EXECUTIVE SUMMARY

ES.1 SUMMARY OF FINDINGS

The results of this *Palomino Business Park Energy Analysis* is summarized below based on the significance criteria in Section 3 of this report consistent with Appendix G of the California Environmental Quality Act (CEQA) Guidelines (1). Table ES-1 shows the findings of significance for potential energy impacts under CEQA.

TABLE ES-1: SUMMARY OF CEQA SIGNIFICANCE FINDINGS

| Analysis | Report Section | Significance Findings | |
|--|----------------|------------------------------|------------|
| | | Unmitigated | Mitigated |
| Energy Impact #1: Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation. | 5.0 | <i>Less Than Significant</i> | <i>n/a</i> |
| Energy Impact #2: Conflict with or obstruct a state or local plan for renewable energy or energy efficiency. | 5.0 | <i>Less Than Significant</i> | <i>n/a</i> |

ES.2 PROJECT REQUIREMENTS

The Project Greenhouse Gas Analysis (GHGA) establishes mitigation measures that would benefit energy reduction. As a conservative measure, no “credit” or reduction for the following measures was taken from the emissions totals calculated herein.

MM-GHG-1: Incorporate Water Conservation and Efficient Measures for Landscaping. The project will devise a comprehensive water conservation strategy in compliance with California Green Building Standards Code Water Efficiency Measures and Leadership in Energy and Environmental Design Neighborhood Development standards to reduce water use during project operation. The strategy will include the following, plus other innovative measures that may be appropriate.

- Install drought-tolerant plants for landscaping.
- Use reclaimed water for landscape irrigation within the project at such time as it can be made reasonably available. Install the infrastructure to deliver and use reclaimed water, as part of street improvements within the project site along Jurupa Avenue, Locust Avenue, Alder Avenue, and Armstrong Road as needed to provide reclaimed water for landscape irrigation when available.
- Install water-efficient irrigation systems, such as weather-based and soil-moisture-based irrigation controllers and sensors, for landscaping according to the California Department of Water Resources Model Efficient Landscape Ordinance.
- Ensure that all landscape and irrigation measures are in compliance with the City of Norco’s Municipal Code.

MM-GHG-2: Design Building Components to Meet 2016 Title 24 Standards. The project will design building shells and building components, such as windows; roof systems; electrical and lighting systems; and heating, ventilating, and air conditioning systems to meet 2016 Title 24 Standards, which are 5 percent more stringent than the 2013 Title 24 Standards, which were in turn 30 percent more stringent than the 2008 Title 24 Standards for nonresidential buildings.

MM-GHG-3: Design CALGreen-Compliant Buildings. Buildings will be designed to provide CALGreen Standards with Leadership in Energy and Environmental Design features for potential certification and will employ energy and water conservation measures in accordance with such standards. This includes design considerations related to the building envelope; heating, ventilating, and air conditioning; lighting; and power systems.

MM-GHG-4: Provide Electrical Connections at Loading Docks. Electrical outlets will be provided in loading dock areas to provide power for trucks.

MM-GHG-5: Utilize Energy Efficient Lighting. The project will utilize energy-efficient interior and exterior lighting, including light-emitting diodes, T5 and T8 fluorescent lamps, or other lighting that is at least as efficient. Lighting will incorporate motion sensors that turn lighting off when not in use.

MM-GHG-6: Select Efficient Refrigerants and Heating, Ventilating, and Air Conditioning (HVAC) Systems. Refrigerants and HVAC equipment will be selected to minimize or eliminate the emission of compounds that contribute to ozone depletion and global warming. Ventilation and HVAC systems will be designed to meet or exceed the minimum outdoor air ventilation rates described in the American Society of Heating Refrigeration, and Air Conditioning Engineers standards and/or per California Title 24 requirements.

MM-GHG-7: Provide Landscaped Parking Lots. Surface parking lots will be well landscaped to reduce heat island effect. Parking lot landscaping will be planted with 15-gallon trees, at a rate of one per every four parking stalls. The trees may be clustered, but a minimum of one cluster will be provided for each 100 feet of parking row. Trees will be selected and placed to provide canopy and shade for the parking lots.

MM-GHG-8: Recycling Program: Operational Sustainability. The Project shall implement a recycling program in order to meet a 50 percent minimum waste diversion goal.

MM-GHG-9: Encourage Ridesharing and Transit Incentives. Each building operator will be required to support and encourage ridesharing and transit incentives for the construction crew by providing crews with the needed resources to organize rideshares, such as bulletin boards or email announcements. The Construction Contractor will also fully or partially subsidize transit fares or passes for the construction crew members who can feasibly use transit

MM-GHG-10: Non-Diesel Cargo Handling Equipment. All on-site outdoor cargo-handling equipment (including yard trucks, hostlers, yard goats, pallet jacks, forklifts, and other on-site equipment) and all on-site indoor forklifts will be powered by non-diesel engines.

1 INTRODUCTION

This report presents the results of the energy analysis prepared by Urban Crossroads, Inc., for the proposed Palomino Business Park (referred to as Project). The purpose of this report is to ensure that energy implication is considered by the City of Norco, as the lead agency, and to quantify anticipated energy usage associated with construction and operation of the proposed Project, determine if the usage amounts are efficient, typical, or wasteful for the land use type, and to emphasize avoiding or reducing inefficient, wasteful, and unnecessary consumption of energy.

1.1 SITE LOCATION

The proposed Palomino Business Park site is located on either side of Mountain Avenue between Second Street and First Street in the City of Norco, as shown on Exhibit 1-A.

1.2 PROJECT STUDY AREA

The Project site is currently developed with 36 single-family residential structures and a chicken egg warehouse and distribution facility for Hidden Villa Ranch. Residential structures are located along First Street, Second Street, and Pacific Avenue, some of which are occupied, and some are vacant. Several of the on-site residential parcels contain chickens, horses, goats, ponies, and dog raising activities; however, none are commercial operations. The site also includes several dilapidated former farm buildings, stables, chicken sheds, and concrete pads from previous uses. Additionally, a large portion of the site consists of undeveloped vacant land, a portion of which includes remnants of building foundations.

The surrounding land uses are described below.

- North: Second Street followed by single-family residential uses. General Plan Land Use designation of Residential Agricultural (RA) and Zoned Agricultural – Low Density 10 acres (A-1-10).
- West: Pacific Avenue and single-family residential uses. General Plan Land Use designation of Residential Agricultural (RA) and Zoned Agricultural – Low Density 10 acres (A-1-10).
- South: First Street and single-family residential. General Plan Land Use designation of Residential Agricultural (RA) and Zoned Agricultural – Low Density 10 acres (A-1-10); and Gateway Specific Plan designation of Residential (R).
- East: A portion of Mountain Avenue, single-family residential, and industrial development. Gateway Specific Plan designation of Industrial (I) with a Housing Development Overlay (HDO).

1.3 PROJECT DESCRIPTION

The Project is proposed to consist of the development of 602,130 square feet (sf) of high-cube cold storage warehousing, 1,426,460 sf of industrial park, 6,520 sf of retail, 6,520 sf of fast-food restaurant without drive-through window, 4,275 sf of fast-food restaurant with drive-through window, and a 12-vehicle fueling position (VFP) gas station with a 4,095 sf convenience market, for a total development of 2,050,000 sf, as shown on Exhibit 1-B. The Project is anticipated to be constructed in a single phase by the year 2022.

