FAA Determination of No Hazard to Air Navigation
Phase I Environmental Site Assessment Collinsville Wind Project Property
August 21, 2013

Subject: Confidentiality of Certain Reference Documents

To Whom It May Concern:

The attached report, Phase 1 Environmental Site Assessment for the Collinsville Wind Project Property, Solano County, California, prepared for SMUD by URS Corporation, dated October 18, 2012, contains references to an archeological report, Archeological Survey and Geoarcheological Sensitivity Report for the Proposed PG&E Collinsville Wind Project, Solano County, Whitaker, Adrian R., and Phillip Kaijankoski, 2012 that is protected under a confidentiality agreement and that further may be withheld from disclosure by public records act requests in accordance with the California Public Records Act (PRC 6254.10).

Sincerely,

Gary W. Lawson
Supervisor Energy Commodity Contracts

EXECUTIVE SUMMARY

The Sacramento Municipal Utility District (SMUD) retained URS Corporation Americas (URS) to conduct a Phase I Environmental Site Assessment (ESA) of the Collinsville Wind Project property in the Montezuma Hills region of Solano County, California (site). This Phase I ESA was performed in general conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) Standard Practice E1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, and the United States Environmental Protection Agency (EPA) standards for all appropriate inquiries (AAI). This Phase I ESA was also performed in conformance with the SMUD Professional Services Contract 4500074231.

The scope of work for this project included a visual inspection of the site, performed on September 26, 2012; interviews with a Pacific Gas and Electric Company (PG&E) representative (site owner), and a SMUD representative (prospective purchaser of the property for use as a wind farm); review of pertinent background and historical information; contact with appropriate regulatory agencies, prior ownership review; review of chemical and waste handling, storage, and disposal practices; observation of land use on surrounding land; review of a regulatory database report; and photographic documentation of the site.

The site consists of approximately 700 acres of land in the Montezuma Hills region of Solano County, California. The southwest corner of the property is located approximately 0.50 mile north of the community of Collinsville, from which it extends approximately 1.75 miles east, and 1.1 miles north. The Sacramento River is located immediately to the south. The site is largely undeveloped land that is used for livestock grazing and dry-land hay farming. Features on the subject property include evidence of a former homestead, a dug well, a barn and adjacent corrals, and overhead power transmission lines. The site is accessible via Stratton Lane and various unimproved roadways.

Based on research performed during this environmental site assessment (ESA), historically, the site has been primarily undeveloped land used for dry farming and livestock grazing. One structure and one former homestead site were observed during the site reconnaissance. The former homestead is documented as Site CA-SOL-284H, the Dadami Homestead (Whitaker and Kajjankoski, 2012). The existing structure is an open-sided, dilapidated barn or shade structure for stock. The barn and vicinity are documented as Site CA-SOL-283 (Whitaker and Kajjankoski, 2012). Both of these locations are in the central portion of the site, adjacent to and north of Stratton Lane. While residual agricultural chemicals could exist in site soils from historic use of the site for agricultural purposes, the potential presence of these constituents is considered likely to be de minimis.

URS has performed a Phase I ESA of the Collinsville Wind Project property located in the Montezuma Hills region of Solano County, California, in general accordance with the scope and limitations of the ASTM Standard Practice E1527-05. Based on the findings of this Phase I ESA, no recognized environmental conditions (RECs) were observed by URS for the site.
While not posing as RECs to the site, the following notable conditions were identified:

- The dilapidated barn in the central portion of the site adjacent to Stratton Lane may have remnants of possible lead-containing paint. A formal survey for lead-in-paint should be performed prior to any renovation and demolition of the structure.

- According to documents reviewed during this ESA, the southern portion of the site contains wetlands vegetation and is within the 500-year floodplain.

- URS observed evidence of a dug well used for stock water. URS recommends appropriate abandonment of any site wells not in use.

- Based on historic topographic maps reviewed during this ESA, the southwestern portion of the site may have been filled with dredge materials from the Sacramento River. The dredged soils could contain industrial constituents originating from upgradient sources. The potential dredged soils are unlikely to pose an environmental concern under the proposed use of the site (wind farming).

- An archeological survey of the site (Whitaker and Kaijankoski, 2012) has identified the locations of possible septic tanks and pit privies in the vicinity of two former homestead sites.

This Executive Summary is presented for convenience only and should not be used in lieu of information presented in the entire report.
1.0 INTRODUCTION

The Sacramento Municipal Utility District (SMUD) retained URS Corporation Americas (URS) to conduct a Phase I Environmental Site Assessment (Phase I ESA) of the Collinsville Wind Project property in the Montezuma Hills region of Solano County, California (site). This Phase I ESA was performed in general conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) Standard Practice E1527-05, Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process, and the United States Environmental Protection Agency (EPA) standards for all appropriate inquiries (AAI). This Phase I ESA was also performed in conformance with the SMUD Professional Services Contract 4500074231.

1.1 Purpose

The purpose of this report is to identify recognized environmental conditions (RECs) in connection with the site. The ASTM Standard Practice E1527-05 defines RECs as: The presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures of the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

1.2 Scope of Work

The scope of work for this project included the following primary tasks:

- Perform a reconnaissance survey of the subject property consisting of visual observations of existing site conditions and activities, and a drive-by survey of the area within 0.25 mile of the site to observe types of general land use.
- Interview site owners and occupants based on contact provided by SMUD.
- Review pertinent, readily available documents and maps regarding local physiographic and hydrogeologic conditions in the site vicinity.
- Review and interpret available historical reference materials as needed to reasonably establish site historic use, including aerial photographs, Sanborn maps, historic topographic maps, and city directories.
- Conduct inquiries as appropriate, in person, by telephone, or in writing, of appropriate regulatory agencies to obtain information regarding environmental permits, violations or incidents, and/or the status of enforcement actions at the subject property.
• Review and evaluate a federal, state, and local database list search provided by Environmental Data Resources, Inc., (EDR) of known or potential hazardous waste sites or landfills, and properties currently under investigation for environmental violations.

• Perform a limited evaluation of select non-ASTM considerations, including wetlands, asbestos, lead in drinking water, lead in paint, and radon gas.

• Summarize findings in this ESA report.

In accordance with the ASTM standard, this report is valid for 180 days from the date of issuance.

1.3 User Reliance

This report has been prepared for use solely by SMUD and its lenders and affiliates and shall not be relied upon by, or transferred to, any other party or used for any other purpose without the express written authorization of URS.

1.4 Deletions and Deviations

It was the intent of the Phase I ESA to make all appropriate inquiries into the previous ownership and uses of the property, consistent with good commercial or customary practice. Furthermore, it is the intent of this document to permit SMUD to satisfy one of the requirements to qualify for the innocent landowner defense to Comprehensive Environmental Response, Compensation, and Liability Act liability. This Phase I ESA did not deviate from general requirements set forth in the ASTM Standard Practice E1527-05 or EPA’s AAI, or no significant data gaps were identified, with the following exception:

• The Pacific Gas and Electric Company (PG&E) has provided contact information for the licensee for livestock grazing and dry-land farming, Mr. Ian Andersen. However, at the time of preparation of this report, URS had been unable to contact and interview Mr. Anderson.

Given the relatively benign nature of the use and the absence of any material storage associated with that use, the data gap is not expected to alter the findings of this ESA.

