I. INTRODUCTION

The purpose of this report is to determine the following:

- The expected average daily and peak wastewater flows from the proposed development based on the latest land use designations and building intensities.
- The impact of the proposed project on the existing City of Irwindale sewer system and pipe segments. The pipe segments are analyzed from the proposed development to the Sanitation District of Los Angeles (LACSD) trunk sewer lines.
- The capacities of the existing City and LACSD sewer lines and the adequacy of the existing sewer systems to convey the additional anticipated wastewater from the proposed project.

II. SITE DESCRIPTION

The Park @ Live Oak Project consist of 78.32 acres in the west portion of the City of Irwindale, immediately west of Interstate 605. Project site is bound by Arrow Highway on the North, Live Oak Avenue on the Southeast and Interstate 605 (I-605) on the East. Refer to the project site map, *Figure 1 — Vicinity Map,* for project site locations.

The existing site is a former sand and gravel quarry. Currently on-site backfill operations are underway to enable the redevelopment of the site. The Park @ Live Oak includes industrial, business park and commercial uses. The project consists of 1,451,400 sq. feet of industrial/business park and 98,600 sq. feet of commercial uses.

III. EXISTING SEWER SYSTEMS DESCRIPTION

The proposed project is located within the jurisdictional boundaries of the City of Irwindale and Los Angeles County Sanitation District (LACSD) District No.22. The wastewater flow originating from the project site will discharge to an existing City of Irwindale sewer line for conveyance to the LACSD Joint Outfall B Unit 8G Trunk Sewer, located in Live Oak Avenue at Myrtle Avenue. Please refer to *Figure 2 — Sewer System Exhibit* for existing sewer infrastructure.

The table below provides a summary of the existing sewer infrastructure in the vicinity of the proposed project. This summary is based on the latest available and reviewed record drawings. Please refer to *Appendix F - As-Built Plans* for copies of the City of Irwindale record drawings.

Location	Size	Notes
Arrow Hwy	Line B - City of Irwindale 15” Sewer Line	Sewer line flows west
Live Oak Ave	Line A – City of Irwindale 15” Sewer Line	Sewer line southwest of intersection with Arrow Hwy. Sewer line flows northwest to intersection of Live Oak Ave and Arrow Hwy
Live Oak Ave	Line C - City of Irwindale 21” Sewer Line	Sewer line between Arrow Hwy and private drive Line D. Sewer line flows west

Private Drive Alley	Line D - City of Irwindale 12" Sewer Line	Sewer line flows northwest to MH at Live Oak and private drive intersection
Live Oak Avenue	Line E - City of Irwindale 20" Sewer Line	Sewer line between private road intersection and outfall at Live Oak Ave and Myrtle Avenue. Sewer Line flows west

The original design of the Live Oak sewer was performed by Kenneth Mullen, Consulting Engineers to determine the sewer generation rates, tributary flows and sizes of proposed sewer lines to serve the entire tributary areas. Please refer to *Appendix E - LA Marketplace Sewer Design Live Oak Study* for copies of the tributary area map and sewer design calculations.

Additionally, David Evans and Associates, Inc. prepared a sewer area study dated June 2017 for the project site to determinate the capacity of existing sewer systems. The Sewer Area Study has been reviewed and accepted by the City of Irwindale. Please refer to *Appendix D — Sewer Area Study Arrow Pit Development dated June 2017* for a copy of the Sewer Area Study.

This sewer area study will utilize the findings of the above-mentioned studies and update the sewer generation flow calculations and existing sewer lines capacities based on the latest land use information and record drawings.

IV. PROPOSED DEVELOPMENT AND EXISTING SEWER FLOWS

The Park @ Live Oak consists of 1,451,400 sq. feet of industrial/business park land use and 98,600 sq. feet of commercial uses. The proposed project's sewer demand is estimated based on Los Angeles County Sanitation District (LACSD) sewage generation factors. The expected average and peak wastewater flows from the project are 322,325 GPD and 0.806 MGP respectfully. Please refer to LACSD Table 1, "Loadings for each class of land use" in *Appendix A — Estimated Average Daily Sewer Flows for Various Occupancies and Table 1 — Summary of Project Average Daily and Peak Sewer Flows* for project sewer demand calculations.

The proposed project site will have multiple points of connection (POC) to the existing sewer lines A and B. The majority of the site peak wastewater flow (approximately 88.8% of the peak flow) will be tributary to existing Line A along Live Oak Ave. The remaining site peak wastewater flow (11.2% of the peak flow) will be tributary to Line B along Arrow Hwy. Please refer to *Figure 2 — Sewer System Exhibit for proposed POC to existing sewer lines and Tables 1A and 1B* for Line A and Line B contributing flows calculations.

This sewer area study has utilized the same wastewater flows of 80 gpd/1000 sq.ft. from tributary areas that contribute to existing sewer lines as estimated per original LA Marketplace sewer study, except for the LA Racing site located south of Live Oak Avenue. The original sewer study wastewater flow estimate for LA Marketplace (now the LA Racing) was based on 20,000 attendances, where LA Racing has 6,000 attendances capacity. Please refer to *Table 1 C— Summary of Contributing Flows for LA Racing* for contributing flows calculations.

Existing sewer lines segments area contributing flows and cumulative contributing flows are summarized in *Table 2 — Sewer Capacity Summary*

V. SEWER PIPE CAPACITY ANALYSIS

Existing sewer lines A & B are 15" pipes diameters, line C is 21" pipe diameter, line D is 12" pipe diameter, and line E is 20" pipes diameter. Peak flow capacities for these lines, normal depths and velocities for peak flows were determined by using Kutter's Formula. Refer to Pipe Size Capacity Calculations in *Appendix C — Pipe Size Capacity Calculations*. Each main line is sized based on the minimum slope (worst case scenario) and half or 3/4 full pipe depending on the pipe size based on Los Angeles County guidelines. Note that LA County defines 100% DESIGN capacity for an existing pipeline, 15" or greater in diameter, as operating at ¾ full. A memo issued from the county, however, allows for the exceedance of this capacity. Refer to *Appendix B* for an excerpt from this memo.

