

North Coast Regional Water Quality Control Board

October 18, 2023

Subject: Memo Outlining Revisions to the Notice of Completion and OPR Report for the Sediment and Wood Augmentation Along the Trinity River Restoration Environmental Assessment/Initial Study

To Whom It May Concern,

On October 12, 2023, the North Coast Regional Water Quality Control Board (Regional Water Board), as California Environmental Quality Act (CEQA) lead agency for the Trinity River Restoration Program (TRRP), submitted a joint Environmental Assessment/Initial Study (EA/IS) for TRRP's upcoming Sediment and Wood Augmentation Along the Trinity River Restoration project (Project). A Notice of Completion and an Office of Planning and Research Summary Report were also submitted in support of the EA/IS. However, after the EA/IS was published and made available for public review, several errors were discovered in the Notice of Completion and Office of Planning and Research Summary Report. Those errors have been corrected and the Notice of Completion and Office of Planning and Research Summary Report have been resubmitted. The information contained in the EA/IS remains unchanged and no revisions to the document were necessary.

The revisions to the Notice of Completion and Office of Planning and Research Summary Report were limited to information regarding the Project's location. Specifically, the cross streets; zip code; coordinates; Section, Township, and Range; and total acreage were updated to accurately reflect the proposed Project's location.

Accompanying this memo are the revised Notice of Completion and Office of Planning and Research Summary Report. If you have any questions, please contact Jake Shannon at Jacob.Shannon@Waterboards.ca.gov.

Sincerely,

A handwritten signature in black ink that reads "JAKE SHANNON".
