate discussion of significant cumulative impacts, the CEQA Guidelines Section 15130(b)(1)(A) and (B) allows an EIR to determine cumulative impacts and reasonably foreseeable growth based on either of the following methods:

- A list of past, present, and probable future projects producing related or cumulative impacts; or

- A summary of projections contained in an adopted general plan or related planning document, or in a prior environmental planning document which has been adopted or certified, which described or evaluated regional or area-wide conditions contributing to the cumulative impact.

For the purposes of the cumulative impacts analysis for the Project, the City is using a list of past, present, and probable future projects. Projects within the Cities of El Segundo, Los Angeles, and Manhattan Beach are included in the analyses.

Table 3-1, *Related Projects List*, provides the updated list of pending projects (i.e., application submitted, approved, under construction). **Figure 3-1**, *Related Projects Map (Revised),* shows the location of the ~~26~~ 31 related projects. Although the projects listed in Table 3-1 serve as the primary basis for evaluation of cumulative impacts, the related projects may vary among certain environmental issues, as the geographic contexts of certain issue areas may vary.

~~The cumulative analyses for each environmental issue, including a discussion regarding the identification of relevant related projects are provided in their applicable sections in Chapter 4, Environmental Impact Analysis, of this Draft EIR.~~ The cumulative analysis for traffic has been updated in Section 4.J, Transportation and Traffic. With regard to aesthetics, two of the new related projects (No. 22 and 25) would not be located within the same view fields as the Project as a result of distance from the Project Site and intervening development. However, three of the new related projects (No. 21, 23, and 24) are located within the geographic area between Maple Street and El Segundo Boulevard on the north and south, and between Douglas Street and Main Street on the east and west. However, these related projects are of a scale and distance from the Project Site that the Project in conjunction with these projects would not contribute to a significant aesthetic impact. In addition, as with the Project, related projects would be required to comply with the City's landscape, signage and height requirements, and other regulations pertinent to visual character and, as such, would contribute to rather than detract from the visual quality of the area.

With regard to air quality, the cumulative analysis is based on the South Coast Air Quality Management District's (SCAQMD) cumulative methodology as provided in Section 4.B, Air Quality. The SCAQMD CEQA Air Quality Handbook states that the "Handbook is intended to provide local governments, project proponents, and consultants who prepare environmental documents with guidance for analyzing and mitigating air quality impacts of projects."[1] The SCAQMD CEQA Air Quality Handbook also states that "[f]rom an air quality perspective, the impact of a project is determined by examining the types and levels of emissions generated by the project and its impact on factors that affect air quality. As such, projects should be evaluated in terms of air pollution thresholds established by the District."[2] The SCAQMD has also provided

[1] South Coast Air Quality Management District, CEQA Air Quality Handbook, 1993, http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-(1993), p. iii. Accessed April 2019.

[2] South Coast Air Quality Management District, CEQA Air Quality Handbook, 1993, p. 6-1.

guidance on an acceptable approach to addressing the cumulative impacts issue for air quality as discussed below:[3]

> *"As Lead Agency, the AQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR… Projects that exceed the Project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant."*

In accordance with SCAQMD guidance, the cumulative analysis in Section 4.B, Air Quality, is appropriately based on the SCAQMD cumulative methodology and SCAQMD thresholds.

As discussed in Section 4.D, Greenhouse Gas Emissions, the analysis of greenhouse gas (GHG) emissions is inherently a cumulative analysis. As discussed on page 4.D-26, according to the California Air Pollution Control Officers Association (CAPCOA) White Paper titled, *CEQA & Climate Change: Evaluating and Addressing Greenhouse Gas Emissions from Projects Subject to the California Environmental Quality Act*, "GHG impacts are exclusively cumulative impacts; there are no non-cumulative GHG emission impacts from a climate change perspective."[4] Furthermore, per CEQA Guidelines Section 15064(h)(3), a project's incremental contribution to a cumulative impact can be found not cumulatively considerable if the project would comply with an approved plan or mitigation program that provides specific requirements that would avoid or substantially lessen the cumulative problem within the geographic area of the project.[5] In accordance with the CAPCOA White Paper and the CEQA Guidelines, the cumulative analysis in Section 4.D, Greenhouse Gas Emissions, appropriately evaluates cumulative GHG impacts.

As detailed in Section 4.B, Air Quality, and Section 4.D, Greenhouse Gas Emissions, the Project would result in less than significant air quality and GHG emissions impacts and therefore, the Project's incremental contribution considered with related projects would not be cumulatively considerable. Therefore, the Project's cumulative contribution of air quality and GHG emissions would be less than significant.

With regard to cultural resources, with the implementation of mitigation measures, Project impacts to archaeological and paleontological resources would be less than significant. In association with CEQA review, if ground disturbance were to occur in a sensitive area, mitigation measures would be implemented for the related projects. Therefore, the Project's contribution to cumulative impacts on cultural resources would not be cumulative considerable. With regard to tribal cultural resources, AB 52 consultation was conducted for the Project and no tribal cultural resources were identified in the Project Site or vicinity. In association with CEQA review, AB 52 consultation with Native

Accessed April 2019.

[5] 14 CCR § 15064(h)(3).

American tribes would be required for each related project. Therefore, to the extent impacts on tribal cultural resources from related project may occur, contribution from the Project would not be cumulatively considerable. The Project would result in a less than significant cumulative impact.

With regard to hazards and hazardous materials and hydrology and water quality, the Project would result in less than significant impacts. Like the Project, each related project would be required to comply with applicable regulatory requirements. Therefore, the Project would not contribute to a significant cumulative impact.

The Project would be substantially consistent with the City's land use objective to concentrate corporate office uses to the east of Pacific Coast Highway. In addition, the Project is reasonably close in scale to the development anticipated in the 2004 Development Agreement for the Project Site. Three new related projects would be located within the similar geographic area as the Project (between Maple Street and El Segundo Boulevard on the north and south and between Douglas Street and Main Street on the east and west). This area has general access to the Green Line Mariposa Station or the Green Line El Segundo Station and is also well served by bus lines along Pacific Coast Highway. The City has discretionary authority to approve those land uses it deems to be consistent with the objectives of the General Plan. Much of the new development would be within proximity to transit and would be consistent with goals to concentrate development in transit rich areas. Therefore, cumulative land use impacts would be less than significant.

With regard to noise, noise is by definition a localized phenomenon, and reduces in magnitude as the distance from the noise source increases. Thus, noise from construction of the Project and related projects would be localized, thereby affecting areas immediately within 500 feet from the Project and related project construction sites. The cumulative construction noise analysis considered related projects within 500 feet from the Project Site. With implementation of prescribed Project mitigation measures, cumulative construction noise impacts would be less than significant. During operations, cumulative noise impacts would occur primarily as a result of increased vehicle traffic on local roadways due to operation of the Project and related projects, as vehicle traffic is the greatest source of operational noise in the Project area. As shown in Table 4.H-14 of the Draft EIR, the maximum cumulative noise increase from the Project plus related project traffic would be 2.2 dBA CNEL, which would occur along El Segundo Boulevard, between Nash Street and Douglas Street. This increase in sound level would not exceed the significance threshold of an increase of 3 dBA CNEL. Based on the updated cumulative traffic data and the added roadway intersections that are discussed in Section 4.J, Transportation and Traffic of this RPDEIR, cumulative roadway segment volumes would not result in a doubling of daily traffic volumes.[6] Therefore, the increase in sound level would not exceed the significance threshold of an increase of 3 dBA CNEL. As a result, cumulative traffic-related noise impacts would be less than significant. With respect to operational stationary noise sources, although each related project could potentially impact an adjacent sensitive use, that potential impact would be localized to the specific area of each related project and would not contribute to cumulative noise conditions at the Project Site. As the Project's composite stationary-source impacts would be less than significant, the Project would

[6] California Department of Transportation, Technical Noise Supplement to the Traffic Noise Analysis Protocol, September 2013, page 2-15, http://www.dot.ca.gov/env/noise/docs/tens-sep2013.pdf. Accessed April 2019. Under the dBA scale, a doubling of sound energy corresponds to a 3 dBA increase.

not contribute to cumulative stationary-source noise impacts. Therefore, cumulative noise impacts from operational stationary-source noise would be less than significant.

With regard to police protection and fire protection services, the Project would result in a less than significant impact to public services. The updated related projects list results in five new related projects within the City. However, each of these projects would be reviewed by the public service providers to ensure that all applicable requirements are met. Any increase in cumulative demand for public services personnel would not be expected to result in the need for the development of new facilities. Finally, the Project, as well as the related projects, would pay the applicable development impact fees. The Project would not substantially contribute to cumulatively considerable impacts regarding police and fire protections services and cumulative impacts would be less than significant.

With regard to utilities, the Project would result in a less than significant impact regarding water supply and wastewater. Future development within the City is considered in the City's Urban Water Management Plan, which considers water demand and supply within the whole of the City through the 2035 planning horizon. While the five new related projects, all of which are located within the City, would increase the demand within the City, these are infill, redevelopment properties that would result in net increases in water demand. In addition, each of the related projects would be required to implement water conservation features pursuant to City ordinances. With regard to wastewater, each related project would be subject to the provisions of the applicable jurisdiction's code requiring the provision of on-site infrastructure, improvements to address local capacity issues and payment of fees for future sewerage replacement and/or relief improvements. Therefore, the Project would not contribute to a cumulative significant impact with regard to water supply and wastewater facilities. In terms of infrastructure, developers are required to improve facilities where appropriate and development cannot proceed without verification and approval from the City. Therefore, cumulative impacts on the water and wastewater infrastructure would be less than significant.

4.B Air Quality

This section contains the following revisions to the 2017 Draft EIR:

- *An update of potential health effects of pollutants based on recent research*
- *More recent ambient air quality data*
- *Summary of a refined construction health risk assessment*

1. Introduction

This section provides an analysis of air emissions generated by construction and operation of the Project. In addition, consistency of the Project with air quality policies set forth within the South Coast Air Quality Management District's (SCAQMD) Air Quality Management Plan (AQMP) and the City of El Segundo (City) General Plan is evaluated. The analysis of Project-generated air emissions focuses on whether the Project would cause an exceedance of an ambient air quality standard or a SCAQMD numeric indicator. Calculation worksheets, assumptions, and model outputs are provided in Appendix B of this Recirculated Partial Draft Environmental Impact Report (RPDEIR)~~EIR~~. In addition, in response to comments received during the public review period, this RPDEIR includes results of a refined construction health risk assessment (HRA) analysis that provides information that further substantiates the impact conclusions reached in the Project's Draft EIR. Detailed calculation worksheets and methodology for the refined construction HRA are provided in Appendix C of this RPDEIR.

2. Environmental Setting

a. Existing Conditions

(1) Regional Context

(a) Criteria Pollutants

The Project Site is located within the South Coast Air Basin (Air Basin), which is an approximately 6,745-square-mile area bounded by the Pacific Ocean to the west, and the San Gabriel, San Bernardino, and San Jacinto Mountains to the north and east. The Air Basin consists of Orange County, Los Angeles County (excluding the Antelope Valley portion), and the western, non-desert portions of San Bernardino and Riverside Counties, in addition to the San Gorgonio Pass area in Riverside County. The terrain and geographical location determine the distinctive climate of the Air Basin, as it is a coastal plain with connecting broad valleys and low hills.

The Air Basin lies in the semi-permanent high-pressure zone of the eastern Pacific Ocean, which provides a usually mild climatological pattern, interrupted by periods of hot weather, winter storms, or Santa Ana winds. The extent and severity of air pollutant concentrations in the Air Basin is a function of the area's natural physical characteristics (e.g., climate and topography) and man-made influences (e.g., development patterns and lifestyles). Factors such as wind, sunlight, temperature, humidity, rainfall, and topography all affect the accumulation and dispersion of air pollutants throughout the Air Basin, making it an area of high air pollution potential. The Air Basin's

meteorological conditions, in combination with regional topography, are conducive to the formation and retention of ozone, which is a secondary pollutant that forms through photochemical reactions with ozone precursors in the atmosphere. Thus, the greatest air pollution impacts throughout the Air Basin typically occur from June through September, when days have the longest amount of daylight. This condition is generally attributed to the emissions occurring in the Air Basin, light winds, and shallow vertical atmospheric mixing, which reduce the potential for pollutant dispersion causing elevated air pollutant concentrations. Pollutant concentrations in the Air Basin vary with location, season, and time of day. Concentrations of ozone, for example, tend to be lower along the coast, higher in the near inland valleys, and lower in the far inland areas of the Air Basin and adjacent desert.

Certain air pollutants have been recognized to cause notable health problems and consequential damage to the environment either directly or in reaction with other pollutants, due to their presence in elevated concentrations in the atmosphere. Such pollutants have been identified and regulated as part of the overall endeavor to prevent further deterioration and to facilitate improvement in air quality. These pollutants are regulated by the United States Environmental Protection Agency (USEPA) and are subject to emissions control requirements adopted by federal, state and local regulatory agencies. These pollutants are referred to as "criteria air pollutants", and National Ambient Air Quality Standards (NAAQS) have been adopted for them. NAAQS and California Ambient Air Quality Standards (CAAQS) for each of the monitored pollutants and their effects on health are summarized in **Table 4.B-1,** *Ambient Air Quality Standards*. NAAQS and CAAQS have been set at levels considered safe to protect public health, including the health of sensitive populations such as asthmatics, children, and the elderly with a margin of safety; and to protect public welfare, including protection against decreased visibility and damage to animals, crops, vegetation, and buildings. A brief description of the health effects of these criteria air pollutants are provided below:

- **Ozone (O_3):** Ozone is a secondary pollutant formed by the chemical reaction of volatile organic compounds (VOCs) and nitrogen oxides (NO_X) in the presence of sunlight under favorable meteorological conditions, such as high temperature and stagnation episodes. Ozone concentrations are generally highest during the summer months when direct sunlight, light wind, and warm temperature conditions are favorable. According to the U.S. EPA, ozone can cause the muscles in the airways to constrict potentially leading to wheezing and shortness of breath.[1] Ozone can make it more difficult to breathe deeply and vigorously; cause shortness of breath and pain when taking a deep breath; cause coughing and sore or scratchy throat; inflame and damage the airways; aggravate lung diseases such as asthma, emphysema and chronic bronchitis; increase the frequency of asthma attacks; make the lungs more susceptible to infection; continue to damage the lungs even when the symptoms have disappeared; and cause chronic obstructive pulmonary disease.[2] Long-term exposure to ozone is linked to aggravation of asthma, and is likely to be one of many causes of asthma development and long-term exposures to higher concentrations of ozone may also be linked to permanent lung damage,

[1] United States Environmental Protection Agency (U.S. EPA), Health Effects of Ozone Pollution, last updated October 10, 2018, https://www.epa.gov/ground-level-ozone-pollution/health-effects-ozone-pollution. Accessed March 2019.

[2] U.S. EPA, Health Effects of Ozone Pollution.

such as abnormal lung development in children.[3] According to the California Air Resources Board (CARB), inhalation of ozone causes inflammation and irritation of the tissues lining human airways, causing and worsening a variety of symptoms and exposure to ozone can reduce the volume of air that the lungs breathe in and cause shortness of breath.[4] The U.S. EPA states that people most at risk from breathing air containing ozone include people with asthma, children, older adults, and people who are active outdoors, especially outdoor workers.[5] Children are at greatest risk from exposure to ozone because their lungs are still developing and they are more likely to be active outdoors when ozone levels are high, which increases their exposure.[6] According to CARB, studies show that children are no more or less likely to suffer harmful effects than adults; however, children and teens may be more susceptible to ozone and other pollutants because they spend nearly twice as much time outdoors and engaged in vigorous activities compared to adults.[7] Children breathe more rapidly than adults and inhale more pollution per pound of their body weight than adults and are less likely than adults to notice their own symptoms and avoid harmful exposures.[8] Further research may be able to better distinguish between health effects in children and adults.[9]

- ~~**Ozone (O_3):** O_3 is a secondary pollutant formed by the chemical reaction of ozone precursors of volatile organic compounds (VOCs) and nitrogen oxides (NO_X) under favorable meteorological conditions, such as high temperature and stagnation episodes. O_3 concentrations are generally highest during the summer months when direct sunlight, light wind, and warm temperature conditions occur. Elevated O_3 levels irritate the lungs and breathing passages, causing coughing and pain in the chest and throat, thereby increasing susceptibility to respiratory infections and reducing the ability to exercise. Effects are more severe in people with asthma and other respiratory ailments. Long-term exposure may lead to scarring of lung tissue and may lower the lung efficiency.~~

- **Volatile Organic Compounds (VOCs):** VOCs are organic chemical compounds of carbon and are not "criteria" pollutants themselves; however, they contribute with NO_X to form ozone, and are regulated to prevent the formation of ozone.[10] According to CARB, some VOCs are highly reactive and play a critical role in the formation of ozone, other VOCs have adverse health effects, and in some cases, VOCs can be both highly reactive and have adverse health effects.[11] VOCs are typically formed from combustion of fuels and/or released through evaporation of organic liquids, internal combustion associated with motor vehicle usage, and consumer products (e.g., architectural coatings, etc.).[12]

12 CARB, Toxic Air Contaminants Monitoring, Volatile Organic Compounds.

- ~~**Volatile Organic Compounds (VOCs):** VOCs are typically formed from combustion of fuels and/or released through evaporation of organic liquids. Some VOCs are also classified by the State as toxic air contaminants (TACs). VOCs are comprised primarily of atoms of hydrogen and carbon. Internal combustion associated with motor vehicle usage is the major source of hydrocarbons, as are architectural coatings. Emissions of VOCs themselves are not "criteria" pollutants; however, they contribute with NO_X in the formation of O_3 and are regulated as O_3 precursor emissions.~~

- **Nitrogen Dioxide (NO_2) and Nitrogen Oxides (NO_X):** NO_X is a term that refers to a group of compounds containing nitrogen and oxygen. The primary compounds of air quality concern include nitrogen dioxide (NO_2) and nitric oxide (NO). Ambient air quality standards have been promulgated for NO_2, which is a reddish-brown, reactive gas.[13] The principal form of NO_X produced by combustion is NO, but NO reacts quickly in the atmosphere to form NO_2, creating the mixture of NO and NO_2 referred to as NO_X.[14] Major sources of NO_X include emissions from cars, trucks and buses, power plants, and off-road equipment.[15] The terms NO_X and NO_2 are sometimes used interchangeably. However, the term NO_X is typically used when discussing emissions, usually from combustion-related activities, and the term NO_2 is typically used when discussing ambient air quality standards. Where NO_X emissions are discussed in the context of the thresholds of significance or impact analyses, the discussions are based on the conservative assumption that all NO_X emissions would oxidize in the atmosphere to form NO_2. According to the U.S. EPA, short-term exposures to NO_2 can potentially aggravate respiratory diseases, particularly asthma, leading to respiratory symptoms (such as coughing, wheezing or difficulty breathing), hospital admissions and visits to emergency rooms while longer exposures to elevated concentrations of NO_2 may contribute to the development of asthma and potentially increase susceptibility to respiratory infections.[16] According to CARB, controlled human exposure studies that show that NO_2 exposure can intensify responses to allergens in allergic asthmatics.[17] In addition, a number of epidemiological studies have demonstrated associations between NO_2 exposure and premature death, cardiopulmonary effects, decreased lung function growth in children, respiratory symptoms, emergency room visits for asthma, and intensified allergic responses.[18] Infants and children are particularly at risk from exposure to NO_2 because they have disproportionately higher exposure to NO_2 than adults due to their greater breathing rate for their body weight and their typically greater outdoor exposure duration while in adults, the greatest risk is to people who have chronic respiratory diseases, such as asthma and chronic obstructive pulmonary disease.[19] CARB states that much of the information on distribution in air, human exposure and dose, and health effects is specifically for NO_2 and there is only limited information for NO and NO_X, as well as large uncertainty in relating health effects to NO or NO_X exposure.[20]

- **Nitrogen Dioxide (NO_2) and Nitrogen Oxides (NOx):** NO_X is a term that refers to a group of compounds containing nitrogen and oxygen including primarily NO_2, and nitric oxide (NO). Ambient air quality standards have been promulgated for NO_2, which is a reddish brown, reactive gas. The principal form of NO_X produced by combustion is NO, but NO reacts quickly in the atmosphere to form NO_2, creating the mixture of NO and NO_2 referred to as NO_X. Major sources of NO_X emissions include power plants, large industrial facilities, and motor vehicles. Emissions of NO_X are a precursor to the formation of ground-level ozone. NO_2 can potentially irritate the nose and throat, aggravate lung and heart problems, and may increase susceptibility to respiratory infections, especially in people with asthma. According to the California Air Resources Board (CARB), "NO_2 is an oxidizing gas capable of damaging cells lining the respiratory tract. Exposure to NO_2 along with other traffic-related pollutants, is associated with respiratory symptoms, episodes of respiratory illness and impaired lung functioning. Studies in animals have reported biochemical, structural, and cellular changes in the lung when exposed to NO_2 above the level of the current state air quality standard. Clinical studies of human subjects suggest that NO_2 exposure to levels near the current standard may worsen the effect of allergens in allergic asthmatics, especially in children."[21] NO_2 also contributes to the formation of particulate matter.

TABLE 4.B-1
AMBIENT AIR QUALITY STANDARDS

Pollutant	Average Time	California Standards [a]		National Standards [b]		
		Concentration [c]	Method [d]	Primary [c,e]	Secondary [c,f]	Method [g]
O_3 [h]	1 Hour	0.09 ppm (180 µg/m^3)	Ultraviolet Photometry	—	Same as Primary Standard	Ultraviolet Photometry
	8 Hour	0.070 ppm (137 µg/m^3)		0.070 ppm (137 µg/m^3)		
NO_2 [i]	1 Hour	0.18 ppm (339 µg/m^3)	Gas Phase Chemi-luminescence	100 ppb (188 µg/m^3)	None	Gas Phase Chemi-luminescence
	Annual Arithmetic Mean	0.030 ppm (57 µg/m^3)		53 ppb (100 µg/m^3)	Same as Primary Standard	
CO	1 Hour	20 ppm (23 mg/m^3)	Non-Dispersive Infrared Photometry (NDIR)	35 ppm (40 mg/m^3)	None	Non-Dispersive Infrared Photometry (NDIR)
	8 Hour	9.0 ppm (10mg/m^3)		9 ppm (10 mg/m^3)		
	8 Hour (Lake Tahoe)	6 ppm (7 mg/m^3)		—	—

	Annual Arithmetic Mean	20 µg/m^3		—		
$PM_{2.5}$ [k]	24 Hour	No Separate State Standard		35 µg/m^3	Same as Primary Standard	Inertial Separation and Gravimetric Analysis
	Annual Arithmetic Mean	12 µg/m^3	Gravimetric or Beta Attenuation	12.0 µg/m^3 [k]	15 µg/m^3	
Lead [l,m]	30 Day Average	1.5 µg/m^3	Atomic Absorption	—	—	High Volume Sampler and Atomic Absorption
	Calendar Quarter	—		1.5 µg/m^3 (for certain areas)[m]	Same as Primary Standard	
	Rolling 3-Month Average [m]	--		0.15 µg/m^3		
Visibility Reducing Particles [n]	8 Hour	Extinction coefficient of 0.23 per kilometer — visibility of ten miles or more (0.07 — 30 miles or more for Lake Tahoe) due to particles when relative humidity is less than 70 percent. Method: Beta Attenuation and Transmittance through Filter Tape.		**No Federal Standards**		
Sulfates (SO_4)	24 Hour	25 µg/m^3	Ion Chromatography			
Hydrogen Sulfide	1 Hour	0.03 ppm (42 µg/m^3)	Ultraviolet Fluorescence			
Vinyl Chloride [l]	24 Hour	0.01 ppm (26 µg/m^3)	Gas Chromatography			

Pollutant	Average Time	California Standards [a]		National Standards [b]		
		Concentration [c]	Method [d]	Primary [c,e]	Secondary [c,f]	Method [g]

[a] California standards for ozone, carbon monoxide (except 8-hour Lake Tahoe), sulfur dioxide (1 and 24 hour), nitrogen dioxide, and particulate matter (PM_{10}, $PM_{2.5}$, and visibility reducing particles), are values that are not to be exceeded. All others are not to be equaled or exceeded. California ambient air quality standards are listed in the Table of Standards in Section 70200 of Title 17 of the California Code of Regulations.

[b] National standards (other than ozone, particulate matter, and those based on annual arithmetic mean) are not to be exceeded more than once a year. The ozone standard is attained when the fourth highest 8-hour concentration measured at each site in a year, averaged over three years, is equal to or less than the standard. For PM_{10}, the 24-hour standard is attained when the expected number of days per calendar year with a 24-hour average concentration above 150 micrograms/per cubic meter ($\mu g/m^3$) is equal to or less than one. For $PM_{2.5}$, the 24-hour standard is attained when 98 percent of the daily concentrations, averaged over three years, are equal to or less than the standard.

[c] Concentration expressed first in units in which it was promulgated. Equivalent units given in parentheses are based upon a reference temperature of 25°C and a reference pressure of 760 torr. Most measurements of air quality are to be corrected to a reference temperature of 25°C and a reference pressure of 760 torr; ppm in this table refers to ppm by volume, or micromoles of pollutant per mole of gas.

[d] Any equivalent procedure which can be shown to the satisfaction of the California Air Resources Board to give equivalent results at or near the level of the air quality standard may be used.

[e] National Primary Standards: The levels of air quality necessary, with an adequate margin of safety to protect the public health.

[f] National Secondary Standards: The levels of air quality necessary to protect the public welfare from any known or anticipated adverse effects of a pollutant.

[g] Reference method as described by the USEPA. An “equivalent method” of measurement may be used but must have a “consistent relationship to the reference method” and must be approved by the USEPA.

[h] On October 1, 2015, the national 8-hour ozone primary and secondary standards were lowered from 0.075 to 0.070 ppm.

[i] To attain the 1-hour national standard, the 3-year average of the annual 98th percentile of the 1-hour daily maximum concentrations at each site must not exceed 100 ppb.

[j] On June 2, 2010, a new 1-hour SO_2 standard was established and the existing 24-hour and annual primary standards were revoked. To attain the 1-hour national standard, the 3-year average of the annual 99th percentile of the 1-hour daily maximum concentrations at each site must not exceed 75 ppb. The 1971 SO_2 national standards (24-hour and annual) remain in effect until one year after an area is designated for the 2010 standard, except that in areas designated non-attainment for the 1971 standards, the 1971 standards remain in effect until implementation plans to attain or maintain the 2010 standards are approved.

[k] On December 14, 2012, the national annual $PM_{2.5}$ primary standard was lowered from 15 $\mu g/m^3$ to 12.0 $\mu g/m^3$.

[l] The California Air Resources Board has identified lead and vinyl chloride as 'toxic air contaminants' with no threshold level of exposure for adverse health effects determined. These actions allow for the implementation of control measures at levels below the ambient concentrations specified for these pollutants.

[m] The national standard for lead was revised on October 15, 2008 to a rolling 3-month average. The 1978 lead standard (1.5 $\mu g/m^3$ as a quarterly average) remains in effect until one year after an area is designated for the 2008 standard, except that in areas designated non-attainment for the 1978 standard, the 1978 standard remains in effect until implementation plans to attain or maintain the 2008 standard are approved.

[n] In 1989, the California Air Resources Board converted both the general statewide 10-mile visibility standard and the Lake Tahoe 30-mile visibility standard to instrumental equivalents, which are "extinction of 0.23 per kilometer" and "extinction of 0.07 per kilometer" for the statewide and Lake Tahoe Air Basin standards, respectively.

SOURCE: CARB, 2016.

