## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetland Inventory

Source: Department of Fish & Game

Telephone: 916-445-0411

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

#### California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

## OTHER STATE DATABASE INFORMATION

#### California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

### RADON

#### State Database: CA Radon

Source: Department of Health Services

Telephone: 916-324-2208

Radon Database for California

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

# 1. Applicable Standards and Goals

---

## 1.1 GENERAL

This Health and Safety Plan (HASP) was prepared by PlaceWorks for Bright Star Schools (BSS). This HASP provides an overview of current conditions at the site and describes the safety procedures to be employed and the rationale for their selection. The HASP has been prepared to ensure proper precautions are taken to protect human health and safety while work is being performed at the site. During the development of this HASP, consideration was given to current safety standards as defined by the U.S. Environmental Protection Agency (EPA), the Occupational Health and Safety Administration (OSHA), and the National Institute of Occupational Safety and Health (NIOSH). This HASP was prepared in accordance with guidelines set forth in Title 8 of the California Code of Regulations, Section 5192 (8 CCR 5192). In addition, this HASP also describes the health effects and standards for known contaminants and the procedures designed to account for the potential for exposure to unknown substances.

## 1.2 SCOPE AND APPLICABILITY OF THE HEALTH AND SAFETY PLAN

The purpose of this HASP is to define the requirements and designate protocols to be followed by the onsite personnel during the field activities. Site conditions, identified sources and previous work elements implemented at the site are described in the Workplan. This HASP is applicable to all employees, government employees, contractors, subcontractors, and visitors to the site. This HASP will be used to ensure that adequate site safety practices are used during sample collection activities.

All personnel working at the site must review the HASP and sign an agreement to comply with its requirements and to signify their familiarity with all aspects of the HASP before entering an exclusion zone or a contamination reduction zone. A copy of the HASP Certification is provided in Section 19. All personnel working at the site will be briefed daily by the Site Safety Officer (SSO) and will be required to become familiar with the following sections of this plan:

- Directions to Hospital - Section 17 and Page 3 (map);
- Safety Rules and Personal Hygiene - Appendix A;
- Field Standard Operating Procedures for Use and Decontamination of Personal Protective Equipment (PPE) - Appendix B;
- Heat Stress and Heat Stress Monitoring - Appendix C.

## 1. Applicable Standards and Goals

*This page intentionally left blank.*

## 2. Site Description

---

### 2.1 SITE IDENTIFICATION

The site has been identified by BSS as the proposed Rise Kohyang High School.

### 2.2 SITE LOCATION

The United States Geological Survey (USGS) topographic maps for the site are the Hollywood, Los Angeles, and Santa Monica Series, California Quadrangle. The 1.15-acre site is located in Los Angeles County at approximately 34.073172 north latitude and -118.289616 west longitude. The site is located in Section 19 of Township 01 South, Range 13 West of the San Bernardino Base Line and Meridian.

### 2.3 CURRENT AND HISTORICAL LAND USES

#### 2.3.1 Property Ownership

The site is currently owned by the Good News Central Church.

#### 2.3.2 Business/Manufacturing Activities

The site is currently occupied by the Good News Central Church and a single family residence for the pastor of the church. Currently there are seven structures on the property. The structures consist of two chapels, one kitchen, one residence, two storage sheds, and a structure for the church's International Youth Fellowship. According to Sanborn Maps, the site is first developed in the 1930s and in 1950 the site was occupied by a repair shop, a janitorial supply shop, a restaurant, an unidentified store, and a dwelling. In 1968 the site's repair shop appears to be occupied by a print shop. From 1950 to when the church appears to occupy the site around 1998, the site is used for commercial purposes.

#### 2.3.3 Site Climatological Setting

The site vicinity is an area with typical Mediterranean climate, characterized by warm dry summers and mild winters. The Western Regional Climate Center collected climatological data in Downtown Los Angeles from 1877 to 2016. The mean temperature in the area ranges from a low of 55.8° Fahrenheit (°F) in the winter to a high of 74.0 °F in the summer. The average annual precipitation is 14.77 inches per year.

## 2. Site Description

*This page intentionally left blank.*

## 3. Roles and Responsibilities

---

A number of roles are required for the safe and efficient operation of a field team. These roles include Project Director, Project Manager, PlaceWorks Health and Safety Manager, Site Manager, SSO and field personnel. A team member may take on more than one role, but the roles must be clearly assigned and must cover all positions required. The personnel assigned to the various roles and their phone numbers are listed below:

<u>Assignment</u>	<u>Name</u>	<u>Phone Number</u>
Project Director	Dr. Denise Clendening	(909) 989-4449
Project Manager	Dr. Denise Clendening	(909) 989-4449
Health & Safety Manager	Mike Watson	(909) 989-4449
Site Manager	Mike Watson	(909) 989-4449
Site Safety Officer	Mike Watson	(909) 989-4449
Field Personnel	Mike Watson	(909) 989-4449

The following guidelines outline assignment of responsibilities of the field team members.

### 3.1 PROJECT DIRECTOR

The Project Director is responsible for the overall operation of the project, including safety during field activities. Specific responsibilities include organization of all project work assignments, assigning personnel to specific duties, ensuring that the field team follows health and safety procedures approved by the PlaceWorks Health and Safety Manager, and overall quality assurance/quality control of the project.

### 3.2 PROJECT MANAGER

The Project Manager will be responsible for the day-to-day progress of the project and will hold review and planning meetings as necessary with all technical staff, during which the current progress, problems encountered, and future direction will be discussed.

### 3.3 PLACEWORKS HEALTH AND SAFETY MANAGER

The PlaceWorks Health and Safety Manager is responsible for the design and, with assistance from the Project Manager on personnel issues, implementation of the health and safety program for this project. This includes developing a site HASP, ensuring that all onsite workers have met the necessary health and safety training requirements and are knowledgeable about the work they will perform, assigning a qualified SSO to the field team, verifying compliance with all applicable safety and health requirements, and updating equipment and procedures based on new information gathered during the course of work.

### 3. Roles and Responsibilities

#### 3.4 SITE MANAGER

The Site Manager is responsible for the operation of the field team. Responsibilities include organization of field activities, compliance with the provisions of the site Workplan, field documentation and record keeping, quality control of field activities, and communication with the site's correspondent. The Site Manager, along with the SSO, must also ensure that subcontractors and outside observers comply with the HASP.

#### 3.5 SITE SAFETY OFFICER

The SSO works closely with the Site Manager to enforce the provisions of the HASP during field activities. The SSO is responsible for implementing the procedures stipulated in the HASP:

- Evaluating and amending the HASP daily to remedy deficiencies and post entry briefings;
- Determining the levels of personal protection based on observations or changing field conditions;
- Controlling site entry and exit;
- Briefing the field team on the health and safety decontamination procedures required for various field activities;
- Monitoring the field team for signs of stress or exposure;
- Initiating emergency procedures, if necessary;
- Verifying that field team members have met the health and safety requirements for field activities;
- Being available to document and respond to any concerns or complaints made by personnel onsite;
- Documenting unsafe work practices or conditions;
- Documenting any accidents or incidents that result in illness or injury to personnel; and
- Issuing stop work notices if site conditions become unsafe, with conference with the Project Director and/or the PlaceWorks Health and Safety Manager.

#### 3.6 FIELD TECHNICIANS

The field technicians are responsible for complying with the HASP, notifying the SSO of hazardous or potentially hazardous conditions, and carrying out specialized tasks during field operations. These tasks include inspecting, calibrating, maintaining, and using field equipment; performing site characterization activities; maintaining decontamination stations; preparing and decontaminating sampling equipment; collecting and preserving samples; and packaging and shipping samples according to proper chain-of-custody procedures.

## 3. Environmental Analysis

### 3.7 FIELD TEAM SIZE

The size of the field team is determined by the nature of the field activities, the characteristics of the site, the safety hazards involved, and the prescribed levels of safety protection. The field team must be large enough to ensure onsite activities are conducted safely, but not so large as to sacrifice efficiency. PlaceWorks personnel shall be present during all phases of the field activities.

### 3. Roles and Responsibilities

*This page intentionally left blank.*

## 4. Training and Medical Monitoring Requirements

---

Staff and subcontractors participating in the fieldwork must have completed a 40-hour health and safety training course (8 CCR 5192(e), 29 CFR 1910.120(e)(2)) as appropriate for their particular tasks and have annual refresher training. Before personnel arrive onsite, each employer will be responsible for certifying that its employees meet the OSHA training requirements.

Each employee will be familiar with the requirements of the site safety and health plan, and will participate in site activity and safety briefings. Medical surveillance is conducted as a routine program, which meets the requirements of 8 CCR 5192 (f); the medical surveillance program is detailed in Appendix D. There will not be any special medical tests or examinations required for staff involved in this project.

All personnel will be trained to operate their respective equipment, including respiratory protection if site conditions exist where respirators are needed. Under no circumstance will untrained or unqualified personnel operate equipment.

## 4. Training and Medical Monitoring Requirements

*This page intentionally left blank.*

## 5. Description of Field Work

---

The following subsections describe tasks to be performed during the field activities and the hazards associated with each task. Some of the protective measures to be implemented during completion of those operations are also identified.

### 5.1 SOIL SAMPLING ACTIVITIES

#### 5.1.1 Soil Sampling

Soil samples will be collected within the 1.15-acre proposed school site following protocols described in the following guidance: DTSC's Interim Guidance for Evaluating School Sites with Potential Soil Contamination as a result of Lead from Lead-Based Paint, Organochlorine Pesticides from Termiticides, and Polychlorinated Biphenyls from Electrical Transformers (DTSC 2006) and DTSC's Preliminary Endangerment Assessment Guidance Manual (DTSC 2015).

Soil samples will be collected across the site. The proposed sampling locations are included in Table 1 of the Workplan. A total of 26 primary soil samples plus two duplicates will be collected from 13 locations across the 1.15-acre subject site. The proposed soil sampling locations are shown on Figure 5. We are proposing to collect soil samples at 0.0-0.5' and 2.5' below ground surface (bgs) at the 13 locations.

#### 5.1.2 Sampling Methods and Procedures

Soil sampling will be conducted using a track-mounted or truck-mounted direct push drill rig (Geoprobe™). The Geoprobe™ rig advanced acetate lined sample core barrels sleeves to desired depths using a hydraulic ram or pneumatic hammer system. The inside diameter of the core barrel is 1.5 to 2.25 inches. The sample barrel will be retrieved and the sample interval will be observed, described and preserved.

### 5.2 SOIL GAS SAMPLING ACTIVITIES

#### 5.2.1 Soil Gas Sampling

Soil gas sampling will be conducted to evaluate if there are potential impacts to the proposed school site from the USTs that had been at the site. Soil gas sampling will be conducted following protocols described in DTSC's and Los Angeles Regional Water Quality Control Board's (LARWQCB) Advisory – Active Soil Gas Investigations (DTSC and LARWQCB 2015). Soil gas samples will be collected at 5 and 15 feet bgs from five locations across the site. The soil gas samples will be analyzed for VOCs by EPA Method 8260B. The proposed soil gas sampling locations are shown on Figure 5. Should soil gas sampling results reveal elevated levels of VOCs, DTSC will be contacted to discuss possible additional sampling and step-out options.

## 5. Description of Field Work

### 5.2.2 Sampling Methods and Procedures

Probes will be installed using standard Geoprobe™ rods. After the rod is driven to the desired depth using a direct push installation rig, the rod will be retracted. The implant will be attached to the ¼-inch outer diameter sample line and lowered into the boring. Use of the implant, attached to relatively small diameter Teflon tubing, allows for the soil gas to be sampled with a minimum volume of line purging. A sand pack will be poured into the boring, followed by one foot of dry granular bentonite and hydrated bentonite slurry and the probe will be allowed to equilibrate for a minimum of two hours prior to sampling.

Prior to sampling, a shut-in test will be conducted to check for leaks in the above-ground sampling system. Soil gas samples will be collected in glass, gas-tight syringes equipped with Teflon plungers. A sampling rate of approximately 200 mL/min. will be maintained and based on the purge test that was performed for other investigations on the base, a target of three purge volumes will be employed. Samples will be analyzed within one-half-hour of collection. The mobile laboratory will use a tracer gas as outlined in the Active Soil Gas Investigations Advisory. The soil gas probes will be left in the ground and abandoned following receipt of the laboratory report and following a discussion with the DTSC.

Hazards associated with this task include dermal contact with and accidental ingestion of contaminated soil and inhalation of dusts and vapors (i.e. VOCs), noise and lifting. Some of the protective measures to be implemented during soil sampling include the use of chemical-resistant gloves to reduce the hazards associated with soil sampling. Level D PPE will be used when sampling is initiated, but will be upgraded as necessary. The use of the PID for air monitoring will be used (as necessary) primarily for the detection of VOCs and not organochlorine pesticides or metals, which are not detectable with a PID.

Previous surveys indicate that heavy equipment such as drilling or excavation equipment may produce continuous and impact noise at or above the action level of 85 dBA. All site personnel within 25 feet of operating equipment, or near an operation that creates noise levels high enough to impair conversation, shall wear hearing protective devices (either muffs or plugs). All PlaceWorks personnel are in the PlaceWorks Hearing Conservation Program and have had baseline and, where appropriate, annual audiograms. Personnel will wash their hands with soap and water prior to inserting earplugs to avoid initiating ear infections.

The following guidelines will be followed whenever lifting equipment such as portable generators, coolers filled with samples, any other objects that are of odd size or shape, or that weigh over 40 pounds.

- Get help when lifting heavy loads. Portable generators will only be lifted using a two-person lift.
- When moving heavy objects such as drums or containers, use a dolly or other means of assistance.
- Plan the lift. If lifting a heavy object, plan the route and where to place the object. In addition, plan communication signals to be used (i.e., “1,2,3, lift,” etc.).
- Wear sturdy shoes in good condition that supply traction when performing lifts.

## 5. Description of Field Work

- Keep your back straight and head aligned during the lift and use your legs to lift the load – do not twist or bend from the waist. Keep the load in front of you – do not lift or carry objects from the side.
- Keeping the heavy part of the load close to your body will help maintain your balance.

## 5. Description of Field Work

*This page intentionally left blank.*

## 6. Chemical Hazards

---

The presence of chemical hazards at the site has not been confirmed; however, the primary suspected potential constituents of concern associated with the site are metals and organochlorine pesticides. The list of chemicals of concern for the site will be reassessed, as more data becomes available. Brief toxicological profiles of the major constituents of concern are included in Appendix E. Chemical and physical characteristics of these compounds are presented in Table 1.

Potential exposures to these chemicals during field activities include the following:

- Dermal contact with and accidental ingestion of potentially contaminated rinsate and residue during decontamination and sampling; and
- Splash hazards during decontamination.

To protect workers from eye and skin contact, skin absorption, and accidental ingestion of airborne dust, PPE will be used as outlined in Section 8.0.

### 6.1 HAZARD ASSESSMENT

A literature review was conducted to find ionization potentials (IPs), exposure limits, and concentrations immediately dangerous to life and health (IDLH) for the constituents of concern in environmental media at the site. Exposure limit data are expressed as 8-hour time-weighted averages (TWAs). TWAs promulgated in OSHA regulations are referred to as permissible exposure limits (PELs). The American Conference of Governmental and Industrial Hygienists adopts values for exposure limits that are referred to as threshold limit values.

Exposure limits and the IDLH for the constituents of concern are depicted in Table 1. These data are also used to establish action levels to determine when personnel should upgrade from Level D PPE (i.e., no respiratory protection) to Level C PPE (i.e., full-face air-purifying respirator) and to select the appropriate types of outer garments, gloves, and respirator cartridges. Action levels triggering an upgrade in respiratory protection from Level D to Level C are established by examining exposure limit data and selecting compounds with the lowest PEL.

Site work will be initiated in Level D protection. If unusual odors or symptoms are noted in the field, and engineering controls cannot reduce potential hazards in the breathing zone, the level of protection will be upgraded to Level C. If an upgrade to Level B is required, field activities will stop and the site will be evacuated. If Level B is required, the project will be stopped and the current operating procedures will be assessed by the SSO, the Health and Safety Officer, and the Health and Safety Committee. If it is determined that Level B PPE is required, a subcontractor will be retained to conduct this supervised work.

## 6. Chemical Hazards

The potential for injuries inherent in operating heavy equipment presents additional hazards, especially because the operator may be wearing restrictive clothing. The use of heavy equipment creates the potential for contact with active utility lines. These utility lines will be located before intrusive activities are conducted and avoided.

## 7. Physical Hazards

---

Potential physical hazards associated with this project include, but are not limited to, working around heavy equipment, electrocution, slippery terrain, noise, weather conditions, and heat stress.

### 7.1 HEAVY EQUIPMENT

It is important that personnel be aware of all operations that are occurring at a work location as well as physical hazards, such as excavations, trenches, or open pits. Personnel will be aware of the position and movement of equipment by identified operational areas. Special precautions, with regard to layout of equipment traffic patterns associated with other vehicles and buildings, will be carefully considered before beginning field activities. Traffic barriers and/or caution barrier tape will be used to delineate the layout and assist in directing traffic flow to reduce risk of vehicle injury. Employees will be notified during daily meetings as to the established traffic patterns of heavy equipment. Whenever heavy equipment operations are conducted in a congested site area, a traffic coordinator designated by the SSO will direct movement of heavy equipment and pedestrians. For non-essential persons, pedestrian traffic will be prohibited where heavy excavation equipment is in operation. Operators will be tasked to watch for employees that might stray into the restricted entry area; site personnel will be required to wear orange safety vests in the vicinity of heavy equipment operation.

### 7.2 ELECTROCUTION

Electrical power lines above (overhead) and below ground will be identified at the site before to the start of any activities to prevent electrocution. Minimum safe distance will be established by the SSO in areas of overhead and underground power lines. Subcontracted utility locating services will be used as necessary to locate or confirm the presence of suspected underground utilities at drilling or boring locations.

### 7.3 SLIPPERY TERRAIN, SLIPS, TRIPS, AND FALLS

Slippery and uneven terrain is common and may increase the risk of injuries. Personnel shall wear the appropriate foot protection while onsite. The SSO will monitor site work surfaces for potential trip and fall hazards. Overhead hazards consist of potential contact with falling objects, rigging equipment, or other items in use at the site. Hard hats are required at all times when at the site.

### 7.4 NOISE

Noise levels around the equipment may exceed a comfortable range; therefore earplugs or equivalent hearing protection devices are required when equipment is operating.

## 7. Physical Hazards

### 7.5 HEAT STRESS

The potential for heat stress is high given the warm southern California climate and use of protective garments. Heat stress and heat stress monitoring are discussed in Appendix C.

## 8. Personal Protective Equipment (PPE)

---

It is anticipated that Level D PPE will be used, with Level C PPE available on stand-by. Level D PPE will consist of the following equipment:

- Long pants and long-sleeved or short-sleeved shirts;
- Steel-toed work boots;
- Nitrile gloves;
- Hard hats, required when heavy equipment is being used and an overhead hazard exists;
- Safety glasses; and
- Hearing protection during heavy equipment operation.

Damaged PPE will be replaced immediately. Backup equipment will be kept onsite for replacement as necessary.

At a minimum, the following PPE will be discarded and replaced daily:

- Nitrile gloves; and
- Disposable type ear plugs.

New gloves will be used to collect each sample. Procedures for using PPE are given in Appendix B.

The level of protection provided by PPE selection may be upgraded or downgraded by the SSO, in conference with the PlaceWorks Health and Safety Manager and/or the Project Director, based on changes in site conditions. When a significant change occurs, the hazards will be reassessed. Some indicators of the need for reassessment are as follows:

- A change in weather conditions;
- Encountering contaminants other than those previously identified;
- A change in ambient levels of contaminants; and
- A change in work scope that affects the degree of contact with contaminants.

Level C PPE will consist of the following equipment:

## 8. Personal Protective Equipment (PPE)

- Dual-canister full-face air-purifying respirator (NIOSH approved);
- Organic vapor/P100 combination cartridges;
- Tyvek or Saranex-coated coveralls;
- Steel-toed work boots;
- Double layer nitrile;
- Hard hats, required when heavy equipment is being used; and
- Safety glasses.

Particulate respirator cartridges should be changed out when the wearer has difficulty breathing through the cartridges. Chemical gas or vapor respirator cartridges will be changed out at least daily.

- Proper inspection of PPE includes several levels of inspection depending on specific articles of PPE and its frequency of use. The different levels of inspection are as follows:
- Inspection of equipment received from the factory or distributor;
- Inspection of equipment as it is issued to workers;
- Inspection after use or training;
- Periodic inspection of stored equipment; and
- Periodic inspection when a question arises concerning the appropriateness of the selected equipment or when problems with similar equipment arise.

The primary inspection of PPE in use for activities at the site will occur before use and will be conducted by the user. This ensures that the device or article has been inspected by the user and the user is familiar with its use. The SSO will periodically review field technicians' knowledge and execution of inspection guidelines for the various types of PPE in use at the site.

## 9. Illumination

---

Nighttime work activities are not anticipated; however, if nighttime work becomes necessary, illumination at the site will be supplemented in order to ensure safe working conditions. Supplemental lighting will be provided by mobile generator powered units.

## 9. Illumination

*This page intentionally left blank.*

## 10. Standard Operating Procedures

---

The standards regarding Safety Rules and Personal Hygiene and Use and Decontamination of PPE are detailed in Appendices A and B, respectively.

Standard operating procedures (SOPs) for equipment will be presented in the Workplan.

### 10.1 DAILY SAFETY MEETINGS

The SSO will conduct a daily safety meeting to discuss any changes in safety status, safety violations and administrative actions, work assignments, or modifications of procedures with all onsite field personnel. This safety meeting will be scheduled as the first activity of each day. An alternate person may be designated to conduct the briefing at the discretion of the SSO. All personnel present will sign the Daily Attendance sheet.

### 10.2 DAILY DEBRIEFING MEETINGS

At the end of each workday at the site, the SSO will discuss with the Site Manager or the Project Director, daily progress, technical problems, administrative resolution of disciplinary actions, and monitoring and analytical findings.

In the event that an emergency occurs or other accident that requires immediate attention, and additional safety meeting may be conducted. Non-routine meetings will address any site changes that have safety implications, which must be immediately addressed before work can continue.

### 10.3 ADMINISTRATIVE ACTION

Observed violations of safety procedures can result in immediate removal of the violator from the site. The Project Director will take administrative action on each violation. In the event of a violation, the nature of the violation, the past record of the violator, and any extenuating circumstances will be reviewed. The SSO and Health and Safety Officer will provide a recommendation to the Project Director regarding administrative actions such as retraining and reassignment, change in clearance status, or permanent dismissal from the site.

## 10. Standard Operating Procedures

*This page intentionally left blank.*

# 11. Confined Spaces

---

No confined space entry is anticipated at the site. A confined space protocol will be developed for Agency review and approval should conditions at the site change.

## 11. Confined Spaces

*This page intentionally left blank.*

## 12. Noise Monitoring

---

Noise may be monitored using a sound level meter (General Radio model 1565B) in areas where heavy equipment is being utilized. Hearing protection devices (HPDs) will be available onsite at all times. Use of HPDs will be required whenever the noise level equals or exceeds 85 dBA; in general, they will be used whenever equipment is operated. Field technicians will be informed on the proper use, maintenance and storage of HPDs. Engineering controls will be utilized as necessary to ensure that noise levels generated by work do not impact residences adjacent to the site.

## 12. Noise Monitoring

*This page intentionally left blank.*

## 13. Description of Site Work Zones

---

The various work zones may be established at the site before commencing any field activities.

### **Exclusion Zone**

All workers who enter the contaminated work area will wear the correct level of protection. The number of workers in this zone will be kept at a minimum.

### **Contamination Reduction Zone (CRZ)**

Decontamination areas for field personnel and heavy equipment will be designated in the CRZ adjacent to the exclusion zone.

### **Support Zones**

The administrative and break areas shall be located in the support zone outside the CRZ and the overall work zone. The support zone will be located upwind from the overall work zone as permitted by site meteorological conditions.

The work areas and site shall be cleared and secured at the end of each workday.

## 13. Description of Site Work Zones

*This page intentionally left blank.*

## 14. Decontamination

---

Decontamination of PPE will take place in the decontamination area identified onsite. Before starting field activities, a decontamination station will be set with one bucket or tub containing clean water and soap mixture and another bucket or tub containing clean water. All workers and PPE will be decontaminated to prevent the spread of potentially hazardous substances. All workers will wash their hands, arms, and face after removing PPE and before leaving the site. The volume and concentration of the decontamination fluid will be sufficiently low to allow disposal at the site. The water (and water with detergent) will be poured onto the ground or into a storm drain. Disposable items will be placed in trash bags for disposal along with other wastes removed from the property. Support vehicles are to be left, to the extent practical, outside the exclusion area so that decontamination will not be necessary. Decontamination procedures are outlined in Appendix B.

## 14. Decontamination

*This page intentionally left blank.*

# 15. Emergency Supplies

---

## 15.1 FIRE EXTINGUISHERS

A fire extinguisher will be available onsite during field activities. Field technicians will be informed on the proper use of fire extinguishers.

## 15.2 SPILL CONTROL EQUIPMENT

Accidental spills will be contained with sandbags or commercially available absorbent materials especially designed for spill containment or cleanup.

## 15. Emergency Supplies

*This page intentionally left blank.*

## 16. Emergency Contact Information

---

Emergency response shall be addressed according to the requirements of T8 CCR 5192. If it is determined that the emergency could threaten human health or the environment, the incident will be reported to the proper agencies:

**Police/Fire** 911

**Department of Toxic Substances Control** (714) 484-5300

5796 Corporate Avenue

Cypress, California 90630

Fax: (714) 484-5302

**Department of Health Services** (916) 445-4171

714/744 P Street

Sacramento, California 95814

The closest hospital is: (213) 484-7111

St. Vincent Medical Center

2131 West 3<sup>rd</sup> Street

Los Angeles, California 90057

## 16. Emergency Contact Information

*This page intentionally left blank.*

## 17. Directions to the Hospital

---

Directions (See Figure 1): Start out heading east on West 1<sup>st</sup> Street towards S. Madison Avenue. Turn right onto S. Virgil Avenue and then turn left onto West 3<sup>rd</sup> Street. Then turn left and turn left again and the destination will be on the right.

## 17. Directions to the Hospital

*This page intentionally left blank.*

## 18. Authorized Changes to the Health and Safety Plan

---

Changes to the HASP are to be documented by completing a Modification of Site Health and Safety Plan form. This completed form must be signed by the Site Safety Officer, the Health and Safety Manager, and the Project Director. A copy of each completed form is to be included with each copy of the HASP and made a part of the project files.

## 18. Authorized Changes to the Health and Safety Plan

*This page intentionally left blank.*

# 19. Certification

---

This HASP has been reviewed and approved by the PlaceWorks Health and Safety Manager. The plan satisfies the requirements of the Occupational Safety and Health Act 1910.120 as implemented by the Health and Safety Committee for hazardous waste site activities.

All PlaceWorks site personnel have read the HASP and are familiar with its provisions.

# Appendices

## Appendix

*This page intentionally left blank.*

## **Appendix A**

### **Safety Rules and Personal Hygiene**

1. Remove all facial hair that interferes with a satisfactory fit of respiratory protective equipment.
2. Do not wear contact lenses while wearing full-face respirators.
3. Do not take prescribed drugs unless specifically approved by a physician. Notify the SSO that prescription medication is being taken.
4. In the work zone, do not eat, drink, smoke, chew gum or tobacco, or engage in any other practice that increases the probability of hand-to-mouth transfer or ingestion of material.
5. Wash hands and face thoroughly after leaving the work area and before eating, drinking, or any other activities.
6. Thoroughly wash entire body as soon as possible after removing Level C protective garments.
7. Whenever possible, avoid contact with contaminated or suspected contaminated surfaces.

## Appendix B

### Field Standard Operating Procedures for Use and Decontamination of Personal Protective Equipment

1. Park vehicles outside the site boundaries.
2. During the pre-work safety meeting, the SSO will provide the following information:
  - A. a description of the site and known problem areas
  - B. the level of protection required
  - C. emergency medical information
  - D. the locations of the first aid kit and fire extinguisher
3. Use the nearest lavatory.
4. Lay out and check safety gear.
5. Check and don Level D PPE.
6. For work in Level C PPE, put on safety gear in the following order:
  - A. Coveralls
  - B. Steel-toed work boots
  - C. Connect suit and boots with tape
  - D. Outer booties, if used
  - E. Air purifying respirators (APRs), if required
7. For work in Level C PPE, put on APRs as follows:
  - A. Inspect.
    - (1) Inspect before each use to ensure that they have been cleaned adequately.
    - (2) Check material conditions for signs of pliability, deterioration, or distortion.
    - (3) Examine cartridges and ensure that they are the correct type for the intended use, that the expiration date has not passed, and that they have not been opened or used previously.
    - (4) Check face shields for cracks or fogginess.
  - B. Loosen all harness strap adjustments.
  - C. Place chin in chin cup and draw back evenly on strap adjustments - the two bottom straps first, then the two top straps, and the center top strap last.
  - D. Check that the respirator is centered evenly on the face and that the straps are not uncomfortably tight.

- E. Check for leaks or proper facial seals.
  - (1) To conduct a negative-pressure test, close the inlet part with the palm of the hand so it does not pass air, and gently inhale for about 10 seconds. Any inward rush of air indicates a poor fit. Note that a leaking facepiece may be drawn tightly to the face to form a good seal, giving a false indication of adequate fit.
  - (2) To conduct a positive-pressure test, gently exhale while covering the exhalation valve to ensure that a positive pressure can be built up. Failure to build a positive pressure indicates a poor fit.
  
- 8. Put on the rest of the gear in the following order:
  - A. Raise hood
  - B. Hard hat, if necessary
  - C. Surgical gloves
  - D. Outer gloves
  - E. Connect gloves and suit with tape
  
- 9. Select a buddy to act as a safety backup.
  
- 10. Check your buddy's equipment and have your buddy check yours for rips, tears, or malfunctions. Pay special attention to respirators, making sure that seals are good and that cartridges are securely in place.
  
- 11. If any equipment or gear gets damaged or if your suit tears badly, GO BACK.
  
- 12. If you experience physical discomfort, breathing difficulties, light-headedness, dizziness, or other abnormalities, GO BACK.
  
- 13. When you return, have your buddy check for external accumulation of contamination and remove it. Also check gear for damage.
  
- 14. Decontamination will be performed in steps as follows (as appropriate for the PPE being utilized):

Step 1 - Segregated Equipment Drop: Deposit equipment used onsite (tools, sampling devices and containers, monitoring instruments, clipboards, etc.) in different containers with plastic liners. Each may be contaminated to a different degree. Segregation at the drop reduces the probability of cross-contamination. This equipment may be reused if properly decontaminated.

Equipment:            various sizes of containers  
                             plastic drop cloths

Step 2 - Boot Cover and Outer Glove Wash and Rinse: (Optional - will be used at the Site Safety Officer's discretion.)

Equipment:            spray bottle/container with nozzle  
                             two wash basins or tubs  
                             scrub brush  
                             water  
                             Liqui-nox nonphosphate soap solution (1%)

Step 3 - Tape Removal: Remove tape around boots and gloves, and deposit in container with plastic liner. Remove boot covers, then outer gloves, and place them in the container.

Equipment:            container (30-50 gallons)  
                             plastic liners  
                             folding chairs

Step 4 - Safety Boot Wash and Rinse: (Optional - will be used at discretion of field team members.)

Equipment:            two wash basins or tubs  
                             scrub brush  
                             water  
                             Liqui-nox solution (1%)

Step 5 - Protective Coverall Removal: With the assistance of a helper, remove protective coverall. Deposit in container with plastic liner.

Equipment:            container (30-50 gallons)  
                             folding chairs  
                             plastic liners

Step 6 - Respirator Removal: Remove facepiece. Avoid touching face with gloves. If work is completed for the day, discard cartridges in lined container, and wash and rinse respirator.

Equipment:            container (30-50 gallons)  
                             plastic liners

Step 7 - Inner Glove Removal: Remove inner gloves and deposit in container with plastic liner.

Equipment:            container (20-30 gallons)  
                             plastic liners

15. Respirators will be cleaned daily by hand washing with MSA cleaner-sanitizer solution followed by a thorough rinse and air drying. NEVER ALLOW A RESPIRATOR TO DRY WITH THE STRAPS PLACED FORWARD ACROSS THE FACESHIELD BECAUSE THIS MAY CAUSE CHANGES IN THE FACE-TO-RESPIRATOR SEAL SURFACE. The specific procedures to be employed are as follows:

- A. Remove all cartridges (canisters) and filters plus gaskets and seals not

- permanently affixed to their seats.
  - B. Loosen harness adjustment straps.
  - C. Remove exhalation valve cover.
  - D. Remove inhalation and exhalation valves.
  - E. Remove protective faceshield cover.
  - F. Wash facepiece in MSA cleaner/sanitizer powder mixed with warm water, preferably at a temperature of 120° F. Wash components separately from facepiece. Heavy soil may be removed from the facepiece surface using a medium-soft handbrush.
  - G. Remove all parts from the wash solution, and rinse twice in clean, warm water.
  - H. Air dry all parts in a designated clean area.
  - I. Pat facepieces, valves, and seats to remove any remaining soap residue, water, or other foreign material with a clean, damp, lint-free cloth.
  - J. Reassemble respirator.
  - K. Place respirator in a plastic bag and the respirator box or otherwise store the respirator to prevent exposure to dust, moisture, sunlight, damaging chemicals, extreme temperatures, and impact.
16. Investigation-derived waste material will be handled as follows:
- A. Used PPE and disposable equipment will be double bagged and placed in a municipal refuse dumpster on site. These wastes are not considered hazardous and can be sent to a municipal landfill. Any PPE and disposable equipment that is to be disposed of which can still be reused will be rendered inoperable before disposal in the refuse dumpster.
  - B. Wash and rinse waters from personal and equipment decontamination will be poured onto the ground or into a storm drain.
  - C. Soil cuttings generated during the subsurface sampling will be placed back into the soil borings from which the samples were obtained. Any remaining soil cuttings will be spread around the sampling location.

## Appendix C

### Heat Stress and Heat Stress Monitoring

Heat is one of the most common (and potentially serious) illnesses at hazardous waste sites where PPE is worn; therefore, regular monitoring and other preventive precautions are vital. Shelter from the sun will be provided during rest periods. Below is a list of the signs and symptoms of heat stress. Initial work schedules will be approximately 90 minutes of work followed by 15 minutes of rest. Work intervals will be adjusted to shorter periods based on the assessment of the SSO. Monitoring for heat stress will be conducted by visual observation by the individual team members.

#### Signs and Symptoms of Heat Stress

- **Heat rash** may result from continuous exposure to heat or humid air.
- **Heat cramps** are caused by heavy sweating with inadequate electrolyte replacement. Signs and symptoms include:
  - muscle spasms
  - pain in the hands, feet, and abdomen
- **Heat exhaustion** occurs from increased stress on various body organs, including inadequate blood circulation caused by cardiovascular insufficiency or dehydration. Signs and symptoms include:
  - pale, cool, moist skin
  - heavy sweating
  - dizziness
  - nausea
  - fainting
- **Heat stroke** is the most serious form of heat stress. Temperature regulation fails, and the body temperature rises to critical levels. Immediate action must be taken to cool the body before serious injury and death occur. Competent medical help must be obtained. Signs and symptoms include:
  - red, hot, usually dry skin
  - lack of or reduced perspiration
  - nausea
  - dizziness and confusion
  - strong, rapid pulse
  - coma

First-aid remedies for heat stress and heat stroke includes removing the worker to a cool place, providing cool water or a commercial sport drink, loosen tight clothing, and call for an ambulance if victim vomits or starts to lose consciousness.

## **Appendix D**

### **Medical Monitoring Program**

The workers most likely to be exposed to contaminated materials at the site are sampling and inspection personnel. These personnel are included in this Medical Monitoring Program.

The purposes of the Medical Monitoring Program are to identify any illness or problem that would put an employee at an unusual risk from exposures; to ensure that each employee can use negative-pressure respirators safely and withstand heat or cold stress; and to establish and maintain a medical data base for employees to monitor any abnormalities that may be related to work exposure and that could increase injury risk for the employee or others in the performance of job functions. The Medical Monitoring Program includes:

- A baseline physical examination;
- A medical determination of fitness of duty, including work restrictions after any job-related injury or illness or non job-related absence lasting more than three working days;
- The review of each site-specific Health and Safety Plan and potential exposure list to determine the need for specific biological and medical monitoring; and
- Annual and exit physical examinations with attention given to specific exposures or symptoms.

#### **Baseline Physical Examination**

A Baseline Physical Examination will be performed on each employee engaged in hazardous waste activities. The purposes of this examination are to identify any illness or problem that would put an employee at unusual risk from certain exposures; to certify the safe use of negative-pressure respirators (OSHA Safety and Health Standard 29 CFR 1910.134); and to develop a database for the assessment of exposure-related events detected through periodic medical monitoring. Variable data, such as age, sex, race, smoking, prior employment, and exposure history, that may have a bearing on the occurrence of subsequent events after employment begins will be gathered.

The content of the Baseline Physical Examination will include:

- Medical, occupational, and fertility histories;
- A physical examination, stressing neurological, cardiopulmonary, musculoskeletal, and skin systems;
- An electrocardiogram;
- PA and lateral chest x-rays;
- A pulmonary function test (FEV1, FVC, FEV 25-75);
- An audiogram;

- A multi-chemistry blood panel, including kidney and liver function tests, CBC with
- differential, and urinalysis;
- Tests deemed necessary by symptoms or exposure history;
- A red blood cell cholinesterase; and
- Physical parameters, including blood pressure and visual acuity testing.

### **Annual Physical Examination**

An examination and updated occupational history will be performed on an annual basis during the anniversary month of the baseline physical examination. The Annual Physical Examination serves to identify and prevent illness caused by cumulative exposure to toxic substances.

The Annual Physical Examination will include:

- A personal work history (based on specific project histories);
- A physical examination, stressing neurological, cardiopulmonary, musculoskeletal, and skin systems;
- Pulmonary function test (FEV1, FVC, FEV 25-75);
- A multi-chemistry blood panel, including kidney and liver function test;
- An audiogram;
- Tests deemed necessary by symptoms or exposure history; and
- An optional wellness profile.

### **Return to Work Examination**

Any job-related illness or injury will be followed by a medical examination to determine fitness for duty or possible job restrictions based on the physical findings of the medical examiner. A similar examination will be performed following three missed workdays caused by a non job-related illness or injury requiring medical intervention.

### **Exit Physical Examination**

The content of the Exit Physical Examination will include:

- a personal work history (based on specific project histories);
- medical, exposure, and fertility histories;
- a physical examination, stressing neurological, cardiopulmonary, musculoskeletal, and skin systems;
- a pulmonary function test (FEV1, FVC, FEV 25-75);
- an electrocardiogram;
- PA and lateral chest x-rays;
- an audiogram;
- a multi-chemistry blood panel, including kidney and liver function tests, CBC with differential, and urinalysis;
- tests deemed necessary by symptoms or exposure history;
- a red blood cell cholinesterase; and
- physical parameters, including blood pressure and visual acuity testing.

