Linscott, Law & Greenspan, Engineers

---

Subject: ***Traffic Circulation Assessment Scope of Work for Brea 265 Specific Plan  
Brea, California***

Linscott, Law & Greenspan, Engineers (LLG) is pleased to submit the following Scope of Work for the Traffic Circulation Assessment for the proposed Brea 265 Specific Plan Project in the City of Brea for your review and approval. It is our understanding that a Traffic Circulation Assessment is required to provide consistency with the General Plan. The work program summarized below is based on our current experience within the City, prior coordination efforts with City staff on this project, as well as our understanding of the City's requirements.

## **Circulation Assessment Scope of Work**

**A. Project Location:** The Brea 265 Specific Plan is a master planned residential community consisting of 260.7 acres located in the City of Brea and unincorporated Orange County; although not a part of the Specific Plan, an additional 1.4 acres of open space located on the northeast corner of Valencia Avenue and Rose Drive has been included this resulting in a total overall acreage of 262.1 acres. The proposed Project is generally located east of the State Route (SR) 57 Freeway and north of SR-90 (Imperial Highway), towards the eastern portion of the City and is surrounded by existing residential neighborhood communities, the Brea Sports Park and Carbon Canyon Regional Park. The Specific Plan area is bisected by Valencia Avenue which runs in a north-south direction, and by Lambert Road which runs in an east-west direction. The Project site is located to the south of Lambert Road/Carbon Canyon Road, north of Rose Drive, east of Valencia Avenue and west of Carbon Canyon Regional Park. Of the 217.7 acres located within unincorporated Orange County, 123.2 acres is currently designated as "Hillside Residential" and 94.5 acres is designated as "Low Density Residential" land use in the City's General Plan. The 43-acre portion of the Project that is located within the City is designated as "Hillside Residential".

**Figure 1-1** presents a Vicinity Map that illustrates the general location of the Project and surrounding street system. **Figure 2-1** is an existing aerial photograph of the Project site.

## **B. Project Description:**

### General Plan Zoning

As indicated previously, the Projects General Plan zoning for the site is to be developed with 166.2 acres of “Hillside Residential” uses, which equates to 332 single family dwelling units (DU) at an assumed density of 2 DU per acre (166.2 acres x 2 DU/acre). For 94.5 acres of “Low Density Residential” use, the Project zoned to develop with a maximum density of up to 6 DU per acre. However, based on surrounding residential development, a density of 3 DU per acre has been utilized for the “Low Density Residential” uses, which translates to 283 single family dwelling units (94.5 acres x 3 DU/acre). Therefore, the Project site has a zoning development of up to 615 single family dwelling units.

### Proposed Project

The proposed Project is a master planned residential community of low-density, medium-density, and high-density residential neighborhoods, parks, recreational amenities, and open space within thirteen (13) planning areas (PA) of the proposed specific plan. The Project will include a mix of approximately 1,100 residential dwelling units on 197.5 acres, up to 15.1 acres of parks/recreations uses, including up to 13 acres of Sports Park uses adjacent to the existing Brea Sports Park and a 2.1-acre Trail Staging Area, and 47.5 acres of open space/slopes. The proposed Project allows for a fire station and police substation on a 1.0 acre site on the northwest corner of Lambert and Valencia. Inclusion of 2.0 acres of Master Plan Right-of-way results in a total project acreage of 262.1 acres. Affordable housing units are also included as part of the total dwelling units proposed for the Project. The proposed Project would be phased and constructed based on market conditions. The proposed land uses would be linked together by an extensive trail network that will connect to the Tracks at Brea and other regional systems, as well as to the adjacent neighborhoods and off-site parks, open space, and surrounding employment centers and retail venues.

Per the Project’s development tabulation, two (2) residential land use categories are proposed and consists of 450 “low density” DU, and 650 “medium density” DU, with 15.1 acres of parks/recreations uses, including up to 13 acres of Sports Park uses adjacent to the existing Brea Sports Park and a 2.1-acre Trail Staging Area. From review of the Project’s details, the above-referenced land uses translate to the development of 450 single family detached DU, and 650 single family attached DU (i.e. townhomes, row homes, detached cluster homes, attached motorcourt homes, etc.). The proposed Sports Park component of the Project is essentially an expansion of the existing Brea Sports Park, that together

will provide the Brea community and new residents of the Project with recreational opportunities.