1.5 Limitations

In evaluating the site, URS also has relied upon representations and information furnished by individuals, agencies, and companies noted in the report with respect to existing operations and property conditions and the historic uses of the property, to the extent that the information obtained has not been contradicted by data obtained from other sources. Accordingly, URS accepts no responsibility for any deficiency, misstatements, or inaccuracy contained in this report as a result of misstatements, omissions, misrepresentations, or fraudulent information provided by the persons interviewed or documents reviewed.

URS’ objective is to perform its work with care, exercising the customary thoroughness and competence of earth science, environmental, and engineering consulting professionals, in accordance with the standard for professional services at the time these services are provided.
The opinions expressed are based on the probability of occurrence of environmental-related liability, based on limited information and a limited scope of services. It is important to recognize that even the most comprehensive scope of services may fail to detect environmental conditions and potential liability at a particular site. Therefore, URS cannot act as insurers and cannot “certify or underwrite” that a site is free of environmental contamination, and no expressed or implied representation or warranty is included or intended in this report except that the work was performed within the limits prescribed with the customary thoroughness and competence of the environmental consulting profession.

The passage of time, manifestation of latent conditions, or occurrence of future events may require further site exploration, data analysis, and re-evaluation of the findings, observations, conclusions, and recommendations expressed in this report.

The findings, observations, conclusions, and recommendations expressed by URS in this report are limited by the scope of services and should not be considered an opinion concerning the compliance of any past or current owner or operator of the site with any federal, state, or local law or regulation. No warranty or guarantee, whether express or implied, is made with respect to the data reported or findings, observations, conclusions, and recommendations expressed in this report.

1.6 URS Qualifications

This Phase I ESA was prepared by URS representative Anthony Mindling, a California Registered Professional Geologist. Mr. Mindling has approximately 25 years of experience in providing environmental due diligence services and directing environmental remedial actions. Mr. Mindling meets the AAI definition of an Environmental Professional and, therefore, is qualified to exercise professional judgment to develop opinions and conclusions regarding the presence of releases or threatened releases of hazardous substances.

This Phase I ESA was reviewed by URS representative Scott Allin. Mr. Allin is a California Class II Registered Environmental Assessor. Mr. Allin has approximately 20 years of experience in providing national and international environmental due diligence services and directing environmental remedial actions for various local and state regulatory agencies.
2.0 SITE DESCRIPTION

Site description information was obtained from various sources during this ESA. Figures 1 and 2 in Appendix A show the site location. Appendix B presents photographic documentation of the site and surrounding properties.

2.1 Legal Description

The site is in the Montezuma Hills region of Solano County, California, and consists of approximately 720.57 acres (following final lot line adjustments) and is at an approximate Latitude North 38.0852 and Longitude West 121.8326. According to information provided by SMUD, the assessor’s parcel numbers (APNs) for the site are:

<table>
<thead>
<tr>

</tbody>
</table>
2.2 Improvements

The site is largely undeveloped land used for dry farming and livestock grazing. One structure and one former homestead site were observed during the site reconnaissance. The former homestead is documented as Site CA-SOL-284H, the Dadami Homestead (Whitaker and Kaijankoski, 2012). A dug well used to provide stock water is the only remaining improvement at the homestead location (Appendix B, Photo 5). The existing structure is an open-sided, dilapidated barn (Appendix B, Photo 3) or shade structure for stock. The barn and vicinity are documented as Site CA-SOL-283 (Whitaker and Kaijankoski, 2012). Both locations are in the central portion of the site, adjacent to and north of Stratton Lane.

2.3 Owner

PG&E currently owns the site, having acquired the property in the 1960s.

2.4 Zoning

According to Mr. Mike Gumby, principal land planner with the PG&E Environmental Planning and Permitting Group, the portion of the site above the 10-foot-elevation contour is zoned agricultural; the portion below the 10-foot-elevation contour is zoned as Marsh Preserve.

2.5 Utilities

Various aboveground electrical transmission lines were observed throughout the site, and are also shown on the EDR Overview Map provided in Appendix A. According to PG&E, there are also SMUD-owned underground utilities. Evidence of septic systems in the vicinity of the former homestead and the barn were reported in the site archeological survey (Whitaker and Kaijankoski, 2012).

2.6 Current Use

Currently, the site is currently used for livestock grazing and winter wheat dry-land farming under license from PG&E to Mr. Ian Anderson. PG&E has provided contact information for Mr. Anderson, but at the time of preparation of this report URS had been unable to contact him. Corrals were observed in the vicinity of the barn. Empty containers of Clostridium vaccine and animal marking paint sticks were observed in buckets in the vicinity of the corrals, suggesting that the area has been used for treatment of cattle or livestock. The dilapidated barn in the vicinity of the corrals appears to have no use other than possibly a shade structure for grazing animals. A dug well observed in the vicinity of the former homestead area to the west of the barn and corrals is used to fill adjacent stock watering troughs. No other development indicative of site use was observed.
3.0 REGIONAL DESCRIPTION

Regional information was obtained from the sources listed hereafter and from observations noted during the site reconnaissance.

3.1 Topography

The United States Geological Survey 7.5-minute map of the Antioch North California Quadrangle dated 1978, shows that the property elevation ranges from approximately sea level to 190 feet above sea level and regionally slopes to the south. The topography of most of the site and immediately surrounding properties is characterized as rolling hills. The southern portion of the site, adjacent to the Sacramento River, is relatively flat. Based on information obtained during this ESA, the northern banks of the Sacramento River in this vicinity were subject to reclamation through the deposition of dredged soil during creation of a deep-water shipping channel. The south west corner of the property may include land reclaimed in this manner.

3.2 Surface Water

According to topographic maps reviewed during this ESA and observations during URS’ site reconnaissance, three intermittent streams drain the site to the south-southwest into the Sacramento River.

3.3 Floodplains

According to the EDR radius map obtained during this ESA (see Appendix C), most of the site is shown on the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map, as being outside of the 500-year floodplain. Portions of the southwestern part of the site, where wetland vegetation exists extending southeast to the Sacramento River, are shown as within the 500-year floodplain. Specific FEMA Community Panel Numbers for the site are provided in the EDR report included in Appendix C.

3.4 Geology

According to a geotechnical study of the site prepared for PG&E (Fugro West, Inc., 2010), the site is underlain largely by the Montezuma Formation, a non-marine sedimentary rock from the Cenozoic era, Quaternary period, consisting of Pliocene and/or Pleistocene sandstone, shale, and gravel deposits, mostly loosely consolidated. The Vaca-Kirby Hills fault extends in a north-northwest/south-southwest direction along the southwestern corner of the site. Appendix C includes the Physical Setting Source Map depicting this fault line. According to Fugro West, Inc., geotechnical study, historical seismicity of the site vicinity of magnitude greater than 5 between 1889 and 2006 is probably associated with this fault. The site is not located within or near a California Geological Survey Fault-Rupture Hazard Zone (Fugro West, Inc., 2010).

According to EDR, site soils have a soil component name of DIABLO. The DIABLO soil has a clay texture, and is in the Class D Hydrologic Group (very slow infiltration rates). According to
the United States Soil Conservation Service, these soils have clay texture from 0 to 2 feet below ground surface (bgs), a silty clay texture from approximately 2 to 4 feet bgs, and weathered bedrock below at depth.

The site generally resides within the Midland Fault Zone. EDR depicts an unnamed fault running in a northeast/southwest orientation on the western portion of the site. Other unnamed faults exist further west of the site.

3.5 Oil and Gas Records

According to EDR, no oil or gas wells are located on subject property.