## Appendix E

### Properties of Materials and Toxicological Profiles

#### Chromium (Cr III and Cr VI)

The permissible exposure limit (PEL) for chrome is  $0.5 \text{ mg/m}^3$ , which is also the recommended exposure limit (REL) established by the National Institute for Occupational Safety and Health (NIOSH). The Immediately Dangerous to Life or Health (IDLH) concentration for this substance is  $25 \text{ mg/m}^3$ .

The appearance and odor of this substance varies depending on the type of chrome compound. Symptoms of exposure to chrome may include irritation of the skin and eyes. If splashed in the eyes, irrigate immediately. For dermal exposure, wash with soap and water immediately. If swallowed, immediately seek medical attention. If victim stops breathing after exposure to vapors, begin artificial respiration.

#### Arsenic

The PEL for arsenic is  $0.010 \text{ mg/m}^3$ . NIOSH has established an REL, based on a 15-minute exposure period, of  $2 \text{ mg/m}^3$ . The IDLH concentration for this substance is  $5 \text{ mg/m}^3$ .

The appearance and odor of arsenic varies depending upon the specific organic arsenic compound. Routes of exposure include inhalation, ingestion, and contact. The skin, respiratory system, kidneys, central nervous system (CNS), liver, GI tract, and reproductive system are all target organs or chronic exposure.

#### Lead

The PEL for lead is  $0.050 \text{ mg/m}^3$ . NIOSH has established an REL of  $0.100 \text{ mg/m}^3$ . The IDLH concentration for this substance is  $100 \text{ mg/m}^3$ .

A heavy, ductile, soft, gray solid, lead is also known as lead metal and plumbum. A person can be exposed to lead contamination by inhalation, ingestion, or contact. The target organs for lead include eyes, GI tract, CNS, blood, and gingival tissue.

Symptoms of lead exposure include weakness, lassitude, insomnia; facial pallor; pal eye, anorexia, weight loss, malnutrition; constipation, abdominal pain, colic; anemia; gingival lead line; tremor; ankle or wrist paralysis, encephalopathy; kidney disease; irritated eyes; and hypotension. If eye contact occurs, the eyes should be washed immediately with large amounts of water. For dermal contact, remove any penetrated clothing and immediately flush the contaminated skin with soap and water. If this chemical is inhaled in large quantities, move to fresh air at once. Perform mouth-to-mouth resuscitation if breathing has stopped. Keep the person warm and resting. For any of the above or if the chemical has been swallowed, seek medical attention promptly.

### **Dichlorodiphenyltrichloroethane (DDT)**

The PEL for DDT is 1 mg/m<sup>3</sup>. NIOSH has established an REL of 0.5 mg/m<sup>3</sup>. The IDLH concentration for this substance is 500 mg/m<sup>3</sup>.

Routes of exposure include inhalation, ingestion, absorption, and contact. Symptoms of exposure to DDT include irritation to eyes and skin, paresthesia of the tongue, lips, and face, tremor, apprehension, dizziness, confusion, malaise, headache, fatigue, convulsions, and vomiting. If eye contact occurs, the eyes should be washed immediately with large amounts of water. For dermal contact, remove any penetrated clothing and immediately flush the contaminated skin with soap and water. If this chemical is inhaled in large quantities, move to fresh air at once. Perform mouth-to-mouth resuscitation if breathing has stopped. Keep the person warm and resting. For any of the above or if the chemical has been swallowed, seek medical attention promptly.

### **Aldrin**

The PEL for aldrin is 0.25 mg/m<sup>3</sup>. NIOSH has established an REL of 0.25 mg/m<sup>3</sup>. The IDLH concentration for this substance is 25 mg/m<sup>3</sup>.

Routes of exposure include inhalation, ingestion, absorption, and contact. Symptoms of exposure to aldrin include headache, dizziness, nausea, vomiting, malaise, and coma. If eye contact occurs, the eyes should be washed immediately with large amounts of water. For dermal contact, remove any penetrated clothing and immediately flush the contaminated skin with soap and water. If this chemical is inhaled in large quantities, move to fresh air at once. Perform mouth-to-mouth resuscitation if breathing has stopped. Keep the person warm and resting. For any of the above or if the chemical has been swallowed, seek medical attention promptly.

### **Toxaphene**

The PEL for toxaphene is 0.5 mg/m<sup>3</sup>. The IDLH concentration for this substance is 200 mg/m<sup>3</sup>.

Routes of exposure include inhalation, ingestion, absorption, and contact. Symptoms of exposure to toxaphene include nausea, confusion, agitation, tremor, convulsions, dry, red skin, and unconsciousness. If eye contact occurs, the eyes should be washed immediately with large amounts of water. For dermal contact, remove any penetrated clothing and immediately flush the contaminated skin with soap and water. If this chemical is inhaled in large quantities, move to fresh air at once. Perform mouth-to-mouth resuscitation if breathing has stopped. Keep the person warm and resting. For any of the above or if the chemical has been swallowed, seek medical attention promptly.

## **Dieldrin**

The PEL for dieldrin is 0.25 mg/m<sup>3</sup>. NIOSH has established an REL of 0.25 mg/m<sup>3</sup>. The IDLH concentration for this substance is 50 mg/m<sup>3</sup>.

Routes of exposure include inhalation, ingestion, absorption, and contact. Symptoms of exposure to dieldrin include headache, dizziness, nausea, vomiting, sweat, and coma. If eye contact occurs, the eyes should be washed immediately with large amounts of water. For dermal contact, remove any penetrated clothing and immediately flush the contaminated skin with soap and water. If this chemical is inhaled in large quantities, move to fresh air at once. Perform mouth-to-mouth resuscitation if breathing has stopped. Keep the person warm and resting. For any of the above or if the chemical has been swallowed, seek medical attention promptly.

## **Appendix F**

### **Site Safety Officer Responsibilities**

An SSO will be designated. The responsibilities of the SSO will include the following:

- briefing personnel on the hazards at the site, the standard operating procedures to be employed, and emergency procedures;
- conducting onsite health monitoring;
- coordinating access control and site security, including responsibility for protection of third parties, such as visitors or the surrounding community;
- monitoring work practices and decontamination to ensure that required procedures are being followed;
- being available to document and respond to any concerns or complaints made by onsite personnel;
- documenting unsafe work practices or conditions;
- documenting any accidents or incidents that result in illness or injury to personnel; and
- evaluating and amending the HASP daily to remedy deficiencies and post entry briefings.

### QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.  
 B1 = BOD dilution water is over specifications . The reported result may be biased high.  
 D = Surrogate recoveries are not calculated due to sample dilution.  
 E = Estimated value; Value exceeds calibration level of instrument.  
 H = Analyte was prepared and/or analyzed outside of the analytical method holding time  
 I = Matrix Interference.  
 J = Analyte concentration detected between RL and MDL.  
 Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.  
 S = Customer provided specification limit exceeded.

### ABBREVIATIONS

DF = Dilution Factor  
 RL = Reporting Limit, Adjusted by DF  
 MDL = Method Detection Limit, Adjusted by DF  
 Qual = Qualifier  
 Tech = Technician

As regulatory limits change frequently, A & R Laboratories advises the recipient of this report to confirm such limits with the appropriate federal, state, or local authorities before acting in reliance on the regulatory limits provided.

For any feedback concerning our services, please contact Jenny Jiang, Project Manager at 951.779.0310. You may also contact Ken Zheng, President at office@arlaboratories.com.

*Respectfully Submitted:*

Ken Zheng - Lab Director

### QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.

B1 = BOD dilution water is over specifications. The reported result may be biased high.

D = Surrogate recoveries are not calculated due to sample dilution.

E = Estimated value; Value exceeds calibration level of instrument.

H = Analyte was prepared and/or analyzed outside of the analytical method holding time

I = Matrix Interference.

J = Analyte concentration detected between RL and MDL.

Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.

S = Customer provided specification limit exceeded.

### ABBREVIATIONS

DF = Dilution Factor

RL = Reporting Limit, Adjusted by DF

MDL = Method Detection Limit, Adjusted by DF

Qual = Qualifier

Tech = Technician

*As regulatory limits change frequently, A & R Laboratories advises the recipient of this report to confirm such limits with the appropriate federal, state, or local authorities before acting in reliance on the regulatory limits provided.*

*For any feedback concerning our services, please contact Jenny Jiang, Project Manager at 951.779.0310. You may also contact Ken Zheng, President at office@arlaboratories.com.*

### QUALIFIERS

B = Detected in the associated Method Blank at a concentration above the routine RL.  
B1 = BOD dilution water is over specifications. The reported result may be biased high.  
D = Surrogate recoveries are not calculated due to sample dilution.  
E = Estimated value; Value exceeds calibration level of instrument.  
H = Analyte was prepared and/or analyzed outside of the analytical method holding time  
I = Matrix Interference.  
J = Analyte concentration detected between RL and MDL.  
Q = One or more quality control criteria did not meet specifications. See Comments for further explanation.  
S = Customer provided specification limit exceeded.

### ABBREVIATIONS

DF = Dilution Factor  
RL = Reporting Limit, Adjusted by DF  
MDL = Method Detection Limit, Adjusted by DF  
Qual = Qualifier  
Tech = Technician

As regulatory limits change frequently, A & R Laboratories advises the recipient of this report to confirm such limits with the appropriate federal, state, or local authorities before acting in reliance on the regulatory limits provided.

For any feedback concerning our services, please contact Jenny Jiang, Project Manager at 951.779.0310. You may also contact Ken Zheng, President at office@arlaboratories.com.

Eurofins Calscience (Calscience) certifies that the test results provided in this report meet all NELAC Institute requirements for parameters for which accreditation is required or available. Any exceptions to NELAC Institute requirements are noted in the case narrative. The original report of subcontracted analyses, if any, is attached to this report. The results in this report are limited to the sample(s) tested and any reproduction thereof must be made in its entirety. The client or recipient of this report is specifically prohibited from making material changes to said report and, to the extent that such changes are made, Calscience is not responsible, legally or otherwise. The client or recipient agrees to indemnify Calscience for any defense to any litigation which may arise.

# Contents

Client Project Name: 3500 W. 1st ST., LA, CA 90004 / 1812-00168  
Work Order Number: 18-12-1585

1	Work Order Narrative. . . . .	3
2	Sample Summary. . . . .	4
3	Client Sample Data. . . . .	5
	3.1 EPA 16 Hydrogen Sulfide (Air). . . . .	5
4	Quality Control Sample Data. . . . .	6
	4.1 Sample Duplicate. . . . .	6
	4.2 LCS/LCSD. . . . .	7
5	Sample Analysis Summary. . . . .	8
6	Glossary of Terms and Qualifiers. . . . .	9
7	Chain-of-Custody/Sample Receipt Form. . . . .	10

**Condition Upon Receipt:**

Samples were received under Chain-of-Custody (COC) on 12/18/18. They were assigned to Work Order 18-12-1585.

Unless otherwise noted on the Sample Receiving forms all samples were received in good condition and within the recommended EPA temperature criteria for the methods noted on the COC. The COC and Sample Receiving Documents are integral elements of the analytical report and are presented at the back of the report.

**Holding Times:**

All samples were analyzed within prescribed holding times (HT) and/or in accordance with the Calscience Sample Acceptance Policy unless otherwise noted in the analytical report and/or comprehensive case narrative, if required.

Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of  $\leq 15$  minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.

**Quality Control:**

All quality control parameters (QC) were within established control limits except where noted in the QC summary forms or described further within this report.

**Subcontractor Information:**

Unless otherwise noted below (or on the subcontract form), no samples were subcontracted.

**Additional Comments:**

Air - Sorbent-extracted air methods (EPA TO-4A, EPA TO-10, EPA TO-13A, EPA TO-17): Analytical results are converted from mass/sample basis to mass/volume basis using client-supplied air volumes.

Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are always reported on a wet weight basis.

**DoD Projects:**

The test results contained in this report are accredited under the laboratory's ISO/IEC 17025:2005 and DoD-ELAP accreditation issued by the ANSI-ASQ National Accreditation Board. Refer to certificate and scope of accreditation ADE-1864.

## Glossary of Terms and Qualifiers

Work Order: 18-12-1585

Page 1 of 1

<u>Qualifiers</u>	<u>Definition</u>
*	See applicable analysis comment.
<	Less than the indicated value.
>	Greater than the indicated value.
1	Surrogate compound recovery was out of control due to a required sample dilution. Therefore, the sample data was reported without further clarification.
2	Surrogate compound recovery was out of control due to matrix interference. The associated method blank surrogate spike compound was in control and, therefore, the sample data was reported without further clarification.
3	Recovery of the Matrix Spike (MS) or Matrix Spike Duplicate (MSD) compound was out of control due to suspected matrix interference. The associated LCS recovery was in control.
4	The MS/MSD RPD was out of control due to suspected matrix interference.
5	The PDS/PDSD or PES/PESD associated with this batch of samples was out of control due to suspected matrix interference.
6	Surrogate recovery below the acceptance limit.
7	Surrogate recovery above the acceptance limit.
B	Analyte was present in the associated method blank.
BU	Sample analyzed after holding time expired.
BV	Sample received after holding time expired.
CI	See case narrative.
E	Concentration exceeds the calibration range.
ET	Sample was extracted past end of recommended max. holding time.
HD	The chromatographic pattern was inconsistent with the profile of the reference fuel standard.
HDH	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but heavier hydrocarbons were also present (or detected).
HDL	The sample chromatographic pattern for TPH matches the chromatographic pattern of the specified standard but lighter hydrocarbons were also present (or detected).
J	Analyte was detected at a concentration below the reporting limit and above the laboratory method detection limit. Reported value is estimated.
JA	Analyte positively identified but quantitation is an estimate.
ME	LCS Recovery Percentage is within Marginal Exceedance (ME) Control Limit range (+/- 4 SD from the mean).
ND	Parameter not detected at the indicated reporting limit.
Q	Spike recovery and RPD control limits do not apply resulting from the parameter concentration in the sample exceeding the spike concentration by a factor of four or greater.
SG	The sample extract was subjected to Silica Gel treatment prior to analysis.
X	% Recovery and/or RPD out-of-range.
Z	Analyte presence was not confirmed by second column or GC/MS analysis.
	Solid - Unless otherwise indicated, solid sample data is reported on a wet weight basis, not corrected for % moisture. All QC results are reported on a wet weight basis.
	Any parameter identified in 40CFR Part 136.3 Table II that is designated as "analyze immediately" with a holding time of <= 15 minutes (40CFR-136.3 Table II, footnote 4), is considered a "field" test and the reported results will be qualified as being received outside of the stated holding time unless received at the laboratory within 15 minutes of the collection time.
	A calculated total result (Example: Total Pesticides) is the summation of each component concentration and/or, if "J" flags are reported, estimated concentration. Component concentrations showing not detected (ND) are summed into the calculated total result as zero concentrations.

# 1. Introduction

---

This Quality Assurance Project Plan (QAPP) has been prepared by PlaceWorks on behalf of Bright Star Schools (BSS) to address quality assurance (QA) and quality control (QC) policies associated with the collection of environmental data at the proposed Rise Kohyang High School (site), in Los Angeles, California. Together with the Workplan, this QAPP presents the plan for sampling and analysis as part of the investigation. U.S. Environmental Protection Agency (USEPA) policy requires a QAPP for all environmental data collection projects mandated or supported by the USEPA through regulations or other formalized means (USEPA 1998a). The purpose of this QAPP is to identify the methods to be employed to establish technical accuracy, precision, and validity of data that is generated at the site.

The sampling program is formally described in the Workplan. This QAPP contains general and specific details regarding field sampling, laboratory, and analytical procedures that apply to activities described in the Workplan. It provides field and laboratory personnel with instructions regarding activities to be performed before, during, and after field investigations. These instructions will insure data collected for use in project decisions will be of the type and quality required to meet the data quality objectives (DQOs) for the project.

Guidelines followed in the preparation of this QAPP are described in EPA Requirements for Quality Assurance Plans for Environmental Data Operations, External Review Draft Final, EPA QA/R-5 (USEPA 1998a) and EPA Guidance for Quality Assurance Project Plans, EPA QA/G-5 (USEPA 1998b). Other documents that have been referenced in this plan include, Guidance for the Data Quality Objectives Process, EPA QA/G-4 (USEPA 1994a) and Test Methods for Evaluating Solid Waste, Physical/Chemical Methods (USEPA SW-846, Third Edition, 1996).

## 1.1 PROJECT HISTORY AND OBJECTIVES

The 1.15-acre project site is located at 3500 West 1<sup>st</sup> Street, with a single-family residence on site associated with the address of 119 S Madison Avenue. Other addresses associated with the site include: 3468, 3478 3474, 3470, 3464, 3506, and 3510 West 1<sup>st</sup> Street and 115 S Madison Avenue. The site is identified with Assessor's Parcel Numbers [APNs] 5501-014-004,-021,-022,-023,-024,-025. Based on the USGS 7<sup>1</sup>/<sub>2</sub>-Minute Topographic Series, Hollywood, California Quadrangle Map (USGS 2015), the proposed school site is located in Section 19 of Township 01 South, Range 13 West of the San Bernardino Base Line and Meridian.

The proposed school site is currently occupied by the Good News Central Church and a single family residence for the pastor of the church. Currently there are seven structures on the property. The structures consist of two chapels, one kitchen, one residence, two storage sheds, and a structure for the church's International Youth Fellowship. There have been structures on site since the late 1930s and across 1st Street, north of the subject site, is Virgil Middle School which was constructed in the early 1920s.

## 1. Introduction

*This page intentionally left blank.*

## 2. Project Description

---

This section presents information concerning the proposed sampling activities, selected analytical parameters, data quality objectives, and the resulting project decisions. A separate Workplan provides specifications for field activities.

### 2.1 ANALYTICAL SCOPE

The planned sampling effort includes the sampling and analysis of shallow soils for a list of potential hazardous substances. A detailed plan of this investigation is provided in the site-specific Workplan, and includes specified numbers and locations of samples to be collected. The Workplan also provides specific procedures for sample collection at designated locations. Samples will be collected in accordance with methods presented in the Workplan.

Soil samples will be collected on the project area in accordance with the protocols detailed in the DTSC's PEA Guidance Manual (DTSC 1999).

Soil gas sampling will be conducted to evaluate if there are potential impacts to the proposed school site from the USTs that had been at the site. Soil gas sampling will be conducted following protocols described in DTSC's and Los Angeles Regional Water Quality Control Board's (LARWQCB) Advisory – Active Soil Gas Investigations (DTSC and LARWQCB 2015).

The appropriate analyses selected for this field program, and the rationale for selection of these parameters, are further provided in the Workplan. A&R Laboratories, Inc. (ARL), located in Ontario, California, will perform testing of soil samples. Jones Environmental, Inc. based in Santa Fe Springs, California is anticipated to perform on-site testing of soil gas samples.

### 2.2 DATA USE

Decisions to be made based upon the planned sampling and analysis effort will be determined by the data compiled from the sampling and analysis program. It is intended that data collected through implementation of this QAPP will satisfy federal, state, and local data quality requirements. These data may be used to characterize the nature and extent of contamination, support risk assessment, support the evaluation of corrective/remedial action, and/or assist in determination of additional actions.

The presence of environmental contaminants will be determined by the extent of valid detectable concentrations of the constituents discussed above. If the data associated with any detections of chemicals of potential concern (COPCs) are confirmed, the data will be used to assess risk using accepted methods for determining potential carcinogenic and non-carcinogenic exposures. If results from the risk screening evaluations indicate no risks of exposure with respect to the use of the property, then BSS will use the data to support No Further Action consent from DTSC, and the proposed development may continue without

## 2. Site Description

modification. If the evaluation indicates unacceptable risks of exposure, then the data can be used by BSS for further consideration of action.

## 3. Project Organization

---

This section provides a description of the organizational structure and responsibilities of the individual positions for this project. This description defines the lines of communication and identifies key personnel assigned to various activities for the project.

### 3.1 BRIGHT STAR SCHOOLS

Mr. Elijah Sugay is the designated contact person for Bright Star Schools. Mr. Sugay will be responsible for the directional decisions, as well as budget control, and for work conducted at the school site. Mr. Sugay, or designee, may perform document review of related work plans, reports, and drawings for activities associated with this project.

### 3.2 PLACEWORKS

The investigation contractor has responsibility for assigned phases of investigation and reporting. Together the management team (Project Manager and Field Manager) will be responsible for the technical planning and implementation of the work prescribed in the site-specific Workplan. The QA staff has responsibility for effective planning, verification and management of QA activities associated with the assigned project.

Dr. Denise Clendening is the PlaceWorks Project Manager and will serve as the primary contact with the DTSC and Bright Star Schools. Her responsibilities include strategy development, budget control, document control, project management, risk assessment and document review.

Mr. Michael Watson of PlaceWorks is a Professional Geologist in the State of California. Mr. Watson's responsibilities include field activities and preparation of required reports and data validation including quality assurance/quality control.

### 3.3 LABORATORY

The primary offsite laboratory is anticipated to be ARL in Ontario, California. ARL will perform analytical testing for soil samples collected for this investigation. The primary onsite laboratory is anticipated to be Jones Environmental, Inc. based in Santa Fe Springs, California. Jones will perform analytical testing for soil gas samples collected for this investigation. The respective laboratory's project manager will report to the PlaceWorks Field Manager on all aspects of the sample analysis. In addition, the PlaceWorks QA Manager will be advised of any matters related to data quality during the course of the investigation.

### 3. Project Organization

*This page intentionally left blank.*

## 4. Data Quality Objectives

---

DQOs have been specified for each data collection activity. The project work will be conducted and documented so that the data collected are of sufficient quality for their intended use (USEPA 1998). DQOs specify the data type, quality, quantity, and uses needed to make decisions, and are the basis for designing data collection activities. The DQOs have been used to design the data collection activities presented in the Workplan. The DQOs for the project are discussed in the following sections.

### 4.1 DATA QUALITY OBJECTIVES

The project DQOs developed specifically for the planned sampling and analysis program have been determined based on USEPA's seven-step DQO process (USEPA 1994a). The Project Manager will evaluate the DQOs to determine if the quantitative and qualitative needs of the sampling and analysis program have been met. The project definition associated with each step of the DQO process can be summarized as follows:

**State the problem:** The purpose of the sampling program is to determine if the proposed site is acceptable for the development of a new educational facility. Although the proposed development of the site will result in asphalt or concrete surfacing over the majority of the site, exposed soils will exist in landscaped areas where students could come into contact. Previous investigations have not performed a complete evaluation of potential contamination based on historical use of the property.

**Identify the Decision:** The data obtained from the sampling and testing activities will be used to evaluate if releases of hazardous substances from historical uses have occurred at the site. The investigative results will be further evaluated to determine to what extent any contamination identified will result in risk of exposure. The results will be compiled and used to assess the relative threat associated with any contamination identified, through a baseline risk assessment. Based on the calculation of human health and ecological risks for the site, the suitability of the property for its intended development will be determined.

**Identify Inputs to the Decision:** Inputs to the decision will include results of analytical testing of soil gas samples, and shallow soils from selected locations on the site. Each of these matrices will be tested for the specified analytes discussed in Section II.

**Define the Study Boundaries:** The boundaries of the field sampling and analysis program will be the perimeter of Site B discussed above and detailed in the Workplan.

**Develop a Decision Rule:** Decisions will be based upon laboratory results for the target constituents presented in Tables 1 through 3 for each respective matrix tested. If no valid detectable concentrations of target compounds are reported for the given samples, then a decision will be made that the site is fully characterized with respect to the compounds tested and no further sampling will be required as part of this

## 4. Data Quality Objectives

investigation. If target constituents are detected in the samples tested, then the data will be compiled for use in calculating the human health and ecological risk of exposure. The results of the risk evaluation will be used by BSS to support a No Further Action consent from DTSC, if the data indicate risk is acceptable.

**Specify Limits on Decision Error:** The results of all analytical testing will be subjected to data validation specified in Section 7.3. Data are determined to be valid if the specified DQOs for precision, accuracy, representativeness, comparability and completeness are achieved. The results of any detected target constituents will be considered in evaluating the need for additional sampling of soil gas and/or site soil, and assessing the necessity for reducing any risks posed by the potential contamination.

**Optimize the Design:** The field sampling program has been designed to provide the type and quantity of data needed to satisfy each of the aforementioned objectives. A separate Workplan provides the specifications for the data collection activities, including the numbers of samples, respective locations, and sampling techniques. The quality of the data will be assessed through the procedures further described in this QAPP.

### 4.2 PRECISION, ACCURACY, REPRESENTATIVENESS, COMPARABILITY AND COMPLETENESS

The basis for assessing the elements of data quality is discussed in the following subsections. In the absence of laboratory specific precision and accuracy limits, the QC limits listed in this section must be met.

#### 4.2.1 Precision

Precision measures the reproducibility of repetitive measurements. It is strictly defined as the degree of mutual agreement among independent measurements as the result of repeated application of the sample process under similar conditions.

Analytical precision is a measurement of the variability associated with duplicate or replicate analyses of the same sample in the laboratory. Precision is assessed by analysis of the results between laboratory quality control sample pairs. These include laboratory control sample (LCS) and LCS duplicates, matrix spike (MS) and MS duplicates (MSD), or sample duplicates. If the recoveries of analytes in the specified control samples pairs are comparable within established control limits, then precision criteria are satisfied.

Total precision is a measurement of the variability associated with the entire sampling and analytical process. It is determined by analysis of duplicate (two) or replicate (more than two) field samples, and measures variability introduced by both the laboratory and field operations. Field duplicate samples are analyzed to assess combined field and analytical precision.

Duplicate results are assessed using the relative percent difference (RPD) between duplicate measurements. If the RPD for laboratory quality control samples exceeds 30 percent, data will be qualified as described in the applicable validation procedure. If the RPD between primary and duplicate field samples exceeds 100 percent for soil or soil gas, data will be qualified as described in the applicable validation procedure.

## 4. Data Quality Objectives

The RPD is calculated as the difference between the two sample results (absolute value) divided by the average of the two sample results. The equation can be expressed as follows:

$$\%RPD = 200 \times ((x_2 - x_1) / (x_2 + x_1))$$

### 4.2.2 Accuracy

Accuracy is a statistical measurement of correctness of a measured value, and includes components of random error (variability due to imprecision) and systematic error. It reflects the total error associated with a measurement. A measurement is accurate when the value reported does not differ from the true value of a known concentration, spike, or standard.

Accuracy of laboratory analyses will be assessed by LCS recoveries, surrogate standard recoveries, MS spike recoveries, and initial and continuing calibrations of instruments. Laboratory accuracy is expressed as the percent recovery (%R). Accuracy limits are statistically generated by the laboratory or required by specified USEPA methods. If the percent recovery is determined to be outside of acceptance criteria, data will be qualified as described in the applicable validation procedure. The calculation of percent recovery is provided below:

$$\% R = 100 \times (X_s - X) / T$$

where  $X_s$  is the measured value of the spiked sample,  $X$  is the measured value of the unspiked sample, and  $T$  is the true value of the spike solution added.

Accuracy is also assessed by the analysis of laboratory and field blanks. Assessment of blank results provides information regarding potential bias imparted to analytical results from measurement systems and/or field conditions. Field accuracy will be assessed through the analysis of field equipment blanks. Analysis of field blanks documents bias associated with the sampling process, field contamination, sample preservation, and sample handling. The DQO for field equipment and trip blanks is that all values are less than the reporting limit for each target constituent. If contamination is reported in the field equipment or trip blanks, data will be qualified as described in the applicable validation procedure.

### 4.2.3 Representativeness

Representativeness is the degree to which data accurately and precisely represent selected characteristics of the media sampled. Representativeness of data collection is addressed by careful preparation of sampling and analysis programs. This QAPP, together with the Workplan, address representativeness by specifying sufficient and proper numbers and locations of samples; incorporating appropriate sampling methodologies; specifying proper sample collection techniques and decontamination procedures; selecting appropriate laboratory methods to prepare and analyze soil and soil gas; and establishing proper field and laboratory QA/QC procedures.

## 4. Data Quality Objectives

### 4.2.4 Completeness

Completeness is the measure of valid data obtained compared to the amount that was expected under ideal conditions. The number of valid results divided by the number of possible results, expressed as a percentage, determines the completeness of the data set. The objective for completeness is to obtain at least 90 percent of the planned data to support evaluation and assessment efforts. Specifically, for background samples, a completeness requirement of 100 percent is mandated. The formula for calculation of completeness is presented, as follows:

$$\% \text{ Completeness} = 100 \times \frac{\text{number of valid results}}{\text{number of expected results}}$$

### 4.2.5 Comparability

Comparability is an expression of confidence with which one data set can be compared to another. The objective of comparability is to ensure that data developed during the investigation are comparable with data previously collected (i.e., methods of analysis are comparable), and that the methods used adequately address applicable criteria or standards established by the USEPA and California Department of Health Services (CADHS). This QAPP addresses comparability by specifying laboratory methods that are consistent with the current standards of practice as approved by the USEPA and CADHS. Field methods are discussed in the Workplan.

## 5. Quality Control Elements

---

This section presents QC requirements relevant to analysis of environmental samples that will be followed during all project analytical activities. The purpose of the QC program is to produce data of known quality that satisfy the project objectives and that meet or exceed the requirements of the standard methods of analysis. This program provides a mechanism for ongoing control and evaluation of data quality measurements through the use of QC materials.

### 5.1 QUALITY CONTROL ELEMENTS

The chemical data to be collected for this effort will be used to determine that the extent of contamination is properly evaluated. As such, it is critical that the chemical data is documented to be of the highest confidence and quality. Consequently, strict QA/QC procedures will be adhered to. These procedures include:

- Adherence to protocols for field sampling and decontamination procedures;
- Collection and laboratory analysis of appropriate field and equipment blanks to monitor for contamination of samples in the field or the laboratory;
- Collection and laboratory analysis of site specific matrix spike, matrix spike duplicate, and blind duplicate samples to evaluate precision and accuracy; and
- Attainment of completeness goals.

#### 5.1.1 Equipment Decontamination

Non-dedicated equipment will be decontaminated before and after each sample is collected. The equipment will be washed in a non-phosphate detergent and potable water, rinsed in potable water, and then double rinsed in distilled water. A description of the specific methodologies to be followed to maximize proper decontamination of non-dedicated sampling equipment is provided in the Workplan.

#### 5.1.2 Standards

Standards used for calibration or to prepare samples will be certified by National Institute of Standards and Technology (NIST), USEPA, or other equivalent source. The standards will be current. The expiration date will be established by the manufacturer, or based on chemical stability, the possibility of contamination, and environmental and storage conditions. Standards will be labeled with expiration dates, and will reference primary standard sources if applicable. Expired standards will be discarded.

## 5. Quality Control Elements

### 5.1.3 Supplies

All supplies will be inspected prior to their use in the field or laboratory. The descriptions for sample collection and analysis contained in the methods will be used as a guideline for establishing the acceptance criteria for supplies. A current inventory and appropriate storage system for these materials will assure their integrity prior to use.

### 5.1.4 Holding Time Compliance

Sample preparation and analysis will be completed within the required method holding times (Table 1). Holding time begins at the time of sample collection. If holding times are exceeded, and the analyses are performed, the associated results will be qualified as described in the applicable validation procedure. The following definitions of extraction and analysis compliance are used to assess holding times:

- Preparation or extraction completion - completion of the sample preparation process as described in the applicable method, prior to any necessary extract cleanup.
- Analysis completion - completion of all analytical runs, including dilutions, second-column confirmations, and any required re-analyses.

### 5.1.5 Preventative Maintenance

The Field Manager for PlaceWorks is responsible for documenting the maintenance of all field equipment prescribed in the manufacturer's specifications. Scheduled maintenance will be performed by trained personnel. Procedures specific to the calibration, use and maintenance of field equipment are presented in the Workplan. The analytical laboratory is responsible for all analytical equipment calibration and maintenance as described in their laboratory QA Plan. Subcontractors are responsible for maintenance of all equipment needed to carry out subcontracted duties

## 5.2 QUALITY ASSURANCE AND QUALITY CONTROL (QA/QC) SAMPLES

The purpose of this QA/QC program is to produce data of known quality that satisfy the project objectives and that meet or exceed the requirements of the standard methods of analysis. This program provides a mechanism for ongoing control and evaluation of data quality measurements through the use of QC materials. Quality assurance and quality control samples will be collected as part of the overall QA/QC program.

### 5.2.1 Laboratory Reagent Blanks

A laboratory reagent blank is de-ionized, distilled water that is extracted by the laboratory and analyzed as a sample. Analysis of the reagent blank indicates potential sources of contamination from laboratory procedures (e.g., contaminated reagents, improperly cleaned laboratory equipment, or persistent contamination due to presence of certain compounds in the ambient laboratory air). A reagent blank will be analyzed at least once each day for each method utilized by the laboratory for that day.

## 5. Quality Control Elements

### 5.2.2 Field Equipment Blanks

A field equipment blank is a sample that is prepared in the field by pouring de-ionized, distilled water into cleaned sampling equipment. The water is then collected and analyzed as a sample. Field equipment blanks are typically blind (given a fictitious name so that the laboratory will not recognize it as a blank). The field equipment blank gives an indication of contamination from field procedures (e.g., improperly cleaned sampling equipment, cross-contamination). Field equipment blanks will be collected at a minimum frequency of at least one per day when non-dedicated equipment is utilized. The field equipment blanks should be analyzed using the same analyses requested for the associated primary samples collected.

### 5.2.3 Trip Blanks

The primary purpose of trip blanks is to detect potential additional sources of contamination that could potentially influence contaminant values reported in field samples, both quantitatively and qualitatively. Trip blanks serve as a mechanism of control for sample bottle preparation, blank water quality and sample handling. They are generally submitted to the laboratory for analysis of VOCs. If VOCs are detected with the PID at or above 1 part per million, trip blanks will included as part of the sampling program.

### 5.2.4 Matrix Spike Samples

Matrix spikes are performed by the analytical laboratory to evaluate the efficiency of the sample extraction and analysis procedures, and are necessary because matrix interference (interferences from non-target compound in the sample matrix, water or soil) may have a widely varying impact on the accuracy and precision of the extraction analysis. The matrix spike is prepared by the addition of known quantities of target compounds to a sample. The sample is extracted and analyzed. The results of the analysis are compared with the known additions and a matrix spike recovery is calculated giving an evaluation of the accuracy of the extraction and analysis procedures. Matrix spike recoveries are reviewed to check that they are within acceptable range. However, the acceptable ranges vary widely with both sample matrix and analytical method. Matrix spikes and matrix spike duplicates will be analyzed by the laboratory at a frequency of at least one per twenty, or 5 percent of the primary field samples. Typically, matrix spikes are performed in duplicate in order to evaluate the precision of the procedures as well as the accuracy. Precision objectives (represented by agreement between matrix spike and matrix spike duplicate recoveries) and accuracy objectives (represented by matrix spike recovery results) are based on statistically generated limits established annually by the analytical laboratory. It is important to note that these objectives are to be viewed as goals, not as criteria. If matrix bias is suspected, the associated data will be qualified and the direction of the bias indicated in the data validation report.

### 5.2.5 Field Duplicate Samples

Field duplicate samples will be collected and analyzed to evaluate sampling and analytical precision. Field duplicates are collected and analyzed in the same manner as the primary samples. Agreement between duplicate sample results will indicate good sampling and analytical precision. Specific locations will be designated for collection of field duplicates prior to the start of field activities. Field duplicates will be collected at a frequency of 10 percent of the primary samples collected. The duplicate sample will be

## 5. Quality Control Elements

analyzed for all laboratory analyses requested for the primary sample collected. The precision goal for field duplicates analyses will be plus or minus 50 percent relative percent difference for aqueous samples and plus or minus 100 percent relative percent difference for soil, or air samples. Results for samples exceeding these goals will be qualified as estimated. Professional judgement will be used to determine if all samples in the associated batch will be qualified as well.

### 5.2.6 Performance Evaluation Samples

Double blind performance evaluation (PE) samples may be submitted to the analytical laboratory during any site investigation. These samples may be of water or soil matrix, and are used to assess the accuracy of analytical procedures employed for a given sample set. PE samples will be used if questionable data quality is suspected as determined during laboratory audits or data validation.

If used, double blind PE samples will be prepared by Environmental Resources Standards, or similar supplier, in similar sample containers as the project field samples and shipped from the field to the laboratory for analysis.

Double blind PE samples will be prepared using NIST and/or A2LA certified standards. The project-specific PE samples will contain known concentrations of the analytes of interest. Laboratory results will be evaluated against the original Certificates of Analyses for precision and accuracy. PE samples may be submitted for analysis as part of the laboratory pre-qualification process, or as part of a given sampling event. Results will be reported to the laboratory and presented with associated field sample results

## 6. Sampling Procedures

---

The defensibility of data is dependent on the use of well defined, accepted sampling procedures. This section describes the sampling and handling procedures that will be followed for each sampling event.

### 6.1 SAMPLING PROCEDURES

Collection of high integrity environmental samples is important to the quality of chemical data to be generated. To this end, detailed field procedures have been developed to guide sample collections during each phase of the field investigation. These procedures are contained in the Workplan.

#### 6.1.1 Sample Containers, Preservation and Holding Times

Table 1 lists the required sample containers, preservatives, and recommended maximum holding times for samples. Sample containers provided by the laboratory will be new, and purchased commercially from I-Chem, Eagle Pitcher, or other equivalent validated sources.

#### 6.1.2 Sample Handling and Storage

In the field, each sample container will be marked with the sampling location number, and date and time of sample collection. All sample containers will be wiped with paper towels and securely packed, in a cooler on ice, in preparation for delivery to the laboratory.

Upon receipt of the samples, the laboratory will immediately notify the Field Manager if conditions or problems are identified which require immediate resolution. Such conditions include container breakage, missing or improper chain-of-custody, exceeded holding times, improper preservation, missing or illegible sample labeling, or temperature excursions.

#### 6.1.3 Sample Custody

For each sample that is submitted to the laboratory for analysis, an entry will be made on a chain-of-custody form supplied by the laboratory. The information to be recorded includes the sampling date and time, sample identification number, matrix type, requested analyses and methods, preservatives, and the sampler's name. Sampling team members will maintain custody of the samples until they are relinquished to laboratory personnel or a professional courier service. The chain-of-custody form will accompany the samples from the time of collection until received by the laboratory. Each party in possession of the samples (except the professional courier service) will sign the chain-of-custody form signifying receipt.

The chain-of-custody form will be placed in a plastic bag and shipped with samples inside the cooler. After the samples, ice, and chain-of-custody forms are packed in the coolers, the cooler will be appropriately sealed before it is relinquished to the courier. A copy of the original completed form will be provided by the

## 6. Sampling Procedures

laboratory along with the report of results. Upon receipt, the laboratory will inspect the condition of the sample containers and report the information on chain-of-custody or similar form.

## 7. Analytical Procedures

---

The analytical methods used for this project are primarily USEPA approved methods and are listed in Tables 1 through 3. Specific analytical method procedures are detailed in the laboratory QA Plan and standard operating procedures (SOPs) of the selected laboratory. These documents may be reviewed by PlaceWorks quality assurance staff during laboratory audits to ensure that project specifications are met. Laboratory audits are discussed in Section 9.2.