As shown in *Table 2 — Sewer Capacity Summary* all existing City of Irwindale sewer lines have adequate capacity.

Additionally, a will serve letter request was submitted to LACSD for proposed development to verify trunk sewer line capacity. Based on the LACSD letter dated May 1, 2018 the District's Joint Outfall B Unit 8G Trunk Sewer has a capacity of 4.2 MGP and conveyed peak flow of 1.5 MGP when measured in 2012. This results in an available capacity of 2.7 MGP. The Park @ Live Oak Project will be contributing flow of 0.81 MGP to LACSD trunk sewer line. Therefore, existing trunk sewer line have enough available capacity for the proposed project. Please see LACSD will serve letter in *Appendix B.*

VI. CONCLUSION

A summary of existing pipe diameters, slopes, peak flows capacities and normal depts can be found in *Table 2 — Sewer Capacity Summary*. All existing sewer mains that will serve the project site, except for a portion of line E, meet the County capacity standards of no more than ½ full for mains under 15" diameter and no more than ¾ full for mains with a diameter of 15" and larger and will not negatively impact the available capacity of this sewer lines. The portion of Line E that exceeds the defined 100% capacity is also within the parameters allowed by the county memo. Refer to *Appendix B* and *Appendix C — Pipe Size Capacity Calculations*.

The project site will contribute 0.81 MGD to the LACSD Joint Outfall B Unit 8G Trunk Sewer, which does not exceed the available capacity of 2.7 MGD.

In summary the existing City of Irwindale collector lines have adequate capacity for the proposed project. Additionally, the existing LACSD sewer system have sufficient available capacity to serve the proposed project.

* DISCHARGE FOR THIS PIPE SEGMENT SEGMENT IS 78.4% FULL, WHICH IS APPROXIMATELY 105% OF THE DESIGN CAPACITY. THIS IS BASED ON LA COUNTY'S DEFINITION OF 100% DESIGN CAPACITY BEING REACHED AT 75% FULL PIPE. HOWEVER, PER LOS ANGELES COUNTY POLICIES FOR MANAGING AVAILABLE SEWER CAPACITY AND SEWAGE DISCHARGE IN EXCESS OF DESIGN CAPACITY, NO FLOW MEASUREMENTS AND NO MITIGATION WILL BE REQUIRED. REFER TO APPENDIX B FOR MEMO FROMLA COUNTY.

Planning Division
City of Irwindale
5050 North Irwindale Avenue
Irwindale, CA 91706

Dear Ms. Simpson:

NOP Response for The Park @ Live Oak Specific Plan Project

The Sanitation Districts of Los Angeles County (Districts) received a Notice of Preparation of a Draft Environmental Impact Report (NOP) for the subject project on April 4, 2018. The proposed project is located within the jurisdictional boundaries of District No. 22. We offer the following comments regarding sewerage service:

1. The wastewater flow originating from the proposed project will discharge to a local sewer line, which is not maintained by the Districts, for conveyance to the Districts' Joint Outfall B Unit 8G Trunk Sewer, located in Live Oak Avenue at Myrtle Avenue. The Districts' 21-inch diameter trunk sewer has a capacity of 4.2 million gallons per day (mgd) and conveyed a peak flow of 1.5 mgd when last measured in 2012.

2. The wastewater generated by the proposed project will be treated at the San Jose Creek Water Reclamation Plant (WRP) located adjacent to the City of Industry, which has a capacity of 100 mgd and currently processes an average flow of 64.1 mgd. All biosolids and wastewater flows that exceed the capacity of the San Jose Creek WRP are diverted to and treated at the Joint Water Pollution Control Plant in the City of Carson.

3. The expected average wastewater flow from the project, described in the document as a 1,451,400-square-foot mixed-use industrial and commercial park, is 471,705 gallons per day. For a copy of the Districts' average wastewater generation factors, go to www.lacsd.org, Wastewater & Sewer Systems, click on Will Serve Program, and click on the Table 1, Loadings for Each Class of Land Use link.

4. The Districts are empowered by the California Health and Safety Code to charge a fee for the privilege of connecting (directly or indirectly) to the Districts' Sewerage System for increasing the strength or quantity of wastewater discharged from connected facilities. This connection fee is a capital facilities fee that is imposed in an amount sufficient to construct an incremental expansion of the Sewerage System to accommodate the proposed project. Payment of a

connection fee will be required before a permit to connect to the sewer is issued. For more information and a copy of the Connection Fee Information Sheet, go to www.lacsd.org, Wastewater & Sewer Systems, click on Will Serve Program, and search for the appropriate link. In determining the impact to the Sewerage System and applicable connection fees, the Districts' Chief Engineer and General Manager will determine the user category (e.g. Condominium, Single Family home, etc.) that best represents the actual or anticipated use of the parcel or facilities on the parcel. For more specific information regarding the connection fee application procedure and fees, please contact the Connection Fee Counter at (562) 908-4288, extension 2727.

5. In order for the Districts to conform to the requirements of the Federal Clean Air Act (CAA), the capacities of the Districts' wastewater treatment facilities are based on the regional growth forecast adopted by the Southern California Association of Governments (SCAG). Specific policies included in the development of the SCAG regional growth forecast are incorporated into clean air plans, which are prepared by the South Coast and Antelope Valley Air Quality Management Districts in order to improve air quality in the South Coast and Mojave Desert Air Basins as mandated by the CCA. All expansions of Districts' facilities must be sized and service phased in a manner that will be consistent with the SCAG regional growth forecast for the counties of Los Angeles, Orange, San Bernardino, Riverside, Ventura, and Imperial. The available capacity of the Districts' treatment facilities will, therefore, be limited to levels associated with the approved growth identified by SCAG. As such, this letter does not constitute a guarantee of wastewater service, but is to advise you that the Districts intend to provide this service up to the levels that are legally permitted and to inform you of the currently existing capacity and any proposed expansion of the Districts' facilities.