3.6 Hydrology

According to EDR, no groundwater flow data are available for the site vicinity. No wells are depicted by EDR on the subject property. One dug well was observed on the property in the vicinity of the former homestead adjacent to Stratton Lane. Water in this well (which is at an elevation of approximately 11 feet) was at land surface. According to the Fugro West, Inc., geotechnical report, the water level in their boring B-1 (located at an elevation of approximately 37 feet at the base of the Montezuma Hills in the northwestern portion of the site) was approximately 7 bgs. No groundwater was encountered in higher elevation borings. Based on the topography of the region, it is likely that groundwater movement is in a south-southwest direction, toward the Sacramento River.

3.7 Surrounding Properties

The majority of the surrounding properties consist of undeveloped land used for livestock grazing and wind farming activities. URS observed the following uses during the site reconnaissance:

**North:** The site is bordered to the north by primarily undeveloped land used for livestock grazing and wind farming. Part of the site’s northern boundary is adjacent to Talbert Lane.

**South:** The site is bordered to the south by Stratton Lane, marshes, and the Sacramento River.

**East:** The site is bordered to the east by SMUD-owned property and is used for wind farming, livestock grazing, and dry-land farming.

**West:** The site is bordered to the west by Collinsville Road, residences, and businesses north of the community of Collinsville, and marshes.

No specific environmental concerns were noted for adjacent properties inspected by URS from the public right-of-way. Section 6.0 presents additional discussions regarding off-site environmental conditions.
4.0 SITE AND REGIONAL HISTORY

4.1 Aerial Photographs

URS reviewed aerial photographs of the site and surrounding areas to determine past land uses. The aerial photographs were obtained from EDR, and included the following years: 1937, 1957, 1965, 1970, 1984, 1993, 1998, 2005, and 2006. One to two aerial photographs exist for each date, and some portions of the site are not depicted for all dates. Appendix D includes copies of the aerial photographs, which are summarized below:

1937 - Several farm and residential structures are shown in the Hastings Adobe area on the south side of Stratton Lane, just outside the southern boundary of the site. Several structures, including what appears to be a residence, are shown in the vicinity of the existing barn on the Dadami homestead. Several other scattered residences or farm buildings are visible along both sides of Stratton Lane between Collinsville Road and barn area. Most of the site area north of Stratton Lane appears cultivated, with rows of mown crops on some of the fields.

1957 - Site development and cultivation appear essentially the same as in 1937, with the exception that the number of structures (within the site area) on the north side of Stratton Lane at the Hastings adobe site has been reduced to a single large barn.

1965 - Residences that existed at the two homestead areas are no longer apparent. No other significant changes in site development or use are shown.

1970 - Significant development of what appears to be a fishing resort is located off of the site on the Sacramento River approximately 0.50 mile to the southwest of the existing barn. A dirt road is shown leading to a building on a low hilltop just northwest of three tall structures at the location of radio towers depicted on historical topographic maps. No other significant changes in site development or use are shown.

1984 - The off-site fishing resort development on the Sacramento River remains. Cultivation appears in the same areas of the hills as in previous photographs. The quality of the image is too low to assess other site changes in use or development.

1993 - The coverage of this photo is limited to the areas of the two former homestead areas within the site, and shows no significant change from the previous photograph.

1998 - The development at the off-site fishing resort is significantly reduced. Residences are no longer apparent along Talbert Lane. Wind farm development is visible north of the site, north of Talbert Lane, and east of the site. No other significant site changes are apparent.

2005 - This detailed photograph is limited to the areas of the two former homesteads in the central portion of the site, and shows no change from the previous photograph.
2006 - This photograph, which depicts only the central portion of the site, shows additional wind farm development adjacent and northwest of the site. No other significant changes are shown.

Based on URS’ review of aerial photographs, historically, the site has been primarily undeveloped land used for dry farming and livestock grazing. No RECs were identified for the site in the aerial photographs reviewed. While residual agricultural chemicals could exist in site soils from historic use of the site for agricultural purposes, the potential presence of these constituents is considered likely to be "de minimis."

4.2 Historic Topographic Maps

URS reviewed historic topographic maps of the site and surrounding areas to determine past land uses. The topographic maps were obtained from EDR. The topographic maps reviewed included the years 1908, 1918, 1953, 1968, and 1978, which are summarized below. Appendix D includes copies of the following topographic maps:

1908 - 1918 – The 1908 (Antioch 15-minute series) and 1918 (Collinsville 7.5-minute series) topographic maps show the site and surrounding area as primarily undeveloped land. The site area is labeled Los Ulpinos, in reference to an 1844 Mexican land grant known as Rancho Los Ulpinos. Roads are shown in the present locations of Collinsville Road, Talbert Lane, and Stratton Lane. Marshland and the Sacramento River are depicted south of Stratton Lane. Buildings are shown along Collinsville Road west of the site. The community of Collinsville is labeled where Collinsville Road terminates at the Sacramento River. Two buildings are shown within the site at the locations of the former homestead and the existing barn. Surrounding properties are also undeveloped with scattered residential-type buildings. No other significant features are indicated for the site.

1953 – The 1953 (Pittsburg 15’ series) and 1953 (Antioch North 7.5’ series) topographic maps show a few more buildings along Collinsville Road and in the vicinity of Collinsville. Additional local unpaved roads are shown in the vicinity of Collinsville. Stockyards are labeled to the west of the site, west of Collinsville Road. A structure is no longer depicted within the site at the location of the former homestead. An additional structure is shown in the vicinity of the existing barn. Radio towers and an adjacent building are depicted in the western portion of the site.

1968 – The 1968 (Antioch North 7.5-minute) topographic map is photo-revised from the 1953 map. No changes are depicted within the site. To the west, a few additional structures are depicted in the vicinity of the stockyards. A power transmission line is shown north of the site. No other significant changes were noted.

1978 – The 1978 (Antioch North 7.5-minute) topographic map labels the radio towers as “KKIS.” The second structure adjacent to the existing barn is no longer depicted. The stockyards are no longer depicted. No other significant changes were noted.
Based on URS’ review of historic topographic maps, historically, the site and surrounding area has been undeveloped land, with the exception of former residences and a barn within the site, and stockyards and structures along Collinsville Road to the west and in the vicinity of Collinsville. No specific RECs were identified for the site in the topographic maps reviewed.

4.3 Sanborn Maps

URS contacted the EDR library to determine whether Sanborn fire insurance maps are available for the area in which the site is located. Sanborn maps show the location of underground storage tanks (USTs) and underground pipelines and the types of buildings and industrial activities on properties. However, according to EDR, no Sanborn maps are available for the site.

4.4 Historic Site Occupants

URS interviewed PG&E representative Mr. Gumby regarding historic site occupants. PG&E obtained the property in the 1960s. According to Mr. Gumby, the property use at that time was for dry-land wheat farming and livestock grazing. He was aware of no occupants of the property at that time. Archeological research (Whitaker and Kaijankoski, 2012) has indicated that two farming family homesteads previously existed on the property. Structures at both of these homestead locations are shown on the 1918 historical topographic map. One of those structures (near the existing barn) is shown on the 1968 map, but had disappeared by the time the 1978 map was prepared. No other historic site occupant information was obtained during this ESA.

4.5 Historic Site Ownership

The site includes land that was part of an 1844 Mexican land grant of 17,726 acres encompassing the Montezuma Hills and present-day Rio Vista. Two known homesteads, the Knox-Marshall homestead associated with the existing barn, and the Dadami homestead, historically existed on the site. The population of Collinsville peaked in the 1870s through 1880s with the salmon fishery, which supported canneries there, but faded (Whitaker and Kaijankoski, 2012) as hydraulic mining choked the Sacramento River and the fishery declined.