### 7.1 INTERNAL STANDARDS

Internal standards are measured amounts of method-specified compounds added after preparation, or extraction, of a sample. Internal standards are added to samples, controls, and blanks in accordance with method requirements to identify column injection losses, purging losses, or viscosity effects.

Acceptance limits for internal standard recoveries are set forth in the applicable method. If the internal standard recovery falls outside of acceptance criteria, the instrument will be checked for malfunction and reanalysis of the sample will be performed after any problems are resolved.

### 7.2 RETENTION TIME WINDOWS

Retention time windows will be established as described in SW-846 Method 8000A for applicable analyses of organic compounds. Retention time windows are used for qualitative identification of analytes and are calculated based on multiple, replicated analyses of a respective standard.

Retention times will be checked on a daily basis. Acceptance criteria for retention time windows are established in the referenced method. If the retention time falls outside the respective window, actions will be taken to correct the problem. The instrument must be re-calibrated after any retention time window failure and the affected samples must be reanalyzed.

### 7.3 METHOD DETECTION LIMITS

The method detection limit (MDL) is the minimum concentration of an analyte, or compound, that can be measured and reported with 99 percent confidence that the concentration is greater than zero. MDLs are established for each method, matrix and analyte, and for each instrument used to analyze project samples. MDLs are derived using the procedures described in 40CFR 136 Appendix B (USEPA 1990a). USEPA requires that MDLs be established on an annual basis. MDLs must be less than applicable reporting limits for each target analyte presented in Tables 2 and 3.

## 7. Analytical Procedures

### 7.4 INSTRUMENT CALIBRATION

Analytical instruments will be calibrated in accordance with the procedures specified in the applicable method. All analytes that are reported shall be present in the initial and continuing calibrations, and these calibrations must meet the acceptance criteria specified in the reference method. Records of standard preparation and instrument calibration will be maintained. Records shall unambiguously trace the preparation of standards and their use in calibration and quantitation of sample results. Calibration records will be traceable to standard materials as described in Section 5.2.

At the onset of analysis, instrument calibrations will be checked using all of the analytes of interest. This applies equally to multi-response analytes. At a minimum, calibration criteria will satisfy method requirements. Analyte concentrations can be determined with either calibration curves or response factors, as defined in the method. Guidance provided in SW-846 should be considered to determine appropriate evaluation procedures.

## 8. Data Reporting

---

This section presents reporting requirements relevant to the data produced during all project analytical activities.

### 8.1 FIELD DATA

Data measured by field instruments will be recorded in field notebooks, laptops, and/or on required field forms. Units of measure for field analyses are identified on the field forms. The field data will be reviewed by the Project or Field Manager to evaluate completeness of the field records and appropriateness of the field methods employed. All field records will be retained in the project files.

### 8.2 LABORATORY DATA

Analytical data will contain the necessary sample results and quality control data to evaluate the data quality objectives defined for the project. Documentation requirements for laboratory data are defined in USEPA Region IX Laboratory Documentation Requirements for Data Validation (USEPA 1990b). The laboratory reports will be consistent with USEPA Level III documentation and include the following data and summary forms:

- Narrative, cross-reference, chain-of-custody, and method references;
- Analytical results;
- Surrogate recoveries (as applicable);
- Calibration summary;
- Blank results;
- Laboratory control sample recoveries;
- Duplicate sample results or duplicate spike recoveries;
- Sample spike recoveries;
- Instrument tuning summary;
- Associated raw data; and
- Magnetic tape or equivalent upon request.

## 8. Data Reporting

Data validation criteria are derived from the USEPA Contract Laboratory Program National Functional Guidelines for Organic and Inorganic Data Review (USEPA 1994b and 1994c). The Functional Guidelines provide specific data validation criteria that can be applied to data generated for this investigation.

The laboratory data will be reviewed for compliance with the applicable method and the quality of the data reported. The following summarizes the areas of data validation.

- Holding Times;
- Calibrations;
- Blanks;
- Laboratory Control Samples;
- Matrix Spike/Matrix Spike Duplicates;
- Surrogates/Internal Standards (as applicable);
- Field Quality Control Samples; and
- Compound Identification and Quantification.

The application of data validation criteria is a function of project-specific DQOs. The QA/QC Manager will determine if the data quality objectives for the analytical data have been met. Results of the data validation review will be documented and summarized in the investigation.

### 8.3 PROCEDURES FOR DATA VALIDATION

Procedures for performing data validation for the types of analyses to be performed for this investigation are documented in the National Functional Guidelines. Data validation will be documented in a manner consistent with the functional guidelines. The results of the data validation will be included in a Data Validation Memorandum. This documentation will be maintained by PlaceWorks in the project files.

#### 8.3.1 Data Qualifiers

The data validation procedures were designed to review each data set and identify biases inherent to the data and determine its usefulness. Data validation flags are applied to those sample results that fall outside of specified tolerance limits, and, therefore, did not meet the program's quality assurance objectives described in Section 3.2. Data validation flags to be used for this project are defined in the National Functional Guidelines. Data validation flags will indicate if results are considered quantitative, estimated, or rejected. Only rejected data are considered unusable for decision-making purposes; however, other qualified data may require further verification.

## 8. Data Reporting

### 8.3.2 Project Data Management

Data management is the process of organizing, maintaining, and applying a variety of data to provide a useful and coherent view of the site conditions. Data collected for this investigation include sample collection data, field measurement data, onsite laboratory analytical data, and offsite laboratory analytical data. The data management resources include staff to review and maintain project data, a computerized data management system, and a documentation filing system. The project database management system has the capability to maintain the relationship between sampling locations, samples collected, and filed and laboratory analytical results.

## 8. Data Reporting

*This page intentionally left blank.*

## 9. Performance and System Audits

---

Audit programs are established and directed by PlaceWorks quality assurance staff to ensure that field and laboratory activities are performed in compliance with project controlling documents. This section describes responsibilities, requirements and methods for scheduling, conducting and documenting audits of field and laboratory activities.

### 9.1 FIELD AUDITS

Field audits focus on appropriateness of personnel assignments and expertise, availability of field equipment, adherence to project controlling documents for sample collection and identification, sample handling and transport, use of QA samples, chain of custody procedures, equipment decontamination and documentation. Field audits are not required, but may be performed in the event significant discrepancies are identified that warrant evaluation of field practices.

### 9.2 LABORATORY AUDITS

Laboratory audits include reviews of sample handling procedures, internal sample tracking, SOPs, analytical data documentation, QA/QC protocols, and data reporting. Any selected mobile or offsite laboratory will be licensed by the State of California as a certified testing laboratory. If no previous audit has been conducted by PlaceWorks, a scheduled audit will be conducted by the quality assurance staff during the course of this project to ensure the integrity of sample handling and processing by the laboratory.

### 9.3 DATA AUDITS

Data audits will be performed on analytical results received from the laboratories. These audits will be accomplished through the process of data validation as described in Section 8.3, or may involve a more detailed review of laboratory analytical results. Data audits require the laboratory to submit complete raw data files to PlaceWorks for validation. PlaceWorks chemists will perform a review of the data consistent with the level of effort described in the National Functional Guidelines (USEPA 1994 b and c). This level of validation consists of a detailed review of sample data, including verification of data calculations for calibration and quality control samples to assess if these data are consistent with method requirements. Upon request, the laboratory will make available all supporting documentation in a timely fashion.

### 9.4 REPORTS TO MANAGEMENT AND RESPONSIBILITIES

Upon completion of any audit, the auditor will submit to the Project Manager and Field Manager a report or memorandum describing any problems or deficiencies identified during the audit. It is the responsibility of the Project Manager to determine if the deviations will result in any adverse effect on the project conclusions. If it is determined that corrective action is necessary, procedures outlined in Section 9.5 will be followed.

## 9. Performance and System Audits

### 9.5 CORRECTIVE ACTION

Corrective actions will be initiated whenever data quality indicators suggest that DQOs have not been met. Corrective actions will begin with identifying the source of the problem. Potential problem sources include failure to adhere to method procedures, improper data reduction, equipment malfunctions, or systemic contamination. The first level of responsibility for identifying the problems and initiating corrective action lies with the analyst/field personnel. The second level of responsibility lies with any person reviewing the data. Corrective actions may include more intensive staff training, equipment repair followed by a more intensive preventive maintenance program, or removal of the source of systemic contamination. Once resolved, the corrective action procedure will be fully documented, and if DQOs were not met, the samples in question must be recollected and/or reanalyzed utilizing a properly functioning system (USEPA 1998).

# Executive Summary

---

PlaceWorks has performed a Phase I Environmental Site Assessment (Phase I) on behalf of Pacific Charter School Development (PCSD) and Bright Star Schools for the proposed development of Rise Kohyang High School in the City of Los Angeles County, California (Figures 1 and 2). The Phase I was performed in general conformance with the scope and limitations of the ASTM E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Exceptions to, or deletions from, this practice are described in Section 1 of this report. Our conclusions are intended to help the user evaluate the “environmental risk” associated with the site, as defined in the ASTM E 1527-13 Standard and discussed in the Introduction section of this report. The Phase I also followed Department of Toxic Substances Control (DTSC) guidelines for Phase I evaluations for school sites.

The approximately 1.15-acre site is located at 3500 West 1<sup>st</sup> Street, with a single-family residence on site associated with the address of 119 S Madison Avenue. Other addresses associated with the site include: 3468, 3478 3474, 3470, 3464, 3506, and 3510 West 1<sup>st</sup> Street and 115 S Madison Avenue. The site is identified with Assessor’s Parcel Numbers [APNs] 5501-014-004,-021,-022,-023,-024,-025. The site is currently occupied by the Good News Central Church and a single family residence for the pastor of the church. Currently there are seven structures on the property. The structures consist of two chapels, one kitchen, one residence, two storage sheds, and a structure for the church’s International Youth Fellowship.

Bright Star Schools will be developing a permanent charter high school facility on the project site. All existing structures will be demolished for the new campus. The development of the school will be funded by the State and will require approvals and permits from Division of State Architect, California Department of Education, and DTSC.

The site is located in the Wilshire Center neighborhood which consists of smaller neighborhoods of Koreatown and Little Bangladesh in the City of Los Angeles. The site is approximately 0.460-mile south of the Hollywood Freeway (US-101) and is bounded by West 1<sup>st</sup> Street on the north and South Madison Avenue on the east. Regional access to the site in the near future would be provided by West 1<sup>st</sup> Street. The site is approximately 1.1 mile northwest of MacArthur Park Figure 3 is an aerial photograph showing current site conditions and the outline of the site boundaries. The site is surrounded by a highly developed mix of commercial, educational and residential properties.

The site was developed in the late 1930s with several structures for commercial use. By 1950 the subject site was occupied by a repair shop, a janitorial supplies store, a restaurant, an unlabeled store, and a residential dwelling. In 1968 the subject site continued to have similar commercial buildings as it did in 1950, but in addition, there was also an office building present. The Good News Central Church has been located on the site from at least 2006 to the present.

## Executive Summary

The site appears on the leaking underground storage tank (LUST) list for having a gasoline leak from a tank in 1986 that received regulatory agency closure in 1996. The lead regulatory agencies were identified as the City of Los Angeles and the Los Angeles Regional Water Quality Control Board (RWQCB) for the tank assessment and closure. No documents were available for review for the assessment of the LUST.

The objective of a Phase I is to assess whether “recognized environmental conditions” (REC), historical RECs (HREC), and controlled RECs (CREC) are associated with the subject site. Our conclusions are intended to help the user evaluate the “business environmental risk” associated with the subject site. Our opinion regarding an REC’s potential impact on the subject site is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, and our experience evaluating similar sites.

### **RECOGNIZED ENVIRONMENTAL CONDITIONS (RECs)**

The ASTM E 1527-13 Standard defines an REC in part as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”

This assessment has revealed evidence of two RECs in connection with the project site following the ASTM standard.

- The subject site is located in a City of Los Angeles Methane Zone. As such the site is subject to methane testing and mitigation requirements per the city “methane code” (ordinance No. 175790).

### **HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS (HRECs)**

The ASTM E 1527-13 Standard defines an HREC as “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

This assessment has revealed evidence of one HRECs or known environmental conditions in connection with the project site following the ASTM standard.

- The subject site is listed on the State and Tribal LUST list.
  - On November 7, 1986 a leak of gasoline was discovered and on November 21, 1986 the leak was stopped. The case is currently listed as complete and case closed as of July 23, 1996 under the City of Los Angeles and the Regional Water Quality Control Board (Region 4). Due to this leak occurring over 30 years ago and current regulatory status, this is expected to not to be a significant issue for the subject site. Because the closure documents were not available for review

## Executive Summary

we could not determine if the cleanup met unrestricted land use criteria. No conclusive information was provided if the UST is still present.

### **CONTROLLED RECS ENVIRONMENTAL CONDITIONS**

The Standard also requires the identification of controlled RECs (CRECs). The ASTM Standard defines CRECs as

“a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

This assessment has revealed no evidence of CRECs in connection with the project site following the ASTM standard.

### **DEPARTMENT OF TOXIC SUBSTANCES CONTROL PROTOCOL**

Based on a review of historical information; structures have occupied the subject site since 1938. Due to the time period of the development of the subject site, the DTSC would require testing to assess for potential impacts to soil from lead-based paint and organochlorine pesticides from possible termiticide usage. PlaceWorks recommends a Phase I Addendum or a Preliminary Environmental Assessment be implemented to collect soil samples in the project area to assess the existing structures. Following DTSC's *Interim Guidance for Evaluating School Sites with Potential Soil Contamination as a result of Lead from Lead-Based Paint, Organochlorine Pesticides from Termiticides, and Polychlorinated Biphenyls from Electrical Transformers* dated June 2006.

### **SUMMARY**

Based on the results of this assessment, the site location is in a methane zone, is recorded on the LUST database, and based on the age of the structures, testing for lead and organochlorine pesticides would be needed for DTSC approval. PlaceWorks recommends a soil gas survey to assess the site for the potential LUST site and to address the methane zone REC, PlaceWorks recommends site methane testing, and development of corresponding mitigation measures, by city-approved vendor(s), in accordance with the city of Los Angeles methane ordinance (No. 175790), and in conjunction with the building permit approval process. Soil sampling around the base of the structures is recommended to assess for lead-based paint and potential termiticides following DTSC protocol.

It is PlaceWorks' professional opinion that an appropriate level of inquiry has been made into previous activities and uses of the Site in an effort to protect future occupants from significant exposures to hazardous substances. Section 17213 of the California Education Code and Section 21151.8 of the California Public Resources Code prohibit construction of a school upon a current or former hazardous waste disposal site or solid waste disposal site. Based on site inspection and information reviewed for preparation of this report, the project school site is not located on a current or former disposal site.

## Executive Summary

The remainder of this report contains additional information regarding the Phase I work performed, the findings summarized above, and any limitations.

# 1. Introduction

---

This Phase I Environmental Site Assessment (Phase I) was performed in general conformance with the scope and limitations of the American Society for Testing and Materials (ASTM) E 1527-13 Standard on behalf of Pacific Charter School Development (PCSD) for the proposed development of Rise Kohyang High School at 3500 West 1<sup>st</sup> Street, City of Los Angeles County, California (Figures 1 and 2). The Phase I was performed in conformance with the scope and limitations of the ASTM E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Exceptions to, or deletions from, this practice are described in Section 1 of this report. Our conclusions are intended to help the user evaluate the “environmental risk” associated with the site, as defined in the ASTM E 1527-13 Standard. Department of Toxic Substances Control (DTSC) guidelines for Phase I evaluations for school sites were also followed in preparing this assessment (DTSC 2001).

The approximately 1.15-acre site is identified with Assessor’s Parcel Numbers [APNs] 5501-014-004,-021,-022,-023,-024,-025. The site is currently occupied by the Good News Central Church and a single-family residence for the pastor. There are currently seven structures on the property associated with the church, two chapels, two storage sheds, one residence, one kitchen, and one structure for the International Youth Fellowship. The site is surrounded by a highly developed mix of commercial and residential properties. The site is approximately 0.460-mile southeast of the Hollywood Freeway (US-101) and is bounded by West 1<sup>st</sup> Street on the north and South Madison Avenue on the east. Regional access to the site is by West 1<sup>st</sup> Street. Figure 3 is an aerial photograph showing current site conditions and the outline of the site boundaries.

## 1.1 OBJECTIVES

The primary objective of the Phase I ESA was to identify historical and/or current activities that resulted in, or potentially could have resulted in, environmental impairment to the school Site through the release of hazardous substances (including petroleum compounds) to soil, soil vapor, groundwater, or surface water. Both on-site and off-site sources of potential environmental concern were considered. The possible presence of naturally-occurring hazardous materials, such as methane or radon, was also evaluated. Potentially hazardous environmental conditions, if identified, generally warrant additional investigation and/or a cleanup response. The objective of this assessment was to identify the potential presence of Recognized Environmental Conditions (RECs) in connection with the subject site. RECs are defined by ASTM as

“the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.”

In addition, the Standard requires the identification of historical RECs (HRECs) and known or suspect environmental conditions in the Phase I report. The standard defines historical RECs as

## 1. Introduction

“a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

The Standard also requires the identification of controlled RECs (CRECs). The ASTM Standard defines CRECs as

“a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

Our conclusions are intended to help the user evaluate the “environmental risk” associated with the site, defined by ASTM as “a risk which can have a material environmental or environmentally-driven financial impact on the business associated with the current or planned use of a parcel of commercial real estate. Consideration of environmental risk issues may involve addressing one or more non-scope considerations.”

## 1.2 SITE IDENTIFICATION

The 1.15-acre subject site is located at the of the corner of the intersection of West 1st Street and South Madison Avenue in Los Angeles, Los Angeles County, California (Figure 1). Figure 2, *Local Vicinity*, provides a map depicting the general location of the subject site and is identified with Assessor’s Parcel Number [APN] 5501-014-004,-021,-022,-023,-024,-025. The site is currently occupied by the Good News Central Church, associated with the address of 3500 West 1<sup>st</sup> Street, and a single-family residence, associated with the address of 119 S Madison Avenue. Other addresses associated with the site include: 3468, 3478 3474, 3470, 3464, 3506, and 3510 West 1<sup>st</sup> Street and 115 S Madison Avenue.

Bright Star Schools proposes to acquire the 1.15-acres subject site for the building of Rise Kohyang High School. The site is bounded by S Madison Avenue to the east and bounded by West 1<sup>st</sup> Street on the north. Regional access to the site is provided by West 1<sup>st</sup> Street. The subject site is surrounded by a mix of commercial and residential properties, with residential dwellings predominately clustered to the south and southeast and with commercial properties primarily south and south west of the subject site. The nearest school is Virgil Middle School, located to the north across 1<sup>st</sup> Street.

## 1.3 DETAILED SCOPE OF SERVICES

The Phase I ESA was conducted under the terms and conditions of PlaceWorks’ proposal to Bright Star (c/o Pacific Charter Schools Development [PCSD]), dated May 21, 2018. The scope of services was performed in substantial conformance with the United States Environmental Protection Agency (USEPA) *Standards and Practices for All Appropriate Inquiries* (40 CFR 312), the American Society for Testing and Materials (ASTM)

## 1. Introduction

*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (E 1527-13), and *ASTM Standard Practice for Vapor Encroachment Screening on Property Involved in Real Estate Transactions* (E 2600-15). PlaceWorks performed the following detailed scope of services to complete our Phase I assessment:

- 1) Visual observations of site conditions, and of adjoining property use, to evaluate the nature and type of activities that have been or are being conducted at and adjacent to the site, in terms of the potential for release or threat of release of hazardous substances or petroleum products.
- 2) Review of federal and state environmental database information within the ASTM- specified radii from the subject site using a database service to access records. Use of 7.5-minute topographic maps to evaluate the site's physical setting.
- 3) Review of federal and state environmental files, as necessary, pertaining to the subject site and nearby sites with the potential to impact the subject site.
- 4) Review of previous reports (if any) prepared for the subject site.
- 5) Review of historical aerial photographs.
- 6) Contacts with state and local agencies, as necessary, regarding the site and surrounding properties and structures.
- 7) Interviews with the Key Site Manager and property tenant representatives (if any). Interpretation of information and data assembled as a result of the above work tasks, and formulation of conclusions regarding the potential presence and impact of RECs as defined by the ASTM E 1527-13 Standard.

### 1.4 NON-SCOPE CONSIDERATIONS

The ASTM E 1527-13 Standard includes the following list of “additional issues” that are non-scope considerations outside of the scope of the ASTM Phase I practice: Asbestos-Containing Materials, Biological Agents, Radon, Lead-Based Paint, Lead in Drinking Water, Wetlands, Regulatory Compliance, Cultural and Historic Risks, Industrial Hygiene, Health and Safety, Ecological Resources, Endangered Species, Indoor Air Quality unrelated to releases of hazardous substances or petroleum products in the environment and mold.

A limited assessment of the presence of polychlorinated biphenyls (PCBs) is included in the ASTM work scope. Accordingly, the assessment of the presence of PCBs is limited to those potential sources specified in the ASTM E 1527-13 Standard as “electrical or hydraulic equipment known or likely to contain PCBs” to the extent visually and or physically observed or identified from the interview or records review.

### 1.5 EXCEPTIONS AND DEVIATIONS

PlaceWorks has completed this assessment in substantial conformance with ASTM E 1527-13. In our opinion, there were no exceptions, addition, deviations or deletions made to the ASTM work scope.

## 1. Introduction

### 1.6 LIMITATIONS

Our work for this project was performed generally consistent with the ASTM E 1527-13 Standard for Phase I Environmental Site Assessments. Several organizations other than ASTM, such as professional associations (e.g. ASFE and AGWSE) have also developed “guidelines” or “standards” for environmental site assessments. The Phase I presented herein is consistent with the ASTM E 1527-13 Standard, which may vary from the specific “guidelines” or “standards” required by other organizations.

This Report was prepared pursuant to an Agreement between the PCSD and PlaceWorks. All uses of this Report are subject to, and deemed acceptance of, the conditions and restrictions contained in the Agreement. The observations and conclusions described in this Report are based solely on the Scope of Services provided pursuant to the Agreement. PlaceWorks has not performed any additional observations, investigations, studies or other testing not specified in the Agreement. PlaceWorks shall not be liable for the existence of any condition the discovery of which would have required the performance of services not authorized under the Agreement.

This Report is prepared for the exclusive use of the PCSD in connection with the proposed acquisition of the subject site. There are no intended beneficiaries other than the PCSD. PlaceWorks shall owe no duty whatsoever to any other person or entity on account of the Agreement or the Report. Use of this Report by any person or entity other than the PCSD for any purpose whatsoever is expressly forbidden unless such other person or entity obtains written authorization from the PCSD and from PlaceWorks. Use of this Report by such other person or entity without the written authorization of the PCSD and PlaceWorks shall be at such other person’s or entity’s sole risk, and shall be without legal exposure or liability to PlaceWorks.

Use of this Report by any person or entity, including by the PCSD, for a purpose other than the site, is expressly prohibited unless such person or entity obtains written authorization from PlaceWorks indicating that the Report is adequate for such other use. Use of this Report by any person or entity for such other purpose without written authorization by PlaceWorks shall be at such person’s or entity’s sole risk and shall be without legal exposure or liability to PlaceWorks.

This Report reflects site conditions observed and described by records available to PlaceWorks as of the date of report preparation. The passage of time may result in significant changes in site conditions, technology, or economic conditions, which could alter the findings and/or recommendations of the report. Accordingly, the PCSD and any other party to whom the report is provided recognize and agree that PlaceWorks shall bear no liability for deviations from observed conditions or available records after the time of report preparation.

The findings, conclusions, and recommendations contained in this report are based on site conditions as they existed at the time of our investigation. Our review of documents, lists, databases, and public agency files have been conducted with due diligence. However, our conclusions are based on available information and are subject to constraints imposed by public agencies on review procedures and information retrieval. As a result, PlaceWorks may have been unable to identify potential concerns. PlaceWorks assumes no responsibility for conditions that did not come to our attention despite reasonable care, or for conditions that were not generally recognizable as environmentally unacceptable at the time of this report. Opinions and judgments

## 1. Introduction

expressed are based on our understanding and interpretations of currently available regulatory standards and should not be construed as legal opinions or advice.

Use of this Report by any person or entity in violation of the restrictions expressed in this Report shall be deemed and accepted by the user as conclusive evidence that such use and the reliance placed on this Report, or any portions thereof, is unreasonable, and that the user accepts full and exclusive responsibility and liability for any losses, damages or other liability which may result.

## 1. Introduction

*This page intentionally left blank.*

## 2. Site Description

---

### 2.1 SITE LOCATION

The site is located in the Wilshire Center neighborhood which consists of smaller neighborhoods of Koreatown and Little Bangladesh in the City of Los Angeles. The site is approximately 0.460-mile south of the Hollywood Freeway (US-101) and is bounded by West 1<sup>st</sup> Street on the north and South Madison Avenue on the east. Regional access to the site in the near future would be provided by West 1<sup>st</sup> Street. The site is approximately 1.1 mile northwest of MacArthur Park

#### 2.1.1 Name of Site Owner

The site is currently owned by the Good News Central Church. They are listed as the owners since 1998.

#### 2.1.2 Site Location Map

The United States Geological Survey (USGS) topographic maps for the site are the Hollywood, Los Angeles, and Santa Monica Series, California Quadrangle. The USGS topographic maps were used as the source for site setting information. The site is located in Los Angeles County at approximately 34.073172 north latitude and -118.289616 west longitude. The site is located in Section 19 of Township 01 South, Range 13 West of the San Bernardino Base Line and Meridian.

### 2.2 CURRENT SITE AND VICINITY DESCRIPTION

The 1.15-acre subject site is located at the southwest corner of the intersection of West 1<sup>st</sup> Street and South Madison Avenue in Los Angeles, Los Angeles County, California. Figure 1, *Regional Location*, provides a map depicting the general location of the Site that is associated with the address of 3500 West 1<sup>st</sup> Street and is identified with Assessor's Parcel Number [APN] 5501-014-004,-021,-022,-023,-024,-025. Other addresses associated with the site include: 3468, 3478 3474, 3470, 3464, 3506, and 3510 West 1<sup>st</sup> Street and 115 S Madison Avenue. The site is bounded by West 1<sup>st</sup> Street on the north and South Madison Avenue on the east.

The site is currently occupied by the Good News Central Church and a single family residence for the pastor of the church. Currently there are seven structures on the property. The structures consist of two chapels, one kitchen, one residence, two storage sheds, and a structure for the church's International Youth Fellowship. Access to the site is provided by West 1<sup>st</sup> Street and S Madison Avenue.

There have been structures on site since the late 1930s. According to information provided in the Los Angeles Zoning Information and Map Access System (ZIMAS), the single-family residence was built in 1938, the two story chapel was built in 1951, and the one story chapel was built in 1965. According to Sanborn Maps (included in Appendix A), in 1950 the site was occupied by a repair shop, a janitorial supply shop, a

## 2. Site Description

restaurant, an unidentified store, and a dwelling. In 1968 the site's repair shop appears to be occupied by a print shop. From 1950 to when the church appears to occupy the site around 1998, the site is used for commercial purposes.

Across 1st Street, north of the subject site, is Virgil Middle School which was constructed in the early 1920s. Directly south of the subject site are a cluster of residential properties.

### 2.3 DESCRIPTION OF ADJACENT OFF-SITE PROPERTIES

Based on observations during the Site reconnaissance, land uses for the properties that immediately border the Site are listed below.

**North** 1st Street borders the Site to the north followed by Virgil Middle School.

**East** Madison Avenue borders the site on the east followed by a small office building near 1st Street and single family residential.

**South** Multi-family and single-family residential borders the site on the southeast and a parking lot borders the site on the southwest followed by White House Place and more residential. An alley borders the Site to the south; beyond the alley is "Heart of Los Angeles" and the Bryson Apartments; Wilshire Blvd lies further south.

**West** A parking lot borders the site on the west followed by Bimini Place. West of Bimini Place is a small auto repair facility and multifamily residential.

The community that surrounds the Site currently is an urban mix of educational, residential and commercial development.

## 3. Environmental Setting

---

### 3.1 PHYSICAL SETTING

Subsurface explorations were not performed for this evaluation; therefore site geology and hydrology were evaluated on the basis of readily-available public information or references, and/or based upon our experience and understanding of subsurface conditions in the subject property area

### 3.2 TOPOGRAPHY

The Site and vicinity are depicted on the 2012 United States Geologic Survey (USGS) Hollywood, California 7.5 Minute Quadrangle. The geographic coordinates for the subject site are 34.073172 north Latitude and -118.289616 west Longitude. The subject site lies at an approximate elevation of 267.55' feet above sea level. The topography in the vicinity of the Site is hilly in places but generally flat, with a general gradient toward the west-southwest.

#### 3.2.1 Geologic Information

Subsurface investigations during the construction of the Metro Rail in Wilshire Boulevard approximately 4,000 feet to the south, indicated that the Puente Formation, with oil or tar accumulations, is present beneath the site at a depth of approximately 20 feet below grade surface (bgs). Data obtained from oil well logs indicate that the San Pedro Formation is missing and the Lakewood Formation is thinning out in this vicinity (CDWR, 1961). Folding and faulting of the relatively recent formations are associated with the active Elysian Park Anticlinorium.

There are several oil fields in close proximity to the site. The site is mapped on the Division of Oil, Gas and Geothermal Resources (DOGGR) as being located within the Los Angeles City Oil Field although there are no oil wells on the site or adjacent to the site. The petroleum sources in this region are mainly determined by structural elements, such as anticlines and faults, and/or stratigraphic elements of the basin. These elements provide hydrocarbon traps in which the crude oil may collect.

Based on the results of previous investigations implemented less than a mile of the Site, soils beneath the Site likely are predominantly underlain by variegated, finely laminated to homogeneous dark clays with silty clay inter-beds.

The subject site is not located within the boundary of the Alquist-Priolo special study zone and it is not located within an earthquake fault zone.

### 3. Environmental Setting

#### 3.2.2 Naturally Occurring Asbestos and Radon Gas

Based on a review of A General Location Guide for Ultramafic Rocks in California – Areas More Likely to Contain Naturally Occurring Asbestos (Department of Conservation, Division of Mines and Geology 2000) and Van Gosen and Clinkenbeard (2011), the site is not located within a ten-mile radius or downstream from an area thought to contain naturally occurring asbestos (NOA).

The Indoor Radon Abatement Act of 1988 directs the United States Environmental Protection Agency to identify and lists areas of the United States with the potential for elevated indoor radon levels. The U.S. EPA's Map of Radon Zones assigns one of three zones based on radon potential:

- Zone 1 counties have a predicted average indoor radon screening level greater than 4 pico curies per liter (pCi/L)
- Zone 2 counties with a predicted average indoor radon screening level between 2 and 4 pCi/L
- Zone 3 counties with a predicted average indoor radon screening level less than 2 pCi/L

The EDR GeoCheck report indicates that the site is within Zone 2 (Appendix A). The California Department of Health Services recommends action to be taken to reduce radon levels inside buildings if they are 4 pCi/L or greater.

#### 3.2.3 Hydrology: Groundwater and Surface Water Information

Based on an analysis of the topography in the subject site vicinity, sheet flow runoff from the site during periods of intense or prolonged precipitation would be expected to flow west-southwest. The subject site is not within a mapped flood zone.

The subject site is located in the area of the Exposition and Gardena aquifers of the Lakewood Formation. Surface water is expected to follow the direction of the ground slope, west-southwest. The nearest surface water body to the subject site is found in the MacArthur Park, which is approximately 1.08–miles southeast of the subject site. No active groundwater wells are listed as being present within the vicinity or within one mile of the subject site. Water is supplied to the subject site by the City of Los Angeles through municipal supply lines and hookups.

Hydrological investigations were not performed on the subject site for this investigation; therefore it is unknown to what extent localized variations in groundwater presence and flow occur on the site.

#### 3.2.4 Sensitive Receptors and Ecological Features

The subject site is located in City of Los Angeles, in a part of the city that has been highly developed for many decades. Therefore, sensitive environmental receptors such as wetlands or endangered species are not present on or near the subject site. The area the subject site is in does not readily support threatened or endangered species or habitat critical for such species, and there does not appear to a significant pathway of

### 3. Environmental Setting

exposure to ecologically sensitive species. Sensitive human receptors located within 0.25 mile radius of the Site include one day care facility, one medical facility, and four schools.

### 3. Environmental Setting

*This page intentionally left blank.*

## 4. Historical Documents Review

---

Past usage of the site was assessed through review of historical aerial photographs, topographic maps, and databases. Copies of historical information reviewed are included in Appendix A.

### 4.1 PREVIOUS REPORTS

A Preliminary Environmental Transaction Screen Assessment prepared in 2016 by Western Environmental Engineers Co (WEECO) was reviewed for the project site. WEECO reported that the site was identified on the Leaking Underground Storage Tank (LUST) list on Regional Water Control Board's GeoTracker website. The reports indicated that the tank was used by the Pedus Services facility that occupied the site in the 1980s and regulatory closure was obtained in 1996. The WEECO report indicated that the tank was removed and provided the file they reviewed. PlaceWorks reviewed the RWQCB file and did not find any mention that the tank was removed. WEECO indicates in their assessment that the LUST site is an environmental concern.

### 4.2 PAST USAGE OF THE SITE

The subject site was first developed on in the late 1930s. According to the section 4.2.2, the Sanborn maps show the subject site was developed for commercial use. By 1950 the subject site was occupied by a repair shop, a janitorial supplies store, a restaurant, an unlabeled store, and a dwelling. In 1968 the subject site continued to have similar commercial buildings as it did in 1950, but in addition, there was also an office building present. The Good News Central Church appears to occupy the subject site from at least 2006 to present.

#### 4.2.1 Historical Aerial Photographs

Aerial photographs for the site obtained from EDR for the years of 1923, 1928, 1938, 1948, 1952, 1954, 1964, 1972, 1977, 1981, 1989, 1994, 2002, 2009, and 2012. Copies of the aerial photographs from the EDR report are included in Appendix A.

- 1923 – The site is an empty vacant lot and appears to be an open field with no structures present on the site. There are a handful of trees on the northeast corner. The surroundings appear mostly residential with vacant land to the east and Virgil Middle School is located to the north.
- 1928 – The site appears to still be an open field. The trees in the northeast corner are primarily gone and land to the east is being developed.
- 1938 – There appears to be two structures now located in the northeastern area of subject site along W. 1<sup>st</sup> Street.

## 4. Historical Documents Review

- 1948 – Two more structures appear in the northern corner of the subject site. There also appears to be another structure along the southeast corner. Development in the surrounding area continues to increase.
- 1952 – The site appears relatively unchanged in comparison to the 1948 aerial photograph. The US-101 (Hollywood Freeway) is now built to the north of the subject site.
- 1954 – The site appears relatively unchanged in comparison to the 1952 aerial photograph.
- 1964 – There are more structures along the southern edge of the subject site. The structures to the northern edge appear to have expanded.
- 1972 – There is a new structure in the western corner of the subject site. There are now a total of three buildings along the southern end and there appear to be two structures in the northern corner of the site.
- 1977 – The site and surrounding area appear relatively unchanged in comparison to the 1972 aerial photograph.
- 1981 – The site and surrounding area appear relatively unchanged in comparison to the 1977 aerial photograph.
- 1989 – The site appears to have one structure in the northern corner, one in the center of the parcel, and one in the southeast corner.
- 1994 – The site and surrounding area appear relatively unchanged in comparison to the 1989 aerial photograph.
- 2002 – The site and surrounding area appear relatively unchanged in comparison to the 1994 aerial photograph.
- 2005 – The site and surrounding area appear relatively unchanged in comparison to the 2002 aerial photograph.
- 2009 – The site and surrounding area appear relatively unchanged in comparison to the 2005 aerial photograph.
- 2012 – The site and surrounding area appear relatively unchanged in comparison to the 2009 aerial photograph.

### 4.2.2 Historical Sanborn Maps

Sanborn maps for the site obtained from EDR for the years of 1907, 1921, 1950, 1954, 1955, 1961, 1968, and 1970. Copies of the Sanborn maps from the EDR report are included in Appendix A.

- 1907 – Site is just outside the mapped portion of the Sanborn map.

## 4. Historical Documents Review

- 1921 – Site is depicted as vacant property along W. 1<sup>st</sup> Street. Dwellings and flats are depicted on the parcel southwest of the subject site. Northwest of the site is the Virgil Intermediate School and auditorium.
- 1950 – There is a repair shop depicted in the northeastern corner with a janitorial supplies shop adjacent to the west. Adjacent to the west of the janitorial supplies shop is a restaurant. A little southwest of the restaurant, another store is present. In the southeast corner of the site is a dwelling structure, which is potentially the same residential structure that is present at the site as of today. Along the southwestern edge of the site, two structures are depicted and labeled as being made out of reinforced concrete (gunite). The Virgil Intermediate School is now labeled as Virgil Junior High School and has increased the number of classroom buildings. Northeast of the site, on the intersection of W. 1<sup>st</sup> Street and what is now N. Westmoreland Avenue there is an outline of an oil and gas facility along with manufacturing buildings. East of the site is a mix of commercial facilities and residential dwellings.
- 1954 – The site appears relatively unchanged in comparison to the 1950 Sanborn map.
- 1955 – The site appears relatively unchanged in comparison to the 1954 Sanborn map.
- 1961 – The site appears relatively unchanged in comparison to the 1955 Sanborn map.
- 1968 – The repair shop in the northern corner is now labeled as a printing store. The janitorial supplies store is now Janitorial Supplies wholesale and has moved to the buildings along the southwest edge of the site. What used to be the Janitorial Supplies store is now simply labeled “store”. The restaurant is still depicted and the store southwest of the restaurant is also still present. Now occupying the northwest corner of the site is an office building which is currently the chapel building.
- 1970 – The site appears relatively unchanged in comparison to the 1968 Sanborn map.

### 4.2.3 Historical Topographic Maps

Topographic maps obtained from EDR were reviewed for the subject site for the years of 1894, 1896, 1898, 1900, 1902, 1920, 1921, 1926/1928, 1953, 1966, 1972, 1981, 1991, and 2012. Copies of the topographic maps are included in Appendix A.

- 1894 – No structures are depicted on the subject site. Railroad tracks run north and east southeast of the subject site. There are a few sparse structures depicted in the surrounding area, the densest concentration is southeast of the subject site.
- 1896 – The site appears relatively unchanged in comparison to the 1894 topographic map.
- 1898 – The site appears relatively unchanged in comparison to the 1896 topographic map.
- 1900 – The site appears relatively unchanged in comparison to the 1898 topographic map.
- 1902 – The site appears relatively unchanged in comparison to the 1900 topographic map.