- **Carbon Monoxide (CO):** Carbon monoxide (CO) is primarily emitted from combustion processes and motor vehicles due to the incomplete combustion of fuel, such as natural gas, gasoline, or wood, with the majority of outdoor CO emissions from mobile sources.[22] According to the USEPA, breathing air with a high concentration of CO reduces the amount of oxygen that can be transported in the blood stream to critical organs like the heart and brain and at very high levels, which are possible indoors or in other enclosed environments, CO can

[22] CARB, Carbon Monoxide & Health, https://ww2.arb.ca.gov/resources/carbon-monoxide-and-health. Accessed March 2019.

cause dizziness, confusion, unconsciousness and death.[23] Very high levels of CO are not likely to occur outdoors; however, when CO levels are elevated outdoors, they can be of particular concern for people with some types of heart disease since these people already have a reduced ability for getting oxygenated blood to their hearts and are especially vulnerable to the effects of CO when exercising or under increased stress.[24] In these situations, short-term exposure to elevated CO may result in reduced oxygen to the heart accompanied by chest pain also known as angina.[25] According to CARB, the most common effects of CO exposure are fatigue, headaches, confusion, and dizziness due to inadequate oxygen delivery to the brain.[26] For people with cardiovascular disease, short-term CO exposure can further reduce their body's already compromised ability to respond to the increased oxygen demands of exercise, exertion, or stress; inadequate oxygen delivery to the heart muscle leads to chest pain and decreased exercise tolerance.[27] Unborn babies, infants, elderly people, and people with anemia or with a history of heart or respiratory disease are most likely to experience health effects with exposure to elevated levels of CO.[28]

- ~~**Carbon Monoxide (CO):** CO is primarily emitted from combustion processes and motor vehicles due to incomplete combustion of fuel. Elevated concentrations of CO weaken the heart's contractions and lower the amount of oxygen carried by the blood. It is especially dangerous for people with chronic heart disease. Inhalation of CO can cause nausea, dizziness, and headaches at moderate concentrations and can be fatal at high concentrations.~~

- **Sulfur Dioxide (SO_2):** According to the U.S. EPA, the largest source of sulfur dioxide (SO_2) emissions in the atmosphere is the burning of fossil fuels by power plants and other industrial facilities while smaller sources of SO_2 emissions include industrial processes such as extracting metal from ore; natural sources such as volcanoes; and locomotives, ships and other vehicles and heavy equipment that burn fuel with a high sulfur content.[29] In 2006, California phased-in the ultra-low-sulfur diesel regulation limiting vehicle diesel fuel to a sulfur content not exceeding 15 parts per million, down from the previous requirement of 500 parts per million, substantially reducing emissions of sulfur from diesel combustion.[30] According to the U.S. EPA, short-term exposures to SO_2 can harm the human respiratory system and make breathing difficult.[31] According to CARB, health effects at levels near the State one-hour standard are those of asthma exacerbation, including bronchoconstriction accompanied by symptoms of respiratory irritation such as wheezing, shortness of breath and chest tightness, especially during exercise or physical activity and exposure at elevated levels of SO_2 (above 1 part per million (ppm)) results in increased incidence of pulmonary symptoms and disease, decreased

[31] U.S. EPA, Sulfur Dioxide (SO_2) Pollution.

pulmonary function, and increased risk of mortality.[32] Children, the elderly, and those with asthma, cardiovascular disease, or chronic lung disease (such as bronchitis or emphysema) are most likely to experience the adverse effects of SO_2.[33,34]

- ~~**Sulfur Dioxide (SO_2):** Major sources of SO_2 include power plants, large industrial facilities, diesel vehicles, and oil-burning residential heaters. Emissions of SO_2 aggravate lung diseases, especially bronchitis. It also constricts the breathing passages, especially in asthmatics and people involved in moderate to heavy exercise. SO_2 potentially causes wheezing, shortness of breath, and coughing. High levels of particulates appear to worsen the effect of SO_2, and long-term exposures to both pollutants leads to higher rates of respiratory illness.~~

- **Particulate Matter (PM10 and PM2.5):** Particulate matter air pollution is a mixture of solid particles and liquid droplets found in the air.[35] Some particles, such as dust, dirt, soot, or smoke, are large or dark enough to be seen with the naked eye while other particles are so small they can only be detected using an electron microscope.[36] Particles are defined by their diameter for air quality regulatory purposes: inhalable particles with diameters that are generally 10 micrometers and smaller (PM10); and fine inhalable particles with diameters that are generally 2.5 micrometers and smaller (PM2.5).[37] Thus, PM2.5 comprises a portion or a subset of PM10. Sources of PM10 emissions include dust from construction sites, landfills and agriculture, wildfires and brush/waste burning, industrial sources, and wind-blown dust from open lands.[38] Sources of PM2.5 emissions include combustion of gasoline, oil, diesel fuel, or wood.[39] PM10 and PM2.5 may be either directly emitted from sources (primary particles) or formed in the atmosphere through chemical reactions of gases (secondary particles) such as SO_2, NO_X, and certain organic compounds.[40] According to CARB, both PM10 and PM2.5 can be inhaled, with some depositing throughout the airways; PM_{10} is more likely to deposit on the surfaces of the larger airways of the upper region of the lung while PM2.5 is more likely to travel into and deposit on the surface of the deeper parts of the lung, which can induce tissue damage, and lung inflammation.[41] Short-term (up to 24 hours duration) exposure to PM10 has been associated primarily with worsening of respiratory diseases, including asthma and chronic obstructive pulmonary disease, leading to hospitalization and emergency department visits.[42] The effects of long-term (months or years) exposure to PM10 are less clear, although studies suggest a link between long-term PM10 exposure and respiratory mortality. The International Agency for Research on Cancer published a review in 2015 that concluded that particulate matter in outdoor air pollution causes lung cancer.[43] Short-term exposure to PM2.5 has been

[43] CARB, Inhalable Particulate Matter and Health (PM2.5 and PM10).

associated with premature mortality, increased hospital admissions for heart or lung causes, acute and chronic bronchitis, asthma attacks, emergency room visits, respiratory symptoms, and restricted activity days and long-term exposure to PM2.5 has been linked to premature death, particularly in people who have chronic heart or lung diseases, and reduced lung function growth in children.[44] According to CARB, populations most likely to experience adverse health effects with exposure to PM10 and PM2.5 include older adults with chronic heart or lung disease, children, and asthmatics and children and infants are more susceptible to harm from inhaling pollutants such as PM10 and PM2.5 compared to healthy adults because they inhale more air per pound of body weight than do adults, spend more time outdoors, and have developing immune systems.[45]

- ~~**Particulate Matter (PM_{10} and $PM_{2.5}$):** The human body naturally prevents the entry of larger particles into the body. However, small particles including fugitive dust, with an aerodynamic diameter equal to or less than ten microns (PM_{10}) and even smaller particles with an aerodynamic diameter equal to or less than 2.5 microns ($PM_{2.5}$), can enter the body and are trapped in the nose, throat, and upper respiratory tract. These small particulates could potentially aggravate existing heart and lung diseases, change the body's defenses against inhaled materials, and damage lung tissue. The elderly, children, and those with chronic lung or heart disease are most sensitive to PM_{10} and $PM_{2.5}$. Lung impairment can persist for two to three weeks after exposure to high levels of particulate matter. Some types of particulates could become toxic after inhalation due to the presence of certain chemicals and their reaction with internal body fluids. The elderly, children, and those with chronic lung or heart disease are most sensitive to PM_{10} and $PM_{2.5}$. In children, studies have shown associations between PM exposure and reduced lung function and increased respiratory symptoms and illnesses.[46]~~

- **Lead (Pb):** Major sources of lead emissions include ore and metals processing, piston-engine aircraft operating on leaded aviation fuel, waste incinerators, utilities, and lead-acid battery manufacturers.[47] In the past, leaded gasoline was a major source of lead emissions; however, the removal of lead from gasoline has resulted in a decrease of lead in the air by 98 percent between 1980 and 2014.[48] Lead can adversely affect the nervous system, kidney function, immune system, reproductive and developmental systems and the cardiovascular system, and affects the oxygen carrying capacity of blood.[49] The lead effects most commonly encountered in current populations are neurological effects in children, such as behavioral problems and reduced intelligence, anemia, and liver or kidney damage.[50] Excessive lead exposure in adults can cause reproductive problems in men and women, high blood pressure, kidney disease, digestive problems, nerve disorders, memory and concentration problems, and muscle and joint pain.[51]

51 CARB, Lead & Health.

- ~~**Lead:** Lead is emitted from industrial facilities and from the sanding or removal of old lead-based paint. Smelting or processing the metal is the primary source of lead emissions, which is primarily a regional pollutant. Lead affects the brain and other parts of the body's nervous system. Exposure to lead in very young children impairs the development of the nervous system, kidneys, and blood forming processes in the body.~~

(b) Other Criteria Pollutants (California Only)

The California Ambient Air Quality Standards (CAAQS) regulate the same criteria pollutants as the NAAQS but in addition, regulate State-identified criteria pollutants, including sulfates, hydrogen sulfide, visibility-reducing particles, and vinyl chloride.[52] With respect to the State-identified criteria pollutants (i.e., sulfates, hydrogen sulfide, visibility reducing particles, and vinyl chloride), the Project would either not emit them (i.e., hydrogen sulfide and vinyl chloride), or they would be accounted for as part of the pollutants estimated in this analysis (i.e., sulfates and visibility reducing particles). For example, visibility reducing particles are associated with particulate matter emissions and sulfates are associated with SO_X emissions. Both particulate matter and SO_X are included in the emissions estimates for the Project. A description of the health effects of the State-identified criteria air pollutants is provided below.

- **Sulfates (SO_4^{2-}):** Sulfates in the environment occur as a result of SO_2 (sulfur dioxide) being converted to SO_4^{2-} compounds in the atmosphere where sulfur is first oxidized to SO_2 during the combustion process of sulfur containing, petroleum-derived fuels (e.g., gasoline and diesel fuel).[53] Exposure to SO_4^{2-}, which are part of PM2.5, results in health effects similar to those from exposure to PM2.5 including reduced lung function, aggravated asthmatic symptoms, and increased risk of emergency department visits, hospitalizations, and death in people who have chronic heart or lung diseases.[54] Population groups with higher risks of experiencing adverse health effects with exposure to SO_4^{2-} include children, asthmatics, and older adults who have chronic heart or lung diseases.[55]

- **Hydrogen Sulfide (H_2S)**: H_2S is a colorless gas with a strong odor of rotten eggs. The most common sources of H_2S emissions are oil and natural gas extraction and processing, and natural emissions from geothermal fields. Industrial sources of H_2S include petrochemical plants and kraft paper mills. H_2S is also formed during bacterial decomposition of human and animal wastes, and is present in emissions from sewage treatment facilities and landfills.[56] Exposure to H_2S can induce tearing of the eyes and symptoms related to overstimulation of the sense of smell, including headache, nausea, or vomiting; additional health effects of eye irritation have only been reported with exposures greater than 50 ppm, which is considerably higher than the odor threshold.[57] H_2S is regulated as a nuisance based on its odor detection level; if the standard were based on adverse health effects, it would be set at a much higher level.[58] According to

[58] CARB, Hydrogen Sulfide & Health.

CARB, there are insufficient data available to determine whether or not some groups are at greater risk than others.[59]

- **Visibility-Reducing Particles:** Visibility-reducing particles come from a variety of natural and manmade sources and can vary greatly in shape, size and chemical composition. Visibility reduction is caused by the absorption and scattering of light by the particles in the atmosphere before it reaches the observer. Certain visibility-reducing particles are directly emitted to the air such as windblown dust and soot, while others are formed in the atmosphere through chemical transformations of gaseous pollutants (e.g., sulfates, nitrates, organic carbon particles) which are the major constituents of particulate matter. As the number of visibility reducing particles increases, more light is absorbed and scattered, resulting in less clarity, color, and visual range.[60] Exposure to some haze-causing pollutants have been linked to adverse health impacts similar to PM10 and PM2.5 as discussed above.[61]

- **Vinyl Chloride:** Vinyl chloride is a colorless gas with a mild, sweet odor. Most vinyl chloride is used to make polyvinyl chloride (PVC) plastic and vinyl products and are generally emitted from industrial processes and other major sources of vinyl chloride have been detected near landfills, sewage plants, and hazardous waste sites, due to microbial breakdown of chlorinated solvents.[62] Short-term health of effects of exposure to high levels of vinyl chloride in the air include central nervous system effects, such as dizziness, drowsiness, and headaches while long-term exposure to vinyl chloride through inhalation and oral exposure causes liver damage and has been shown to increase the risk of angiosarcoma, a rare form of liver cancer in humans.[63] Most health data on vinyl chloride relate to carcinogenicity; thus, the people most at risk are those who have long-term exposure to elevated levels, which is more likely to occur in occupational or industrial settings; however, control methodologies applied to industrial facilities generally prevent emissions to the ambient air.[64]

(c~~b~~) Air Toxics

In addition to criteria pollutants, SCAQMD periodically assesses levels of TACs in the Air Basin. A TAC is defined by California Health and Safety Code Section 39655:

> *"Toxic air contaminant" means an air pollutant which may cause or contribute to an increase in mortality or in serious illness, or which may pose a present or potential hazard to human health. A substance that is listed as a hazardous air pollutant pursuant to subsection (b) of Section 112 of the federal act (42 U.S.C. Sec. 7412(b)) is a toxic air contaminant."*

Between July 2012 and June 2013, SCAQMD conducted the Multiple Air Toxics Exposure Study (MATES IV), which is a follow-up to previous air toxics studies conducted in the Air Basin. The MATES IV Final Report was issued in May 2015. The MATES IV study was based on actual

[64] CARB, Vinyl Chloride & Health.

monitored data throughout the Air Basin and consisted of several elements. The elements included a monitoring program, an updated emissions inventory of TACs, and a modeling effort to characterize carcinogenic risk across the Air Basin from exposure to TACs. MATES IV applied a two-kilometer (1.24-mile) grid over the Air Basin and reported carcinogenic risk within each grid space (covering an area of four square kilometers or 1.54 square miles). MATES IV concluded that the average of the modeled air toxics concentrations measured at each of the monitoring stations in the Air Basin equates to a background cancer risk of approximately 418 in 1,000,000 primarily due to diesel exhaust, which is approximately 65 percent lower than the previous MATES III cancer risk.[65] Subsequent to the SCAQMD's risk calculations estimates performed for MATES IV, the California Environmental Protection Agency Office of Environmental Health Hazard Assessment (OEHHA) updated the methods for estimating cancer risks.[66] The updated method utilizes higher estimates of cancer potency during early life exposures and uses different assumptions for breathing rates and length of residential exposures. When combined together, SCAQMD staff estimates that risks for the same inhalation exposure level will be approximately 2.5 to 2.7 times higher using the updated methods. This would be reflected in the average lifetime air toxics risk estimated from the monitoring sites data going from 418 per million to 1,023 per million.[67] Under the updated OEHHA methodology, adopted in March of 2015, the relative reduction in risk from the MATES IV results compared to MATES III would be the same (approximately 65 percent).

Approximately 68 percent of the risk is attributed to diesel particulate emissions, approximately 22 percent to other toxics associated with mobile sources (including benzene, butadiene, and formaldehyde), and approximately 10 percent of all airborne carcinogenic risk is attributed to stationary sources (which include industries and other certain businesses, such as dry cleaners and chrome plating operations).[68] The study also found lower ambient concentrations of most of the measured air toxics compared to the levels measured in the previous study conducted during 2004 and 2006. Specifically, benzene and 1,3-butadiene, pollutants generated mainly from vehicles, were down 35 percent and 11 percent, respectively. [69] The reductions were attributed to air quality control regulations and improved emission control technologies. In addition to air toxics, MATES IV included continuous measurements of black carbon and ultrafine particles (particles smaller than 0.1 microns in size), which are emitted by combustion of diesel fuels. Sampling sites located near heavily-trafficked freeways or near industrial areas were characterized by increased levels of black carbon and ultrafine particles compared to more rural sites.

As part of the MATES IV, SCAQMD prepared maps that show regional trends in estimated outdoor inhalation cancer risk from toxic emissions, as part of an ongoing effort to provide insight into

relative risks. The maps represent the estimated number of potential cancers per million people associated with a lifetime of breathing air toxics (24 hours per day outdoors for 70 years). The background potential cancer risk per million people using the update OEHHA methodology is estimated from 1,086 to 1,285 per million (compared to an overall South Coast Air Basin-wide risk of 1,023 per million).[70] Generally, the risk from air toxics is lower near the coastline and increases inland, with higher risks concentrated near diesel sources (e.g., freeways, airports, and ports).

(2) Local Air Quality

(a) Existing Criteria Pollutants Levels at Nearby Monitoring Stations

SCAQMD maintains a network of air quality monitoring stations located throughout the Air Basin to measure ambient pollutant concentrations. The monitoring station most representative of the Project Site is the Southwest Los Angeles County Coastal Monitoring Station. This station is located at the intersection of West 91st Street and Hastings Avenue in the City of Los Angeles, approximately 3.3 miles northwest of the Project Site. Criteria pollutants monitored at this station include ozone, NO_2, CO, SO_2, and PM_{10}. This station did not have data for $PM_{2.5}$, therefore, the next closest station with $PM_{2.5}$ measurements is the South Los Angeles County Coastal 1 Monitoring Station. This station is located at the intersection of East 37th Street and Long Beach Boulevard in the City of Long Beach, approximately 13 miles southeast of the Project Site. The most recent data available from the SCAQMD for these monitoring stations are from years 2011 to 2015. The pollutant concentration data for these years are summarized in **Table 4.B-2,** *Monitoring Station Ambient Air Quality Data*.

TABLE 4.B-2
MONITORING STATION AMBIENT AIR QUALITY DATA

Pollutant/Standard [a]	2013	2014	2015	2016	2017
O_3 (1-hour)					
Maximum Concentration (ppm)	0.105	0.114	0.096	0.087	0.086

Annual Arithmetic Mean (12 µg/m^3)	11.3	11.4	10.8	10.4	10.9
Lead					
Maximum 30-day average (µg/m^3)	0.005	0.008	0.008	0.006	0.005

[a] ppm = parts per million; µg/m^3 = micrograms per cubic meter
[b] Data from the Southwest Los Angeles County Station did not provide PM2.5 data for years 2011-2015, instead the South Los Angeles County Coastal Monitoring Station was used to provide PM2.5 data.

SOURCE: SCAQMD, 2017.

(b) Existing Site Emissions

The 12.5-acre Project Site consists of three contiguous parcels: the 1955 East Grand Avenue Parcel, 333 Continental Boulevard Parcel, and 455 Continental Boulevard Parcel. The 333 Continental Boulevard Parcel would remain unchanged under the Project, and therefore, is not included in this air quality analysis. The 455 Continental Boulevard and 1955 East Grand Avenue Parcels, which are evaluated in this air quality analysis, do not currently generate vehicle trips, and therefore, do not generate mobile emissions. The 1955 East Grand Avenue Parcel produces minimal emissions from intermittent building operations. Therefore, this analysis will conservatively assume no existing site emissions that would offset the Project's overall operational emissions.

(c) Sensitive Receptors and Locations

Some population groups, such as children, the elderly, and acutely ill and chronically ill persons, especially those with cardio-respiratory diseases, are considered more sensitive to air pollution than others. Potential sensitive receptors (e.g., child care facilities, residential areas, schools, or convalescent care facilities) located within the area are the DoubleTree Hotel, which is located to the south of the 333 Continental Avenue building and east of the 1955 East Grand Avenue property,

and the child care center located on the site on the 333 Continental Boulevard Parcel. While the public accessing the DoubleTree Hotel could include some members of sensitive population groups, these individuals are not specifically identified in the analysis in accordance with SCAQMD methodology, since their presence in the vicinity of the Project Site would be limited and/or intermittent. In addition, since the child care center is operated and maintained by Mattel on the Project Site, the Applicant would control the construction program and operation of the child care center such that children's exposure to TACs during Project construction would be avoided. ~~Sensitive land uses i~~In accordance with SCAQMD guidance, ESA identified the following off-site sensitive receptors located near the Project Site that are included in the refined construction HRA ~~include the following~~:

- The closest residence, approximately 1,100 feet west of the Project Site; and
- The closest schools, the Da Vinci School, approximately 1,850 feet southeast of the Project Site, and the El Segundo Middle School, approximately 2,500 feet west of the Project Site.

The closest schools are the Da Vinci School (DVS), which is located approximately 1,850 feet southeast of the Project Site, and the El Segundo Middle School (ESMS), which is located approximately 2,500 feet west of the Project Site. However, health impacts to students at the DVS and ESMS are not evaluated in the refined construction HRA for the following reasons: (1) students at DVS and ESMS would be located more than twice as far from the Project Site compared to children of the same age located at residences closer to the Project Site, (2) DVS teaches grades, 9 through 12 and ESMS teaches grades 6, 7, and 8, thus student breathing rates (2 to 16 age bin and 16+ age bin) would be lower compared to infant children (0 to 2 age bin) at the residences closer to the Project Site in which a majority of construction exposure occurs, (3) exposure durations of students at DVS and ESMS (180 days) would be less than that of children at residences (350 days), and (4) this refined construction HRA resulted in less than significant impacts for the maximum impacted residence which is closer to the Project Site than DVS and ESMS. Therefore, impacts to DVS and ESMS students would be less than significant.

In addition, while workers at commercial buildings are generally not considered sensitive receptors, worker receptors at commercial buildings located near the Project Site are also included in the refined construction HRA in order to provide a health-protective analysis of workers in the surrounding commercial buildings.

b. Regulatory Framework

A number of statutes, regulations, plans, and policies have been adopted that address air quality issues. The Project is subject to air quality regulations developed and implemented at the federal, state, and local levels. This section provides a summary of pertinent air quality regulations affecting the Project at the federal, state, and local levels.

(1) Federal

The Clean Air Act (CAA) of 1963 was the first federal legislation regarding air pollution control and has been amended numerous times in subsequent years, with the most recent amendments occurring in 1990. At the federal level, USEPA is responsible for implementation of certain

portions of the CAA including mobile source requirements. Other portions of the CAA, such as stationary source requirements, are implemented by state and local agencies.

The CAA establishes federal air quality standards and specifies future dates for achieving compliance. The CAA also mandates that the state submit and implement a State Implementation Plan (SIP) for areas not meeting these standards. SIPs must include pollution control measures that demonstrate how the NAAQS will be met. The 1990 amendments to the CAA identify specific emission reduction goals for areas not meeting the NAAQS. These amendments require both a demonstration of reasonable further progress toward attainment and incorporation of additional sanctions for failure to attain or to meet interim milestones. The sections of the CAA which are most applicable to the Project include Title I (Nonattainment Provisions) and Title II (Mobile Source Provisions).

The sections of the CAA which are most applicable to the Project include Title I (Nonattainment Provisions) and Title II (Mobile Source Provisions). Title I requirements are implemented for the purpose of attaining NAAQS for the following criteria pollutants: O_3; NO_2; CO; SO_2; PM_{10}; and lead. The NAAQS were amended in July 1997 to include an 8-hour standard for O_3 and to adopt a NAAQS for $PM_{2.5}$. The NAAQS were last amended in September 2006 to include an established methodology for calculating $PM_{2.5}$ as well as revoking the annual PM_{10} threshold.

The Project is located within an area designated as non-attainment because it does not currently meet NAAQS for the 8-hour ozone, $PM_{2.5}$, and lead regulated under the CAA. The CAA sets certain deadlines for meeting the NAAQS within the Air Basin including the following: 1-hour O_3 by the year 2023; 8-hour O_3 by the year 2024;[71] PM_{10} is currently in attainment; and $PM_{2.5}$ by the year 2019.[72]

In 2008, the USEPA reduced the lead standard from 1.5 $\mu g/m^3$ to 0.15 $\mu g/m^3$. From this, USEPA designated a portion of Los Angeles County, excluding San Clemente, Santa Catalina Islands, and the high deserts, as non-attainment for the violation of the new 2008 lead standard.[73] The violation was based on 2007-2009 air quality monitoring data near a large lead-acid battery recycling facility.[74] The lead-acid battery recycling industry is the main source of lead emissions in Los Angeles County, all other ambient measurements of lead across the County are well below the 2008 standard.[75] In 2012, a state implementation plan was introduced with strategies and pollution control activities that would be necessary to demonstrate attainment of the lead NAAQS.

Title II of the CAA pertains to mobile sources, such as cars, trucks, buses, and planes. Reformulated gasoline, automobile pollution control devices, and vapor recovery nozzles on gas pumps are a few

71 The 8-hour ozone attainment deadline for the 1997 standard of 80 parts per billion is 2024. The 8-hour ozone attainment deadline for the 2008 standard of 75 parts per billion is 2032.

72 $PM_{2.5}$ has a deadline of 2019 for the 24-hour standard of 35$\mu g/m^3$. Deadlines for the 1997 annual standard of 15.0 $\mu g/m^3$ is 2015 and for the 2012 annual standard of 12.0 $\mu g/m^3$ is 2025.

73 USEPA, Lead Designations - Table of EPA Initial Nonattainment Designations, 2017. Available at https://www.epa.gov/lead-designations/lead-designations-table-epa-initial-nonattainment-designations.

74 South Coast Air Quality Management District, Adopt the 2012 Lead State Implementation Plan for Los Angeles County, May 2012. Available at http://www3.aqmd.gov/hb/attachments/2011-2015/2012May/2012-May4-030.pdf.

75 Ibid.

of the mechanisms USEPA uses to regulate mobile air emission sources. The provisions of Title II have resulted in tailpipe emission standards for vehicles, which have strengthened in recent years to improve air quality. For example, the standards for NO_X emissions have been lowered substantially, and the specification requirements for cleaner burning gasoline are more stringent.

(2) State

(a) California Clean Air Act

The California CAA, signed into law in 1988, requires all areas of the State to achieve and maintain the CAAQS by the earliest practical date. The CAAQS apply to the same criteria pollutants as the federal CAA but also include State-identified criteria pollutants, which include sulfates, visibility-reducing particles, hydrogen sulfide, and vinyl chloride. The CARB has primary responsibility for ensuring the implementation of the California CAA,[76] responding to the federal CAA planning requirements applicable to the state, and regulating emissions from motor vehicles and consumer products within the state. Table 4.B-1 shows the CAAQS currently in effect for each of the criteria pollutants as well as the other pollutants recognized by the state. As shown in Table 4.B-1, the CAAQS include more stringent standards than the NAAQS for most of the criteria air pollutants. Currently CO, NO_2, SO_2, and PM_{10} are in attainment for NAAQS, however PM_{10} is designated at non-attainment for CAAQS. O_3 and $PM_{2.5}$ are designated as non-attainment for NAAQS and CAAQS. Lead is designated as attainment for CAAQS. For NAAQS, lead is designated as non-attainment for a portion of Los Angeles County due to lead-acid battery recycling facilities, however, all other ambient air monitoring stations beyond these facilities have levels lower than the 2008 standard.

Health and Safety Code Section 39607(e) requires CARB to establish and periodically review area designation criteria. **Table 4.B-3**, *South Coast Air Basin Attainment Status (Los Angeles County)*, provides a summary of the attainment status of the Los Angeles County portion of the Air Basin with respect to the state standards. The Air Basin is designated as attainment for the California standards for sulfates and unclassified for hydrogen sulfide and visibility-reducing particles. Because vinyl chloride is a carcinogenic toxic air contaminant, CARB does not classify attainment status for this pollutant.

(b) California Air Resources Board On-Road and Off-Road Vehicle Rules

In 2004, CARB adopted an Airborne Toxic Control Measure (ATCM) to limit heavy-duty diesel motor vehicle idling in order to reduce public exposure to diesel PM and other TACs. The measure applies to diesel-fueled commercial vehicles with gross vehicle weight ratings greater than 10,000 pounds that are licensed to operate on highways, regardless of where they are registered. This measure does not allow diesel-fueled commercial vehicles to idle for more than 5 minutes at any given time.

[76] Chapter 1568 of the Statutes of 1988.

TABLE 4.B-3
SOUTH COAST AIR BASIN ATTAINMENT STATUS (LOS ANGELES COUNTY)

Pollutant	National Standards	California Standards
O_3 (1-hour standard)	N/A [a]	Non-attainment – Extreme
O_3 (8-hour standard)	Non-attainment – Extreme	Non-attainment
CO	Attainment	Attainment
NO_2	Attainment	Attainment
SO_2	Attainment	Attainment
PM_{10}	Attainment	Non-attainment
$PM_{2.5}$	Non-attainment	Non-attainment
Lead	Non-attainment	Attainment
Visibility Reducing Particles	N/A	Unclassified
Sulfates	N/A	Attainment
Hydrogen Sulfide	N/A	Unclassified
Vinyl Chloride	N/A	N/A [b]

N/A = not applicable

[a] The NAAQS for 1-hour ozone was revoked on June 15, 2005, for all areas except Early Action Compact areas.
[b] In 1990 the California Air Resources Board identified vinyl chloride as a toxic air contaminant and determined that it does not have an identifiable threshold. Therefore, the California Air Resources Board does not monitor or make status designations for this pollutant.

SOURCE: USEPA, 2016 and CARB, 2017.

In 2008 CARB approved the Truck and Bus regulation to reduce NO_X, PM_{10}, and $PM_{2.5}$ emissions from existing diesel vehicles operating in California. The requirements were amended in December 2010 and apply to nearly all diesel fueled trucks and busses with a gross vehicle weight rating greater than 14,000 pounds. For the largest trucks in the fleet, those with a gross vehicle weight rating greater than 26,000 pounds, there are two methods to comply with the requirements. The first way is for the fleet owner to retrofit or replace engines, starting with the oldest engine model year, to meet 2010 engine standards, or better. This is phased over 8 years, starting in 2015 and would be fully implemented by 2023, meaning that all trucks operating in the State subject to this option would meet or exceed the 2010 engine emission standards for NO_X and PM by 2023. The second option, if chosen, requires fleet owners, starting in 2012, to retrofit a portion of their fleet with diesel particulate filters achieving at least 85 percent removal efficiency, so that by January 1, 2016 their entire fleet is equipped with diesel particulate filters. However, diesel particulate filters do not typically lower NO_X emissions. Thus, fleet owners choosing the second option must still comply with the 2010 engine emission standards for their trucks and busses by 2020.

In addition to limiting exhaust from idling trucks, CARB recently promulgated emission standards for off-road diesel construction equipment of greater than 25 horsepower such as bulldozers, loaders, backhoes and forklifts, as well as many other self-propelled off-road diesel vehicles. The regulation adopted by the CARB on July 26, 2007, aims to reduce emissions by installation of

diesel soot filters and encouraging the retirement, replacement, or repower of older, dirtier engines with newer emission controlled models. Implementation is staggered based on fleet size (which is the total of all off-road horsepower under common ownership or control), with the largest fleets to begin compliance by January 1, 2014. Each fleet must demonstrate compliance through one of two methods. The first option is to calculate and maintain fleet average emissions targets, which encourages the retirement or repowering of older equipment and rewards the introduction of newer cleaner units into the fleet. The second option is to meet the Best Available Control Technology (BACT) requirements by turning over or installing Verified Diesel Emission Control Strategies (e.g., engine retrofits) on a certain percentage of its total fleet horsepower. The compliance schedule requires that BACT turn overs or retrofits be fully implemented by 2023 in all equipment in large and medium fleets and across 100 percent of small fleets by 2028.

(3) Regional

(a) South Coast Air Quality Management District

The SCAQMD is primarily responsible for planning, implementing, and enforcing air quality standards for all of Orange County, Los Angeles County (excluding the Antelope Valley portion), the western, non-desert portion of San Bernardino County, and the western, Coachella Valley, and San Gorgonio Pass portions of Riverside County. While air quality in the Air Basin has improved, the Air Basin requires continued diligence to meet the air quality standards.

(i) Air Quality Management Plan

The SCAQMD has adopted a series of AQMPs to meet the CAAQS and NAAQS. In December 2012, the SCAQMD adopted the 2012 Air Quality Management Plan, which incorporates scientific and technological information and planning assumptions, including growth projections.[77] The 2012 AQMP incorporates a comprehensive strategy aimed at controlling pollution from all sources, including stationary sources, and on-road and off-road mobile sources. The 2012 AQMP builds upon improvements in previous plans, and includes new and changing federal requirements, implementation of new technology measures, and the continued development of economically sound, flexible compliance approaches. In addition, it highlights the significant amount of emission reductions needed and the urgent need to identify additional strategies, especially in the area of mobile sources, to meet all federal criteria pollutant standards within the timeframes allowed under the federal CAA.

The key undertaking of the 2012 AQMP is to bring the Air Basin into attainment with the NAAQS for the 24-hour PM2.5 standard. It also intensifies the scope and pace of continued air quality improvement efforts toward meeting the 2024 8-hour O_3 standard deadline with new measures designed to reduce reliance on the federal CAA Section 182(e)(5) long-term measures for NO_X and VOC reductions. The SCAQMD expects exposure reductions to be achieved through

[77] South Coast Air Quality Management District, 2012 Air Quality Management Plan. Available at http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan/final-2012-air-quality-management-plan. Accessed March 2017.

implementation of new and advanced control technologies as well as improvement of existing technologies.

The SCAQMD released the Draft 2016 AQMP on June 30, 2016 for public review and comment. A revised Draft 2016 AQMP was released in October 2016 and the SCAQMD Governing Board adopted the 2016 AQMP on March 3, 2017.[78] CARB approved the 2016 on March 23, 2017. Key elements of the 2016 AQMP include implementing fair-share emissions reductions strategies at the federal, state, and local levels; establishing partnerships, funding, and incentives to accelerate deployment of zero and near-zero-emissions technologies; and taking credit from co-benefits from greenhouse gas, energy, transportation and other planning efforts.[79] The strategies included in the 2016 AQMP are intended to demonstrate attainment of the NAAQS for the federal non-attainment pollutants ozone and PM2.5.[80] While the 2016 AQMP was adopted by the SCAQMD and CARB, it has not been yet received USEPA approval for inclusion in the SIP. Therefore, until such time as the 2016 AQMP is approved by the USEPA, the 2012 AQMP remains the applicable AQMP.