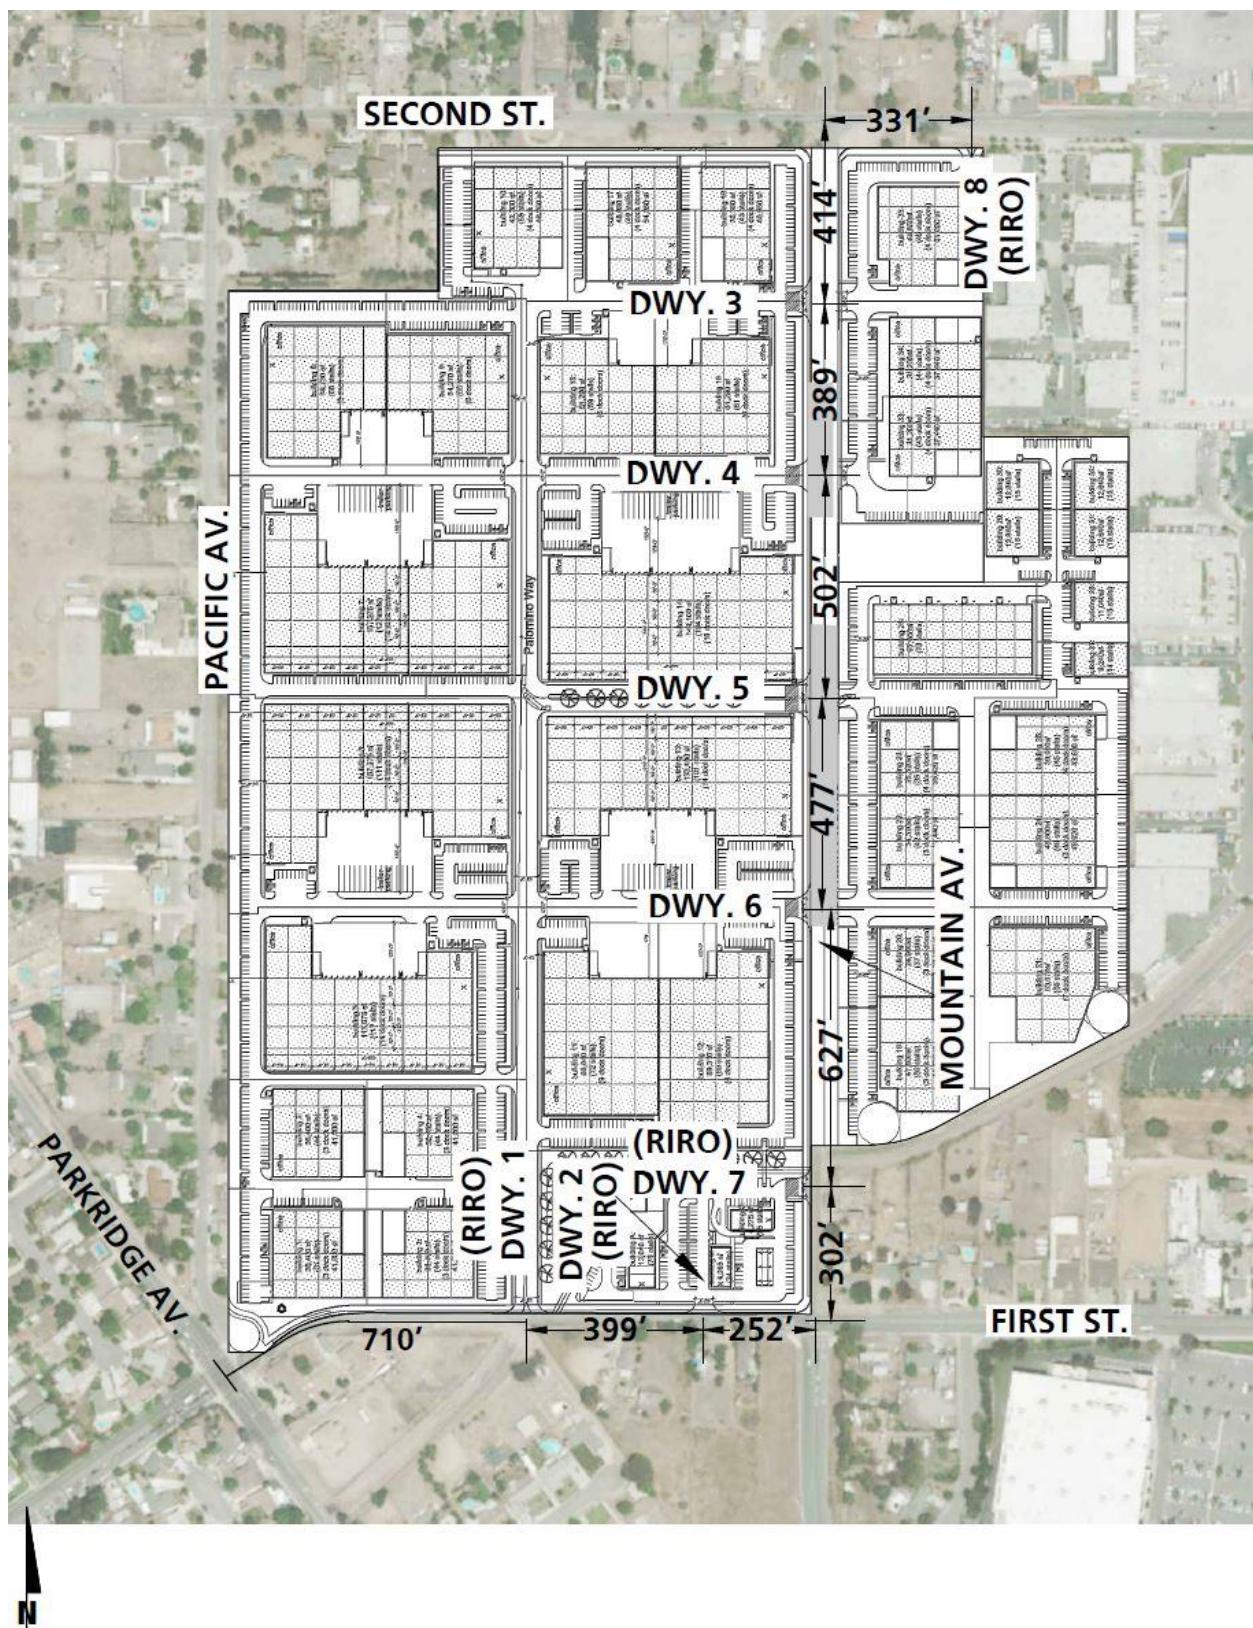

At the time this energy analysis was prepared, the future tenants of the proposed Project were unknown. This energy study is intended to describe impacts associated with the expected typical, 24-hour seven days per week operational activities at the Project site.

Per the *Palomino Business Park Traffic Impact Analysis* (TIA) prepared by Urban Crossroads, Inc. the Project is expected to generate a total of approximately 7,922 trip-ends per day (actual vehicles) and includes 1,040 truck trip-ends per day (2). This study relies on the actual Project trips (as opposed to the passenger car equivalents) to accurately account for the effect of individual truck trips on the study area roadway network.

EXHIBIT 1-A: LOCATION MAP

EXHIBIT 1-B: SITE PLAN

2 EXISTING CONDITIONS

This section provides an overview of the existing energy conditions in the Project area and region.

2.1 OVERVIEW

The most recent data for California's estimated annual energy use is from 2016 and included:

- Approximately 7,830 trillion British Thermal Unit (BTU) of energy was consumed; (3);
- Approximately 2,115 billion cubic feet of natural gas (3); and
- Approximately 15.8 billion gallons of transportation fuel (for the year 2017) (4)

The most recent data provided by the United States Energy Information Administration (EIA) is from 2016 and illustrates energy use in California by demand sector as follows:

- Approximately 39.8 percent transportation;
- Approximately 23.7 percent industrial;
- Approximately 17.7 percent residential; and
- Approximately 18.9 percent commercial (5)

In 2017, total system electric generation for California was 292,039 gigawatt-hours (GWh). California's massive electricity in-state generation system generated approximately 206,336 GWh which accounted for approximately 71% of the electricity it uses; the rest was imported from the Pacific Northwest (14%) and the U.S. Southwest (16%) (6). Natural gas is the main source for electricity generation at 50% of the total in-state electric generation system power as shown in Table 2-1.

TABLE 2-1: TOTAL ELECTRICITY SYSTEM POWER (CALIFORNIA 2017)

| Fuel Type | California In-State Generation (GWh) | Percent of California In-State Generation | Northwest Imports (GWh) | Southwest Imports (GWh) | California Power Mix (GWh) | Percent California Power Mix |
|------------------------------|--------------------------------------|---|-------------------------|-------------------------|----------------------------|------------------------------|
| Coal | 302 | 0.15% | 409 | 11,364 | 12,075 | 4.13% |
| Large Hydro | 36,920 | 17.89% | 4531 | 1,536 | 42,987 | 14.72% |
| Natural Gas | 89,564 | 43.40% | 46 | 8,705 | 98,315 | 33.67% |
| Nuclear | 17,925 | 8.69% | 0 | 8,594 | 26,519 | 9.08% |
| Oil | 33 | 0.02% | 0 | 0 | 33 | 0.01% |
| Other | 409 | 0.20% | 0 | 0 | 409 | 0.14% |
| Renewables | 61,183 | 29.65% | 12,502 | 10,999 | 84,684 | 29.00% |
| Biomass | 5,827 | 2.82% | 1,015 | 32 | 6,874 | 2.35% |
| Geothermal | 11,745 | 5.69% | 23 | 937 | 12,705 | 4.35% |
| Small Hydro | 6,413 | 3.11% | 1449 | 5 | 7,867 | 2.70% |
| Solar | 24,331 | 11.79% | 0 | 5,465 | 29,796 | 10.20% |

| Unspecified Sources of Power | N/A | N/A | 22,385 | 4,632 | 27,017 | 9.25% |
| Total | 206,336 | 100% | 39,873 | 45,830 | 292,039 | 100% |

Source: https://www.energy.ca.gov/almanac/electricity_data/total_system_power.html

A summary of, and context for energy consumption and energy demands within the State is presented in “U.S. Energy Information Administration, California State Profile and Energy Estimates, Quick Facts” excerpted below:

- California was the fourth-largest producer of crude oil among the 50 states in 2017, after Texas, North Dakota, and Alaska, and, as of January 2018, third in oil refining capacity after Texas and Louisiana.
- California is the largest consumer of jet fuel among the 50 states and accounted for one-fifth of the nation’s jet fuel consumption in 2016.
- California's total energy consumption is second-highest in the nation, but, in 2016, the state's per capita energy consumption ranked 48th, due in part to its mild climate and its energy efficiency programs.
- In 2017, California ranked second in the nation in conventional hydroelectric generation and first as a producer of electricity from solar, geothermal, and biomass resources.
- In 2017, solar PV and solar thermal installations provided about 16% of California’s net electricity generation (7).

As indicated above, California is one of the nation’s leading energy-producing states, and California per capita energy use is among the nation’s most efficient. Given the nature of the proposed Project being industrial uses, the remainder of this discussion will focus on the three

sources of energy that are most relevant to the project—namely, electricity, natural gas, and transportation fuel for vehicle trips associated with industrial uses planned for the Project.