A chain-of-title report review is not included in this ESA. Mr. Gumby stated that he has no information on the site’s the previous owners. No other historic site occupants were identified during this ESA.

4.6 Environmental Liens or Use Limitations

According to SMUD representative Mr. Jose Bodipo-Memba, PG&E has informed SMUD that no environmental liens exist against the property. Land use limitations include wetland resource locations and associated setbacks. In addition, existing and potential setback limitations associated with residential development, wind turbine blade throw distance and secondary Suisun Marsh area would and could restrict land use. Additionally, Mr. Bodipo-Memba has stated that SMUD is aware of setback and height limitations associated with Travis Air Force Base security restrictions, setback limitations from physical structures on the property, and county roads.
4.7 Valuation Reduction for Environmental Issues

According to Mr. Bodipo-Memba, no valuation reductions for environmental issues exist for the subject property.

4.8 Prior Assessment(s)

SMUD provided URS with a Limited Site Inspection report prepared for the site by Stantec Consulting Corporation (Stantec) in September 2010. The scope of the inspection included a site reconnaissance and review of an EDR regulatory database search. The stated purpose of the inspection was to acquire pertinent environmental information prior to property development.

The report described the property as 600 to 700 acres of undeveloped land used for livestock grazing and dry-ground hay production. No structures were reported, other than the dilapidated barn and an adjacent house trailer. Portions of the property were observed to be variously disced, covered with weeds, or under hay cultivation. No evidence of RECs was observed during the site reconnaissance.

Review of aerial photographs dating between 1937 and 2005 identified scattered residences, wind generators on adjacent properties, and the existing barn. Property uses during the period of record of the aerial photographs was reported to appear similar to current uses, and no RECs or areas of concern were identified based on the photograph review.

Review of topographic maps dating from 1908 through 1978 indicated no appreciable change in development with respect to the current time. No RECs or areas of concern were identified based on the historical topographic map review.

The EDR regulatory database search radius was extended to 3 miles from the center of the site because of the size of the site. According to the Stantec report (Stantec, 2010), the site was not listed in any of the databases searched by EDR, and no mapped sites were found in EDR’s search of available government records within the designated search area.

In its report, Stantec concluded that their inspection had revealed no evidence of RECs in connection with the site. The report conclusions noted that “Based on the early 1900s construction date of the barn, lead-based paint may have been used in the past; however, no obvious painted surfaces were observed by Stantec during the site reconnaissance and there was no chipping or otherwise deteriorated paint identified.”
5.0 SITE INSPECTION AND INTERVIEWS

URS inspected accessible portions of the site for evidence of RECs. This inspection included features listed in ASTM Standard Practice E1527-05, but was subject to the limitations specified in this report and the ASTM Standard. Inspection activities were performed on September 26, 2012. The site was inspected from accessible roadways and areas of elevation throughout the site. Given the size of the property, a detailed inspection of all areas was not practical. Appendix B includes photographic documentation of the site and surrounding properties. URS also interviewed individuals considered knowledgeable of current and historic site conditions.

5.1 Interviews

During this ESA, URS interviewed SMUD representative Mr. Jose Bodipo-Memba and PG&E representative Mr. Mike Gumby regarding the current and historic uses of the subject property. Information obtained from these interviews is provided in various sections of this report.

5.2 Site Features

As indicated, the site is largely undeveloped land used for livestock grazing. The majority of the site consists of rolling hills used for dry-farming of hay or wheat. At the time of the reconnaissance, the cultivated portions of the site were in a state of low stubble. Portions of the hills had been recently disked, as evidenced by the bare soil and lack of weeds. Lower portions of the site (below the approximate 10-foot elevation) appeared to consist of potential wetlands, marsh land, and weed-covered flat areas. One structure, the dilapidated, open-sided barn previously described, existed on the site at the time of URS’s reconnaissance. No evidence of a structure was observed in the vicinity of the former radio towers and adjacent building depicted on the historical topographic maps. Besides the barn, adjacent corrals, Stratton Lane, and fencing, no other improvement was observed on the site other than the dug well used for stock watering previously described.

5.3 Stormwater

Other than roadside ditches along Stratton Lane, no site improvements were observed to accommodate stormwater, which drains naturally to the southwest via three principal intermittent streams and overland sheet flow. Water collects in intermittent ponds in the low-lying southwestern portion of the site, or flows directly to the Sacramento River. No evidence of environmental concerns was identified for the stormwater drainage pathways.

5.4 Material and Waste Storage

With the exception of empty vaccine containers in a single 5-gallon bucket, livestock-marking paint sticks also in a 5-gallon bucket, and piles of scrap wood in the vicinity of the barn, no material or waste storage was identified on the site. No environmental concerns were identified for materials observed.
5.5 Storage Tanks

No above or below ground storage tanks were observed at or reported for the site. No evidence of USTs was observed at either of the former homestead sites.

5.6 Wastewater Discharges

No active wastewater discharges were identified for the site during this ESA.

5.7 Air Emissions

Active point sources of air emissions were not identified for the site.

5.8 Polychlorinated Biphenyls

No pad-mounted or pole-mounted transformers were observed on or in the vicinity of the site. No other potential polychlorinated biphenyl-containing equipment was observed on the site.

5.9 Groundwater Wells

URS observed one dug well, which is currently used for livestock watering. No other site wells were reported by interviewees or indicated on topographic maps.
6.0 ENVIRONMENTAL RECORD REVIEW

6.1 Federal and State Database Review

URS retained EDR to provide a database search of federal and state environmental records. The EDR report identifies specific databases searched, and the search radius for each. Appendix C includes a copy of EDR’s report and search radius map. The database report was reviewed to note reported releases in the vicinity of the site that are known to have, or are expected to result in, an environmental condition that could adversely impact the site. Reported release sites listed in the regulatory agency database search report were evaluated with respect to the nature and extent of a given release, the distance of the reported release from the site, and the position of a reported release with respect to known or expected local and/or regional groundwater flow direction (to the south, see Section 3.0). Generally, reported release sites within 0.5 mile upgradient, 0.25 mile cross-gradient, or adjacent downgradient were considered to have a potential to impact the site and are discussed hereafter. Properties listed in the database search report but not identified as a release site (for example, a site listed as a hazardous waste generator but not as having had a release) were not considered to have a potential to impact the site. Any non-release sites identified adjacent to the site are not discussed. Unless indicated, information that unmapped or orphan facilities identified in the EDR report would adversely affect the site was not identified.

URS notes that this information is reported as received from EDR, and that EDR, in turn, reports information as it is provided in various government databases. It is not possible for either URS or EDR to verify the accuracy or completeness of information contained in these databases. However, the use of, and reliance on, this information is a generally accepted practice in the conduct of environmental due diligence.

6.1.1 Site Listings

The EDR database report included no listings within the boundaries of the site.

6.1.2 Surrounding Property Listings

Because of the large area encompassed by the site, the search radius for the database search of surrounding properties was extended to 2 miles from the center of the site. A review of the EDR database report identified three listings within that radius:

- **Jerico Products, Inc., 1 mile west, elevation 16 feet.** The property is listed as a surface mine, non-coal, non-metallic minerals, indicating it is likely a quarry. A citation was issued in 1994, the issuer reported abated in November 2010 and the case closed. Based on the distance and elevation of this property relative to the site, as well as the issue abatement and case closure, this property is unlikely to represent a REC with respect to the site.