(ii) SCAQMD Air Quality Guidance Documents

The CEQA Air Quality Handbook was published by the SCAQMD in November 1993 to provide local governments with guidance for analyzing and mitigating project-specific air quality impacts. The CEQA Air Quality Handbook provides standards, methodologies, and procedures for conducting air quality analyses in EIRs and was used extensively in the preparation of this analysis. However, the SCAQMD is currently in the process of replacing the CEQA Air Quality Handbook with the Air Quality Analysis Guidance Handbook. While this process is underway, the SCAQMD recommends that lead agencies avoid using the screening tables in Chapter 6 (Determining the Air Quality Significance of a Project) of the CEQA Air Quality Handbook, because the tables were derived using an obsolete version of CARB's mobile source emission factor inventory, and the trip generation characteristics of the land uses identified in these screening tables were based on the fifth edition of the Institute of Transportation Engineer's Trip Generation Manual, instead of the most current edition. Additionally, the lead agency should avoid using the on-road mobile source emission factors in Table A9-5-J1 through A9-5-L (EMFAC7EP Emission Factors for Passenger Vehicles and Trucks, Emission Factors for Estimating Material Hauling, and Emission Factors for Oxides of Sulfur and Lead). The SCAQMD instead recommends using other approved models to calculate emissions from land use projects, such as the California Emissions Estimator Model (CalEEMod) software, initially released in 2011 and updated in 2016.[81]

78 South Coast Air Quality Management District, Air Quality Management Plan (AQMP). Available at http://www.aqmd.gov/home/library/clean-air-plans/air-quality-mgt-plan. Accessed March 2017.

81 South Coast Air Quality Management District, CEQA Air Quality Handbook (1993). Available at http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/ceqa-air-quality-handbook-(1993). Accessed April 2016.

The SCAQMD has published a guidance document called the Localized Significance Threshold Methodology for CEQA Evaluations that is intended to provide guidance in evaluating localized effects from mass emissions during construction.[82] The SCAQMD adopted additional guidance regarding PM2.5 in a document called *Final Methodology to Calculate Particulate Matter (PM)2.5 and PM2.5 Significance Thresholds*.[83] This latter document has been incorporated by the SCAQMD into its CEQA significance thresholds and Localized Significance Threshold Methodology.

(iii) SCAQMD Rules and Regulations

Several SCAQMD rules adopted to implement portions of the AQMP apply to the proposed Project. For example, SCAQMD Rule 403 requires implementation of best available fugitive dust control measures during active construction periods capable of generating fugitive dust emissions from on-site earth-moving activities, construction/demolition activities, and construction equipment travel on paved and unpaved roads. The Project would be subject to the following SCAQMD rules and regulations:

- **Regulation IV – Prohibitions:** This regulation sets forth the restrictions for visible emissions, odor nuisance, fugitive dust, various air emissions, fuel contaminants, start-up/shutdown exemptions and breakdown events. The following is a list of rules which apply to the Project:

  - **Rule 402 – Nuisance:** This rule states that a person shall not discharge from any source whatsoever such quantities of air contaminants or other material which cause injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public, or which endanger the comfort, repose, health or safety of any such persons or the public, or which cause, or have a natural tendency to cause, injury or damage to business or property.

  - **Rule 403 – Fugitive Dust:** This rule requires projects to prevent, reduce or mitigate fugitive dust emissions from a site. Rule 403 restricts visible fugitive dust to the project property line, restricts the net PM10 emissions to less than 50 micrograms per cubic meter ($\mu g/m^3$) and restricts the tracking out of bulk materials onto public roads. Additionally, projects must utilize one or more of the best available control measures (identified in the tables within the rule). Mitigation measures may include adding freeboard to haul vehicles, covering loose material on haul vehicles, watering, using chemical stabilizers and/or ceasing all activities. Finally, a contingency plan may be required if so determined by the USEPA.

- **Regulation XI – Source Specific Standards:** Regulation XI sets emissions standards for specific sources. The following is a list of rules which apply to the Project:

  - **Rule 1113 – Architectural Coatings:** This rule requires manufacturers, distributors, and end users of architectural and industrial maintenance coatings to reduce VOC emissions

[82] South Coast Air Quality Management District, Final Localized Significance Threshold Methodology, 2008.

[83] South Coast Air Quality Management District, Final Methodology to Calculate Particulate Matter (PM)2.5 and PM2.5 Significance Thresholds, 2006.

from the use of these coatings, primarily by placing limits on the VOC content of various coating categories.

- **Rule 1146.2 – Emissions of Oxides of Nitrogen from Large Water Heaters and Small Boilers and Process Heaters:** This rule requires manufacturers, distributors, retailers, refurbishers, installers, and operators of new and existing units to reduce NOX emissions from natural gas-fired water heaters, boilers, and process heaters as defined in this rule.

- **Rule 1186 – PM_{10} Emissions from Paved and Unpaved Roads, and Livestock Operations:** This rule applies to owners and operators of paved and unpaved roads and livestock operations. The rule is intended to reduce PM_{10} emissions by requiring the cleanup of material deposited onto paved roads, use of certified street sweeping equipment, and treatment of high-use unpaved roads (see also Rule 403).

- **Rule 1403 – Asbestos Emissions from Demolition/Renovation Activities:** This rule requires owners and operators of any demolition or renovation activity and the associated disturbance of asbestos-containing materials, any asbestos storage facility, or any active waste disposal site to implement work practice requirements to limit asbestos emissions from building demolition and renovation activities, including the removal and associated disturbance of asbestos-containing materials.

(b) Southern California Association of Governments

The Southern California Association of Governments (SCAG) is the regional planning agency for Los Angeles, Orange, Ventura, Riverside, San Bernardino and Imperial Counties and addresses regional issues relating to transportation, the economy, community development and the environment. SCAG is the federally designated Metropolitan Planning Organization for the majority of the Southern California region and is the largest Metropolitan Planning Organization in the nation. With regard to air quality planning, SCAG adopted the 2016-2040 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) in April 2016, which addresses regional development and growth forecasts and forms the basis for the land use and transportation control portions of the AQMP. The growth forecasts are utilized in the preparation of the air quality forecasts and consistency analysis included in the AQMP. The RTP/SCS and AQMP are based on projections originating within local jurisdictions.

SCAG's SCS provides specific strategies for successful implementation. These strategies include supporting projects that encourage a diverse job opportunities for a variety of skills and education, recreation and culture and a full-range of shopping, entertainment and services all within a relatively short distance; encouraging employment development around current and planned transit stations and neighborhood commercial centers; encouraging the implementation of a "Complete Streets" policy that meets the needs of all users of the streets, roads and highways including bicyclists, children, persons with disabilities, motorists, electric vehicles, movers of commercial goods, pedestrians, users of public transportation, and seniors; and supporting alternative fueled vehicles.

In 2008, SCAG released the Regional Comprehensive Plan (RCP) which addresses regional issues such as housing, traffic/transportation, water, and air quality. The RCP serves as an advisory document to local agencies in the Southern California region for their information and voluntary

use for preparing local plans and handling local issues of regional significance. The RCP presents a vision of how Southern California can balance air quality with growth and development by including goals such as: reducing emissions of criteria pollutants to attain federal air quality standards by prescribed dates and stated ambient air quality standards as soon as practicable; reverse current trends in greenhouse gas emissions to support sustainability goals for energy, water supply, agriculture, and other resource areas; and to minimize land uses that increase the risk of adverse air pollution-related health impacts from exposure to TACs, particulates (PM_{10} and $PM_{2.5}$) and CO.

(4) Local

(a) City of El Segundo

Local jurisdictions, such as the City, have the authority and responsibility to reduce air pollution through its land use decision-making authority. Specifically, the City is responsible for the assessment and mitigation of air emissions resulting from its land use decisions.

(i) General Plan Air Quality Element

The City's General Plan (El Segundo, 1992) has an Air Quality Element which includes Citywide goals, objectives, and policies related to air quality resources.[84] The City prepared the Air Quality Element to address problems of maximum air pollution levels, reduce the adverse of effects of air pollution regarding health and economics, comply with the 1991 AQMP, exploring the best options to address AQMP measures, and increase awareness of local community and government responsibility for air quality. A number of goals, objectives, and policies are relevant to the proposed Project and are related to traffic mobility, minimizing particulate emissions from construction activities, discouraging single-occupancy vehicle trips, managing traffic congestion during peak hours, and increasing energy efficiency in City facilities and private developments. The goals and policies applicable to the proposed project are included in the impact analysis below.

3. Environmental Impacts

a. Methodology

The methodology used to evaluate the potential impacts to regional and local air quality that may result from the construction and long-term operations of the Project is described below. Detailed calculation worksheets and methodology for the refined construction HRA are provided in Appendix A of this RPDEIR. ~~Calculation worksheets, assumptions, and model outputs are provided in Appendix B of this EIR.~~

(1) Consistency with Air Quality Management Plan

The SCAQMD is required, pursuant to the CAA, to reduce emissions of criteria pollutants for which the Air Basin is in non-attainment of the NAAQS (e.g., ozone and $PM_{2.5}$). The SCAQMD's 2012 AQMP contains a comprehensive list of pollution control strategies directed at reducing emissions and achieving the NAAQS. These strategies are developed, in part, based on regional

[84] City of El Segundo General Plan-1992. Available at http://www.elsegundo.org/depts/planningsafety/planning/general_plan/default.asp. Accessed April 2017.

growth projections prepared by the SCAG. Projects that are consistent with the assumptions used in the AQMP do not interfere with attainment because the growth is included in the projections utilized in the formulation of the AQMP. Thus, projects, uses, and activities that are consistent with the applicable growth projections and control strategies used in the development of the AQMP would not jeopardize attainment of the air quality levels identified in the AQMP, even if they were to exceed the SCAQMD's significance thresholds.

(2) Construction Impacts

Construction of the Project has the potential to generate temporary criteria pollutant emissions through the use of heavy-duty construction equipment, such as excavators and forklifts, and through vehicle trips generated from workers and haul trucks traveling to and from the Project Site. In addition, fugitive dust emissions would result from demolition and various soil-handling activities. Mobile source emissions, primarily NOx, would result from the use of construction equipment, such as excavators and forklifts. Construction emissions can vary substantially from day to day, depending on number and type of equipment, the specific type and level of construction activity, and prevailing weather conditions.

Daily regional emissions during construction are forecasted by assuming a conservative estimate of construction activities (i.e., assuming all construction occurs at the earliest feasible date) and applying the mobile source and fugitive dust emissions factors. The emissions are estimated using the CalEEMod (Version 2016.3.1) software, an emissions inventory software program recommended by the SCAQMD. The input values used in this analysis were adjusted to be Project-specific based on equipment types and the construction schedule. Construction haul and vendor truck emissions during grading, concrete pour and building construction were evaluated using regional heavy-duty truck emission factors from EMFAC2014. Daily truck trips and default trip length data were used to assess roadway emissions from truck exhaust, as well as typical CARB idling times of local emissions on-site. Detailed calculations are provided in Appendix B of this EIR. Maximum daily emissions are predicted values for the worst-case day and do not represent the emissions that would occur for every day of Project construction. The maximum daily emissions are compared to SCAQMD daily regional numeric indicators.

The localized effects from the on-site portion of the emissions are evaluated at nearby sensitive receptor locations potentially impacted by the Project according to SCAQMD's Localized Significance Threshold Methodology (June 2003, revised July 2008). The localized significance thresholds are only applicable to NOx, CO, PM_{10}, and $PM_{2.5}$. SCAQMD has established screening criteria that can be used to determine the maximum allowable daily emissions that would satisfy the localized significance thresholds and therefore not cause or contribute to an exceedance of the applicable ambient air quality standards without project-specific dispersion modeling. The localized analysis is based on this SCAQMD screening criteria.

(3) Operational Impacts

Operation of the Project has the potential to generate criteria pollutant emissions through vehicle trips traveling to and from the Project Site. In addition, emissions would result from area sources on-site such as natural gas combustion, landscaping equipment, and use of consumer products.

Operational impacts were assessed for the full Project buildout year (2024) with concurrent operation of both Phase 1 and Phase 2.

The operational emissions are estimated using the CalEEMod software. CalEEMod was used to forecast the daily regional emissions from area and stationary sources that would occur during long-term Project operations. In calculating mobile-source emissions, the trip length values were based on the distances provided in CalEEMod. The trip distances were applied to the maximum daily trip estimates, based on the trip rates in the traffic study.[85]

Area source emissions are based on natural gas (building heating and water heaters), landscaping equipment, and consumer product usage (including paints) rates provided in CalEEMod. Natural gas usage factors in CalEEMod are based on the California Energy Commission (CEC) California Commercial End Use Survey (CEUS) data set, which provides energy demand by building type and climate zone.[86] However, since the data from the CEUS is from 2002, correction factors are incorporated into CalEEMod to account for the appropriate version of the Title 24 Building Energy Efficiency Standards in effect.

Operational air quality impacts are assessed based on the incremental increase in emissions compared to baseline conditions. For this analysis, baseline emissions are zero since there are no existing site emissions. The Project Site consists of three contiguous parcels and each parcel has associated emissions. However, only the 455 Continental Boulevard and 1955 E. Grand Avenue Parcels would have new development and are included in this analysis. The maximum daily emissions from operation of the proposed Project are compared to the SCAQMD daily regional numeric indicators. Detailed emissions calculations are provided in Appendix B of this RPDEIR.

As with the construction analysis, the localized effects from the on-site portion of daily emissions from Project operation are evaluated at nearby sensitive receptor locations potentially impacted by the Project according to the SCAQMD's Localized Significance Threshold Methodology (June 2003, revised July 2008).

(4) Toxic Air Contaminants Impacts ~~(Construction and Operation)~~

~~The potential for the Project to cause impacts from TACs are evaluated by conducting a screening-level analysis. The screening-level analysis consists of reviewing the Project's site plan and Project description to identify any new or modified TAC emission sources. If it is determined that the Project would introduce a new source of TACs, or modify an existing source, then downwind sensitive receptor locations are identified and a site-specific analysis is conducted.~~

Construction

The greatest potential for TAC emissions during construction would be related to diesel particulate matter emissions associated with heavy-duty equipment during demolition, excavation and grading

85 Kimley-Horn and Associates, Inc., Traffic Impact Study for the Continental Grand Campus Specific Plan, May 2017.

86 California Energy Commission, California Commercial End-Use Survey. Available at http://capabilities.itron.com/CeusWeb/Chart.aspx. Accessed April 2016.

activities. Construction activities associated with the Project would be sporadic, transitory, and short term in nature (approximately three years). Since Project construction would be temporary and would adhere to regulations that would limit construction TAC emissions, the Draft EIR evaluated construction TAC impacts qualitatively. As discussed previously, this RPDEIR provides a refined analysis to support the conclusions presented in the Draft EIR.

The SCAQMD does not require projects to prepare quantitative construction HRAs and has no guidance on construction HRAs. Thus, health risk calculations were used from available guidance based on SCAQMD's risk assessment procedures normally used to evaluate health risk impacts from long-term operations for stationary source facility permit projects.

(a) Emissions

As discussed previously, the Project's construction emissions were estimated using the CalEEMod software, an emissions computer model recommended by the SCAQMD. DPM emissions were assumed to be equal to PM10 exhaust emissions reported by CalEEMod. According to documentation from CARB, diesel exhaust consists of 92 percent PM2.5 and 100 percent PM10 (PM2.5 is a subset of PM10). Therefore, utilizing the PM10 exhaust emissions reported by CalEEMod is appropriate for analyzing potential health risk impacts from diesel particulate matter.

The refined construction HRA included DPM emissions from on-road construction haul and vendor truck trips estimated using USEPA-approved EMFAC2014 model. Emission factors for the starting year were conservatively used for each construction phase as the emission factors tend to decrease in the later years. For example, the 455 Continental Boulevard parcel building construction phase would begin in 2021 and end in 2022, therefore, emission factors for 2021 were applied for the entire phase. For the purposes of this refined construction HRA, truck emissions were limited to those emissions that would occur within an approximately 0.25-mile radius of the Project Site boundaries, which is consistent with general SCAQMD recommendations for HRAs when siting sources of TACs in relation to sensitive receptors.[87]

Idling emissions associated with heavy-duty trucks were estimated based on the Project's truck trips and idling emission factors for heavy-duty vehicles from EMFAC2014 for on-road emissions. It was assumed haul and vendor trucks' idling activities would total 15 minutes per trip, representing three separate 5-minute idling occurrences: check-in to the site or queuing at the site boundary upon arrival, on-site idling during loading/unloading, and check-out of the site or queuing at the site boundary upon departure. The 5-minute limit per idling occurrence is consistent with the CARB's Airborne Toxics Control Measure (ATCM) to Limit Diesel-Fueled Commercial Motor Vehicle Idling.

The maximum daily construction emissions were estimated for each construction phase and parcel of the Project. The maximum daily emissions are predicted values for a representative worst-case day based on heavy duty equipment being continuously used for eight hours. These emissions

[87] SCAQMD, Rule 212, Standards for Approving Permits and Issuing Public Notice, http://www.aqmd.gov/docs/default-source/rule-book/reg-ii/rule-212.pdf. Accessed February 2019. The SCAQMD provides recommendations for HRAs for facilities that have stationary sources or substantial daily trucks trips (such as warehouses, transit centers, truck stops, etc.).

would not represent the emissions that would occur for every day of construction. The maximum daily emissions of each construction phase were applied in the refined construction HRA analysis thereby providing a conservative analysis. Detailed calculations can be found in Appendix A of this RPDEIR.

(b) Dispersion Modeling

The refined construction HRA used the American Meteorological Society/Environmental Protection Agency regulatory air dispersion model (AERMOD version 18081) to estimate ambient concentrations of DPM at off-site receptors. Besides the residential and worker receptors described in Section 2.a(2)(c), a Cartesian receptor grid with 20-meter spacing and a radius of more than 400 meters was generated in AERMOD and covered the existing off-site residential and commercial areas. In addition, a refined receptor grid with 10-meters spacing was placed over the residential receptors. Each receptor was placed at a height of zero meters in accordance with SCAQMD modeling guidance for AERMOD.[88] Besides receptors, the AERMOD model requires numerous other inputs, such as meteorological data, topographical data, and source parameters, which are discussed below.

Meteorological Data

The analysis used the AERMOD-ready meteorological dataset of the nearest meteorological air monitoring site, which is located at the Los Angeles International Airport. The dataset includes five years of data from 2012-2016. The data was obtained from SCAQMD's meteorological database.

Modeling Terrain

Terrain and elevation data was imported from the United States Geological Survey's (USGS) National Elevation Dataset (NED) (United States Geological Survey 2013). The dataset consists of ground surface elevation data for the United States, Canada, and Mexico. Elevations for the modeled receptors and buildings were based on a NED dataset with a 10-meter resolution.

Based on the land use characteristics in the Project vicinity, urban dispersion coefficients were used in AERMOD. The site was modeled with the urban population of 9,818,605 based on SCAQMD's modeling guidance for AERMOD. The urban option in AERMOD accounts for increased turbulence associated with the urban heat island effect.

As noted above, construction sources include off-road construction equipment, on-road diesel trucks (including haul trucks and vendor trucks), and diesel truck idling. The modeling parameters used in AERMOD for each source are discussed below.

Modeled Source Characters

Emission rates from the construction emission sources were based on the anticipated hours of activity for each source as described above. Each emission source was modeled separately within AERMOD. The analysis used a unitized emission rate concept for each source group, where each source group is modeled with a unitized emission rate of 1 gram/second (g/s). The modeled concentration at each receptor (micrograms per cubic meter [μ/m^3]/[g/s]) represents a "dispersion

[88] SCAQMD, Modeling Guidance for AERMOD, https://www.aqmd.gov/home/air-quality/air-quality-data-studies/meteorological-data/modeling-guidance. Accessed February 2019.

factor," which was then multiplied by the actual emission rate of each source group to determine actual concentrations, and the final result from all the sources was superimposed.

Off-road Equipment

The exhaust emissions from off-road construction equipment were modeled as multiple area sources equal to the size of the construction areas, with a 5-meter release height and 1.4-meter initial vertical dispersion. For all construction activities, an even distribution of construction emissions over the entire area of construction for each construction phase was used with the assumption that emissions would originate from all potential locations within the construction source grid.

On-Road Heavy Duty Truck Travel

To represent the truck haul route, a line volume source (i.e., line sources as a series of volume sources) was placed along Grand Avenue heading west and then turning right onto Sepulveda Boulevard. The haul route was modeled with a 10-foot release height.[89]

Heavy Duty Truck Travel

DPM emissions for truck idling were assumed to occur along the portion of Grand Avenue that borders the Project Site. Idling emissions were modeled as line volume sources with a release height of 10 feet to represent haul trucks checking in and out of the construction site, as well as emissions from loading/unloading activities.[90] Although loading/unloading activities are likely to occur farther away from the construction site boundary, modeling these emissions at this location would be more conservative because emissions would be closer to the identified sensitive receptors analyzed in the refined construction HRA.

(c) Risk Characterization

Health risk calculations were performed using the Office of Environmental Health Hazard Assessment (OEHHA) methodologies and exposure parameters, and the corresponding SCAQMD guidance documents. In March 2015, OEHHA updated the methods for estimating cancer risks to use higher estimates of cancer potency during early life exposures and to use different assumptions for breathing rates and length of residential exposures. The new guidance, Air Toxics Hot Spots Program Guidance Manual for the Preparation of Health Risk Assessments, incorporates advances in risk assessment with consideration of infants and children using Age Sensitivity Factors (ASF) (OEHHA 2015). These updated exposure factors can result in numeric life-time health risk values to be approximately two to three times higher than those calculated under the previous OEHHA guidelines. The refined construction HRA followed the OEHHA 2015 guidance.

89 Bay Area Air Quality Management District, Recommended Methods for Screening and Modeling Local Risks and Hazards, May 2012, p.71, http://www.baaqmd.gov/~/media/files/planning-and-research/ceqa/risk-modeling-approach-may-2012.pdf. Accessed February 19, 2019.

90 Bay Area Air Quality Management District, Recommended Methods for Screening and Modeling Local Risks and Hazards, May 2012, p.71.

This analysis calculated the cancer risk and chronic hazard indices to estimate Project-specific health risks for construction emissions using annual average pollutant ambient concentrations modeled by AERMOD.

The health risks are calculated as follows:

Residential Cancer Risk

Equation 1: $Dose_{RESIDENT}$ (mg/kg/day) = C_{AIR} × DBR × A × EF × CF where:

- C_{AIR}= concentration in air (µg/m^3)
- DBR= daily breathing rate normalized to body weight (L/kg body weight-day)
- A= inhalation absorption factor (1 for DPM, unitless)
- EF= exposure frequency (unitless) (days/365 days)
- CF= 10^{-6}, correction factor, micrograms to milligrams conversion, liters to cubic meters conversion

Equation 2: $Risk_{INH\text{-}RESIDENT}$ (in one million) = $Dose_{AIR}$ × CPF × ASF × ED/AT × FAH × CCF

where:

- $Dose_{AIR}$= daily inhalation dose (mg/kg-day)
- CPF= cancer potency factor (mg/kg-day) $^{-1}$
- ASF= age sensitivity factor (unitless)
- ED= exposure duration (years)
- AT= averaging time for lifetime cancer risk (years)
- FAH= fraction of time spent at home (unitless)
- CCF= 10^6, cancer conversion factor to represent risk in chances per million

Worker Cancer Risk

Equation 3: $Dose_{WORKER}$ (mg/kg/day) = [C_{AIR} × WAF] × DBR × A × EF × CF where:

- C_{air}= concentration in air (µg/m^3)
- WAF= worker adjustment factor (unitless), WAF = ($H_{residential}$ / H_{source}) x ($D_{residential}$ / D_{source}) = (24/8) x (7/6) = 3.5
- DBR= daily breathing rate normalized to body weight (L/kg body weight-day)
- A= inhalation absorption factor (1 for DPM, unitless)
- EF= exposure frequency (unitless) 0.68 (250 days / 365 days). Equivalent to working 5 days/week, 50 weeks/year
- CF= 10^{-6}, correction factor, micrograms to milligrams conversion, liters to cubic meters conversion

Equation 4: $Risk_{INH\text{-}WORKER}$ (in one million) = $Dose_{AIR}$ × CPF × ASF × ED/AT × FAH × CCF

where:

- $Dose_{AIR}$= daily inhalation dose (mg/kg-day)
- CPF= cancer potency factor (mg/kg-day^{-1})
- ASF= age sensitivity factor (unitless)
- ED= exposure duration (years)
- AT= averaging time for lifetime cancer risk (years)
- CCF= 10^6, cancer conversion factor to represent risk in chances per million

A summary of the exposure parameters used under this methodology are shown in **Table 4.B-4**, *Cancer Risk Exposure Parameters*.

TABLE 4.B-4
CANCER RISK EXPOSURE PARAMETERS

Parameter	Residential			Worker
	3rd Trimester	0 < 2 years	2 < 5 years

(i) Risk Assessment

The assessment of health risks determines the relationship between the magnitude of chemical exposure and the nature and magnitude of adverse health risks resulting from this exposure. Cancer

and chronic health risks were calculated using the OEHHA cancer potency factor (CPF) and Reference Exposure Level (REL) for DPM.[91] There is no acute toxicity factor for DPM.

(ii) Age Sensitivity Factors

The estimated excess lifetime cancer risks for residential receptors (including the early-in-life exposure) were adjusted using the ASFs recommended in the California Environmental Protection Agency (Cal/EPA) OEHHA Technical Support Document and 2015 OEHHA guidance.[92] This approach accounts for an "anticipated special sensitivity to carcinogens" of infants and children. Cancer risk estimates were weighted by a factor of 10 for exposures that occur from the third trimester of pregnancy to two years of age and by a factor of three for exposures that occur from 2 to 15 years of age. No weighting factor (i.e., an ASF equal to one, which is equivalent to no adjustment) is applied to ages 16 to 70 years.

(iii) Cancer Risk Calculation

Excess lifetime cancer risks are estimated as the upper-bound incremental probability that an individual will develop cancer over a lifetime as a direct result of exposure to carcinogens. The risk is expressed as a unitless probability, and was calculated as the number of cancer incidences per million individuals in the refined construction HRA. The cancer risk for each chemical was calculated by multiplying the chemical intake or dose at the human exchange boundaries (e.g., lungs) by the DPM CPF. For cancer risk, the SCAQMD guidance identifies a significant impact if a project would result in an incremental cancer risk that is greater than 10 in one million for a sensitive receptor. Cancer burden is the estimated increased in the occurrence of cancer cases in population subject to maximum incremental cancer risk of greater than or equal to one in one million (1.0×10^{-6}) based on a 70-year exposure to TACs.[93] Since the construction phases of the Project would only last for approximately three years, cancer burden based on a 70-year exposure for construction is not appropriate and was not conducted.

(iv) Chronic Health Impacts

Non-cancer effects of chronic (i.e., long- term) DPM exposures were evaluated using the Hazard Index (HI) approach consistent with the OEHHA guidance. The chronic HI was calculated by dividing the modeled annual average concentration by the REL. The REL is the concentration at or below which no adverse health effects are anticipated. The REL for DPM was obtained from OEHHA. OEHHA has recommended an ambient concentration of 5 micrograms per cubic meter ($\mu g/m^3$) as the chronic inhalation REL for DPM exhaust. The SCAQMD guidance identifies a significant impact if a project would result in an incremental chronic HI that is greater than 1.0. This threshold is consistent with the chronic HI threshold stated in the Draft EIR.

~~). Given the temporary duration of Project construction, construction impacts associated with TACs are addressed qualitatively based on consistency with strategies and measures that limit, minimize, or reduce diesel emissions.~~

Operations

During operation, TACs could be emitted as part of periodic maintenance operations, cleaning, painting, etc., and from diesel-powered delivery and service vehicles. However, these uses are expected to be occasional and result in minimal exposure to off-site sensitive receptors. Since the Project consists of solely commercial uses, the Project would not include sources of substantive TAC emissions identified by the SCAQMD or CARB siting recommendations. Thus, a qualitative approach is appropriate.

The siting of the Project itself in relation to off-site sources of TACs is addressed under land use compatibility for the surrounding area in Section 4.G, Land Use and Planning.

b. Thresholds of Significance

The significance thresholds below are derived from the Environmental Checklist question in Appendix G of the *State CEQA Guidelines*.[94] Accordingly, a significant air quality impact would occur if the Project would:

AQ-1 Conflict with or obstruct the implementation of the applicable air quality plan.

AQ-2 Violate any air quality standard or contribute substantially to an existing or projected air quality violation.

AQ-3 Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).

AQ-4 Expose sensitive receptors to substantial pollutant concentrations.

AQ-5 Create objectionable odors affecting a substantial number of people.

As discussed in the Initial Study, which is contained in Appendix A, and in Chapter 6, Other CEQA Considerations, of the ~~this~~ Draft EIR the Project would have a less than significant impact with regard to odors. According to the SCAQMD, facilities that are typically associated with sources of odors include: wastewater treatment plants, landfills, waste transfers and recycling stations, composting operations, petroleum operations, food and byproduct processes, and agricultural operations. The Project is commercial in nature and would not introduce new substantial sources

[94] While the Appendix G Checklist Question were modified by the Natural Resources Agency in December 2018, the thresholds used in the Draft EIR are retained for comparison purposes. While the Appendix G questions relative the Air Quality have been revised, the revisions do not materially change the analyses that are necessary to address the thresholds.

of odors and is not associated with any of the uses or operations as described above. As such, no further analysis of this topic is necessary.

Pursuant to the *State CEQA Guidelines* (Section 15064.7), a lead agency may consider using, when available, the significance criteria established by the applicable air quality management district or air pollution control district when making determinations of significance. The Project would be under the SCAQMD's jurisdiction. SCAQMD has established air quality significance thresholds in its CEQA Air Quality Handbook. These thresholds are based on the recognition that the Air Basin is a distinct geographic area with a critical air pollution problem for which ambient air quality standards have been promulgated to protect public health.[95] The potential air quality impacts of the Project are, therefore, evaluated according to the most recent thresholds adopted by the SCAQMD in connection with its CEQA Air Quality Handbook, Air Quality Analysis Guidance Handbook, and subsequent SCAQMD guidance as discussed previously.[96]

(1) Construction Emissions

The SCAQMD has established numerical emission indicators of significance for construction. The numerical emission indicators are based on the recognition that the Air Basin is a distinct geographic area with a critical air pollution problem for which ambient air quality standards have been promulgated to protect public health.[97] Given that construction impacts are temporary and limited to the construction phase, the SCAQMD has established numeric indicators of significance specific to construction activity. Based on the indicators in the SCAQMD CEQA Air Quality Handbook, the Project would potentially cause or contribute to an exceedance of an ambient air quality standard if the following would occur:

- Regional construction emissions from both direct and indirect sources would exceed any of the following SCAQMD prescribed daily regional emissions thresholds:[98]
  - 75 pounds a day for VOC;
  - 100 pounds per day for NOx;
  - 550 pounds per day for CO;
  - 150 pounds per day for SO_2;
  - 150 pounds per day for PM_{10}; or
  - 55 pounds per day for $PM_{2.5}$.

95 South Coast Air Quality Management District, CEQA Air Quality Handbook, 1993, page 6-2.

96 While the SCAQMD CEQA Air Quality Handbook contains significance thresholds for lead, Project construction and operation would not include sources of lead emissions and would not exceed the established thresholds for lead. Unleaded fuel and unleaded paints have virtually eliminated lead emissions from commercial and residential land use projects. As a result, lead emissions are not further evaluated in this Draft EIR.