2.2 ELECTRICITY

The Southern California region's electricity reliability has been of concern for the past several years due to the planned retirement of aging facilities that depend upon once-through cooling technologies, as well as the June 2013 retirement of the San Onofre Nuclear Generating Station (San Onofre). While the once-through cooling phase-out has been ongoing since the May 2010 adoption of the State Water Resources Control Board's once-through cooling policy, the retirement of San Onofre complicated the situation. California ISO studies had revealed the extent to which the Southern California Air Basin (SCAB) and the San Diego Air Basin (SDAB) region were vulnerable to low-voltage and post-transient voltage instability concerns. A preliminary plan to address these issues was detailed in the 2013 Integrative Energy Policy Report (2013 IEPR) after a collaborative process with other energy agencies, utilities, and air districts (8). If the resource development outlined in the preliminary plan continues as detailed, reliability in Southern California would likely be assured; however, tight resource margins have led energy agencies and the ARB to develop a contingency plan. This contingency plan was discussed at a public workshop in Los Angeles on August 20, 2014 and is detailed within this Section (9).

Electricity is provided to the Project by Southern California Edison (SCE). SCE provides electric power to more than 14 million persons in 15 counties and in 180 incorporated cities, within a service area encompassing approximately 50,000 square miles. SCE derives electricity from varied energy resources including: fossil fuels, hydroelectric generators, nuclear power plants, geothermal power plants, solar power generation, and wind farms. SCE also purchases from independent power producers and utilities, including out-of-state suppliers (10).

California's electricity industry is an organization of traditional utilities, private generating companies, and state agencies, each with a variety of roles and responsibilities to ensure that electrical power is provided to consumers. The California Independent Service Operator ("ISO") is a nonprofit public benefit corporation and is the impartial operator of the State's wholesale power grid and is charged with maintaining grid reliability, and to direct uninterrupted electrical energy supplies to California's homes and communities. While utilities [such as SCE] still own transmission assets, the ISO routes electrical power along these assets, maximizing the use of the transmission system and its power generation resources. The ISO matches buyers and sellers of electricity to ensure that sufficient power is available to meet demand. To these ends, every five minutes the ISO forecasts electrical demands, accounts for operating reserves, and assigns the lowest cost power plant unit to meet demands while ensuring adequate system transmission capacities and capabilities (11).

Part of the ISO's charge is to plan and coordinate grid enhancements to ensure that electrical power is provided to California consumers. To this end, transmission owners (investor-owned utilities such as SCE) file annual transmission expansion/modification plans to accommodate the State's growing electrical needs. The ISO reviews and either approves or denies the proposed additions. In addition, and perhaps most importantly, the ISO works with other areas in the western United States electrical grid to ensure that adequate power supplies are available to the

State. In this manner, continuing reliable and affordable electrical power is assured to existing and new consumers throughout the State.

Table 2-2 identifies SCE's specific proportional shares of electricity sources in 2017. As indicated in Table 2-2, the 2017 SCE Power Mix has renewable energy at 32% of the overall energy resources. Geothermal resources are at 8%, wind power is at 10%, large hydroelectric sources are at 8%, solar energy is at 13%, and coal is at 0%. Biomass and waste sources have decreased to 0% from 1% in 2016. Natural gas is at 20% having decreased from 19% in 2016 (12).

TABLE 2-2: SCE 2017 POWER CONTENT MIX

| Energy Resources | 2017 SCE Power Mix |
|-------------------------------|--------------------|
| <i>Eligible Renewable</i> | 32% |
| Biomass & waste | 0% |
| Geothermal | 8% |
| Small Hydroelectric | 1% |
| Solar | 13% |
| Wind | 10% |
| <i>Coal</i> | 0% |
| <i>Large Hydroelectric</i> | 8% |
| <i>Natural Gas</i> | 20% |
| <i>Nuclear</i> | 6% |
| <i>Other</i> | 0% |
| Unspecified Sources of power* | 34% |
| Total | 100% |

* "Unspecified sources of power" means electricity from transactions that are not traceable to specific generation sources

2.3 NATURAL GAS

The usage associated with natural gas use were calculated using the CalEEMod model. The following summary of natural gas resources and service providers, delivery systems, and associated regulation is excerpted from information provided by the California Public Utilities Commission (CPUC).

"The California Public Utilities Commission (PUC) regulates natural gas utility service for approximately 10.8 million customers that receive natural gas from Pacific Gas and Electric (PG&E), Southern California Gas (SoCalGas), San Diego Gas & Electric (SDG&E), Southwest Gas, and several smaller natural gas utilities. The CPUC also regulates independent storage operators: Lodi Gas Storage, Wild Goose Storage, Central Valley Storage and Gill Ranch Storage.

The vast majority of California's natural gas customers are residential and small commercial customers, referred to as "core" customers, who accounted for approximately 32% of the natural gas delivered by California utilities in 2012. Large

consumers, like electric generators and industrial customers, referred to as “noncore” customers, accounted for approximately 68% of the natural gas delivered by California utilities in 2012.

The PUC regulates the California utilities’ natural gas rates and natural gas services, including in-state transportation over the utilities’ transmission and distribution pipeline systems, storage, procurement, metering and billing. Most of the natural gas used in California comes from out-of-state natural gas basins. In 2012, California customers received 35% of their natural gas supply from basins located in the Southwest, 16% from Canada, 40% from the Rocky Mountains, and 9% from basins located within California. California gas utilities may soon also begin receiving biogas into their pipeline systems.

Natural gas from out-of-state production basins is delivered into California via the interstate natural gas pipeline system. The major interstate pipelines that deliver out-of-state natural gas to California consumers are the Gas Transmission Northwest Pipeline, Kern River Pipeline, Transwestern Pipeline, El Paso Pipeline, Ruby Pipeline, Questar Southern Trails and Mojave Pipeline. Another pipeline, the North Baja – Baja Norte Pipeline, takes gas off the El Paso Pipeline at the California/Arizona border, and delivers that gas through California into Mexico. While the Federal Energy Regulatory Commission (FERC) regulates the transportation of natural gas on the interstate pipelines, the PUC often participates in FERC regulatory proceedings to represent the interests of California natural gas consumers.

Most of the natural gas transported via the interstate pipelines, as well as some of the California-produced natural gas, is delivered into the PG&E and SoCalGas intrastate natural gas transmission pipeline systems (commonly referred to as California’s “backbone” natural gas pipeline system). Natural gas on the utilities’ backbone pipeline systems is then delivered into the local transmission and distribution pipeline systems, or to natural gas storage fields. Some large noncore customers take natural gas directly off the high-pressure backbone pipeline systems, while core customers and other noncore customers take natural gas off the utilities’ distribution pipeline systems. The PUC has regulatory jurisdiction over 150,000 miles of utility-owned natural gas pipelines, which transported 82% of the total amount of natural gas delivered to California’s gas consumers in 2012.

SDG&E and Southwest Gas’ southern division are wholesale customers of SoCalGas, and currently receive all of their natural gas from the SoCalGas system (Southwest Gas also provides natural gas distribution service in the Lake Tahoe area). Some other municipal wholesale customers are the cities of Palo Alto, Long Beach, and Vernon, which are not regulated by the CPUC.

Some of the natural gas delivered to California customers may be delivered directly to them without being transported over the regulated utility systems. For example, the Kern River/Mojave pipeline system can deliver natural gas directly to some large customers, “bypassing” the utilities’ systems. Much of California-produced natural gas is also delivered directly to large consumers.

PG&E and SoCalGas own and operate several natural gas storage fields that are located in northern and southern California. These storage fields, and four independently owned storage utilities – Lodi Gas Storage, Wild Goose Storage, Central Valley Storage, and Gill Ranch Storage – help meet peak seasonal natural gas demand and allow California natural gas customers to secure natural gas supplies more efficiently. (A portion of the Gill Ranch facility is owned by PG&E).

California's regulated utilities do not own any natural gas production facilities. All of the natural gas sold by these utilities must be purchased from suppliers and/or marketers. The price of natural gas sold by suppliers and marketers was deregulated by the FERC in the mid-1980's and is determined by "market forces." However, the PUC decides whether California's utilities have taken reasonable steps in order to minimize the cost of natural gas purchased on behalf of their core customers." (13)

As indicated in the preceding discussions, natural gas is available from a variety of in-state and out-of-state sources and is provided throughout the state in response to market supply and demand. Complementing available natural gas resources, biogas may soon be available via existing delivery systems, thereby increasing the availability and reliability of resources in total. The PUC oversees utility purchases and transmission of natural gas to ensure reliable and affordable natural gas deliveries to existing and new consumers throughout the State.

2.4 TRANSPORTATION ENERGY RESOURCES

The Project would generate additional vehicle trips with resulting consumption of energy resources, predominantly gasoline and diesel fuel. In March 2018, the Department of Motor Vehicles (DMV) identified 35 million registered vehicles in California (14), and those vehicles (as noted previously) consume an estimated 19 billion gallons of fuel each year¹. Gasoline (and other vehicle fuels) are commercially-provided commodities and would be available to the Project patrons and employees via commercial outlets.

California's on-road transportation system includes 170,000 miles of highways and major roadways, more than 27 million passenger vehicles and light trucks, and almost 8 million medium- and heavy-duty vehicles (14). While gasoline consumption has been declining since 2008 it is still by far the dominant fuel. Petroleum comprises about 92 percent of all transportation energy use, excluding fuel consumed for aviation and most marine vessels (15). Nearly 19 billion gallons of on-highway fuel are burned each year, including 15.1 billion gallons of gasoline (including ethanol) and 3.9 billion gallons of diesel fuel (including biodiesel and renewable diesel). In 2016, Californians also used 194 million therms of natural gas as a transportation fuel (16), or the equivalent of 155 million gallons of gasoline.

¹ Fuel consumptions estimated utilizing information from EMFAC2017.