For the purposes of this analysis, the Project site was split into three (3) zones. Zone 1 is the portion of the Project site located north of Lambert Road. Zone 2 is the portion located south of Lambert Road, west of Valencia Avenue (includes proposed Sports Park). Zone 3 is the portion located east of Valencia Avenue and east of Rose Drive. **Table 2-1** provides the Project development summary. **Figure 2-2** illustrates the Brea Specific Plan Land Use Plan for the Project. This figure generally illustrates the Parks and Open Space plan for the Project as well.

For our understanding, units may be transferred between land use designations and locations so long as the total number of units does not exceed 1,100 units and the number of units in the planning area does not exceed the maximum number of dwelling units per acre permitted for the planning area's land use designation.

#### Vehicular Site Access

Subject to confirmation and review of the Project's access and circulation plan, it is our understanding that vehicular access to the Project from the public streets bordering the subject property will be provided via one (1) full access signalized driveway on Lambert Road, one (1) full access signalized driveway on Valencia Avenue, one (1) full access unsignalized driveway on Rose Drive, and one (1) full access signalized driveway at the existing intersection of Rose Drive at Vesuvius Drive. Vehicular circulation internal to the various proposed neighborhoods will be provided by a system of local residential streets.

For the proposed Sports Park, it is assumed that primary vehicular access will be provided via the proposed signalized Project entries on Valencia Avenue and on Lambert Road, with additional vehicular access provided through the existing Brea Sports Park via the unsignalized easterly park driveway located on Birch Street. It is assumed that the "loop" road, which now serves as a "fire lane" and is used by authorized park service vehicles, will be open to through traffic as well as provide for pedestrian and bicycle connectivity.

Project-sponsored proposed intersection lane configurations and traffic controls for the Project's vehicular access points noted above, subject to confirmation, includes the following Project Design Features:

- Lambert Road, from Valencia Avenue west along Project frontage to just east of Sunflower Street - widen and construct Lambert Road along project frontage to Major Arterial Highway Standards per the City's requirements, providing three 12-foot travel lanes and an 8-foot bike lane in each direction,

separated by a 14-foot median within 88-feet of paved width and a right-of way of 120-feet. Lambert Road currently includes two travel lanes in each direction, midblock along the Project frontage.

- ❑ Carbon Canyon Road (SR-142), from Valencia Avenue east along Project frontage - widen and construct the south side of Carbon Canyon Road along project frontage to ultimate half-section width per the City's Major Arterial Highway standard and provide three 12-foot travel lanes and an 8-foot bike lane in the eastbound direction, separated by a 14-foot median within 88-feet of paved width and a right-of way of 120-feet. Carbon Canyon Road currently includes three travel lanes, narrowing to two lanes in the easterly direction along the Project frontage.
- ❑ Valencia Avenue (SR-142), from Lambert Road/Carbon Canyon Road south to along project frontage - this state route is currently improved to the City's Primary Arterial standards, and now provides two travel lanes and an 8-foot bike lane in each direction, separated by a 14-foot median within 84-feet of paved width and a right-of way of 100-feet; no additional travel lanes are proposed with the Project.
- ❑ Rose Drive, from Valencia Avenue south along Project frontage to Vesuvius Drive - widen and construct the east side of Rose Drive along project frontage to Primary Arterial Standards per the City's requirements, providing two foot travel lanes and an 8-foot bike lane in the northbound, separated by a median within 42-feet of half-paved width and a 50-foot half right-of way. To achieve two southbound travels lane along the Project's entire frontage, modifications to the future median and/or lane widths may be needed. Subject to the City's review/approval, it is expected that the design of second southbound through lane will require motorist to merge left to continue through and be terminated as a right-turn lane at the intersection of Rose Drive and Vesuvius Drive to align with the existing southbound right-turn lane at this intersection. Rose Drive currently includes one travel lane in each direction and bike lanes, separated by a painted median.

**Figure 2-3** illustrates the Project's Circulation Plan as presented in the Brea 265 Specific Plan.

#### *Pedestrian and Bicycle Circulation*

**Figure 2-4** illustrates the Non-Vehicular Circulation Plan that identifies the existing trails/sidewalks adjacent to the Project site and the proposed trails within the Project site as presented in the Brea 265 Specific Plan. In addition to the trail

and pedestrian connectivity proposed by the Project, a planned bikeway system will facilitate continuous bicycle access throughout the Project site, linking the site the current bicycle facilities in the immediate area. On-street bike plane will be provided on both sides of Lambert Road, Valencia Avenue, and Rose Drive, and on the south side of Carbon Canyon Road upon completion of proposed Project Design Features.