97 South Coast Air Quality Management District, CEQA Air Quality Handbook, 1993, page 6-2.

98 South Coast Air Quality Management District, SCAQMD Air Quality Significance Thresholds, March 2015. Available at http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf?sfvrsn=2. Accessed June 2017.

In addition, the SCAQMD has developed a methodology to assess the potential for localized emissions to cause an exceedance of applicable ambient air quality standards or ambient concentration limits. Impacts would be considered significant if the following would occur:

- Maximum daily localized emissions of NO_X and/or CO during construction are greater than the applicable localized significance thresholds, resulting in predicted ambient concentrations in the vicinity of the Project Site greater than the most stringent ambient air quality standards for NO_2 and/or CO.[99]
- Maximum daily localized emissions of PM_{10} and/or $PM_{2.5}$ during construction are greater than the applicable localized significance thresholds, resulting in predicted ambient concentrations in the vicinity of the Project Site to exceed 10.4 $\mu g/m^3$ over 24 hours (SCAQMD Rule 403 control requirement).

As discussed previously under Methodology, the SCAQMD has established screening criteria that can be used to determine the maximum allowable daily emissions that would satisfy the localized significance thresholds and therefore not cause or contribute to an exceedance of the applicable ambient air quality standards or ambient concentration limits without project-specific dispersion modeling. This analysis uses the screening criteria to evaluate impacts from localized emissions.

(2) Operational Emissions

The SCAQMD has established numerical emission indicators of significance for operations. The numerical emission indicators are based on the recognition that the Air Basin is a distinct geographic area with a critical air pollution problem for which ambient air quality standards have been promulgated to protect public health.[100] The SCAQMD has established numeric indicators of significance in part based on Section 182(e) of the CAA which identifies 10 tons per year of VOC as a significance level for stationary source emissions in extreme non-attainment areas for O_3.[101] As shown in Table 4.B-4, the Air Basin is designated as extreme non-attainment for O_3. The SCAQMD converted this significance level to pounds per day for O_3 precursor emissions (10 tons per year × 2,000 pounds per ton ÷ 365 days per year = 55 pounds per day). The numeric indicators for other pollutants are also based on federal stationary source significance levels. Based on the indicators in the SCAQMD CEQA Air Quality Handbook, the Project would potentially cause or contribute to an exceedance of an ambient air quality standard if the following would occur:

- Regional operational emissions exceed any of the following SCAQMD prescribed daily regional emissions thresholds:[102]
  - 55 pounds a day for VOC;
  - 55 pounds per day for NOx;

[99] South Coast Air Quality Management District, Final Localized Significance Threshold Methodology, 2008. Available at http://www.aqmd.gov/home/regulations/ceqa/air-quality-analysis-handbook/localized-significance-thresholds. Accessed March 2017.

[100] South Coast Air Quality Management District, CEQA Air Quality Handbook, 1993, page 6-2.

[101] South Coast Air Quality Management District, CEQA Air Quality Handbook, 1993, page 6-1.

[102] South Coast Air Quality Management District, SCAQMD Air Quality Significance Thresholds, March 2015. Available at http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf?sfvrsn=2. Accessed June 2017.

- 550 pounds per day for CO;
- 150 pounds per day for SO_2;
- 150 pounds per day for PM_{10}; or
- 55 pounds per day for $PM_{2.5}$.

In addition, the SCAQMD has developed a methodology to assess the potential for localized emissions to cause an exceedance of applicable ambient air quality standards. Impacts would be considered significant if the following were to occur:

- Maximum daily localized emissions of NO_X and/or CO during operation are greater than the applicable localized significance thresholds, resulting in predicted ambient concentrations in the vicinity of the project site greater than the most stringent ambient air quality standards for NO_2 and/or CO.[103]
- Maximum daily localized emissions of PM_{10} and/or $PM_{2.5}$ during operation are greater than the applicable localized significance thresholds, resulting in predicted ambient concentrations in the vicinity of the project site to exceed 2.5 $\mu g/m^3$ over 24 hours (SCAQMD Rule 1303 allowable change in concentration).

As discussed previously, the SCAQMD has established screening criteria that can be used to determine the maximum allowable daily emissions that would satisfy the localized significance thresholds and therefore not cause or contribute to an exceedance of the applicable ambient air quality standards or ambient concentration limits without project-specific dispersion modeling. This analysis uses the SCAQMD screening criteria to evaluate impacts from localized emissions.

(3) Carbon Monoxide Hotspots

With respect to the formation of CO hotspots, the Project would be considered significant if the following would occur:

- The Project would cause or contribute to an exceedance of the CAAQS one-hour or eight-hour CO standards of 20 or 9.0 parts per million (ppm), respectively.

(4) Toxic Air Contaminants

Based on criteria set forth by the SCAQMD, the Project would expose sensitive receptors to substantial concentrations of TACs if any of the following were to occur:[104]

- The Project would emit carcinogenic materials or TACs that exceed the maximum incremental cancer risk of ten in one million or a cancer burden greater than 0.5 excess cancer cases (in areas greater than or equal to 1 in 1 million) or an acute or chronic hazard index of 1.0.

As discussed previously, construction impacts <u>from</u>~~orm~~ TACs<u>, specifically DPM,</u> are evaluated <u>quantitatively in order to further substantiate the conclusions reached in the Draft EIR.</u> ~~qualitatively~~

[103] Ibid.

[104] South Coast Air Quality Management District, CEQA Air Quality Handbook, Chapter 6 (Determining the Air Quality Significance of a Project) and Chapter 10 (Assessing Toxic Air Pollutants), 1993. SCAQMD Air Quality Significance Thresholds, March 2011. Available at http://www.aqmd.gov/docs/default-source/ceqa/handbook/scaqmd-air-quality-significance-thresholds.pdf?sfvrsn=2. Accessed June 2017.

~~due to the sporadic and temporary emissions of TACs from construction equipment.~~ For operations, the impacts are analyzed qualitatively due to the limited and minimal sources of TACs associated with the Project.

c. Project Design Features

The Project incorporates project design features (PDFs) that would reduce operational emissions and target sustainable site development, water savings, energy efficiency, green-oriented materials selection, and improved indoor environmental quality. Building features would include installation of heating, ventilation, and air conditioning (HVAC) systems that use ozone-friendly refrigerants; use of materials and finishes that emit low quantities of VOCs; use of high efficiency fixtures and appliances, water conservation features; and recycling of solid wastes. The Project would also provide bicycle parking and designated parking for fuel-efficient, low-emitting, or carpool/van pool vehicles.

The following PDF would reduce air pollutant emissions as well as GHG emissions. To the extent they can be quantified, these features have been assumed in the impacts calculations, but all of these measures are considered in the consistency analysis:

PDF AQ-1 (Green Building Measures): The Project would be designed and operated to meet or exceed the applicable requirements of the California Green Building Standards Code and the City's Green Building Code. Green building features would include, but are not limited to the following:

- Expansion of existing recycling program for recycling paper, aluminum, magazines, cardboard, electronic waste, and plastic.
- Installation of low-flow water fixtures that meet the U.S. Environmental Protection Agency WaterSense standards or equivalent.
- Installation of lighting controls with occupancy sensors in indoor common areas to conserve energy and to take advantage of available natural light
- The parking structure on the 455 Continental Boulevard Parcel would be designed with occupancy-sensor controlled lighting that would place lighting fixtures in a low power state in unoccupied zones. A demonstration project by the United States Department of Energy indicated that the use of occupancy-sensor controlled lighting achieved a reduction of greater than 50 percent in lighting energy use compared to a similarly lighted parking structure without occupancy-sensor controls.[105] For the purposes of this assessment, compliance with this feature is assumed to achieve a minimum 50 percent reduction in the energy required for the parking structure.
- Use of reclaimed water for landscaping.
- Installation of efficient heating, ventilation, and air conditioning (HVAC) systems.
- Provision of designated parking for any combination of low-emitting, fuel efficient, and carpool/vanpool vehicles.

[105] United States Department of Energy, Building Technologies Office, SSL Demonstration: Parking Garage Lighting, Washington DC, June 2013. Available at https://www1.eere.energy.gov/buildings/publications/pdfs/ssl/deptoflabor_brief.pdf. Accessed May 2017.

- Installation of bicycle parking for employees.

d. Analysis of Project Impacts

(1) Air Quality Management Program

Threshold AQ-1: The Project would result in a significant impact if the Project would conflict with or obstruct the implementation of the applicable air quality plan.

Impact Statement AQ-1: The Project would not conflict with or obstruct implementation of relevant air quality policies in the Air Quality Management Plan. Therefore, impacts would be less than significant.

(a) Construction

Under this criterion, the SCAQMD recommends that lead agencies demonstrate that a project would not directly obstruct implementation of an applicable air quality plan and that a project be consistent with the assumptions upon which the air quality plan is based. The Project would result in an increase in short-term employment compared to existing conditions. Although the Project would require many workers over the construction process, these jobs would be temporary in nature. Construction jobs under the Project would not conflict with the long-term employment projections upon which the AQMP is based. Control strategies in the AQMP with potential applicability to short-term emissions from construction activities include strategies denoted in the AQMP as MOB-08 and MOB-10, which are intended to reduce emissions from on-road and off-road heavy-duty vehicles and equipment by accelerating replacement of older, emissions-prone engines with newer engines meeting more stringent emission standards. Project construction would not conflict with implementation of these strategies. Additionally, Project construction would comply with CARB requirements to minimize short-term emissions from on-road and off-road diesel equipment. Project construction would also comply with SCAQMD regulations for controlling fugitive dust pursuant to SCAQMD Rule 403.

Compliance with these requirements is consistent with and meets or exceeds the AQMP requirements for control strategies intended to reduce emissions from construction equipment and activities. Because Project construction activities would not conflict with the control strategies intended to reduce emissions from construction equipment, Project construction would not conflict with or obstruct implementation of the AQMP, and impacts would be less than significant.

(b) Operations

The AQMP was prepared to accommodate growth, reduce the levels of pollutants within the areas under the jurisdiction of SCAQMD, return clean air to the region, and minimize the impact on the economy. Projects that are considered consistent with the AQMP would not interfere with attainment because the growth is included in the projections used in the formulation of the AQMP. The Project Site is located is located in an urbanized area and is an infill development. The Project would utilize the existing transportation and utility infrastructure and would not require mechanisms, such as road extensions and infrastructure that would have an indirect effect on growth. The Project's new development is within the range of development anticipated within the

established SCAG regional forecast for the City and would not involve construction of major infrastructure or extension of existing infrastructure. The City's Zoning Map designates the three-parcel Project Site as Corporate Office. As designed the Project would result in a floor area ratio (FAR) of 1.6 for the 12.5 acre-site exceeding the City's General Plan FAR of 0.8. The Project would seek approval of a General Plan amendment, as well as a Zone Text amendment to increase the FAR from 0.8 to 1.6. With approvals of these amendments the Project would not result in long-term operational population or employment growth that exceeds planned growth projections. As the Project would not conflict with the growth projections in the AQMP, impacts would be less than significant.

(c) General Plan Air Quality Element

The City's General Plan defines Citywide policies regarding a range of City resources and services, some of which are relevant to air quality. The evaluation for consistency is found below in **Table 4.B-118,** *Comparison of the Project to Applicable Air Quality Policies of the General Plan*.

(2) Regional Impacts

Threshold AQ-2: The Project would result in a significant impact if the Project would violate any air quality standard or contribute substantially to an existing or projected air quality violation.

Impact Statement AIR-2: Construction and operation of the Project would not exceed the applicable SCAQMD daily regional numeric thresholds for VOC, NO_x, CO, SO_2, PM_{10}, or $PM_{2.5}$ Therefore, regional construction and operational emission impacts would be less than significant.

(a) Construction

Project construction would consist of two phases and these phases would not occur at the same time. Phase 1 would consist of the proposed improvements on the 455 Continental Boulevard Parcel and would take approximately 15.5 to 19.5 months. Phase 1 would commence during the first quarter of 2021 and would be complete by the third quarter of 2022. Phase 1 would have three stages of activity: demolition, site preparation/excavation, and construction. Demolition would involve removal of the existing private recreational facilities, landscaping and other minor improvements, which would take approximately two weeks. Site preparation and excavation for the proposed tower and parking structure would take from three to five months and construction is projected to take approximately 12 to 14 months.

Phase 2 of the buildout of the Continental Grand Campus Specific Plan would be the development of the 1955 East Grand Avenue Parcel and would take about 13 to 18 months. Phase 2 would start upon completion of Phase 1 and be complete by the first quarter of 2024. Similar to Phase 1, there would be three stages of activity: demolition, site preparation/excavation, and construction. Demolition of the existing building and surface parking lot would take approximately 4 months. Site preparation and excavation for the new structure would take approximately 2 months. Construction on the new building is projected to take approximately nine to 12 months.

Construction of the Project would require the use of heavy equipment during the demolition, grading, and excavation activities at the Project Site. During each stage of development, there would be a different mix of equipment including aerial lifts, air compressors, cement and mortar mixers, cranes, generator sets, graders, pavers, paving equipment, rollers, rough terrain forklifts, scrapers, tractor/loader/backhoe, water trucks, and welders.

The maximum daily construction emissions were estimated for each construction phase and parcel of the Project. Some individual construction phases potentially overlap and the maximum daily emissions account for the overlap in activities. The maximum daily emissions are predicted values for a representative worst-case day, and would not represent the emissions that would occur for every day of construction. Detailed emissions calculations are provided in Appendix B of this Draft EIR. Results of the criteria pollutant calculations are presented in **Table 4.B-54**, *Maximum Unmitigated Regional Construction Emissions*. These calculations include appropriate dust control measures required by SCAQMD Rule 403 (Control of Fugitive Dust) to be implemented during each phase of development. Therefore, with respect to regional emissions from construction activities, impacts would be less than significant.

(b) Operations

Operational criteria pollutant emissions were assessed for mobile, area, and stationary sources of the Project for the full buildout year (2024). Daily trip generation rates for the Project were provided in the Traffic Impact Study.[106] Operational emission estimates also incorporate the green building design features detailed in the Project Design Features, including increased energy efficiency measures. With regard to VOCs, SCAQMD Rule 1113 would be enforced that limits the VOC content of architectural coating emissions. Detailed emissions calculations are provided in Appendix B of this Draft EIR.

Results of the criteria pollutant calculations are presented in **Table 4.B-65.** *Maximum Unmitigated Regional Operational Emissions*. The net increase in operational-related daily emissions (Project emissions minus existing emissions) for the criteria and precursor pollutants (VOC, NO_X, CO, SO_2, PM_{10}, and $PM_{2.5}$) would not exceed SCAQMD thresholds of significance. Therefore, Project-related regional operational emissions would result in a less-than-significant impact.

(3) Non-Attainment Criteria Pollutants

Threshold AQ-3: The Project would result in a significant impact if the Project would result in a cumulatively considerable net increase of any criteria pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).

SOURCE: ESA PCR, 2017

Impact Statement AQ-3: The South Coast Air Basin is designated as non-attainment for O_3, PM_{10}, and $PM_{2.5}$ under federal and/or state ambient air quality standards. Construction and operation of the Project would not exceed the applicable SCAQMD significance thresholds for ozone precursor emissions (i.e., VOCs and NO_X), PM_{10}, or $PM_{2.5}$. Therefore, construction and operational emissions would be less than significant.

(a) Construction

The Project would result in the emission of criteria pollutants for which the project area is in non-attainment during both construction and operation. A significant impact may occur if a project would add a cumulatively considerable contribution of a federal or state non-attainment pollutant. The Air Basin is currently in non-attainment under federal or state standards for ozone, PM_{10}, and $PM_{2.5}$. The emissions from construction of the Project are not predicted to exceed any applicable SCAQMD regional or local impact threshold and therefore, are not expected to result in ground level concentrations that exceed the NAAQS or CAAQS. Therefore, the Project would not result in a cumulatively considerable net increase for non-attainment pollutants or ozone precursors and would result in a less than significant impact for construction emissions.

(b) Operations

Future operations would generate ozone precursors (i.e., VOCs and NO_X), CO, PM_{10}, and $PM_{2.5}$. Operational emissions would not exceed the SCAQMD regional or local thresholds and would not be expected to result in ground level concentrations that exceed the NAAQS or CAAQS. Since the project would not introduce any substantial stationary sources of emissions, Therefore, operation of the Project would not result in a cumulatively considerable net increase for non-attainment of criteria pollutants or ozone precursors. As a result, the project would result in a less than significant impact for operational emissions.

(4) Expose Sensitive Receptors to Substantial Pollutant Concentrations

Threshold AQ-4: The Project would result in a significant impact if the Project would expose sensitive receptors to substantial pollutant concentrations.

Impact Statement AQ-4: Construction and operation of the Project would not exceed the localized significance thresholds at off-site sensitive receptors. The Project would not cause or contribute to an exceedance of the CAAQS one-hour or eight-hour CO standards of 20 or 9.0 ppm, respectively. Therefore, CO hotspots impacts would be less than significant. Construction of the Project would not generate emissions of TACs (i.e., diesel PM) that would result in a significant health impact to off-site sensitive receptors. Operation of the Project would not include permanent sources (equipment, etc.) that would generate substantial long-term TAC emissions in excess of the health risk thresholds. Therefore, construction and operational TAC impacts would be less than significant.

(a) Localized Construction

The localized construction air quality analysis was conducted using the methodology described in the SCAQMD Localized Significance Threshold Methodology (June 2003, revised July 2008). The screening criteria provided in the methodology were used to determine localized construction emissions thresholds for the Project. The maximum daily localized emissions for each of the construction phases and localized significance thresholds are presented in **Table 4.B-7~~6~~,** *Maximum Unmitigated Localized Construction Emissions*. As shown therein, maximum localized construction emissions for sensitive receptors would not exceed the localized thresholds for NO_X, CO, PM_{10}, and $PM_{2.5}$. Therefore, with respect to localized construction emissions, impacts would be less than significant.

(b) Localized Operations

The localized operational air quality analysis was conducted using the methodology described in the SCAQMD Localized Significance Threshold Methodology (June 2003, revised July 2008). The screening criteria provided in the Localized Significance Threshold Methodology were used to determine localized operational emissions thresholds for the Project. The maximum daily localized emissions and localized significance thresholds are presented in **Table 4.B-8~~7~~,** *Maximum Unmitigated Localized Operational Emissions*. As shown therein, the increase in maximum localized operational emissions for sensitive receptors would not exceed the localized thresholds for NO_X, CO, PM_{10}, and $PM_{2.5}$. Therefore, with respect to localized operational emissions, impacts would be less than significant.

(c) Carbon Monoxide Hotspots

The potential for the Project to cause or contribute to CO hotspots is evaluated by comparing Project intersections (both intersection geometry and traffic volumes) with prior studies conducted by SCAQMD in support of their AQMPs and considering existing background CO concentrations. As discussed below, this comparison demonstrates that the Project would not cause or contribute considerably to the formation of CO hotspots, that CO concentrations at Project impacted intersections would remain well below the ambient air quality standards, and that no further CO analysis is warranted or required.

As shown previously in Table 4.B-2, CO levels in the Project area are substantially below the federal and state standards. Maximum CO levels in recent years are 2.0 ppm (one-hour average) and 1.4 ppm (eight-hour average) compared to the thresholds of 20 ppm (one-hour average) and 9.0 ppm (eight-hour average).

CO levels decreased dramatically in the Air Basin with the introduction of the catalytic converter in 1975. No exceedances of CO have been recorded at monitoring stations in the Air Basin for some time and the Air Basin is currently designated as a CO attainment area for both the CAAQS and NAAQS. Thus, it is not expected that CO levels at Project-impacted intersections would rise to the level of an exceedance of these standards.

Additionally, SCAQMD conducted CO modeling for the 2003 AQMP for the four worst-case intersections in the Air Basin: (1) Wilshire Boulevard and Veteran Avenue; (2) Sunset Boulevard and Highland Avenue; (3) La Cienega Boulevard and Century Boulevard; and (4) Long Beach Boulevard and Imperial Highway. In the 2003 AQMP, SCAQMD notes that the intersection of Wilshire Boulevard and Veteran Avenue is the most congested intersection in Los Angeles County, with an average daily traffic volume of approximately 100,000 vehicles per day. This intersection is located near the on- and off-ramps to Interstate 405 in West Los Angeles.

The evidence provided in the 2003 AQMP (Table 4-10 of Appendix V) shows that the peak modeled CO concentration due to vehicle emissions at these four intersections was 4.6 ppm (one-hour average) and 3.2 (eight-hour average) at Wilshire Boulevard and Veteran Avenue. When added to the today's existing background CO concentrations, the screening values would be 7.6 ppm (one-hour average) and 5.7 ppm (eight-hour average).

Based on the Project's Traffic Impact Study,[107] of the studied intersections that were found to operate at a Level of Service (LOS) F under future operational year plus Project conditions, one intersection would potentially have peak traffic volumes of approximately 82,280 per day. As a result, CO concentrations are expected to be less than those estimated in the 2003 AQMP, which

[107] Kimley-Horn and Associates, Inc. Traffic Impact Study for the Continental Grand Campus Specific Plan, May 2017.

would not exceed the thresholds. Thus, this comparison demonstrates that the Project would not contribute considerably to the formation of CO hotspots, and no further CO analysis is required. The Project would result in less than significant impacts with respect to CO hotspots.

(d) Toxic Air Contaminants

(i) Construction

The greatest potential for TAC emissions would be related to diesel particulate matter emissions associated with heavy equipment operations during demolition, grading, and site preparation activities. In addition, incidental amounts of toxic substances such as oils, solvents, and paints would be used. These products would comply with all applicable SCAQMD rules for their manufacture and use. The Project would be subject to several SCAQMD rules designed to limit exposure to TACs during construction activities. The Project would be required to comply with the CARB ATC~~CT~~M that limits diesel powered equipment and vehicle idling to no more than 5 minutes at a location, and the CARB In-Use Off-Road Diesel Vehicle Regulation. Compliance with these control measures would minimize emissions of TACs during construction. The Project would also incorporate appropriate dust control measures during site activities and transport of materials.

The Applicant would be required to comply with the requirements of SCAQMD Rule 1403 regarding the abatement and disposal of asbestos found during construction activities.[108] Rule 1403 regulates asbestos as a toxic material and controls the emissions of asbestos from demolition and renovation activities by specifying agency notifications, appropriate removal procedures, and handling and clean-up procedures. Rule 1403 applies to owners and operators involved in the demolition or renovation of Asbestos Containing Materials (ACM)-containing structures, asbestos storage facilities, and waste disposal sites. The requirements under Rule 1403 include: surveying structures for ACM; agency notification of intention to remove asbestos; ACM removal procedures and time schedules; ACM handling and clean-up procedures; ACM storage, disposal, and landfill requirements; and record keeping. In addition, any facility known to contain asbestos is required to have a written asbestos management plan (also known as an Operations and Maintenance [O&M] Program).

As discussed previously, the resulting health risk calculations were performed using a spreadsheet tool consistent with the OEHHA guidance. The spreadsheet tool incorporates the algorithms, equations, and a variable described above as well as in the OEHHA Guidance, and incorporates the results of the AERMOD dispersion model. **Table 4.B-9** presents the maximum incremental increase in cancer risk for construction. As shown below, the Project would not exceed the 10 in one million cancer risk threshold for the modeled receptor types. Therefore, Project impacts would be less than significant. The maximum impacted receptors for each scenario are shown in **Figure 1,** *Project Cancer Risk,* of Appendix A of this RPDEIR.

[108] Since the structure was built in 1978 it is possible that asbestos materials were used.

TABLE 4.B-9
CONSTRUCTION MAXIMUM INCREMENTAL INCREASE IN CANCER RISK

Receptor Type	Cancer Risk (chances in one million)
Off-Site Residential	2.2
Off-Site Worker	3.8
SCAQMD Cancer Risk Threshold (in one million)	10
Exceeds Threshold?	**No**

SOURCE: ESA, 2019.

Table 4.B-10 presents the chronic hazard indices for construction. As shown below, the Project would not result in a chronic hazard index greater than 1.0; therefore, chronic health risks would be less than significant. The maximum impacted receptors for each scenario are shown in **Figure 2,** *Project Chronic Health Risks* of Appendix A of this RPDEIR.

TABLE 4.B-10
CONSTRUCTION MAXIMUM CHRONIC HAZARD INDEX

Receptor Type	Chronic Hazard Index
Off-Site Residential	0.002
Off-Site Worker	0.03
SCAQMD Hazard Index Threshold	1.0
Exceeds Threshold?	**No**

SOURCE: ESA, 2019.

Based on the analysis above, the refined construction HRA results indicate that the residential and worker health impacts would be less than the applicable SCAMQD thresholds. Therefore, impacts from construction DPM exposure would be less than significant and no further analysis or mitigation measures are required.

~~Compliance with the above regulatory requirements and standard conditions of approval would minimize emissions of TACs during construction and would not result in long-term health risks to existing off-site sensitive populations. Based on the above, impacts to off-site sensitive receptors from criteria pollutants and TACs impacts would be less than significant and no mitigation measures would be necessary.~~

(ii) Operations

Project operations would generate minor amounts of diesel emissions from commercial delivery truck operations. The trucks would comply with the applicable provisions of the CARB Truck and

Bus regulation to minimize and reduce emissions from existing diesel trucks. Therefore, the Project operations would not be considered a substantial source of diesel particulates.

In addition, Project operations would result in minimal emissions of air toxics from maintenance or other ongoing activities, such as from the use of architectural coatings, landscaping, and cleaning products. As a result, toxic or carcinogenic air pollutants are not expected to occur in substantial amounts in conjunction with operation of the proposed office use within the Project site. Based on the uses expected on the Project site, potential long-term operational impacts associated with the release of TACs would be minimal and would not be expected to exceed SCAQMD thresholds of significance. Therefore, impacts would be less than significant.

TABLE 4.B-11~~8~~
COMPARISON OF THE PROJECT TO APPLICABLE AIR QUALITY POLICES OF THE GENERAL PLAN

Policy	Characteristics of the Proposed Project
Policy AQ1-1.1: It is the policy of the City of El Segundo that the City encourage businesses to adopt alternative work schedules and prepare guidelines to assist local businesses in the implementation of alternative work schedule programs.	**Consistent:** Mattel currently allows flexibility in employee's work schedule and operates a half day on Friday, which results in some reduction to peak hour employee trips. In addition, Mattel has a successful Transportation Demand Management (TDM) program that would be expanded to include the future employees of the Project. The benefits of the rideshare program are communicated through a dedicated section on the Mattel intranet, periodically through company newsletter, as well as communicated to new hires during the orientation process. Therefore, the Project would be consistent with this policy.
Policy AQ1-1.2: It is the policy of the City of El Segundo that businesses be encouraged to establish and maintain telecommuting or work-at-home programs to reduce employee work trips.	**Consistent:** As discussed above, Mattel has a successful TDM program that would be expanded to include the new buildings. While not providing specifically for telecommuting, Mattel provides a program to reduce the number of peak hour trips. Therefore, the Project would be supportive of this policy.
Policy AQ1-1.3: It is the policy of the City of El Segundo that Transportation System Management (TSM) plans provide a 30 percent reduction in vehicle ridership or the equivalent Average Vehicle Ridership (AVR) per commute vehicle.	**Consistent:** As indicated above, Mattel, Inc. has a successful TDM program in place, which would be expanded to the Project. Mattel has a documented 19 percent participation in its ride share program. Mattel has a designated employee who provides Transportation Management services and the program is promoted through the company intranet. The program would be expanded to include the Project. Therefore, the Project would be consistent with this policy.
Policy AQ3-1.1: It is the policy of the City of El Segundo that the City continue to require employers in existing congested areas of the City and developers of large new developments to adopt Transportation System Management (TSM) plans and provide incentives for the provision of transit support facilities.	**Consistent:** Currently, Mattel, Inc., has a successful TDM plan in place, which would be expanded to include the Project. The TDM plan would encourage ridesharing, carpooling and vanpooling. In addition, the Project is located within close proximity to public transit, including MTA, MAX, the Green Line, and Torrance Transit. When transfer opportunities are considered, the Project site is in one of the best served transit areas in the region. Mattel encourages employee ridership of public transit through employee awareness and convenient access to schedules and routes. Finally, the Project would provide amenities to accommodate alternative modes of transportation, such as bicycle racks, lockers, and on-site shower facilities for employees. Bicycle racks would be provided similar to those provided for the existing 333 Continental Boulevard building. Therefore, while

Policy	Characteristics of the Proposed Project
	incentives for the provision of transit are not provided, the proposed Project would encourage the use of alternative modes of transportation and therefore, would be supportive of this policy.
Policy AQ3-1.2: It is the policy of the City of El Segundo that it continue to require developer TSM plans to encourage trip reduction programs and development of transit and ridesharing facilities over highway capacity expansion in order to achieve and maintain mobility and air quality.	**Consistent:** As indicated above, Mattel has an active and successful TDM program, which serves to reduce vehicle trips. In addition, when transfer opportunities are considered, the Project Site is located in one of the best served transit areas in the region. Mattel encourages employee ridership of public transit through employee awareness and convenient access to schedules and routes. Therefore, the Project would be consistent with this policy.
Policy AQ5-1.1: It is the policy of the City of El Segundo that the City discourage the use of single-occupant vehicles in congested areas of the City by changing or modifying the availability and cost of parking.	**Consistent:** In support of Mattel's TDM program, preferential parking for high occupancy vehicles would be provided in the new parking structure and within the surface parking lot, similar to the preferential parking available at the existing parking structure for the 333 Continental Boulevard building. Therefore, the Project would be consistent with this policy.
Policy AQ10-1.3: It is the policy of the City of El Segundo that all new development projects meet or exceed requirements of the South Coast Air Quality Management District for reducing PM_{10} standards.	**Consistent:** The Project would comply with SCAQMD Rule 403, which regulates and minimizes fugitive dust emissions for development projects. In addition, all areas that are not developed with building or paved for access would be landscaped, which would reduce soil erosion on the site. Therefore, the Project would be consistent with the policy.
Policy AQ12-1.2: It is the policy of the City of El Segundo that the City encourage the incorporation of energy conservation features in the design of new projects and the installation of conservation devices in existing developments.	**Consistent:** The Project would comply the State Building Energy Efficiency Standards of Title 24 of the California Code of Regulations, which limit energy consumption in new buildings. The efficiency standards regulate energy consumed for heating, cooling, ventilation, water heating, and lighting within new construction, and are enforced through the building permit process. Therefore, the Project would be consistent with the policy.
Policy AQ12-1.4: It is the policy of the City of El Segundo that new construction not preclude the use of solar energy systems by uses and buildings on adjacent properties and consider enactment of a comprehensive solar access ordinance.	**Consistent:** Given the distance between buildings and the building orientation, the Project would not preclude the use of solar energy systems on adjacent properties to the north.

e. Cumulative Impacts

The SCAQMD CEQA Air Quality Handbook states that the "Handbook is intended to provide local governments, project proponents, and consultants who prepare environmental documents with guidance for analyzing and mitigating air quality impacts of projects."[109] The SCAQMD CEQA Air Quality Handbook also states that "[f]rom an air quality perspective, the impact of a project is determined by examining the types and levels of emissions generated by the project and its impact on factors that affect air quality. As such, projects should be evaluated in terms of air pollution thresholds established by the District."[110] The SCAQMD has also provided guidance on an

[109] South Coast Air Quality Management District, CEQA Air Quality Handbook, 1993, page iii.
[110] South Coast Air Quality Management District, CEQA Air Quality Handbook, 1993, page 6-1.

acceptable approach to addressing the cumulative impacts issue for air quality as discussed below:[111]

> *As Lead Agency, the AQMD uses the same significance thresholds for project specific and cumulative impacts for all environmental topics analyzed in an Environmental Assessment or EIR… Projects that exceed the Project-specific significance thresholds are considered by the SCAQMD to be cumulatively considerable. This is the reason project-specific and cumulative significance thresholds are the same. Conversely, projects that do not exceed the project-specific thresholds are generally not considered to be cumulatively significant.*

Because the City has not adopted specific Citywide significance thresholds for air quality impacts, it is appropriate to rely on thresholds established by the SCAQMD (refer to CEQA Guidelines Section 15064.7). While it may be possible to add emissions from the list of related projects and the Project, it would not provide meaningful data for evaluating cumulative impacts under CEQA because neither the City nor the SCAQMD have established numerical thresholds applicable to the summation of multiple project emissions for comparison purposes. Additionally, regional emissions from a project have the potential to affect the whole Air Basin and unlike other environmental issues areas, such as aesthetics or noise, it is not possible to establish a geographical radius from a specific project site where potential cumulative impacts from regional emissions would be limited. Meteorological factors, such as wind, can disperse pollutants, often times tens of miles downwind from a project site. Therefore, consistent with accepted and established SCAQMD cumulative impact evaluation methodologies, the potential for the Project to results in cumulative impacts from regional emissions is assessed based on the SCAQMD thresholds.