If you have any questions, please contact the undersigned at (562) 908-4288, extension 2717.

Very truly yours,

Adriana Raza
Customer Service Specialist
Facilities Planning Department

DOC: #4563864.D22

October 12, 2005

Approved

TO: Dean Efstathiou

FROM: Dennis Hunter
Land Development Division

POLICIES FOR MANAGING AVAILABLE SEWER CAPACITY AND SEWAGE DISCHARGE IN EXCESS OF DESIGN CAPACITY

The following will set forth Public Works' policies related to managing sewer infrastructure capacity. Design capacity of the sewer mainline is defined as follows:

< 15" diameter	½ full = 100% capacity (d/D)
≥ 15" diameter	¾ full = 100% capacity (d/D)

When Public Works determines there is available capacity in a mainline sewer for infill and redevelopment projects, the remaining available capacity shall be allocated on a first come – first serve basis.

Sewer Advisory Committee

A Sewer Advisory Committee (SAC) will be formed for the purpose of recommending courses of action to address proposed development connecting to existing sewers that will cause them to be operating beyond their design capacity. The SAC will make their recommendations to Dean Efstathiou, Assistant Director. The SAC will be chaired by Waterworks and Sewer Maintenance Division and will have representatives from Design and Land Development Divisions. Each Division will appoint a Principal Engineer or Senior Civil Engineer as a representative to the SAC and will convene whenever sewer decisions are required to address developmental impacts. Sewer Maintenance will maintain records of SAC meetings and will prepare recommendations to Administration for approval. The SAC may require other Division representatives to participate on a case-by-case basis when necessary, such as Building and Safety and Programs Development.

Divisional Responsibilities

Design Division

1. Support activities of the SAC.

2. Prepare sewer area studies when required.

3. Maintain records/archive of all approved sewer area studies and flow measurements.

Land Development Division

1. Support activities of the SAC.

2. Impose sewer area study requirements for private developments if necessary and review/approve all submittals.

3. Refer cases to SAC when both sewer area studies and flow measurements indicate that a potential overload situation exists or will exist based on criteria described below.

4. Provide copies of all approved sewer area studies and flow measurements to Design Division for archiving.

Waterworks and Sewer Maintenance Division

1. Chair the SAC, maintain meeting records and prepare position papers to Administration.

2. Advise the SAC when an overload condition is observed during maintenance activities.

3. Initiate effort to track and map all overload areas within the Consolidated Maintenance District.

4. Keep database of all flow measurement results.

Design Criteria

1. Capacity of sewer mainlines less than 15" in diameter are considered full (100 percent) when the ratio of the depth of flow (d) over the pipe diameter (D) is equal to 0.5, expressed as d/D = 0.5.

2. Capacity of sewer mainlines equal to or greater than 15" in diameter are considered full (100 percent) when the ratio of the depth of flow (d) over the pipe diameter (D) is equal to 0.75, expressed as d/D = 0.75.

3. When an area study indicates that flow conditions based on calculated discharges is between 101 percent to 150 percent of capacity, no flow measurements and no mitigation will be required. If maintenance records warrant, a flow test may be required.

4. When an area study for a development that proposes to increase the density or change the zoning indicates that flow conditions are between 151 to 200 percent of capacity, flow measurements shall be required. If the flow test indicates that the actual flow condition is below 151 percent, no mitigation will be required. If the flow test results indicate the actual flow is above 151 percent, the case shall be referred to the SAC to evaluate options and make recommendations to Administration for approval. These options may include, but are not limited to: requiring full mitigation from the development, assessing pro-rata shares, creation of a reimbursement district, or establishing a County Improvement (CI) district.

APPENDICES

Proposed Arrow Pit Site Plan ..... A

Proposed Arrow Pit Flow and Sewer Capacity Calculations ..... B

LACSD Loadings for Each Class of Land Use C

LA Marketplace Sewer Design Live Oak Study ..... D

Live Oak Sanitary Sewer Improvement Plans ..... E

1. PROJECT DESCRIPTION

The existing 77-acre quarry site sits in the triangular area bounded by Arrow Highway to the north, Live Oak Ave to the south, and the 605 Freeway to the east. The site is currently being filled to rough graded condition and will ultimately be developed as a mixed-use facility consisting of warehouse, retail, and restaurant space. See Appendix A for project site plan. The project site currently does not discharge into the City of Irwindale's sewer system.

2. PURPOSE OF STUDY

The following study was prepared to determine if the existing sanitary sewer main in Live Oak Ave has the capacity to accept the flows from the proposed Arrow Pit Development Project. The expected flows from the proposed development will be compared to the assumed flows from the original sewer design. Our study also revises the original sewer design calculations to utilize Kutter's Formula and the updated pipe capacity requirements discussed further below.

3. ORIGINAL SEWER DESIGN FLOWS

The original design of the Live Oak Sewer was performed by Kenneth Mullen, Consulting Engineers (See **Appendix D**). In the study "LA Marketplace – Sewer main Design Live Oak Ave", the assumed tributary areas to the sewer main in Live Oak Ave between Arrow Highway and the 605 Freeway included the Arrow Pit site. The assumed flow that was used at the time for all of the tributary areas was 80 gpd/1,000 SF and the calculated daily flow rate for the Arrow Pit site was 0.39 cfs. These numbers were based on a theoretical future land use consisting of warehouse, office buildings, and restaurant space. The assumed flows from the Arrow Pit site and the LA Marketplace (now the Irwindale Speedway) resulted in calculations showing that a minimum 12" pipe was needed at 0.4% slope. The calculations utilized Manning's Equation to determine the required pipe sizes. Per the record drawings (See **Appendix E**) a 15" pipe at 0.3% slope was built in Live Oak Ave.