- **UNINC, 1.4 miles west-northwest, elevation 65 feet, intersection of Collinsville Road and Talbert Lane.** The property is listed for a spill incident dated April 20, 1989, and was
closed on April 27, 1989. Because of the distance of this property from the site and the case closure, this property is considered unlikely to represent a REC with respect to the site.

- **D. D. Feldman Oil & Gas, 1.5 miles east-northeast, elevation 60 feet.** This listing is for an inactive natural gas well. No incidents or citations are reported for this location, which is not considered to represent a REC with respect to the subject property.

### 6.2 Local Agency Review

In addition to the database list search, URS made inquiries of the following public agencies regarding the site.

- URS reviewed listings for the site vicinity on the GeoTracker website provided by the California State Water Resources Control Board. One listing, for Santa Fe Realty Corporation in Collinsville, was identified within the site vicinity. The record indicates that the listed site is inactive as of April 2009, and that no cleanup actions exist. This listing is not considered to represent a REC for the site.
7.0 SUPPLEMENTAL CONSIDERATIONS

The following non-ASTM components were included in the scope of work for this ESA.

7.1 Wetlands

Wetlands are jointly defined by EPA and the United States Army Corps of Engineers as *those areas that are inundated or saturated by surface or groundwater for a duration and frequency sufficient to support and under normal circumstances do support a prevalence of vegetation adapted for life in saturated soil conditions*.

A formal wetlands survey was not included in the scope of this ESA. According to wetlands information obtained from EDR, wetlands exist within the southwestern portion of the site, generally south of Stratton Lane and below the 10 foot elevation contour. These wetlands are located within the eastern portion of the Suisun Marsh Management Area. PG&E has reported that land use restrictions are in effect for this portion of the site.

7.2 Asbestos

The use of most asbestos in building materials was banned by the EPA National Emission Standards for Hazardous Air Pollutants and Toxic Substances Control Act during the years of 1973, 1978, and 1989. However, in 1991, many of the original bans were vacated and remanded by the U.S. Fifth Circuit Court of Appeals, and some non-friable products are still produced today. Therefore, care should be taken with any building material that is damaged or friable, pending laboratory confirmation that it is free of asbestos-containing materials.

The only building structure on the subject property is the barn associated with the former Knox-Marshall homestead. This structure is constructed of wood and includes a corrugated metal roof. These materials are unlikely to contain asbestos.

7.3 Lead-In-Paint

In 1978, the Consumer Product Safety Commission banned the production of virtually all house paints containing lead. Established guidelines for lead in paint include the United States Department of Housing and Urban Development's 0.5 percent level. This level is a non-enforceable guideline at which lead abatement measures or operations and maintenance programs should be implemented.

The above-mentioned barn is the only structure identified on the site. This structure was built prior to 1908. Consequently, any paint which may have been used on the building may contain lead. However, if any paint had been applied to this structure, it was not evident at the time of the site reconnaissance. A formal survey for lead-in-paint should be performed prior to any renovation or demolition of the structure.
7.4 Lead-In-Drinking Water

EPA regulates drinking water quality under the Safe Drinking Water Act of 1974. EPA guidelines recommend a maximum level of 15 micrograms per liter (µg/L) of lead in drinking water from commercial and public buildings. It is recommended that remedial actions be taken for lead levels in excess of 15 µg/L in the 90th percentile. These standards are intended for drinking water suppliers (e.g., municipal water authorities); however, the data evaluation process for assessing lead results may be used for other drinking water sources.

No current drinking water sources were identified for the subject property.

7.5 Radon Gas

Radon is an invisible, odorless radioactive gas formed by the decay of uranium in the earth's soil that migrates to the surface through cracks and pore spaces in the soil. Radon gas dissipates in outdoor settings and is present at concentrations considered harmless. However, radon gas can accumulate inside buildings and closed spaces; depending on building location, ventilation, and other factors. EPA recommends considering indoor remedial measures when the radon concentration exceeds 4.0 picoCuries per liter (pCi/L) on an annual average basis.

According to information provided in the EDR report, the site is located in a designated EPA Radon Zone 3, where the predicted average radon concentration is less than 2.0 pCi/L. Based on the EPA designation, radon gas is unlikely to pose an environmental concern for the site.
8.0 CONCLUSIONS AND RECOMMENDATIONS

URS has performed a Phase I ESA of the Collinsville Wind Project property in the Montezuma Hills region of Solano County, California, in general accordance with the scope and limitations of the ASTM Standard Practice E1527-05. Based on the findings of this Phase I ESA, URS identified no RECs for the site.

While not posing as RECs to the site, the following notable conditions were identified:

- The barn associated with the former Knox-Marshall and Dadami homesteads site may contain small amounts of paint that may contain lead. A formal survey for lead-in-paint should be performed prior to renovation and demolition of the structure.
- According to documents reviewed during this ESA, the central portion of the site contains wetlands vegetation and is within the 500-year floodplain.
- URS observed evidence of one stock watering well on the site. URS recommends appropriate abandonment of any site wells not in use.
- Based on historic topographic maps reviewed during this ESA, the south western portion of the site may have been filled with dredge materials from the Sacramento River. The dredged soils could contain industrial constituents originating from upgradient sources. The potential dredged soils are unlikely to pose an environmental concern under the proposed use of the site (wind farming).
- An archeological survey of the site (Whitaker and Kaijankoski, 2012) has identified the locations of possible septic tanks and pit privies in the vicinity of two former homestead sites.

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA’s Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in bold italics are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

ADDITIONAL ENVIRONMENTAL RECORDS

Records of Emergency Release Reports

CHMIRS: The California Hazardous Material Incident Report System contains information on reported hazardous material incidents, i.e., accidental releases or spills. The source is the California Office of Emergency Services.

A review of the CHMIRS list, as provided by EDR, and dated 03/28/2012 has revealed that there is 1 CHMIRS site within approximately 2 miles of the target property.

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

**STANDARD ENVIRONMENTAL RECORDS**

**Federal NPL site list**

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA’s Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

**Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

**NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

DELISTED NPL: National Priority List Deletions
The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System
CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 12/27/2011  Source: EPA
Date Data Arrived at EDR: 02/27/2012  Telephone: 703-412-9810
Date Made Active in Reports: 03/12/2012  Last EDR Contact: 08/28/2012
Number of Days to Update: 14  Next Scheduled EDR Contact: 12/10/2012
Data Release Frequency: Quarterly

FEDERAL FACILITY: Federal Facility Site Information listing
A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 12/10/2010  Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/11/2011  Telephone: 703-603-8704
Date Made Active in Reports: 02/16/2011  Last EDR Contact: 07/13/2012
Number of Days to Update: 36  Next Scheduled EDR Contact: 10/22/2012
Data Release Frequency: Varies

Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned
Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA’s knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Federal RCRA CORRACTS facilities list

CORRACTS: Corrective Action Report
CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.
Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transports are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators
RCRAInfo is EPA’s comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.
Federal institutional controls / engineering controls registries

US ENG CONTROLS: Engineering Controls Sites List
A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

- **Date of Government Version:** 12/30/2011
- **Source:** Environmental Protection Agency
- **Telephone:** 703-603-0695
- **Last EDR Contact:** 09/05/2012
- **Next Scheduled EDR Contact:** 12/24/2012
- **Data Release Frequency:** Varies

US INST CONTROL: Sites with Institutional Controls
A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

- **Date of Government Version:** 12/30/2011
- **Source:** Environmental Protection Agency
- **Telephone:** 703-603-0695
- **Last EDR Contact:** 09/05/2012
- **Next Scheduled EDR Contact:** 12/24/2012
- **Data Release Frequency:** Varies