(1) Construction

The Project would result in emissions of criteria air pollutants for which the region is in non-attainment during both construction and operation. The Air Basin fails to meet NAAQS for O_3 and $PM_{2.5}$, and therefore is considered a federal "non-attainment" area for these pollutants. SCAQMD has designed significance thresholds to assist the region in attaining the applicable CAAQS and NAAQS, apply to both primary (criteria and precursor) and secondary pollutants (O_3). Although the Project Site is located in a region that is in non-attainment for O_3 and $PM_{2.5}$, the emissions associated with Project construction would not be cumulatively considerable, as the emissions would fall below SCAQMD daily regional significance thresholds.

Any quantitative analysis to ascertain daily construction emissions that assumes multiple, concurrent construction projects would be speculative. SCAQMD recommends that project-specific air quality impacts be used to determine the potential cumulative impacts to regional air quality.

With respect to the Project's short-term construction-related air quality emissions and cumulative conditions, SCAQMD has developed strategies to reduce criteria pollutant emissions outlined in

[111] South Coast Air Quality Management District, Cumulative Impacts White Paper, Appendix D. Available at http://www.aqmd.gov/docs/default-source/Agendas/Environmental-Justice/cumulative-impacts-working-group/cumulative-impacts-white-paper-appendix.pdf?sfvrsn=4. Accessed May 2017.

the AQMP pursuant to the federal CAA mandates. Construction of the Project would comply with SCAQMD Rule 403 requirement, which focuses on reducing fugitive dust emissions and the ATCM to limit heavy duty diesel motor vehicle idling to no more than 5 minutes at any given time. In addition, the Project would utilize a construction contractor(s) that complies with required and applicable BACT and the In-Use Off-Road Diesel Vehicle Regulation. Per SCAQMD rules and mandates, as well as the CEQA requirement that significant impacts be mitigated to the extent feasible, these same requirements (i.e., Rule 403 compliance, the implementation of all feasible mitigation measures, and compliance with adopted AQMP emissions control measures) would also be imposed on construction projects in the Air Basin, which would include the cumulative projects in the Project Area. Consistent with SCAQMD guidance for cumulative impacts, regional and localized emissions would be less than SCAQMD significance thresholds as shown above in Table 4.B-5~~4~~ and Table 4.B-7~~6~~. As such, the Project's contribution to cumulatively significant construction impacts to air quality would not be cumulatively considerable and cumulative impacts would be less than significant for regional and localized criteria pollutants during construction.

(2) Operation

SCAQMD's approach for assessing cumulative impacts related to operations or long-term implementation is based on attainment of ambient air quality standards in accordance with the requirements of the federal CAA and California CAA. As discussed earlier, SCAQMD has developed a comprehensive plan, the AQMP, which addresses the region's cumulative air quality condition.

A significant impact may occur if a project would add a cumulatively considerable contribution of a federal or California non-attainment pollutant. Because the Los Angeles County portion of the Air Basin is currently in non-attainment for ozone, NO_2, PM_{10}, and $PM_{2.5}$, cumulative projects could exceed an air quality standard or contribute to an existing or projected air quality exceedance. Cumulative impacts to air quality are evaluated under two sets of thresholds for CEQA and SCAQMD. In particular, Section 15064(h)(3) of the CEQA Guidelines provides guidance in determining the significance of cumulative impacts, which states in part that:

> *A lead agency may determine that a project's incremental contribution to a cumulative effect is not cumulatively considerable if the project will comply with the requirements in a previously approved plan or mitigation program which provides specific requirements that will avoid or substantially lessen the cumulative problem (e.g., water quality control plan, air quality plan, integrated waste management plan) within the geographic area in which the project is located. Such plans or programs must be specified in law or adopted by the public agency with jurisdiction over the affected resources through a public review process to implement, interpret, or make specific the law enforced or administered by the public agency.*

For purposes of the cumulative air quality analysis with respect to CEQA Guidelines Section 15064(h)(3), the Project's incremental contribution to cumulative air quality impacts is determined based on compliance with the AQMP. The Project would not conflict with or obstruct implementation of AQMP and would be consistent with the growth projections in the AQMP.

Nonetheless, SCAQMD no longer recommends relying solely upon consistency with the AQMP as an appropriate methodology for assessing cumulative air quality impacts. SCAQMD recommends that project-specific air quality impacts be used to determine the potential cumulative impacts to regional air quality. The Project's regional and localized emissions would be below SCAQMD significance thresholds as shown in Table 4.B-6~~5~~ and Table 4.B-8~~7~~. Therefore, the Project's incremental contribution to long-term emissions of non-attainment pollutants and ozone precursors, considered together with cumulative projects, would not be cumulatively considerable, and therefore the cumulative impact of the Project would be less than significant.

4. Mitigation Measures

Mitigation measures are not required since Project construction and operational impacts would be less than significant.

5. Level of Significance After Mitigation

Impacts relative to air quality would be less than significant and no mitigation measures are required.

4.J. Transportation and Circulation

This section contains the following revisions to the 2017 Draft EIR:
- *Expands the study area to the east to include four additional intersections.*
- *Provides an updated cumulative traffic analysis.*

1. Introduction

This section describes the potential impacts of construction and operation of the Project on transportation facilities. The analysis summarizes the Revised Traffic Impact Study, provided in Appendix C of this RPDEIR, prepared by Kimley-Horn and Associates, Inc. The section analyzes construction traffic; intersection capacity (revised); the regional transportation system; public transit; and safety with regard to pedestrian and bicycle safety. The evaluation of intersection capacity examines the impact of the Project relative to existing and future conditions. ~~This section is based on the Traffic Impact Study, provided in Appendix H of this EIR, prepared by Kimley-Horn and Associates, Inc.~~

2. Environmental Setting

a. Existing Conditions

(1) Local and Regional Access

Regional access to the Project Site is provided by the Century Freeway (I-105), which is oriented in an east-west direction approximately three-quarters of a mile north of the Project Site. Regional access is also provided via the San Diego Freeway (I-405) which is a north-south major travel corridor approximately 1.5 miles east of the Project Site, with a full interchange at Imperial Highway and at El Segundo Boulevard. Local access to the project site is provided by the following local roadways:

~~Sepulveda Boulevard~~ Pacific Coast Highway (State ~~Highway~~ Route 1)[1] is classified as a Major Arterial and is a designated truck route on the City of El Segundo (City) Circulation Element of the General Plan. ~~Sepulveda Boulevard~~ Pacific Coast Highway is a north-south arterial located approximately 1,200 feet west of the Site. This roadway provides four travel lanes in each direction with a raised landscaped median in the Project vicinity. Sidewalks are provided and parking is prohibited along both sides of ~~Sepulveda Boulevard~~ the street. The posted speed limit in the Project vicinity is 40 miles per hour (mph).

Continental Boulevard, which is classified as a Secondary Arterial, is a north-south street that forms the eastern boundary of the Project Site. It has three lanes in each direction with a landscaped median from Mariposa Avenue on the north to El Segundo Boulevard on the south. Sidewalks are

[1] The portion of Pacific Coast Highway through the study area was previously named Sepulveda Boulevard. It was renamed Pacific Coast Highway in 2017. Therefore, this section is updated throughout to reflect the name change.

provided and parking is prohibited along both sides of the street, and the posted speed limit is 30 mph. Continental Boulevard is classified as a Secondary Arterial on the Circulation Element.

Nash Street, which is classified as a Secondary Arterial, is a north-south street located approximately 1,200 feet east of the Project Site. It has two lanes in each direction and connects Imperial Highway on the north to El Segundo Boulevard on the south. Sidewalks are provided on both sides of the street. Nash Street terminates at the westbound I-105 (Glenn Anderson Freeway) off-ramp at Imperial Highway. Parking is prohibited along both sides of Nash Street and the posted speed limit is 35 mph.

Douglas Street, which is classified as a Secondary Arterial, is a six-lane north-south arterial located approximately one-half mile east of the Project Site. Douglas Street provides a connection between Imperial Highway and Rosecrans Avenue through the industrial/manufacturing/ aerospace area of El Segundo. Sidewalks are provided along both sides of the street. The posted speed limit on Douglas Street is 40 mph. South of El Segundo Boulevard, Douglas Street narrows to four lanes and the speed limit is reduced to 25 mph north of Rosecrans Avenue.

Aviation Boulevard is classified as a Major Arterial and is a designated truck route on the Circulation Element of the General Plan. Aviation Boulevard is a north-south arterial located approximately three-quarters of a mile east of the Project Site. A sidewalk is provided along the east side of Aviation Boulevard. Parking is prohibited along both sides of the street. The posted speed limit is 40 mph.

Imperial Highway is classified as a Secondary Arterial and is a designated truck route on the Circulation Element of the General Plan. Imperial Highway is an east-west arterial extending from the City eastward into Orange County. Imperial Highway forms the southern boundary of the Los Angeles International Airport, and runs under and parallel to the Century Freeway (I-105). In the Project vicinity, Imperial Highway provides three travel lanes in each direction, separated by a raised median. The roadway narrows to two lanes in each direction approximately one-half mile west of ~~Sepulveda Boulevard~~ Pacific Coast Highway. Sidewalks are provided along both sides of the street. The speed limit on Imperial Highway in the Project vicinity is posted at 40 mph.

Walnut Avenue, which is classified as a Secondary Arterial, is an east-west street located approximately one-half mile north of the Project Site. Walnut Avenue provides one travel lane in each direction. Sidewalks are provided along both sides of the street. Parking is allowed on both sides of Walnut Avenue. To the east of ~~Sepulveda Boulevard~~ Pacific Coast Highway, Walnut Avenue terminates at Selby Street.

Maple Avenue, which is classified as a Collector to the east of ~~Sepulveda Boulevard~~ Pacific Coast Highway and as a Local Street to the west of ~~Sepulveda Boulevard~~ Pacific Coast Highway, is located approximately 2,000 feet north of the Project Site. Maple Avenue provides one lane in each direction to the west of ~~Sepulveda Boulevard~~ Pacific Coast Highway, and two lanes in each direction to the east of ~~Sepulveda Boulevard~~ Pacific Coast Highway. Sidewalks are provided and on-street parking is allowed on both sides of the street.

Mariposa Avenue, which is classified as a Secondary Arterial east of ~~Sepulveda Boulevard~~ Pacific Coast Highway and a two-lane Collector west of ~~Sepulveda Boulevard~~ Pacific Coast Highway, is a four-lane roadway located approximately 1,100 feet north of the Project Site. Mariposa Avenue connects Douglas Street on the east to the residential area of El Segundo on the west side of the City. Sidewalks are provided along both sides of the street. The posted speed limit is 40 mph.

Grand Avenue, which is classified as a Secondary Arterial and is a designated truck route west of ~~Sepulveda Boulevard~~ Pacific Coast Highway, forms the southern border of the Project Site. Grand Avenue begins at Duley Road on the east and extends westerly through the City's downtown area to Vista del Mar, near the Pacific Ocean. In the Project vicinity, Grand Avenue has two lanes east of Nash Street and six lanes west of Nash Street. Sidewalks are provided along both sides of the street. The posted speed limit on Grand Avenue is 35 mph.

El Segundo Boulevard is classified as a Secondary Arterial west of ~~Sepulveda Boulevard~~ Pacific Coast Highway and a Major Arterial east of ~~Sepulveda Boulevard~~ Pacific Coast Highway. El Segundo Boulevard, which is an east-west arterial located approximately one-quarter mile south of the Project Site, is a designated truck route. El Segundo Boulevard extends from near the Pacific Ocean through the City to the San Diego Freeway and beyond. The posted speed limit in the Project vicinity is 40 mph. Sidewalks are provided along both sides of the street.

Isis Avenue is a north-south local street located in the City of Hawthorne and County of Los Angeles. Isis Avenue extends north from El Segundo Boulevard, to 116th Street and has one lane in each direction. The posted speed limit is 25 mph. Parking is allowed on both sides of the street.

La Cienega Boulevard is a north-south arterial located in the City of Hawthorne and County of Los Angeles. La Cienega Boulevard runs through Hawthorne, from El Segundo Boulevard north to the City's boundary. The posted speed limit is 40 mph, and parking is restricted on both sides of the street.

(2) Study Area

Weekday morning and evening peak hours were evaluated at a total of ~~16~~ 20 study intersections, which were selected through consultation with City Staff. **Table 4.J-1**, *Study Intersections*, lists the ~~16~~ 20 intersections within the Study Area and provides the jurisdiction. As shown in Table 4.J-1, nine of the study intersections are under City of El Segundo jurisdiction, two are under City of Hawthorne jurisdiction, and ~~seven~~ nine are under Caltrans jurisdiction. **Figure 4.J-1**, *Study Intersection Locations, Lane Configuration, and Traffic Control (Revised)*, shows the locations of the study area intersections, as well as existing lane configurations and traffic control.

Figure 4.J-1

Study Intersection Locations, Lane Configuration, and Traffic Control (Revised)

The freeway mainline analysis was conducted on the I-405 Freeway between Century Boulevard and Rosecrans Avenue, and on the I-105 Freeway between ~~Sepulveda Boulevard~~ Pacific Coast Highway and Hawthorne Boulevard. Traffic was evaluated in both directions for the following six mainline freeway segments during the AM and PM peak hours:

I-405

- Southbound
  1. Century Boulevard to I-105
  2. I-105 to El Segundo Boulevard
  3. El Segundo Boulevard to Rosecrans Avenue
- Northbound
  1. Rosecrans Avenue to El Segundo Boulevard
  2. El Segundo Boulevard to I-105
  3. I-105 to Century Boulevard

I-105

- Westbound
  1. Hawthorne Boulevard to I-405
  2. I-405 to Douglas Street
  3. Douglas Street to ~~Sepulveda Boulevard~~ Pacific Coast Highway
- Eastbound
  1. ~~Sepulveda Boulevard~~ Pacific Coast Highway to Douglas Street
  2. Douglas Street to I-405
  3. I-405 to Hawthorne Boulevard

(3) Existing Intersection Operating Conditions

All of the study intersections for this analysis are signalized. Peak hour operating conditions at signalized intersections were evaluated using the Intersection Capacity Utilization (ICU) methodology, in accordance with the City and Los Angeles County Congestion Management Program (CMP) requirements. The ICU methodology provides a comparison of the number of vehicles passing through an intersection to the theoretical hourly vehicular capacity of that intersection during a given hour.

The ICU calculation results in a volume-to-capacity (V/C) ratio that translates into a corresponding Level of Service (LOS) measure, ranging from LOS A, representing uncongested, free-flowing conditions; to LOS F, representing over-capacity conditions. **Table 4.J-2**, *Level of Service Descriptions – ICU Methodology*, provides a description of each LOS grade and the corresponding V/C ratio.

TABLE 4.J-2
LEVEL OF SERVICE DESCRIPTIONS – ICU METHODOLOGY

Level of Service	V/C Ratio	Definition
A	0.000 - 0.600	EXCELLENT. No vehicle waits longer than one red light and no approach phase is fully used.
B	0.601 - 0.700	VERY GOOD. An occasional approach phase is fully utilized; many drivers begin to feel somewhat restricted within groups of vehicles.
C	0.701 - 0.800	GOOD. Occasionally drivers may have to wait through more than one red light; backups may develop behind turning vehicles.
D	0.801 - 0.900	FAIR. Delays may be substantial during portions of the rush hours, but enough lower volume periods occur to permit clearing of developing lines, preventing excessive backups.
E	0.901 - 1.000	POOR. Represents the most vehicles intersection approaches can accommodate; may be long lines of waiting vehicles through several signal cycles.
F	> 1.000	FAILURE. Backups from nearby locations or on cross streets may restrict or prevent movement of vehicles out of the intersection approaches. Tremendous delays with continuously increasing queue lengths.

SOURCE: Transportation Research Board, Transportation Research Circular No. 212, Interim Materials on Highway Capacity, 1980.

Peak hour operating conditions at the unsignalized project driveway intersections and at intersections along ~~Sepulveda Boulevard~~ Pacific Coast Highway, which are under Caltrans' jurisdiction, were analyzed using the Highway Capacity Manual (HCM) delay methodology in accordance with the Caltrans *Guide for the Preparation of Traffic Impact Studies*.

The HCM delay values ~~translate~~ correspond to LOS designations, also ranging from LOS A to LOS F. **Table 4.J-3**, *Level of Service and Delay Ranges – HCM Methodology*, provides a summary of the delay ranges for each LOS grade. Caltrans endeavors to maintain a target LOS at the transition between LOS C and LOS D on State Highway facilities.

TABLE 4.J-3
LEVEL OF SERVICE AND DELAY RANGES – HCM METHODOLOGY

Level of Service	Signalized Intersection (Average delay per vehicle, in seconds)	Unsignalized Intersection (Average delay per vehicle, in seconds)
A	0 - 10	0 – 10
B	> 10 – 20	> 10 – 15
C	> 20 – 35	> 15 – 25
D	> 35 – 55	> 25 – 35
E	> 55 – 80	> 35 – 50
F	> 80	> 50

SOURCE: Highway Capacity Manual (HCM 2010), Exhibits 18-4, 19-1, and 20-2.

Table 4.J-4, *Intersection Operations – Existing Conditions*, provides a summary of conditions using both the ICU and HCM methodologies.[2] As shown in Table 4.J-4 all study intersections currently operate at LOS D or better during both peak hours, with the exception of the following:

- No. 1 – ~~Sepulveda Boulevard~~ Pacific Coast Highway at Imperial Highway (ICU) – PM LOS E~~)~~
- No. 16 – Aviation Boulevard at El Segundo Boulevard (ICU) – PM LOS E~~)~~

(4) Existing Freeway Operating Conditions

An analysis of freeway mainline segments in the Project vicinity was conducted in accordance with the *Caltrans Guide for the Preparation of Traffic Impact Studies*, which specifies application of the HCM methodology for freeway analysis. Freeway analysis results are expressed in terms of density, which measures the number of passenger cars per lane mile (pc/mi/ln) on the freeway mainline.

Table 4.J-5, *Freeway Segment Operations – Existing Conditions*, provides existing peak hour freeway volumes and analysis results for the morning and evening peak hours, by segment, and by direction. As shown in Table 4.J-5, each freeway segment currently operates at LOS D or better in each direction, and in both peak hours, with the exception of the I-405 southbound segment between El Segundo Boulevard and Rosecrans Avenue, which currently operates at LOS E in the evening peak hour.

TABLE 4.J-5
FREEWAY SEGMENT OPERATIONS – EXISTING CONDITIONS

Freeway Segment	Lanes	AM Peak Hour Volume	AM Peak Hour Density (pc/mi/ln)	AM Peak Hour LOS	PM Peak Hour Volume	PM Peak Hour Density (pc/mi/ln)	PM Peak Hour LOS

(5) Public Transit

Public transportation services for the Project area are provided by the Los Angeles County Metropolitan Transportation Authority (Metro), the Los Angeles Department of Transportation (LADOT), and other local transit services, as described below. The LADOT operates Commuter Express (CE) lines to facilitate commuter travel to downtown Los Angeles and other employment destinations during the morning and afternoon commute hours.

Metro Bus Line 232 travels mainly north-south along ~~Sepulveda Boulevard~~ Pacific Coast Highway in the Project vicinity, with a one-way loop via Mariposa Avenue, Nash Street, and Grand Avenue. Line 232 originates at LAX and travels south on ~~Sepulveda Boulevard~~ Pacific Coast Highway through the cities of Manhattan Beach, Hermosa Beach, and Redondo Beach, then turns eastward on Pacific Coast Highway, terminating at the Transit Mall in the City of Long Beach. Line 232 operates with headways (the interval between arrivals) of 10-15 minutes during the weekday peak commuting hours, and 20-60 minutes during other hours. Line 232 operates on the weekends with headways of 30 minutes during the day and 40-60 minutes in the evenings. The bus stop closest to the Project Site is located on Grand Avenue west of Continental Boulevard, adjacent to the Project Site.

The Metro Green Line is a light rail system that travels between Redondo Beach and Norwalk every day of the week with headways of six to eight minutes during weekday peak hours and 15-20 minutes during non-peak hours and weekends. The Green Line stations in the vicinity of the Project are the El Segundo Station, located near the intersection of El Segundo Boulevard at Nash Street (approximately one-half mile from the Project Site); the Mariposa Station, located at the intersection of Mariposa Avenue and Nash Street (approximately one-half mile from the project site); and the Aviation/LAX Station, located at the intersection of Aviation Boulevard and Imperial Highway (approximately one and one-half mile from the Project Site).

LADOT Commuter Express 574 serves the communities of El Segundo, Manhattan Beach, Redondo Beach, and Hermosa Beach via ~~Sepulveda Boulevard~~ Pacific Coast Highway, El Segundo Boulevard, and Aviation Boulevard. Line 574 operates southbound only during weekday mornings and northbound during the evenings, and travels non-stop via the I-405 Freeway between Space Park Drive at Aviation Boulevard in El Segundo, and the Sylmar/Encino area. Line 574 operates on 30- to 60-minute headways during the morning and afternoon commute periods (5:20 to 8:56 AM and 3:35 to 7:42 PM) on weekdays only. Line 574 stops at the bus stop located at the corner of Grand Avenue and Continental Boulevard.

Torrance Transit Line 8 originates at the LAX Transit Center and travels south via ~~Sepulveda Boulevard~~ Pacific Coast Highway, Nash Street, and Aviation Boulevard to the City of Torrance. Line 8 has headways of approximately 30 minutes on weekdays and provides limited service on weekends with 30- to 60-minute headways. The nearest bus stop is located near the corner of Grand Avenue at Nash Street.

City of Redondo Beach - Beach Cities Transit Line 109 operates between the cities of El Segundo and Redondo Beach, and provides service to Downtown Manhattan Beach, Downtown El Segundo, Plaza El Segundo, the Douglas and Aviation Green Line Stations, the LAX City Bus Center, and other areas. Line 109 travels along Imperial Avenue, Main Street, Grand Avenue, and ~~Sepulveda Boulevard~~ Pacific Coast Highway in the vicinity of the Project Site. This bus line operates with headways of 30 to 45 minutes on weekdays and one hour on weekends.

City of El Segundo - Lunchtime Shuttle: The City operates a Lunchtime Shuttle to connect the corporate business area on the east side of the city with the downtown area on the west side of the City. The shuttle operates free of charge, Monday through Friday from 11:30 AM to 2:15 PM, with 10-minute headways. The shuttle does not run on weekends or holidays. The Lunchtime Shuttle stops closest to the Project Site are located on Continental Boulevard between Mariposa Avenue and Grand Avenue; and on Grand Avenue, between Continental Boulevard and Nash Street.

b. Regulatory Framework

(1) State

(a) California Department of Transportation

The California Department of Transportation (Caltrans) publishes the *Guide for the Preparation of Traffic Impact Studies* (Guide), which provides guidelines and recommended elements of traffic studies for projects that could potentially impact state facilities such as State Route highways and freeway facilities. This is a State-level document that is used by each of the Caltrans District offices.

The Guide defines when traffic studies should be conducted to address impacts to state facilities, but does not define quantitative impact standards. The Guide states that Measures of Effectiveness (MOEs) are used to evaluate Caltrans facilities, and that Caltrans strives to maintain a LOS value of C on its facilities. However, the Guide states that the appropriate target LOS varies by facility and congestion level, and is defined differently by Caltrans depending on the analyzed facility.

(b) Senate Bill No. 743

On September 27, 2013, Governor Brown signed Senate Bill (SB) 743, which became effective on January 1, 2014. The purpose of SB 743 is to streamline the review under the California Environmental Quality Act (CEQA) for several categories of development projects including the development of infill projects in transit priority areas and to balance the needs of congestion management with Statewide goals related to infill development, promotion of public health through active transportation, and reduction of greenhouse gas emissions. SB 743 adds Chapter 2.7: Modernization of Transportation Analysis for Transit Oriented Infill Projects to the CEQA Statute (Section 21099). Section 21099(d)(1) provides that aesthetic and parking impacts of a residential, mixed-use residential, or employment center project on an infill site within a transit priority area shall not be considered significant impacts on the environment. In addition, SB 743 will result in a change in the metrics for determining impacts relative to the transportation network through the development of new methodologies for traffic analyses for CEQA documents to promote the State's goals of reducing greenhouse gas emissions and traffic-related air pollution, promoting the development of multimodal transportation system, and providing clean, efficient access to destinations.

Currently, environmental review of transportation impacts focuses on the delay that vehicles experience at intersections and on roadway segments, which is often measured using LOS. Mitigation for increased delay often involves widening a roadway or the size of an intersection, which increases capacity and may therefore, increase auto use and emissions and discourage alternative forms of transportation. Under SB 743, the focus of transportation analysis will shift from driver delay to reduction of greenhouse gas emissions, creation of multimodal networks, and promotion of a mix of land uses.

In accordance with SB 743, the new CEQA Guidelines section 15064.3, subdivision (b) was adopted in December 2018 by the California Natural Resources Agency. These revisions to the CEQA Guidelines criteria for determining the significance of transportation impacts are primarily focused on projects within transit priority areas, and shifts the focus from driver delay to reduction of greenhouse gas emissions, creation of multimodal networks, and promotion of a mix of land uses. Vehicle miles traveled, or VMT, is a measure of the total number of miles driven to or from a development and is sometimes expressed as an average per trip or per person.

The newly adopted guidance provides that a lead agency may elect to be governed by the provisions of this section immediately. However, beginning on July 1, 2020, the provisions of this section shall apply statewide. The City is currently engaged in this process and has not yet formally adopted its updated transportation significance thresholds or its updated transportation impact analysis procedures. Since the regulations of SB 743 have not been finalized or adopted by the City, delay and LOS are the measures used in this EIR to determine the significance of transportation impacts. ~~Among other things, SB 743 requires that the Office of Planning and Research (OPR) prepare revisions to the CEQA Guidelines criteria for determining the significance of transportation impacts of projects within transit priority areas. OPR will submit the proposed changes to the Secretary of the Natural Resources Agency to certify and adopt. In August 2014 OPR released a report entitled "Updating Transportation Impacts Analysis in the CEQA Guidelines" for public comment. The report contained a new proposed Section 15064.3 to the CEQA Guidelines as well~~

~~as proposed amendments to Appendix F (Energy Conservation) and Appendix G (Initial Study Checklist) of the CEQA Guidelines. The comment period closed November 21, 2014 and OPR reviewed and considered comments to determine if revisions were needed. OPR conducted many months of intensive engagement with the public, public agencies, environmental organizations, development advocates, industry experts, and many others, regarding the analysis of transportation impacts. On January 20, 2016 OPR released a Notice of Availability for the Revised Proposal on Updates to the CEQA Guidelines on Evaluating Transportation Impacts in CEQA. The comment period closed on February 29, 2016. After substantial study and public comment throughout the process, it is expected that OPR will submit a set of final revisions to the Natural Resources Agency in mid-2017. The subsequent "rulemaking" process is anticipated to take approximately 6 months and SB 743 is expected to go into effect in late 2017/early 2018.~~

(2) Regional

(a) Los Angeles County Metropolitan Transportation Authority

The Los Angeles County Metropolitan Transportation Authority (Metro) is responsible for the continuous improvement of an efficient and effective transportation system for the County of Los Angeles. Metro's service area covers approximately 1,433 square miles. Government Code Section 65089 requires that a congestion management program be developed, adopted, and updated biennially for every county that includes an urbanized area and requires that it include every city and the county government within that county. As the Congestion Management Agency for Los Angeles County, Metro is responsible for implementing the CMP for the County.

Since 1990, the CMP has become an effective tool in linking transportation, land use, and air quality decisions for the County. The CMP addresses the impact of local growth on the regional transportation system. Statutory elements of the CMP include Highway and Roadway System monitoring, multi-modal system performance analysis, the Transportation Demand Management Program, the Land Use Analysis Program, and local conformance for all of the County's jurisdictions.

(i) Congestion Management Program

Every county in California is required to develop a CMP that examines the relationships between land use, transportation, and air quality. The CMP addresses the impact of local growth on the regional transportation system. In 1990, Proposition 111 (the "Traffic Congestion Relief and Spending Limitation Act of 1990") amended the California Constitution by, among other things, establishing a nine cent per gallon gas tax, staged over a five-year period, for the purpose of funding transportation-related improvements statewide. In order to be eligible for the revenues associated with Proposition 111, Government Code §65089 requires that a CMP be developed, adopted, and updated biennially for every county that includes an urbanized area and shall include every city and the county government within that county. Statutory elements of the CMP include Highway and Roadway System monitoring, multi-modal system performance analysis, the Transportation Demand Management Program, the Land Use Analysis Program, and local conformance for all the county's jurisdictions.

As the Congestion Management Agency for Los Angeles County, Metro is responsible for implementing Los Angeles County's CMP. Metro serves as Los Angeles County's transportation planner and coordinator, designer, builder and operator.

The purpose of the CMP is to develop a coordinated approach to managing and decreasing traffic congestion by linking the various transportation, land use and air quality planning programs throughout the County. The program is consistent with that of the Regional Transportation Plan / Sustainable Communities Strategy (RTP/SCS) prepared by the Southern California Association of Governments (SCAG). The CMP program requires review of significant individual projects, which might on their own impact the CMP transportation system.