4. PROPOSED DEVELOPMENT FLOWS

It is anticipated that the proposed Arrow Pit development will consist of 1.355 million SF of warehouse, 47,000 SF of retail space, and 33,000 SF of restaurants. Using the LA County Sanitation Districts (LACSD) generations tables, an average flow of 57.2 gpd/1,000 SF can be assumed for the area resulting in total daily flow rate of 0.13 cfs. Peak flow in each line was determined by multiplying the average daily flow rate of each pipe by the factor of 2.5 per LACSD. These calculations can be seen in **Appendix B** and in a summary **Table 1** and **Table 2** below. In order to obtain conservative values, the

retail space was calculated as a "Shopping Center" per the LACSD table, however it is more likely to generate flows closer to "Store" (225 gpd/1,000 SF less than "Shopping Center"). The LACSD generation table is attached in **Appendix C** for reference.

5. SEWER PIPE CAPACITY ANALYSIS

Per the record drawings, a 15" pipe at 0.3% slope was built in Live Oak Avenue (See **Appendix E**). An updated sewer capacity analysis was done to revise the calculations utilizing Kutter's Formula and the requirement of pipe sizes greater than 15 inches to flow ¾ full and pipe sizes 15 inches and less to flow ½ full. Using Kutter's Formula in flowmaster, with 15" pipe, a slope of 0.003 ft/ft, a roughness coefficient of 0.013, and a peak flow of 1.32 cfs, the pipe was 43.2 percent full. The result shows that the existing 15" pipe has sufficient capacity to handle the discharge from the proposed Arrow Pit development. See **Appendix B** for the Flowmaster calculation results and a summary in **Table 3** below.

TABLE 3 – SEWER CAPACITY ANALYSIS SUMMARY

	Q_P (CFS)	PIPE (IN)	%FULL	EX PIPE (IN)	EX SLOPE (%)
LINE A	1.32	15	43.2	15	0.3
LINE B	1.99	18	38.1	-	-
LINE C	4.11	18	57.2	21	0.4
LINE D	1.04	12	49.1	-	-
LINE E	5.15	18	66.3	-	-

6. SUMMARY OF RESULTS

Our conservative flow estimate average of 57.2 gpd/1,000 SF is considerably less than the original assumed design flow average of 80 gpd/1,000 SF. Similarly, the anticipated total daily flow volume for the proposed Arrow Pit development is 3 times less (0.13 cfs vs 0.39 cfs) than what the City's sewer main was originally designed to accept from the 77-acre property. This is due to the conservative nature of the original design, which assumed that commercial buildings would cover the entire footprint of the tributary areas. Since our calculated flows are significantly lower than the original design, we conclude that there is sufficient capacity to handle the discharge from the proposed Arrow Pit development.

LA Marketplace Sewer Design Live Oak Study

DETERMINE SIZE OF PROPOSED SEWERMAIN REQUIRED TO SERVE ENTIRE TRIBUTARY AREA (SEE ATTACHED MAP)

DESIGN CRITERIA:

MIN. PIPE SIZE = 8" MIN. VELOCITY = 2fps
PIPELINE FLOWING 1/2 FULL FOR D ≤ 10"
PIPELINE FLOWING 3/4 FULL FOR D > 10"
PEAKING FACTORS DETERMINED FROM ATTACHED CURVES
CURRENT ZONING: M2 OR QUARRY

DETERMINE SEWAGE GENERATION RATES:

THE TYPES OF USES ALLOWED IN AN M-2 ZONE ARE MOSTLY "DRY USES", IE. THEY DO NOT PRODUCE LARGE VOLUMES OF SEWAGE. DISCUSSIONS WITH CITY STAFF INDICATE THAT SOME USES WHICH PRODUCE MORE SEWAGE MAY BE ALLOWED, SUCH AS RESTAURANTS OR R&D PARKS, ESPECIALLY ALONG THE FREEWAY FRONTAGE. THEREFORE, SEWAGE GENERATION RATES COULD VARY BETWEEN 1000 gpd/1000SF TO 25gpd/1000 SF.

GIVEN THE LAND REQUIREMENTS FOR THE M2 USES AND THOSE FOR RESTAURANT USES, A COMPROMISE USING AN AVERAGE SEWAGE GENERATION RATE WOULD BE APPROPRIATE. THE MAJORITY OF LAND WOULD UNDOUBTEDLY BE DEVOTED TO USES SUCH AS LUMBER YARD, WAREHOUSING, AUTO SALES, TRUCKING & SOME OFFICE TYPE USES. VERY SMALL AMOUNTS OF LAND WOULD BE DEVOTED TO MORE INTENSIVE USES SUCH AS RESTAURANTS & HEALTH CLUBS.

A TOTAL OF 357 ACRES, PLUS THE PROJECT SITE, ARE TRIBUTARY TO THE SUBJECT SEWER MAIN. OF THIS LARGE SINGLE PARCELS OF 10 ACRES OR MORE EQUAL 287 ACRES.