## 4. Historical Documents Review

- 1920 –Railroad tracks are gone and development in the surrounding area has exploded. The site still appears vacant. Structures appear adjacent to the east of the subject site.
- 1921 – The site appears relatively unchanged in comparison to the 1920 topographic map.
- 1926/1928 – The subject site still appears to be vacant. A school structure has appeared northwest of the subject site. Structures directly south of the site are now depicted.
- 1953 – The subject site is on an area of the topographic map that is highlighted in omission tint, reflecting the buildup in the surrounding area. However, Virgil Junior High School is still depicted.
- 1966 – The subject site is on an area of the topographic map that is highlighted in omission tint, reflecting the buildup in the surrounding area.
- 1972 – The subject site is on an area of the topographic map that is highlighted in omission tint, reflecting the buildup in the surrounding area.
- 1981 – The subject site is on an area of the topographic map that is highlighted in omission tint, reflecting the buildup in the surrounding area.
- 1991 – The subject site is on an area of the topographic map that is highlighted in omission tint, reflecting the buildup in the surrounding area.
- 2012 – No buildings are depicted and the site appears unchanged in comparison to the 1991 topographic map.

### 4.2.4 Building Permits

The Build Permits Report provided by EDR identified twenty-six building permit items that were listed for the subject site addresses of 3500 West 1<sup>st</sup> Street, 115 South Madison Avenue, and 119 South Madison Avenue. The building permits searched by EDR were for the years 1988 through 2018 with the City of Los Angeles Department of Building and Safety. Most of the building permits related to routine building activities, including plumbing, electrical repair, HVAC, updating disability access, and general building repairs. A second floor was added to a one-story fellowship room in 2004. The EDR Building Permit Report is included in Appendix A.

### 4.2.5 City Directory Review

EDR provided an EDR-City Directory of the subject site located at 3500 W. 1<sup>st</sup> Street and is included in Appendix A. City Directory data was searched for the years spanning 1920 through 2014. The project site, located at 3500 W. 1<sup>st</sup> Street, it is identified in 1942 as a restaurant belonging to Prose Harrison. The subject site is then listed from 1971 through 1981 as being the location of Kinney National Maintenance INC. From 1981 through to 1990 the subject site is occupied by Kinney National Maintenance and Pedus Services INC. In 2006, the City Directory lists the subject site as the location of the Good News Central Church.

## 4. Historical Documents Review

### Directory listings for Site Address 3464, 3470, 2474, 3500 W 1<sup>st</sup> Street and 119 Madison Avenue

Address	Occupant	Years
3464 W 1 <sup>st</sup> Street	Refrigeration Supplies	1951, 1958
3470 W 1 <sup>st</sup> Street	Pac Exterminating Company, Commercial Soap and Supply and Ball Co.	1951
3470 W 1 <sup>st</sup> Street	Ball AW Company Janitorial Supplies	1958
3470 W 1 <sup>st</sup> Street	Holiday Candy	1967
3478 W 1 <sup>st</sup> Street	Tested Products Co	1951, 1958
3478 W 1 <sup>st</sup> Street	Belmont Draperies	1967
3500 W 1 <sup>st</sup> Street	Good News Central Service, International Youth Fellowship, Pedus Aviation Services	2014, 2010
3500 W 1 <sup>st</sup> Street	Central Church Good News	2006
3500 W 1 <sup>st</sup> Street	Pedus Building Services	1995, 1985
3500 W 1 <sup>st</sup> Street	National Cleaning Company, Pedus Building Services, Pedus Food services, Pedus Hospital Services, Pedus Security Services	1990, 1986, 1981
3500 W 1 <sup>st</sup> Street	Kinney National Maintenance Service, Kinney National Management, National Carpet Care, National Cleaning, National Protection Services Kinney, Western Building Maintenance, Western Guard Service	1981, 1975, 1971, 1967
3500 W 1 <sup>st</sup> Street	Prose Harrison Restaurant	1942
119 Madison Avenue	Christine Eaves	2000, 2006
119 Madison Avenue	John Manning	1981
119 Madison Avenue	Marie Mikova	1962, 1958, 1942

## 4. Historical Documents Review

### Directory listings for Site Address 3464, 3470, 2474, 3500 W 1<sup>st</sup> Street and 119 Madison Avenue

Address	Occupant	Years
115 Madison Avenue	Peter Dussman	2000

### 4.2.6 Historical Uses of Surrounding Properties

Looking at the Sanborn Maps, provided by EDR and included in Appendix A, in 1907 the area around the subject site was largely unmapped. Bimini Avenue is shown, however, and there appears to be an Inn on the west side of the street and a bath house on the southeast side. In 1921, West 1<sup>st</sup> Street is now depicted and shows Virgil Intermediate School directly northwest of the subject site. Dwelling and flats are shown south of the subject site and the Inn on Bimini Avenue, shown on the 1907 map, is now the Comnock School of Expression and Academy for Women. The 1950s map reflect the massive development of the City of Los Angeles, as there are now commercial buildings northeast and directly east of the subject site. More dwellings are south, southeast, and southwest of the subject site. The Comnock School of Expression is now a movie theater with Bimini Lodge directly south. In 1954 the only changes shown are the conversion of Bimini Lodge into the 155 Hotel and the movie theater is now labeled the Los Angeles Revival Center. Surrounding the subject site is predominately a highly developed mix of commercial and residential properties, which is current status quo for the area.

### 4.2.7 Prior Agricultural Uses

Based on the review of historical sources (aerial photographs and topographic maps), there is no evidence to indicate that the site was ever utilized for agricultural purposes.

### 4.2.8 Mines

Based on the review of historical sources (aerial photographs and topographic maps), there is no evidence to indicate that the site was ever utilized for mining operations.

### 4.2.9 Illegal Drug Manufacturing

The proposed site was not identified by the California Hazardous Material Incident Report System (CHMIRS) which is maintained by the California Office of Emergency Services and contains information regarding hazardous material incidents such as accidental releases or spills. The site was also not identified on Clandestine Drug Labs (CDL), a listing of drug lab locations maintained by the DTSC. Drug-related waste was not observed on the site during the site inspection.

### 4.2.10 Prior U.S. Government Ownership

Based on the review of the County Tax Assessor website, EDR reports, historical aerial photographs and topographic maps, the site appears to have been vacant land until development started in the 1930s with a

## 4. Historical Documents Review

combination of shops, restaurant and dwelling. There is no indication that the property was owned by the U.S. Government or utilized for military operations.

### 4.3 SURROUNDING PROPERTY LAND USES

The surrounding properties have been developed since the early 1900s. Currently the surrounding areas are highly developed with mixed land uses including schools, commercial and residential properties. Residential dwellings are predominately clustered to the south and southeast and commercial properties are generally spread out, but are mostly south and south west of the subject site. The nearest school to the subject site is the Virgil Middle School which has been located to the north of the site across 1<sup>st</sup> Street since at least the 1920s. Other non-residential property use in the surrounding area includes the Vermont/Beverly Metro Station, approximately 1,530 feet north-northeast of the subject site. Additionally, approximately 1,877 feet north-northeast of the subject site is the California Highway Patrol station.

## 4. Historical Documents Review

*This page intentionally left blank.*

## 5. Environmental Records Review

### 5.1 STANDARD ENVIRONMENTAL RECORDS REVIEW

PlaceWorks utilized the electronic database service EDR to complete the environmental records review. The database search was used to identify properties that may be listed in the referenced Agency records, located within the American Society for Testing and Materials (ASTM)-specified search radii indicated below:

Database	Approximate Search Distance	Subject Site Listed?	Number of Sites within Search Area
Federal NPL Sites	1 mile	No	0
Federal Delisted NPL Sites	0.5 mile	No	0
CERCLIS Sites	0.5 mile	No	0
CERCLIS-NFRAP Sites	0.5 mile	No	2
Federal ERNS	Site only	No	0
RCRA non-CORRACTS TSD Facilities	0.5 mile	No	0
RCRA CORRACTS Facilities	1 mile	No	0
RCRA Generators	Site & Adjoining	No	19
Federal Institutional/Engineering Control Registry	Site Only	No	0
State and Tribal Equivalent NPL Sites	1 mile	No	0
State and Tribal Equivalent CERCLIS Sites	0.5 mile	No	23
State and Tribal Registered Storage Tanks	Site & Adjoining	No	6
State and Tribal Landfills and Solid Waste Disposal Sites	0.5 mile	No	0
State and Tribal Leaking Storage Tanks	0.5 mile	Yes	33
State and Tribal Institutional Controls/Engineering Control	Site Only	No	Not Applicable
State and Tribal Voluntary Cleanup Sites	0.5 mile	No	1
State and Tribal Brownfield Sites	0.5 mile	No	0
Orphan Site List	Site & Adjoining	No	2
HAZNET	Site Only	Yes	1

A review of selected regulatory agency databases for documented environmental concerns on the site, or in close proximity to the site, was conducted by EDR. A copy of the radius report, dated May 24, 2018 is included in Appendix B. The project site was listed on the leaking underground storage tank database.

#### 5.1.1 NPL Sites

The National Priorities List (NPL) is a list of contaminated sites that are considered the highest priority for clean-up by the EPA.

- The subject site is not listed on the NPL List.
- The database did not identify any NPL sites within a mile radius of the subject site.

## 5. Environmental Records Review

### 5.1.2 Federal Delisted NPL Sites

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425. (e), sites may be deleted from the NPL where no further response is appropriate.

- The subject site is not listed on the delisted NPL List.
- The database did not identify any delisted NPL sites within a mile radius of the subject site.

### 5.1.3 CERCLIS Sites

The Comprehensive Environmental Response, Compensation, and Liability Act Information System (CERCLIS) list identifies sites which are suspected to have contamination and require additional investigation to assess if they should be considered for inclusion on the NPL.

- The subject site is not listed on the CERCLIS List.
- The database search did not identify any CERCLIS listings within a one-half mile radius of the subject site.

### 5.1.4 CERCLIS-NFRAP Sites

CERCLIS-NFRAP status indicates that a site was once on the CERCLIS List but has No Further Response Actions Planned (NFRAP). Sites on the CERCLIS-NFRAP List were removed from the CERCLIS List in February 1995 because, after an initial investigation was performed, no contamination was found, contamination was removed quickly, or the contamination was not significant enough to warrant NPL status.

- The subject site is not listed on the CERCLIS-NFRAP List.
- The database search identified two CERCLIS-NFRAP sites within a one-half mile radius of the subject site.
  - Trust Services of America located at 220/222 North Juanita Avenue, approximately 0.128-mile northwest from the subject site, is listed because it was one of many potential and/or existing school sites in the Los Angeles area that the Department of Toxic Substance Control [DTSC] and Los Angeles Unified School District [LAUSD] slated to have a Preliminary Endangerment Assessment (PEA) done in 2000. No contaminants were found and the regulatory status is listed as “no action required as of May 17, 2002. This is not expected to impact the subject site. (Central Region Elementary School #20 is also listed as part of this site).
  - Culligan Deionized Water Services located at 315 Hoover Street, approximately 0.365-mile northeast from the subject site, is listed for a permit it received in 1981 and it has been closed since July 13, 1987. Due to regulatory status, this is not expected to impact the subject site.

## 5. Environmental Records Review

### 5.1.5 RCRA CORRACTS Facilities

The RCRA CORRACTS Facilities list catalogues facilities that treat, store, or dispose of hazardous waste and have been associated with corrective action activity.

- The subject site is not listed as a RCRA CORRACTS TSD facility.
- The database search did not identify any RCRA CORRACTS TSD facilities within a one-mile radius of the subject site.

### 5.1.6 RCRA Non-CORRACTS TSD Facilities

The Resource Conservation and Recovery Act (RCRA) non-CORRACTS TSD Facilities List tracks facilities which treat, store, or dispose of hazardous waste and are not associated with corrective action activity.

- The subject site is not listed as a RCRA non-CORRACTS TSD facility.
- The database search did not identify any RCRA non-CORRACTS TSD facilities within a one-half mile radius of the subject site.

### 5.1.7 RCRA Generators

The RCRA Generator list is maintained by the EPA to track facilities that generate hazardous waste.

- The subject site is not on the RCRA Generators list.
- The database search identified fifteen RCRA Generators within a quarter mile radius of the subject site.
  - Dirt Busters located at 124 S Vermont, approximately 0.102 southwest of the subject site, is listed as a small quantity generator. On the EPA Enforcement and Compliance History database they are listed as having no history of violations.
  - Sejin Auto Repair located at 150 S Bimini Place, approximately 0.079-mile south of subject site, is listed as a small quantity generator of a solvent mixture that gets transported offsite for recycling. On the EPA Enforcement and Compliance History database they are listed as having no history of violations.
  - Midway Ford Body Shop located at 206 N Juanita Avenue, approximately 0.095-mile north of the subject site, is listed as a small quantity generator. On the EPA Enforcement and Compliance History database they are listed as having no history of violations. (This site is listed twice on the EDR, but it is the same case and site).

## 5. Environmental Records Review

- American Industrial Services located at 201 N Westmorland, approximately 0.099-mile northeast of the subject site, is listed due to a leak that was reported on May 26, 1993. The regulatory status of the case is listed as completed and case closed as of August 13, 1996.
- Los Angeles Unified School District Virgil Junior High School located at 152 N Vermont Avenue, White House Place located at 108 S Bimini Place, and Central Region Elementary School located at 3600 W Council Street approximately 0.102-mile north of the subject site, is listed because the site is under the oversight of the DTSC with ongoing operations and maintenance. However, since the site is actively being monitored and the school is still open this is not expected to impact the subject site. (Virgil High School, 108 S Bimini Place, and Central Region Elementary School are listed separately on the EDR although they are the same site).
- Daily Racing Form INC located at 170 S Bimini Place, approximately 0.108-mile southwest of the subject site, is listed as a small quantity generator. On the EPA Enforcement and Compliance History database they are listed as having no history of violations.
- Newell Colour Lab located at 221 N Westmoreland Avenue, approximately 0.121-mile northeast of the subject site, is listed because before the facility was occupied by Central City Value High School, the Newell Colour Lab performed photo processing and printing services. Soil sampling for petroleum hydrocarbons was done in 2001 as the site was being considered for building the Central City Value High School. Currently, the site is listed as inactive as November 8, 2005.
- Bogarz INC is located at 137 N Virgil Avenue, approximately 0.137-mile northeast of the subject site, is listed because there was a leak of gasoline reported on May 4 1994, at the Silverlake Car Wash across the street (3595 Beverly Boulevard). The case is listed as completed and case closed as of February 25, 1998.
- ICC Collision Centers located at 3415 W. 2<sup>nd</sup> Street, approximately 0.141-mile south of the subject site, is listed as a small quantity generator. They are listed on the EDR database as having no violations listed.
- Del Olmo Elementary School located at 100 N. Hampshire Avenue, approximately 0.159-mile west of the subject site, is listed because before the school was built the facility was 3 acres of commercial and residential property that had 144 tons of lead-contaminated soil removed in 2002. The cleanup status is listed as certified as of March 26, 2007.
- Dunlee Corp located at 3644 Beverly Boulevard, approximately 0.196-mile northeast of the subject site, is listed because of a gasoline leak when the site was McClelland Property/Arco. The case is listed as completed and case closed as of June 28, 1996.
- Chevron Station 90373 located at 3631 Beverly Boulevard, approximately 0.201-mile northeast of the subject site, is listed because of a gasoline leak reported on October 27, 1989. The case is listed as completed and case closed as of September 19, 1996.

## 5. Environmental Records Review

- Dewey Pest Control located at 3711 Beverly Boulevard, approximately 0.26-mile north of the subject site, is listed as a small quantity generator that uses transfer station to dispose of organic residue. On the EPA Enforcement and Compliance History database they are listed as having no history of violations. They are also listed as an underground storage tank site (UST) with a permit from the City of Los Angeles.
- Big 7 Photo located at 205 S Vermont Avenue, approximately 0.219-mile southwest of the subject site, is listed as a small quantity generator. On the EPA Enforcement and Compliance History database they are listed as having no history of violations.
- J.P. Carrol Company located at 310 N. Madison Avenue, approximately 0.244-mile north of the subject site, is listed because in 1994 two UST were removed the property owner never received a closure letter. On October 1, 2015 soil sampling was conducted contaminants of concern were not detected. On January 6, 2016 the Regional Board reviewed the case and determined that no further action is required and no case would be opened.

### 5.1.8 Federal Institutional Control / Engineering Controls

A listing of sites with institutional and or engineering controls in place is maintained by the EPA. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

- The subject site is not listed as having an institutional or engineering control.

### 5.1.9 Federal ERNS List

The Emergency Response Notification System records and stores information on reported releases of oil and hazardous substances. The list is maintained by the National Response Center United States Coast Guard.

- The subject site is not listed on the ERNS List.

### 5.1.10 State-and Tribal- equivalent NPL

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

- The subject site is not listed on state- and tribal-equivalent NPL.
- The database search did not identify any state-and tribal equivalent NPL sites within a one mile radius of the subject site.

## 5. Environmental Records Review

### 5.1.11 State and Tribal- equivalent CERCLIS

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

- The subject site is not listed on state- and tribal- equivalent CERCLIS.
- The database search identified twenty-three state- and tribal- equivalent CERCLIS sites within a mile radius of the subject site.
  - Central Region Elementary School #20 is listed under the RCRA Generator list.
  - Belmont New Primary Center No. 2 is part of the Central Region Elementary School #20 et al. case listed under the RCRA Generator list.
  - Newell Colour Lab is listed under the RCRA Generator list.
  - Crossroads Trust is listed but is the same case and address as Newell Colour Lab which is listed under the RCRA Generator list.
  - Belmont New Elementary No. 6 is the same as the Del Olmo Elementary School case listed under the RCRA Generator list.
  - Trust Services of America is listed under the CERCLIS-NFRAP list.
  - Camino Nuevo Charter Academy Planned School located at 3400 West 3<sup>rd</sup> Street, approximately 0.268-mile south of the subject site, is listed because the area was being considered for the Camino Nuevo Charter Academy, which currently occupies the location. Soil sampling was approved by the DTSC to test for lead based paint and organochloride pesticides due to previous existing structures. On March 5, 2015 DTSC confirmed that no further action was needed for the case.
  - Commonwealth Elementary School Addition located at 215 South Commonwealth Avenue, approximately 0.270-mile southeast of the subject site, is listed because the site is under the oversight of the DTSC with ongoing operations and maintenance. The school has a subsurface gas mitigation system installed to monitor for potential methane infiltration and accumulation. The case is listed as certified/operations and maintenance as of December 29, 2009.

## 5. Environmental Records Review

- Gore Graphics located at 340 N. Madison Avenue, approximately 0.248-mile north of the subject site, is listed because they filed for a permit with the DTSC around 2001.
- Belmont/Hollywood No. 1 located at Oakwood Avenue/Juanita Avenue, approximately 0.287-mile north of the subject site, is listed because it was one of many potential and/or existing school sites in the Los Angeles area that the Department of Toxic Substance Control [DTSC] and Los Angeles Unified School District [LAUSD] slated to have a Preliminary Endangerment Assessment (PEA) done in 2000.
- Pueblo Nuevo Charter Academy located at 3501-3515 W Temple Street and 325 North Hoover, approximately 0.357-mile northeast of the subject site, is listed because as part of the Camino Nuevo Charter Academy development in the surrounding area the site under went three phases of soil removal action before it was turned into the current athletic complex. The case is listed as certified as of October 20, 2011.
- Culligan Deionized Water Services is listed under the CERCLIS-NFRAP list.
- Dayton Heights Elementary School Playground located at 607 N Westmoreland Avenue, approximately 0.629-mile north of the subject site, is listed because it was one of many potential and/or existing school sites in the Los Angeles area that the Department of Toxic Substance Control [DTSC] and Los Angeles Unified School District [LAUSD] slated to have a Preliminary Endangerment Assessment (PEA) done in 2000. The facility expanded and was certified on February 6, 2003.
- Belmont Primary Center No. 1 located at 610 Micheltorena Street, approximately 0.642-mile northeast of the subject site, is listed because it was one of many potential and/or existing school sites in the Los Angeles area that the Department of Toxic Substance Control [DTSC] and Los Angeles Unified School District [LAUSD] slated to have a Preliminary Endangerment Assessment (PEA) done in 2000. The facility expanded sometime in 2001 and the DTSC found nothing that required further action and the case was listed as so on September 9, 2001.
- Belmont/Hollywood Primary Center No. 2 located at 310 S Lafayette Park Place, approximately 0.662-mile southeast of the subject site, is listed because it was one of many potential and/or existing school sites in the Los Angeles area that the Department of Toxic Substance Control [DTSC] and Los Angeles Unified School District [LAUSD] slated to have a Preliminary Endangerment Assessment (PEA) done in 2000. The case is currently listed as requiring no further action as of April 2, 2002.
- Cahuenga Elementary School Site No. 12 located at Mariposa Avenue/Fifth Street/ Alexandria Avenue, approximately 0.704-mile southwest of the subject site, is listed because it was one of many potential and/or existing school sites in the Los Angeles area that the Department of Toxic Substance Control [DTSC] and Los Angeles Unified School District [LAUSD] slated to have a Preliminary Endangerment Assessment (PEA) done in 2000.

## 5. Environmental Records Review

- Central Los Angeles Middle School No. 3 located at Vermont Avenue/ Wilshire Boulevard, approximately 0.778-mile south of subject site, is listed because it was one of many potential and/or existing school sites in the Los Angeles area that the Department of Toxic Substance Control [DTSC] and Los Angeles Unified School District [LAUSD] slated to have a Preliminary Endangerment Assessment (PEA) done in 2000. On January 1, 2007 the DTSC certified that no further action is necessary for the case.
- Terminix located at 2828 London Street, approximately 0.804-mile east of the subject site, is listed because of a voluntary cleanup agreement with the DTSC. The case is listed as still active as of February 2, 2018.
- Cahuenga Elementary School Site No. 11 located at Harvard Boulevard/Third Street/Hobart Boulevard, approximately 0.810-mile southwest of the subject site, is listed because it was one of many potential and/or existing school sites in the Los Angeles area that the Department of Toxic Substance Control [DTSC] and Los Angeles Unified School District [LAUSD] slated to have a Preliminary Endangerment Assessment (PEA) done in 2000.
- Alexandria New Elementary School No.1 located at Beverly Boulevard/North Harvard Boulevard, approximately 0.861-mile west of the subject site, is listed because it was one of many potential and/or existing school sites in the Los Angeles area that the Department of Toxic Substance Control [DTSC] and Los Angeles Unified School District [LAUSD] slated to have a Preliminary Endangerment Assessment (PEA) done in 2000. The case is listed as not requiring any further action as of July 1, 2003.
- Ambassador Hotel (Former) located at 3400 Wilshire Boulevard, approximately 0.891-mile southwest of the subject site, is listed because there was a leak of gasoline reported February 19, 1997. The case is listed as completed and case closed as of December 18, 1997.
- West Fourth Street Site located at 2424 West 4<sup>th</sup> Street, approximately 0.931-mile southeast of the subject site, is listed as requiring no further action by the DTSC as of May 3, 1993.
- Sav-Mor Oil Company located at 4217 W 3<sup>rd</sup> Street, approximately 0.971-mile southeast of the subject site, is listed both as a LUST cleanup site that is listed as completed and case closed as of September 26, 1996 and because they filed for a UST permit.

### 5.1.12 State and Tribal- equivalent Landfill and/or Solid Waste Disposal Sites

The database search did not identify any State Landfills or Solid Waste Disposal Sites within a one-half mile radius of the subject site.

- The subject site is not listed on state- and tribal- equivalent landfill and/or solid waste disposal site lists.

## 5. Environmental Records Review

- The database did not identify any state-and tribal equivalent landfill and/or solid waste disposal site within a half mile radius of the subject site.

### 5.1.13 State and Tribal Leaking Underground Storage Tanks

The State Water Resources Control Board Leaking Underground Storage Tank Information System contains an inventory of Leaking Underground Storage Tank (LUST) Incident Reports.

- The subject site is listed on the State and Tribal LUST list.
  - On November 7, 1986 a leak of gasoline was discovered and on November 21, 1986 the leak was stopped. The case is currently listed as complete and case closed as of July 23, 1996. Due to this leak happening over 30 years ago and current regulatory status, this is expected to be a non-issue for the subject site.
- The database search identified thirty-three LUST facilities within a half-mile radius of the subject site.
  - American Industrial Service is listed under RCRA Generator list.
  - Columbia Pest Control located at 101 N Virgil Avenue, approximately 0.115-mile east of the subject site, is listed because of a leak of a solvent or non-petroleum hydrocarbon on July 17, 1991. The case is currently listed as completed and case closed as of September 6, 1996.
  - Midway Motors INC located at 200 N Vermont Avenue, approximately 0.137-mile northwest of the subject site, is listed because of a leak reported May 29, 1996.
  - Seong K Kim located at 3560 Beverly Boulevard, approximately 0.148-mile east of the subject site, is listed because of leak of diesel on March 1, 1990. The case is currently listed at completed and case closed as of April 1, 2010.
  - Belmont New Primary Center No.2 is listed under the state- and tribal- equivalent CERCLIS list.
  - Bogarz INC is listed under the RCRA Generators list.
  - Dunlee Corp is listed under the RCRA Generators list.
  - McClelland/Western Exterm located at 3654 Beverly Boulevard, approximately 0.190-mile northeast from the subject site, is listed because of a kerosene leak reported November 30, 1989. The case is currently listed as completed and case closed as of June 20, 1996.
  - Chevron Station 90373 is listed under the RCRA Generators list.

## 5. Environmental Records Review

- Panglossian Development Corporation located at 240 N Virgil Avenue, approximately 0.212-mile northeast from the subject site, is listed because of a gasoline leak reported on July 3, 1987. Currently the case is listed as completed and case closed as of May 14, 1998.
- Arco (Former) located at 3737 Beverly Boulevard, approximately 0.214-mile north of the subject site, is listed because of a gasoline leak reported on June 21, 1990. Currently the case is listed as completed and case closed as of December 11, 2013. (This site and address is listed on the EDR twice, but they are the same case).
- Service Station 6377 located at 304 N Vermont Avenue, approximately 0.244-mile northwest from the subject site, is listed because of a gasoline leak reported September 16, 1992. Currently the case is listed as completed and case closed as of November 14, 1996.
- 76 Station #2705706 located at 304 N Vermont Avenue, approximately 0.244-mile northwest from the subject site, is listed because of a gasoline leak reported June 14, 1995. Currently the case is listed as completed and case closed as of August 1, 2017.
- Mobil Service Station located at 301 N Virgil Street, approximately 0.250-mile northeast of the subject site, is currently listed because of a gasoline leak reported on May 14, 1984. Currently the case is listed as completed and case closed as of July 17, 1996.
- AT&T Former SBC located at 316 Juanita Avenue, approximately 0.253-mile north of the subject site, is listed because of a gasoline leak reported on November 17, 2004. Currently the case is listed as completed and case closed as of April 10, 2009.
- Tosco-76 Station #3472 located at 3501 3<sup>rd</sup> Street, approximately 0.286-mile southwest of the subject site, is listed because of a gasoline leak reported November 18, 1992. Currently the case is listed as completed and closed as of January 31, 2018.
- Pacific Bell (G1-185) located at 3804 Oakwood Avenue, approximately 0.291-mile north of the subject site, is listed because of a diesel leak reported January 13, 1990. Currently the case is listed as completed and closed as of October 17, 1996.
- Fire Station #6 located at 326 N Virgil Avenue, approximately 0.310-mile northeast from the subject site, is listed because of a gasoline leak reported July 1, 1990. Currently the case is listed as completed and closed as of November 16, 2009.
- Shell Oil Service located at 341 N Virgil Avenue, approximately 0.317-mile northeast from the subject site, is listed because of a gasoline leak reported April 13, 1989. Currently the case is listed as completed and closed as of July 18, 1996. (This site and address is listed twice in the EDR, but it is the same case).

## 5. Environmental Records Review

- Atlas Wireline located at 1213 N Ventura Avenue is not actually in the surrounding area of the subject site; Atlas Wireline was mislabeled in the EDR as being in Los Angeles but it is really in Ventura California. This will not impact the subject site.
- Leslie Family Trust located at 3566/3580 West 3<sup>rd</sup> Street, approximately 0.350-miles southwest of the subject site, is listed because the site is under the oversight of the California Regional Water Quality Control Board due to environmental contamination from a dry cleaner. The site was cleaned up and currently the case is listed as completed and case closed with restrictions on land use as of June 14, 2011. (This case is listed three times on the EDR, but it is only one case).
- Won S. Woo located at 310 S Berendo Street, approximately 0.350-mile southwest of the subject site, is listed because of a solvent or non-petroleum hydrocarbon leak reported on July 9, 1991. Currently the case is listed as completed and case closed as of October 10, 1997.
- Chevron Station #00894 (former) located at 3501 W Temple Boulevard, approximately 0.357-mile northeast of the subject site, is listed because of a gasoline leak reported October 1, 1988. Currently the case is listed as completed and case closed as of July 19, 1996.
- Department of Transportation located at 411 Vermont Avenue, approximately 0.357-mile northwest of the subject site, is listed because of a diesel leak reported on May 7, 1992. The date the case was closed is not reported on EDR. However, due to the leak happening 26 years ago, this is not expected to impact the subject site.
- Los Angeles Shriners Hospital located at 3169 Geneva Street, approximately 0.367-mile south of the subject site, is listed because of an unspecified leak that was reported on March 22, 1985. Currently the case is listed as completed and case closed as of October 4, 1985.
- Shriners Hospital for Children located at 3160 Geneva Street, approximately 0.391-mile south of the subject site, is listed because of a diesel leak that was discovered on April 2, 2003. Currently the case is listed as completed and case closed as of August 5, 2014.
- Beverly Catalina Car Wash located at 4000 Beverly Boulevard, approximately 0.382-mile northwest of the subject site, is listed because of a gasoline leak reported on March 9, 1991. Currently the case is listed as completed and case closed as of July 15, 2016.
- Jons Market #1 located at 3667 W 3<sup>rd</sup> Street, approximately 0.438-mile southwest of the subject site, is listed because of a leak of gasoline stopped on August 30, 1988. Currently the case is listed as completed and case closed as of September 14, 2011.

### 5.1.14 State and Tribal Registered Underground Storage Tanks

The State Water Resources Control Board's Hazardous Substance Storage Container Database maintains a list of USTs regulated by the Resource Conservation and Recovery Act.

## 5. Environmental Records Review

- The subject site is not listed on the registered UST list.
- The database did not identify any registered UST facilities within a quarter mile radius of the subject site.

### 5.1.15 State and Tribal Voluntary Cleanup Site

The DTSC maintains a list of low threat level properties with either confirmed or unconfirmed releases and the project proponents have request that DTSC oversee investigation and/or cleanup activities and have agreed to provide coverage for DTSC's costs.

- The subject site is not listed on the state and tribal voluntary cleanup program.
- The database identified one state and tribal voluntary cleanup program sites within a half mile radius of the subject site.
  - Crossroads Trust is the site of the Newell Colour Lab case which is listed under the RCRA Generator list.

### 5.1.16 Orphan Sites

The EDR database identified two facilities that were indicated as being potentially in the area and were not mapped due to incomplete address information.

- Southern California Disposal is listed as a municipal solid waste landfill with the address of 186<sup>th</sup> Street and Vermont Avenue. The address listed is actually for a hotel in Gardena California. And there is no municipal solid waste landfill in the surrounding area of the subject site.
- Shatto Cleaners, Tea Seong Kim DBA listed a 401 S Vermont Avenue on the EDR, on GeoTracker the case is listed as Shatto Investment Company located at 3151 W 6<sup>th</sup> Street, which is just off of S Vermont Street. The case is listed because of a gasoline leak that was reported on May 4, 1990. Currently the case is listed as completed and closed as of April 24, 2009.

## 5.2 ADDITIONAL ENVIRONMENTAL RECORDS REVIEW

In conformance with ASTM inquiry was made with the additional agencies described below.

### 5.2.1 Local Brownfield Lists

The DTSC's Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. One brownfield site was identified on the EnviroStor database.

## 5. Environmental Records Review

- Beverly/Virgil Sub Area is approximately 0.163-mile northeast of the subject site, based on the information provided; this case is most likely to be the same as the Bogarz INC listed under the RCRA Generators list.

### 5.2.2 Local Lists of Hazardous Waste Contaminated Sites

A record search was done on the following databases: Clandestine Drug Labs, HIST Cal-Sites Historical Calsites Database, and Toxic Pits Cleanup Act Sites. San Gabriel Valley Areas of Concern records were searched.

- The subject site is not listed on the Local List of Hazardous Waste Contaminated Sites.
- The database identified four nearby sites within the designated search radius.
  - Belmont New Primary Center No. 2 and Central Region Elementary School #20 et al. case listed under the RCRA Generator list.
  - Crossroads Trust is the site of the Newell Colour Lab case which is listed under the RCRA Generator list.
  - Belmont New Elementary No. 6 is the same as the Del Olmo Elementary School case listed under the RCRA Generator list.

### 5.2.3 Local Lists of Registered Storage Tanks

A record search was done of the local lists of registered storage tanks. Six registered UST sites are identified in the database as being within a 0.25 mile of the site.

- LAUSD Vacant Lot located at 3600 W Council Street, approximately 0.103-mile northwest of the subject site
- Classic Chevron located at 3625 W Beverly Boulevard, approximately 0.199-mile northeast of the subject site. Facility ID: FA0031291. This facility is listed three times in the EDR database for registered storage tanks.
- Dewey Pest Control located at 3711 Beverly Boulevard, approximately 0.216-mile north of the subject site. Facility ID: 23852. This case is also listed under the RCRA Generators list.
- Circle K Stores INC located at 304 N Vermont Avenue, approximately 0.244-mile north northwest of the subject site. Facility ID: 24173.

## 5. Environmental Records Review

### 5.2.4 HAZNET

HAZNET is the Hazardous Waste Information System. The subject site is listed as a HAZNET site and the case is discussed in section 5.1.13 State and Tribal LUST list.

### 5.2.5 High Risk Historical Records

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, and dry cleaners. Eighteen were identified, ten are dry cleaners and eight are auto related sites.

- Nelson W H may have been located at 3486 W 1st Street, which is less than 1/8-mile from the subject site. It was a gas and oil service station that listed for the year 1942. It is no longer present at the subject site.
- Woods J E may have been located at 3469 W 1st Street, which is less than 1/8-mile from the subject site. It was an Auto Repair and gas and oil service station listed from 1929 to 1937. It is no longer present at the subject site.
- Holmes Oscar may have been located at 3550 W 1st Street, which is approximately 0.032-mile from the subject site. It was a gas and oil service station listed from 1929 to 1942. It is no longer present.
- Nielsen W H may have been located at 3436 W 1st Street, which is approximately 0.048-mile from the subject site. It was a gas and oil service station listed from 1929 to 1937. It is no longer present.
- Fleischman Frank may have been located at 3574 W 1st Street, which is approximately 0.054-mile from the subject site. It was a clothes pressers cleaners and repairers listed for the year 1929. It is no longer present.
- Fienberg ABR may have been located at 3435 W 1st Street, which is approximately 0.065-mile from the subject site. It was a clothes presser and cleaners listed for the year 1937. It is no longer present.
- Weisner L A may have been located at 150 Bimini Place, which is approximately 0.079-mile from the subject site. It was an auto repair shop listed for the year 1937. Sejin Group INC is now located at the site and it also an auto repair shop.
- R & U Service Station may have been located at 100 S Vermont Avenue, which is approximately 0.088-mile from the subject site. It was a gas and oil service station listed for the years 1970 to 1974. It is no longer present.

## 5. Environmental Records Review

- Lilybeach Fred may have been located at 106 S Vermont Avenue, which is approximately 0.092-mile from the subject site. It was a clothes cleaners pressers and dryers listed for the years 1924 and 1933. It is no longer present.
- Gazin Nathan may have been located at 108 S Vermont Avenue, which is approximately 0.092-mile from the subject site. It was a clothes cleaners pressers and dryers listed for the year 1929. It is no longer present.
- Dirt Busters Cleaners may have been located at 124 S Vermont Av, which is approximately 0.102-mile from the subject site. It was a dry cleaner listed for the years 1989, 1991, and 1992. It is no longer present.
- Gribs Morris may have been located at 121 S Vermont Avenue, which is approximately 0.107-mile from the subject site. It was a clothes pressers and cleaners listed for the year 1937. It is no longer present.
- Klimmek R C may have been located at 170 Bimini Place, which is approximately 0.108-mile from the subject site. It was an auto repair and service station listed for the year 1929. It is no longer present.
- Resnik Hershel may have been located at 134 S Vermont Avenue, which is approximately 0.110-mile from the subject site. It was a gas and oil service station listed for the year 1942. It is no longer present.
- Jasmine Cleaners may have been located at 129 S Vermont Avenue, which is approximately 0.111-mile from the subject site. It was a dry cleaner listed for the years 1995 to 2013. It is currently an A & G Pharmacy.
- Drexel Cleaners may have been located at 3606 W 1<sup>st</sup> Street, which is approximately 0.118-mile from the subject site. It was a garment pressing and cleaners listed for the years 1986 to 1988. It is no longer present.
- Miller T W may have been located at 3608 W 1<sup>st</sup> Street, which is approximately 0.119-mile from the subject site. It was a clothes pressers cleaner and repairers listed for the years 1929 and 1933. It is no longer present.
- Cosmopolitan Laundry Co. may have been located at 221 N Westmoreland Avenue, which is approximately 0.121-mile from the subject site. It was a laundry listed for the years 1933, 1937, and 1942. It is no longer present.

### 5.2.6 State of California Division of Oil and Gas Records

A review of California Division of Oil and Geothermal Resources (DOGGR) Well Finder website indicates that there are no oil wells on the subject site. The closest oil well is located approximately 0.135-mile south of the subject site. The well is identified with the API number 03725777 and is listed as a buried-idle well that was built by L.A. Terminal & Transport Co. Looking at the on-line maps numerous buried-idle oil wells are located southwest and south of the subject site. The closest active well appears to be approximately 3.22-miles southwest of the site owned by Sentinel Peak Resources California, LLC.

## 5. Environmental Records Review

### 5.2.7 Vapor Migration

The ASTM 1527-13 standard states that "for the purposes of this practice, “migrate” and “migration” refers to the movement of hazardous substances or petroleum products in any form, including, for example, solid and liquid at the surface or subsurface, and vapor in the subsurface". Thus, this section specifies whether or not we perceive a risk of vapor migration to the subject site.

To assess a vapor migration risk a review and analysis of the site-specific environmental database report and other reasonably ascertainable records was implemented to assess whether:

- 1) Off-site properties have documented chlorinated volatile organic compound (VOC) contamination located within 100 feet of the subject property, or
- 2) Off-site properties have documented volatile petroleum hydrocarbon contamination within 30 feet of the subject property.

According to the navigatela web page, the subject site is in a City of Los Angeles methane zone. Therefore the area is subject to methane testing and mitigation requirements. The city “methane code” (ordinance No. 175790) describes the testing and mitigation requirements for building in a methane zone. The methane hazard is considered a REC for this Site.

### 5.2.8 User-Provided Information

The ASTM Standard requires disclosure in the Phase I report whether the user of the report has specialized knowledge about previous ownership or uses of the property that may be material to identifying RECs, or whether the user has determined that the property’s Title contains environmental liens or other information related to environmental condition of the property, including engineering and institutional controls and Activity and Use Limitations, as defined by ASTM. In addition, we are required by the ASTM Standard to inquire whether the user of the report has prior knowledge that the price of the property has been reduced for environmentally-related reasons.