The CMP requires an EIR to evaluate traffic and public transit impact analyses for select regional facilities based on the quantity of project traffic expected to use those facilities. Metro's 2010 CMP guidelines, which is the most current adopted CMP, state that areas selected for analysis should be those that include the following locations:

- All CMP arterial monitoring intersections, including monitored on- or off-ramp intersections, where the proposed project will add 50 or more trips during either the A.M. or P.M. weekday peak hours of adjacent street traffic; and
- Mainline freeway monitoring locations where the project will add 150 or more trips, in either direction, during either the A.M. or P.M. weekday peak hours.

The following CMP-monitored facilities are located within the Project study area:

- Intersection #6: ~~Sepulveda Boulevard~~ Pacific Coast Highway ~~(SR-1)~~/El Segundo Boulevard
- Intersection #7: ~~Sepulveda Boulevard~~ Pacific Coast Highway ~~(SR-1)~~/Rosecrans Avenue

(3) Local

(a) City of El Segundo General Plan Circulation Element

The Circulation Element is intended to assist the City in providing a safe, convenient, and efficient circulation system. It provides the general location and extent of existing and proposed major thoroughfares, transportation routes, and other public facilities. It also identifies the system capable of responding to the anticipated growth, consistent with the Policies and Land Use Plan presented in the Land Use Element. The Circulation Element identifies the physical improvements needed to attain the circulation Goals and Objectives and alternative techniques to improve the City's circulation system.

(i) 2004 Master Plan of Streets

Circulation Element Exhibit C-10 illustrates the City's Master Plan of Streets (Master Plan). The Master Plan designates the preferred number of traffic lanes (roadway classification) to support build-out of the Land Use Element. According to Circulation Element Exhibit C-10, the primary roadways that provide local access to the Project Site, Grand Avenue and Continental Boulevard, are classified as Secondary Arterials; ~~Sepulveda Boulevard~~ Pacific Coast Highway ~~(SR-1)~~ to the west of the Project Site, and El Segundo Boulevard to the south of the Project Site, are classified as a Secondary Arterials. Major Arterials function to connect traffic from collectors to the major freeway system and should be planned for eight lanes of through traffic. Secondary Arterials

function similar to Major Arterials, connecting traffic from collectors to the major freeway system, and should be planned for six lanes of through traffic. Circulation Element Exhibit C-8 specifies the geometrics (minimum standards) for each roadway classification. When new roadways are constructed or existing roadways are improved, the standards shown on Exhibit C-8 should be used to establish minimum and maximum right-of-way improvements.[3]

(ii) Transportation System Management and Transportation Demand Management

The Circulation Element recognizes the build-out traffic projections in many instances cannot be accommodated solely by conventional roadway widening techniques. The Element requires the use of Transportation System Management (TSM) and Transportation Demand Management (TDM) techniques to handle the projected "person trips" in the area.

(iii) Rail Rapid Transit and Pedestrian/Bicycle Circulation

The El Segundo and Mariposa Stations allowing access to the Metro Green Line railway are located approximately 0.5 miles southeast and 0.5 miles northeast, respectively, of the Project Site. The Green Line is a light rail line running between the cities of Redondo Beach (to the south) and Norwalk (to the east). The Circulation Element (Pages 4-33 and 34) notes the following regarding the Metro Green Line and pedestrian/bicycle circulation:

> *To ensure that the Metro Green Line is integrated into the City's circulation system and City activities in general, consideration of the rail line should be incorporated into all aspects of City planning activities and the development review process. This is particularly important in the vicinity of the rail line stations. In addition, the pedestrian and bicycle circulation system must be designed to allow convenient access to each of the stations.*
>
> *A multi-modal transit center with a park-and-ride facility is planned to be constructed on City property adjacent to the Douglas Street Metro Green Line Station, as part of the Douglas Street extension project.*

(iv) Master Plan of Bicycle Routes

Circulation Element Exhibit C-15 illustrates the City's Master Plan of Bicycle Routes and identifies a Class III (Shared) bicycle facility on Grand Avenue and a Class II (Bike Lane) or III (Shared) facility on Mariposa Avenue in the Project vicinity. The South Bay Bicycle Master Plan, adopted by the City on October 4, 2011, identifies Class III Bike Routes on Grand Avenue and Nash Street, and a Class II Bike Lane on Mariposa Avenue, in the Project vicinity.[4]

(b) City of El Segundo Municipal Code

The El Segundo Municipal Code (ESMC) includes Chapter 15-16, Developer Transportation Demand Management, which sets forth requirements for major new developments to provide facilities that encourage and accommodate the use of ridesharing, transit, pedestrian, and bicycle commuting as alternatives to single occupant motor vehicle trips. According to ESMC Section 15-16-2, before approval of any development project, the Applicant must provide for, at a minimum,

[3] City of El Segundo, City of El Segundo General Plan Circulation Element, Page 4-12.

[4] The Master Plan was approved; however, no CEQA analysis was performed for the various projects it identified.

all of the applicable TDM and trip reduction measures, as specified in ESMC Section 15-16-3: *Development Standards*, which include the following among others:

A. Development of 25,000 square feet or more: a bulletin board, display case or kiosk displaying transportation information located where the greatest number of employees are likely to see it (ESMC includes specific requirements regarding content).

B. Development of 50,000 square feet or more: the measures in subsection A above; preferential parking (not less than 15 percent of employee parking areas; high occupancy vehicle (HOV) loading area; vanpool access; on site amenities or shuttle; bicycle facilities; shower and lockers (optional); transit support facilities (optional): Projects may provide facilities which will promote transit use.

C. Development of 100,000 square feet or more: the measures in subsections A and B above; sidewalks or other designated pathways; bus stop improvements (if deemed necessary by the City); and access from external circulation system to onsite bicycle parking facilities.

3. Environmental Impacts

a. Methodology

The analysis of potential transportation and traffic impacts considers potential Project effects related to construction, intersection service levels, and the regional transportation system (i.e., CMP and Caltrans facilities).

(1) Construction Impacts

The analysis of construction traffic includes a determination of the number of construction-related trips (i.e., construction worker trips and construction truck trips) that would occur as a result of the Project~~, the contributions of those trips to the local traffic system, and an analysis of the potential conflicts between construction activity and ongoing activity in the Project vicinity~~. The potential impact of construction traffic, including haul trucks, would be a lessening of the capacities of access streets and haul routes due to slower movements and larger turning radii of trucks.~~ Potential conflicts, including vehicular, pedestrian, bicyclists, site access, transit, and parking are evaluated.~~

(2) Intersection and Freeway Service Levels

The methodology for intersection traffic impacts involves several steps. The Traffic Study evaluates the following scenarios:

- Existing Conditions
- Existing with Project
- Future Condition - Year (2022) without Project
- Future Condition - Year (2022) with Project (Phase 1)

- Future Condition - Year (2023) without Project
- Future Condition - Year (2023) with Project (Buildout)

Based on consultation with the City's Planning Department, morning and evening peak hour turning movement counts were collected for the study intersections in October 2015, ~~and~~ May 2016, and April 2018. Counts were collected on a typical weekday, while local schools were in session. The AM peak period intersection counts were collected from 7:00 AM to 9:00 AM; PM peak period intersection counts were collected from 4:00 PM to 6:00 PM. The traffic volumes used in the analysis were taken from the highest-volume hour within each two-hour peak period. Counts collected in 2015 were grown 0.26 percent, per the Los Angeles CMP, to be consistent with 2016 counts. Although the Project Site is located within proximity to public transit, no transit credits were taken. Thus, the Traffic Study provides a conservative analysis. Detailed traffic count data worksheets are provided in Appendix ~~H~~ C of this ~~Draft~~ RPDEIR.

Peak hour freeway volumes were obtained from the Caltrans website. The most recent data available was 2015. A conservative growth factor of 1.0 percent per year was applied to the traffic volumes to derive Existing Conditions (2016) volumes.

(3) Trip Generation, Distribution, and Assignment

Table 4.J-6, *Summary of Project Trip Generation*, provides the trip generation rates and the resulting trip generation estimates for Phase 1 and Phase 2 of the Project. As shown on Table 4.J-6 the Project is estimated to generate a total of 4,555 trips on a daily basis, with 746 trips in the morning peak hour, and 696 trips in the evening peak hour.

Trip distribution assumptions for the Project were developed by considering Project access, the surrounding land uses, and the area roadway system. Trip distribution for the Project includes the following Project site access assumptions:

- I-405: 35 percent of Project trips;
- ~~Sepulveda Boulevard~~ Pacific Coast Highway ~~(SR-1)~~: 20 percent of Project trips;
- I-105: 15 percent of Project trips;
- El Segundo Boulevard: 10 percent of Project trips;
- Imperial Avenue/Imperial highway: 10 percent of Project trips;
- Mariposa Avenue: five percent of Project trips; and
- Grand Avenue: five percent of Project trips.

Based on these trip distribution assumptions, Project trips were assigned to each study intersection. Further detail on Project trip distribution and assignment is provided in Appendix ~~H of this Draft EIR~~ C of this RPDEIR.

(4) Future Conditions (Cumulative Scenario)

Traffic forecasts have been developed to evaluate Future Conditions (Cumulative Scenario) for the anticipated Project opening year. Phase 1 of the Project is anticipated to be operational by 2022, and Phase 2 of the Project is anticipated to be operational by 2023; as such, the future year analysis was conducted for two scenarios: Year 2022 (Phase 1) and Year 2023 (Buildout). The surrounding transportation network, intersection lane configurations, and traffic control are assumed to be the same as Existing Conditions. Traffic forecast volumes were developed using the "build-up" process, starting with existing traffic volumes, and adding a background growth factor and traffic from cumulative projects.

Based on the Los Angeles County CMP, the traffic growth factor for the South Bay/LAX area is estimated to be 0.26 percent per year between years 2016 and 2020, and 0.18 percent between years 2020 and 2025. As noted above, the Project is expected to be completed in two phases, with Phase 1 completion in 2022 and Phase 2 completion in 2023; accordingly, Existing Conditions volumes

were adjusted by a growth factor of 1.014 to reflect Year 2022 conditions and 1.0158 for Year 2023 conditions.

Information about cumulative projects (approved and pending projects) was obtained from the City's Planning Department and the Cities of Manhattan Beach and Los Angeles. ~~Twenty-six~~ Thirty-one approved and pending projects in the vicinity of the project site were identified (see Table 3-1, Related Projects List, in Chapter 3 of this RPDEIR). The location, approved/proposed land uses, and estimated peak hour trips for each of the cumulative projects is provided in Appendix ~~H of this Draft EIR~~ C of this RPDEIR. Trip generation estimates and trip distribution assumptions for the cumulative projects were derived from approved traffic studies, where available; and developed by Kimley-Horn if approved traffic studies were not available. Based on these trip distribution assumptions, cumulative project trips were assigned to each study intersection.

b. Thresholds of Significance

The significance thresholds below are derived from the Environmental Checklist questions in Appendix G of the *State CEQA Guidelines*.

(1) Construction Traffic

The City generally considers construction-related traffic to cause adverse but not significant impacts because, while sometimes inconvenient, construction-related traffic effects are temporary. Factors considered are street or lane closures, presence of emergency services (fire, hospital, etc.) located nearby that use the affected streets, loss of vehicular or pedestrian access, loss of bus stops or rerouting of bus lines, and loss of on-street parking. Based on these considerations, Project construction activities would have a significant construction traffic impact if the Project would:

TRAF-1 (1) Cause substantial delays and disruption of existing traffic flow; (2) require temporary relocation of existing bus stops to more than one-quarter mile from their existing stops; (3) result in impacts based on the operational thresholds at intersections during peak periods; or (4) result in the substantial loss of on-street parking such that the parking needs of the Project area would not be met.

(2) Intersection Capacity and Freeway Segments

According to the City's Circulation Element, the minimum acceptable level of service for signalized intersections in the City is LOS D. The project impact at an intersection would be considered to be significant if the project's traffic results in a change in Level of Service from LOS D or better to LOS E or F, or if there is an increase in intersection capacity utilization (ICU) value of 0.020 or more, when the "Without Project" intersection level of service is already at LOS E or F (ICU = 0.901 or more).[5]

[5] While the Appendix G Checklist Question has been modified by the Natural Resources Agency to address consistency with CEQA Guidelines section 15064.3, subdivision (b), which relates to use of VMT as the performance measure for evaluating traffic impacts, the City has not yet adopted VMT thresholds to address this updated Appendix G Checklist

For Caltrans intersections, LOS standards and impact criteria specified by Caltrans will apply. The *Caltrans Guide for the Preparation of Traffic Impact Studies* states that "Caltrans endeavors to maintain a target Level of Service at the transition between LOS C and LOS D on State highway facilities. If an existing State highway facility is operating at less than the target LOS, the existing Level of Service is to be maintained." The target LOS for freeway mainline segments is LOS D, which is a density between 26 and 35 pc/mi/ln. If the existing density exceeds the target LOS, the existing LOS is to be maintained.

Based on the above, a significant impact on intersection service levels or a freeway segment would occur if the Project would:

TRAF-2 Result in a change in LOS from LOS D or better to LOS E or F, or if there is an increase in intersection capacity utilization (ICU) value of 0.020 or more, when the "Without Project" intersection level of service is already at LOS E or F (ICU = 0.901 or more).

TRAF-3 Result in the LOS worsening from acceptable to unacceptable, or would cause a freeway segment that is already operating at a deficient LOS to deteriorate to a worse LOS.

(3) Regional Transportation System

TRAF-4 Conflict with an applicable congestion management plan including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways.

(4) Alternative Transportation Plan Consistency

The Project would result in a significant impact if the Project would:

TRAF-5 Conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.

As discussed in the Initial Study, which is contained in Appendix A of ~~this~~ the Draft EIR, and in Chapter 6, Subsection G, Effects Found Not to be Significant, of ~~this~~ the Draft EIR, the Project would have a less than significant impact with respect to question "c", a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks; question "d", substantially increase hazards due to a design feature or incompatible uses; and question "e", result in inadequate emergency access. As such, no further analysis of these questions in this Draft EIR is necessary.

Question. Thus, the analysis is based on the City's adopted methodology, which requires the use of LOS and delay to evaluate the traffic impacts of a project.

c. Project Design Features

The following Project Design Feature (PDF) is proposed to reduce construction related traffic impacts:

PDF TRAF-1: Construction Traffic Management Plan: Prior to the issuance of a building permit for the Project, a detailed Construction Traffic Management Plan (CTMP) ~~shall be reviewed and approved by~~ shall be prepared by the applicant's contractor and submitted to the City Public Works Department for review and approval. The CTMP ~~would~~ will formalize how construction ~~would~~ shall be carried out and identify specific actions that ~~would~~ shall be required to reduce traffic/transportation effects on the surrounding community. The CTMP shall be based on the nature and timing of the specific construction activities and other projects in the vicinity of the Project Site. The CTMP shall include at a minimum, but not be limited to, the following elements as deemed appropriate and effective by the City Public Works Department to limit construction-period impacts to transportation and traffic:

- Temporary pedestrian and vehicular traffic controls during all construction activities adjacent to the Project Site to ensure traffic safety on public right of ways. These controls shall include, but are not limited to, flag people trained in pedestrian safety.
- Temporary traffic control during all construction activities adjacent to public rights-of-way to improve traffic flow on public roadways (e.g., flag men).
- Scheduling of construction-related deliveries, haul trips, etc., so as to occur outside the commuter peak hours to the extent feasible.
- Construction-related vehicles shall not park on surrounding public streets.
- If needed during the peak construction periods, off-site parking would be provided, and workers would carpool or be shuttled to the worksite.
- Coordination with public transit agencies to provide advanced notifications of stop relocations and durations, if necessary.
- Provide detour plans to address temporary road closures during construction.
- Perform monthly monitoring of traffic conditions adjacent to the Project Site and report findings to the City Public Works Department to determine whether additional measures are necessary to reduce construction-related delays to motorists, bicyclists, and pedestrians.

d. Project Impacts

(1) Construction Impacts

Threshold TRAF-1: The Project's construction activities would result in a significant construction traffic impact if the Project would (1) cause substantial delays and disruption of existing traffic flow; (2) require temporary relocation of existing bus stops to more than one-quarter mile from their existing stops; (3) result in impacts based on the operational thresholds at intersections during peak periods; or (4) result in the substantial loss of on-street parking such that the parking needs of the Project area would not be met.

Impact Statement TRAF-1: With the implementation of PDF TRAF-1 potential construction impacts associated with hauling, deliveries, lane closures, and worker vehicles would be reduced through scheduling, traffic controls, notification, and safety procedures to ensure that the Project would not result in: substantial disruption of traffic flow, intersection operational impacts, conflicts with pedestrians and/or bicyclists, the loss of on-street parking, or conflicts with existing transit operations. Any temporary relocation of bus stops would not exceed one-quarter mile distance from the existing bus stop location. Transportation and parking impacts related to construction would be less than significant.

Construction of the Project would occur over two phases and would add construction-related trips to and from the site. The number of construction trips would be less than the number of trips generated by occupation of the new office floor area. The trips are associated with construction activities, including construction workers, grading and construction of structures and site features. Large construction equipment such as bulldozers, loaders, scrapers, and pavers would be required during various construction phases. Large equipment is generally brought to the site at the start of the construction phase, and kept on site until its term of use ends. A staging area would be designated on-site to store construction equipment and supplies during construction.

Throughout construction, the size of the work crew reporting to the site each day would vary, depending on the construction phase and the different construction activities taking place at the time. Parking for workers would be provided on-site during all phases of construction; construction workers would not be allowed to park on local streets. If needed during the peak construction periods, off-site parking would be provided, and workers would carpool or be shuttled to the worksite.

Phase 1 would include the construction of the 455 Continental Boulevard building, which would consist of three stages of construction activity: demolition, excavation, and construction. Demolition and excavation activities would require the removal of approximately 4,000 cubic yards (cy) of dirt over the course of three to five months. Assuming a capacity of nine cy per truckload, grading activities would require approximately 445 truckloads of material. In a conservative scenario in which excavation is completed in three months (65 working days), an average of seven truckloads of material would need to be moved per day. This would equate to seven inbound trucks and seven outbound trucks per day, which would be spread over the course of the 11-hour workday (7:00 AM to 6:00 PM). On an hourly basis, this would equate to one or two truck trips, which would

be minimal considering the existing traffic volumes on study area roadways described above in Section 2.0, *Environmental Setting*.

Phase 2 would include the construction of the 1955 Grand Avenue building, which would also consist of three stages of activity: demolition, excavation, and construction. Demolition and excavation activities would require the removal of approximately 23,200 cy of dirt over the course of three to five months. Assuming a capacity of nine cy per truckload, grading activities would require approximately 2,578 truckloads of cut material. In a conservative scenario in which demolition and excavation is completed in five months (109 working days), an average of 24 truckloads of material would need to be moved per day. This would equate to 24 inbound trucks and 24 outbound trucks per day, which would be spread over the course of the 11-hour workday (7:00 AM to 6:00 PM). On an hourly basis, this would equate to four or five truck trips, which would be minimal considering the existing traffic volumes on study area roadways described above in Section 2.0, *Environmental Setting*.

Heavy vehicles associated with construction would use the existing regional and local truck route network to approach the site, getting as close to the destination site as possible before turning off the designated truck route. As stipulated in PDF TRAF-1, the applicant would be required to identify planned haul routes, and obtain a haul route permit from the City. Designated truck routes serving the project area include ~~Sepulveda Boulevard~~ Pacific Coast Highway and El Segundo Boulevard. Approach and departure routes for construction vehicles, therefore, would most likely be via ~~Sepulveda Boulevard~~ Pacific Coast Highway or El Segundo Boulevard. Depending on the origin/destination (the nearest landfill, or the deposit site identified for cut material), trucks would either arrive and depart on ~~Sepulveda Boulevard~~ Pacific Coast Highway via the I-105 Freeway, to the north of the site; or El Segundo Boulevard via the I-405 Freeway, to the east of the site.

Temporary delays in traffic may occasionally occur due to oversized vehicles traveling at lower speeds on local streets. Such delays would be occasional and of short duration. These temporary delays would be considered less than significant. The Project would be required to prepare a Construction Traffic Management Plan (PDF TRAF-1), which would include such things as requiring an encroachment permit for work in the public right-of-way, limiting heavy truck activity during peak hours, using flag men to manage short-term traffic control, requiring a formal traffic control plan for extended street and lane closures, limiting time and duration of closures, or requiring a minimum number of lanes be open for travel during peak hours.

Project construction is not expected to create hazards for roadway travelers, bus riders, or parked vehicles, so long as commonly practiced safety procedures for construction are followed. Such procedures and other measures (e.g., to address temporary traffic control, lane closures, sidewalk closures, etc.) have been incorporated into the Construction Traffic Management Plan (PDF TRAF-1). With the implementation of PDF TRAF-1, construction-related impacts would be less than significant.

(2) Operations Impacts

Threshold TRAF-2: The Project would have a significant impact on the performance of a study intersection if it would result in a change in Level of Service from LOS D or better to LOS E or F, or if there is an increase in intersection capacity utilization (ICU) value of 0.020 or more, when the "Without Project" intersection level of service is already at LOS E or F (ICU = 0.901 or more).

(a) Existing with Project Conditions

Impact Statement TRAF-2a: The Project would have a significant impact at Intersection Nos. 1, 15, ~~and~~ 16, and 18 during the PM peak hour under Existing with Project Conditions. While mitigation measures are identified for Intersection Nos. 1 and 18, their implementation is uncertain because the City does not have jurisdictional control or authority over these intersections, and therefore impacts at these intersections are considered significant and unavoidable. As there are no feasible mitigation measures for Intersection Nos. 15 and 16, impacts at these intersections would also be significant and unavoidable.

This section addresses the impacts associated with adding Project-generated trips (Phase 1 and Phase 2) to Existing Conditions traffic volumes. The Existing with Project analysis scenario is a hypothetical scenario that assumes completion of the Project and full absorption of the Project traffic on the surrounding street network at the current time, with no other changes in traffic conditions. The Existing with Project scenario is required by CEQA and is provided for informational purposes only, and is not used for impact determinations or mitigation.

The Project-generated peak hour trips were added to the existing peak hour volumes to evaluate Existing with Project conditions. **Table 4.J-7**, *Intersection Operations – Existing with Project Conditions*, summarizes the results of the AM and PM peak hour intersection analysis for Existing with Project Conditions. As shown in the table, with the addition of Project traffic, all study intersections would continue to operate at an acceptable LOS (LOS D or better), with the following exceptions:

- Intersection No. 1 – ~~Sepulveda Boulevard~~ Pacific Coast Highway at Imperial Highway (ICU) – PM LOS F
- Intersection No. 15 – Douglas Street at El Segundo Boulevard (ICU) – PM LOS E
- Intersection No. 16 – Aviation Boulevard at El Segundo Boulevard (ICU) – PM LOS E
- Intersection No. 18 – El Segundo Boulevard at I-405 SB Ramps (ICU) – PM LOS E

Compared to Existing Conditions, Intersection Nos. 1, 15, ~~and~~ 16, and 18 would experience a significant impact based on the City's significance thresholds. All four Project driveways would operate at LOS C or better. Detailed LOS analysis sheets are provided in Appendix ~~H~~ C of this ~~Draft~~ RPDEIR. Mitigation Measures (MM) are discussed in Section 4, Mitigation Measures, below.

While the driveways would operate at LOS C or better based on the traffic analysis, the Traffic Impact Study recommends that the Project include the construction of a left-turn pocket on eastbound Grand Avenue. The Grand Avenue median does not have a left-turn pocket for eastbound left-turning traffic. However, as a result of a break in the median, left-turning vehicles can turn

from the Number 1 through lane (the left-most lane closest to the median). The presence of a median break on a six-lane roadway without a left-turn pocket is an unusual and potentially unsafe condition. However, the lack of a left-turn pocket at the median break on Grand Avenue and the Mattel driveway does not cause a deficient condition from a peak hour LOS standpoint. Thus, the Traffic Study includes a recommendation that the City consider requiring an improvement to the median to provide a left-turn pocket as a condition of the Project approval.

(b) Future with Project Conditions

(i) Year 2022

Impact Statement TRAF-2b: The Project would have a significant impact at ~~three~~ five study intersections (~~intersection~~ Intersection Nos. 14, 15, 16, 18, and 20) during the AM and/or PM peak hours under the Year 2022 (Phase 1) scenario. As there are no feasible mitigation measures for Intersection Nos. 15 and 16 and the implementation of feasible mitigation measures for Intersection Nos. 18 and 20 is uncertain since the City does not have jurisdictional control or authority over these intersections, impacts at these intersections would be significant and unavoidable.

The Project-generated peak hour trips for Phase 1 were added to the volumes developed for Opening Year 2022 without Project to determine Opening Year 2022 with Phase 1 conditions. **Table 4.J-8**, *Intersection Operations –Year 2022 with Project Conditions*, summarizes the results of the AM and PM peak hour intersection analysis for Opening Year 2022. Detailed LOS analysis sheets are provided in Appendix ~~H~~ C of this ~~Draft EIR~~ RPDEIR.

LOS shown in **bold** ~~and shaded~~ indicates unacceptable Level of Service.
Project impact shown in **bold** and shaded indicates a significant Project impact.
ICU = Intersection Capacity Utilization
HCM = Highway Capacity Manual
LOS = Level of Service
Intersection operation is expressed in volume-to-capacity (v/c) ratio for the ICU Methodology.
Intersection operation is expressed in average seconds of delay per vehicle for the HCM Methodology.
Four study driveways were only studied for with Project conditions; therefore, no comparison ~~is provided with Existing~~to Year 2020 without Project Conditions is provided.

SOURCE: Kimley-Horn and Associates, Inc., ~~2017~~ 2019.

As shown in Table 4.J-8, with the addition of Phase 1 Project traffic, all study intersections would continue to operate at an acceptable LOS (LOS D or better), with the following exceptions:

- No. 1 – ~~Sepulveda Boulevard~~ Pacific Coast Highway/Imperial Highway (ICU) – PM LOS F
- No. 6 – ~~Sepulveda Boulevard~~ Pacific Coast Highway/El Segundo Boulevard ~~(ICU)~~
  - (ICU) – AM LOS F, PM LOS F
  - (HCM) – AM and PM LOS E
- No. 7 – ~~Sepulveda Boulevard~~ Pacific Coast Highway/Rosecrans Boulevard (ICU) – AM LOS E, PM LOS F
- No. 14 – Nash Street/El Segundo Boulevard (ICU) – PM LOS F
- No. 15 – Douglas Street/El Segundo Boulevard (ICU) – AM and ~~LOS F,~~ PM LOS F
- No. 16 – Aviation Boulevard/El Segundo Boulevard (ICU) – AM and ~~LOS F,~~ PM LOS F
- No. 18 – El Segundo Boulevard/I-405 Southbound Ramps
  - (ICU) – PM LOS F
  - (HCM) – PM LOS F
- No. 20 – El Segundo Boulevard/I-405 Northbound Ramps (ICU) – AM LOS E

All four Project driveways would operate at LOS C or better. Table 4.J-8 also shows the change in V/C ratio or in the seconds of delay as a result of the Phase 1 Project-generated traffic. Compared to the Year 2022 without Project conditions, the Phase 1 Project would ~~not~~ cause ~~any~~ Intersection No. 20 (El Segundo Boulevard/I-405 Northbound Ramps) ~~additional intersections~~ to

operate at an unacceptable LOS (LOS E or F). ~~However~~ In addition, the Phase 1 Project would cause the ICU value at ~~three~~ four already-deficient intersections to worsen by 0.02 V/C or more thereby exceeding the threshold. Therefore, the Project (Phase 1) would result in a significant impact at the following ~~three~~ five locations:

- No. 14 – Nash Street/El Segundo Boulevard (ICU) – PM LOS F
- No. 15 – Douglas Street/El Segundo Boulevard (ICU) – AM and ~~LOS F,~~ PM LOS F
- No. 16 – Aviation Boulevard/El Segundo Boulevard (ICU) – AM LOS F
- No. 18 – El Segundo Boulevard/I-405 Southbound Ramps
  - (ICU) PM LOS F
  - (HCM) PM LOS F
- No. 20 – El Segundo Boulevard/I-405 Northbound Ramps (ICU) – Project causes AM LOS E

Mitigation measures are discussed in Section 4, Mitigation Measures, below.

(ii) Year 2023

Impact Statement TRAF-2c: The Project would have a significant impact at ~~six~~ eight study intersections (Intersection Nos. 1, 5, 6, 14, 15, 16, 18, and 20) during the AM and/or PM peak hours under the Year 2023 (Buildout) scenario. While mitigation measures are identified for Intersection Nos. 1, 5, ~~and~~ 6, 18, and 20, the ~~because the~~ implementation ~~of the mitigation measures are~~ is uncertain as a result of jurisdictional control, and therefore, impacts at these intersections are considered significant and unavoidable. ~~Even with the implementation of a mitigation measure for Intersection No. 14 impacts would be significant and unavoidable under the Year 2023 (Buildout) scenario.~~ No feasible mitigation measures were identified for Intersection Nos. 15 and 16 and impacts at these intersections would also be significant and unavoidable.

The Project-generated peak hour trips for Phases 1 and 2 were added to the volumes developed for Year 2023 without Project to determine Year 2023 with Phase 1 and 2 Project conditions. **Table 4.J-9**, *Intersection Operations – Year 2023 with Project Conditions*, summarizes the results of the AM and PM peak hour intersection analysis for Year 2023. Detailed LOS analysis sheets are provided in Appendix ~~H~~ C of this ~~Draft EIR~~ RPDEIR.

LOS shown in **bold** ~~and shaded~~ indicates unacceptable Level of Service.
Project impact shown in **bold** and shaded indicates a significant Project impact.
ICU = Intersection Capacity Utilization
HCM = Highway Capacity Manual
LOS = Level of Service
Intersection operation is expressed in volume-to-capacity (v/c) ratio for the ICU Methodology.
Intersection operation is expressed in average seconds of delay per vehicle for the HCM Methodology.
Four study driveways were only studied for with Project conditions; therefore, no comparison ~~is provided with Existing~~to Year 2023 without Project Conditions is provided.

SOURCE: Kimley-Horn and Associates, Inc., ~~2017~~ 2019.