THE FOLLOWING IS A THEORETICAL BREAKDOWN BY LANDUSE TYPE OF THE TRIBUTARY AREA:

AREA		SEWAGE *
287	WAREHOUSING, LUMBERYARD, OPEN STORAGE, NURSERY, DRY MANUFACTURING ETC.	25 gpd/1000 SF
60 Ac	OFFICE BLDG., R&D ETC, AUTO SALES	200 gpd/1000 SF
10 Ac	RESTAURANT	1000 gpd/1000 SF

USE A "WEIGHTED AVG"

$$\frac{287(25\text{gpd}/1000) + 60(200) + 10(1000)}{357} = 81.7\text{gpd}/1000\text{SF}$$

USE 80 gpd/1000 SF AVERAGE SEWAGE GENERATION FOR SURROUNDING PROPERTIES

CONVERT TO CFS/ACRE

$$Q = 80\text{gpd}/1000\text{SF} \times \frac{1\text{DAY}}{24\text{hr}} \times \frac{1\text{HR}}{60\text{m}} \times \frac{1\text{m}}{60\text{S}} \times \frac{1\text{CF}}{7.48\text{gal}} \times \frac{43560\text{SF}}{1\text{AC}}$$

$$= .0054\ \text{cfs/Ac}$$

DETERMINE SEWAGE VOLUME FOR LA MARKET PLACE

ESTIMATED ATTENDANCE = 20,000 PEOPLE PER DAY

* SEWAGE GENERATION = 10 gpd/PERSON (ATTENDANCE)

$$Q = 10\text{gpd}/\text{PERSON} \times 20{,}000 \times \frac{1\text{CF}}{7.48\text{gal}} \times \frac{1\text{DAY}}{24\text{HR}} \times \frac{1\text{HR}}{60\text{m}} \times \frac{1\text{m}}{60\text{S}}$$

$$= 0.3095\ \text{cfs}$$

* FROM ATTACHED LETTER FROM LA CO. SAN DIST.

TRIBUTARY AREA IN ACRES (FROM ASSESSOR'S MAPS)

M-2 USE = 9.3 + 4.77 + 14.3 + 45.53 + 3.3

= 77.20 AC

Q_{DT} = 77.20 Ac × .0054 cfs/Ac

= 0.42 cfs

B. DETERMINE SIZE OF PIPELINES

1. DERIVE STANDARD EQUASIONS

a. ASSUME PIPELINES ≤ 10" ϕ FLOWING 1/2 FULL

USE MANNING'S EQN. & SOLVE FOR DIAMETER

$$Q = A\left(\frac{1.486}{n}\right) R_H^{2/3} S^{1/2}$$

WHERE: A = AREA OF FLOW = $\frac{1}{2}\left(\frac{\pi D^2}{4}\right) = \frac{\pi D^2}{8}$

$$R_H = \frac{A}{P} = \frac{\frac{1}{2}\frac{\pi D^2}{4}}{\frac{1}{2}\pi D} = \frac{D}{4}$$

$n = .013$

THEREFORE: $Q = \frac{\pi D^2}{8}\left(\frac{1.486}{.013}\right)\left(\frac{D}{4}\right)^{2/3} S^{1/2}$

$Q = (17.81)\, D^2 (D^{2/3})\, S^{1/2}$

$Q = 17.81\, D^{8/3} S^{1/2}$ FOR PIPES ≤ 10" ϕ

b. ASSUME PIPELINES > 10" ϕ FLOWING 3/4 FULL
USE MANNING'S EQN & SOLVE FOR DIAMETER

$$Q = A\left(\frac{1.486}{n}\right) R_H^{2/3} S^{1/2}$$

WHERE: A = AREA OF FLOW $= 0.632D^2$ FROM TABLE 7-4 *

$R_H = \frac{A}{P} = 0.302D$ FROM TABLE 7-5 *

$n = .013$

* KING'S HANDBOOK OF HYDRAULICS PAGE 7-35
FOR $D/d = 0.75$

THEREFORE: $Q = 0.632D^2\left(\frac{1.486}{.013}\right)(0.302D)^{2/3} S^{1/2}$

$= 32.52\ D^2 (D^{2/3}) S^{1/2}$

$Q = 32.52\ D^{8/3} S^{1/2}$ FOR PIPES > 10" ϕ

2. DETERMINE PEAK FLOW IN EACH PIPELINE

a. LINE "A"

$Q_A = 0.71$ cfs $F = 2.8$ FROM ATTACHED GRAPH FIG. 2-5 LA CO SAN. DIST.

$Q_{AP} = 0.71\ (F)$

$Q_{AP} = 0.71\ (2.8)$

$= 1.99$ cfs

b. LINE "B"

$Q_{BT} = 0.80$ cfs F = 2.7 FROM ATTACHED GRAPH

$Q_{BP} = 0.80\ (F)$

$= 0.80\ (2.7)$

$= 2.16$ cfs

c. LINE "C"

$Q_C = Q_{AT} + Q_{BT} + Q_{CT}$ F = 2.5 FROM ATTACHED GRAPH

$= 0.71 + 0.80 + 0.32$

$= 1.83$ cfs

$Q_{CP} = 1.83\ (F)$

$= 1.83\ (2.5) = 4.58$ cfs

d. LINE "D"

$Q_{DT} = 0.42$ cfs

F = 2.9 FROM ATTACHED GRAPH

$Q_{DP} = 0.42(F)$

$= .42(2.9)$ cfs $= 1.22$ cfs

e. LINE "E"

