STATE CLEARINGHOUSE

Dear Mr. Sanfilippo:

MITIGATED NEGATIVE DECLARATION FOR SITE APPROVAL NO. PA-1700279, (NORTH CENTRAL VALLEY ENERGY CENTER PROJECT), SCH#2018032050

The Department of Conservation's (Department) Division of Land Resource Protection (Division) has reviewed the Mitigated Negative Declaration for Site Approval No. PA-1700279, the North Central Valley Energy Center Project (Project). The Division monitors farmland conversion on a statewide basis, provides technical assistance regarding the Williamson Act, and administers various agricultural land conservation programs. We offer the following comments and recommendations with respect to the project's potential impacts on agricultural land and resources.

Project Description

A Site Approval application for the construction, operation, and decommissioning of the North Central Valley Energy Center (Project). The Project use type is classified as "Utility Services-Major" and would consist of a 132-megawatt (MW) battery energy storage system (BESS) on approximately 14.85 acres of a 57.28-acre parcel, which would include up to 300 battery storage containers (totaling up to 45,000 square feet) and associated on-site support facilities including a 11,000-square-foot Project collector substation, up to 50 inverters (totaling up to 6,500 square feet), collector lines, fencing, access roads, an operations and maintenance (O&M) building, a supervisory control and data acquisition (SCADA) system, and other ancillary facilities and equipment. The parcel upon which the BESS is proposed is currently under Williamson Act contract.

Department Comments

The conversion of agricultural land represents a permanent reduction and significant impact to California's agricultural land resources. CEQA requires that all feasible and reasonable mitigation be reviewed and applied to projects. Under CEQA, a lead agency should not approve a project if there are feasible alternatives or feasible mitigation measures available that would lessen the significant effects of the project.

All mitigation measures that are potentially feasible should be included in the project's environmental review. A measure brought to the attention of the lead agency should not be left out unless it is infeasible based on its elements.

Consistent with CEQA Guidelines, the Department recommends the County consider agricultural conservation easements, among other measures, as potential mitigation. (See Cal. Code Regs., tit. 14, § 15370 [mitigation includes "compensating for the impact by replacing or providing substitute resources or environments, including through permanent protection of such resources in the form of conservation easements."])

Mitigation through agricultural easements can take at least two forms: the outright purchase of easements or the donation of mitigation fees to a local, regional, or statewide organization or agency whose purpose includes the acquisition and stewardship of agricultural easements. The conversion of agricultural land should be deemed an impact of at least regional significance. Hence, the search for replacement lands should not be limited strictly to lands within the project's surrounding area.

A helpful source for regional and statewide agricultural mitigation banks is the California Council of Land Trusts. They provide helpful insight into farmland mitigation policies and implementation strategies, including a guidebook with model policies and a model local ordinance. The guidebook can be found at:

<https://www.calandtrusts.org/resources/conserving-californias-harvest/>

Of course, the use of conservation easements is only one form of mitigation that should be considered. Any other feasible mitigation measures should also be considered. Indeed, the recent judicial opinion in *King and Gardiner Farms, LLC v. County of Kern* (2020) 45 Cal.App.5th 814 ("KG Farms") holds that agricultural conservation easements on a 1 to 1 ratio are not alone sufficient to adequately mitigate a project's conversion of agricultural land. KG Farms does not stand for the proposition that agricultural conservation easements are irrelevant as mitigation. Rather, the holding suggests that to the extent they are considered, they may need to be applied at a greater than 1 to 1 ratio, or combined with other forms of mitigation (such as restoration of some land not currently used as farmland).

Conclusion

The Department recommends further discussion of the following issues:

- The Projects compatibility with, and/or, potential contract resolutions for lands within agricultural preserves and/or enrolled in a Williamson Act contract.
- If applicable, notification of Williamson Act contract non-renewal and/or cancellation.

Thank you for giving us the opportunity to comment on the Mitigated Negative Declaration for Site Approval No. PA-1700279, the North Central Valley Energy Center Project. Please provide this Department with notices of any future hearing dates as well as any staff reports pertaining to this project. If you have any questions regarding our comments, please contact Farl Grundy, Associate Environmental Planner via email at Farl.Grundy@conservation.ca.gov.

Sincerely,

Monique Wilber