As shown in Table 4.J-9, with the addition of Project traffic at buildout, all four Project driveways would operate at LOS C or better. All study intersections would continue to operate at an acceptable LOS (LOS D or better), with the following exceptions:

- No. 1 – ~~Sepulveda Boulevard~~ Pacific Coast Highway/Imperial Highway (ICU) – PM LOS F
- No. 5 – Pacific Coast Highway/Grand Avenue (ICU) – Project causes PM LOS E
- No. 6 – ~~Sepulveda Boulevard~~ Pacific Coast Highway/El Segundo Boulevard ~~(ICU)~~
  - (ICU) – AM and PM LOS F
  - (HCM) – AM LOS E and PM LOS ~~E~~F
- No. 7 – ~~Sepulveda Boulevard~~ Pacific Coast Highway/Rosecrans Boulevard (ICU) – AM LOS E, PM LOS F
- No. 14 – Nash Street/El Segundo Boulevard (ICU) – PM LOS F
- No. 15 – Douglas Street/El Segundo Boulevard (ICU) – AM and ~~LOS F,~~ PM LOS F
- No. 16 – Aviation Boulevard/El Segundo Boulevard (ICU) – AM and ~~LOS F,~~ PM LOS F
- No. 18 – El Segundo Boulevard/I-405 Southbound Ramps
  - (ICU) – PM LOS F
  - (HCM) – PM LOS F
- No. 20 – El Segundo Boulevard/I-405 Northbound Ramps (ICU) – Project causes AM LOS E

Table 4.J-9 also shows the change in V/C ratio or in the seconds of delay as a result of the Project-generated traffic. Compared to the Year 2023 without Project conditions, full buildout of the Project would cause Intersection No. 5 (~~Sepulveda Boulevard~~ Pacific Coast Highway/Grand Avenue) and Intersection No. 20 (El Segundo Boulevard/I-405 Northbound Ramps) to operate at an unacceptable LOS (LOS E or F). In addition, full buildout of the Project would increase the traffic such that the ICU value at four already deficient intersections would worsen by 0.02 V/C or more thereby exceeding the threshold. Thus, based on the ICU methodology the Project would result in significant impacts at the following ~~five~~ seven locations:

- No. 1 – ~~Sepulveda Boulevard~~ Pacific Coast Highway/Imperial Highway - (ICU) - PM LOS F
- No. 5 – ~~Sepulveda Boulevard~~ Pacific Coast Highway/Grand Avenue (ICU) - Project causes PM LOS E
- No. 14 – Nash Street/El Segundo Boulevard (ICU) - PM LOS F
- No. 15 – Douglas Street/El Segundo Boulevard (ICU) - AM and ~~LOS F,~~ PM LOS F
- No. 16 – Aviation Boulevard/El Segundo Boulevard (ICU) - AM and ~~LOS F,~~ PM LOS F
- No. 18 – El Segundo Boulevard/I-405 Southbound Ramps (ICU) – PM LOS F
- No. 20 – El Segundo Boulevard/I-405 Northbound Ramps (ICU) - Project causes AM LOS E

In addition, based on the HCM delay methodology, Project Buildout (Phase 1 and Phase 2) would cause ~~one~~ two intersections already operating at a deficient LOS to worsen from LOS E to LOS F:

- No. 6 – ~~Sepulveda Boulevard~~ Pacific Coast Highway/El Segundo Boulevard (HCM) – PM LOS E worsens to LOS F.
- No. 18 – El Segundo Boulevard/I-405 Southbound Ramps (HCM) – PM LOS E worsens to LOS F.

Mitigation measures are discussed in Section 4, Mitigation Measures, below.

In summary, based on the significance criteria presented earlier, the addition of vehicle trips generated by buildout of the Project would result in a significant impact at these ~~six~~eight intersections. No significant impacts would occur at the Project driveways.

Threshold TRAF-3: The Project would have a significant impact on the performance of a study freeway segment if it would result in the LOS worsening from acceptable to unacceptable, or would cause a freeway segment that is already operating at a deficient LOS to deteriorate to a worse LOS.

Impact Statement TRAF-3: The Project would have a less-than-significant impact at study area freeway segments under the Year 2022 (Phase 1) and Year 2023 (buildout) cumulative scenario.

Existing with Project peak hour freeway volumes and analysis results for the morning and evening peak hours, by segment, and by direction are summarized on **Table 4.J-10**, *Freeway Segment Operations – Existing with Project Conditions*. The results of the analysis indicate that, compared to Existing Conditions, each freeway segment would continue to operate at LOS D or better in each

direction, and in both peak hours, with the exception of the I-405 southbound segment between El Segundo Boulevard and Rosecrans Avenue, which would continue to operate at LOS E in the evening peak hour.

Table 4.J-11, *Freeway Segment Operations -Year 2022 with Project Conditions*, provides the peak hour freeway volumes and analysis results for the morning and evening peak hours, by segment, and by direction. The results of the analysis indicate that, compared to Year 2022 without Project conditions, all freeway segments would continue operating at LOS D or better in each direction, and in both peak hours, with the exception of:

- I-405 southbound, between El Segundo Boulevard and Rosecrans Avenue, PM LOS E
- I-405 northbound, between Rosecrans Avenue and El Segundo Boulevard, AM LOS E

The addition of Phase 1 Project traffic to the freeway mainline system would not cause a freeway segment LOS to worsen from acceptable to unacceptable, and would not cause a freeway segment that is already operating at a deficient LOS to deteriorate to a worse LOS. Therefore, Phase 1 Project-generated traffic would result in a less-than-significant impact to the study freeway segments.

SOURCE: Kimley-Horn and Associates, Inc., 2017.

Year 2023 with Phase 1 and 2 Project peak hour freeway volumes and analysis results for the morning and evening peak hours, by segment, and by direction are summarized on **Table 4.J-12**, *Freeway Segment Operations – Opening Year 2023 with Project Conditions*. The results of the analysis indicate that, compared to Year 2023 without Project conditions, all freeway segments would continue operating at LOS D or better in each direction, and in both peak hours, with the exception of:

- I-405 southbound, between El Segundo Boulevard and Rosecrans Avenue, PM LOS E
- I-405 northbound, between Rosecrans Avenue and El Segundo Boulevard, AM LOS E

The addition of Project traffic at buildout to the freeway mainline system would not cause a freeway segment to worsen from acceptable to unacceptable, and would not cause a freeway segment that is already operating at a deficient LOS to deteriorate to a worse LOS. Therefore, vehicle trips generated by Phase 1 and 2 of the Project would result in a less-than-significant impact to the study freeway segments.

(3) Regional Transportation System

Threshold TRAF-4: The Project would have a significant impact on the regional transportation system if it would conflict with an applicable congestion management plan including, but not limited to level of service standards and travel demand measures, or other standards established by the county congestion management agency for designated roads or highways.

Impact Statement TRAF-4: Under Year 2022 (Phase 1) with Project Conditions, the Project would have a less-than-significant impact at both CMP intersections located within the Project study area during the AM and PM peak hours. Under Year 2023 (Buildout) with Project Conditions, the Project would have a significant impact at one CMP intersection (intersection No. 6) during the PM peak hour.

As stated previously, the following CMP-monitored facilities are located within the Project study area:

- Intersection No. 6: ~~Sepulveda Boulevard~~ Pacific Coast Highway ~~(SR-1)~~/El Segundo Boulevard
- Intersection No. 7: ~~Sepulveda Boulevard~~ Pacific Coast Highway ~~(SR-1)~~/Rosecrans Avenue

The Project is forecasted to contribute 50 or more project trips to these two CMP intersections. Both intersections were included as study intersections and were evaluated under impact discussion TRAF-2, above. Since CMP significance thresholds are the same as the thresholds used by the City, the impact conclusions stated in the TRAF-2 discussion remain valid for the CMP evaluation. Below is a summary of those conclusions:

(a) Year 2022 (Phase 1)

No significant impacts would occur to CMP intersections as a result of vehicle trips generated by Phase 1 of the Project.

(b) Year 2023 (Buildout)

Based on the HCM delay methodology, vehicle trips generated by Phase 1 and 2 of the Project would cause one CMP intersection already operating at a deficient LOS (LOS E or F) to worsen from LOS E to LOS F:

- Intersection No. 6 – ~~Sepulveda Boulevard~~ Pacific Coast Highway/El Segundo Boulevard (HCM) – PM LOS E to LOS F

Therefore, the addition of vehicle trips generated by the Project at buildout would result in a significant impact during the PM peak hour at one CMP intersection. MM are discussed in Section 4, Mitigation Measures, below.

(4) Alternative Transportation Plan Consistency

Threshold TRAF-5: The Project would have a significant impact on alternative transportation if the Project would conflict with adopted policies, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities.

Impact Statement TRAF-5: The Project would not conflict with any adopted polices, plans, or programs regarding public transit, bicycle, or pedestrian facilities, or otherwise decrease the performance or safety of such facilities. Therefore, the Project would result in a less-than-significant impact to transit, bicycle, and pedestrian facilities.

The Project would be consistent with policies, plans, and programs that support alternative transportation, including SCAG'S 2016 RTP/SCS, the City's Circulation Element and the South Bay Bicycle Master Plan. The Project would be located within 0.5 miles of the Metro Green Line station and numerous regional bus lines on ~~Sepulveda Boulevard~~ Pacific Coast Highway, Grand Avenue, and El Segundo Boulevard. The Project would concentrate employment opportunities and provide a range of on-site services, such as child care, cafeteria, on-site retail, as well as pedestrian access to restaurants and services in the immediate vicinity that would reduce vehicle miles, while maximizing the productivity of the transportation system.

The Circulation Element's Bicycle Master Plan shows Grand Avenue as a Class III Bike Route connecting to a Class I, II, or III bike route in Douglas Street and to the Green Line Station at Douglas Street and El Segundo Boulevard. In addition, the South Bay Bicycle Master Plan shows Grand Avenue as a proposed Class III Bike Route. The Project would not conflict with the development of the bike routes in the future. The bike routes would further encourage multi-modal access.

Pedestrian access to the site is facilitated by existing sidewalks on both sides of Grand Avenue and Continental Boulevard, and crosswalks on all four legs of the intersection. There are no bicycle routes in the project area. The Project would be required to meet the on-site bicycle parking requirements set forth in Section 15-15-6, *Required Parking Spaces*, of the City's Municipal Code. The Project would not make any changes to reduce or inhibit pedestrian access to the site. While the Project would not add bicycle routes, the Project would not preclude or conflict with the development of bike routes in the future. The Project would not permanently modify or relocate the existing Metro/LADOT bus stop located on Grand Avenue in front of the DoubleTree Hotel, nor would it impede access to this bus stop.

Therefore, the Project would not conflict with policies, plans, and programs that support alternative transportation, and impacts would be less than significant.

e. Cumulative Impacts

(1) Construction Impacts

Impacts on traffic associated with construction (e.g., an intermittent reduction in street and intersection operating capacity, potential conflicts with pedestrians/bicyclists, potential overlap with construction of other nearby projects, potential conflict with Metro operations) are typically

considered short-term adverse impacts, but not significant. The Project would result in a less-than-significant traffic impact during construction with the implementation of PDF TRAF-1, Construction Management Plan, which would incorporate scheduling, notification, and safety procedures. Each cumulative project would be required to comply with City requirements regarding haul routes and would implement MM and/or include PDFs, such as traffic controls and scheduling, notification, and safety procedures, to reduce potential traffic impacts during construction. Furthermore, like for the Project, construction worker traffic typically avoids the peak hours, and it is anticipated that many of the related projects, like the Project, would restrict construction truck traffic and deliveries to off-peak hours to the extent feasible. Accordingly, Project-related contributions to cumulatively significant construction traffic impacts, considered together with the impacts of related projects, would be less than cumulatively considerable.

(2) Operational Impacts

The Traffic Study (see Appendix ~~H~~ C of this ~~Draft~~ RPDEIR) was developed to address Project impacts in the context of existing baseline conditions (Year 2016) and future (Year 2022 and 2023) conditions. Future conditions take into account traffic caused by the 26 related projects identified in Chapter 3, Basis for Cumulative Analyses, as well as a growth factor to account for other ambient growth occurring in the region. Therefore, the analysis of future traffic conditions in 2022 and 2023 provides the cumulative analysis because it considers traffic generated by future proposed or planned land uses. Thus, the above analyses of Project impacts have taken into account the cumulative impacts associated with future growth.

As indicated above in Impact Statement TRAF-2a, under Existing With Project Conditions, the Project would result in less-than-significant impacts at the study intersections. Under Future With Project Conditions (Year 2022), the Project would result in a potentially significant impact at ~~three~~ five study intersections (Intersection Nos. 14, 15, 16, 18, and 20) during the AM and/or PM peak hours. Under the Future With Project Conditions (Year 2023), the Project would have a significant impact at ~~six~~ eight study intersections (intersection Nos. 1, 5, 6, 14, 15, 16, 18, and 20) during the AM and/or PM peak hours. Therefore, mitigation measures are proposed below.

With regard to the regional transportation system, as discussed above in Impact Statement TRAF-3, based on the HCM delay methodology, vehicle trips generated by Project Buildout (Year 2023) would result in a significant impact at Intersection No. 6 (~~Sepulveda Boulevard~~ Pacific Coast Highway/El Segundo Boulevard) during the PM peak hour.

4. Mitigation Measures

a. Construction

PDF TRAF-1 would ensure that impacts due to Project construction would be less than significant. Therefore, no mitigation measures are necessary.

b. Operation

The Project would result in a significant impact at ~~three~~ five intersections under Year 2022 (Phase 1) scenario, and at ~~six~~ eight intersections under Year 2023 (Buildout) scenario. No impacts would occur to the study freeway segments on I-105 or I-405.

(1) Year 2022 (Phase 1) Mitigation Measures

As stated previously, significant impacts would occur at the following ~~three~~ five intersections under Year 2022 with Project conditions:

- No. 14 – Nash Street/El Segundo Boulevard (ICU) – PM LOS F
- No. 15 – Douglas Street/El Segundo Boulevard (ICU) – AM LOS F, PM LOS F
- No. 16 – Aviation Boulevard/El Segundo Boulevard (ICU) – AM LOS F
- No. 18 – El Segundo Boulevard/I-405 Southbound Ramps
  - (ICU) PM LOS F
  - (HCM) PM LOS F
- No. 20 – El Segundo Boulevard/I-405 Northbound Ramps (ICU) – Project causes AM LOS E

Implementation of the following improvements would mitigate the Project impacts:

The south leg of Intersection No. 14 (Nash Street at El Segundo Boulevard) is one of the primary driveways for the approved Raytheon South Campus Specific Plan. As such, the need for the improvement would occur as a result of the proposed Raytheon-generated traffic. A mitigation measure was identified in the *Raytheon South Campus Specific Plan TIA* (RBF, May 2014) for the following improvements: widen the northbound approach from two left-turn lanes, one shared through/right-turn lane, and one right-turn lane with right-turn overlap signal phasing to consist of two left-turn lanes, one through lane, and two right-turn lanes with right-turn overlap signal phasing. As the Project would contribute traffic to this intersection, the following mitigation measure is recommended:

> **MM TRAF-1 (Intersection No. 14 – Nash Street at El Segundo Boulevard):** The applicant for Continental Grand Campus Specific Plan shall contribute a fair share if the Raytheon project is developed as approved in the Raytheon South Campus Specific Plan. In accordance with adopted mitigation measure for the Raytheon South Campus Specific Plan and in order to provide additional capacity for the heavy northbound right-turn movement, widen the northbound approach from two left-turn lanes, one shared through/right-turn lane, and one right-turn lane with right-turn overlap signal phasing to consist of two left-turn lanes, one through lane, and two right-turn lanes with right-turn overlap signal phasing.

The increase in capacity for the heavy northbound right-turn movement would improve the LOS from LOS F to LOS ~~D~~ E in the evening peak hour. Therefore, implementation of MM TRAF-1 would reduce the significant impact at Intersection No. 14 to a less-than-significant level in Year 2022 (Phase 1).

With regard to significant impacts at Intersection Nos. 15 (Douglas Street at El Segundo Boulevard) and 16 (Aviation Boulevard at El Segundo Boulevard), potential ~~MM~~ mitigation measures ~~at the remaining two intersections, are considered~~ were determined to be infeasible due to right-of-way constraints and ~~existing structures~~ the adverse effects that intersection widening would have on existing infrastructure and adjacent developed private property. Therefore, the Project impact at these intersections would remain significant and unavoidable.

The following improvements are recommended for impacts at Intersection Nos. 18 and 20:

> **MM TRAF-2 (Intersection No. 18 – El Segundo Boulevard at I-405 Southbound Ramps):** Add right-turn overlap phasing to the eastbound approach of the intersection.

This improvement would provide additional signal green time for the heavy eastbound right-turn movement which would improve operating conditions from LOS F to LOS E in the evening peak hour, thereby mitigating the Project impact.

> **MM TRAF-3 (Intersection No. 20 – El Segundo Boulevard at I-405 Northbound Ramps):** Re-stripe the northbound right-turn lane to a shared left/right-turn lane.

This improvement would provide additional capacity for the northbound left-turn movement which would improve operating conditions from LOS E to LOS C in the morning peak hour, thereby mitigating the Project impact.

While MM TRAF-2 and MM TRAF-3 would reduce impacts to a less-than-significant level, these intersections are under Caltrans jurisdiction. Since the implementation of these improvements are outside the City's jurisdiction and there is uncertainty regarding the ability to implement these improvements, the City determines that there is a potential for a significant and unavoidable impact to occur at Intersection Nos. 18 and 20 as a result of Phase 1 of the Project.

(2) Year 2023 (Buildout) Mitigation Measures

As stated previously, significant impacts would occur at the following ~~six~~ eight intersections under Year 2023 with Project conditions:

- No. 1 – ~~Sepulveda Boulevard~~ Pacific Coast Highway/Imperial Highway (ICU) - PM LOS F
- No. 5 – ~~Sepulveda Boulevard~~ Pacific Coast Highway/Grand Avenue (ICU) - Project causes PM LOS E
- No. 6 – ~~Sepulveda Boulevard~~ Pacific Coast Highway/El Segundo Boulevard (HCM) – PM LOS E worsens to LOS F
- No. 14 – Nash Street/El Segundo Boulevard (ICU) – PM LOS F
- No. 15 – Douglas Street/El Segundo Boulevard (ICU) – AM LOS F, PM LOS F
- No. 16 – Aviation Boulevard/El Segundo Boulevard (ICU) – AM LOS F
- No. 18 – El Segundo Boulevard/I-405 Southbound Ramps
  - (ICU) – PM LOS F
  - (HCM) – PM LOS E worsens to LOS F

- No. 20 – El Segundo Boulevard/I-405 Northbound Ramps (ICU) - Project causes AM LOS E

Implementation of MM TRAF-1, MM TRAF-2, and MM TRAF-3 would apply to Year 2023 (Buildout) as well as to Phase 1. The following improvements are recommended for impacts at Intersection Nos. 1, 5, and 6:

> **MM TRAF-~~2~~ 4 (Intersection No. 1 – ~~Sepulveda Boulevard~~ Pacific Coast Highway at Imperial Highway):** In order to provide additional capacity for the heavy northbound right-turn movement, the applicant shall re-stripe the northbound approach to provide a second northbound right-turn lane.

The increase in capacity for the heavy northbound right-turn movement would improve the LOS from LOS F to LOS D in the evening peak hour. Therefore, implementation of MM TRAF-~~2~~ 4 would reduce the significant impact at Intersection No. 1 to a less-than-significant level.

> **MM TRAF-~~3~~ 5 (Intersection No. 5 – ~~Sepulveda Boulevard~~ Pacific Coast Highway at Grand Avenue):** Re-stripe the westbound approach to convert the Number 1 through lane to a shared through/right-turn lane.

The increase in capacity for the heavy westbound right-turn movement would improve the LOS from LOS E to LOS D in the evening peak hour. Therefore, implementation of MM TRAF-~~3~~5 would reduce the significant impact at Intersection No. 5 to a less-than-significant level.

> **MM TRAF-~~4~~ 6 (Intersection No. 6 – ~~Sepulveda Boulevard~~ Pacific Coast Highway at El Segundo Boulevard):** In order to provide additional capacity for the heavy westbound right-turn movement, the applicant shall re-stripe the westbound approach to convert the Number 1 through lane to a shared through/right-turn lane.

The increase in capacity for the heavy westbound right-turn movement would improve the LOS from LOS F to LOS ~~D~~ E in the evening peak hour. The delay associated with the mitigated LOS E condition would be less than the delay that is projected at this intersection without the Project. Therefore, implementation of MM TRAF-~~4~~ 6 would reduce the significant impact at Intersection No. 6 to a less-than-significant level.

While MM TRAF-~~2~~ 4, TRAF-~~3~~ 5 and TRAF-~~4~~ 6 would reduce impacts to a less-than-significant level, these intersections are under Caltrans jurisdiction. Since the implementation of these improvements are outside the City's jurisdiction and there is uncertainty regarding the ability to implement these improvements, the City determines that there is a potential for a significant and unavoidable impact to occur at Intersection Nos. 1, 5 and 6 as a result of buildout of the Project.

MM TRAF-1 (No. 14 – Nash Street at El Segundo Boulevard), described above for Year 2022 with Project conditions, would also ~~serve to~~ mitigate the Project impact under Year ~~2022~~2023 with Project conditions to a less-than-significant level. The increase in capacity for the heavy northbound right-turn movement would improve operating conditions from LOS F to LOS E in the evening peak hour. This mitigation measure would also improve operating conditions as compared to the delay and LOS that is projected at this intersection without the Project. ~~However, MM TRAF-~~

~~1 would not reduce the impact at Intersection No. 14 to less than significant.~~ Therefore, implementation of MM TRAF-1 would reduce the significant ~~in~~ Year 2023 (Buildout) with Project ~~conditions the Project would contribute to a significant and unavoidable~~ impact at Intersection No. 14 to a less-than-significant level.

As described above for Year 2022 with Project conditions, mitigation measures at intersection No. 15 – Douglas Street at El Segundo Boulevard and No. 16 – Aviation Boulevard at El Segundo Boulevard are considered to be infeasible due to right-of-way constraints and ~~existing structures~~ the adverse effects that intersection widening would have on existing infrastructure and adjacent developed private property. Therefore, the Project would result in significant and unavoidable impacts at these intersections.

5. Level of Significance After Mitigation

a. Construction

Less-than-significant construction traffic impacts would occur and no MM are necessary.

b. Operation

A summary of the intersection operation before and after implementation of these MM is provided on **Table 4.J-13**, *Summary of Intersection Operations with Mitigation Measures*.

TABLE 4.J-13
SUMMARY OF INTERSECTION OPERATIONS WITH MITIGATION MEASURES

Int. #	Intersection	Methodology	Peak Hour	Without Mitigation		With Mitigation	
				ICU/Delay	LOS	ICU/Delay	LOS
1	~~Sepulveda Blvd~~ Pacific Coast Hwy/Imperial Hwy	ICU	PM	~~1.074~~ 1.085	**F**	0.895	D
5	~~Sepulveda Blvd~~ Pacific Coast Hwy/Grand Ave	ICU	PM	~~0.956~~ 0.967	**E**	0.819	D
6	~~Sepulveda Blvd~~ Pacific Coast Hwy/El Segundo Blvd	HCM	PM	~~81.400~~ 88.100	**F**	52.000	D
14	Nash St/El Segundo Blvd	ICU	PM	1.076	**F**	0.917	**E**
15	Douglas St/El Segundo Blvd	ICU	AM	~~1.030~~ 1.031	**F**	No Feasible Mitigation	
			PM	~~1.217~~ 1.218	**F**		
16	Aviation Blvd/El Segundo Blvd	ICU	AM	~~1.201~~ 1.208	**F**	No Feasible Mitigation	
			PM	~~1.186~~ 1.189	**F**		
18	El Segundo Blvd/I-405 SB Ramps	ICU	PM	1.264	**F**	1.137	**F**
		HCM	PM	89.5	**F**	42.0	D
20	El Segundo Blvd/I-405 NB Ramps	ICU	AM	0.937	**E**	0.776	C

LOS shown in **bold** ~~and shaded~~ indicates unacceptable Level of Service.
ICU = Intersection Capacity Utilization
HCM = Highway Capacity Manual
LOS = Level of Service
Intersection operation is expressed in volume-to-capacity (v/c) ratio for the ICU Methodology.
Intersection operation is expressed in average seconds of delay per vehicle for the HCM Methodology.

SOURCE: Kimley-Horn and Associates, Inc., ~~2017~~ 2019.

MM TRAF-2, TRAF-3, ~~and~~ TRAF-4, TRAF-5, and TRAF-6 would reduce impacts at the following ~~three~~ five intersections to less-than-significant levels:

- No. 1 – ~~Sepulveda Boulevard~~ Pacific Coast Highway/Imperial Highway
- No. 5 – ~~Sepulveda Boulevard~~ Pacific Coast Highway/Grand Avenue
- No. 6 – ~~Sepulveda Boulevard~~ Pacific Coast Highway/El Segundo Boulevard
- No. 18 – El Segundo Boulevard/I-405 Southbound Ramps
- No. 20 – El Segundo Boulevard/I-405 Northbound Ramps

However, while implementation of ~~MM TRAF-2, TRAF-3 and TRAF-4 at Intersection Nos. 1, 5, and 6, respectively,~~ these five mitigation measures would reduce impacts to a less-than-significant level, the~~se~~ intersections are under Caltrans jurisdiction. Since the implementation of these improvements are outside the City's jurisdiction and there is uncertainty regarding the ability to implement these improvements, the City determines that there is a potential for a significant and unavoidable impact to occur at Intersection Nos. 1, 5 ~~and~~ 6, 18, and 20 as a result of buildout of the Project.

With regard to Intersection No. 14 (Nash Street at El Segundo Boulevard), the need for MM TRAF-1 would occur if the Raytheon South Campus Specific Plan is developed as approved. The south leg of the intersection is one of the primary driveways for the approved Raytheon South Campus Specific Plan. As such, the need for the improvement would occur as a result of the proposed Raytheon-generated traffic. A mitigation measure was identified in the *Raytheon South Campus Specific Plan TIA* (RBF, May 2014) and is included in the adopted MMRP for that project. Therefore, the need for the MM TRAF-1 would occur if the Project and the related project were to both develop. If that occurs, the Project applicant would be required to contribute a fair share for the improvement. The implementation of MM TRAF-1 would reduce the impact at Intersection No. 14 to a less-than-significant level under both ~~the~~ Year 2022 (Phase 1) and ~~scenario. However, even with the implementation of MM TRAF-1, the impact would remain significant and unavoidable in the~~ Year 2023 (Buildout) traffic scenarios.

With regard to Intersection Nos. 15 and 16, potential ~~MM~~ mitigation measures at these two intersections are considered to be infeasible due to right-of-way constraints and ~~existing structures~~ the adverse effects that intersection widening would have on existing infrastructure and adjacent developed private property. Therefore, the Project impact at these intersections would remain significant and unavoidable.

CHAPTER 1
Introduction

The City of El Segundo (the City), as the Lead Agency under the California Environmental Quality Act (CEQA), prepared a Draft Environmental Impact Report (Draft EIR) for the Mattel, Inc. (Mattel) Continental Grand Campus Specific Plan Project (Project), which proposes to expand its corporate headquarters, located on an approximately 12.5-acre campus (Campus or Project Site) in the City of El Segundo. The Project would support Mattel's goal to manage its businesses more efficiently by relocating and consolidating operations that are currently conducted in a number of other cities throughout the country to El Segundo, while also accommodating expansion of its current headquarters in the City.

The City circulated the Draft EIR for a 47-day public review period beginning on September 21, 2017 and ending on November 6, 2017 in compliance with Section 15105(a) of the State *CEQA Guidelines*. In response to a public request, the City extended the public review period until December 6, 2017. With the extension, a 77-day public review period occurred, which exceeds the required 45-day minimum public review period.

During the public review period, the City received a letter from Christina M. Caro of Adams Broadwell Joseph & Cardozo, on behalf of Coalition for Responsible Equitable Economic Development (CREED LA). The CREED LA comment letter provides comments related to the analysis of toxic air contaminants (TACs) provided in Section 4.B, *Air Quality*, of the Draft EIR and states that the Draft EIR failed to perform a health risk assessment (HRA) to evaluate the cancer risk from either the Project's construction or operational diesel particulate matter (DPM) emissions. CREED LA obtained the services of the Soil Water Air Protection Enterprise (SWAPE) to evaluate the Draft EIR and its technical appendices. SWAPE conducted separate screening-level HRAs for Project construction and operation.

As indicated in the Draft EIR, the South Coast Air Quality Management District (SCAQMD) is the applicable regional regulatory body regarding air pollutant emissions. While SCAQMD does not require development projects subject to CEQA to prepare quantitative construction HRAs and has not adopted guidance on construction HRAs,[1] the purpose of this technical memorandum is to

[1] South Coast Air Quality Management District, Final Environmental Assessment for: Proposed Amended Rule 307.1 – Alternative Fees for Air Toxics Emissions Inventory; Proposed Amended Rule 1401 – New Source Review of Toxic Air Contaminants; Proposed Amended Rule 1402 – Control of Toxic Air Contaminants from Existing Sources; SCAQMD Public Notification Procedures for Facilities Under the Air Toxics "Hot Spots" Information and Assessment Act (AB 2588) and Rule 1402; and, SCAQMD Guidelines for Participating in the Rule 1402 Voluntary Risk, page 2-23, September 2016, http://www.aqmd.gov/docs/default-source/ceqa/documents/aqmd-projects/2016/final-ea_par-307-1_1401_1402.pdf?sfvrsn=4. Accessed February 19, 2019.

provide a refined construction HRA to further substantiate the conclusions reached in the Project's Draft EIR and to allow for public review of the analysis.

Background

As indicated above, a Draft EIR was prepared for the Project. Section 4.B, Air Quality, of the Draft EIR provides an analysis of the Project's potential health risk impacts from construction and operation, including potential health risk impacts from DPM emissions. As disclosed on page 4.B-33 of Section 4.B of the Draft EIR, "The greatest potential for TAC emissions would be related to diesel particulate matter emissions associated with heavy equipment operations during demolition, grading, and site preparation activities." The Draft EIR also states on page 4.B-33 that

> *The Project would be subject to several SCAQMD rules designed to limit exposure to TACs during construction activities. The Project would be required to comply with the CARB ATCM that limits diesel powered equipment and vehicle idling to no more than 5 minutes at a location, and the CARB In-Use Off-Road Diesel Vehicle Regulation. Compliance with these control measures would minimize emissions of TACs during construction.*

Based on the analysis provided in the Draft EIR, it is concluded on page 4.B-33 that "Compliance with the above regulatory requirements and standard conditions of approval would minimize emissions of TACs during construction and would not result in long-term health risks to existing off-site sensitive populations" and that construction health risk impacts would be less than significant. With respect to operations, pages 4.B-33 and 4.B-34 states that "Project operations would generate minor amounts of diesel emissions from commercial delivery truck operations" and that "toxic or carcinogenic air pollutants are not expected to occur in substantial amounts in conjunction with operation of the proposed office use within the Project site." Based on the analysis provided in the Draft EIR on page 4.B-34, "potential long-term operational impacts associated with the release of TACs would be minimal and would not be expected to exceed SCAQMD thresholds of significance" and that operational health risk impacts would be less than significant.

As indicated above, in response to comments received on the Draft EIR, and to allow for public review of the analysis, ESA prepared a refined construction HRA for the Project that quantitatively estimates health risk impacts from DPM emissions, which the State of California has identified as a TAC.