3 REGULATORY BACKGROUND

Federal and state agencies regulate energy use and consumption through various means and programs. On the federal level, the United States Department of Transportation, the United States Department of Energy, and the United States Environmental Protection Agency are three federal agencies with substantial influence over energy policies and programs. On the state level, the PUC and the California Energy Commissions (CEC) are two agencies with authority over different aspects of energy. Relevant federal and state energy-related laws and plans are summarized below. Project consistency with applicable federal and state regulations is also presented in *italicized* text.

3.1 FEDERAL REGULATIONS

Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA)

The Intermodal Surface Transportation Efficiency Act of 1991 (ISTEA) promoted the development of inter-modal transportation systems to maximize mobility as well as address national and local interests in air quality and energy. ISTEА contained factors that Metropolitan Planning Organizations (MPOs) were to address in developing transportation plans and programs, including some energy-related factors. To meet the new ISTEА requirements, MPOs adopted explicit policies defining the social, economic, energy, and environmental values guiding transportation decisions. *Transportation and access to the Project site is provided primarily by the local and regional roadway systems. The Project would not interfere with, nor otherwise obstruct intermodal transportation plans or projects that may be realized pursuant to the ISTEА because SCAG is not planning for intermodal facilities on or through the Project site.*

The Transportation Equity Act for the 21st Century (TEA-21)

The Transportation Equity Act for the 21st Century (TEA-21) was signed into law in 1998 and builds upon the initiatives established in the ISTEА legislation, discussed above. TEA-21 authorizes highway, highway safety, transit, and other efficient surface transportation programs. TEA-21 continues the program structure established for highways and transit under ISTEА, such as flexibility in the use of funds, emphasis on measures to improve the environment, and focus on a strong planning process as the foundation of good transportation decisions. TEA-21 also provides for investment in research and its application to maximize the performance of the transportation system through, for example, deployment of Intelligent Transportation Systems, to help improve operations and management of transportation systems and vehicle safety. *The Project site is located along major transportation corridors with proximate access to the Interstate freeway system. The site selected for the Project facilitates access, acts to reduce vehicle miles traveled, takes advantage of existing infrastructure systems, and promotes land use compatibilities through collocation of similar uses. The Project supports the strong planning processes emphasized under TEA-21. The Project is therefore consistent with, and would not otherwise interfere with, nor obstruct implementation of TEA-21.*

3.2 CALIFORNIA REGULATIONS

Integrated Energy Policy Report

Senate Bill 1389 (Bowen, Chapter 568, Statutes of 2002) requires the California Energy Commission to prepare a biennial integrated energy policy report that assesses major energy trends and issues facing the state's electricity, natural gas, and transportation fuel sectors and provides policy recommendations to conserve resources; protect the environment; ensure reliable, secure, and diverse energy supplies; enhance the state's economy; and protect public health and safety (Public Resources Code § 25301a]). The Energy Commission prepares these assessments and associated policy recommendations every two years, with updates in alternate years, as part of the Integrated Energy Policy Report.

The 2018 Integrated Energy Policy Report (2018 IEPR) was adopted February 20, 2019, and continues to work towards improving electricity, natural gas, and transportation fuel energy use in California. The 2018 IEPR focuses on a variety of topics such as including the environmental performance of the electricity generation system, landscape-scale planning, the response to the gas leak at the Aliso Canyon natural gas storage facility, transportation fuel supply reliability issues, updates on Southern California electricity reliability, methane leakage, climate adaptation activities for the energy sector, climate and sea level rise scenarios, and the California Energy Demand Forecast (17). *Electricity would be provided to the Project by Southern California Edison (SCE). SCE's Clean Power and Electrification Pathway (CPEP) white paper builds on existing state programs and policies. As such, the Project is consistent with, and would not otherwise interfere with, nor obstruct implementation the goals presented in the 2018 IEPR.*

State of California Energy Plan

The CEC is responsible for preparing the State Energy Plan, which identifies emerging trends related to energy supply, demand, conservation, public health and safety, and the maintenance of a healthy economy. The Plan calls for the state to assist in the transformation of the transportation system to improve air quality, reduce congestion, and increase the efficient use of fuel supplies with the least environmental and energy costs. To further this policy, the plan identifies a number of strategies, including assistance to public agencies and fleet operators and encouragement of urban designs that reduce vehicle miles traveled and accommodate pedestrian and bicycle access. *The Project site is located along major transportation corridors with proximate access to the Interstate freeway system. The site selected for the Project facilitates access, acts to reduce vehicle miles traveled, takes advantage of existing infrastructure systems, and promotes land use compatibilities through the introduction of commercial and industrial uses on a commercial and industrial-designated site. The Project therefore supports urban design and planning processes identified under the State of California Energy Plan, is consistent with, and would not otherwise interfere with, nor obstruct implementation of the State of California Energy Plan.*

California Code Title 24, Part 6, Energy Efficiency Standards

California Code of Regulations Title 24 Part 6: California's Energy Efficiency Standards for Residential and Nonresidential Buildings, was first adopted in 1978 in response to a legislative mandate to reduce California's energy consumption. The standards are updated periodically to allow consideration and possible incorporation of new energy efficient technologies and methods. Energy efficient buildings require less electricity; therefore, increased energy efficiency reduces fossil fuel consumption and decreases GHG emissions. The 2019 version of Title 24 was adopted by the California Energy Commission (CEC) and will become effective on January 1, 2020. The 2019 Title 24 standards go into effect on January 1, 2020 and are applicable to building permit applications submitted on or after that date. The 2019 Title 24 standards require solar photovoltaic systems for new homes, establish requirements for newly constructed healthcare facilities, encourage demand responsive technologies for residential buildings, update indoor and outdoor lighting for nonresidential buildings. The CEC anticipates that single-family homes built with the 2019 standards will use approximately 7 percent less energy compared to the residential homes built under the 2016 standards. Additionally, after implementation of solar photovoltaic systems, homes built under the 2019 standards will about 53 percent less energy than homes built under the 2016 standards. Nonresidential buildings will use approximately 30 percent less energy due to lighting upgrades (18). *As a conservative measure, the analysis herein assumes compliance with the 2016 Title 24 Standards and no additional reduction for compliance with the 2019 standards have been taken.*

4 PROJECT ENERGY DEMANDS AND ENERGY EFFICIENCY MEASURES

4.1 EVALUATION CRITERIA

In compliance with Appendix G of the *State CEQA Guidelines* (1), this report analyzes the project's anticipated energy use to determine if the Project would:

- Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation; or
- Conflict with or obstruct a state or local plan for renewable energy or energy efficiency

In addition, Appendix F of the *State CEQA Guidelines* (19), states that the means of achieving the goal of energy conservation includes the following:

- Decreasing overall per capita energy consumption;
- Decreasing reliance on fossil fuels such as coal, natural gas and oil; and
- Increasing reliance on renewable energy sources.

4.2 METHODOLOGY

Information from the CalEEMod 2016.3.2 outputs for the *Palomino Business Park Air Quality Impact Analysis* (AQIA) (Urban Crossroads, Inc., 2019) (20) was utilized in this analysis, detailing Project related construction equipment, transportation energy demands, and facility energy demands. These outputs can be referenced in Appendices 3.1 through 3.4.

4.3 CONSTRUCTION ENERGY DEMANDS

4.3.1 CONSTRUCTION EQUIPMENT ELECTRICITY USAGE ESTIMATES

The focus within this section is the energy implications of the construction process, specifically the power cost from on-site electricity consumption during construction of the proposed Project. Based on the 2017 National Construction Estimator, Richard Pray (2017) (21), the typical power cost per 1,000 square feet of building construction per month is estimated to be \$2.32. For the Palomino Business Park development, the Project plans to develop 2,050,000 square feet of building space over the course of 27 months. Based on Table 4-1, the total power cost of the on-site electricity usage during the construction of the proposed Project is estimated to be approximately \$128,412.00. Additionally, as of June 1, 2018, SCE's general service rate schedule (GS-1) for an industrial land uses are \$0.07 per kWh of electricity (22). As shown on Table 4-2, the total electricity usage from on-site Project construction related activities is estimated to be approximately 626,547 kWh.

TABLE 4-1: PROJECT CONSTRUCTION POWER COST

| Land Use | Power Cost (per 1,000 SF of building per month of construction) | Total Building Size (1,000 SF) | Construction Duration (months) | Project Construction Power Cost |
|--|--|--------------------------------------|--------------------------------------|---------------------------------------|
| High-Cube Cold Storage Warehouse | \$2.32 | 602.130 | 27 | \$37,717.42 |
| Industrial Park | \$2.32 | 1,426.460 | 27 | \$89,353.45 |
| Shopping Center | \$2.32 | 6.520 | 27 | \$408.41 |
| Fast-Food without Drive- Thru | \$2.32 | 6.520 | 27 | \$408.41 |
| Gas Station with Market | \$2.32 | 4.095 | 27 | \$256.51 |
| Fast-Food with Drive-Thru | \$2.32 | 4.275 | 27 | \$267.79 |
| TOTAL PROJECT CONSTRUCTION POWER COST | | | | \$128,412.00 |

TABLE 4-2: PROJECT CONSTRUCTION ELECTRICITY USAGE

| Land Use | Cost per kWh | Project Construction Electricity Usage (kWh) |
|---|--------------|---|
| High-Cube Cold Storage Warehouse | \$0.07 | 538,820 |
| Industrial Park | \$1.07 | 83,508 |
| Shopping Center | \$2.07 | 197 |
| Fast-Food without Drive-Thru | \$3.07 | 133 |
| Gas Station with Market | \$4.07 | 63 |
| Fast-Food with Drive-Thru | \$0.07 | 3,826 |
| TOTAL PROJECT CONSTRUCTION ELECTRICITY USAGE (kWh) | | 626,547 |

¹ Assumes the Project will be under the GS-1 General Industrial service rate under SCE

4.3.2 CONSTRUCTION EQUIPMENT FUEL ESTIMATES

Fuel consumed by construction equipment would be the primary energy resource expended over the course of Project construction. Project construction activity timeline estimates, construction equipment schedules, equipment power ratings, load factors, and associated fuel consumption estimates are presented in Table 4-3.