**C. Traffic Study Locations:** The following twenty-two (22) key study intersections, along with the applicable jurisdiction and/or City location, have been identified based on coordination with the City, for which the Project’s potential traffic impact is to be assessed. *Figure 1-1* identifies the study locations.

As a result of SB743, traffic studies are no longer a CEQA requirement. Hence, subject to confirmation by the City Traffic Engineer, Level of Service (LOS) calculations would be prepared at these locations:

**TABLE 1-1  
 KEY STUDY INTERSECTIONS**

| Key Intersection   | Applicable Jurisdiction (City Location) |              |
|--|---|--------------|
|  | Caltrans                                | City of Brea |
| 1. State College Boulevard at Lambert Road               | --                                      | Brea         |
| 2. SR-57 SB Ramps at Lambert Road                        | Caltrans (Brea)                         | --           |
| 3. SR-57 NB Ramps at Lambert Road                        | Caltrans (Brea)                         | --           |
| 4. Pointe Drive at Lambert Road                          | --                                      | Brea         |
| 5. Wildcat Way/N Associated Road at Lambert Road         | --                                      | Brea         |
| 6. Santa Fe Road/Kraemer Boulevard at Lambert Road       | --                                      | Brea         |
| 7. Sunflower Street at Lambert Road                      | --                                      | Brea         |
| 8. Valencia Avenue at Lambert Road/Carbon Canyon Road    | Caltrans (Brea)                         | --           |
| 9. Santa Fe Road at Carbon Canyon Road                   | Caltrans (Brea)                         | --           |
| 10. State College Boulevard at Birch Street              | --                                      | Brea         |
| 11. S Associated Road at Birch Street                    | --                                      | Brea         |
| 12. N Associated Road at Birch Street                    | --                                      | Brea         |
| 13. Kraemer Boulevard at Birch Street                    | --                                      | Brea         |
| 14. Valencia Avenue at Birch Street/Rose Drive           | Caltrans (Brea)                         | --           |
| 15. Rose Drive at Vesuvius Drive                         | --                                      | Brea         |
| 16. SR-57 SB Ramps at Imperial Highway                   | Caltrans (Brea)                         | --           |
| 17. SR-57 NB Ramps at Imperial Highway                   | Caltrans (Brea)                         | --           |
| 18. Associated Road at Imperial Highway                  | Caltrans (Brea)                         | --           |
| 19. Castlegate Lane/Placentia Avenue at Imperial Highway | Caltrans (Brea)                         | --           |
| 20. Kraemer Boulevard at Imperial Highway                | Caltrans (Brea)                         | --           |
| 21. Valencia Avenue at Imperial Highway                  | Caltrans (Brea)                         | --           |
| 22. Rose Drive at Imperial Highway                       | Caltrans (Placentia)                    | --           |

- D. Traffic Counts:** Based on current conditions, due to COVID-19 pandemic, the ability to collect traffic counts to establish baseline conditions is not possible. As such, to establish existing “baseline” traffic conditions, pre-COVID-19, LLG has researched historical data and was able to obtain Year 2018 counts at all twenty-two (22) key study locations. As such, to establish existing “baseline” traffic conditions, an annual growth factor of 1% per year will be applied to the Year 2018 conditions to establish Year 2021 pre-COVID-19 baseline traffic conditions.
- E. Project Traffic Generation:** The trip generation potential of the proposed Project will be estimated using trip rates contained in the 11<sup>th</sup> Edition of *Trip Generation*, published by the Institute of Transportation Engineers (ITE), [Washington, D.C., 2021]. *Table 5-1* summarizes the trip generation rates used in forecasting the vehicular trips generated by the proposed Project and also presents the project’s forecast peak hour and daily traffic volumes.

Based on the Project description, the upper portion of *Table 5-1* identifies land use categories and trip rates which were considered in forecasting the trip generation of the Project. The land uses include ITE Land Use 210: Single Family Detached Housing, 215: Single Family Attached Housing, ITE Land Use 220: Multifamily Housing (Low-Rise), and ITE Land Use 488: Soccer Complex. The trip generation potential of both the Project’s medium density (“multifamily” and “single family attached”) components will be forecast based on ITE Land Use 215: Single Family Attached trip rates. Given the description of the Project’s proposed Sports Park component, the trip generation potential will be forecast based on ITE Land Use 488: Soccer Complex<sup>1</sup> trip rates.

A review of the lower portion of this table indicates that the proposed Project is forecast to generate approximately 9,351 daily trips, with 634 trips (182 inbound, 452 outbound) produced in the AM peak hour and 893 trips (542 inbound, 351 outbound) produced in the PM peak hour on a “typical” weekday.