$Q_E = Q_C + Q_{DT}$ F = 2.45 FROM ATTACHED GRAPH

$= 1.83 + 0.42$

$= 2.25$ cfs

$Q_{EP} = 2.25\ (F)$

$= 2.25\ (2.45) = 5.51$ cfs

3. DETERMINE PIPE SIZES

a. LINE A ASSUME $D > 10"\phi$

$Q = 32.52\, D^{8/3} S^{1/2}$ $S = .004$

$1.99 = 32.52\, D^{8/3} (.004)^{1/2}$

$D^{8/3} = 0.9675$

$D = 0.99$ ft $= 11.85$ INCHES USE 12" PIPE

b. LINE B ASSUME $D > 10"$

$Q = 32.52\, D^{8/3} S^{1/2}$ $S = .004$

$2.16 = 32.52\, D^{8/3} (.004)^{1/2}$

$D^{8/3} = 1.05$

$D = 1.02$ ft $= 12.2$ IN. USE 12" PIPE

C. LINE C ASSUME $D > 10"$

$Q = 32.52\, D^{8/3} S^{1/2}$ $S = .004$

$4.58 \text{cfs} = 32.52\, D^{8/3} (.004)^{1/2}$

$D^{8/3} = 2.23$

$D = 1.35$ ft $= 16.2$ IN. USE 18" PIPE

d. LINE D ASSUME $D > 10"$

$Q = 32.52\, D^{8/3} S^{1/2}$ $S = .004$

$1.22 = 32.52\, D^{8/3} (.004)^{1/2}$

$D^{8/3} = 0.5932$

$D = 0.82$ ft $= 9.87$ USE 10" PIPE

℄ LINE E ASSUME D > 10"

$Q = 32.52\, D^{8/3}\, S^{1/2}$ $S = .004$

$5.51 = 32.52\, D^{8/3}(.004)^{1/2}$

$D^{8/3} = 2.68$

$D = 1.45$ ft $= 17.36$ IN. USE 18" ∅ PIPE

File No: JOA-00.00-00

Ms. Barbara Hull
Kenneth Mullen Consulting Engineers
325 North Santa Anita Avenue
Arcadia, CA 91006

Dear Ms. Hull:

Standard Wastewater Discharge Factors

Enclosed, per your request, is a copy of the standard wastewater discharge factors used by the Sanitation Districts.

If you have any questions regarding this information, please contact the undersigned at (213) 699-7411, extension 2704.

Very truly yours,

Charles W. Carry

= 77.20 AC

Q_{DT} = 77.20 Ac × .0054 cfs/Ac

= 0.42 cfs

B. DETERMINE SIZE OF PIPELINES

1. DERIVE STANDARD EQUASIONS

a. ASSUME PIPELINES ≤ 10" ϕ FLOWING 1/2 FULL

USE MANNING'S EQN. & SOLVE FOR DIAMETER

$$Q = A\left(\frac{1.486}{n}\right) R_H^{2/3} S^{1/2}$$

WHERE: A = AREA OF FLOW = $\frac{1}{2}\left(\frac{\pi D^2}{4}\right) = \frac{\pi D^2}{8}$

$$R_H = \frac{A}{P} = \frac{\frac{1}{2}\frac{\pi D^2}{4}}{\frac{1}{2}\pi D} = \frac{D}{4}$$

$n = .013$

THEREFORE: $Q = \frac{\pi D^2}{8}\left(\frac{1.486}{.013}\right)\left(\frac{D}{4}\right)^{2/3} S^{1/2}$

$Q = (17.81)\, D^2 (D^{2/3})\, S^{1/2}$

$Q = 17.81\, D^{8/3} S^{1/2}$ FOR PIPES ≤ 10" ϕ

b. ASSUME PIPELINES > 10" ϕ FLOWING 3/4 FULL
USE MANNING'S EQN & SOLVE FOR DIAMETER

$$Q = A\left(\frac{1.486}{n}\right) R_H^{2/3} S^{1/2}$$

WHERE: A = AREA OF FLOW $= 0.632D^2$ FROM TABLE 7-4 *

$R_H = \frac{A}{P} = 0.302D$ FROM TABLE 7-5 *

$n = .013$

* KING'S HANDBOOK OF HYDRAULICS PAGE 7-35
FOR $D/d = 0.75$

THEREFORE: $Q = 0.632D^2\left(\frac{1.486}{.013}\right)(0.302D)^{2/3} S^{1/2}$

$= 32.52\ D^2 (D^{2/3}) S^{1/2}$

$Q = 32.52\ D^{8/3} S^{1/2}$ FOR PIPES > 10" ϕ

2. DETERMINE PEAK FLOW IN EACH PIPELINE

a. LINE "A"

$Q_A = 0.71$ cfs $F = 2.8$ FROM ATTACHED GRAPH FIG. 2-5 LA CO SAN. DIST.

$Q_{AP} = 0.71\ (F)$

$Q_{AP} = 0.71\ (2.8)$

$= 1.99$ cfs

b. LINE "B"

$Q_{BT} = 0.80$ cfs F = 2.7 FROM ATTACHED GRAPH

$Q_{BP} = 0.80\ (F)$

$= 0.80\ (2.7)$

$= 2.16$ cfs

c. LINE "C"

$Q_C = Q_{AT} + Q_{BT} + Q_{CT}$ F = 2.5 FROM ATTACHED GRAPH

$= 0.71 + 0.80 + 0.32$

$= 1.83$ cfs

$Q_{CP} = 1.83\ (F)$

$= 1.83\ (2.5) = 4.58$ cfs

d. LINE "D"

$Q_{DT} = 0.42$ cfs

F = 2.9 FROM ATTACHED GRAPH

$Q_{DP} = 0.42(F)$

$= .42(2.9)$ cfs $= 1.22$ cfs

e. LINE "E"