TABLE 4-3: CONSTRUCTION EQUIPMENT FUEL CONSUMPTION ESTIMATES

| Activity/Duration | Equipment | HP Rating | Quantity | Usage Hours | Load Factor | HP-hrs/day | Total Fuel Consumption (gal. diesel fuel) |
|---|---------------------------|------------------|-----------------|--------------------|--------------------|-------------------|--|
| Demolition (40 days) | Concrete/Industrial Saws | 81 | 1 | 8 | 0.73 | 473 | 1,023 |
| | Crushing/Processing | 85 | 1 | 8 | 0.78 | 530 | 1,147 |
| | Excavators | 158 | 2 | 8 | 0.38 | 961 | 2,077 |
| | Rubber Tired Dozers | 247 | 2 | 8 | 0.40 | 1,581 | 3,418 |
| Site Preparation (80 days) | Crawler Tractors | 212 | 4 | 8 | 0.43 | 2,917 | 12,615 |
| | Rubber Tired Dozers | 247 | 3 | 8 | 0.40 | 2,371 | 10,254 |
| Grading (80 days) | Excavators | 158 | 2 | 8 | 0.38 | 961 | 4,154 |
| | Graders | 187 | 4 | 8 | 0.41 | 2,453 | 10,609 |
| | Rubber Tired Dozers | 247 | 4 | 8 | 0.40 | 3,162 | 13,672 |
| | Scrapers | 367 | 4 | 8 | 0.48 | 5,637 | 24,377 |
| | Tractors/Loaders/Backhoes | 97 | 2 | 8 | 0.37 | 574 | 2,483 |
| | Water Trucks | 402 | 2 | 8 | 0.38 | 2,444 | 10,569 |
| Building Construction (300 days) | Cranes | 231 | 2 | 8 | 0.29 | 1,072 | 17,381 |
| | Forklifts | 89 | 3 | 8 | 0.20 | 427 | 6,928 |
| | Generator Sets | 84 | 2 | 8 | 0.74 | 995 | 16,128 |
| | Tractors/Loaders/Backhoes | 97 | 3 | 8 | 0.37 | 861 | 13,968 |
| | Welders | 46 | 2 | 8 | 0.45 | 331 | 5,371 |
| Paving (40 days) | Pavers | 130 | 2 | 8 | 0.42 | 874 | 1,889 |
| | Paving Equipment | 132 | 2 | 8 | 0.36 | 760 | 1,644 |
| | Rollers | 80 | 2 | 8 | 0.38 | 486 | 1,052 |
| Architectural Coating (200 days) | Air Compressors | 78 | 3 | 8 | 0.48 | 899 | 9,714 |
| CONSTRUCTION FUEL DEMAND (GALLONS DIESEL FUEL) | | | | | | | 170,472 |

Eight-hour daily use of all equipment is assumed. The aggregate fuel consumption rate for all equipment is estimated at 18.5 hp-hr-gal., obtained from California Air Resources Board (CARB) 2018 Emissions Factors Tables and cited fuel consumption rate factors presented in Table D-24 of the Moyer guidelines (23). For the purposes of this analysis, the calculations are based on all construction equipment being diesel-powered which is standard practice consistent with industry standards. Diesel fuel would be supplied by existing commercial fuel providers serving the City and region.

As presented in Table 4-3, Project construction activities would consume an estimated 170,472 gallons of diesel fuel. Project construction would represent a “single-event” diesel fuel demand and would not require on-going or permanent commitment of diesel fuel resources for this purpose.

4.3.3 CONSTRUCTION WORKER FUEL ESTIMATES

It is assumed that all construction worker trips are from light duty autos (LDA) along area roadways. With respect to estimated VMT, the construction worker trips would generate an estimated 10,367,028 VMT (20). Data regarding Project related construction worker trips were based on CalEEMod 2016.3.2 model defaults utilized within the AQIA.

Vehicle fuel efficiencies for LDA were estimated using information generated within the 2014 version of the Emissions FACTor model (EMFAC) developed by the CARB. EMFAC 2017 is a mathematical model that was developed to calculate emission rates, fuel consumption, and VMT from motor vehicles that operate on highways, freeways, and local roads in California and is commonly used by the ARB to project changes in future emissions from on-road mobile sources (24). EMFAC 2017 was run for the LDA vehicle class within the California sub-area for a 2022 calendar year. Data from EMFAC 2017 is shown in Appendix 3.5.

As generated by EMFAC 2017, an aggregated fuel economy of LDAs ranging from model year 1974 to model year 2022 are estimated to have a fuel efficiency of 32.53 miles per gallon (mpg). Table 4-4 provides an estimated annual fuel consumption resulting from the Project generated by LDAs related to construction worker trips. Based on Table 4-4, it is estimated that 318,657 gallons of fuel will be consumed related to construction worker trips during full construction of the proposed Project. Project construction worker trips would represent a “single-event” gasoline fuel demand and would not require on-going or permanent commitment of fuel resources for this purpose.

TABLE 4-4: CONSTRUCTION WORKER FUEL CONSUMPTION ESTIMATES

| Construction Activity | Worker Trips / Day | Trip Length | Vehicle Miles | Average Vehicle Fuel Economy | Estimated Fuel Consumption |
|--|---------------------------|--------------------|----------------------|-------------------------------------|-----------------------------------|
| Demolition (40 days) | 15 | 14.7 | 8,820 | 32.53 | 271 |
| Site Preparation (80 days) | 18 | 14.7 | 21,168 | 32.53 | 651 |
| Grading (80 days) | 45 | 14.7 | 52,920 | 32.53 | 1,627 |
| Building Construction (300 days) | 2056 | 14.7 | 9,066,960 | 32.53 | 278,696 |
| Paving (40 days) | 15 | 14.7 | 8,820 | 32.53 | 271 |
| Architectural Coating (200 days) | 411 | 14.7 | 1,208,340 | 32.53 | 37,141 |
| <i>TOTAL CONSTRUCTION WORKER FUEL CONSUMPTION</i> | | | | | <i>318,657</i> |

4.3.4 CONSTRUCTION VENDOR/HAULING FUEL ESTIMATES

With respect to estimated VMT, the construction vendor/hauling trips would generate an estimated 1,827,410 VMT along area roadways (20). It is assumed that 50% of all vendor trips are from medium-heavy duty trucks (MHD) and 50% are from heavy-heavy duty trucks (HHD). It is assumed that 100% of all hauling trips are from HHD. These assumptions are consistent with the 2016.3.2 CalEEMod defaults utilized within the AQIA (20). Vehicle fuel efficiencies for MHD and HHD trucks were estimated using information generated within EMFAC 2017. For purposes of this analysis, EMFAC 2017 was run for the MHD and HHD vehicle class within the California sub-area for a 2022 calendar year. Data from EMFAC 2017 is shown in Appendix 3.5.

As generated by EMFAC 2017, an aggregated fuel economy of MHD trucks ranging from model year 1974 to model year 2022 are estimated to have a fuel efficiency of 10.01 mpg. Additionally, HHD trucks are estimated to have a fuel efficiency of 7.10 mpg. Based on Table 4-5, it is estimated that 83,048 gallons of fuel will be consumed related to construction vendor trips (medium duty trucks) during full construction of the proposed Project. Tables 4-6 and 4-7 shows the estimated fuel economy of HHD trucks accessing the Project site. Based on Tables 4-6 and 4-7, fuel consumption from construction vendor and hauling trips (heavy duty trucks) will total approximately 140,335 gallons. The total fuel consumption from construction vendor and hauling trips (medium and heavy-duty trucks) is 223,383 gallons. Project construction vendor trips would represent a “single-event” diesel fuel demand and would not require on-going or permanent commitment of diesel fuel resources for this purpose.

TABLE 4-5: CONSTRUCTION VENDOR FUEL CONSUMPTION ESTIMATES (MHD TRUCKS)

| Construction Activity | Vendor Trips / Day | Trip Length (miles) | Vehicle Miles Traveled | Average Vehicle Fuel Economy (mpg) | Estimated Fuel Consumption (gallons) |
|---|--------------------|---------------------|------------------------|------------------------------------|--------------------------------------|
| Vendor | | | | | |
| Building Construction (300 days) | 401.5 | 6.9 | 831,105 | 10.01 | 83,048 |
| PROJECT VENDOR MEDIUM DUTY TRUCK TOTAL | | | | | 83,048 |

TABLE 4-6: CONSTRUCTION VENDOR FUEL CONSUMPTION ESTIMATES (HHD TRUCKS)

| Construction Activity | Vendor Trips / Day | Trip Length (miles) | Vehicle Miles Traveled | Average Vehicle Fuel Economy (mpg) | Estimated Fuel Consumption (gallons) |
|--|--------------------|---------------------|------------------------|------------------------------------|--------------------------------------|
| Vendor | | | | | |
| Building Construction (300 days) | 401.5 | 6.9 | 831,105 | 7.10 | 117,065 |
| PROJECT VENDOR HEAVY DUTY TRUCK TOTAL | | | | | 117,065 |

|---|--------------------|---------------------|------------------------|------------------------------------|--------------------------------------|
| Hauling | | | | | |
| Demolition (40 days) | 1,365 | 20 | 27,300 | 7.10 | 3,845 |
| Grading (80 days) | 6,895 | 20 | 137,900 | 7.10 | 19,424 |
| PROJECT HAULING HEAVY DUTY TRUCK TOTAL | | | | | 140,335 |

4.3.5 CONSTRUCTION ENERGY EFFICIENCY/CONSERVATION MEASURES

The equipment used for Project construction would conform to CARB regulations and CA emissions standards. There are no unusual Project characteristics or construction processes that would require the use of equipment that would be more energy intensive than is used for comparable activities; or equipment that would not conform to current emissions standards (and related fuel efficiencies). Equipment employed in construction of the Project would therefore not result in inefficient wasteful, or unnecessary consumption of fuel.