Federal ERNS list

ERNS: Emergency Response Notification System
Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

- **Date of Government Version:** 04/02/2012
- **Source:** National Response Center, United States Coast Guard
- **Telephone:** 202-267-2180
- **Last EDR Contact:** 07/02/2012
- **Next Scheduled EDR Contact:** 10/15/2012
- **Data Release Frequency:** Annually

State- and tribal - equivalent NPL

RESPONSE: State Response Sites
Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

- **Date of Government Version:** 08/06/2012
- **Source:** Department of Toxic Substances Control
- **Telephone:** 916-323-3400
- **Last EDR Contact:** 09/21/2012
- **Next Scheduled EDR Contact:** 11/19/2012
- **Data Release Frequency:** Quarterly

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database
The Department of Toxic Substances Control’s (DTSC’s) Site Mitigation and Brownfields Reuse Program’s (SMBRP’s) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.
State and tribal landfill and/or solid waste disposal site lists

SWF/LF (SWIS): Solid Waste Information System
Active, Closed and Inactive Landfills. SWF/LF records typically contain an inventory of solid waste disposal facilities or landfills. These may be active or inactive facilities or open dumps that failed to meet RCRA Section 4004 criteria for solid waste landfills or disposal sites.

State and tribal leaking storage tank lists

LUST REG 9: Leaking Underground Storage Tank Report
Orange, Riverside, San Diego counties. For more current information, please refer to the State Water Resources Control Board’s LUST database.

LUST REG 7: Leaking Underground Storage Tank Case Listing
Leaking Underground Storage Tank locations. Imperial, Riverside, San Diego, Santa Barbara counties.

LUST REG 6V: Leaking Underground Storage Tank Case Listing

LUST REG 6L: Leaking Underground Storage Tank Case Listing
For more current information, please refer to the State Water Resources Control Board’s LUST database.
LUST REG 5: Leaking Underground Storage Tank Database

Date of Government Version: 07/01/2008

**ADDITIONAL ENVIRONMENTAL RECORDS**

**Local Brownfield lists**

**US BROWNFIELDS: A Listing of Brownfields Sites**
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Local Lists of Hazardous waste / Contaminated Sites

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.
HIST CAL-SITES: Calsites Database
The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

SCH: School Property Evaluation Program
This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

TOXIC PITS: Toxic Pits Cleanup Act Sites
Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

CDL: Clandestine Drug Labs
A listing of drug lab locations. Listing of a location in this database does not indicate that any illegal drug lab materials were or were not present there, and does not constitute a determination that the location either requires or does not require additional cleanup work.

US HIST CDL: National Clandestine Laboratory Register
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.
### Local Lists of Registered Storage Tanks

**CA FID UST: Facility Inventory Database**

The Facility Inventory Database (FID) contains a historical listing of active and inactive underground storage tank locations from the State Water Resource Control Board. Refer to local/county source for current data.

### Local Land Records

**LIENS 2: CERCLA Lien Information**

A Federal CERCLA (‘Superfund’) lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

**DEED:** Deed Restriction Listing
Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program’s oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder’s office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

MCS: Military Cleanup Sites Listing
The State Water Resources Control Board and nine Regional Water Quality Control Boards partner with the Department of Defense (DoD) through the Defense and State Memorandum of Agreement (DSMOA) to oversee the investigation and remediation of water quality issues at military facilities.

Other Ascertainable Records
RCRA-NonGen: RCRA - Non Generators
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

DOT OPS: Incident and Accident Data
Department of Transportation, Office of Pipeline Safety Incident and Accident data.

DOD: Department of Defense Sites
This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

FUDS: Formerly Used Defense Sites
The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

CONSENT: Superfund (CERCLA) Consent Decrees
Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.
ROD: Records Of Decision
Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 02/27/2012  Source: EPA
Date Data Arrived at EDR: 03/14/2012  Telephone: 703-416-0223
Date Made Active in Reports: 06/14/2012  Last EDR Contact: 09/12/2012
Number of Days to Update: 92  Next Scheduled EDR Contact: 12/24/2012
Data Release Frequency: Annually

UMTRA: Uranium Mill Tailings Sites
Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

PADS: PCB Activity Database System
PCB Activity Database. PADS identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 11/01/2010  
Source: EPA  
Telephone: 202-566-0500  
Last EDR Contact: 07/19/2012  
Next Scheduled EDR Contact: 10/29/2012  
Data Release Frequency: Annually

MLTS: Material Licensing Tracking System
MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 06/21/2011  
Source: Nuclear Regulatory Commission  
Telephone: 301-415-7169  
Last EDR Contact: 09/05/2012  
Next Scheduled EDR Contact: 12/24/2012  
Data Release Frequency: Quarterly

RADINFO: Radiation Information Database
The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 01/10/2012  
Source: Environmental Protection Agency  
Telephone: 202-343-9775  
Last EDR Contact: 07/11/2012  
Next Scheduled EDR Contact: 10/22/2012  
Data Release Frequency: Quarterly

FINDS: Facility Index System/Facility Registry System
Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 10/23/2011  
Source: EPA  
Telephone: (415) 947-8000  
Last EDR Contact: 09/11/2012  
Next Scheduled EDR Contact: 12/24/2012  
Data Release Frequency: Quarterly

RAATS: RCRA Administrative Action Tracking System
RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.
BRS: Biennial Reporting System
The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

CA BOND EXP. PLAN: Bond Expenditure Plan
Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

UIC: UIC Listing
A listing of underground control injection wells.

NPDES: NPDES Permits Listing
A listing of NPDES permits, including stormwater.

CORTESE: "Cortese" Hazardous Waste & Substances Sites List
The sites for the list are designated by the State Water Resource Control Board (LUST), the Integrated Waste Board (SWF/LS), and the Department of Toxic Substances Control (Cal-Sites).

HIST CORTESE: Hazardous Waste & Substance Site List
The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSITES]. This listing is no longer updated by the state agency.

**NOTIFY 65: Proposition 65 Records**
Listings of all Proposition 65 incidents reported to counties by the State Water Resources Control Board and the Regional Water Quality Control Board. This database is no longer updated by the reporting agency.

**DRYCLEANERS**: Cleaner Facilities
A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaner's agents; linen supply; coin-operated laundries and cleaning; drycleaning plants, except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

**WIP**: Well Investigation Program Case List
Well Investigation Program case in the San Gabriel and San Fernando Valley area.

**ENF**: Enforcement Action Listing

**HAZNET**: Facility and Manifest Data
Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.
EMI: Emissions Inventory Data
Toxics and criteria pollutant emissions data collected by the ARB and local air pollution agencies.

SCRD DRYCLEANERS: State Coalition for Remediation of Drycleaners Listing
The State Coalition for Remediation of Drycleaners was established in 1998, with support from the U.S. EPA Office of Superfund Remediation and Technology Innovation. It is comprised of representatives of states with established drycleaner remediation programs. Currently the member states are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

EPA WATCH LIST: EPA WATCH LIST
EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 07/31/2012
Date Data Arrived at EDR: 08/13/2012
Date Made Active in Reports: 09/18/2012

Data Release Frequency: Quarterly

PRP: Potentially Responsible Parties
A listing of verified Potentially Responsible Parties

TC3420068.1s  Page GR-23
2020 COR ACTION: 2020 Corrective Action Program List
The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

FINANCIAL ASSURANCE 1: Financial Assurance Information Listing
Financial assurance information

FINANCIAL ASSURANCE 2: Financial Assurance Information Listing
A listing of financial assurance information for solid waste facilities. Financial assurance is intended to ensure that resources are available to pay for the cost of closure, post-closure care, and corrective measures if the owner or operator of a regulated facility is unable or unwilling to pay.