- F. Project Trip Distribution Pattern:** *Tables 5-2 and 5-3* present the overall directional north/south/east/west distribution pattern for the residential and sports park components, respectively. *Figures 5-1 through 5-5* present the detailed Project Trip Distribution for Zone 1, Zone 2A, Zone 2B, Zone 3A and Zone 3B for review by the City. Project traffic volumes, both entering and exiting the site,

---

<sup>1</sup> Per Trip Generation, a soccer complex is an outdoor facility that is used for non-professional soccer games. It may consist of multiple fields. The size of each field within the land use may vary to accommodate games for different age groups. On-site amenities may include stadium seating, a fitness trail, an activities shelter, aquatic center, picnic grounds, basketball and tennis courts, and a playground, similar to the proposed Project’s Sports Park component. For this analysis, it is assumed up to two (2) full-sized soccer fields will be provided. However, when taking into consideration that a full-sized soccer field can be subdivided into approximately 2-3 child-sized fields, this analysis will conservatively analyze a total of six (6) soccer fields.

have been distributed and assigned to the adjacent street system based on Project Select Zone model runs and were further refined based on the following considerations:

- location of site access points in relation to the surrounding street system,
- the site's proximity to major traffic carriers and regional access routes,
- physical characteristics of the circulation system such as lane channelization and presence of traffic signals that affect travel patterns,
- presence of traffic congestion in the surrounding vicinity,
- ingress/egress availability at the project site, and
- prior discussions with City Staff.

#### **G. Near-Term Cumulative Background Traffic:**

- Project Completion Year: 2035. The proposed Project is expected to development in several phases between 2023 and 2030, but is dependent on several factors, including the timing of Project approval, Project funding, market conditions, site preparation and/or the current COVID-19 environment which could delay the Project. As such, the Year 2035 has been utilized to assess the Project's potential traffic impacts at full occupancy (to be confirmed by the applicant).
- Ambient Growth Rate: 1% per year
- Cumulative Projects: Planned and/or approved projects are presented in **Table 6-1**.

**H. General Plan Buildout Traffic:** General Plan Buildout (Year 2045) traffic volume forecasts will be developed based on OCTAM 5.0 approved computer traffic model runs for baseline conditions and buildout conditions for the AM and PM peak periods and daily traffic conditions. Forecast future buildout traffic volumes using the following methodology:

- a. Peak period traffic volumes will be converted to peak hour (i.e., one-hour) traffic volumes using a conversion factor of 0.3566 for the AM peak hour and 0.2662 for the PM peak hour;
- b. Calculate the difference between the baseline and buildout peak period traffic volumes and convert to AM and PM peak hour (i.e., one-hour) link traffic volumes;
- c. Link traffic volumes (i.e., two-way directional traffic volumes on each roadway segment) will be post-processed using the "b-turns" program and the relationship of the base year validation model run output to the

base year "ground" traffic counts to develop buildout AM and PM peak hour traffic volumes.

**I. Analysis Scenarios:** Prepare AM peak hour and PM peak hour Level of Service (LOS) calculations at up to twenty-two (22) study intersections to determine the potential impacts of the proposed Project. The following traffic scenarios will be prepared.

1. Existing Traffic Conditions;
2. Near-Term (Year 2035 to be confirmed) Background Traffic Conditions (Existing plus Ambient Growth plus Related Projects);
3. Near-Term (Year 2035 to be confirmed) Background Plus Project Traffic Conditions;
4. Scenario (3) with improvements to be implemented as conditions of approval (COA), if necessary;
5. General Plan Buildout (Year 2045) Traffic Conditions;
6. General Plan Buildout (Year 2045) Plus Project Traffic Conditions; and
7. Scenario (6) with improvements to be implemented as conditions of approval (COA), if necessary.

**J. LOS Methodology:** The LOS calculations will be based on the HCM 6<sup>th</sup> Edition methodology for both signalized and unsignalized intersections to be consistent with the City of Brea Transportation Impact Analysis (TIA) Guidelines. Additionally, the LOS calculations will also be based on the Intersection Capacity Utilization (ICU) methodology for signalized intersections to be consistent with the City of Brea General Plan.