The Project would utilize construction contractors which practice compliance with applicable CARB regulation regarding retrofitting, repowering, or replacement of diesel off-road construction equipment. Additionally, CARB has adopted the Airborne Toxic Control Measure to limit heavy-duty diesel motor vehicle idling in order to reduce public exposure to diesel particulate matter and other Toxic Air Contaminants. Compliance with anti-idling and emissions

regulations would result in a more efficient use of construction-related energy and the minimization or elimination of wasteful or unnecessary consumption of energy. Idling restrictions and the use of newer engines and equipment would result in less fuel combustion and energy consumption.

Additionally, certain incidental construction-source energy efficiencies would likely accrue through implementation of California regulations and best available control measures (BACM). More specifically, California Code of Regulations Title 13, Motor Vehicles, section 2449(d)(3) Idling, limits idling times of construction vehicles to no more than five minutes, thereby precluding unnecessary and wasteful consumption of fuel due to unproductive idling of construction equipment. To this end, “grading plans shall reference the requirement that a sign shall be posted on-site stating that construction workers need to shut off engines at or before five minutes of idling.” In this manner, construction equipment operators are informed that engines are to be turned off at or prior to five minutes of idling. Enforcement of idling limitations is realized through periodic site inspections conducted by City building officials, and/or in response to citizen complaints.

Indirectly, construction energy efficiencies and energy conservation would be achieved for the proposed development through energy efficiencies realized from bulk purchase, transport and use of construction materials.

A full analysis related to the energy needed to form construction materials is not included in this analysis due to a lack of detailed Project-specific information on construction materials. At this time, an analysis of the energy needed to create Project-related construction materials would be extremely speculative and thus has not been prepared.

In general, the construction processes promote conservation and efficient use of energy by reducing raw materials demands, with related reduction in energy demands associated with raw materials extraction, transportation, processing and refinement. Use of materials in bulk reduces energy demands associated with preparation and transport of construction materials as well as the transport and disposal of construction waste and solid waste in general, with corollary reduced demands on area landfill capacities and energy consumed by waste transport and landfill operations.

4.4 OPERATIONAL ENERGY DEMANDS

Energy consumption in support of or related to Project operations would include transportation energy demands (energy consumed by employee and patron vehicles accessing the Project site) and facilities energy demands (energy consumed by building operations and site maintenance activities).

4.4.1 INDUSTRIAL TRANSPORTATION ENERGY DEMANDS

Energy that would be consumed by Project-generated industrial traffic is a function of total VMT and estimated vehicle fuel economies of vehicles accessing the Project site.

LIGHT-DUTY AUTOS

With respect to estimated VMT, and based on the trip frequency and trip length methodologies cited in the Project's AQIA, the Project would generate an estimated 16,098,481 annual VMT along area roadways for all LDAs with full build-out of the Project (20). As generated by EMFAC 2017, an aggregated fuel economy of LDAs ranging from model year 1974 to model year 2022 are estimated to have a fuel efficiency of 32.53 mpg. Table 4-8 provides an estimated range of annual fuel consumption resulting from Project generated LDAs. Based on Table 4-8, it is estimated that 494,827 gallons of fuel will be consumed from Project generated LDA trips.

TABLE 4-8: PROJECT-GENERATED LDA VEHICLE TRAFFIC ANNUAL FUEL CONSUMPTION

| Annual Vehicle Miles Traveled | Average Vehicle Fuel Economy (mpg) | Estimated Annual Fuel Consumption (gallons) |
|-------------------------------|------------------------------------|---|
| 16,098,481 | 32.53 | 494,827 |

LIGHT-DUTY TRUCKS (LDT1)

With respect to estimated VMT, and based on the trip frequency and trip length methodologies cited in the Project's AQIA, the Project would generate an estimated 1,095,845 annual VMT along area roadways for all LDT1² vehicles with full build-out of the Project (20). As generated by EMFAC 2017, an aggregated fuel economy of LDT1s ranging from model year 1974 to model year 2022 are estimated to have a fuel efficiency of 27.20 mpg. Table 4-9 provides an estimated range of annual fuel consumption resulting from Project generated LDT1s. Based on Table 4-9, it is estimated that 40,289 gallons of fuel will be consumed from Project generated LDT1 trips.

TABLE 4-9: PROJECT-GENERATED LDT1 VEHICLE TRAFFIC ANNUAL FUEL CONSUMPTION

| Annual Vehicle Miles Traveled | Average Vehicle Fuel Economy (mpg) | Estimated Annual Fuel Consumption (gallons) |
|-------------------------------|------------------------------------|---|
| 1,095,845 | 27.20 | 40,289 |

LIGHT-DUTY TRUCKS (LDT2)

With respect to estimated VMT, and based on the trip frequency and trip length methodologies cited in the Project's AQIA, the Project would generate an estimated 5,505,315 annual VMT along area roadways for all LDT2³ vehicles with full build-out of the Project (20). As generated by EMFAC 2017, an aggregated fuel economy of LDT2s ranging from model year 1974 to model year 2022 are estimated to have a fuel efficiency of 25.68 mpg. Table 4-10 provides an estimated range of annual fuel consumption resulting from Project generated LDT2s. Based on Table 4-10, it is estimated that 214,382 gallons of fuel will be consumed from Project generated LDT2 trips.

² Vehicles under the LDT1 category have a gross vehicle weight rating (GVWR) of less than 6,000 lbs. and equivalent test weight (ETW) of less than or equal to 3,750 lbs.

³ Vehicles under the LDT2 category have a GVWR of less than 6,000 lbs. and ETW between 3,751 lbs. and 5,750 lbs.

TABLE 4-10: PROJECT-GENERATED LDT2 VEHICLE TRAFFIC ANNUAL FUEL CONSUMPTION

| Annual Vehicle Miles Traveled | Average Vehicle Fuel Economy (mpg) | Estimated Annual Fuel Consumption (gallons) |
|-------------------------------|------------------------------------|---|
| 5,505,315 | 25.68 | 214,382 |

MEDIUM-DUTY TRUCKS (MDV)

With respect to estimated VMT, and based on the trip frequency and trip length methodologies cited in the Project's AQIA, the Project would generate an estimated 3,391,900 annual VMT along area roadways for all MDV vehicles with full build-out of the Project (20). As generated by EMFAC 2017, an aggregated fuel economy of MDVs ranging from model year 1974 to model year 2022 are estimated to have a fuel efficiency of 20.59 mpg. Table 4-11 provides an estimated range of annual fuel consumption resulting from Project generated MDVs. Based on Table 4-11, it is estimated that 164,772 gallons of fuel will be consumed from Project generated MDV trips.

TABLE 4-11: PROJECT-GENERATED MDV VEHICLE TRAFFIC ANNUAL FUEL CONSUMPTION

| Annual Vehicle Miles Traveled | Average Vehicle Fuel Economy (mpg) | Estimated Annual Fuel Consumption (gallons) |
|-------------------------------|------------------------------------|---|
| 3,391,900 | 20.59 | 164,772 |

LIGHT-HEAVY DUTY TRUCKS

With respect to estimated VMT, and based on the trip frequency and trip length methodologies cited in the Project's AQIA, the Project would generate an estimated 4,507,049 annual VMT along area roadways for all LHD trucks with full build-out of the Project (20). As generated by EMFAC 2017, an aggregated fuel economy of LHD trucks ranging from model year 1974 to model year 2022 are estimated to have a fuel efficiency of 14.27 mpg. Table 4-12 provides an estimated range of annual fuel consumption resulting from Project generated LHD trucks. Based on Table 4-12, it is estimated that 315,797 gallons of fuel will be consumed from Project generated LHD truck trips.

TABLE 4-12: PROJECT-GENERATED LHD TRUCK TRAFFIC ANNUAL FUEL CONSUMPTION

| Annual Vehicle Miles Traveled | Average Vehicle Fuel Economy (mpg) | Estimated Annual Fuel Consumption (gallons) |
|-------------------------------|------------------------------------|---|
| 4,507,049 | 14.27 | 315,797 |

MEDIUM-HEAVY DUTY TRUCKS

With respect to estimated VMT, and based on the trip frequency and trip length methodologies cited in the Project's AQIA, the Project would generate an estimated 3,068,553 annual VMT along area roadways for all MHD trucks with full build-out of the Project (20). As generated by EMFAC 2017, an aggregated fuel economy of MHD trucks ranging from model year 1974 to model year

2022 are estimated to have a fuel efficiency of 10.01 mpg. Table 4-13 provides an estimated range of annual fuel consumption resulting from Project generated MHD trucks. Based on Table 4-13, it is estimated that 306,626 gallons of fuel will be consumed from Project generated MHD truck trips.