PlaceWorks was provided by Pacific Charter Scholl Development with the Preliminary Environmental Transaction Screen Assessment prepared for the Bank of Hope by Western Environmental Engineers in 2016. The Transaction Screen Assessment identifies the presence of a former underground storage tank at the site.

## 6. Site Reconnaissance and Key Personnel Interview(s)

---

A site visit to observe site conditions was conducted by PlaceWorks on June 27, 2018. No weather-related conditions or other conditions that would limit our ability to observe the site occurred during our site reconnaissance. PlaceWorks personnel observed the exterior portions of the property, including the property boundaries. Site photographs are included in Appendix C. Petroleum products and hazardous materials were not observed in the debris.

ASTM requires that the current site owner or Key Site Manager and user, if different from the current owner or Key Site Manager, be asked if there are any helpful documents or information that can be made available for review. These consist of environmental site assessment reports, audits, permits, tank registrations, Material Safety Data Sheets, Community Right-to-Know plans, safety plans, hydrogeologic or geotechnical reports, or hazardous waste generator reports.

### 6.1 CURRENT USE OF THE PROPERTY

The 1.15-acre site currently consists of seven structures related to the Good News Central Church. There are two chapels, two storage sheds, one kitchen, one single-family residence, and one building for the International Youth Fellowship located on the site.

### 6.2 SITE VISIT OBSERVATIONS OF ENVIRONMENTAL INTEREST

#### 6.2.1 General Description of Structures

There are two chapels with a dining hall under one, one cafeteria, two storage structures, one house that the Pastor lives in, and one structure for the International Fellows youth group. The site is also gated with a parking lot in the middle of the site.

#### 6.2.2 Heating and Cooling System

The structures have central heating and cooling.

#### 6.2.3 Potable Water Supply and Sewage Disposal System or Septic Systems

Water is supplied to the Site by the City of Los Angeles via municipal supply lines and hookups. Sewage disposal systems would be provided by Los Angeles County Sanitation District.

## 6. Site Reconnaissance and Key Personnel Interview(s)

### 6.2.4 Use of Petroleum Products and Hazardous Materials

Use of petroleum products or hazardous materials was not observed at the subject site.

### 6.2.5 Storage of Petroleum Products and Hazardous Materials (Storage Tanks, Drums)

No storage of petroleum products or hazardous materials was observed at the subject site. Storage tanks and drums were not observed in the illegally dumped material.

### 6.2.6 Disposal of Petroleum Products and Hazardous Materials

No evidence of disposal of petroleum products or hazardous materials was observed at the subject site. No petroleum products or hazardous material were observed in the dumped materials.

### 6.2.7 Hydraulic Elevators

No hydraulic elevators were observed at the subject site.

### 6.2.8 Vehicle Maintenance Lifts

No vehicle maintenance lifts were observed at the subject site.

### 6.2.9 Emergency Generators and Sprinkler System Pumps

No emergency generators or sprinkler system pumps were observed on the subject site.

### 6.2.10 Polychlorinated Biphenyls (PCBs) Associated with Electrical or Hydraulic Equipment

No electrical or hydraulic equipment was observed on the subject site. Based on the information above, PCBs are not expected to have impacted the subject site.

### 6.2.11 Floor Drain and Sumps

No floor drains or sumps were observed at the subject site.

### 6.2.12 Catch Basins

No catch basins were observed at the subject site.

### 6.2.13 Dry Wells

No dry wells were observed at the subject site.

## 6. Site Reconnaissance and Key Personnel Interview(s)

### 6.2.14 Pits, Ponds, Lagoons, and Pools of Liquid

No pits, ponds, lagoons, or pools of liquid were observed at the subject site.

### 6.2.15 Odors

No odors were observed at the subject site.

### 6.2.16 Stains or Corrosion on Floors, Walls, or Ceilings

No unusual staining or corrosion was observed on the subject site.

### 6.2.17 Stained Soil or Pavement

No stained soil or pavement was observed at the subject site.

### 6.2.18 Stressed Vegetation

No stressed vegetation was observed at the subject site.

### 6.2.19 Solid Waste and Evidence of Waste Filling

No evidence of waste filling was observed on the subject site.

### 6.2.20 Wastewater and Stormwater Discharge

No wastewater discharge was observed on the subject site. Stormwater is expected to exit the subject site via overland flow to local roadways and creeks.

### 6.2.21 Monitoring, Water Supply, or Irrigation Wells

No monitoring, water supply or irrigation wells were observed at the subject site.

### 6.2.22 Non-Scope Considerations

No railroad tracks are located within 1,500 feet of the subject site.

## 6.3 INTERVIEWS

A questionnaire was completed by Elijah Sugay of Bright Star Schools for the subject site on June 22, 2018. Mr. Sugay was not aware of any leaks, spills or discharges of hazardous materials to the project site or on adjacent properties. He was not aware of any environmental cleanup liens against the property nor was he aware of any land use limitations due to environmental issues. The completed questionnaire is included in Appendix D.

## 6. Site Reconnaissance and Key Personnel Interview(s)

*This page intentionally left blank.*

## 7. Data Gap Identification

---

Adjacent land owners were not interviewed for this Phase I Environmental Site Assessment. Chain-of-title documentation was not reviewed so it could not be ascertained if the complete title report contains environmental liens or other information related to environmental condition of the property. However, the database search contained in Appendix B indicates that the site is not on the Recorded Environmental Cleanup Liens database which is maintained by the DTSC and contains a listing of liens placed upon real properties. The site is also not listed on the DTSC's Deed Restriction database which lists sites with DTSC with restricted land use. The site is not listed on NPL Liens, a database the EPA maintains on real property, in order to recover remedial action expenditures when the property owner has received notification of potential liability.

## 7. Data Gap Identification

*This page intentionally left blank.*

## 8. Findings and Conclusions

---

PlaceWorks has performed a Phase I Environmental Site Assessment (Phase I) on behalf of Pacific Charter School Development (PCSD) for the proposed development of Rise Kohyang High School in the City of Los Angeles County, California (Figures 1 and 2). The Phase I was performed in general conformance with the scope and limitations of the ASTM E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process. Exceptions to, or deletions from, this practice are described in Section 1 of this report. Our conclusions are intended to help the user evaluate the “environmental risk” associated with the site, as defined in the ASTM E 1527-13 Standard and discussed in the Introduction section of this report. The Phase I also followed Department of Toxic Substances Control (DTSC) guidelines for Phase I evaluations for school sites.

The approximately 1.15-acre site is located at 3500 West 1<sup>st</sup> Street, with a single-family residence on site associated with the address of 119 S Madison Avenue. Other addresses associated with the site include: 3468, 3478 3474, 3470, 3464, 3506, and 3510 West 1<sup>st</sup> Street and 115 S Madison Avenue. The site is identified with Assessor’s Parcel Numbers [APNs] 5501-014-004,-021,-022,-023,-024,-025. The site is currently occupied by the Good News Central Church and a single family residence for the pastor of the church. Currently there are seven structures on the property. The structures consist of two chapels, one kitchen, one residence, two storage sheds, and a structure for the church’s International Youth Fellowship. The site is approximately 0.460-mile southeast of the Hollywood Freeway (US-101) and is bounded by West 1<sup>st</sup> Street on the north and South Madison Avenue on the east. Regional access to the site in the near future would be provided by West 1<sup>st</sup> Street. Figure 3 is an aerial photograph showing current site conditions and the outline of the site boundaries. The site is surrounded by a highly developed mix of commercial and residential properties.

Based on the research conducted for this Phase I no previous environmental site assessments are known to have been conducted for the project site.

The objective of a Phase I is to assess whether “recognized environmental conditions” (REC), historical RECs (HREC), and controlled RECs (CREC) are associated with the subject site. Our conclusions are intended to help the user evaluate the “business environmental risk” associated with the subject site. Our opinion regarding an REC’s potential impact on the subject site is based on the scope of our work, the information obtained during the course of our work, the conditions prevailing at the time our work was performed, the applicable regulatory requirements in effect at the time our work was performed, and our experience evaluating similar sites.

### **RECOGNIZED ENVIRONMENTAL CONDITIONS (RECs)**

The ASTM E 1527-13 Standard defines an REC in part as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under

## 8. Findings and Conclusions

conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”

This assessment has revealed evidence of one REC in connection with the project site following the ASTM standard.

- The subject site is located in a City of Los Angeles Methane Zone. As such the site is subject to methane testing and mitigation requirements per the city “methane code” (ordinance No. 175790).

### **HISTORICAL RECOGNIZED ENVIRONMENTAL CONDITIONS (HRECs)**

The ASTM E 1527-13 Standard defines an HREC as “a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

This assessment has revealed evidence of one HRECs or known environmental conditions in connection with the project site following the ASTM standard.

- The subject site is listed on the State and Tribal LUST list.
  - On November 7, 1986 a leak of gasoline was discovered and on November 21, 1986 the leak was stopped. The case is currently listed as complete and case closed as of July 23, 1996 under the City of Los Angeles and the Regional Water Quality Control Board (Region 4). Due to this leak occurring over 30 years ago and current regulatory status, this is expected to not to be a significant issue for the subject site. Because the closure documents were not available for review we could not determine if the cleanup met unrestricted land use criteria. No conclusive information was provided if the UST is still present.

### **CONTROLLED RECS ENVIRONMENTAL CONDITIONS**

The Standard also requires the identification of controlled RECs (CRECs). The ASTM Standard defines CRECs as

“a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).”

This assessment has revealed no evidence of CRECs in connection with the project site following the ASTM standard.

## 8. Findings and Conclusions

### DEPARTMENT OF TOXIC SUBSTANCES CONTROL PROTOCOL

Based on a review of historical information; structures have occupied the subject site since 1938. Due to the time period of the development of the subject site, the DTSC would require testing to assess for potential impacts to soil from lead-based paint and organochlorine pesticides from possible termiticide usage. PlaceWorks recommends a Phase I Addendum or a Preliminary Environmental Assessment be implemented to collect soil samples in the project area to assess the existing structures. Following DTSC's *Interim Guidance for Evaluating School Sites with Potential Soil Contamination as a result of Lead from Lead-Based Paint, Organochlorine Pesticides from Termiticides, and Polychlorinated Biphenyls from Electrical Transformers* dated June 2006.

### SUMMARY

Based on the results of this assessment, the site location is in a methane zone, is recorded on the LUST database, and based on the age of the structures testing for lead and organochlorine pesticides would be needed for DTSC approval. Based on DTSC protocol, soil and soil gas sampling are recommended for the subject site.

It is PlaceWorks' professional opinion that an appropriate level of inquiry has been made into previous activities and uses of the Site in an effort to protect future occupants from significant exposures to hazardous substances. Section 17213 of the California Education Code and Section 21151.8 of the California Public Resources Code prohibit construction of a school upon a current or former hazardous waste disposal site or solid waste disposal site. Based on site inspection and information reviewed for preparation of this report, the project school site is not located on a current or former disposal site.

## 8. Findings and Conclusions

## 9. Credentials

---

This Phase I ESA was prepared in a manner consistent with the level of care and skill ordinarily exercised by professional engineers, geologists, and environmental scientists, under the technical direction of the undersigned. We declare to the best of our professional knowledge and belief, that we meet the definition of Environmental Professional as defined in the ASTM Standard. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Qualifications information for the project personnel is provided in Appendix E.

Denise Clendening, Ph.D.  
Associate Principal

Michael Watson, PG 8177  
Project Geologist

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by PlaceWorks were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting [www.edrnet.com/sanborn](http://www.edrnet.com/sanborn).

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

# EDR BUILDING PERMIT REPORT

## About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

## ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquiries (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

## Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

## EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of PlaceWorks on May 24, 2018.

### TARGET PROPERTY

3500 W 1st Street  
Los Angeles, CA 90004

### SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

### RESEARCH SUMMARY

Building permits identified: **YES**

The following research sources were consulted in the preparation of this report. An "X" indicates where information was identified in the source and provided in this report.

## GLOSSARY

### General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeyman:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

## GLOSSARY

### Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

### Sample Building Permit Data

Date: Nov 09, 2000

Permit Type: Bldg -

New Permit Number: 101000000405

Status: Valuation: \$1,000,000.00

Contractor Company: OWNER-BUILDER

Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

## EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

***Thank you for your business.***

Please contact EDR at 1-800-352-0050  
with any questions or comments.

## **EXECUTIVE SUMMARY**

Western Environmental Engineers Co. (WEECO) was retained by **Bank of Hope** to perform a Preliminary Environmental Transaction Screen Assessment for the property located at **3464-3510 W. 1<sup>st</sup> Street & 115 S. Madison Avenue, Los Angeles, California** in order to obtain any current records regarding hazardous material stage at the site and to identify any environmental concerns that may exist on the subject site. On November 30, 2016, WEECO conducted a site investigation of the subject site. The following summarizes the findings, conclusions, and recommendations of this site.

In conducting a Federal, State and Regional Record Search, WEECO completed the following: a review of government database records and a review of topographic maps within a 1.0 mile radius of the subject site for evidence of possible environmental contamination on-site and within the immediate vicinity.

Asbestos, lead-based paint, radon and wetland visual site investigation was not performed in this study. Archaeological studies and review of a chain-of-title were not included in the scope of services for this project.

---

**Preliminary Environmental Transaction Screen Assessment**  
**3464-3510 West 1<sup>st</sup> Street & 115 South Madison Avenue, Los Angeles, California 90004**

**ENVIRONMENTAL FINDINGS:**

**ON-SITE:**

- ◆ The subject property at 3464-3510 W. 1<sup>st</sup> Street & 115 S. Madison Avenue, in the City of Los Angeles, is legally described by the assessor's parcel numbers: 5501-014-004, 5501-014-020, 5501-014-021, 5501-014-022, 5501-014-023, and 5501-014-024. According to the Los Angeles County, Office of the Assessor, the subject property is an approximately 44,485 square-foot total lot, and has been developed with seven (7) structures approximately 7,202 square-feet, 6,764 square-feet, 4,550 square-feet, 3,419 square-feet, 1,325 square-feet, 3,000 square-feet and 5,000 square-feet in size. The subject buildings were constructed in 1965, 1951, 1941, 1947, 1970, 1970, and 1950, respectively. From the visual inspection, the subject site has been developed with five (5) buildings being used by a church facility. A main chapel building was observed near the northwest portion of the site. A preschool building was observed east of the Chapel. The Pastor's office/residence was observed east of the preschool building. A youth ministry building was observed along the southern property line. Storage sheds were observed at the southwest corner of the subject site. Asphalt paved parking areas were observed throughout the subject site. Currently, the subject property is occupied by a "Good News Central Church". See Section 2, Figure (2) & Attachment (F).
- ◆ BBL's Historical Tenant Report was reviewed which identifies the tenants (be it the owner or lessee) of the subject site over the last 50 years. Sources for the research includes various city directories, street address directories and criss-cross directories published from 1920 forward. Based on the Historical Tenant Report, from 1956 to 1965, the subject site had no listings. From 1970 to 1980, the subject site was listed as having "National Cleaning Co.". From 1985 to 1994, the subject site was listed as having "National Cleaning Company; and Pedus Services Inc.". In 1998, the subject site was listed as having "Pedus Building Service; Pedus Food Service Inc.; Pedus Security Service; and WCS Ltd". From 2000 to 2008, the subject site was listed as having "Good News Central Church". In 2010, the subject site was listed as having "Good News Central Church; International Youth Fellowship; and US Good News Weekly". In 2012, the subject site was listed as having "A & B Garage Doors & Gates; ADT; Good News Central Church; and International Youth Fellowship". From 2014 to 2016, the subject site was listed as having "ADT; and Good News Central Church". See Section 2.
- ◆ From the visual inspection, WEECO investigator observed no hazardous materials being used or stored at the subject site. No 55-gallon industrial drums were observed at the subject site. One (1) trash bin was observed at the southeast corner of the subject site, and did not appear to contain any hazardous materials or waste. See Attachment (F).
- ◆ From the visual inspection, WEECO investigator observed no aboveground storage tanks (AST) at the subject site. Also, no evidence of concrete scaring, fill pipes, or vent pipes that indicate the past or present existence of underground storage tanks (UST) were detected at the subject property.

---

**Preliminary Environmental Transaction Screen Assessment**  
**3464-3510 West 1<sup>st</sup> Street & 115 South Madison Avenue, Los Angeles, California 90004**

- ◆ WEECO investigator researched data from the South Coast AQMD Database to review any records regarding Hazardous Waste/Materials and violations for the subject property. Records were found for the subject site. According to the records, Pedus Building Services, Inc. is currently an out of business facility was found for the subject site. There is no equipment operating permits listed for the subject site. No notices of violation or notices to comply were issued for the subject site. See Attachment (B).
- ◆ WEECO investigator contacted the Department of Toxic Substances Control (DTSC), EnviroStor website to review any records pertaining to hazardous materials used or stored at the subject site and to review any records pertaining to aboveground/underground storage tanks at the subject site. No records were found for the subject site.

The adjoining property - Central Region Elementary School #20 at 3600 Council Street - to the north of the subject site is listed on the DTSC's Site Cleanup Program. The Site was composed of three adjacent land areas (Approx. 8.3 Acres). The Northern Area of the Site consisted of a city block bounded by commercial/industrial businesses to the north, beyond which, is an east-west alley, to the east by Madison Avenue, to the south by Council Street, and to the west by Juanita Avenue (northern area). The Central Area of the Site consisted of Virgil Middle School, which is bounded to the north by Council Street, to the east by Westmoreland Avenue, to the south by 1st Street, and to the west by VMS. The Southern Area of the Site consisted of White House Primary Center (WHPC), which is bound to the north by 1st Street, to the east by residential properties, to the south by White House Place, and to the west by South Bimini Place. Preliminary Environmental Assessment (PEA) was completed (June 2008). The field sampling was conducted for soil, soil gas and groundwater for metals, Volatile Organic Compounds (VOCs), Total Petroleum Hydrocarbons (TPHs), methane and hydrogen sulfide as contaminants of concerns. A PEA Report was prepared (June 2008). Supplemental Site Investigations were completed for soil/soil gas and groundwater (2008/2009). The groundwater monitoring at the Site is ongoing. The Draft Remedial Action Plan is under review with appropriate CEQA process. A Supplemental Environmental Impact Report was prepared for the proposed remedial activities to be performed at the Site. The Final Remedial Action Plan is approved (November, 2009). The cleanup of the Northern Area is completed. The Northern Area (NA) is under school occupancy under Operation and Maintenance activities on quarterly basis for methane mitigation system. The remedial action for soil is completed in the Central Area (CA) and gas mitigation system installation was completed (July 2013). The school is open following the confirmation sampling and review/approval of Remedial Action Completion Report (RACR) and Operation and Maintenance activities occur at regular interval for NA and CA gas mitigation system and groundwater monitoring.

WEECO reviewed a Third Quarter 2013 Groundwater Monitoring Report that was submitted to the (DTSC) by Wayne Perry, Inc on October 17, 2013. CRES#20 includes an area of approximately 8 acres that is split into three sections designated as the Northern, Central, and Southern areas: The Northern Area, consists of approximately 3.2 acres, and is used as play grounds and athletic fields for the Virgil Middle School (VMS) located at 152 North

**Preliminary Environmental Transaction Screen Assessment**  
**3464-3510 West 1<sup>st</sup> Street & 115 South Madison Avenue, Los Angeles, California 90004**

Vermont Avenue. The Central Area of CRES #20 consists of approximately 3.1 acres, and is occupied by the CRES#20 campus. The Central Area is located along the east side of the existing VMS campus within the former middle school play field area, and is now accessed from West Council Street. The Southern Area, consists of about 1.8 acres, and was formerly occupied by the White House Place Primary Center. This facility was demolished and the Southern Area is now occupied by a surface parking lot for VMS and CRES#20 faculty and staff. For the purposes of this reporting period, both the Northern and Central Areas of CRES#20 will be referred to as the "Site."

If the subsurface soil/groundwater at the subject site is indeed contaminated, Los Angeles Unified School District is the responsible party and paying for the remediation cost since it is true and it is always beneficial to know who is liable for the contamination. See Attachment (C).

- ◆ The subject site was listed as a LUST (Leaking Underground Storage Tank) site on the Geotracker – California State Water Resources Control Board’s sponsored website. The case was opened on November 20, 1986. No site history information was available for this site. The Pedus Services facility that previously occupied the subject site operated a gasoline UST onsite. When the facility went out of business, the tank was removed and the site status was updated to Completed – Case Closed as of July 23, 1996. See Attachment (D).

Cleanup Status History	
DATE	STATUS
7/23/1996	Completed - Case Closed
8/10/1987	Open - Site Assessment
11/7/1986	Open - Case Begin Date

- ◆ Due to the former or/and current businesses, the subject site is listed as having one (1) environmental concern in the list of 20 government databases reviewed in this report. See attachment (E).

**- LUST - Leaking Underground Storage Tanks - California State**

The Leaking Underground Storage Tanks Information System is maintained by the State Water Resource Board pursuant to Section 25295 of the Health and Safety Code.

**3464-3510 West 1<sup>st</sup> Street & 115 South Madison Avenue, Los Angeles, California 90004**

**OFF-SITE:**

- ◆ **Sixty-one (61)** environmental concerns are listed in the government databases, which are located within a ½ mile radius from the subject site. The neighborhood sites up to 1.0-mile distance have been investigated by government agencies to determine if any hazardous chemical spills occurred in the past. Please refer to Table (1) and Attachment (D) for further details.

- ◆ **NPL - National Priority List**

EPA has prioritized sites with significant risk to human health and the environment. These sites receive remedial funding under the Comprehensive Environmental Response Conservation and Liability Act (CERCLA).

No listings within 1 mile radius of the subject site.

- ◆ **SEMS - Comprehensive Environmental Response, Compensation, and Liability Act**

Superfund Enterprise Management System (SEMS) replaced CERCLIS in 2014. This database is used by the EPA to track activities conducted under the Comprehensive Environmental Response and Liability Act CERCLA (1980) and the amendment the Superfund Amendments and Reauthorization Act SARA (1986).

Sites to be included are identified primarily by the reporting requirements of hazardous substances Treatment, Storage and Disposal (TSD) facilities and releases larger than specific Reportable Quantities (RQ), established by EPA.

Using the National Oil and hazardous Substance Pollution Contingency Plan (National Contingency Plan) the EPA set priorities for cleanup.

The EPA rates National Contingency Plan sites according to a quantitative Hazard Ranking System (HRS) based on the potential health risk via any one or more pathways: groundwater, surface water, air, direct contact, and fire/explosion.

The EPA and state agencies seek to identify potentially responsible parties (PRP) and ultimately Responsible Parties (RP) who can be required to finance cleanup activities, either directly or through reimbursement of federal Superfund expenditures.

Any Institutional/Engineering controls issued under CERCLA are described in the status detail for each site. Sites delisted from the NPL list are included here.

No listings within ½ mile radius of the subject site.

---

**Preliminary Environmental Transaction Screen Assessment**  
**3464-3510 West 1<sup>st</sup> Street & 115 South Madison Avenue, Los Angeles, California 90004**

◆ **NFRAP - No Further Remedial Action Planned sites (CERCLIS)**

As of February 1995, CERCLIS sites designated 'No Further Remedial Action Planned' NFRAP have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the site being placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration.

EPA has removed these NFRAP sites from CERCLIS to lift unintended barriers to the redevelopment of these properties. This policy change is part of EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens promote economic redevelopment of unproductive urban sites.

Discovery of this Hazardous Waste site was brought to EPA's attention on 05/01/81. The Preliminary Assessment, consisting of collecting and documenting existing information about the source and nature of the site hazard was completed on 05/01/84.

NFRAP as of 5/1/1984 0:00:00.

◆ **LUST - Leaking Underground Storage Tanks – California State**

The Leaking Underground Storage Tank (LUST) database is maintained by the Water Resources Control Board and their regional branches, and tracks sites contaminated by releases from underground storage tanks pursuant to Section 25295 of the Health and Safety Code.

**Twenty-six (26) Leaking Underground Storage Tank (LUST) Sites** were identified within a ½ mile of the subject property. However, because of the distance from the subject site, the nearby leaking site could not have adversely impacted subsurface soil and/or groundwater at the subject site. If indeed, soil and/or groundwater at the subject site have been adversely impacted, the ultimate responsible party of remediation costs will be the LUST site. See Attachment (D).

## **SITE RECONNAISSANCE**

A site reconnaissance of the subject property was conducted on November 30, 2016. Investigator(s) in attendance for the site reconnaissance included the following:

- Jeffrey Pak, Project Engineer / WEECO

The site reconnaissance consisted of a visual inspection of the subject property. The following sections discuss the findings of the site reconnaissance.

### **2.1 SITE LOCATION**

The subject site at 3464-3510 W. 1<sup>st</sup> Street & 115 S. Madison Avenue is a church property located on the southwest corner of W. 1<sup>st</sup> Street and S. Madison Avenue, in the City of Los Angeles, County of Los Angeles, within the State of California as shown in Figures (1) and Figures (2).

### **2.2 SITE AND VICINITY CHARACTERISTICS**

The subject property at 3464-3510 W. 1<sup>st</sup> Street & 115 S. Madison Avenue, in the City of Los Angeles, is legally described by the assessor's parcel numbers: 5501-014-004, 5501-014-020, 5501-014-021, 5501-014-022, 5501-014-023, and 5501-014-024.

According to the Los Angeles County, Office of the Assessor, the subject property is an approximately 44,485 square-foot total lot, and has been developed with seven (7) structures approximately 7,202 square-feet, 6,764 square-feet, 4,550 square-feet, 3,419 square-feet, 1,325 square-feet, 3,000 square-feet and 5,000 square-feet in size. The subject buildings were constructed in 1965, 1951, 1941, 1947, 1970, 1970, and 1950, respectively.

From the visual inspection, the subject site has been developed with five (5) buildings being used by a church facility. A main chapel building was observed near the northwest portion of the site. A preschool building was observed east of the Chapel. The Pastor's office/residence was observed east of the preschool building. A youth ministry building was observed along the south property line. Storage sheds were observed at the southwest corner of the subject site. Asphalt paved parking areas were observed throughout the subject site.

The subject buildings appeared to be constructed of metal, stucco and concrete block walls; metal and composition roofs; and concrete-slab floors. All building materials looked to be in good condition at the time of visual inspection. See Attachment (E).

### **2.3 CURRENT USE of the SUBJECT SITE**

Currently, the subject property is occupied by a "Good News Central Church".

### **2.4 HAZARDOUS MATERIAL STORAGE/USE**

From the visual inspection, WEECO investigator observed no hazardous materials being used or stored at the subject site. No 55-gallon industrial drums were observed at the subject site. One (1) trash bin was observed at the southeast corner of the subject site, and did not appear to contain any hazardous materials or waste. See Attachment (E).

### **2.5 UNDERGROUND/ABOVEGROUND STORAGE TANKS**

From the visual inspection, WEECO investigator observed no aboveground storage tanks (AST) at the subject site. Also, no evidence of concrete scaring, fill pipes, or vent pipes that indicate the past or present existence of underground storage tanks (UST) were detected at the subject property.

### **2.6 STAINING**

From the visual inspection, WEECO investigator found few stained areas at the subject site. However, those stains could not impose a significant threat upon the environmental integrity of the subject site.

### **2.7 ELECTRICAL TRANSFORMERS**

Polychlorinated Biphenyls (PCBs) had been commonly used in dielectric fluids for electrical transformers or light ballasts before 1978. However, manufacturing of PCBs was discontinued in the United States because of its toxicity.

No electrical transformers were observed at the subject site.

### **2.8 ADJOINING PROPERTIES**

During the Site Reconnaissance, WEECO's field assessor also visually inspected and documented the use of those properties, which adjoin the subject property. The observations made by Mr. Jeffrey Pak of the adjoining properties are as follows:

---

**Preliminary Environmental Transaction Screen Assessment**  
**3464-3510 West 1<sup>st</sup> Street & 115 South Madison Avenue, Los Angeles, California 90004**

NORTH

- The property to the north of the subject site across W. 1<sup>st</sup> Street is used for a school purpose (“Virgil Middle School”).

EAST

- The properties to the east of the subject site across S. Madison Avenue are used for a commercial purpose (Office Building) & residential purpose (Residential Area).

SOUTH

- The property to the south of the subject site is used for a residential purpose (Residential Area).
- The area to the south of the subject site is Asphalt paved Parking Lot.

WEST

- The area to the west of the subject site is Asphalt paved Parking Lot.

## **2.9 ENVIRONMENTAL QUESTIONNAIRE**

An environmental questionnaire was answered by a WEECO investigator. The answers are as follows:

- 1a. Is the property used for an industrial use? **NO**
- 1b. Is any adjoining property used for an industrial use? **NO**
  
- 2a. Did you observe evidence or do you have any prior knowledge that the property has been used for an industrial use in the past? **YES**
- 2b. Did you observe evidence or do you have any prior knowledge that any adjoining property has been used for an industrial use in the past? **NO**
  
- 3a. Is the property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)? **NO**
- 3b. Is any adjoining property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)? **NO**
  
- 4a. Did you observe evidence or do you have any prior knowledge that the property has been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)? **NO**

---

**Preliminary Environmental Transaction Screen Assessment**  
**3464-3510 West 1<sup>st</sup> Street & 115 South Madison Avenue, Los Angeles, California 90004**

- 4b. Did you observe evidence or do you have any prior knowledge that any adjoining property has been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)? **NO**
- 5a. Are there currently any damaged or discarded automotive or industrial batteries, pesticides, paints, or other chemicals in individual containers of >5 gallons (19L) in volume or 50 gallons (190L) in the aggregate, stored on or used at the property or at the facility? **NO**
- 5b. Did you observe evidence or do you have any prior knowledge that there have been previously any damaged or discarded automotive or industrial batteries, pesticides, paints, or other chemicals in individual containers of >5 gallons (19L) in volume or 50 gallons (190L) in the aggregate, stored on or used at the property or at the facility? **NO**
- 6a. Are there currently any industrial drums (typically 55 gallons (208L) or sacks of chemicals located on the property or at the facility? **NO**
- 6b. Did you observe evidence or do you have any prior knowledge that there have been previously any industrial drums (typically 55 gallons (208L) or sacks of chemicals located on the property or at the facility? **NO**
- 7a. Did you observe evidence or do you have prior knowledge that fill dirt has been brought onto the property that originated from a contaminated site? **NO**
- 7b. Did you observe evidence or do you have prior knowledge that fill dirt has been brought onto the property that originated from an unknown origin? **YES**
- 8a. Are there currently any pits, ponds, or lagoons located on the property in connection with waste treatment or waste disposal? **NO**
- 8b. Did you observe evidence or do you have any prior knowledge that there have been previously, any pits, ponds, or lagoons located on the property in connection with waste treatment or waste disposal? **NO**
- 9a. Is there currently any stained soil on the property? **NO**
- 9b. Did you observe any evidence or do you have any prior knowledge that there has been previously, any stained soil on the property? **YES**
- 10a. Are there currently any registered or unregistered storage tanks (aboveground or underground) located on the property? **NO**
- 10b. Did you observe evidence or do you have any prior knowledge that there have been previously, any registered or unregistered storage tanks (aboveground or underground) located on the property? **YES (UST)**
- 11a. Are there currently any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property? **NO**

---

**Preliminary Environmental Transaction Screen Assessment**  
**3464-3510 West 1<sup>st</sup> Street & 115 South Madison Avenue, Los Angeles, California 90004**

- 11b. Did you observe evidence or do you have any prior knowledge that there have been previously, any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the property or adjacent to any structure located on the property? **YES**
- 12a. Are there currently any flooring, drains, or walls located within the facility that are stained by substances other than water or are emitting foul odors? **NO**
- 12b. Did you observe evidence or do you have any prior knowledge that there have been previously any flooring, drains, or walls located within the facility that are stained by substances other than water or are emitting foul odors? **NO**
- 13a. If the property is served by a private well or non-public water system, is there evidence or do you have any prior knowledge that contaminants have been identified in the well or system that exceed guidelines applicable to the water system? **NO**
- 13b. If the property is served by a private well or non-public water system is there evidence or do you have prior knowledge that the well has been designated as contaminated by any government environmental/health agency? **NO**
- 18a. Does the property discharge waste water, on or adjacent to the property, other than storm water, into a sanitary sewer system? **NO**
- 18b. Does the property discharge waste water, on or adjacent to the property, other than storm water, into a sanitary sewer system? **NO**
19. Did you observe evidence or do you have any prior knowledge that any hazardous substances or petroleum products, unidentified waste materials, tires, automotive or industrial batteries, or any other waste materials have been dumped above grade, buried and/or burned on the property? **NO**
20. Is there a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of PCB's? **NO**

Attachment (A) includes the questionnaire.

## **2.10 INTERVIEWS AND USER PROVIDED INFORMATION**

Pursuant to ASTM Practice E-1528-14, the following interviews were performed during this investigation in order to obtain information indicating *recognized environmental conditions* (RECs) in connection with the subject property.

- **INTERVIEWS**

No interviews were conducted at the time of site inspection. However, based on the quality of information obtained from other sources, this limitation is not expected to alter the findings of this investigation.

---

**Preliminary Environmental Transaction Screen Assessment**  
**3464-3510 West 1<sup>st</sup> Street & 115 South Madison Avenue, Los Angeles, California 90004**

- **INTERVIEW WITH OWNER OR OCCUPANTS OF NEIGHBORING PROPERTIES (ABANDONED PROPERTIES)**

The subject site is not an abandoned property. The owners/occupants of neighboring properties were not available for interview at the time of visual inspection.

## 2.11 HISTORICAL MAP REVIEW

A historical map review was conducted to better understand the historical use of the subject site.

### Historical Map Review:

<b>Map Date:</b>	<b>Description:</b>

1948	Same as 1952 aerial photo map

## 2.12 CITY DIRECTORY LISTINGS

BBL's Historical Tenant Report was reviewed which identifies the tenants (be it the owner or lessee) of the subject site over the last 50 years. Sources for the research includes various city directories, street address directories and criss-cross directories published from 1920 forward. Based on the Historical Tenant Report, from 1956 to 1965, the subject site had no listings. From 1970 to 1980, the subject site was listed as having "National Cleaning Co.". From 1985 to 1994, the subject site was listed as having "National Cleaning Company; and Pedus Services Inc.". In 1998, the subject site was listed as having "Pedus Building Service; Pedus Food Service Inc.; Pedus Security Service; and WCS Ltd". From 2000 to 2008, the subject site was listed as having "Good News Central Church". In 2010, the subject site was listed as having "Good News Central Church; International Youth Fellowship; and US Good News Weekly". In 2012, the subject site was listed as having "A & B Garage Doors & Gates; ADT; Good News Central Church; and

## **GOVERNMENT RECORDS**

### **3.1 ENVIRONMENTAL RECORD SEARCH**

**Sixty-one (61)** environmental concerns are listed in the government databases, which are located within a ½ mile radius from the subject site. The neighborhood sites up to 1.0-mile distance have been investigated by government agencies to determine if any hazardous chemical spills occurred in the past. Please refer to Table (1) and Attachment (D) for further details.

Due to the former or/and current businesses, the subject site is listed as having one (1) environmental concern in the list of 20 government databases reviewed in this report.

#### **- LUST - Leaking Underground Storage Tanks - California State**

The Leaking Underground Storage Tanks Information System is maintained by the State Water Resource Board pursuant to Section 25295 of the Health and Safety Code.

#### **◆ NPL - National Priority List**

EPA has prioritized sites with significant risk to human health and the environment. These sites receive remedial funding under the Comprehensive Environmental Response Conservation and Liability Act (CERCLA).

No listings within 1 mile radius of the subject site.

#### **◆ SEMS - Comprehensive Environmental Response, Compensation, and Liability Act**

Superfund Enterprise Management System (SEMS) replaced CERCLIS in 2014. This database is used by the EPA to track activities conducted under the Comprehensive Environmental Response and Liability Act CERCLA (1980) and the amendment the Superfund Amendments and Reauthorization Act SARA (1986).

Sites to be included are identified primarily by the reporting requirements of hazardous substances Treatment, Storage and Disposal (TSD) facilities and releases larger than specific Reportable Quantities (RQ), established by EPA.

---

**Preliminary Environmental Transaction Screen Assessment**  
**3464-3510 West 1<sup>st</sup> Street & 115 South Madison Avenue, Los Angeles, California 90004**

Using the National Oil and hazardous Substance Pollution Contingency Plan (National Contingency Plan) the EPA set priorities for cleanup.

The EPA rates National Contingency Plan sites according to a quantitative Hazard Ranking System (HRS) based on the potential health risk via any one or more pathways: groundwater, surface water, air, direct contact, and fire/explosion.

The EPA and state agencies seek to identify potentially responsible parties (PRP) and ultimately Responsible Parties (RP) who can be required to finance cleanup activities, either directly or through reimbursement of federal Superfund expenditures.

Any Institutional/Engineering controls issued under CERCLA are described in the status detail for each site. Sites delisted from the NPL list are included here.

No listings within ½ mile radius of the subject site.

◆ **NFRAP - No Further Remedial Action Planned sites (CERCLIS)**

As of February 1995, CERCLIS sites designated 'No Further Remedial Action Planned' NFRAP have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the site being placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration.

EPA has removed these NFRAP sites from CERCLIS to lift unintended barriers to the redevelopment of these properties. This policy change is part of EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens promote economic redevelopment of unproductive urban sites.

◆ **LUST - Leaking Underground Storage Tanks – California State**

The Leaking Underground Storage Tank (LUST) database is maintained by the Water Resources Control Board and their regional branches, and tracks sites contaminated by releases from underground storage tanks pursuant to Section 25295 of the Health and Safety Code.

**Twenty-six (26) Leaking Underground Storage Tank (LUST) Sites** were identified within a ½ mile of the subject property. However, because of the distance from the subject site, the nearby leaking site could not have adversely impacted subsurface soil and/or groundwater at the subject site. If indeed, soil and/or groundwater at the subject site have been adversely impacted, the ultimate responsible party of remediation costs will be the LUST site. See Attachment (D).