The HCM calculations will utilize the following parameters:

- Utilization of exiting cycle length and pedestrian timing parameters,
- Minimum left-turn split time, including clearance interval timing = 10 seconds
- Saturation flow rates:
  - Thru and Right-turns = 1,900 vehicles per hour (vph)
  - Left-turns = Single Lane: 1,800 vph, Dual Lanes = 3,500 vph

The ICU calculations will utilize the following parameters:

- Lane capacity of 1,700 vph for through and all turn lanes with a clearance adjustment factor of 0.05

Subject to confirmation by the City Traffic Engineer, the following LOS review criteria will be used to assess the need for potential Project-related improvements in relation to the guidance provided in the City of Brea General Plan:

- HCM Methodology:
  - The Project causes one or more study intersections operating at LOS D or better to degrade to LOS E or F, or
  - The Project causes a change in control delay of 4 seconds for intersections already operating at LOS E, or
  - The Project causes a change in control delay of 2 seconds for intersections already operating at LOS F.
  
- ICU Methodology:
  - The Project causes an intersection operating at LOS D or better to degrade to LOS E or F, or
  - The Project increases traffic demand at a signalized study intersection by 0.020 or greater and the intersection is forecast to operate at LOS E or F.

#### **K. Other Issues:**

- Conduct a traffic signal warrant evaluation of the intersection of the Redbay Avenue at Birch Street, inclusive of existing and future LOS calculations.
- Assess traffic flow at the intersection of N. Associated Road at Birch Street and Voyager Avenue at Birch Street as it relates to traffic operations and congestion associated with Country Hills Elementary School and Olinda Elementary School, inclusive of LOS calculations.
- Perform LOS analysis at the four (4) project access points. At Project Driveway B located along Valencia Avenue, perform a phased LOS analysis both with and without a traffic signal. Conduct a traffic signal warrant evaluation at Project Driveway B.
- Assess the impact of the project access points based on the results of the peak hour intersection analyses and the City's LOS standards. Based on this assessment, determine the improvements which may be required to be implemented by the Project as a Condition of Approval. Recommended improvements may include striping modifications, intersection and/or signalization improvements, inclusive of Automated Traffic Surveillance Control and/or Adaptive Traffic System Control improvements.
- Conduct a queuing evaluation at all key study intersections located along Imperial Highway, inclusive of the SR-57 off-ramps to Imperial Highway and Lambert Road, to address potential Caltrans concerns/comments.
- Perform an active transportation facilities assessment of the near-by roadways as it relates to pedestrian mobility and bicycle mobility.
- Provide documentation of existing near-by transit facilities and transit routes that provide services to the site, as well as document existing bikeway facilities/trails.