TABLE 4-13: PROJECT-GENERATED MHD TRUCK TRAFFIC ANNUAL FUEL CONSUMPTION

| Annual Vehicle Miles Traveled | Average Vehicle Fuel Economy (mpg) | Estimated Annual Fuel Consumption (gallons) |
|-------------------------------|------------------------------------|---|
| 3,068,553 | 10.01 | 306,626 |

HEAVY-HEAVY DUTY TRUCKS

With respect to estimated VMT, and based on the trip frequency and trip length methodologies cited in the Project's AQIA, the Project would generate an estimated 10,898,738 annual VMT along area roadways for all HHD trucks with full build-out of the Project (20). As generated by EMFAC 2017, an aggregated fuel economy of HHD trucks ranging from model year 1974 to model year 2022 are estimated to have a fuel efficiency of 7.10 mpg. Table 4-14 provides an estimated range of annual fuel consumption resulting from Project generated HHD trucks. Based on Table 4-14, it is estimated that 1,535,143 gallons of fuel will be consumed from Project generated HHD truck trips.

TABLE 4-14: PROJECT-GENERATED HHD TRUCK TRAFFIC ANNUAL FUEL CONSUMPTION

| Annual Vehicle Miles Traveled | Average Vehicle Fuel Economy (mpg) | Estimated Annual Fuel Consumption (gallons) |
|-------------------------------|------------------------------------|---|
| 10,898,738 | 7.10 | 1,535,143 |

4.4.2 COMMERCIAL TRANSPORTATION ENERGY DEMANDS

Energy that would be consumed by Project-generated commercial traffic is a function of total VMT and estimated vehicle fuel economies of vehicles accessing the Project site.

With respect to estimated VMT, and based on the trip frequency and trip length methodologies cited in the Project's AQIA, the Project would generate an estimated 6,865,240 annual VMT along area roadways for all LDAs with full build-out of the Project (20). As generated by EMFAC 2017, an aggregated fuel economy of LDAs ranging from model year 1974 to model year 2022 are estimated to have a fuel efficiency of 32.53 mpg. Table 4-8 provides an estimated range of annual fuel consumption resulting from Project generated LDAs. Based on Table 4-8, it is estimated that 211,020 gallons of fuel will be consumed from Project generated LDA trips.

TABLE 4-15: PROJECT-GENERATED LDA VEHICLE TRAFFIC ANNUAL FUEL CONSUMPTION

| Annual Vehicle Miles Traveled | Average Vehicle Fuel Economy (mpg) | Estimated Annual Fuel Consumption (gallons) |
|-------------------------------|------------------------------------|---|
| 6,865,240 | 32.53 | 211,020 |

4.4.3 PROJECT TRANSPORTATION ENERGY DEMANDS

As summarized on Table 4-16, the Project will result in 51,431,121 annual VMT and an estimated annual fuel consumption of 3,282,857 gallons of fuel.

TABLE 4-16: PROJECT-GENERATED TRAFFIC ANNUAL FUEL CONSUMPTION (ALL VEHICLES)

| Vehicle Type | Annual Miles Traveled | Estimated Annual Fuel Consumption (gallons) |
|-----------------------------|-----------------------|---|
| Industrial Uses | | |
| LDA | 16,098,481 | 494,827 |
| LDT1 | 1,095,845 | 40,289 |
| LDT2 | 5,505,315 | 214,382 |
| MDV | 3,391,900 | 164,772 |
| LHD Trucks | 4,507,049 | 315,797 |
| MHD Trucks | 3,068,553 | 306,626 |
| HHD Trucks | 10,898,738 | 1,535,143 |
| Commercial Uses | | |
| All Vehicle Types | 6,865,240 | 211,020 |
| Total (All Vehicles) | 51,431,121 | 3,282,857 |

4.4.4 FACILITY ENERGY DEMANDS

Project building operations and Project site maintenance activities would result in the consumption of natural gas and electricity. Natural gas would be supplied to the Project by Southern California Gas Company (SoCalGas); electricity would be supplied to the Project by Southern California Edison. Annual natural gas and electricity demands of the Project are summarized in Table 4-17.

Energy use in buildings is divided into energy consumed by the built environment and energy consumed by uses that are independent of the construction of the building such as in plug-in appliances. In California, the California Building Standards Code Title 24 governs energy consumed by the built environment, mechanical systems, and some types of fixed lighting (25). Non-building energy use, or “plug-in” energy use can be further subdivided by specific end-use (refrigeration, cooking, appliances, etc.). The emissions associated with electricity and natural gas use were calculated using CalEEMod defaults. It is our understanding that Buildings 5, 8, 9, 11, 12, 15, and 16 may use cold storage. The total square footage of these buildings account for

approximately 38.54% of the industrial park use. As such, the energy use for the industrial park use was adjusted to account for the possible use of refrigeration.

TABLE 4-17: PROJECT ANNUAL OPERATIONAL ENERGY DEMAND SUMMARY

| Natural Gas Demand | kBTU/year |
|---|----------------------|
| High-Cube Cold Storage Warehouse | 31,166,200.00 |
| Industrial Park | 31,510,500.00 |
| Shopping Center | 14,474.40 |
| Fast-Food without Drive-Thru | 1,782,830.00 |
| Gas Station with Market | 9,090.90 |
| Fast-Food with Drive-Thru | 1,168,960.00 |
| Other Asphalt Surfaces | 0.00 |
| Parking Lot | 0.00 |
| TOTAL PROJECT NATURAL GAS DEMAND | 65,652,055.30 |
| Electricity Demand | kWh/year |
| High-Cube Cold Storage Warehouse | 24,055,100.00 |
| Industrial Park | 30,312,300.00 |
| Shopping Center | 82,347.60 |
| Fast-Food without Drive-Thru | 309,570.00 |
| Gas Station with Market | 51,719.80 |
| Fast-Food with Drive-Thru | 202,977.00 |
| Other Asphalt Surfaces | 0.00 |
| Parking Lot | 291,620.00 |
| TOTAL PROJECT ELECTRICITY DEMAND | 55,305,634.40 |

4.4.5 OPERATIONAL ENERGY EFFICIENCY/CONSERVATION MEASURES

Energy efficiency/energy conservation attributes of the Project would be complemented by increasingly stringent state and federal regulatory actions addressing vehicle fuel economies and vehicle emissions standards; and enhanced building/utilities energy efficiencies mandated under California building codes (e.g., Title24, California Green Building Standards Code).

It should also be noted that the Project would not result in a substantial increase in demand or transmission service, resulting in the need for new or expanded sources of energy supply or new or expanded energy delivery systems or infrastructure because it would be served by the existing electric utility lines in the Project vicinity.

Enhanced Vehicle Fuel Efficiencies

Project annual fuel consumption estimates presented previously in Tables 4-16 and represent likely potential maximums that would occur for the Project. Under subsequent future conditions, average fuel economies of vehicles accessing the Project site can be expected to improve as older, less fuel-efficient vehicles are removed from circulation, and in response to fuel economy and emissions standards imposed on newer vehicles entering the circulation system.

Project site can be expected to improve as older, less fuel-efficient vehicles are removed from circulation, and in response to fuel economy and emissions standards imposed on newer vehicles entering the circulation system.

4.5 SUMMARY

4.5.1 CONSTRUCTION ENERGY DEMANDS

The estimated power cost of on-site electricity usage during the construction of the proposed Project is assumed to be around \$128,412.00. Additionally, based on the assumed power cost, it is estimated that the total electricity usage during construction, after full Project build-out, is calculated to be around 626,547 kWh.

Construction equipment used by the Project would result in single event consumption of approximately 170,472 gallons of diesel fuel. Construction equipment use of fuel would not be atypical for the type of construction proposed because there are no aspects of the Project's proposed construction process that are unusual or energy-intensive, and Project construction equipment would conform to the applicable CARB emissions standards, acting to promote equipment fuel efficiencies.

CCR Title 13, Title 13, Motor Vehicles, section 2449(d)(3) Idling, limits idling times of construction vehicles to no more than 5 minutes, thereby precluding unnecessary and wasteful consumption of fuel due to unproductive idling of construction equipment. Best available control measures inform construction equipment operators of this requirement. Enforcement of idling limitations is realized through periodic site inspections conducted by City building officials, and/or in response to citizen complaints.

Construction worker trips for full construction of the proposed Project would result in the estimated fuel consumption of 318,657 gallons of fuel. Additionally, fuel consumption from construction vendor trips (medium and heavy-duty trucks) will total approximately 223,383 gallons. Diesel fuel would be supplied by City and regional commercial vendors. Indirectly, construction energy efficiencies and energy conservation would be achieved through the use of bulk purchases, transport and use of construction materials. The 2018 IEPR released by the California Energy Commission has shown that fuel efficiencies are getting better within on and off-road vehicle engines due to more stringent government requirements (17). As supported by the preceding discussions, Project construction energy consumption would not be considered inefficient, wasteful, or otherwise unnecessary.

4.5.2 OPERATIONAL ENERGY DEMANDS

TRANSPORTATION ENERGY DEMANDS

Annual vehicular trips and related VMT generated by the industrial operations of the Project would result in an estimated 494,827 gallons of fuel consumption per year for LDAs, 40,289 gallons of fuel of LDT1s, 214,382 gallons of fuel for LDT2s, and 164,772 gallons for fuel for MDVs. Annual vehicular trips and related VMT generated by the commercial operations of the Project would result in an estimated 211,020 gallons of fuel consumption per year for LDAs. Additionally, the industrial operations of the Project would result in an estimated 315,797 gallons of fuel consumption per year for LHD trucks, an estimated 306,626 gallons of fuel consumption per year for MHD, and 1,535,143 gallons of fuel consumption per year for HHD trucks for the year 2022. The total estimated annual fuel consumption from Project generated VMT would result in a fuel demand 3,282,857 gallons of fuel.