## **CONCLUSIONS AND RECOMMENDATIONS**

In conclusion, WEECO has used generally accepted practices to identify information available on the subject property relating to prior and current environmental concerns. It is our opinion that the site reconnaissance performed, and the information reviewed and cited in this report, indicate the following:

- ◆ The subject property at 3464-3510 W. 1<sup>st</sup> Street & 115 S. Madison Avenue, in the City of Los Angeles, is legally described by the assessor's parcel numbers: 5501-014-004, 5501-014-020, 5501-014-021, 5501-014-022, 5501-014-023, and 5501-014-024. According to the Los Angeles County, Office of the Assessor, the subject property is an approximately 44,485 square-foot total lot, and has been developed with seven (7) structures approximately 7,202 square-feet, 6,764 square-feet, 4,550 square-feet, 3,419 square-feet, 1,325 square-feet, 3,000 square-feet and 5,000 square-feet in size. The subject buildings were constructed in 1965, 1951, 1941, 1947, 1970, 1970, and 1950, respectively. From the visual inspection, the subject site has been developed with five (5) buildings being used by a church facility. A main chapel building was observed near the northwest portion of the site. A preschool building was observed east of the Chapel. The Pastor's office/residence was observed east of the preschool building. A youth ministry building was observed along the southern property line. Storage sheds were observed at the southwest corner of the subject site. Asphalt paved parking areas were observed throughout the subject site. Currently, the subject property is occupied by a "Good News Central Church". See Section 2, Figure (2) & Attachment (F).
- ◆ BBL's Historical Tenant Report was reviewed which identifies the tenants (be it the owner or lessee) of the subject site over the last 50 years. Sources for the research includes various city directories, street address directories and criss-cross directories published from 1920 forward. Based on the Historical Tenant Report, from 1956 to 1965, the subject site had no listings. From 1970 to 1980, the subject site was listed as having "National Cleaning Co.". From 1985 to 1994, the subject site was listed as having "National Cleaning Company; and Pedus Services Inc.". In 1998, the subject site was listed as having "Pedus Building Service; Pedus Food Service Inc.; Pedus Security Service; and WCS Ltd". From 2000 to 2008, the subject site was listed as having "Good News Central Church". In 2010, the subject site was listed as having "Good News Central Church; International Youth Fellowship; and US Good News Weekly". In 2012, the subject site was listed as having "A & B Garage Doors & Gates; ADT; Good News Central Church; and International Youth Fellowship". From 2014 to 2016, the subject site was listed as having "ADT; and Good News Central Church". See Section 2.
- ◆ From the visual inspection, WEECO investigator observed no hazardous materials being used or stored at the subject site. No 55-gallon industrial drums were observed at the subject site. One (1) trash bin was observed at the southeast corner of the subject site, and did not appear to contain any hazardous materials or waste. See Attachment (F).
- ◆ From the visual inspection, WEECO investigator observed no aboveground storage tanks

---

**3464-3510 West 1<sup>st</sup> Street & 115 South Madison Avenue, Los Angeles, California 90004**

(AST) at the subject site. Also, no evidence of concrete scaring, fill pipes, or vent pipes that indicate the past or present existence of underground storage tanks (UST) were detected at the subject property.

- ◆ WEECO investigator researched data from the South Coast AQMD Database to review any records regarding Hazardous Waste/Materials and violations for the subject property. Records were found for the subject site. According to the records, Pedus Building Services, Inc. is currently an out of business facility was found for the subject site. There is no equipment operating permits listed for the subject site. No notices of violation or notices to comply were issued for the subject site. See Attachment (B).
- ◆ WEECO investigator contacted the Department of Toxic Substances Control (DTSC), EnviroStor website to review any records pertaining to hazardous materials used or stored at the subject site and to review any records pertaining to aboveground/underground storage tanks at the subject site. No records were found for the subject site.

The adjoining property - Central Region Elementary School #20 at 3600 Council Street - to the north of the subject site is listed on the DTSC's Site Cleanup Program. The Site was composed of three adjacent land areas (Approx. 8.3 Acres). The Northern Area of the Site consisted of a city block bounded by commercial/industrial businesses to the north, beyond which, is an east-west alley, to the east by Madison Avenue, to the south by Council Street, and to the west by Juanita Avenue (northern area). The Central Area of the Site consisted of Virgil Middle School, which is bounded to the north by Council Street, to the east by Westmoreland Avenue, to the south by 1st Street, and to the west by VMS. The Southern Area of the Site consisted of White House Primary Center (WHPC), which is bound to the north by 1st Street, to the east by residential properties, to the south by White House Place, and to the west by South Bimini Place. Preliminary Environmental Assessment (PEA) was completed (June 2008). The field sampling was conducted for soil, soil gas and groundwater for metals, Volatile Organic Compounds (VOCs), Total Petroleum Hydrocarbons (TPHs), methane and hydrogen sulfide as contaminants of concerns. A PEA Report was prepared (June 2008). Supplemental Site Investigations were completed for soil/soil gas and groundwater (2008/2009). The groundwater monitoring at the Site is ongoing. The Draft Remedial Action Plan is under review with appropriate CEQA process. A Supplemental Environmental Impact Report was prepared for the proposed remedial activities to be performed at the Site. The Final Remedial Action Plan is approved (November, 2009). The cleanup of the Northern Area is completed. The Northern Area (NA) is under school occupancy under Operation and Maintenance activities on quarterly basis for methane mitigation system. The remedial action for soil is completed in the Central Area (CA) and gas mitigation system installation was completed (July 2013). The school is open following the confirmation sampling and review/approval of Remedial Action Completion Report (RACR) and Operation and Maintenance activities occur at regular interval for NA and CA gas mitigation system and groundwater monitoring.

WEECO reviewed a Third Quarter 2013 Groundwater Monitoring Report that was submitted

**Preliminary Environmental Transaction Screen Assessment**  
**3464-3510 West 1<sup>st</sup> Street & 115 South Madison Avenue, Los Angeles, California 90004**

to the (DTSC) by Wayne Perry, Inc on October 17, 2013. CRES#20 includes an area of approximately 8 acres that is split into three sections designated as the Northern, Central, and Southern areas: The Northern Area, consists of approximately 3.2 acres, and is used as play grounds and athletic fields for the Virgil Middle School (VMS) located at 152 North Vermont Avenue. The Central Area of CRES #20 consists of approximately 3.1 acres, and is occupied by the CRES#20 campus. The Central Area is located along the east side of the existing VMS campus within the former middle school play field area, and is now accessed from West Council Street. The Southern Area, consists of about 1.8 acres, and was formerly occupied by the White House Place Primary Center. This facility was demolished and the Southern Area is now occupied by a surface parking lot for VMS and CRES#20 faculty and staff. For the purposes of this reporting period, both the Northern and Central Areas of CRES#20 will be referred to as the “Site.”

If the subsurface soil/groundwater at the subject site is indeed contaminated, Los Angeles Unified School District is the responsible party and paying for the remediation cost since it is true and it is always beneficial to know who is liable for the contamination. See Attachment (C).

- ◆ The subject site was listed as a LUST (Leaking Underground Storage Tank) site on the Geotracker – California State Water Resources Control Board’s sponsored website. The case was opened on November 20, 1986. No site history information was available for this site. The Pedus Services facility that previously occupied the subject site operated a gasoline UST onsite. When the facility went out of business, the tank was removed and the site status was updated to Completed – Case Closed as of July 23, 1996. See Attachment (D).

Cleanup Status History	
DATE	STATUS
7/23/1996	Completed - Case Closed
8/10/1987	Open - Site Assessment
11/7/1986	Open - Case Begin Date

- ◆ Due to the former or/and current businesses, the subject site is listed as having one (1) environmental concern in the list of 20 government databases reviewed in this report. See attachment (E).
- ◆ WEECO has performed a Preliminary Environmental Transaction Screen Assessment in conformance with the scope and limitations of ASTM Practice E-1528-14 of 3464-3510 W. 1<sup>st</sup> Street & 115 S. Madison Avenue, Los Angeles, California, the subject property. This assessment has revealed no evidence of recognized environmental conditions (RECs) or potential environmental conditions (PECs) in connection with the subject property. Therefore, WEECO concludes that the risk of contamination at the site is so minimal that no further investigation is warranted at this time.

## **DISCLAIMER**

Western Environmental Engineer Company (WEECO) has performed a Preliminary Environmental Transaction Screen Assessment for the property located at **3464-3510 W. 1<sup>st</sup> Street & 115 S. Madison Avenue, Los Angeles, California (Subject Property)**. This report has been prepared for the sole use of **Bank of Hope (Client)**.

An environmental site assessment meeting or exceeding this practice and completed less than one (1) year prior to the date of acquisition is presumed to be valid under this standard. In order to maintain landowner liability protections, the user also has a “continuing obligation to not interfere with activity and use limitations associated with the property,” must take “reasonable steps to prevent releases” and must “comply with legal release reporting obligations.” Further, it is the goal of this study to identify business risks related to the property associated with environmental conditions. This investigation is not an environmental compliance audit and is not designed to determine if the operations of an existing facility are in compliance with applicable environmental laws and regulations.

While this report provides an overview of potential environmental concerns, both past and present, the environmental assessment is limited by the availability of information at the time of the assessment. It is possible that unreported disposal of waste or illegal activities impairing the environmental status of the property may have occurred which could not be identified. The conclusions and recommendations regarding environmental conditions that are presented in this report are based on a scope of work authorized by the Client. Note, however, that virtually no scope of work, no matter how exhaustive, can identify all contaminants or all conditions above and below ground.

This report has been prepared in accordance with generally accepted environmental methodologies referred to in ASTM Practice E-1528-14, and contains all of the limitations inherent in these methodologies. No other warranties, expressed or implied, are made as to the professional services provided under the terms of our contract and included in this report. The conclusions of this report are based in part, on the information provided by others. The possibility remains that unexpected environmental conditions may be encountered at the site in locations not specifically investigated. The services performed and outlined in this report were based, in part, upon visual observations of the site and attendant structures. Our opinion cannot be extended to portions of the site that were unavailable for direct observation, reasonably beyond the control of WEECO. The objective of this report was to assess environmental conditions at the site, within the context of our contract and existing environmental regulations within the applicable jurisdiction. Evaluating compliance of past or future owners with applicable local, provincial, and federal government laws and regulations was not included in our contract for services. Our observations relating to the condition of environmental media at the site are described in this report. It should be noted that compounds or materials other than those described could be present in the site environment.

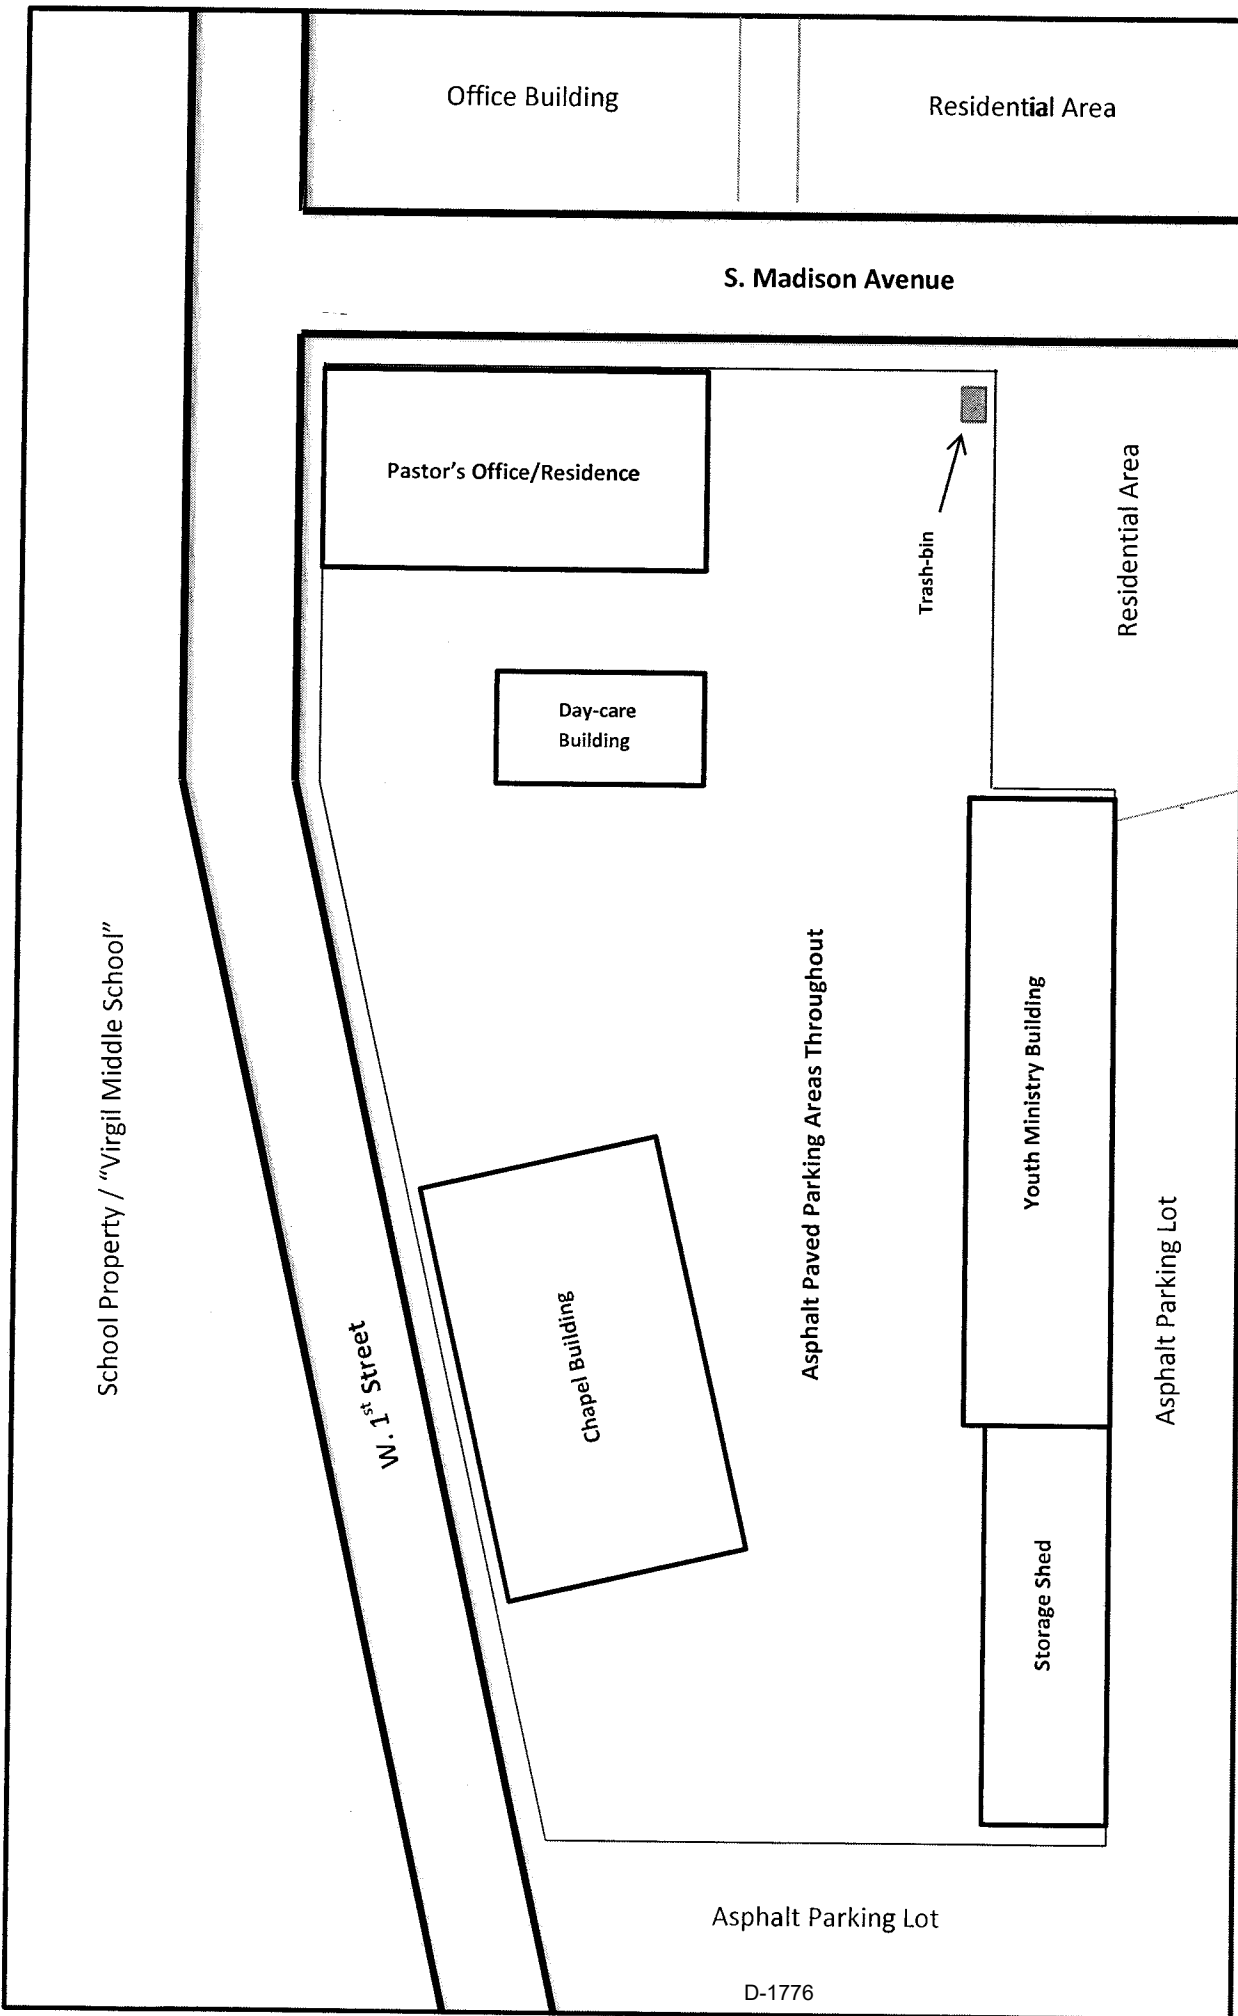

This report has been prepared for the sole use of **Bank of Hope**. The contents should not be relied upon by any other parties without the express written consent of **Bank of Hope and WEECO**.

**ENVIRONMENTAL QUESTIONNAIRE**

6. Transaction Screen Questionnaire

6.1 *Persons to Be Questioned*—The following questions should be asked of (1) the current owner of the property, (2) any major occupant of the property or, if the property does not have any major occupants, at least 10% of the occupants of the property, and (3) in addition to the current owner and the occupants identified in (2), any occupant likely to be using, treating, generating, storing, or disposing of hazardous substances or petroleum products on or from the property. A major

occupant is any occupant using at least 40% of the leasable area of the property or any anchor tenant when the property is a shopping center. In a multifamily property containing both residential and commercial uses, the preparer does not need to ask questions of the residential occupants. The preparer should ask each person to answer all questions to the best of the respondent's actual knowledge and in good faith. When completing the site visit column, the preparer should be sure to observe the property and any buildings and other structures on the property. The guide provides further details on the appropriate use of this questionnaire.

Description of Site: Address:

344 - 3510 W. 1<sup>st</sup> Street & 115 S. Madison Avenue

Los Angeles, California 90004.

Church Property / Chapel Building, Pre-school Building, Youth Ministry Building, Pastor Residence, & Storage Building.

Question	Owner <sup>1</sup>			Occupants (if applicable)			Observed During Site Visit	
	Yes	No	Unk	Yes	No	Unk	Yes	No
1a. Is the property used for an industrial use?							Yes	<input checked="" type="radio"/> No
1b. Is any adjoining property used for an industrial use?							Yes	<input checked="" type="radio"/> No
2a. Did you observe evidence or do you have any prior knowledge that the property has been used for an industrial use in the past?							<input checked="" type="radio"/> Yes	No
2b. Did you observe evidence or do you have any prior knowledge that any adjoining property has been used for an industrial use in the past?							Yes	<input checked="" type="radio"/> No
3a. Is the property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?							Yes	<input checked="" type="radio"/> No
3b. Is any adjoining property used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?							Yes	<input checked="" type="radio"/> No
4a. Did you observe evidence or do you have any prior knowledge that the property has been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?							Yes	<input checked="" type="radio"/> No
4b. Did you observe evidence or do you have any prior knowledge that any adjoining property has been used as a gasoline station, motor repair facility, commercial printing facility, dry cleaners, photo developing laboratory, junkyard or landfill, or as a waste treatment, storage, disposal, processing, or recycling facility (if applicable, identify which)?							Yes	<input checked="" type="radio"/> No
5a. Are there currently any damaged or discarded automotive or industrial batteries, pesticides, paints, or other chemicals in individual containers of >5 gal (19 L) in volume or 50 gal (190 L) in the aggregate, stored on or used at the property or at the facility?							Yes	<input checked="" type="radio"/> No
5b. Did you observe evidence or do you have any prior knowledge that there have been previously any damaged or discarded automotive or industrial batteries, or pesticides, paints, or other chemicals in individual containers of >5 gal (19 L) in volume or 50 gal (190 L) in the aggregate, stored on or used at the property or at the facility?							Yes	<input checked="" type="radio"/> No
6a. Are there currently any industrial drums (typically 55 gal (208 L)) or sacks of chemicals located on the property or at the facility?							Yes	<input checked="" type="radio"/> No
6b. Did you observe evidence or do you have any prior knowledge that there have been previously any industrial drums (typically 55 gal (208 L)) or sacks of chemicals located on the property or at the facility?							Yes	<input checked="" type="radio"/> No
7a. Did you observe evidence or do you have any prior knowledge that fill dirt has been brought onto the property that originated from a contaminated site?							Yes	<input checked="" type="radio"/> No

<sup>1</sup> Unk = "unknown" or "no response"

Question	Owner			Occupants (if applicable)			Observed During Site Visit	
	Yes	No	Unk	Yes	No	Unk		
7b. Did you observe evidence or do you have any prior knowledge that <i>fill dirt</i> has been brought onto the property that is of an unknown origin?	Yes	No	Unk	Yes	No	Unk	<input checked="" type="radio"/>	No
8a. Are there currently any <i>pits, ponds, or lagoons</i> located on the <i>property</i> in connection with waste treatment or waste disposal?	Yes	No	Unk	Yes	No	Unk	Yes	<input checked="" type="radio"/>
8b. Did you observe evidence or do you have any prior knowledge that there have been previously, any <i>pits, ponds, or lagoons</i> located on the <i>property</i> in connection with waste treatment or waste disposal?	Yes	No	Unk	Yes	No	Unk	Yes	<input checked="" type="radio"/>
9a. Is there currently any stained soil on the <i>property</i> ?	Yes	No	Unk	Yes	No	Unk	Yes	<input checked="" type="radio"/>
9b. Did you observe evidence or do you have any prior knowledge that there has been previously, any stained soil on the <i>property</i> ?	Yes	No	Unk	Yes	No	Unk	<input checked="" type="radio"/>	No
10a. Are there currently any registered or unregistered storage tanks (above or underground) located on the <i>property</i> ?	Yes	No	Unk	Yes	No	Unk	Yes	<input checked="" type="radio"/>
10b. Did you observe evidence or do you have any prior knowledge that there have been previously, any registered or unregistered storage tanks (above or underground) located on the <i>property</i> ?	Yes	No	Unk	Yes	No	Unk	<input checked="" type="radio"/>	No 657.
11a. Are there currently any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the <i>property</i> or adjacent to any structure located on the <i>property</i> ?	Yes	No	Unk	Yes	No	Unk	Yes	<input checked="" type="radio"/>
11b. Did you observe evidence or do you have any prior knowledge that there have been previously, any vent pipes, fill pipes, or access ways indicating a fill pipe protruding from the ground on the <i>property</i> or adjacent to any structure located on the <i>property</i> ?	Yes	No	Unk	Yes	No	Unk	Yes	<input checked="" type="radio"/>
12a. Are there currently any flooring, drains, or walls located within the facility that are stained by substances other than water or are emitting foul odors?	Yes	No	Unk	Yes	No	Unk	Yes	<input checked="" type="radio"/>
12b. Did you observe evidence or do you have any prior knowledge that there have been previously any flooring, drains, or walls within the facility that were stained by substances other than water or were emitting foul odors?	Yes	No	Unk	Yes	No	Unk	Yes	<input checked="" type="radio"/>
13a. If the property is served by a private well or non-public water system, is there evidence or do you have prior knowledge that contaminants have been identified in the well or system that exceed guidelines applicable to the water system?	Yes	No	Unk	Yes	No	Unk	Yes	<input checked="" type="radio"/>
13b. If the property is served by a private well or non-public water system, is there evidence or do you have prior knowledge that the well has been designated as contaminated by any government environmental/health agency?	Yes	No	Unk	Yes	No	Unk	Yes	<input checked="" type="radio"/>
14. Does the <i>owner</i> or <i>occupant</i> of the <i>property</i> have any knowledge of <i>environmental liens</i> or governmental notification relating to past or recurrent violations of environmental laws with respect to the <i>property</i> or any facility located on the <i>property</i> ?	Yes	No	Unk	Yes	No	Unk		
15a. Has the <i>owner</i> or <i>occupant</i> of the <i>property</i> been informed of the past existence of <i>hazardous substances</i> or <i>petroleum products</i> with respect to the <i>property</i> or any facility located on the <i>property</i> ?	Yes	No	Unk	Yes	No	Unk		
15b. Has the <i>owner</i> or <i>occupant</i> of the <i>property</i> been informed of the current existence of <i>hazardous substances</i> or <i>petroleum products</i> with respect to the <i>property</i> or any facility located on the <i>property</i> ?	Yes	No	Unk	Yes	No	Unk		
15c. Has the <i>owner</i> or <i>occupant</i> of the <i>property</i> been informed of the past existence of environmental violations with respect to the <i>property</i> or any facility located on the <i>property</i> ?	Yes	No	Unk	Yes	No	Unk		
15d. Has the <i>owner</i> or <i>occupant</i> of the <i>property</i> been informed of the current existence of environmental violations with respect to the <i>property</i> or any facility located on the <i>property</i> ?	Yes	No	Unk	Yes	No	Unk		
16. Does the <i>owner</i> or <i>occupant</i> of the <i>property</i> have any knowledge of any <i>environmental site assessment</i> of the <i>property</i> or facility that indicated the presence of <i>hazardous substances</i> or <i>petroleum products</i> on, or contamination of, the <i>property</i> or recommended further assessment of the <i>property</i> ?	Yes	No	Unk	Yes	No	Unk		

Question	Owner			Occupants (if applicable)			Observed During Site Visit	
	Yes	No	Unk	Yes	No	Unk	Yes	No
17. Does the <i>owner</i> or <i>occupant</i> of the <i>property</i> know of any past, threatened, or pending lawsuits or administrative proceedings concerning a release or threatened release of any <i>hazardous substance</i> or <i>petroleum products</i> involving the <i>property</i> by any owner or occupant of the <i>property</i> ?								
18a. Does the <i>property</i> discharge waste water, on or adjacent to the <i>property</i> , other than storm water, into a storm water sewer system?	Yes	No	Unk	Yes	No	Unk	Yes	<input checked="" type="radio"/> No
18b. Does the <i>property</i> discharge waste water, on or adjacent to the <i>property</i> , other than storm water, into a sanitary sewer system?	Yes	No	Unk	Yes	No	Unk	Yes	<input checked="" type="radio"/> No
19. Did you observe evidence or do you have any prior knowledge that any <i>hazardous substances</i> or <i>petroleum products</i> , unidentified waste materials, tires, automotive or industrial batteries, or any other waste materials have been dumped above grade, buried and/or burned on the <i>property</i> ?	Yes	No	Unk	Yes	No	Unk	Yes	<input checked="" type="radio"/> No
20. Is there a transformer, capacitor, or any hydraulic equipment for which there are any records indicating the presence of PCBs?	Yes	No	Unk	Yes	No	Unk	Yes	<input checked="" type="radio"/> No

**Government Records/Historical Sources Inquiry**  
(See guide, Section 10 of ASTM Practice E 1528-96)

21. Do any of the following Federal government record systems list the *property* or any *property* within the circumference of the area noted below:

- |                                                                    |                                      |                                     |
|--------------------------------------------------------------------|--------------------------------------|-------------------------------------|
| <i>National Priorities List (NPL)</i> —within 1.0 mile (1.6 km)?   | Yes                                  | <input checked="" type="radio"/> No |
| <i>CERCLIS List</i> —within 0.5 mile (0.8 km)?                     | Yes                                  | <input checked="" type="radio"/> No |
| <i>RCRA CORRACTS Facilities</i> —within 1.0 mile (1.6 km)?         | <input checked="" type="radio"/> Yes | No                                  |
| <i>RCRA non-CORRACTS TSD Facilities</i> —within 1.5 mile (0.8 km)? | Yes                                  | <input checked="" type="radio"/> No |

22. Do any of the following state record systems list the *property* or any *property* within the circumference of the area noted below:

- |                                                                                                                                                                                                                      |                                      |                                     |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------|-------------------------------------|
| List maintained by state environmental agency of <i>hazardous waste</i> sites identified for investigation or remediation that is the state agency equivalent to <i>NPL</i> —within approximately 1.0 mile (1.6 km)? | Yes                                  | <input checked="" type="radio"/> No |
| List maintained by state environmental agency of sites identified for investigation or remediation that is the state equivalent to <i>CERCLIS</i> within 0.5 mile (0.8 km)?                                          | <input checked="" type="radio"/> Yes | No                                  |
| Leaking Underground Storage Tank (LUST) List—within 0.5 mile (0.8 km)?                                                                                                                                               | <input checked="" type="radio"/> Yes | No                                  |
| Solid Waste/Landfill Facilities—within 0.5 mile (0.8 km)?                                                                                                                                                            | Yes                                  | <input checked="" type="radio"/> No |

23. Based upon a review of *fire insurance maps* or consultation with the local fire department serving the *property*, all as specified in the guide, are any buildings or other improvements on the *property* or on an *adjoining property* identified as having been used for an industrial use or uses likely to lead to contamination of the *property*?

Yes	No	<input checked="" type="radio"/> N/A

Site History

The Site was composed of three adjacent land areas (Approx. 8.3 Acres). The Northern Area of the Site consisted of a city block bounded by commercial/industrial businesses to the north, beyond which, is an east-west alley, to the east by Madison Avenue, to the south by Council Street, and to the west by Juanita Avenue (northern area). The Central Area of the Site consisted of Virgil Middle School, which is bounded to the north by Council Street, to the east by Westmoreland Avenue, to the south by 1st Street, and to the west by VMS. The Southern Area of the Site consisted of White House Primary Center (WHPC), which is bound to the north by 1st Street, to the east by residential properties, to the south by White House Place, and to the west by South Bimini Place.

Preliminary Environmental Assessment (PEA) was completed (June 2008). The field sampling was conducted for soil, soil gas and groundwater for metals, Volatile Organic Compounds (VOCs), Total Petroleum Hydrocarbons (TPHs), methane and hydrogen sulfide as contaminants of concerns. A PEA Report was prepared (June 2008). Supplemental Site Investigations were completed for soil/soil gas and groundwater (2008/2009). The groundwater monitoring at the Site is ongoing. The Draft Remedial Action Plan is under review with appropriate CEQA process. A Supplemental Environmental Impact Report was prepared for the proposed remedial activities to be performed at the Site.

The Final Remedial Action Plan is approved (November, 2009). The cleanup of the Northern Area is completed. The Northern Area (NA) is under school occupancy under Operation and Maintenance activities on quarterly basis for methane mitigation system.

The remedial action for soil is completed in the Central Area (CA) and gas mitigation system installation was completed (July 2013). The school is open following the confirmation sampling and review/approval of Remedial Action Completion

Report (RACR) and Operation and Maintenance activities occur at regular interval for NA and CA gas mitigation system and groundwater monitoring.

# EXECUTIVE SUMMARY

This "Third Quarter 2013 Groundwater Monitoring Report" for the Northern Area of Central Region Elementary School (CRES) #20, (herein referred to as the "Site"), was prepared by Wayne Perry, Inc. (WPI), on behalf of the Los Angeles Unified School District (LAUSD), for submittal to the Department of Toxic Substances Control (DTSC). The Site is bounded to the north by commercial/industrial businesses and an east-west trending alley, to the east by North Madison Avenue, to the south by Virgil Middle School and the Central Area of CRES #20, and to the west by North Juanita Avenue. The Site has been redeveloped into a track, baseball/soccer field, and paved basketball and volleyball courts for the proposed Virgil Middle School.

During this reporting period, WPI conducted Third Quarter 2013 groundwater monitoring at the Site. Because of redevelopment, groundwater monitoring was discontinued at the Site in September 2009. It was re-initiated following the installation of additional/replacement Groundwater monitoring wells in July, August, and December of 2012. The Third Quarter 2013 monitoring event is the fifth that has been conducted at the Site following re-activation of the groundwater monitoring program.

Quarterly groundwater monitoring is being conducted to:

- Assess the concentrations of dissolved phase contaminants relative to their respective MCLs;
- Demonstrate contaminant source removal,
- Assess the stability and/or reduction of dissolved phase contaminant concentrations in groundwater; and
- Confirm that there is no off-site migration of dissolved phase contaminants related to on-site releases.

The findings summarized below are based on results of this quarterly groundwater monitoring event.

- Petroleum hydrocarbons in at least one range (gas, diesel, and/or motor oil) were detected in groundwater samples collected from wells GW-12, GW-25, GW-29, GW-30, and/or GW-32.
- Gasoline constituents (primarily benzene, TBA, and DIPE) were detected in groundwater samples during the Third Quarter 2013 groundwater monitoring event. Benzene was detected in the groundwater sample from well GW-25 at a concentration of 310 µg/L (this was the only detection of benzene during this monitoring event). The fuel oxygenates TBA and DIPE were detected in the groundwater samples from wells GW-25, GW-29, GW-30, and/or GW-32.

- Chlorinated hydrocarbons (primarily PCE, TCE, c-1,2-DCE, and vinyl chloride) were detected in groundwater during the Third Quarter 2013 groundwater monitoring event. PCE, TCE, c-1,2-DCE, and vinyl chloride were detected in the groundwater samples from wells GW-30 and/or GW-32.
- Benzene, TBA, PCE, TCE, c-1,2-DCE, and vinyl chloride were the only dissolved phase contaminants detected above their respective MCLs/Action Level.
- The groundwater flow direction beneath the Site is generally to the east/southeast. On the Site's southern portion, the flow direction is predominantly southeast towards well GW-12.
- Based on results obtained by this and previous Site investigations and groundwater monitoring events, dissolved phase petroleum hydrocarbons, related VOCs, and fuel oxygenates detected in groundwater along the northern Site boundary are most likely associated with off-site, up-gradient sources.
- A Level II Data Evaluation was performed on all analytical data, and it was found usable for meeting the project objectives. No analytical data was rejected.

Based on the groundwater monitoring and assessment activities conducted during the Third Quarter 2013, WPI recommends that quarterly groundwater monitoring continue to evaluate groundwater trends and plume stability.

# 1.0 INTRODUCTION

This report documents the Third Quarter 2013 Groundwater Monitoring event at the Northern Area of proposed Central Region Elementary School #20 (CRES#20). CRES#20 is located at 3600 West Council Street in Los Angeles, California. The location of CRES #20 is shown on **Figure 1**.

CRES#20 includes an area of approximately 8 acres that is split into three sections designated as the Northern, Central, and Southern areas (**Figure 2**). The Northern Area (herein referred to as the "Site"), consists of approximately 3.2 acres (**Figure 3**) and is used as play grounds and athletic fields for the Virgil Middle School (VMS) located at 152 North Vermont Avenue.

This report was prepared by Wayne Perry, Inc. (WPI) for the Los Angeles Unified School District (LAUSD). This report includes descriptions from documents prepared by GeoSyntec Consultants ("Third Quarter 2009 Groundwater Monitoring Report, Proposed Central Region Elementary School #20, Site 11 Los Angeles, California", dated December 4, 2009) and Accord Engineering, Incorporated ("Groundwater Monitoring Work Plan, Central Region Elementary School #20 – Northern Area, Los Angeles, California 90004", dated January 2012, and revised in March and July of 2012).

## 1.1 SCOPE OF WORK

The scope of services provided by WPI and documented in this report includes:

- Conducting the Third Quarter 2013 groundwater monitoring event for existing wells GW-1, GW-2, GW-25, GW-26, GW-27, GW-28, GW-29, GW-30, GW-31, and GW-32;
- Analysis of analytical data obtained from the groundwater samples;
- Presentation of conclusions and recommendations based on the above data;
- Replacement of the well box for well GW-12;
- Deployment of an oxygen releasing canister (O-Sox) into well GW-25;
- Bi-monthly measurements of dissolved oxygen (DO) concentrations in well GW-25 following O-Sox deployment;
- Conducting agency file reviews to identify and evaluate potential off-site, up-gradient source(s) for the elevated benzene concentrations detected in GW-25; and,
- Uploading of all data to the State Regional Water Resources Control Board's GeoTracker database.

## **1.2 REPORT ORGANIZATION**

This report is organized as follows:

- Section 1.0** Presents an introduction, the objectives, and summary of the scope of work.
- Section 2.0** Provides a discussion of the Site description and background.
- Section 3.0** Documents field activities conducted in conjunction with the Third Quarter 2013 Groundwater Monitoring Event and presents analytical results obtained from the groundwater sample analyses.
- Section 4.0** Documents the implementation of O-Sox oxygen releasing canister in well GW-25.
- Section 5.0** Provides findings of WPI's file review of potential up-gradient sources.
- Section 6.0** Presents a summary of data valuation and QA/QC procedures.
- Section 7.0** Presents findings, conclusions and recommendations based on the activities conducted as part of this assessment and previous work conducted by others.
- Section 8.0** Lists references used for the preparation of this report.

## 2.0 BACKGROUND

The LAUSD has completed a new educational development within and around the existing Virgil Middle School (VMS) campus. The development encompasses approximately 8 acres within three separate properties designated as the Northern, Central and Southern Areas. Improvements conducted in each of the three areas are summarized below:

**Northern Area:** - Replacement play fields for VMS, including a bathroom, a multipurpose field, and basketball and volleyball courts.

**Central Area:** - Construction of CRES#20 classrooms east of the existing VMS campus within the former middle school play field area has been completed. Groundwater impacts associated with the southeast quadrant of the Northern Area are separated from the CRES#20 classrooms by outdoor service yards and playfields. A separate groundwater work plan for the Central Area has been submitted to the DTSC for review.

**Southern Area:** - The White House Place Primary Center was demolished and replaced with a surface parking lot for VMS and CRES#20 faculty and staff.

### 2.1 SITE DESCRIPTION AND LOCATION

The Site is located approximately 0.27 miles south of California Highway 101. The Site area is used for VMS physical education activities.

The Site is located in an area of mixed residential and commercial/industrial development. It comprises the majority of a city block, and is bounded on the north by an east-west alley and commercial/industrial businesses facing Beverly Boulevard; to the east by North Madison Avenue and commercial businesses, Cosmopolitan Street, Central City Value High School, and mixed-use lofts; to the south by Virgil Middle School and CRES#20; and to the west by North Juanita Avenue and commercial businesses.

#### **2.1.1 Historical Use of the Northern Area**

Residential development in the Northern Area began around 1921 with commercial and industrial operations beginning in 1927. A drainage channel/creek located along the eastern half of the Northern Area was backfilled in 1938. When the channel was backfilled, it was replaced with an 8.5 by 12 foot reinforced storm water concrete box culvert that runs down North Madison Avenue and within the southeast corner of the Site.

Commercial and industrial operations within the Northern Area included woodworking, a plumbing contractor business, painting operations, a machine shop, lock manufacturing, metal plating operations, and auto repair.

Three underground storage tanks (USTs) were formerly located at 218 North Juanita Avenue. The UST removal was granted closure in 1992 under the supervision of the California Regional Water Quality Control Board – Los Angeles (CRWQCB-LA).