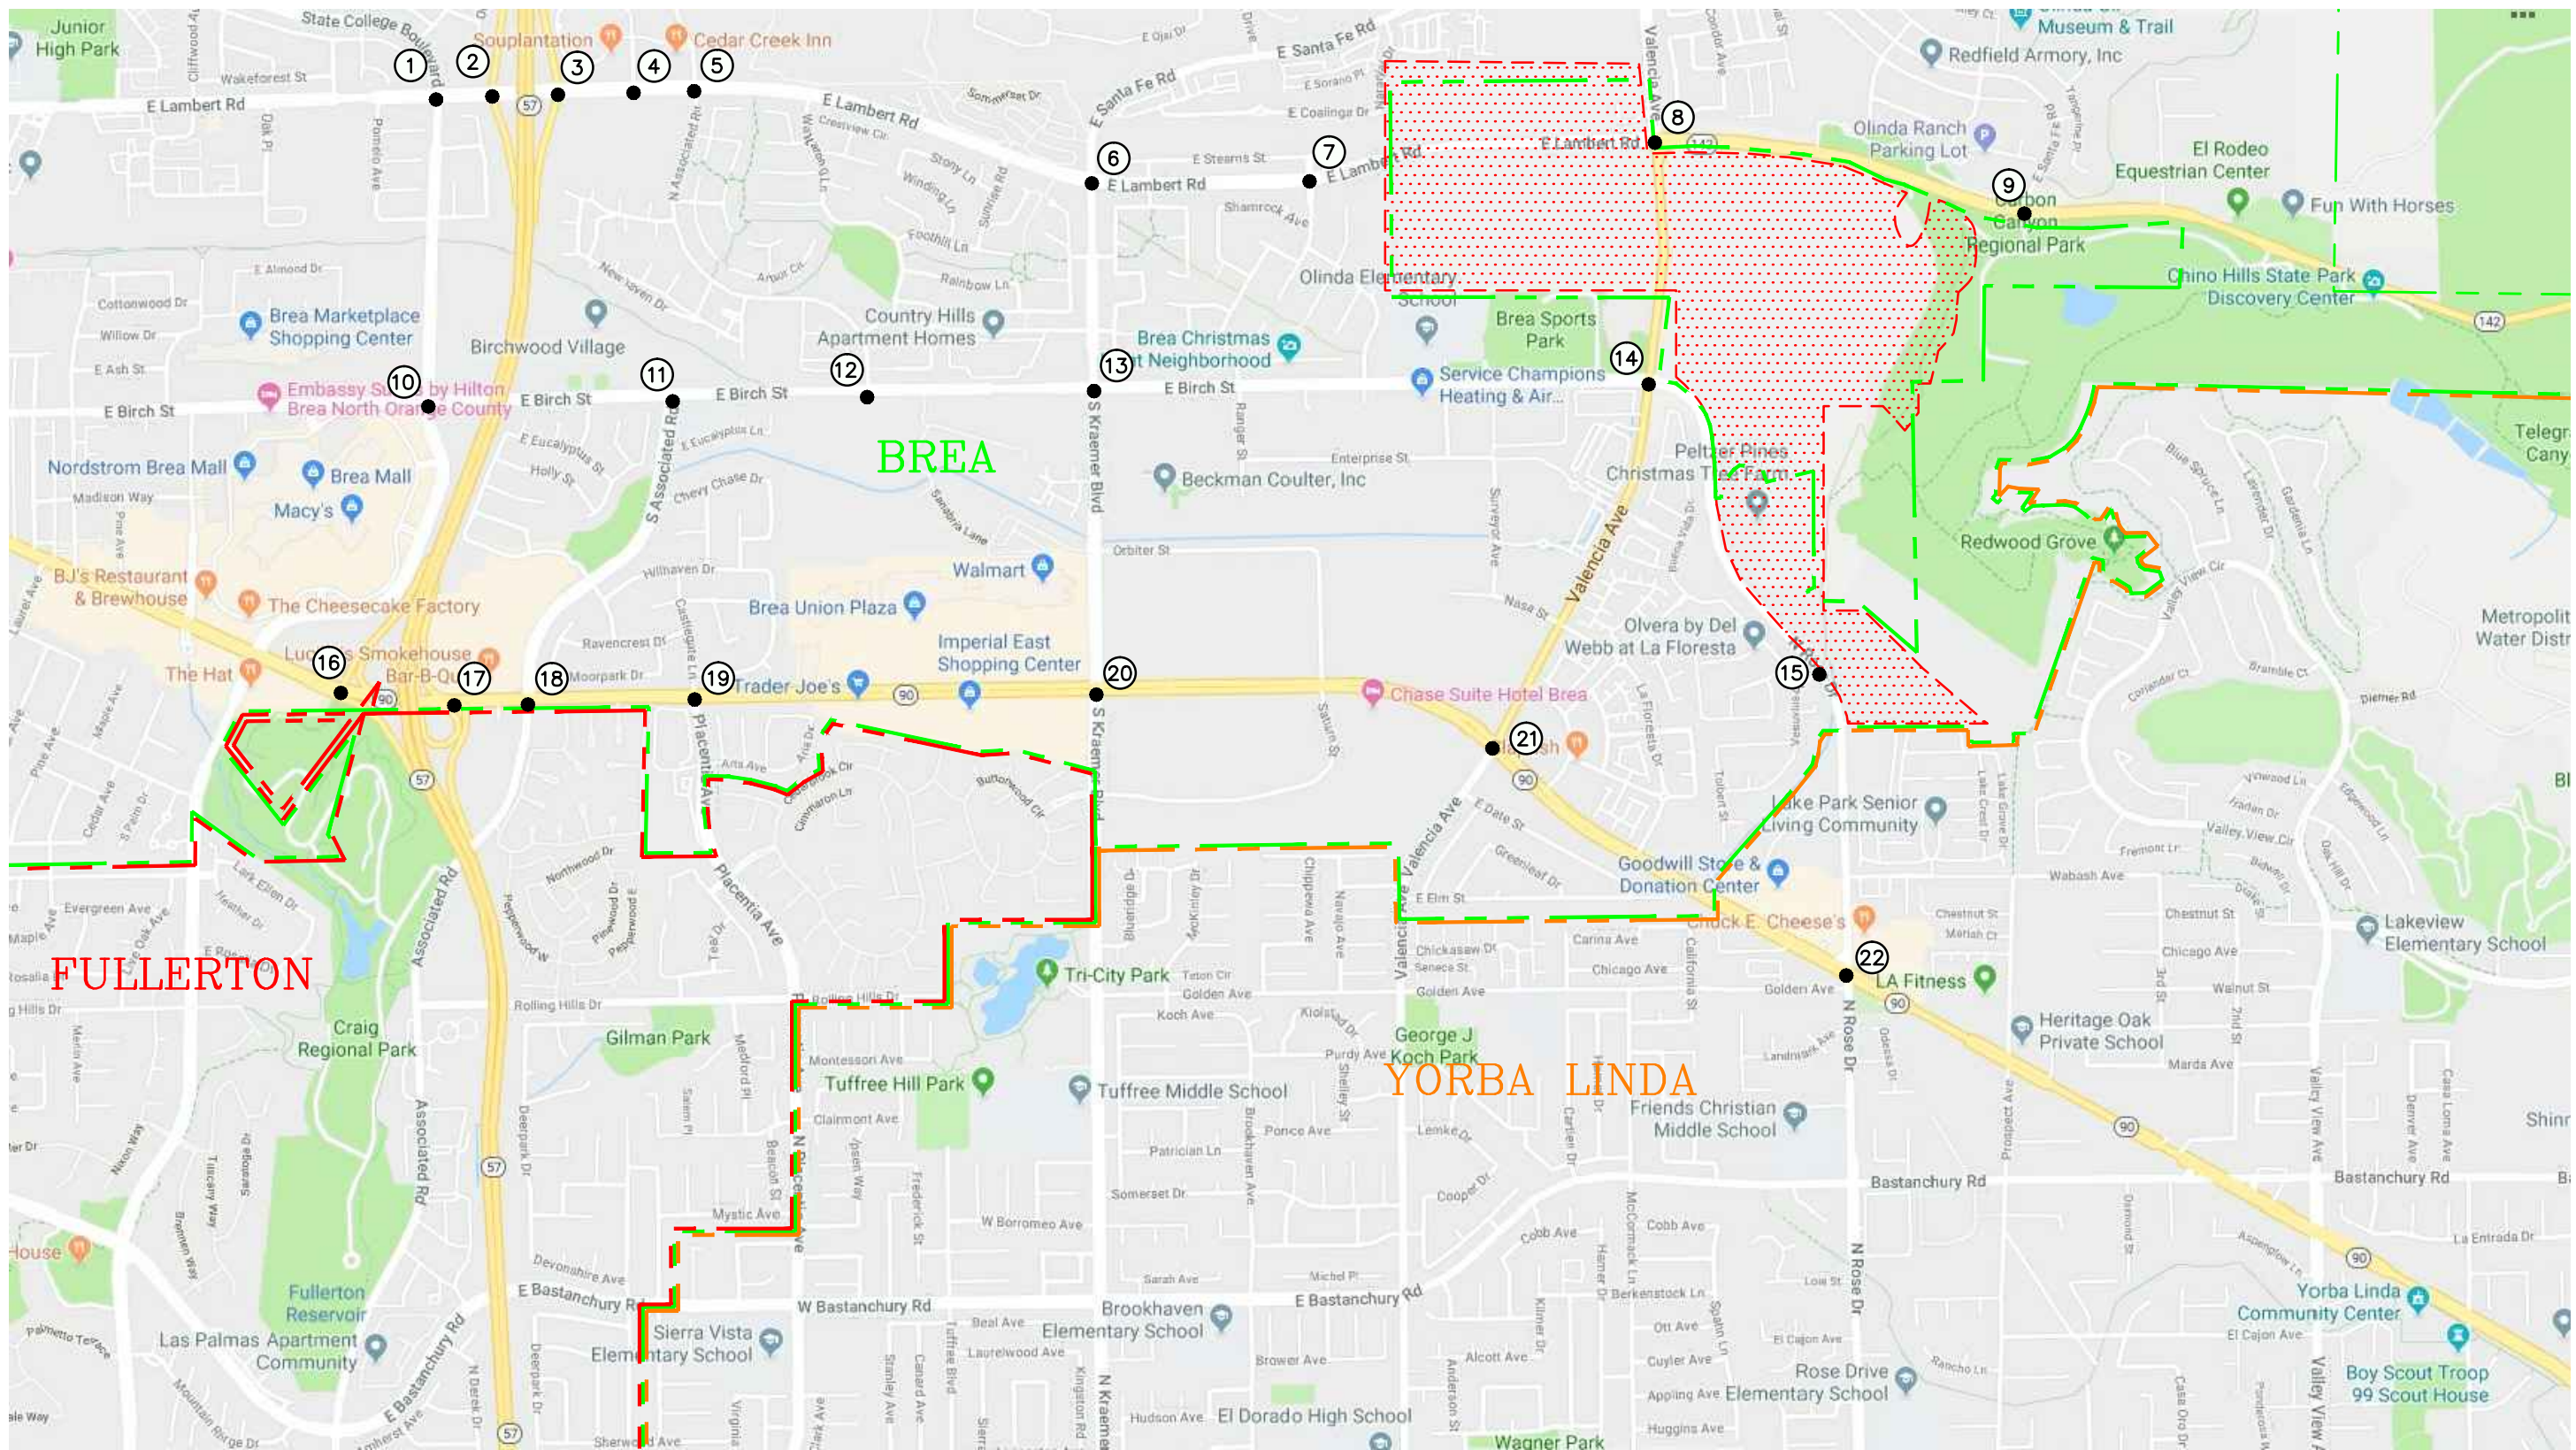

- Prepare a gate queuing study at Project Driveways B and C to identify the distance the gate should be placed to ensure that it does not affect the signal operations along Valencia Avenue and Rose Drive.

\* \* \* \* \*

We appreciate the opportunity to provide this scope of work. Should you have any questions, please call us at (949)825-6175. Thank you.

**TABLE 2-1  
PROJECT DEVELOPMENT SUMMARY**

| <b>Land Use/Project Description</b>   | <b>Project Development Totals<br/>No. of Dwelling Units (DU) /<br/>Acres</b> |
|---|--|
| <b><u>Proposed Project Zone 1 (north of Lambert, west of Valencia):</u></b>                             |  |
| ▪ Single Family Detached Residential  | 105 DU   |
| ▪ Public Facility   | <u>1.0 acre</u>  |
| <i>Zone 1 Subtotal</i>  | <i>105 DU</i>  |
| <b><u>Proposed Project Zone 2 (south of Lambert, west of Valencia):</u></b>                             |  |
| ▪ Multifamily /Single Family Attached Residential   | 507 DU   |
| ▪ Sport Park  | <u>13.0 acres<sup>2</sup></u>  |
| <i>Zone 2 Subtotal</i>  | <i>507 DU</i>  |
| <b><u>Proposed Project Zone 3 (south of Carbon Canyon Road, east of Valencia and east of Rose):</u></b> |  |