HWP: EnviroStor Permitted Facilities Listing
Detailed information on permitted hazardous waste facilities and corrective action ("cleanups") tracked in EnviroStor.
HWT: Registered Hazardous Waste Transporter Database
A listing of hazardous waste transporters. In California, unless specifically exempted, it is unlawful for any
person to transport hazardous wastes unless the person holds a valid registration issued by DTSC. A hazardous
waste transporter registration is valid for one year and is assigned a unique registration number.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR’s researchers. Manufactured gas sites were used in the United States from the 1800’s to 1950’s to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: Rextag Strategies Corp.
Telephone: (281) 769-2247
U.S. Electric Transmission and Power Plants Systems Digital GIS Data

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.
Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics’ primary database on elementary
and secondary public education in the United States. It is a comprehensive, annual, national statistical
database of all public elementary and secondary schools and school districts, which contains data that are
comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics’ primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities
Source: Department of Social Services
Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal
Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR
in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Scanned Digital USGS 7.5’ Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images
are made by scanning published paper maps on high-resolution scanners. The raster image
is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.
GROUNDWATER FLOW DIRECTION INFORMATION
Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY
General Topographic Gradient: General SSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.
HYDROLOGIC INFORMATION
Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE
Target Property County: SOLANO, CA
Flood Plain Panel at Target Property: 06095C - FEMA DFIRM Flood data
Additional Panels in search area: 0602620665C - FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY
NWI Quad at Target Property: YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION
Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*: Search Radius: 1.25 miles Status: Not found

AQUIFLOW®
Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.
GROUNDWATER FLOW VELOCITY INFORMATION
Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY
Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)
Source: United States Geologic Survey
A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW® Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

APPENDIX D

HISTORIC RESEARCH DOCUMENTATION
AERIAL PHOTOGRAPHS
Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR’s professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050 with any questions or comments.

Determination of No Hazard to Air Navigation
** DETERMINATION OF NO HAZARD TO AIR NAVIGATION **

The Federal Aviation Administration has conducted an aeronautical study under the provisions of 49 U.S.C., Section 44718 and if applicable Title 14 of the Code of Federal Regulations, part 77, concerning:

Structure: Wind Turbine P1R1  
Location: Rio Vista, CA  
Latitude: 38-07-54.16N NAD 83  
Longitude: 121-46-31.47W  
Heights: 208 feet site elevation (SE)  
591 feet above ground level (AGL)  
799 feet above mean sea level (AMSL)

This aeronautical study revealed that the structure would have no substantial adverse effect on the safe and efficient utilization of the navigable airspace by aircraft or on the operation of air navigation facilities. Therefore, pursuant to the authority delegated to me, it is hereby determined that the structure would not be a hazard to air navigation provided the following condition(s) is(are) met:

As a condition to this Determination, the structure is to be marked/lighted in accordance with FAA Advisory circular 70/7460-1 L Change 2, Obstruction Marking and Lighting, white paint/synchronized red lights - Chapters 4,12&13(Turbines).

Any failure or malfunction that lasts more than thirty (30) minutes and affects a top light or flashing obstruction light, regardless of its position, should be reported immediately to (877) 487-6867 so a Notice to Airmen (NOTAM) can be issued. As soon as the normal operation is restored, notify the same number.

It is required that FAA Form 7460-2, Notice of Actual Construction or Alteration, be e-filed any time the project is abandoned or:

__X__ At least 60 days prior to start of construction (7460-2, Part 1)  
__X__ Within 5 days after the construction reaches its greatest height (7460-2, Part 2)

See attachment for additional condition(s) or information.

This determination expires on 08/01/2020 unless:
(a) the construction is started (not necessarily completed) and FAA Form 7460-2, Notice of Actual Construction or Alteration, is received by this office.

(b) extended, revised, or terminated by the issuing office.

NOTE: REQUEST FOR EXTENSION OF THE EFFECTIVE PERIOD OF THIS DETERMINATION MUST BE E-FILED AT LEAST 15 DAYS PRIOR TO THE EXPIRATION DATE. AFTER RE-EVALUATION OF CURRENT OPERATIONS IN THE AREA OF THE STRUCTURE TO DETERMINE THAT NO SIGNIFICANT AERONAUTICAL CHANGES HAVE OCCURRED, YOUR DETERMINATION MAY BE ELIGIBLE FOR ONE EXTENSION OF THE EFFECTIVE PERIOD.

This determination is subject to review if an interested party files a petition that is received by the FAA on or before March 03, 2019. In the event a petition for review is filed, it must contain a full statement of the basis upon which it is made and be submitted to the Manager of the Airspace Policy Group. Petitions can be submitted via mail to Federal Aviation Administration, 800 Independence Ave, SW, Room 423, Washington, DC 20591, via email at OEPetitions@faa.gov, or via facsimile (202) 267-9328.

This determination becomes final on March 13, 2019 unless a petition is timely filed. In which case, this determination will not become final pending disposition of the petition. Interested parties will be notified of the grant of any review. For any questions regarding your petition, please contact Airspace Policy Group via telephone – 202-267-8783.

This determination is based, in part, on the foregoing description which includes specific coordinates and heights. This determination is valid for coordinates within one (1) second latitude/longitude and up to the approved AMSL height listed above. If a certified 1A or 2C accuracy survey was required to mitigate an adverse effect, any change in coordinates or increase in height will require a new certified accuracy survey and may require a new aeronautical study.

If construction or alteration is dismantled or destroyed, you must submit notice to the FAA within 5 days after the construction or alteration is dismantled or destroyed.

Additional wind turbines or met towers proposed in the future may cause a cumulative effect on the national airspace system. All information from submission of Supplemental Notice (7460-2 Part 2) will be considered the final data (including heights) for this structure. Any future construction or alteration, including but not limited to changes in heights, requires separate notice to the FAA.

Obstruction marking and lighting recommendations for wind turbine farms are based on the scheme for the entire project. ANY change to the height, location or number of turbines within this project will require a reanalysis of the marking and lighting recommendation for the entire project. In particular, the removal of previously planned or built turbines/turbine locations from the project will often result in a change in the marking/lighting recommendation for other turbines within the project. It is the proponent's responsibility to contact the FAA to discuss the process for developing a revised obstruction marking and lighting plan should this occur.

In order to ensure proper conspicuity of turbines at night during construction, all turbines should be lit with temporary lighting once they reach a height of 200 feet or greater until such time the permanent lighting configuration is turned on. As the height of the structure continues to increase, the temporary lighting should be relocated to the uppermost part of the structure. The temporary lighting may be turned off for periods when they would interfere with construction personnel. If practical, permanent obstruction lights should be installed and operated at each level as construction progresses. An FAA Type L-810 steady red light fixture shall be
used to light the structure during the construction phase. If power is not available, turbines shall be lit with self-contained, solar powered LED steady red light fixture that meets the photometric requirements of an FAA Type L-810 lighting system. The lights should be positioned to ensure that a pilot has an unobstructed view of at least one light at each level. The use of a NOTAM (D) to not light turbines within a project until the entire project has been completed is prohibited.

This determination does include temporary construction equipment such as cranes, derricks, etc., which may be used during actual construction of the structure. However, this equipment shall not exceed the overall heights as indicated above. Equipment which has a height greater than the studied structure requires separate notice to the FAA.