## **2.2 PHYSICAL AND ENVIRONMENTAL CHARACTERISTICS**

### **2.2.1 Site Topography**

Site elevations are reported to range from 266 to 273 feet above mean sea level (Accord Engineering, Incorporated, 2012). The general topographic gradient is approximately 1% toward the southeast.

### **2.2.2 Local Geology and Site Soil Types**

The Site has been described in previous investigation reports (URS, 2008, ENSR/AECOM 2008a; 2008b; 2008c; 2008d, GeoSyntec, 2009a; 2009b; 2009c, The Planning Center, 2010a; 2010b and Accord Engineering, Incorporated, 2012) as being located at the western base of the Elysian Hills, which comprise the marine Upper Miocene Puente Formation. The Puente Formation consists predominantly of sandstones and siltstones, and in the Site vicinity, these sediments are approximately 2,000 feet thick. Units that underlie the siltstone are reported to be petroleum bearing (ExcelTech, 1991).

Holocene alluvium overlies the Puente Formation, and is mapped over the majority of the Site. This alluvium consists of unconsolidated clays and silts, sands, and gravels (Dibblee, 1991).

During previous Site investigations, soil borings were advanced to a maximum depth of approximately 46 feet below ground surface (bgs). These investigations determined that shallow soils consisted mostly of sandy silts and sandy clays, with discontinuous layers of silty sands and clays. Siltstone bedrock was observed at one location at 11 feet bgs in the central portion of the Site and at two locations in the southwest portion of the Site as shallow as 4 feet bgs (URS, 2009b). Siltstone fragments were observed in fill in the northern and central portions of the Site, indicating the soil may be reworked native bedrock. Thicker fill material was encountered at the location of the former drainage channel and the area of the former UST excavation. Soil borings along the northern and southern portions of the Site indicated the presence of tar sands in these areas.

### **2.2.3 Site Hydrogeologic Setting**

The Site is located at the western base of the Elysian Hills, which consist of non-water-bearing Tertiary sediments located outside of the Central Basin and Hollywood Basin of the Los Angeles Coastal Plain (DWR, 1961).

There are no regional aquifers beneath the Site. However, shallow, discontinuous perched zones are present in the underlying alluvium. These perched water zones are likely due to seepage or local irrigation, and are not representative of potential deeper groundwater within the underlying Puente Formation. Per footnote (ac) of Table 2-2 of the Basin Plan (CRWQCB-LA,

1994), “beneficial uses of ground waters outside of major basins listed on this table and outlined in Figure 1-9 have not been specifically listed. However, ground waters outside of the major basins can be significant sources of water. Furthermore, ground waters outside of the major basins may be either potential or existing sources of water for downgradient basins, and as such, beneficial uses in the downgradient basins shall apply to these areas.” Groundwater basins in the area are shown on **Figure 4**.

Based on the 2008 PEA, hydraulic conductivities for soils on the Site at approximately 15 feet bgs (samples most representative of the saturated zone are at this depth) are very low, ranging from  $2.55 \times 10^{-7}$  to  $3.25 \times 10^{-6}$  centimeters/second (cm/sec). Previous quarterly groundwater monitoring events (GeoSyntec, 2009a; 2009b; 2009c) have shown that total dissolved solids (TDS) concentrations have generally exceeded 1,000 milligrams per liter (mg/L) and have been reported as high as 4,690 mg/L. The combination of low hydraulic conductivity and high TDS levels makes the groundwater beneath the Site unsuitable for beneficial use.

Historically, groundwater beneath the Site has flowed towards the east/southeast with a hydraulic gradient of approximately 0.03 feet per foot (ft/ft). During the Third Quarter 2009 monitoring event (GeoSyntec 2009c), groundwater depths in the Northern Area ranged from 8.70 feet (GW-9) to 15.98 (GW-24) below the top of the casing, while groundwater elevations ranged from 250.02 (GW-2) to 258.20 (GW-9) feet above sea level. GeoTrans (2008) concluded that the significant change in water table elevation was indicative of a perched aquifer that was not in equilibrium. Reasons provided for this included the former drainage ditch/creek that had run across the Site from north to south, the subsurface box culvert that runs down Madison Street and traverses the southeast corner of the Site, and the effects of localized irrigation.

#### **2.2.4 Methane and Hydrogen Sulfide**

The Site is located within a designated methane zone according to the Citywide Methane Ordinance Map developed by the Los Angeles Department of Building and Safety (LADBS). The Site is also located within the administrative boundaries of the Los Angeles City Oil Field. Previous Site investigations reported methane concentrations within the Northern Area that exceeded 1,000 parts per million by volume (ppmV) in 14 of 55 soil gas samples, with a maximum concentration of 915,000 ppmV at a location approximately 30 feet south of the former on-Site UST area. Hydrogen sulfide (H<sub>2</sub>S) was also reported at concentrations of 200+ ppmV. Based on these findings, the Site was subject to subsurface gas mitigation measures.

## **2.3 PREVIOUS SITE ASSESSMENTS**

Past environmental investigations conducted for the Site include:

- Phase I Environmental Site Assessment (ESA) Report (ENSR/AECOM, 2008a)
- Preliminary Environmental Assessment (PEA) Report (URS, 2008a)
- Third Quarter 2008 Groundwater Monitoring Report (GeoTrans, 2008)

- Supplemental Site Investigation: Central Area Groundwater Monitoring Well Installation and Sampling (ENSR/AECOM, 2008d)
- Supplemental Site Investigation (SSI) Report (URS, 2009a)
- Fourth Quarter 2008 Groundwater Monitoring Report (URS, 2009b)
- Remedial Action Plan (URS, 2009c)
- First Quarter 2009 Groundwater Monitoring Report (GeoSyntec, 2009a)
- Second Quarter 2009 Groundwater Monitoring Report (GeoSyntec, 2009b)
- Third Quarter 2009 Groundwater Monitoring Report (GeoSyntec, 2009c)
- Supplemental Investigation at Pear Garden Produce and Midway Ford (URS, 2010a)
- Groundwater Well Abandonment Report (20 Wells) (MACTEC 2010)
- Remedial Design Document (RDD) (URS, 2010b)
- Remedial Action Completion Report (RACR) (The Planning Center, 2010)
- Assessment of the Off-site Impacts Technical Memorandum-Northern Area (URS 2011a)
- Gas Mitigation System Start-up Testing Report-Northern Area (The Planning Center 2011a)
- First Quarter 2011 Groundwater Monitoring Report-Northern Area (The Planning Center 2011b)
- Summary Report Assessment of Off-site Impacts-Northern Area (URS 2011b)
- Operation & Maintenance Agreement (LAUSD & DTSC 2011)
- Well Installation and Third Quarter 2012 Groundwater Monitoring Report (WPI 2012)
- Well Installation and Fourth Quarter 2012 Groundwater Monitoring Report (WPI 2013)
- First Quarter 2013 Groundwater Monitoring Report (WPI 2013)
- Second Quarter 2013 Groundwater Monitoring Report (WPI 2013)

### **2.3.1 Quarterly Groundwater Monitoring for 2008 and 2009**

Quarterly groundwater monitoring was conducted in 2008 and 2009 and also as a component of the SSI (AECOM/ENSR 2008b). Groundwater monitoring was initially done in the Northern, Central, and Southern Areas of the proposed CRES#20 location using a network of 30 groundwater monitoring wells. At the request of DTSC, two additional wells were installed in the Northern Area and one in the Central Area before the Fourth Quarter 2008 monitoring event. Analyses conducted for these groundwater monitoring events included metals, TPH, VOCs, polycyclic aromatic hydrocarbons (PAH), and monitored natural attenuation (MNA) parameters. Results from these analyses are summarized and discussed below:

- The only metal contaminants that were detected above State of California Maximum Contaminant Levels (MCLs) for drinking water were antimony, arsenic, nickel, and thallium. Lead and cadmium were detected above their respective MCLs in one

groundwater sample during the first 2008 monitoring event, but were not detected in any groundwater samples during subsequent monitoring events. Metals detected in groundwater do not appear to be associated with any releases at the Site. Since the metal concentrations in groundwater samples from up-gradient and down-gradient wells are similar, and there is no apparent source of metals in soils from historical Site activities, the detected metal concentrations are considered to be naturally occurring.

- TPH-G and TPH-D were detected in groundwater underlying areas with elevated concentrations of TPH-G and TPH-D in soil. TPH-G and TPH-D were detected in groundwater samples from multiple wells during the Third Quarter 2009 monitoring event (GeoSyntec, 2009c). TPH-G was detected above its method detection limit in five wells at concentrations ranging from 0.052J mg/L (MW-3) to 0.85 mg/L (MW-8). TPH-D was detected in three Site wells at concentrations ranging from 0.86J mg/L (GW-3) to 2.5J mg/L (GW-24).
- The volatile gasoline constituents benzene, toluene, ethyl benzene and xylenes (BTEX) were detected in groundwater samples from wells located along the northern boundary of the Northern Area, and in groundwater samples from the area near the former location of the USTs. One or more BTEX compounds were detected in groundwater samples from Site wells GW-3, GW-24 and MW-8 during the Third Quarter 2009 monitoring event. Benzene was detected at a concentration of 40 micrograms per liter ( $\mu\text{g/L}$ ) in the groundwater sample from GW-24 and 61  $\mu\text{g/L}$  in the groundwater sample from MW-8. BTEX detections along the northern Site boundary are most likely related to up-gradient sources such as USTs operated by the former ARCO service station and the historical/current auto repair shops along Juanita Avenue and Beverly Boulevard.
- Petroleum fuel oxygenates were also detected at the Site. The distribution of these constituents appeared to follow the former drainage channel and groundwater flow. The higher concentrations of methyl tertiary butyl ether (MTBE) and tertiary butyl alcohol (TBA) occurred in groundwater samples from wells GW-5 and MW-5, located along the east side of the Site. The increasing trend of MTBE concentrations in GW-5, and stable MTBE concentrations in GW-14R (located in the Central Area), suggests that the source(s) of fuel oxygenates potentially exist off Site, towards the east. One potential source is identified as the former USTs located at 201 and 221 North Westmoreland Avenue. The maximum fuel oxygenate concentrations reported during the Third Quarter 2009 monitoring event (GeoSyntec 2009c) were 2.4  $\mu\text{g/L}$  for MTBE in the groundwater sample from off-site well GW-12, 150  $\mu\text{g/L}$  for TBA in the groundwater sample from GW-3, and 380  $\mu\text{g/L}$  for di-isopropyl ether (DIPE) in the groundwater sample from MW-8.
- Chlorinated VOCs were detected in groundwater samples obtained from near the former Midway Ford Property. During the Third Quarter 2009 monitoring event (GeoSyntec 2009c), PCE, TCE, 1,2-DCA, c-1,2-DCE and vinyl chloride were detected in groundwater samples from Site wells GW-7, MW-3, MW-6 and MW-7, and off-site wells GW-12 and GW-13 at concentrations that exceeded their respective MCLs. PCE was detected in groundwater samples from well MW-3 (72  $\mu\text{g/L}$ ) and off-site well GW-13

(8.9 µg/L), above the MCL of 5 µg/L. TCE was detected in groundwater samples from wells GW-7 (7.8 µg/L), MW-3 (42 µg/L), and off-site well GW-13 (22 µg/L), above the MCL of 5 µg/L. 1,2-DCA was detected in the groundwater sample from off-site well GW-12 (0.97 µg/L), above the MCL of 0.5 µg/L. c-1,2-DCE was detected in groundwater samples from wells GW-7 (86 µg/L), MW-3 (71 µg/L), MW-6 (20 µg/L), MW-7 (16 µg/L), and off-site well GW-13 (110 µg/L), above the MCL of 6 µg/L. Vinyl chloride was detected in the groundwater sample from wells GW-7 (0.56 µg/L), MW-3 (22 µg/L), MW-6 (4.5 µg/L), and MW-7 (6.6 µg/L), above the MCL of 0.5 µg/L.

- The only PAH detected during the Third Quarter 2009 monitoring event (GeoSyntec 2009c) was naphthalene. Naphthalene was detected at a concentration of 2.6 µg/L in the groundwater sample from GW-24, located along the Site's northern boundary.
- Based on results from the MNA analyses, GeoTrans concluded that the plume of dissolved phase contaminants was stable or shrinking in the Northern Area, indicating that natural attenuation was in progress. Other indicators of natural attenuation included the presence of degradation byproducts such as vinyl chloride and TBA. The MNA parameter analyses indicated that plume conditions were predominantly anaerobic. Elevated methane concentrations in groundwater samples from some wells indicated that methanogenesis was taking place. These data suggests that natural attenuation of dissolved-phase contaminants was likely to continue. Continual monitoring for MNA parameters in the Northern Area was not considered necessary and was not proposed in the 2012 Groundwater Monitoring Work Plan.

Petroleum and chlorinated hydrocarbon concentrations in groundwater as detected during the Fourth Quarter 2008 sampling event are shown on **Figure 5**. A summary of historical groundwater analytical data and well construction details from the period between May 2008 and September 2009 is included in **Appendix A**.

### **2.3.2 Remedial Action Plan (2010)**

The DTSC-approved RAP (URS 2010a) indicated that perched groundwater beneath the Site is not suitable for use because it has been impacted by naturally-occurring petroleum hydrocarbons and has high TDS concentrations. Also, the aquifer has a low yield because of the generally non-water bearing bedrock of the Puente formation. Because of these conditions, there were two alternatives to obtain Site closure from the DTSC. The first was to reduce dissolved phase contaminant concentrations in groundwater to their respective MCLs (provided below).

MCLs for Dissolved-Phase VOCs Detected in Groundwater	
Contaminant	MCL
Benzene	1 µg/L
1,1-Dichloroethane	5 µg/L
1,2-Dichloroethane	0.5 µg/L
cis-1,2-Dichloroethene	6 µg/L
trans-1,2-Dichloroethene	10 µg/L
Methyl tertiary butyl ether	13 µg/L
Tetrachloroethene	5 µg/L
Trichloroethene	5 µg/L
Vinyl Chloride	0.5 µg/L

The second alternative was to demonstrate contaminant source removal, the stability or reduction of dissolved phase contaminant concentrations in groundwater, and to confirm that there is no off-site migration of contaminants related to on-site releases. Post remediation groundwater monitoring was proposed to demonstrate that these conditions were satisfied.

### **2.3.3 Groundwater Well Abandonment Report (2010)**

Twenty-two groundwater monitoring wells located on the Site were abandoned for redevelopment activities. All wells were abandoned in accordance with the requirements set forth in the California Department of Water Resources Bulletin 74-90, California Well Standards, and in general compliance with Los Angeles County Department of Environmental Health Services' permit requirements. Well abandonment activities were conducted during April and May 2010.

### **2.3.4 Remedial Action Completion Report (2010)**

Remedial activities were implemented as outlined in the RAP, and included the excavation and disposal of impacted soil and in-situ chemical oxidation at areas over-excavated into the saturated zone to target residual concentrations of VOCs and TPH in groundwater. Following the completion of remedial activities, A remedial action completion report ("Soil Excavation Remedial Action Completion Report, Volumes I & II, Central Region Elementary School #20 Northern Area (Replacement Play Fields), 3600 West Council Street, Los Angeles, California 90004" prepared by The Planning Center, dated November 1, 2010 and revised December 21, 2010) was prepared to document procedures and results.

Groundwater remedial actions included applying Oxygen Release Compounds (ORCs) and/or Hydrogen Release Compounds (HRCs) to excavations advanced into saturated soils. This method was used at Areas 4 (excavated to a depth of 25 feet bgs) and 14, excavated to 18 and 21 feet bgs. The locations of these areas are shown of **Figure 3**.

Prior to backfilling the Area 4 and 14 excavations, a water and vapor barrier was installed to the inboard portions of the shoring walls along the off-site alley way in Area 4 and North Madison Avenue in Area 14. The barrier was constructed of Cetco Liquid Boot, is a rubberized asphaltic product that hardens to form a waterproof and vapor barrier membrane. The shoring was cut approximately 5 feet bgs and the remaining (below grade) shoring was left in place. The bottom of each excavation was stabilized using a sequential placement of a geotextile filter fabric layer, a 1-foot thick layer of washed, angular ¾ inch gravel, and a second layer of filter fabric.

The ORC was mixed with water to form a 20% solids slurry, and sprayed directly into the excavations as they were backfilled. Additional, mixing was conducted by the excavator operator as the backfill was placed. The treatment zone in Area 4 was approximately 8.5 feet thick, at which point the excavation had been backfilled to approximately 15.5 feet bgs. The treatment zone in the 21-foot portion of Area 14 was approximately 3-feet thick, at which point the excavation had been backfilled to approximately 14 feet bgs.

The HRC treatment was confined to the approximate southern half of Area 14, and was conducted by pre-mixing the product with hot water to create a 50% solution that was then applied in evenly spaced rows (approximately 8 to 10 feet on center) atop lifts of backfilled soil. The HRC treatment zone in the 18-foot portion of Area 14 was 3-feet thick, at which point the excavation had been backfilled to approximately 14 feet bgs.

These two products were applied in accordance with procedures outlined in the DTSC-approved RDD and site-specific Waste Discharge Requirements (WDR) permits issued by the CRWQCB-LA. The DTSC approved the RACR on January 3, 2011.

### **2.3.5 Gas Mitigation System Start-up Testing Report-Northern Area (2011)**

Following the completion of soil and groundwater remediation activities in the Northern Area, a methane mitigation system was installed. The installation and startup of this system was documented in "*The Gas Mitigation System Start-up Testing Report-Northern Area*", prepared by The Planning Center (2011a) and submitted to DTSC on April 28, 2011. This report summarized and evaluated the soil gas and methane mitigation system testing results. DTSC correspondence dated May 16, 2011, concurred with the report conclusions that the methane mitigation system was operating as intended, and that the playfield could be occupied for school purposes.

### **2.3.6 Summary Report Assessment of Off-Site Impacts-Northern Area (2011)**

At the DTSC's request, LAUSD delineated the nature and extent of off-site contamination and evaluated potential risks to receptors associated with identified contaminants. Areas of concern evaluated included the Site's northern property boundary (adjacent to the alley) and the southeastern property boundary, towards Madison Avenue to the east and Council Street to the south. Data from the previously installed offsite borings, soil gas probes, and groundwater wells were reviewed and analyzed. Results were used to provide recommendations for additional off-site soil and soil gas characterization. This evaluation was documented in a

Technical Memorandum dated February 4, 2011, revised March 9 and March 24, 2011 (URS, 2011). The "*Summary Report Assessment of Off-Site Impacts-Northern Area*" provided a summary the off-site evaluation and recommendations that were included in the original document, and also provided procedures and results of the additional offsite soil gas and soil sampling that was conducted in response the DTSC's request. Findings are summarized below:

- Naphthalene was detected above the reporting limit. However, it was concluded that residual vapor phase naphthalene concentrations in the northern alleyway did not pose a health risk that would prevent use of the property for commercial/industrial purposes.
- PCE was detected at concentrations exceeding the CHHSL in two vapor samples from a probe located in the southeast corner of the Site. However, the concentrations of PCE in soil vapor were well below the site-specific calculated permissible exposure concentrations for commercial workers, and further remedial action was not considered necessary.

Using a residential exposure scenario, residual off-site contaminants north and southeast of the Site did not pose any potential health risk to occupants of off-site properties. The DTSC approved the report on September 14, 2011.

### **2.3.7 ARCO (Former 3737) Beverly Boulevard**

The ARCO site was first developed as a gasoline station in 1950. The former fueling system included three 12,000-gallon underground storage tanks in a single cluster, two fuel dispensing islands, associated underground product piping, and a 550-gallon waste oil tank. The fueling system was removed in November 1989.

Various environmental site assessment conducted from September 1990 through the present determined that subsurface soils and underlying groundwater were impacted by petroleum fuel constituents. As part of these assessments, approximately 19 groundwater monitoring wells were installed on- and off-site (two of these are replacement wells).

ARCO groundwater monitoring wells MW-13 and MW-17 (**Figure 3**) were installed north of the Site in the alley, and both were located down-gradient of the former ARCO station location. These wells were installed to monitor the distal edge of the dissolved phase petroleum hydrocarbon plume. Due to construction activities in the Northern Area of the Site (in the immediate vicinity of wells MW-13 and MW-17), the CRWQCB-LA authorized the abandonment of both wells on December 14, 2011. MW-13 was abandoned on January 9, 2012 and MW-17 was abandoned on January 20, 2012 (Morgan 2012). Replacement well GW-25 (also located in the Alley, **Figure 3**) was installed to assess groundwater conditions up-gradient of the Site associated with the release at the former ARCO Station and up-gradient of Treatment Area 4 (Accord 2012).

Remedial activities were conducted at the ARCO site in 2008. These included the exaction and off-site disposal of approximately 5,465 tons of hydrocarbon-impacted soil and the removal, treatment and discharging of about 199,976 gallons of impacted groundwater. Regular groundwater monitoring has been conducted at the ARCO site since these remedial activities

were completed. This site remains an open leaking underground storage tank case with the CRWQCB-LA (#900040098).

Results from the most recent groundwater monitoring event (reported in the "*Semi-Annual Groundwater Monitoring Report (For 2<sup>nd</sup> Semi-Annual Report, 2012)*" dated January 15, 2013 are summarized below.

Wells	TPH-G	Benzene	Toluene	Ethyl-benzene	Xylenes	MTBE	ETBE	DIPE	TAME	TBA
MW-1	490	ND	ND	ND	ND	ND	ND	ND	ND	ND
MW-2R	ND	ND	ND	ND	ND	ND	ND	ND	ND	22600
MW-3	ND	ND	ND	ND	ND	4	ND	ND	ND	ND
MW-4	820	ND	2	ND	ND	11	ND	ND	ND	400
MW-6R	210	ND	ND	ND	ND	ND	ND	ND	ND	ND
MW-7	1200	ND	ND	ND	3	2	ND	2	ND	13
MW-8	ND	ND	ND	ND	ND	ND	ND	ND	ND	20
MW-9	ND	ND	ND	ND	ND	ND	ND	ND	ND	ND
MW-10	2200	ND	ND	ND	ND	3	ND	2	ND	ND
MW-14	ND	ND	ND	ND	ND	ND	ND	ND	ND	ND
MW-16	ND	ND	ND	ND	ND	ND	ND	ND	ND	ND

All results are provided in µg/L.

No free product was detected in any wells. Samples were not analyzed for TPH-D or TPH-O. Wells MW-5, MW-11 and MW-12 were not sampled because they were paved over. MW-5 has not been sampled since 9/9/04; MW-11 has not been sampled since 3/8/07; and MW-12 has not been sampled since 12/7/05.

The "*Semi-Annual Groundwater Monitoring Report (For 2<sup>nd</sup> Semi-Annual Report, 2012)*" recommends closure based on the extent of previous remedial activities, and the limited extent and low concentrations of TPH-G, benzene, MTBE, and TBA remaining in groundwater.

### **2.3.8 Well Installation and Third Quarter Groundwater Monitoring Report (2012)**

Because of redevelopment, groundwater monitoring was discontinued at the Site in September 2009. This was the first groundwater monitoring event conducted at the Site since September 2009.

The "*Groundwater Monitoring Work Plan, Central Region Elementary School #20, Los Angeles, California, 90004*" specified that eight groundwater monitoring wells were to be installed at the Site. Seven of these (GW-25 through GW-31) were installed in June and July 2012. These seven wells (and existing wells GW-1, GW-2, and GW-12) were purged and sampled on August 9, 2012. Findings from this event are summarized below:

- Results obtained by this event determined that the groundwater flow direction beneath the Site was generally towards the east. However, the flow direction on the southern portion of the Site was to the southeast (towards well GW-12).

- It was concluded that dissolved phase petroleum fuel hydrocarbons, related VOCs, and fuel oxygenates detected in groundwater wells installed along the northern Site boundary were likely associated with off-site, up-gradient sources.
- Chlorinated VOCs (specifically PCE, c-1,2-DCE, and vinyl chloride) were detected in soil and/or groundwater samples in the southern portion of the Site. However, only vinyl chloride was detected at a concentration of regulatory concern. Vinyl chloride was detected in the groundwater sample from GW-30 at a concentration of 2.1 µg/L, and that exceeds its MCL of 0.5 µg/L).

### **2.3.9 Well Installation and Fourth Quarter Groundwater Monitoring Report (2013)**

During this reporting period, WPI conducted Fourth Quarter 2012 groundwater monitoring at the Site and installed the remaining groundwater monitoring well (GW-32) proposed for the Site in the "Groundwater Monitoring Work Plan, Central Region Elementary School #20, Los Angeles, California, 90004". This monitoring event was the second conducted at the Site following re-activation of the groundwater monitoring program.

In addition to the analyses required under the DTSC groundwater monitoring program, groundwater samples were analyzed for the constituents specified in the CRWQCB-LA's Waste Discharge Requirement (WDR) Order No. R4-2007-00 19 (Series No. 103), and Monitoring and Reporting Program No. CI-9543. These requirements were proposed as condition of approval for groundwater remedial activities at the Site completed in 2010, specifically the application of oxygen and hydrogen releasing compounds to saturated soils at two Site locations.

Findings from this event are summarized below:

- Petroleum hydrocarbons in the gas, diesel, and motor oil ranges were detected in groundwater samples collected from wells GW-12, GW-25, GW-26, GW-27, GW-28, and/or GW-30.
- VOCs detected during this event include benzene (detected only in the groundwater sample from well GW-25 at a concentration of 330 µg/L), the fuel oxygenates TBA and DIPE, detected in the groundwater samples from wells GW-25, GW-28, GW-29, and/or GW-30, and c-1,2-DCE and vinyl chloride, detected in the groundwater sample from well GW-30 at concentrations of 5.2 µg/L and 2.6 µg/L, respectively.
- Benzene and vinyl chloride were the only dissolved-phase contaminants detected above their respective MCLs of 1 µg/L and 0.5 µg/L, respectively.
- The groundwater flow direction remained consistent with previous monitoring events.
- Based on results obtained by this and previous Site investigations and groundwater monitoring events, the source of dissolved-phase petroleum hydrocarbons, related VOCs, and fuel oxygenates detected in groundwater along the northern Site boundary was attributed to off-site, up-gradient sources.
- A comparison of the concentrations of WDR constituents in groundwater samples from wells located up-gradient of the two groundwater treatment areas to their

concentrations in groundwater samples from wells located within and down-gradient from the two treatment areas identified slight concentration increase in the treatment area and down-gradient wells. However, these increases are not considered sufficient to have any detrimental effect on groundwater quality. Since the application of these compounds occurred two years ago, it was concluded that any further impact would be less than that evaluated by the Fourth Quarter 2012 monitoring event. Therefore, it was recommended that monitoring for the WDR constituents be discontinued.

- Petroleum fuel hydrocarbons in the gas, diesel, and motor oil ranges were detected in soil samples collected during the installation of groundwater monitoring well GW-32. The fuel oxygenates MTBE and TBA were detected in the 25-foot soil sample from boring GW-32.
- VOCs (primarily chlorinated compounds) were detected in soil samples obtained from boring GW-32. The only occurrence of a constituent exceeding its Site-Specific Cleanup Goal (SSCG) was the detection of PCE in the 15-foot sample at a concentration of 37,000 µg/kg. The SSCG for PCE is 1,200 µg/kg. The PCE concentration declined to 17 µg/kg in the 20-foot soil sample and 3.3 µg/kg in the 25-foot soil sample. Considering the abundance of fine-grained sediments in subsurface soils, and the fact that elevated PCE vapors were not detected in the 2011 soil gas samples obtained from the general area, this occurrence of PCE was not considered to be a significant source of PCE vapors. In their April 4, 2013 response to this report, the DTSC requested that it be determined if these results change the conclusions contained in URS Corporation's 2011 "Summary Report Assessment of Off-site Impacts Northern Area" (see section 2.3.6 above) URS issued an Addendum to their report on May 29, 2013. Revisions were made and in a September 18, 2013 email, DTSC concurred with the conclusion that the detected concentrations do not change the conclusion (acceptable health risk to those on or off-site) of the original report. The report was subsequently published on September 19, 2013.

#### **2.3.10 First Quarter 2013 Groundwater Monitoring Report (2013)**

During this reporting period, WPI conducted First Quarter 2013 groundwater monitoring at the Site and re-surveyed street wells GW-1, GW-2, and GW-12. This monitoring event was the third conducted at the Site following re-activation of the groundwater monitoring program. Findings from this event are summarized below:

- Petroleum hydrocarbons in at least one range (gas, diesel, and/or motor oil) were detected in groundwater samples collected from wells GW-25, GW-26, GW-29, GW-30, and/or GW-32.
- Petroleum fuel hydrocarbons and oxygenates (primarily benzene, TBA, and DIPE) were detected in groundwater during the Second Quarter 2013 groundwater monitoring event. Benzene was detected in the groundwater sample from well GW-25 at a concentration of 160 µg/L (this was the only detection of benzene this monitoring event). The fuel oxygenates TBA and DIPE were detected in the groundwater samples from wells GW-25, GW-26, GW-29, and/or GW-30.

- Chlorinated hydrocarbons (primarily PCE, TCE, c-1,2-DCE, and vinyl chloride) were detected in groundwater during the First Quarter 2013 groundwater monitoring event. PCE, TCE, c-1,2-DCE, and vinyl chloride were detected in the groundwater samples from wells GW-29, GW-30, and/or GW-32.
- Benzene, TBA, PCE, TCE, c-1,2-DCE, and vinyl chloride were the only dissolved phase contaminants detected above their respective MCLs/Action Level.
- The groundwater flow direction beneath the Site is generally to the east. However, on the Site's southern portion, the flow direction is to the southeast, towards well GW-12. Well GW-12 was unable to be accessed during First Quarter 2013 (automobile parked over it), but groundwater flow direction is expected to remain consistent with previous monitoring events.
- Based on results obtained by this and previous Site investigations and groundwater monitoring events, dissolved phase petroleum hydrocarbons, related VOCs, and fuel oxygenates detected in groundwater along the northern Site boundary are most likely associated with off-site, up-gradient sources.

#### **2.3.11 Second Quarter 2013 Groundwater Monitoring Report (2013)**

During this reporting period, WPI conducted Second Quarter 2013 groundwater monitoring at the Site. This monitoring event was the fourth conducted at the Site following re-activation of the groundwater monitoring program. Findings from this event are summarized below:

- Petroleum hydrocarbons in at least one range (gas, diesel, and/or motor oil) were detected in groundwater samples collected from wells GW-12, GW-25, GW-26, GW-29, GW-30, and/or GW-32.
- Gasoline constituents (primarily benzene, TBA, and DIPE) were detected in groundwater during the Second Quarter 2013 groundwater monitoring event. Benzene was detected in the groundwater sample from well GW-25 at a concentration of 170 µg/L (this was the only detection of benzene during this monitoring event). The fuel oxygenates TBA and DIPE were detected in the groundwater samples from wells GW-25, GW-29, and/or GW-30.
- Chlorinated hydrocarbons (primarily PCE, TCE, c-1,2-DCE, and vinyl chloride) were detected in groundwater during the Second Quarter 2013 groundwater monitoring event. PCE, TCE, c-1,2-DCE, and vinyl chloride were detected in the groundwater samples from wells GW-27, GW-30, and/or GW-32.
- Benzene, TBA, PCE, TCE, c-1,2-DCE, and vinyl chloride were the only dissolved phase contaminants detected above their respective MCLs/Action Levels.
- The groundwater flow direction beneath the Site is generally to the east/southeast. On the Site's southern portion, the flow direction is predominantly southeast towards well GW-12.

- Based on results obtained by this and previous Site investigations and groundwater monitoring events, dissolved phase petroleum hydrocarbons, related VOCs, and fuel oxygenates detected in groundwater along the northern Site boundary are most likely associated with off-site, up-gradient sources.
- A Level II Data Evaluation was performed on all analytical data, and it was found usable for meeting the project objectives. No analytical data was rejected.

Based on the groundwater monitoring and assessment activities conducted during the Second Quarter 2013, WPI recommended that quarterly groundwater monitoring be continued to evaluate groundwater trends and plume stability. Remedial alternatives (if required) would be identified and assessed following two additional quarters of groundwater monitoring.

## **2.4 SUMMARY OF FINDINGS FROM PREVIOUS GROUNDWATER MONITORING EVENTS**

A summary of significant findings and data trends from previous groundwater monitoring events is provided below:

- The groundwater gradient beneath the Northern Area is toward the east to southeast and the hydraulic gradient has ranged from 0.01 to 0.09 feet/foot.
- The significant fluctuations of water table elevations are indicative of a perched aquifer that is likely being recharged from a number of sources including the former drainage ditch/creek, the subsurface box culvert, and localized irrigation.
- The following dissolved phase contaminants have been detected in groundwater at concentrations that exceed their respective MCLs: benzene, 1,2-DCA, c-1,2-DCE, t-1,2-DCE, PCE, TCE, MTBE, and vinyl chloride.
- Potential offsite source areas to the north include an ARCO gasoline station formerly located at 3737 Beverly Boulevard and the Unocal gasoline station located on the northeast corner of the Vermont Avenue and Beverly Boulevard intersection. Additional potential off-site sources include two automobile repair shops located to the west along North Juanita Avenue and north along Beverly Boulevard.
- The contaminant plume has generally been stable or shrinking over the course of historic groundwater monitoring.
- Based on an analysis of MNA parameters conducted prior to remedial activities, natural attenuation was occurring under anaerobic conditions. Secondary indicators of natural attenuation were also identified. These included the presence of degradation byproducts such as vinyl chloride and TBA. Overall, the MNA analysis suggested generally anaerobic conditions and a reducing environment in areas of residual contaminants.
- Previous investigations identified four distinct dissolved phase contaminant plumes. Plumes 1, 2 and 3 consist of dissolved phase petroleum fuel hydrocarbon constituents.

Plume 4 is comprised of dissolved phase chlorinated VOCs. **Figure 4** illustrates the lateral extent of each plume as it existed prior to treatment during the Fourth Quarter 2008 sampling event.

- Results obtained by the Fourth Quarter 2012 monitoring event demonstrated that the application of the ORCs and HRCs did not degrade water quality. Since the application of these compounds occurred two years prior to this event, it was concluded that any further impact would be less than that evaluated. Therefore, it was recommended that monitoring for the WDR constituents be discontinued.

# 3.0 THIRD QUARTER 2013 GROUNDWATER MONITORING

WPI completed the Third Quarter 2013 groundwater monitoring event on August 9, 2013. This is the fifth groundwater monitoring event at the Site since sampling resumed in August 2012. Quarterly groundwater monitoring is being conducted to:

- (1) Demonstrate the stability and/or reduction of dissolved phase contaminant concentrations in groundwater;
- (2) Confirm that no off-site migration of contaminants related to on-site releases is occurring; and
- (3) Evaluate the effectiveness of remedial activities previously conducted at the Site.

## 3.1 FIELD ACTIVITIES

The following sections describe the field activities conducted at the Site during the Third Quarter 2013 Groundwater Monitoring event. Eleven wells were gauged and sampled during this quarterly monitoring event.

### 3.1.1 Traffic Control

During monitoring of wells located within city streets and/or alleys, traffic control was conducted in accordance with Work Area Traffic Control Handbook (WATCH) requirements.

### 3.1.2 Well Head Inspections

Each well box and well head was inspected as part of this groundwater monitoring event on August 9, 2013. These inspections are documented on the purging and sampling log forms. Copies of these forms are provided as **Appendix B**. All wells and well boxes except GW-12 were observed to be in good condition during the inspection. The well box for well GW-12 was later repaired on August 29, 2013, in accordance with the recommendations made in the Second Quarter 2013 report. Well repairs were made under an existing permit with the City of Los Angeles, held by WPI.

### 3.1.3 Groundwater Elevation Measurement

Prior to groundwater sampling, the depth to water in each monitoring well was measured to the nearest 0.01-foot below the top of each casing using an electronic product/water interface probe. The interface probe was decontaminated before each use. Groundwater elevations were determined by subtracting the water table depth from the top of casing elevations. Gauging data (including casing and groundwater elevations) are provided on **Table 1**.

### 3.1.4 Groundwater Well Purging and Sampling

On August 9, 2013, WPI purged and sampled groundwater monitoring wells GW-1, GW-2, GW-12, and GW-25 through GW-32 using low flow sampling techniques. Wells were purged

and sampled using a 12-volt Monsoon pump fitted with new disposable, polyethylene tubing and connected to a Horiba 4-22 flow-through cell field water analyzer. The wells were purged at a rate of approximately 100 to 200 milliliters per minute (ml/min).

The water quality parameters temperature, pH, conductivity, turbidity, dissolved oxygen (DO), and oxidation-reduction potential (ORP) were monitored for stabilization approximately every 5 minutes. Groundwater parameters were recorded on purging and sampling log forms. Copies of these forms are provided as **Appendix B**.

Following completion of purging, groundwater samples were collected in clean, laboratory-supplied sampling containers with preservatives appropriate for the analytical method(s). The containers were labeled with the WPI project number, sampling location, date and time of collection and the sampler's initials, sealed in Zip-Loc® bags, and immediately placed in a cooler chilled with crushed ice. Each sample was recorded on a chain-of-custody form along with the number of containers and the requested analyses. Samples were maintained in a chilled condition until delivered to the off-site laboratory, and were delivered on the same day that they were collected.

### **3.1.5 Decontamination**

Equipment that came into contact with groundwater was decontaminated to avoid cross contamination between monitoring wells. Decontamination of reusable sampling equipment occurred prior to and after each use. All sampling devices used were decontaminated in a pre-designated area using the following sequential procedures:

- Non-phosphate detergent and tap water wash, using a brush if necessary;
- Tap-water rinse; and
- Deionized/distilled water rinse.

New disposable nitrile gloves were worn and changed when handling clean sampling equipment so as not to cross contaminate the equipment. Disposable equipment intended for one-time use was not decontaminated, but packaged for appropriate off-site disposal.

### **3.1.6 Investigation-Derived Wastes**

Purge and decontamination water generated during groundwater sampling activities was contained in a DOT-approved 55-gallon drum and stored on-site pending disposal at an appropriate off-site facility. The drum was transported to DeMenno Kerdoon in Compton, California for lawful disposal. A copy of the IDW disposal manifest is provided in **Appendix C**.

## **3.2 Laboratory Analytical Program**

Analytical testing services for groundwater samples were provided by Calscience Environmental Laboratories, Inc. of Garden Grove, California. Calscience is accredited by the California Environmental Protection Agency Department of Health Services Environmental Laboratory Accreditation Program (ELAP).

In accordance with the DTSC quarterly groundwater monitoring program, groundwater samples from this monitoring event were analyzed for the following constituents:

- VOCs and fuel oxygenates by EPA Method 8260B/5030B; and
- TPH in the C4-C12 (gasoline) range, TPH in the C13-C22 (diesel) range, and TPH in the C23-C40 (oil) range by modified EPA Method 8015B.

TPH ranges were reported by the laboratory as a singular carbon chain or in chain pairs. Results for each range were tabulated and presented in the text as a sum of the carbon chain(s) within the range values shown.