| ▪ Single Family Detached Residential  | 345 DU   |
| ▪ Multifamily/Single Family Attached Residential  | <u>143 DU</u>  |
| <i>Zone 3 Subtotal</i>  | <i>488 DU</i>  |
| <b>Total Proposed Project</b>   | <b>1,100 Units<br/>13.0 acre Sports Park</b>                                 |

<sup>2</sup> Subject to confirmation, for the Sports Park component of the Project assumed to developed with a combination of a baseball/softball field and multi-purpose field that can be used for football or soccer. Other on-site amenities include a fitness trail, an activities shelter, basketball and tennis courts, and a playground plus pickleball courts, For this analysis, it is assumed up to two (2) full-sized soccer fields will be provided. However, when taking into consideration that a full-sized soccer field can be subdivided into approximately 2-3 child-sized fields, this analysis will conservatively analyze a total of six (6) soccer fields.

**Notes:**

TE/DU = Trip End per Dwelling Unit

<sup>3</sup> Source: *Trip Generation*, 11<sup>th</sup> Edition, Institute of Transportation Engineers (ITE), Washington, D.C. (2021).

<sup>4</sup> Low-Rise Multifamily Housing consists of buildings that are less than 3 levels. .

<sup>5</sup> A soccer complex is an outdoor facility that is used for non-professional soccer games. It may consist of multiple fields. The size of each field within the land use may vary to accommodate games for different age groups. On-site amenities may include stadium seating, a fitness trail, an activities shelter, aquatic center, picnic grounds, basketball and tennis courts, and a playground.

| 16.                        | Lambert Road Condos         | 700-800 W. Lambert Road   | 24 DU condominiums  |

<sup>8</sup> Source: City of Brea, Fullerton, and Chino Hills Planning Departments.

<sup>9</sup> The traffic impact analysis conservatively evaluated 790 units as originally planned, which would result in higher traffic volumes in the cumulative scenarios.

<sup>10</sup> Fifteen (15) of the proposed apartments are considered co-living units, which include five (5) 3-bedroom units and ten (10) four-bedroom units, therefore, to provide a conservative assessment, the co-living unit bedrooms have been counted as individual units for a total apartment count of 229 units.

<sup>11</sup> The project has already built and occupied 206 DU apartments and 83 DU townhomes.