$Q_E = Q_C + Q_{DT}$ F = 2.45 FROM ATTACHED GRAPH

$= 1.83 + 0.42$

$= 2.25$ cfs

$Q_{EP} = 2.25\ (F)$

$= 2.25\ (2.45) = 5.51$ cfs

3. DETERMINE PIPE SIZES

a. LINE A ASSUME $D > 10"\phi$

$Q = 32.52\, D^{8/3} S^{1/2}$ $S = .004$

$1.99 = 32.52\, D^{8/3} (.004)^{1/2}$

$D^{8/3} = 0.9675$

$D = 0.99$ ft $= 11.85$ INCHES USE 12" PIPE

b. LINE B ASSUME $D > 10"$

$Q = 32.52\, D^{8/3} S^{1/2}$ $S = .004$

$2.16 = 32.52\, D^{8/3} (.004)^{1/2}$

$D^{8/3} = 1.05$

$D = 1.02$ ft $= 12.2$ IN. USE 12" PIPE

C. LINE C ASSUME $D > 10"$

$Q = 32.52\, D^{8/3} S^{1/2}$ $S = .004$

$4.58 \text{cfs} = 32.52\, D^{8/3} (.004)^{1/2}$

$D^{8/3} = 2.23$

$D = 1.35$ ft $= 16.2$ IN. USE 18" PIPE

d. LINE D ASSUME $D > 10"$

$Q = 32.52\, D^{8/3} S^{1/2}$ $S = .004$

$1.22 = 32.52\, D^{8/3} (.004)^{1/2}$

$D^{8/3} = 0.5932$

$D = 0.82$ ft $= 9.87$ USE 10" PIPE

℄ LINE E ASSUME D > 10"

$Q = 32.52\, D^{8/3}\, S^{1/2}$ $S = .004$

$5.51 = 32.52\, D^{8/3}(.004)^{1/2}$

$D^{8/3} = 2.68$

$D = 1.45$ ft $= 17.36$ IN. USE 18" ∅ PIPE

Dear Ms. Hull:

Standard Wastewater Discharge Factors

Enclosed, per your request, is a copy of the standard wastewater discharge factors used by the Sanitation Districts.

If you have any questions regarding this information, please contact the undersigned at (213) 699-7411, extension 2704.

Very truly yours,

Charles W. Carry

2	PLAN & PROFILE

GENERAL NOTES

1 ALL WORK SHALL BE PERFORMED IN STRICT CONFORMANCE WITH THE CURRENT STANDARD SPECIFICATIONS FOR PUBLIC WORKS CONSTRUCTION. 1992 EDITION AND ALL SUPPLEMENTS APPURTENANT THERETO AND LACDPW STANDARD DRAWINGS LATEST EDITION.

2 ANY CONTRACTOR PERFORMING WORK ON THIS PROJECT SHALL FAMILIARIZE HIMSELF WITH THE SITE AND SHALL BE SOLELY RESPONSIBLE FOR ANY DAMAGE TO EXISTING FACILITIES RESULTING DIRECTLY OR INDIRECTLY FROM HIS OPERATIONS, WHETHER OR NOT THEY ARE SHOWN ON THE PLANS.

3 ALL OBSTRUCTIONS WITHIN THE AREA TO BE IMPROVED ARE TO BE REMOVED AND/OR RELOCATED AT THE DIRECTION OF THE CITY ENGINEER. UTILITIES SHALL BE RELOCATED BY THEIR RESPECTIVE OWNERS. THE CONTRACTOR IS REFERRED TO SECTION 5 OF THE STANDARD SPECIFICATIONS.

4 UTILITY LINE LOCATIONS WERE TAKEN FROM RECORD AND WERE NOT LOCATED IN THE FIELD, UNLESS OTHERWISE NOTED ON THE PLAN. THE CONTRACTOR IS REFERRED TO SECTION 5 OF THE STANDARD SPECIFICATIONS.

5 ALL WORK SHALL CONFORM TO THE PROVISIONS OF CONSTRUCTION SAFETY ORDERS ISSUED BY THE STATE DIVISION OF INDUSTRIAL SAFETY. IN CASE OF ANY ACCIDENTS INVOLVING SAFETY MATTERS COVERED BY SECTION 6424 OF THE CALIFORNIA LABOR CODE, THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE STATE DIVISION OF INDUSTRIAL SAFETY.

6 CALL UNDERGROUND SERVICE ALERT FOR UNDERGROUND LOCATIONS 48 HOURS BEFORE YOU DIG AND PAVE AT (800) 422-4133.

7 THE CONTRACTOR SHALL OBTAIN A NO-FEE TRAFFIC CONTROL PERMIT 48 HOURS PRIOR TO TIME OF CONSTRUCTION WITHIN THE PUBLIC RIGHT-OF-WAY. THE CONTRACTOR IS REFERRED TO SECTION 7-10.3 OF THE STANDARD SPECIFICATIONS.

8 THE CONTRACTOR SHALL RENEW OR REPLACE ANY EXISTING TRAFFIC STRIPING AND/OR PAVEMENT MARKINGS WHICH HAVE BEEN EITHER REMOVED OR THE EFFECTIVENESS OF WHICH HAS BEEN REDUCED AS A RESULT OF HIS OPERATIONS. RENEWAL OF PAVEMENT STRIPING AND MARKINGS SHALL BE DONE IN CONFORMANCE WITH SECTION 310-5.6 OF THE STANDARD SPECIFICATIONS.

9 ALL SEWER MAINS SHALL BE EXTRA STRENGTH VITRIFIED CLAY PIPE (V.C.P.) UNLESS OTHERWISE SHOWN AND APPROVED BY THE CITY ENGINEER.

10 PRIOR TO STARTING CONSTRUCTION, THE CONTRACTOR SHALL VERIFY LOCATION AND ELEVATION OF EXISTING SEWER MAIN(S) AND NOTIFY THE DESIGN ENGINEER OF ANY VARIATION FROM DESIGN.

11 ALL MANHOLES ARE CONSIDERED A CONFINED SPACE WHERE TOXIC FUMES MAY COLLECT. THE CONTRACTOR SHALL FOLLOW ALL CAL-OSHA REGULATIONS WHILE WORKING IN SUCH CONFINED SPACES INCLUDING THE USE OF BREATHING APPARATUS WHERE FOUND NECESSARY.