As noted above, SWAPE conducted a screening-level HRA for Project construction that purports to show a maximum infant cancer risk (0 to 2 years) of 18 in one million and child cancer risk during construction (2 to 16) of 1.4 in one million. Thus, SWAPE's screening-level HRA purports to show a total screening cancer risk from construction of the Project of 19.4 in one million (the summation of 18 plus 1.4, which equals 19.4), which exceeds the South Coast Air Quality Management District's (SCAQMD's) cancer risk threshold of 10 in one million. SWAPE's screening-level analysis utilized the United States Environmental Protection Agency (USEPA) AERSCREEN air dispersion model that is the appropriate model for Level 2 health risk

screening assessments (HRSAs).[2] In the letter submitted on behalf of CREED LA, SWAPE acknowledges the limitations of using a screening-level model and states the following:

> *A level 2 HRSA utilizes a limited amount of site-specific information to generate maximum reasonable downwind concentrations of air contaminants to which nearby receptors may be exposed. If an unacceptable air quality hazard is determined to be possible using AERSCREEN, a more refined modeling approach is required prior to approval of the project.*

Thus, the use of the screening-level model, AERSCREEN, results in conservative (i.e., overestimated) health risk values. In order to provide a refined analysis that reflects Project-specific information not accounted for in the screening-level model, ESA prepared a refined construction HRA for the Project. The refined construction HRA includes use of the American Meteorological Society/Environmental Protection Agency regulatory air dispersion model (AERMOD version 18081) to estimate ambient concentrations of DPM at off-site sensitive receptors. The refined HRA incorporates Project site-specific data such as local meteorological data, the locations of off-site sensitive receptors, and variable DPM emissions during construction, which provides for an analysis that better represents the Project's specific meteorological conditions, location relative to sensitive receptors, and construction emissions.

As disclosed on page 4.B-33 of the Draft EIR, construction of the Project has the potential to generate temporary TAC emissions from the use of heavy-duty construction equipment, such as excavators and forklifts, and from haul trucks traveling to and from the Project Site. Although the SCAQMD does not mandate the preparation of a quantitative HRA for development projects, a quantitative construction HRA was prepared for the Project that provides information that further substantiates the impact conclusions reached in the Project's Draft EIR.

The results of the refined HRA indicate that health risk impacts from the TAC emissions from construction of the Project would be below the SCAQMD significance threshold of an incremental increase in cancer risk of 10 in one million. As such, the results of this quantitative analysis provided in the refined HRA provides substantial evidence in support of the conclusions reached in the Draft EIR that the Project would result in a less than significant impact with respect to TAC emissions. A summary of the refined HRA analysis methodology, modeling inputs, and the results are provided below.

With respect to Project operations, consistent with the Draft EIR, a qualitative operational HRA is appropriate based on guidance from the SCAQMD. In the letter written on behalf of CREED LA, SWAPE claims that preparation of an operational HRA is required on the basis of SCAQMD's *Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Emissions*. Page 7 of SWAPE's findings[3] includes the following quotation from the SCAQMD's *Mobile Source Toxics Analysis* website:[4]

[4] SCAQMD, Mobile Source Toxics Analysis, http://www.aqmd.gov/home/rules-compliance/ceqa/air-quality-analysis-handbook/mobile-source-toxics-analysis. Accessed February 19, 2019.

> *In August 2002, the SCAQMD's Mobile Source Committee approved the "Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Emissions."* ***This document provided guidance for analyzing cancer risks from diesel particulate matter from mobile sources at facilities such as truck stops and warehouse distribution centers****. Subsequently,* ***SCAQMD staff revised the aforementioned document to expand the analysis to provide technical guidance for analyzing cancer risks from potential diesel particulate emissions impacts from truck idling and movement (such as, but not limited to, truck stops, warehouse and distribution centers, or transit centers), ship hotelling at ports, and train idling****. This revised guidance document titled, "Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis" was presented to and approved by the SCAQMD's Mobile Source Committee at its March 28, 2003 committee meeting. It is suggested that projects with diesel powered mobile sources use the following guidance document to quantify potential cancer risks from the diesel particulate emissions [emphasis added].*

As described above, the guidance provided on the SCAQMD's *Mobile Source Toxics Analysis* website states that DPM emissions impacts should be estimated for the following activities:[5]

- Truck idling and movement (such as, but not limited to, truck stops, warehouse/distribution centers or transit centers),
- Ship hoteling at ports, and
- Train idling.

The Project is not associated with any of the activities identified above and would not generate substantial operational DPM emissions. Therefore, in accordance with the guidance provided on the SCAQMD's *Mobile Source Toxics Analysis* website, a refined operational HRA is not required.

In addition, the California Air Resources Board (CARB) identifies the following land uses as air pollution sources of concern when siting sensitive receptors: freeways, rail yards, port, refineries, distribution centers, chrome plating facilities, dry cleaners, and large gasoline service stations.[6] The Project does not include any of these land uses. In 2003, the SCAQMD approved the *Health Risk Guidance for Analyzing Caner Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Emissions*.[7] This document provides guidance for analyzing cancer risks from DPM idling and movement emissions from sources such as truck stops, warehouses, distribution centers, and transit centers. The Project land uses are not related to any of the land uses considered significant sources of DPM. Therefore, in accordance with the SCAQMD approved

5 SCAQMD, Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis, August 2003, p. 1. http://www.aqmd.gov/docs/default-source/ceqa/handbook/mobile-source-toxics-analysis.doc?sfvrsn=2. Accessed February 19, 2019.

the *Health Risk Guidance for Analyzing Caner Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Emissions*, a refined operational HRA is not required.

The Project would generate minor amounts of DPM and sensitive receptor exposure would be minimal because the Project would not generate more than 100 trucks per day or more than 40 trucks with operating transport refrigeration.[8] SCAQMD generally recommends an operational HRA for facilities that exceed these values. Additionally, all trucks visiting the site for deliveries or maintenance are required to comply with applicable provisions of CARB's Truck and Bus regulations as stated on page 4.B-33 of the Draft EIR. Based on CARB and SCAQMD guidance documents, the Project's land use is not considered a significant source of DPM or TAC emissions. Thus a qualitative health risk assessment, consistent with the analysis provided in the Draft EIR, is appropriate. Therefore, the Draft EIR's less than significant determination in regards to operational health risk impacts is adequately supported by substantial evidence and a refined operational HRA is not required.

CHAPTER 2
Methodology

The SCAQMD, the applicable regional regulatory body regarding air pollutant emissions, does not require development projects subject to CEQA to prepare quantitative construction HRAs and has not adopted guidance on construction HRAs.[9] Nonetheless, a refined construction HRA was prepared to further substantiate the conclusions reached in the Project's Draft EIR and to allow for public review of the analysis. As indicated in the Draft EIR, Project construction would result in TAC emissions in the primary form of exhaust DPM associated with the use of heavy-duty equipment and trucks. Construction DPM emissions were estimated by conservatively assuming all construction occurs at the earliest feasible date (2021) and applying the California Emissions Estimator Model's (CalEEMod) and CARB's EMissions FACtor model (EMFAC2014) exhaust emissions factors for the corresponding years of construction. If construction occurs at a later date, construction emissions, including DPM emissions, would be lower than those analyzed herein due to the use of a more energy-efficient and cleaner burning construction vehicle fleet mix, pursuant to State regulations that require vehicle fleet operators to phase-in less polluting heavy-duty equipment. As a result, should Project construction commence at a later date than analyzed herein, emissions would be lower than the values used in this analysis.

The Project's construction emissions were estimated primarily using the CalEEMod software, an emissions computer model recommended by the SCAQMD. DPM emissions were assumed to be equal to PM10 exhaust emissions reported by CalEEMod. According to documentation from CARB,[10] diesel exhaust consists of 92 percent PM2.5 and 100 percent PM10 (PM2.5 is a subset of PM10). Therefore, utilizing the PM10 exhaust emissions reported by CalEEMod is appropriate for analyzing potential health risk impacts from diesel particulate matter.

The input values entered in CalEEMod were adjusted to be Project-specific based on equipment types and the construction schedule information provided by the Project Applicant. The CalEEMod modeling worksheets are provided in Appendix C of the Recirculated Partial Draft EIR, and provides detailed information regarding the construction modeling input values, which include the Project's construction schedule and list of construction activities; the number, type,

horsepower rating, load factor and daily usage of the heavy-duty construction equipment used for each construction activity; and the number of heavy duty trucks used throughout construction.

Project construction would consist of two phases, and these phases would not occur at the same time. Phase 1 consists of the proposed improvements on the 455 Continental Boulevard Parcel located on the northwestern portion of the Project Site. Phase 1 would take approximately 15.5 to 19.5 months to complete. Phase 1 would commence during the first quarter of 2021 and would be complete by the third quarter of 2022. Phase 1 would have three stages of activities: demolition, site preparation/excavation, and construction. Demolition would involve removal of the existing private recreational facilities, landscaping and other minor improvements, which would take approximately two weeks. Site preparation and excavation for the proposed tower and parking structure would take from three to five months. The construction phase is projected to take approximately 12 to 14 months.

Phase 2 consists of development of the 1955 East Grand Avenue Parcel located on the western portion of the Project site and would take about 13 to 18 months. Phase 2 would start upon completion of Phase 1 and be complete by the first quarter of 2024. Similar to Phase 1, there would be three stages of activities: demolition, site preparation/excavation, and construction. Demolition of the existing building and surface parking lot would take approximately four months. Site preparation and excavation for the new structure would take approximately two months. Construction on the new building is projected to take approximately nine to 12 months.

Project construction would require the use of heavy equipment during the demolition, grading, and excavation activities at the Project Site. During each stage of development, there would be a different mix of equipment including aerial lifts, air compressors, cement and mortar mixers, cranes, generator sets, graders, pavers, paving equipment, rollers, rough terrain forklifts, scrapers, tractor/loader/backhoe, water trucks, and welders.

The maximum daily construction emissions were estimated for each construction phase and parcel of the Project. The maximum daily emissions are predicted values for a representative worst-case day based on heavy duty equipment being continuously used for eight hours. These emissions would not represent the emissions that would occur for every day of construction. The maximum daily emissions of each construction phase were applied in the refined HRA analysis thereby providing a conservative analysis.

DPM emissions from on-road construction haul and vendor truck trips were estimated using USEPA-approved EMFAC2014 model. Emissions factors for the starting year were conservatively used for each construction phase as the emission factors tend to decrease in the later years. For example, if a phase started in 2021 and ended in 2022, emission factors for 2021 were applied. For the purposes of this quantitative construction HRA, truck emissions were limited to those emissions that would occur within an approximately 0.25-mile radius of the

Project Site boundaries, which is consistent with general SCAQMD recommendations for HRAs when siting sources of TACs in relation to sensitive receptors.[11]

Idling emissions associated with heavy-duty trucks were estimated based on the Project's truck trips and idling emission factors for heavy-duty vehicles from EMFAC2014 for on-road emissions. It was assumed haul and vendor trucks' idling activities would total 15 minutes per trip, representing three separate 5-minute idling occurrences: check-in to the site or queuing at the site boundary upon arrival, on-site idling during loading/unloading, and check-out of the site or queuing at the site boundary upon departure. The 5-minute limit per idling occurrence is consistent with the CARB's Airborne Toxics Control Measure (ATCM) to Limit Diesel-Fueled Commercial Motor Vehicle Idling.

[11] SCAQMD, Rule 212, Standards for Approving Permits and Issuing Public Notice, http://www.aqmd.gov/docs/default-source/rule-book/reg-ii/rule-212.pdf. Accessed February 2019. The SCAQMD provides recommendations for HRAs for facilities that have stationary sources or substantial daily trucks trips (such as warehouses, transit centers, truck stops, etc.).

CHAPTER 3
Receptor Identification

Some population groups, such as children, the elderly, and acutely ill and chronically ill persons, especially those with cardio-respiratory diseases, are considered more sensitive to air pollution than others. Located within the area are the DoubleTree Hotel, which is located to the south of the 333 Continental Avenue Parcel and east of the 1955 East Grand Avenue Parcel, and the child care center, which is located on the site of the 333 Continental Boulevard Parcel. While the public accessing the DoubleTree Hotel could include some members of sensitive population groups, these individuals are not specifically identified in the analysis in accordance with SCAQMD methodology, since their presence in the vicinity of the Project Site would be limited and/or intermittent. The child care center is operated and maintained by Mattel on the Project Site; therefore, the Applicant would control the construction program and operation of the child care center such that children's exposure to TAC emissions during Project construction would be avoided. In addition to residential receptors, this analysis evaluates health impacts to workers located at nearby commercial buildings. In accordance with SCAQMD, ESA identified the following off-site receptors located within proximity to the Project Site that are included in the refined HRA:

- The closest residence, approximately 1,100 feet west of the Project Site; and
- The closest schools, the Da Vinci School, approximately 1,850 feet southeast of the Project Site, and the El Segundo Middle School, approximately 2,500 feet west of the Project Site.

The closest schools are the Da Vinci School (DVS), which is located approximately 1,850 feet southeast of the Project Site, and the El Segundo Middle School (ESMS), which is located approximately 2,500 feet west of the Project Site. However, health impacts to students at the DVS and ESMS are not evaluated in the refined construction HRA for the following reasons: (1) students at DVS and ESMS would be located more than twice as far from the Project Site compared to children of the same age located at residences closer to the Project Site, (2) DVS teaches grades, 9 through 12 and ESMS teaches grades 6, 7, and 8, thus student breathing rates (2 to 16 age bin and 16+ age bin) would be lower compared to infant children (0 to 2 age bin) at the residences closer to the Project Site in which a majority of construction exposure occurs, (3) exposure durations of students at DVS and ESMS (180 days) would be less than that of children at residences (350 days), and (4) this refined construction HRA resulted in less than significant impacts for the maximum impacted residence which is closer to the Project Site than DVS and ESMS. Therefore, impacts to DVS and ESMS students would be less than significant.

In addition, while workers at commercial buildings are generally not considered sensitive receptors, worker receptors at commercial buildings located near the Project Site are also

included in the refined construction HRA in order to provide a health-protective analysis of workers in the surrounding commercial buildings.

CHAPTER 4
Air Dispersion Modeling

Model Selection and Parameters

This analysis used the American Meteorological Society/Environmental Protection Agency regulatory air dispersion model (AERMOD version 18081) to estimate ambient concentrations of DPM at off-site receptors. Besides the residential and worker receptors described in Chapter 3, a Cartesian receptor grid with 20-meter spacing and a radius of more than 400 meters was generated in AERMOD and covered the existing off-site residential and commercial areas. In addition, a refined receptor grid with 10-meters spacing was placed over the residential receptors. Each receptor was placed at a height of zero meters in accordance with SCAQMD modeling guidance for AERMOD.[12] Besides receptors, the AERMOD model requires numerous other inputs, such as meteorological data, source parameters, and topographical data. The following sections explain the major inputs used for this analysis.

Meteorological Data

This analysis used the AERMOD-ready meteorological dataset of the nearest meteorological air monitoring site, which is located at the Los Angeles International Airport. The dataset includes five years of data from 2012-2016. The data was obtained from SCAQMD's meteorological database.[13]

Modeling Terrain

Terrain and elevation data was imported from the United States Geological Survey's (USGS) National Elevation Dataset (NED) (United States Geological Survey 2013). The dataset consists of ground surface elevation data for the United States, Canada, and Mexico. Elevations for the modeled receptors and buildings were based on a NED dataset with a 10-meter resolution.

Based on the land use characteristics in the Project vicinity, urban dispersion coefficients were used in AERMOD. The site was modeled with the urban population of 9,818,605 based on

[12] SCAQMD, Modeling Guidance for AERMOD, https://www.aqmd.gov/home/air-quality/air-quality-data-studies/meteorological-data/modeling-guidance. Accessed February 2019.

[13] SCAQMD, Meteorological Data for AERMOD, https://www.aqmd.gov/home/air-quality/air-quality-data-studies/meteorological-data/data-for-aermod. Accessed February 2019.

SCAQMD's modeling guidance for AERMOD. The urban option in AERMOD accounts for increased turbulence associated with the urban heat island effect.

Modeled Source Characters

As noted above, construction sources include off-road construction equipment, on-road diesel trucks (including haul trucks and vendor trucks), and diesel truck idling. The modeling parameters used in AERMOD for each source are discussed below.

Emission rates from the construction emission sources were based on the anticipated hours of activity for each source as described in Chapter 2, *Methodology*, above. Each emission source was modeled separately within AERMOD. The analysis used a unitized emission rate concept for each source group, where each source group is modeled with a unitized emission rate of 1 gram/second (g/s). The modeled concentration at each receptor (micrograms per cubic meter [μ/m^3]/[g/s]) represents a "dispersion factor," which was then multiplied by the actual emission rate of each source group to determine actual concentrations, and the final result from all the sources was superimposed.

The sections below describe how construction activities were modeled in AERMOD. Different source groups were modeled to represent emissions for each construction phase (i.e., Phase 1 off-road equipment and Phase 2 off-road equipment). The City of El Segundo allows construction activities to operate between the hours of 7:00AM and 6:00 PM Monday through Saturday.[14] In order to reflect the duration of construction equipment usage of eight hours per day, construction activities were modeled operating between 7:00 AM and 3:00 PM, for 6 days per week. Detailed construction air dispersion modeling parameters are presented in Appendix C of the Recirculated Partial Draft EIR.

Off-road Equipment

The exhaust emissions from off-road construction equipment were modeled as multiple area sources equal to the size of the construction areas, with a 5-meter release height and 1.4-meter initial vertical dispersion.[15, 16]

For all construction activities, an even distribution of construction emissions over the entire area of construction for each construction phase was used with the assumption that emissions would originate from all potential locations within the construction source grid.

On-road Heavy Duty Truck Travel

To represent the truck haul route, a line volume source (i.e., line sources as a series of volume sources) was placed along Grand Avenue heading west and then turning right onto Sepulveda Boulevard. The haul route was modeled with a 10-foot release height.[17]

Heavy Duty Truck Idling

DPM emissions for truck idling were assumed to occur along the portion of Grand Avenue that borders the Project Site. Idling emissions were modeled as line volume sources with a release height of 10 feet to represent haul trucks checking in and out of the construction site, as well as emissions from loading/unloading activities.[18] Although loading/unloading activities are likely to occur farther away from the construction site boundary, modeling these emissions at this location would be more conservative because emissions would be closer to the identified sensitive receptors analyzed in the refined HRA.

CHAPTER 5
Risk Characterization Methods

As discussed previously, the SCAQMD does not require projects to prepare quantitative construction HRAs and has no guidance on construction HRAs.[19] Thus, health risk calculations were used from available guidance based on SCAQMD's risk assessment procedures normally used to evaluate health risk impacts from long-term operations for stationary source facility permit projects.

Health risk calculations were performed using the Office of Environmental Health Hazard Assessment (OEHHA) methodologies and exposure parameters, and the corresponding SCAQMD guidance documents. In March 2015, OEHHA updated the methods for estimating cancer risks to use higher estimates of cancer potency during early life exposures and to use different assumptions for breathing rates and length of residential exposures. The new guidance, *Air Toxics Hot Spots Program Guidance Manual for the Preparation of Health Risk Assessments*, incorporates advances in risk assessment with consideration of infants and children using Age Sensitivity Factors (ASF) (OEHHA 2015). These updated exposure factors can result in numeric life-time health risk values to be approximately two to three times higher than those calculated under the previous OEHHA guidelines. ESA followed the OEHHA 2015 guidance in performing the refined HRA.

This analysis calculated the cancer risk and chronic hazard indices to estimate Project-specific health risks for construction emissions using annual average pollutant ambient concentrations modeled by AERMOD as discussed in Chapter 4.

The health risks are calculated as follows:

Residential Cancer Risk

Equation 1: $Dose_{RESIDENT}$ (mg/kg/day) = $C_{AIR} \times DBR \times A \times EF \times CF$ where:

- C_{AIR}= concentration in air ($\mu g/m^3$)
- DBR= daily breathing rate normalized to body weight (L/kg body weight-day)
- A= inhalation absorption factor (1 for DPM, unitless)

[19] South Coast Air Quality Management District, Final Environmental Assessment for: Proposed Amended Rule 307.1 – Alternative Fees for Air Toxics Emissions Inventory; Proposed Amended Rule 1401 – New Source Review of Toxic Air Contaminants; Proposed Amended Rule 1402 – Control of Toxic Air Contaminants from Existing Sources; SCAQMD Public Notification Procedures for Facilities Under the Air Toxics "Hot Spots" Information and Assessment Act (AB 2588) and Rule 1402; and, SCAQMD Guidelines for Participating in the Rule 1402 Voluntary Risk, page 2-23, September 2016, http://www.aqmd.gov/docs/default-source/ceqa/documents/aqmd-projects/2016/final-ea_par-307-1_1401_1402.pdf?sfvrsn=4. Accessed February 19, 2019.

- EF= exposure frequency (unitless) (days/365 days)
- CF= 10^{-6}, correction factor, micrograms to milligrams conversion, liters to cubic meters conversion

Equation 2: $Risk_{INH\text{-}RESIDENT}$ (in one million) = $Dose_{AIR} \times CPF \times ASF \times ED/AT \times FAH \times CCF$

where:

- $Dose_{AIR}$= daily inhalation dose (mg/kg-day)
- CPF= cancer potency factor (mg/kg-day) $^{-1}$
- ASF= age sensitivity factor (unitless)
- ED= exposure duration (years)
- AT= averaging time for lifetime cancer risk (years)
- FAH= fraction of time spent at home (unitless)
- CCF= 10^6, cancer conversion factor to represent risk in chances per million

Worker Cancer Risk

Equation 3: $Dose_{WORKER}$ (mg/kg/day) = $[C_{AIR} \times WAF] \times DBR \times A \times EF \times CF$ where:

- C_{air}= concentration in air ($\mu g/m^3$)
- WAF= worker adjustment factor (unitless), WAF = ($H_{residential}$ / H_{source}) x ($D_{residential}$ / D_{source}) = (24/8) x (7/6) = 3.5
- DBR= daily breathing rate normalized to body weight (L/kg body weight-day)
- A= inhalation absorption factor (1 for DPM, unitless)
- EF= exposure frequency (unitless) 0.68 (250 days / 365 days). Equivalent to working 5 days/week, 50 weeks/year
- CF= 10^{-6}, correction factor, micrograms to milligrams conversion, liters to cubic meters conversion

Equation 4: $Risk_{INH\text{-}WORKER}$ (in one million) = $Dose_{AIR} \times CPF \times ASF \times ED/AT \times FAH \times CCF$

where:

- $Dose_{AIR}$= daily inhalation dose (mg/kg-day)
- CPF= cancer potency factor (mg/kg-day^{-1})
- ASF= age sensitivity factor (unitless)
- ED= exposure duration (years)
- AT= averaging time for lifetime cancer risk (years)
- CCF= 10^6, cancer conversion factor to represent risk in chances per million

A summary of the exposure parameters used under this methodology are shown in **Table 1**, *Cancer Risk Exposure Parameters*.

[b] OEHHA 2015 Guidance Manual

[c] WAF is based on construction emissions occurring 6 days per week for 8 hours per day.

Risk Assessment

The assessment of health risks determines the relationship between the magnitude of chemical exposure and the nature and magnitude of adverse health risks resulting from this exposure. Cancer and chronic health risks were calculated using the OEHHA cancer potency factor (CPF) and Reference Exposure Level (REL) for DPM.[20] There is no acute toxicity factor for DPM.

Age Sensitivity Factors

The estimated excess lifetime cancer risks for residential receptors (including the early-in-life exposure) were adjusted using the ASFs recommended in the California Environmental Protection Agency (Cal/EPA) OEHHA Technical Support Document and 2015 OEHHA guidance.[21] This approach accounts for an "anticipated special sensitivity to carcinogens" of infants and children. Cancer risk estimates were weighted by a factor of 10 for exposures that occur from the third trimester of pregnancy to two years of age and by a factor of three for

[20] OEHHA, Hot Spots Unit Risk and Cancer Potency Factors, https://oehha.ca.gov/air/air-toxics-hot-spots. Accessed February 19, 2019.

[21] Cal/EPA, *Technical Support Document for Cancer Potency Factors: Methodologies for derivation, listing of available values, and adjustments to allow for early life stage exposures.* May 2009. https://oehha.ca.gov/media/downloads/crnr/tsdcancerpotency.pdf. Accessed February 2019.

exposures that occur from 2 to 15 years of age. No weighting factor (i.e., an ASF equal to one, which is equivalent to no adjustment) is applied to ages 16 to 70 years.

Cancer Risk Calculation

Excess lifetime cancer risks are estimated as the upper-bound incremental probability that an individual will develop cancer over a lifetime as a direct result of exposure to carcinogens. The risk is expressed as a unitless probability, and was calculated as the number of cancer incidences per million individuals in the refined HRA. The cancer risk for each chemical was calculated by multiplying the chemical intake or dose at the human exchange boundaries (e.g., lungs) by the DPM CPF. For cancer risk, the SCAQMD guidance identifies a significant impact if a project would result in an incremental cancer risk that is greater than 10 in one million for a sensitive receptor. This threshold is consistent with the threshold stated in the Draft EIR.

Chronic Health Impacts

Non-cancer effects of chronic (i.e., long- term) DPM exposures were evaluated using the Hazard Index (HI) approach consistent with the OEHHA guidance. The chronic HI was calculated by dividing the modeled annual average concentration by the REL. The REL is the concentration at or below which no adverse health effects are anticipated. The REL for DPM was obtained from OEHHA. OEHHA has recommended an ambient concentration of 5 micrograms per cubic meter ($\mu g/m^3$) as the chronic inhalation REL for DPM exhaust. The SCAQMD guidance identifies a significant impact if a project would result in an incremental chronic HI that is greater than 1.0. This threshold is consistent with the chronic HI threshold stated in the Draft EIR.

CHAPTER 6
Results

Project Health Risks

This section presents the results of the refined HRA, including cancer risk and chronic health risk from DPM exposure as a result of project construction. Off-site residential and worker receptor types were analyzed in the refined HRA and the maximum potential risks from exposure to construction DPM are summarized below.

Lifetime Excess Cancer Risk

Table 2 presents the maximum incremental increase in cancer risk for construction. As shown below, the Project would not exceed the 10 in one million cancer risk threshold for the modeled receptor types. Therefore, Project impacts would be less than significant. The maximum impacted receptors for each scenario are shown below in **Figure 1,** *Project Cancer Risk*.

TABLE 2
CONSTRUCTION MAXIMUM INCREMENTAL INCREASE IN CANCER RISK

Receptor Type	Cancer Risk (chances in one million)
Off-Site Residential	2.2
Off-Site Worker	3.8
SCAQMD Cancer Risk Threshold (in one million)	10
Exceeds Threshold?	**No**

Source: ESA, 2019.

Chronic Health Risk

Table 3 presents the chronic hazard indices for construction. As shown below, the Project would not result in a chronic hazard index greater than 1.0; therefore, chronic health risks would be less than significant. The maximum impacted receptors for each scenario are shown below in **Figure 2,** *Project Chronic Health Risks*.

TABLE 3
CONSTRUCTION MAXIMUM CHRONIC HAZARD INDEX

Receptor Type	Chronic Hazard Index
Off-Site Residential	0.002
Off-Site Worker	0.03
SCAQMD Hazard Index Threshold	1.0
Exceeds Threshold?	**No**

Source: ESA, 2019.

Based on the analysis above, the refined construction HRA results indicate that the residential and worker health impacts would be less than the applicable SCAMQD thresholds. Therefore, impacts from construction DPM exposure would be less than significant. This analysis supports the Draft EIR's previous conclusion of less than significant and no mitigation measures or further analysis is required.

South Coast Air Basin, Winter

1.0 Project Characteristics

1.1 Land Usage

Land Uses	Size	Metric	Lot Acreage	Floor Surface Area	Population
General Office Building	328.61	1000sqft	7.54	328,612.00	0
Enclosed Parking with Elevator	1,087.00	Space	9.78	434,800.00	0
Parking Lot	20.00	Space	0.18	8,000.00	0

1.2 Other Project Characteristics

Urbanization	Urban	**Wind Speed (m/s)**	2.2	**Precipitation Freq (Days)**	31
Climate Zone	8			**Operational Year**	2022
Utility Company	Southern California Edison				
CO2 Intensity (lb/MWhr)	702.44	**CH4 Intensity (lb/MWhr)**	0.029	**N2O Intensity (lb/MWhr)**	0.006

1.3 User Entered Comments & Non-Default Data

Project Characteristics - 2 choices for Climate zone- 8 or 11

Land Use - Construction Assumptions

Construction Phase - Construction Assumptions

Off-road Equipment - Construction Assumptions

Off-road Equipment - Construction Assumptions

Off-road Equipment - Off-highway truck represents water truck 2x per day

Off-road Equipment - Construction Assumptions

Off-road Equipment - Construction Assumptions

Trips and VMT - Construction Assumptions - Determine Haul truck route, added 2 trips to Worker to account for water trucks on-site

Demolition -

Grading - Construction Assumptions

Vehicle Trips -

Construction Off-road Equipment Mitigation -

Water Mitigation -

AERMOD Parameters for Construction HRA

AERMOD Parameters

Offroad Construction Equipment

455 Continental

Parameter	Value
Source Type:	Polygon Area
Release Height (m):[1]	5
Emission Rate (g/s)	1
Initial Vertical Plume (m):[2]	1.4

1955 Grand

Parameter	Value
Source Type:	Polygon Area
Release Height (m):[1]	5
Emission Rate (g/s)	1
Initial Vertical Plume (m):[2]	1.4

Haul Route (Used for both 455 Continental and 1955 Grand)

Parameter	Value
Source Type:	Line Volume
Plume Height (m):[3]	5.1
Plume Width (m)[4]:	13.4
Emission Rate (g/s):	1
Release Height (ft)[5]:	10

Truck Idling (Used for both 455 Continental and 1955 Grand)

Parameter	Value
Source Type:	Line Volume
Plume Height (m):[3]	5.1
Plume Width (m)[4]:	9.7
Emission Rate (g/s):	1
Release Height (ft)[5]:	10

Control Pathway	Input
Pollutant:	Other/DPM
Averaging Time:	Period/hourly
Terrain:	Flat and Elevated
Dispersion Coefficient:	Urban
Receptor Pathway:	**Input**
Receptor Heights (m)[6]:	0
Source Pathway	**Input**
Urban Population[6]:	9818605
Variable Emissions	Monday-Saturday, Hours 7AM-3PM
Meteorological Data[7]	**Input**
Station Name:	KLAX
Elevation (m):	30

Notes:

1 Release height for off-road construction equipment from SCAQMD Final Localized Significance Threshold Methodology,p.2-2 July 2008.

2 Initial vertical dimension for off-road construction equipment from the CRRP-HRA (BAAQMD, SF DPH and SF Planning, 2012)

3 Plume height based on 1.7 x vehicle height of 3m
USEPA, Haul Road Working Group, Final Report, March, 2012.

4 Haul route assumes 2 lanes [(3.7m x 2) + 6m = 13.4m]; Idling source assumes on lane 3.7m+6m=9.7m
USEPA, Haul Road Working Group, Final Report, March, 2012.

5 BAAQMD, Risk Modeling Guidance, 2012, p.71