Fuel would be provided by current and future commercial vendors. Trip generation and VMT generated by the Project are consistent with other industrial uses of similar scale and configuration, as reflected respectively in the Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Ed., 2017); and CalEEMod. That is, the Project does not propose uses or operations that would inherently result in excessive and wasteful vehicle trips and VMT, nor associated excess and wasteful vehicle energy consumption.

Enhanced fuel economies realized pursuant to federal and state regulatory actions, and related transition of LDAs, LDT1s, LDT2s, MDVs, and LHDs to alternative energy sources (e.g., electricity, natural gas, biofuels, hydrogen cells) would likely decrease future gasoline fuel demands per VMT. Location of the Project proximate to regional and local roadway systems tends to reduce VMT within the region, acting to reduce regional vehicle energy demands. The Project would implement sidewalks, facilitating and encouraging pedestrian access. Facilitating pedestrian and bicycle access would reduce VMT and associated energy consumption. In compliance with the California Green Building Standards Code, the Project would promote the use of bicycles as an alternative mean of transportation by providing short-term and/or long-term bicycle parking accommodations. As supported by the preceding discussions, Project transportation energy consumption would not be considered inefficient, wasteful, or otherwise unnecessary.

FACILITY ENERGY DEMANDS

Project facility operational energy demands are estimated at: 65,652,055.30 kBtu/year of natural gas; and 55,3058,634.40 kWh/year of electricity. Natural gas would be supplied to the Project by SoCalGas; electricity would be supplied by SCE. The Project proposes conventional warehouse uses reflecting contemporary energy efficient/energy conserving designs and operational programs. Uses proposed by the Project are not inherently energy intensive, and the Project energy demands in total would be comparable to, or less than, other warehouse projects of similar scale and configuration.

Additionally, the Project is will implement the project design features (as summarized in the Executive Summary). Implementation of these project design features combined with the

required Title 24 standards will ensure that the Project energy demands would not be considered inefficient, wasteful, or otherwise unnecessary.

This page intentionally left blank

5 CONCLUSION

Impact Energy-1: Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation.

As supported by the preceding analyses, Project operations would not result in the inefficient, wasteful or unnecessary consumption of energy. Further, the energy demands of the Project can be accommodated within the context of available resources and energy delivery systems. The Project would therefore not cause or result in the need for additional energy producing or transmission facilities. The Project would not engage in wasteful or inefficient uses of energy and aims to achieve energy conservations goals within the State of California.

Impact Energy-2: Conflict with or obstruct a state or local plan for renewable energy or energy efficiency.

For new development such as that proposed by Palomino Business Park, compliance with California Building Standards Code Title 24 energy efficiency requirements (CALGreen), combined with the mitigation measures that are recommended by AQIA, are considered demonstrable evidence of efficient use of energy. As discussed below, the Project would provide for, and promote, energy efficiencies beyond those required under other applicable federal and State of California standards and regulations, and in so doing would meet or exceed all California Building Standards Code Title 24 standards. Moreover, energy consumed by the Project's operation is calculated to be comparable to, or less than, energy consumed by other industrial, warehouse, business park, and commercial uses of similar scale and intensity that are constructed and operating in California. On this basis, the Project would not result in the inefficient, wasteful, or unnecessary consumption of energy. Further, the Project would not cause or result in the need for additional energy producing facilities or energy delivery systems.

CALEEMOD ANNUAL INDUSTRIAL OPERATIONS (PASSENGER CAR) EMISSIONS MODEL OUTPUTS

Palomino Business Park (Operations - Passenger Cars) - Riverside-South Coast County, Annual

Palomino Business Park (Operations - Passenger Cars)
Riverside-South Coast County, Annual

1.0 Project Characteristics**1.1 Land Usage**

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|--------------------------------|----------|----------|-------------|--------------------|------------|
| Industrial Park | 1,426.46 | 1000sqft | 32.75 | 1,426,460.00 | 0 |
| Refrigerated Warehouse-No Rail | 602.13 | 1000sqft | 13.82 | 602,130.00 | 0 |

1.2 Other Project Characteristics

| | | | | | |
|----------------------------|----------------------------|----------------------------|-------|----------------------------|-------|
| Urbanization | Urban | Wind Speed (m/s) | 2.4 | Precipitation Freq (Days) | 28 |
| Climate Zone | 10 | | | Operational Year | 2022 |
| Utility Company | Southern California Edison | | | | |
| CO2 Intensity (lb/MWhr) | 702.44 | CH4 Intensity (lb/MWhr) | 0.029 | N2O Intensity (lb/MWhr) | 0.006 |

1.3 User Entered Comments & Non-Default Data

Palomino Business Park (Operations - Passenger Cars) - Riverside-South Coast County, Annual

Project Characteristics -

Land Use - Total area for Industrial uses is 46.57 acres.

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Rates based on ITE 10th Edition (2017)

Energy Use - Intensity Factors for Industrial Park use weighted and adjusted to account for Refrigerated Use.

Water And Wastewater - Information from the WSA for CapRock Acquisitions LLC by Charles Marr Consulting

Operational Off-Road Equipment - Based on the latest available information from SCAQMD.

Fleet Mix - Fleet Mix based on normalization of CalEEMod defaults

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

APPENDIX 3.3:

CALEEMOD ANNUAL INDUSTRIAL OPERATIONS (TRUCKS) EMISSIONS MODEL OUTPUTS

Palomino Business Park (Operations - Trucks - Mitigated) - Riverside-South Coast County, Annual

Palomino Business Park (Operations - Trucks - Mitigated)
Riverside-South Coast County, Annual

1.0 Project Characteristics**1.1 Land Usage**

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|--------------------------------|----------|----------|-------------|--------------------|------------|
| Industrial Park | 1,426.46 | 1000sqft | 32.75 | 1,426,460.00 | 0 |
| Refrigerated Warehouse-No Rail | 602.13 | 1000sqft | 13.82 | 602,130.00 | 0 |

1.2 Other Project Characteristics

| | | | | | |
|----------------------------|----------------------------|----------------------------|-------|----------------------------|-------|
| Urbanization | Urban | Wind Speed (m/s) | 2.4 | Precipitation Freq (Days) | 28 |
| Climate Zone | 10 | | | Operational Year | 2022 |
| Utility Company | Southern California Edison | | | | |
| CO2 Intensity (lb/MWhr) | 702.44 | CH4 Intensity (lb/MWhr) | 0.029 | N2O Intensity (lb/MWhr) | 0.006 |

1.3 User Entered Comments & Non-Default Data

Palomino Business Park (Operations - Trucks - Mitigated) - Riverside-South Coast County, Annual

Project Characteristics -

Land Use - Total area for Industrial uses is 46.57 acres.

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Rates based on ITE 10th Edition (2017)

Energy Use - Intensity Factors for Industrial Park use weighted and adjusted to account for Refrigerated Use.

Water And Wastewater - Information from the WSA for CapRock Acquisitions LLC by Charles Marr Consulting

Operational Off-Road Equipment - Based on the latest available information from SCAQMD.

Fleet Mix - Fleet Mix based on information provided in the Trip Generation

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

APPENDIX 3.4:

CALEEMOD ANNUAL COMMERCIAL OPERATIONS EMISSIONS MODEL OUTPUTS

Palomino Business Park - Other Land Uses (Operations) - Riverside-South Coast County, Annual

Palomino Business Park - Other Land Uses (Operations)
Riverside-South Coast County, Annual

1.0 Project Characteristics

1.1 Land Usage

| Land Uses | Size | Metric | Lot Acreage | Floor Surface Area | Population |
|--------------------------------------|----------|----------|-------------|--------------------|------------|
| Other Asphalt Surfaces | 46.25 | Acre | 46.25 | 2,014,686.40 | 0 |
| Parking Lot | 2,083.00 | Space | 19.13 | 833,200.00 | 0 |
| Fast Food Restaurant w/o Drive Thru | 6.52 | 1000sqft | 0.15 | 6,520.00 | 0 |
| Fast Food Restaurant with Drive Thru | 4.28 | 1000sqft | 0.10 | 4,275.00 | 0 |
| Convenience Market With Gas Pumps | 12.00 | Pump | 0.09 | 4,095.00 | 0 |
| Regional Shopping Center | 6.52 | 1000sqft | 0.15 | 6,520.00 | 0 |

1.2 Other Project Characteristics

| | | | | | |
|----------------------------|----------------------------|----------------------------|-------|----------------------------|-------|
| Urbanization | Urban | Wind Speed (m/s) | 2.4 | Precipitation Freq (Days) | 28 |
| Climate Zone | 10 | | | Operational Year | 2022 |
| Utility Company | Southern California Edison | | | | |
| CO2 Intensity (lb/MWhr) | 702.44 | CH4 Intensity (lb/MWhr) | 0.029 | N2O Intensity (lb/MWhr) | 0.006 |

1.3 User Entered Comments & Non-Default Data

Palomino Business Park - Other Land Uses (Operations) - Riverside-South Coast County, Annual

Project Characteristics -

Land Use - Total area for Other Land Uses, Parking Area, and Other Asphalt Surfaces is 65.87 acres.

Construction Phase - Operations Run Only.

Off-road Equipment - Operations Run Only.

Trips and VMT - Operations Run Only.

Vehicle Trips - Trip Rates based on information provided in the TIA.

Water And Wastewater - Information from the WSA for CapRock Acquisitions LLC by Charles Marr Consulting

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017

Vehicle Emission Factors - EMFAC2017