This determination concerns the effect of this structure on the safe and efficient use of navigable airspace by aircraft and does not relieve the sponsor of compliance responsibilities relating to any law, ordinance, or regulation of any Federal, State, or local government body.

This aeronautical study considered and analyzed the impact on existing and proposed arrival, departure, and en route procedures for aircraft operating under both visual flight rules and instrument flight rules; the impact on all existing and planned public-use airports, military airports and aeronautical facilities; and the cumulative impact resulting from the studied structure when combined with the impact of other existing or proposed structures. The study disclosed that the described structure would have no substantial adverse effect on air navigation.

An account of the study findings, aeronautical objections received by the FAA during the study (if any), and the basis for the FAA's decision in this matter can be found on the following page(s).

If we can be of further assistance, please contact Steve Phillips, at (816) 329-2523, or steve.phillips@faa.gov. On any future correspondence concerning this matter, please refer to Aeronautical Study Number 2018-WTW-13388-OE.

RWY, Runway
TPA, Traffic Pattern Airspace
TRACON, Terminal Radar Approach Control
VFR, Visual Flight Rules

The proposed structures are part of a proposed wind farm that would be located approximately 5.02 - 9.07 NM southwest of the Airport Reference Point for the Rio Vista Municipal Airport (O88), Rio Vista, CA. The ASNs with coordinates, AGL heights, and AMSL heights are as shown on page one. They would exceed the obstruction standards of 14 CFR Part 77 as follows:

Section 77.17(a)(1): by 92 feet; a height that exceeds 499 feet AGL.

Section 77.17(a)(2): A height that is 200 feet AGL, or above the established airport elevation, whichever is higher, within 3 NM miles of the established reference point of O88 and that height increases in the proportion of 100 feet for each additional NM from the airport up to a maximum of 499 feet. The following would exceed:

2018-WTW-13388-OE by 190 feet
2018-WTW-13389-OE by 187 feet
2018-WTW-13390-OE by 169 feet
2018-WTW-13391-OE by 154 feet
2018-WTW-13392-OE by 141 feet
2018-WTW-13393-OE by 179 feet
2018-WTW-13394-OE by 167 feet
2018-WTW-13395-OE by 163 feet
2018-WTW-13396-OE by 156 feet

Section 77.17(a)(3): A height that increases a minimum instrument flight altitude within a terminal area;

The following would increase the Northern California TRACON (NCT) MVA for NCT_MVA_FUS3_2017 Sector MCC_B from 1,700 feet AMSL to 1,800 feet AMSL.
The turbines would be within the line of sight of the Stockton, CA. (SCK) ASR-11, the Travis (SUU) DASR, the Mill Valley (QMV) ARSR-4, and the McClellan (MCC) ASR-9 facilities. The proposals will affect the quality and/or availability of radar signals. The effects would be unwanted primary returns (clutter) and primary target drops, all in the area of the turbines. Tracked primary targets could diverge from the aircraft path and follow wind turbines, when the aircraft is over or near the turbines.

In order to facilitate the public comment process, the studies were circularized under ASN 2018-WTW-13388-OE on December 04, 2018, to all known aviation interests and to non-aeronautical interests that may be affected by the proposal. One letter of objection was received as a result of the circularization.

The Solano County Airport Land Use Commission (County) submitted comments that may not necessarily be an "objection" but rather statements. Some of their statements are simply repeating applicable law / rule / orders. They stated that these would be the tallest wind turbines in the area and larger than other onshore turbines elsewhere. Also stated was a belief that these have electromagnetic effects on radar. One statement said they "have seen information that conflicts" with the preliminary analysis of not exceeding TPA. Instead of submitting that stated information, a request was made for the FAA to see if any other obstruction standard was exceeded.

We are not sure what to make of the statement about these being the tallest in the area. Simply being taller than other structures has never been, nor will it ever be, the sole indicator of whether the structure would present an unacceptable impact upon the safe and efficient use of the navigable airspace.

The letter left the impression that the County believes exceeding one or more of the obstruction standards of 14 CFR Part 77 is reason enough to determine the proposal to be a hazard. That is not the case. It is the result of the aeronautical study that determines whether the structure would be a hazard or no hazard to air navigation.

We will always compare proposed structures against all of the obstruction standards but will not circularize the standards that are not exceeded nor any standards and/or effects that are beyond the scope of the public to provide information about.

Records indicate that O88 has approximately 35,000 operations per year primarily from CAT A and B general aviation aircraft. All except one of the proposed turbines lie beyond the TPA for all RWYs and aircraft categories. That one proposal is on the edge of the RWY 15/33 TPA for CAT D, but at 2,199 feet long, this
RWY is incapable of sustaining CAT D aircraft operations. The size of the TPA is based upon the aircraft that regularly use a particular RWY. The preliminary assessment of not exceeding TPA has been confirmed.

Note: Aircraft categories are based on approach speed, CAT A = less than 91 knots, CAT B = 91-120 knots, CAT C = 121-140 knots, CAT D = 141-165 knots.

The County submitted a lot about radar effects. Wind turbines rarely, if ever create "electromagnetic" interference. If they are within the line of sight of a radar sensor, they may be detected by that sensor and may therefore be a physical interference. Simply being "seen" by the radar is not the real issue though. How that target (in this case, the wind turbine) is processed and displayed for ATC is the key. The users of the system (ATC) is the sole decider on whether the system is acceptable to be able to perform their duties. Although there may be others entities using these radar systems, the responsibility and authority of the FAA is the safe and efficient use of the navigable airspace, including the impact of the radar effects on air navigation.

The turbines would be within the line of sight of the Stockton, CA. (SCK) ASR-11, the Travis (SUU) DASR, the Mill Valley (QMV) ARSR-4, and the McClellan (MCC) ASR-9 facilities. However, this would not cause an unacceptable adverse impact on ATC operations at this time.

The aeronautical study disclosed that the proposed structures would have the adverse effect as described above on the NCT MVA. MVAs are solely used by ATC and not published for public use and are not circulated for public comment. The study disclosed that increasing the MVA in the area of the turbines would not impact a significant number of operations. The proposed structures would have no other effect on any existing or proposed arrival, departure, or en route IFR operations or procedures.

Study for possible VFR effect disclosed that the proposals would have no effect on existing or proposed VFR arrival or departure operations. As stated above, the proposals are beyond normal traffic pattern airspace. Therefore, the proposal would not have an adverse effect on VFR traffic pattern operations at O88, or any other known public use or military airports. At 591 feet AGL, the structures would extend upwards into altitudes commonly used for en route VFR flight; however, no information was received to indicate they would be located along a regularly used VFR route or that they would pose a problem for pilots operating en route. Therefore, they would not have a substantial adverse effect on en route VFR flight operations.

The proposed structures would be appropriately obstruction marked/lighted to make them more conspicuous to airmen should circumnavigation be necessary.

The cumulative impact of the proposed structures, when combined with other proposed and existing structures, is not considered to be significant. Study did not disclose any significant adverse effect on existing or proposed public-use or military airports or navigational facilities, nor would the proposals affect the capacity of any known existing or planned public-use or military airport.

Therefore, it is determined that the proposed construction would not have a substantial adverse effect on the safe and efficient utilization of the navigable airspace by aircraft or on any air navigation facility and would not be a hazard to air navigation providing the conditions set forth in this determination are met.

Additional conditions:

As a condition of this determination it is required that Notice of Actual Construction or Alteration (7460-2 Part 1) be E-filed at least 60 full days prior to the start of construction so that appropriate action can be taken to amend the effected procedure(s) and/or altitude(s).