12 CONSTRUCTION OF NEW SEWER MAIN SHALL BE DONE IN ACCORDANCE WITH STATE OF CALIFORNIA DEPARTMENT OF HEALTH SERVICES CRITERIA FOR SEPARATION OF WATER MAINS AND SANITARY SEWERS. THE PLANS INDICATE THE CASE AND ZONE UNDER THESE QUIDELINES DETERMINED BY A SEARCH OF AVAILABLE UTILITY RECORDS. SHOULD THE CONTRACTOR ENCOUNTER CONDITIONS WHICH REQUIRE A MODIFICATION OF THE STATED CASE AND ZONE IN THE FIELD, HE SHALL IMMEDIATELY BRING IT TO THE ATTENTION OF THE CITY ENGINEER.

13 LEAKAGE TESTS SHALL BE PERFROMED ON ALL SEWERS AS SPECIFIED IN S.S.P.W.C. SECTION 306-1.4.4

14 TRAFFIC CONTROL WILL BE PROVIDED IN ACCORDANCE WITH THE SPECIAL PROVISIONS OF THE CITY OF IRWINDALE

NO CONNECTION FOR THE DISPOSAL OF INDUSTRIAL WASTES SHALL BE MADE TO SEWERS SHOWN ON THESE DRAWINGS UNTIL A PERMIT FOR INDUSTRIAL WASTEWATER DISCHARGE HAS BEEN ISSUED BY THE SANITATION DISTRICTS FOR SAID CONNECTION.

THE CONSOLIDATED SEWER MAINTENANCE DISTRICT DOES NOT ASSUME LIABILITY FOR THE HIGHER THAN NORMAL MAINTENANCE OF THIS SANITARY SEWER SYSTEM BECAUSE IT DOES NOT MEET THE MINIMUM DESIGN REQUIREMENTS. HOWEVER, NORMAL ROUTINE MAINTENANCE INSPECTIONS WILL BE PERFORMED BY THE DISTRICT.

5. ALL WORK SHALL CONFORM TO THE PROVISIONS OF CONSTRUCTION SAFETY ORDERS ISSUED BY THE STATE DIVISION OF INDUSTRIAL SAFETY. IN CASE OF ANY ACCIDENTS INVOLVING SAFETY MATTERS COVERED BY SECTION 842+ OF THE CALIFORNIA LABOR CODE, THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE STATE DIVISION OF INDUSTRIAL SAFETY.
6. CALL UNDERGROUND SERVICE ALERT FOR UNDERGROUND LOCATIONS 48 HOURS BEFORE YOU DIG AND PAVE AT (800) 422-4133.
7. THE CONTRACTOR SHALL OBTAIN A NO-FEE TRAFFIC CONTROL PERMIT 48 HOURS PRIOR TO TIME OF CONSTRUCTION WITHIN THE PUBLIC RIGHT-OF-WAY. THE CONTRACTOR IS REFERRED TO SECTION 7-10.3 OF THE STANDARD SPECIFICATIONS.
8. THE CONTRACTOR SHALL RENEW OR REPLACE ANY EXISTING TRAFFIC STRIPING AND/OR PAVEMENT MARKINGS WHICH HAVE BEEN EITHER REMOVED OR THE EFFECTIVENESS OF WHICH HAS BEEN REDUCED AS A RESULT OF HIS OPERATIONS. RENEWAL OF PAVEMENT STRIPING AND MARKINGS SHALL BE DONE IN CONFORMANCE WITH SECTION 310-5.6 OF THE STANDARD SPECIFICATIONS.
9. ALL SEWER MAINS SHALL BE EXTRA STRENGTH VITRIFIED CLAY PIPE (V.C.P.) UNLESS OTHERWISE SHOWN AND APPROVED BY THE CITY ENGINEER.
10. PRIOR TO STARTING CONSTRUCTION, THE CONTRACTOR SHALL VERIFY LOCATION AND ELEVATION OF EXISTING SEWER MAIN(S) AND NOTIFY THE DESIGN ENGINEER OF ANY VARIATION FROM DESIGN.
11. ALL MANHOLES ARE CONSIDERED A CONFINED SPACE WHERE TOXIC FUMES MAY COLLECT. THE CONTRACTOR SHALL FOLLOW ALL CAL-OSHA REGULATIONS WHILE WORKING IN SUCH CONFINED SPACES INCLUDING THE USE OF BREATHING APPARATUS WHERE FOUND NECESSARY.
12. CONSTRUCTION OF NEW SEWER MAIN SHALL BE DONE IN ACCORDANCE WITH STATE OF CALIFORNIA DEPARTMENT OF HEALTH SERVICES CRITERIA FOR SEPARATION OF WATER MAINS AND SANITARY SEWERS. THE PLANS INDICATE THE CASE AND ZONE UNDER THESE GUIDELINES DETERMINED BY A SEARCH OF AVAILABLE UTILITY RECORDS. SHOULD THE CONTRACTOR ENCOUNTER CONDITIONS WHICH REQUIRE A MODIFICATION OF THE STATED CASE AND ZONE IN THE FIELD, HE SHALL IMMEDIATELY BRING IT TO THE ATTENTION OF THE CITY ENGINEER.
13. LEAKAGE TESTS SHALL BE PERFROMED ON ALL SEWERS AS SPECIFIED IN S.S.P.W.C. SECTION 306-1.4.4
14. TRAFFIC CONTROL WILL BE PROVIDED IN ACCORDANCE WITH THE SPECIAL PROVISIONS OF THE CITY OF IRWINDALE.
15. NO CONNECTION FOR THE DISPOSAL OF INDUSTRIAL WASTES SHALL BE MADE TO SEWERS SHOWN ON THESE DRAWINGS UNTIL A PERMIT FOR INDUSTRIAL WASTEWATER DISCHARGE HAS BEEN ISSUED BY THE SANITATION DISTRICTS FOR SAID CONNECTION.