The water quality parameters temperature, pH, conductivity, turbidity, DO, and ORP were measured with a Horiba 4-22 water meter during well purging and at the time of sampling. These measurements were recorded on the purge logs (**Appendix B**).

### **3.2.1 Quality Assurance / Quality Control (QA/QC) Summary**

Quality control (QC) samples were collected as part of the overall quality assurance (QA)/QC program. These samples include laboratory QC samples such as laboratory method blanks, laboratory control samples, laboratory duplicates, and matrix spike samples. The QC samples collected in the field consisted of a sample duplicate and an equipment rinseate sample, collected following decontamination of purging and sampling equipment. In addition, laboratory-prepared temperature and trip blanks were placed in the sample ice chest prior to the collection of the groundwater samples, and remained with the samples during their transportation to the off-site laboratory.

Duplicate groundwater samples are collected and analyzed at a minimum frequency of 10 percent of the primary samples collected to evaluate sampling and analytical precision. Therefore one duplicate was collected during this event. The field duplicate sample was collected from well GW-12. The duplicate sample was analyzed for the same parameters as the primary samples. The trip blank and equipment rinseate samples were analyzed for TPH-G by modified EPA Method 8015 and VOCs by EPA Method 8260B/5030B.

All samples were transported to the laboratory under chain-of-custody procedures. The temperature blank was measured by the laboratory at 2.4 degrees Celsius when the samples were delivered.

## **3.3 GROUNDWATER MONITORING RESULTS**

Field data and analytical results obtained by the Third Quarter 2013 monitoring event are discussed in this section. Measured depth to groundwater and calculated groundwater elevations are provided in **Table 1**. Analytical results from the TPH analyses are summarized in **Table 2**, and analytical results from the VOC analyses are summarized in **Table 3**. Field measurements (pH, dissolved oxygen, and oxygen reduction potential) are tabulated on **Table 4**. Groundwater elevation contours and flow direction are illustrated on **Figure 6**. Copies

of the laboratory reports and chain-of-custody form for the groundwater analyses are provided in **Appendix D**.

### **3.3.1 Groundwater Elevations, Flow Direction, and Gradient**

Depths to groundwater and/or free product were measured to the nearest 0.01-inch using an oil/water interface probe. As with all past events, free product was not detected in any wells during the Third Quarter 2013 groundwater monitoring event.

As shown on **Table 1**, depths to groundwater ranged from 9.61 (GW-32) to 22.06 feet (GW-12). Groundwater elevations ranged from 242.13 feet above mean seal level (MSL) in well GW-12 to 261.75 feet MSL in well GW-1. Based on these data, groundwater flow is to the east-southeast at a gradient of 0.02 foot/foot in the northern half of the Site and 0.12 foot/foot toward the southeast corner of the Site. Groundwater elevation contours are shown on **Figure 6**. The depth to groundwater in wells GW-12, GW-26, GW-28, GW-29, and GW-30 since monitoring resumed in August 2012 is shown graphically on **Figure 6A**.

### **3.3.2 Results of Groundwater Sample Analyses for Petroleum Fuel Constituents and VOCs**

Results obtained from the petroleum fuel constituent and VOC analyses are discussed below.

#### **3.3.2.1 Total Petroleum Hydrocarbons**

Groundwater samples were analyzed for TPH as gasoline, diesel and oil using carbon chain identification. The C4-C12 range is equated to gasoline; the C13-C22 range is equated to diesel, and the C23-C40 range is equated to oil. TPH detections for this quarter are summarized below.

Gasoline range hydrocarbons were detected in the groundwater samples collected from GW-25 at 1,151 µg/L and from GW-29 at 61 µg/L. As shown on **Figure 3**, GW-25 is located in the alley up-gradient of the Site and GW-29 is centrally located on the Site. This was the first detection of TPH-G for well GW-29; however, the concentration appears to be anomalous with respect to the last four sampling events.

Diesel range hydrocarbons were detected in the following groundwater samples:

- GW-12 and its duplicate at concentrations of 254 and <250 µg/L, respectively;
- GW-25 at a concentration 1,430 µg/L;
- GW-29 at a concentration of 291 µg/L;
- GW-30 at a concentration of 182 µg/L; and,
- GW-32 at a concentration of 262 µg/L.

Motor oil range hydrocarbons were detected in the following groundwater samples:

- GW-12 and its duplicate at concentrations of 168 and <250 µg/L, respectively;
- GW-25 at a concentration 360 µg/L;
- GW-29 at a concentration of 152 µg/L;
- GW-30 at a concentration of 114 µg/L; and,
- GW-32 at a concentration of 224 µg/L.

Historical TPH analytical results are summarized on **Table 2**, and TPH isoconcentrations in groundwater are shown on **Figure 7**. **Figure 7A** has been prepared to illustrate the TPH-D concentrations in wells GW-12, GW-25, GW-26, GW-29, GW-30 and GW-32 since monitoring resumed in August 2012.

#### **3.3.2.2 BTEX and Fuel Oxygenates**

VOC detections for this quarter are summarized below:

- Benzene was detected in the groundwater sample from GW-25 at a concentration of 310 µg/L.
- Sec-Butyl benzene was detected in the groundwater sample from GW-25 at a concentration of 1.3 µg/L.
- Isopropyl benzene was detected in the groundwater sample from GW-25 at a concentration of 14 µg/L.
- n-Propyl benzene was detected in the groundwater sample from GW-25 at a concentration of 7.2 µg/L.
- Toluene was detected in the groundwater sample from GW-25 at a concentration of 4.4 µg/L.
- Ethylbenzene was detected in the groundwater sample from GW-25 at a concentration of 1.0 µg/L.
- p/m Xylene was detected in the groundwater sample from GW-25 at 2.5 µg/L;
- TBA was detected in the groundwater samples from GW-25 and GW-29 at concentrations of 10 µg/L and 16 µg/L, respectively. This was the first time TBA was detected in groundwater samples from well GW-29.
- DIPE was detected in the groundwater samples from GW-25, GW-29, GW-30, and GW-32 at concentrations of 7.6 µg/L, 73 µg/L, 7.8 µg/L, and 2.9 µg/L, respectively.

Historical analytical results for the BTEX and fuel oxygenates are summarized on **Table 3**. Isoconcentration contours for the volatile gasoline constituents benzene, toluene, ethylbenzene and xylenes (BTEX) in groundwater are provided as **Figure 8**.

### **3.3.2.3 Chlorinated Compounds**

- PCE was detected in the groundwater sample from GW-32 at a concentration of 19 µg/L.
- TCE was detected in the groundwater sample from GW-32 at a concentration of 17 µg/L.
- c-1,2-DCE was detected in the groundwater samples from GW-30 and GW-32 at concentrations of 3.9 µg/L and 66 µg/L, respectively.
- Vinyl chloride was detected in the groundwater samples from GW-30 and GW-32 at concentrations of 0.81 µg/L and 2.3 µg/L, respectively.

Historical analytical results for the chlorinated compounds are summarized on **Table 3**. Isoconcentration contours for chlorinated VOCs in groundwater are provided on **Figure 9**. **Figure 9A** has been prepared to illustrate the PCE and VC concentrations in wells GW-30 and GW-32 since monitoring resumed in August 2012.

### **3.3.2.4 Discussion**

During this groundwater monitoring event, six contaminants were detected at concentrations above their respective MCLs or action level:

- Benzene was detected at a concentration of 310 µg/L in the groundwater sample from well GW-25, exceeding its MCL of 1.0 µg/L. As compared to the June 2013 sampling event, the benzene concentration in this up-gradient-offsite well increased (from 170 to 310 µg/L).
- TBA was detected at a concentration of 16 µg/L in the groundwater sample from well GW-29, exceeding its state action level of 12 µg/L. This is the first time TBA was detected in groundwater samples from GW-29.
- c-1,2-DCE was detected at a concentration of 66 µg/L in the groundwater sample from well GW-32, exceeding its MCL of 6.0 µg/L. This is an increase from its detection at 57 µg/L the first time this well was sampled during the Second Quarter 2013 monitoring event.
- PCE was detected at a concentration of 19 µg/L in the groundwater sample from well GW-32, exceeding its MCL of 5.0 µg/L. As compared to the February and June 2013 sampling events, the PCE concentration in well GW-32 has continued to decrease (160/77/ 19 µg/L).
- TCE was detected at a concentration of 17 µg/L in the groundwater sample from well GW-32, exceeding its MCL of 5.0 µg/L. As compared to the February and June 2013 sampling events, the TCE concentration in well GW-32 has continued to decrease (46 /34 /17 µg/L).
- Vinyl Chloride was detected in the groundwater samples from wells GW-30 and GW-32 at concentrations of 0.81 µg/L and 2.3 µg/L, respectively. Both of these detections exceed vinyl chloride's MCL of 0.5 µg/L. As compared to the June 2013 sampling event,

the vinyl chloride concentrations in well GW-30 and GW-32 increased slightly (up from 0.71 µg/L and 1.7 µg/L, respectively).

- Dissolved-phase petroleum fuel and VOC contaminants were not detected above their respective method detection limits in the groundwater samples from wells GW-1, GW-2, GW-28, and GW-31.

## 4.0 O-SOX IMPLEMENTATION IN WELL GW-25

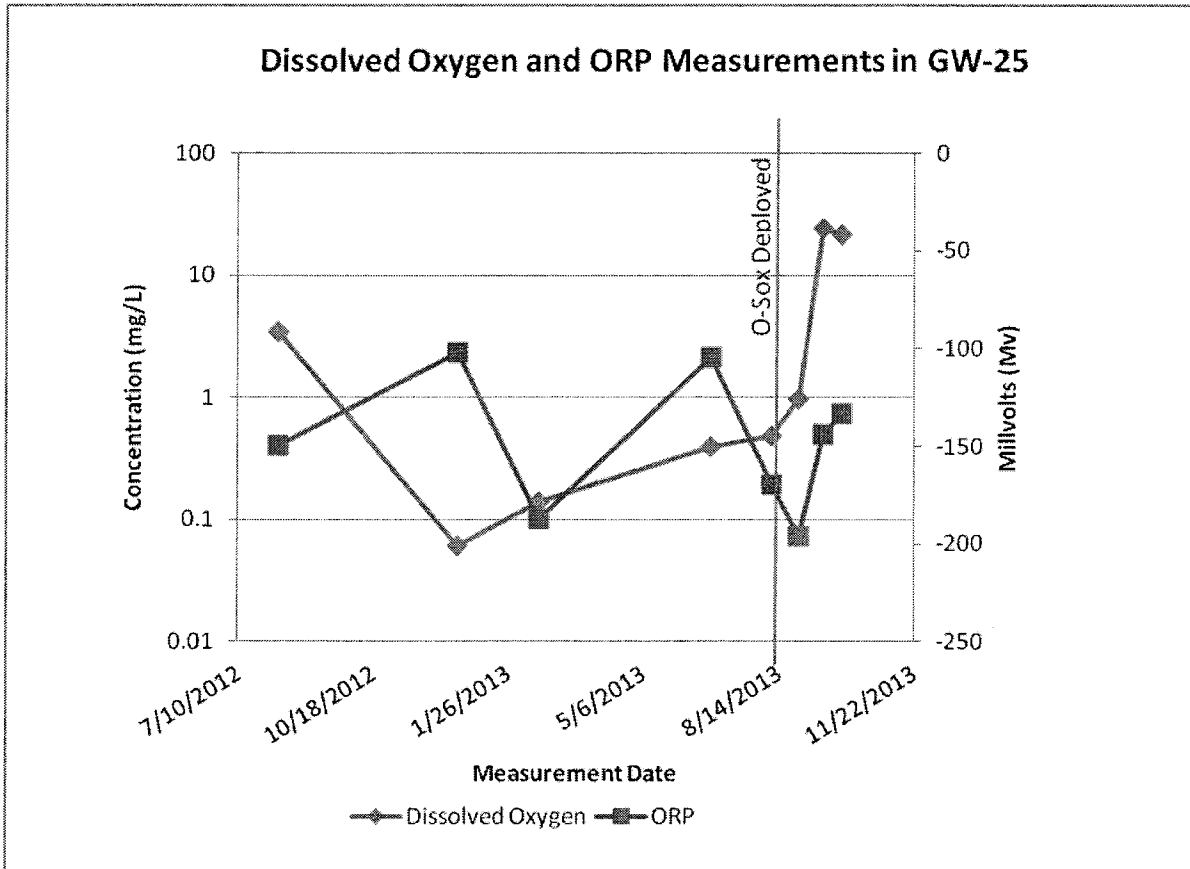

In WPI's "First Quarter 2013 Groundwater Monitoring Report" (dated April 10, 2013), it was recommended that an oxygen releasing canister (e.g. an O-Sox) be placed in GW-25 to increase the dissolved oxygen concentration in the well's vicinity, thus creating conditions that would enhance the development of hydrocarbon-degrading bacteria. In their correspondence dated July 29, 2013, the DTSC requested information on the feasibility of using such a canister in GW-25. This was provided in WPI's "Response to Comments", included with the "Second Quarter 2013 Groundwater Monitoring Report" (dated August 20, 2013).

Based on past experience, WPI selected an O-Sox oxygen releasing canister for use in GW-25. An O-Sox spec sheet is provided as **Appendix F**. O-Sox are easily installed in existing wells, and can be tailored to address hydrocarbon concentrations in a specific well.

The compounds used in O-Sox canisters provide a controlled release of both oxygen and nutrients. These enhance the development of naturally occurring hydrocarbon degrading bacteria. A material safety data sheet (MSDS) for the O-Sox compound is included in **Appendix G**.

Two O-Sox canisters were installed in GW-25. The average depth to water in GW-25 is 14.17 feet, and the well is screened from 15 to 30 feet bgs (a 15-foot interval). The two O-Sox canisters have a combined length of approximately 6- feet. The canisters were centered within the screened interval to facilitate the distribution of dissolved oxygen and nutrients to the surrounding formation.

Dissolved oxygen measurements have been obtained from GW-25 during each sampling event, and were also obtained immediately prior to O-Sox deployment. Since deployment, dissolved oxygen measurements have been obtained from GW-25 on a bi-monthly basis. Pre- and post O-Sox deployment dissolved oxygen concentrations are included in **Table 4** and are shown graphically below.

As shown above, prior to O-Sox deployment, the DO concentrations in GW-25 were generally below 1.0 mg/L. The minimal DO concentration required to support aerobic bacterial is about 2.0 mg/L. Following O-Sox deployment, there has been a significant increase in the DO concentration in well GW-25, and it is now above 10.0 mg/L. It is anticipated that the increased DO concentration will create conditions favorable for the rapid development of aerobic hydrocarbon degrading bacteria, which will decrease the concentration of gasoline constituents in the near vicinity of GW-25.

The DO concentration in GW-25 will continue to be monitored on a bi-monthly basis. The O-Sox will be replaced as necessary to keep the DO concentration in GW-25 above 5.0 mg/L.

## 5.0 FILE REVIEW OF POTENTIAL UP-GRADIENT SOURCES

Based on requests submitted to the Los Angeles City Fire Department and the California Regional Water Quality Control Board – Los Angeles Region, 3706 Beverly Boulevard was the only address between 3700 and 3718 Beverly Boulevard to have a regulatory file that indicated existence of a UST. Copies of the responses to the review requests and a copy of the UST removal report for 3706 Beverly Boulevard are provided as **Appendix H**. A plot plan indentifying the addresses of the businesses north of the alley is provided as **Figure 10**.

The property located at 3706 Beverly Boulevard was formerly occupied by A & M Refrigeration Company. The Los Angeles City Fire Department file for this property contained correspondence dated February 5, 1995 and supporting documentation for soil sampling conducted as part of a 1,000-gallon gasoline UST removal. One soil sample (T-1) was collected from beneath the center of the UST following removal. A second soil sample (SP-1) was collected from the stockpile for waste characterization. Sample T-1 contained detectable concentrations of petroleum hydrocarbons just above the detection limit of 5 µg/kg (ethylbenzene at 6 µg/kg; xylenes at 33 µg/kg).

In addition to the Los Angeles City Fire Department file, WPI also reviewed Sanborn maps included as Appendix D of the ENSR Corporation's "Phase I Environmental Site Assessment Report" (dated March 17, 2008). Copies of the Sanborn maps are provided as **Appendix I**. These maps indicate that both 262 North Juanita Avenue (the southeast corner of Beverly Boulevard and Juanita Avenue) and 3700-3706 Beverly Boulevard (the southwest corner of Beverly Boulevard and North Madison Avenue) were occupied by 'gas and oils' stations between 1950 through at least 1970.

Based on the proximity of these historic gasoline stations to alley well GW-25, the lack of supporting UST removal documentation for either of them, and the detections of ethylbenzene and xylenes in the single soil sample collected during the UST removal at the A&M Refrigeration Company, it is most likely that the presence of BTEX in groundwater samples collected from up-gradient well GW-25 originates from an off-site source and is not reflective of historic operations in the Northern Area.

# 6.0 DATA VALIDATION AND QA/QC RESULTS SUMMARY

All samples were handled, prepared, and measured in the same manner under similar prescribed conditions. Overall, based on this Tier II data validation covering the QC parameters listed below, the data as qualified are usable for meeting project objectives.

These data were reviewed based on the "Data Validation Memorandum, Summary of Level II Data Validation" (DTSC, May 2006) and the "Quality Assurance Project Plan" provided as Section 4.0 of the "Groundwater Monitoring Work Plan, Central Region Elementary School #20, Northern Area", dated March 2012 (herein referred to as the QAPP), and professional judgment. Laboratory reports were reviewed for the following:

- Data completeness;
- Acceptable MDLs;
- Chain of custody;
- Holding times;
- Sample preservation;
- Blanks;
- Laboratory control samples;
- Matrix spike/matrix spike duplicates;
- Surrogates/internal standards (as applicable); and,
- Field quality control samples.

## 6.1 Groundwater Samples

Eleven groundwater samples, one duplicate groundwater sample, and one field equipment rinseate sample were collected on August 9, 2013. The groundwater and duplicate samples were analyzed for VOCs by EPA Method 8260B; and for TPH-G, TPH-D and TPH-O by modified EPA Method 8015B. A laboratory-prepared trip blank and the equipment rinseate sample were analyzed for VOCs by EPA Method 8260B; and TPH-G by modified EPA Method 8015B. All the analyses were performed at Calscience Environmental Laboratories, Garden Grove, CA.

The laboratory QC sample results indicate appropriate sample preparation and analysis. Sample qualifications were made based on duplicate sample results discrepancies, surrogate recoveries and LCS and MS/MSD results. The results of the field QC samples indicate appropriate sample collection and handling procedures. The samples were analyzed as requested and all holding times were met. No contaminants were detected in the method, equipment rinseate, or trip blanks.

**Reporting limits**

Reporting limits were acceptable for all analyses.

**Field Precision**

Field duplicates were collected at a frequency of 10 percent for groundwater samples for all analyses. Several constituents were detected in the field duplicate pair. No RPD values were above the QC limits and no data were qualified.

Based on the Tier II data validation covering the QC parameters listed above, the data are usable for meeting the project objectives and no data was rejected. The data validation memoranda are provided as **Appendix E**.

# 7.0 FINDINGS, CONCLUSIONS AND RECOMMENDATIONS

## 7.1 GENERAL FINDINGS

The historic on-site source of groundwater contaminants (three USTs formerly located at 218 North Juanita Avenue) were removed in 1992 under the supervision the CRWQCB-LA. Contaminated soil was removed in 2010 in accordance with a RAP. This removal of the on-site source(s) satisfies the first requirement of the second alternative to achieve remedial action objectives (page 8).

Field measurements of pH, DO, and ORP obtained during purging for each sampling event are provided as **Table 4**. The average pH of groundwater samples over the last four sampling events has ranged from 7.04 to 7.14 in wells GW-26, GW-27, GW-28, and GW-31, indicating slightly alkaline conditions. The average pH of samples from wells GW-1, GW-2, GW-12, GW-25, GW-29, and GW-30 over the last four sampling events are 6.29, 6.86, 6.67, 6.95, 6.87, and 6.79, indicating slightly acidic conditions in these wells. The average pH from the last three sampling events for GW-32 is 6.99. The average DO concentration in groundwater samples from all wells during the past four sampling events is less than 2 mg/L. This reporting period, DO concentrations ranged from 0.25 mg/L (GW-26) to 0.62 mg/L (GW-25).

The ORP values for the latest sampling event are negative in wells GW-12, GW-25, GW-26, GW-27, GW-28, GW-29, GW-30, GW-31, and GW-32, ranging from an average of -48.1 mV (GW-26) to -168.13 mV (GW-25). Negative values in this range are indicative of a slightly reducing environment. The ORP values from the latest sampling event are positive for wells GW-1 (averaging 32.53 mV) and GW-2 (averaging 4.89 mV). These positive ORP values indicate a slightly oxidizing environment.

Groundwater flow direction beneath the Site is generally towards the east/southeast. The hydraulic gradient to the east/southeast was approximately 0.02 feet/foot in the northern half of the Site and was approximately 0.12 feet/foot in the southeast corner of the Site.

## 7.2 PLUME SPECIFIC FINDINGS

Historically, four independent plumes have been identified at the site. Plumes 1, 2 and 3 consist of dissolved-phase petroleum fuel hydrocarbons. The fourth was comprised of dissolved-phase chlorinated VOCs. **Figure 5** illustrates each plume as it existed during the Fourth Quarter 2008 sampling event, prior to treatment. Each of these plumes is discussed below.

### 7.2.1 Plume 1

In addition to the former ARCO site, it appears that the groundwater contamination present along the northern boundary of the Site may be the result of former uses of 3700 and 3706 Beverly Boulevard.

Plume 1 is identified as the leading edge of an off-site petroleum hydrocarbon plume to the north that has migrated onto the Site (**Figure 5**). Wells GW-3, GW-24, MW-13, and MW-17 were formerly used to monitor Plume 1. These wells were abandoned, and wells GW-25, GW-26, and GW-28 were installed as replacement wells, and are now used to monitor this plume. Wells GW-26 and GW-28 are within treatment areas. The closest potential sources are the properties immediately north of the alley (3700 and 3706 Beverly Boulevard). A farther potential source is the former ARCO station which is in the process of receiving closure from the CRWQCB-LA. Results from the GW-25, GW-26, and GW-28 groundwater analyses are summarized below (range of results since sampling resumed in parentheses, **bold** if defining limit of range):

- TPH-G was detected in the groundwater sample from off-site well GW-25 at a concentration of 1,151 µg/L (707 to **1,151** µg/L);
- TPH-D was detected in the groundwater sample from off-site well GW-25 at a concentration of 1,430 µg /L (800 to 1,500 µg/L) ;
- TPH-O was detected in the groundwater sample from off-site well GW-25 at a concentration of 360 µg /L (<250 to 820 µg/L) ;
- Benzene was detected in the groundwater sample from off-site well GW-25 at a concentration of 310 µg/L (65 to 330 µg/L). This was the only detection of benzene during this groundwater monitoring event;
- Toluene, ethylbenzene, and p/m-xylenes were detected in the groundwater sample from off-site well GW-25 at concentrations of 4.4 µg/L (1.7 to **4.4** µg/L), 1.0 µg/L (<1.0 to 2.4 µg/L), and 2.5 µg/L (<1.0 to 2.7 µg/L) , respectively. These were the only detections of these compounds during this groundwater monitoring event;
- TBA was detected in the groundwater sample from offsite well GW-25 at a concentration of 10 µg /L (**10** to 26 µg/L); and
- DIPE was detected at a concentration of 7.6 µg/L (4.9 to 8.2 µg/L) in the groundwater sample from off-site well GW-25.

These contaminants (which appear to be attributable to an off-site source), are confined to the northern boundary of the Site. As with all other sampling events, chlorinated hydrocarbons were not detected above their respective reporting limits in groundwater samples from Plume 1 wells GW-25, GW-26, and GW-28.

### 7.2.2 Plume 2

Plume 2 (**Figure 5**) is identified as a TPH plume associated with the three USTs that were removed from the Site in 1992. Well MW-8 (now abandoned) was formerly located within the Plume 2 boundaries. Following remedial activities, well GW-29 was installed as a replacement well to monitor this plume. Well GW-29 is within a treatment area. Results from the GW-29 groundwater sample analyses (range of results since sampling resumed in parentheses, **bold** if defining limit of range) are summarized below:

- TPH-G was detected at a concentration of 61 µg /L (<50 to **61** µg/L) ;
- TPH-D was detected at a concentration of 291 µg /L (<50 to 300 µg/L);
- TPH-O was detected at a concentration of 152 µg /L (<50 to **152** µg/L);
- TBA was detected at a concentration of 16µg /L (<10 to **16** µg/L); and
- DIPE was detected at a concentration of 73 µg /L (15 to **73** µg/L).

### 7.2.3 Plume 3

Plume 3 is identified an intermittent TPH and VOC plume underlying the southeast corner of the Site (**Figure 5**). Well MW-5 (abandoned to accommodate remedial activities), was formerly used to monitor this plume. Well GW-32 is now used to monitor Plume 3. This was the third time that GW-32 has been sampled. Results are summarized below (range of results since sampling resumed in parentheses, **bold** if defining limit of range):

- TPH-D was detected at a concentration of 262 µg/L (203 to **262** µg/L) ;
- TPH-O was detected at a concentration of 224 µg/L (53 to **224** µg/L);
- DIPE was detected at a concentration of 2.9 µg/L (<2.0 to **2.9** µg/L);
- c-1,2-DCE was detected at a concentration of 66 µg/L (41 to **66** µg/L);
- PCE was detected at a concentration of 19 µg/L (**19** to 160 µg/L) ;
- TCE was detected at a concentration of 17 µg/L (**17** to 46 µg/L); and
- Vinyl chloride was detected at a concentration of 2.3 µg/L (1.7 to **2.3** µg/L) .

PCE and its breakdown products TCE, c-1,2-DCE, and vinyl chloride were all detected in the GW-32 groundwater sample at concentrations exceeding their respective MCLs. The detected concentration of PCE (19 µg/L) is the lowest since the well was first sampled in February 2013.

### 7.2.4 Plume 4

Plume 4 is identified as a VOC plume located within the former Midway Ford property (**Figure 5**). Former wells MW-3 and MW-6 were located within this plume. Wells GW-30 and GW-31 were installed as replacement wells to monitor Plume 4 following the completion of remedial activities. Well GW-30 is outside of the treatment area and GW-31 is within the treatment area. Analytical results from the GW-30 and GW-31 groundwater sample analyses

are summarized below (range of results since sampling resumed in parentheses, **bold** if defining limit of range).

- TPH-D was detected in the groundwater sample from well GW-30 at a concentration of 182 µg/L (**182** to 420 µg/L). As with all previous events, TPH-D was not detected above its method detection limit in the groundwater sample from well GW-31;
- TPH-O was detected in the groundwater sample from well GW-30 at a concentration of 114 µg/L (<100 to 200 µg/L). As with all previous events, TPH-O was not detected above its method detection limit in the groundwater sample from well GW-31;
- DIPE was detected in the groundwater sample from well GW-30 at a concentration of 7.8 µg/L (**7.8** to 17 µg/L). As with all previous events, fuel oxygenates were not detected above their respective method detection limits in the groundwater sample from well GW-31;
- c-1,2-DCE was detected in the groundwater sample from well GW-30 at a concentration of 3.9 µg/L (3.3 to 5.2 µg/L). As with all previous events, c-1,2-DCE was not detected above its method detection limit in the groundwater sample from well GW-31; and
- Vinyl chloride was detected in the groundwater sample from well GW-30 at a concentration of 0.81 µg/L (0.71 to 2.6 µg/L). As with all previous events, vinyl chloride was not detected above its method detection limit in the groundwater sample from well GW-31.

## 7.3 CONCLUSIONS

Based on findings of the Third Quarter 2013 monitoring event, the following conclusions are provided:

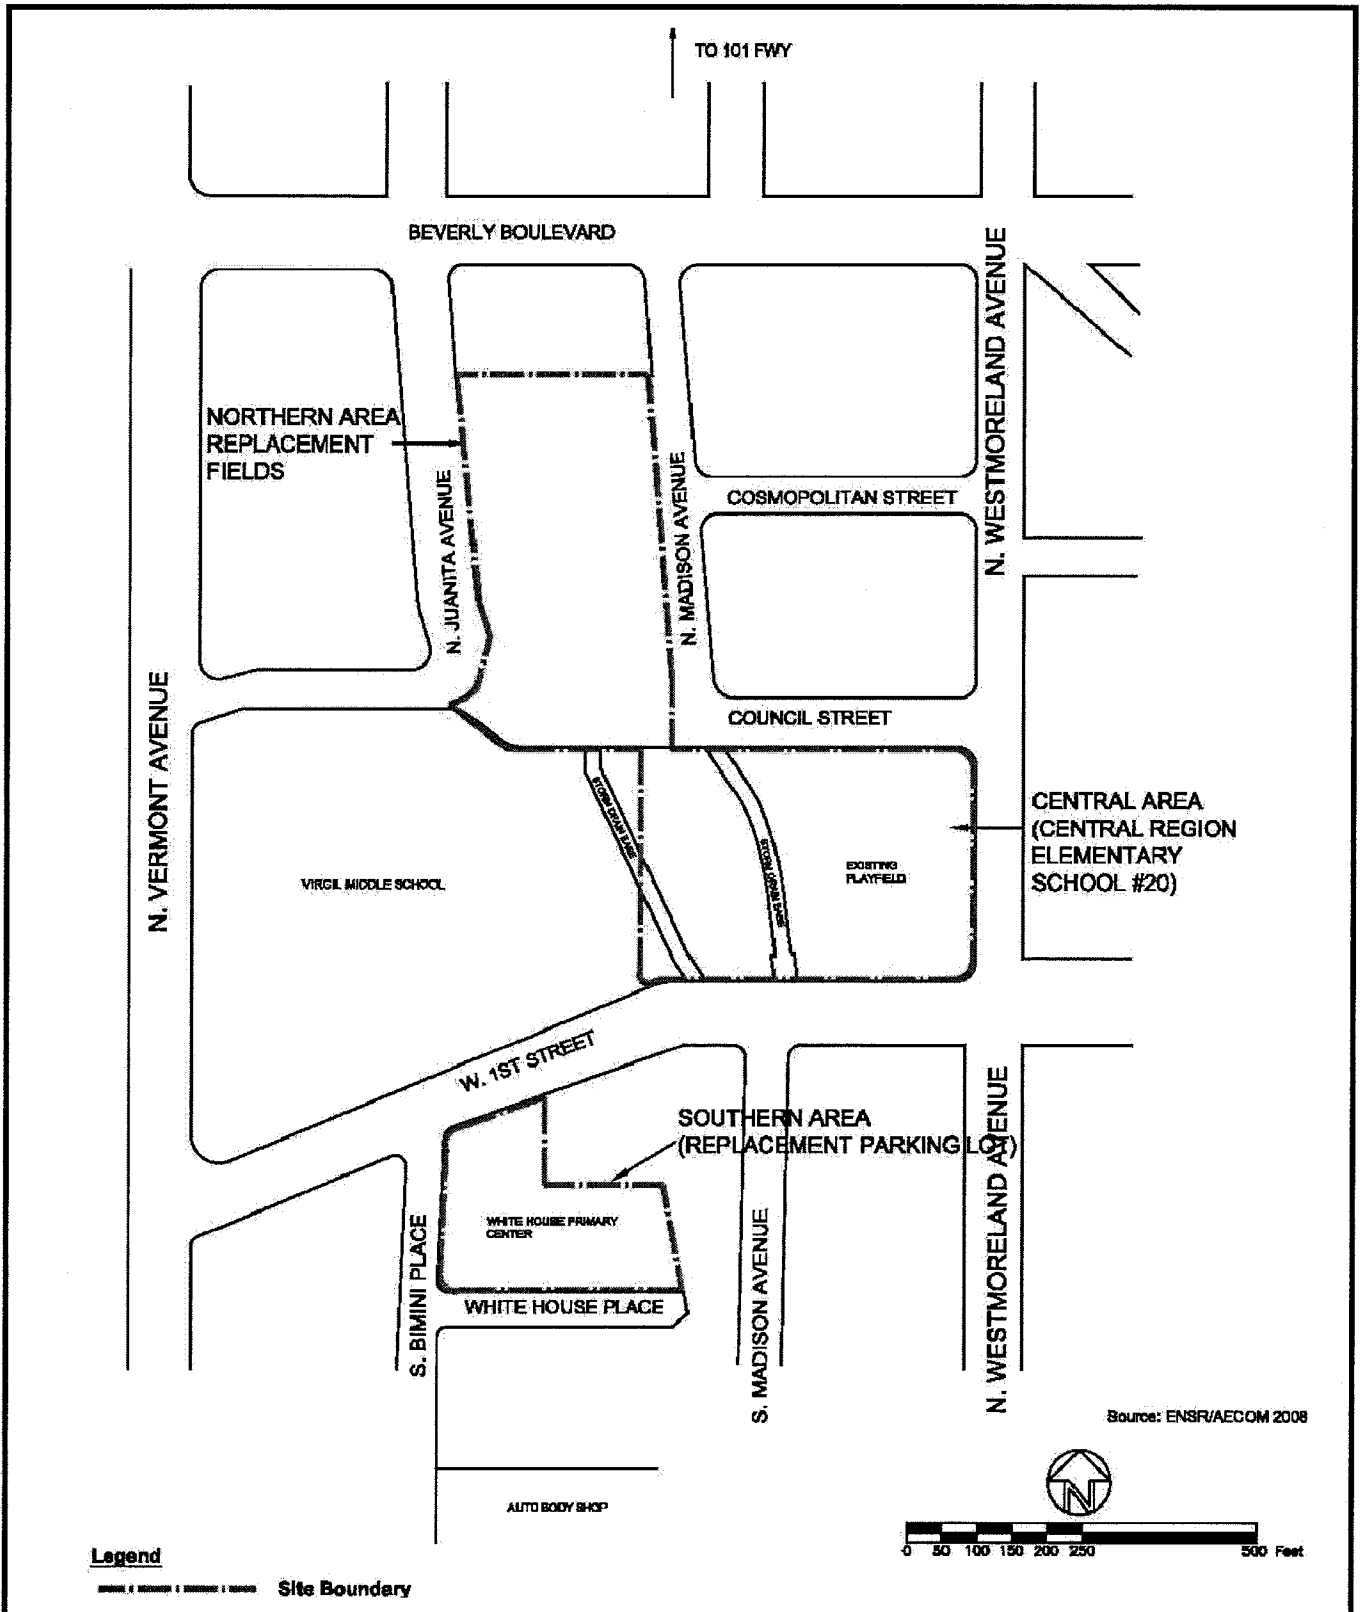

- It appears that sufficient wells are in place to demonstrate plume stability and migration.
- The repair of the well box GW-12 has been completed.
- TPH, related VOCs, and to a lesser extent fuel oxygenates along the northern Site boundary are most likely associated with up-gradient sources located north of the Site. Given the concentrations of fuel oxygenates detected in groundwater monitoring wells within Beverly Boulevard and at the former ARCO station (located at 3737 Beverly Boulevard, north of the Site), fuel oxygenate concentrations detected in GW-25 likely reflect impacts associated with the former ARCO station release.
- Given the historic presence of two service stations at the corners of Beverly Boulevard at North Juanita and North Madison and the lack of supporting data regarding the UST removals associated with these stations and the limited data associated with the UST removal at 3706 Beverly Boulevard, the elevated concentrations of petroleum hydrocarbons in GW-25 (located in the alley adjacent to the northern property boundary of the Site) are likely the result of an undocumented release between Beverly Boulevard and the alley.

- The average DO concentration in each well over the last four groundwater monitoring events is less than 2.0 mg/L. With the exception of GW-1 and GW-2, ORP values in onsite wells with measurable concentrations of the chemicals of concern are generally negative, indicating slightly reducing conditions within each plume area. Collectively, these data indicate generally anaerobic conditions within each contaminant plume.
- Based on a comparison of the chemical of concern concentrations in well GW-31 (located within the treatment area) and GW-30, which is not, the treatment was effective in lowering the concentrations of TPH, BTEX, fuel oxygenates and chlorinated compounds in Plume 4.
- PCE, TCE, c-1,2-DCE, and vinyl chloride were detected in the groundwater sample from GW-32 at concentrations exceeding their respective MCLs. The detections of TCE, c-1,2-DCE, and vinyl chloride indicate that degradation of PCE is occurring.
- It is too early to determine the effect the insertion of O-Sox canisters in well GW-25 has had on groundwater quality along the northern boundary of the Site.

## 7.4 RECOMMENDATIONS

Based on conclusions of the Third Quarter 2013 monitoring event, the following recommendations are provided:

- Future reports should continue to provide information on the effectiveness of the O-Sox canisters placed in GW-25.
- Based on the continued decreasing trend of PCE concentrations in GW-32, additional recommendations, if any, will be postponed until after the Fourth Quarter 2013 groundwater monitoring event has been completed (four sampling events).

ASSESSOR'S MAP  
 COUNTY OF LOS ANGELES, CALIF.

### INTRODUCTION

BBL has used its best effort but makes no claims as to the completeness or accuracy of the referenced government sources or the completeness of the search. Our records are frequently updated but only as current as their publishing date and may not represent the entire field of known or potential hazardous waste or contaminated sites. To ensure complete coverage of the subject property and surrounding area, sites may be included in the list if there is any doubt as to the location because of discrepancies in map location, zip code, address, or other information in our sources. For additional information call 858 793-0641.

In accordance with ASTM E-1527-13, the following government sources have been searched for sites within one mile radius, within the distances of the subject location as listed below.

### FEDERAL SOURCES

#### NPL National Priority List

EPA has prioritized sites with significant risk to human health and the environment. These sites receive remedial funding under the Comprehensive Environmental Response Conservation and Liability Act (CERCLA).

*No listings within 1 mile radius of the subject site.*

#### SEMS Comprehensive Environmental Response, Compensation, and Liability Act

Superfund Enterprise Management System (SEMS) replaced CERCLIS in 2014. This database is used by the EPA to track activities conducted under the Comprehensive Environmental Response and Liability Act CERCLA (1980) and the amendment the Superfund Amendments and Reauthorization Act SARA (1986).

Sites to be included are identified primarily by the reporting requirements of hazardous substances Treatment, Storage and Disposal (TSD) facilities and releases larger than specific Reportable Quantities (RQ), established by EPA.

Using the National Oil and Hazardous Substance Pollution Contingency Plan (National Contingency Plan) the EPA set priorities for cleanup.

The EPA rates National Contingency Plan sites according to a quantitative Hazard Ranking System (HRS) based on the potential health risk via any one or more pathways: groundwater, surface water, air, direct contact, and fire/explosion.

The EPA and state agencies seek to identify potentially responsible parties (PRP) and ultimately Responsible Parties (RP) who can be required to finance cleanup activities, either directly or through reimbursement of federal Superfund expenditures.

Any Institutional/Engineering controls issued under CERCLA are described in the status detail for each site. Sites delisted from the NPL list are included here.

*No listings within half of a mile radius of the subject site.*

#### NFRAP No Further Remedial Action Planned sites (CERCLIS)

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" NFRAP have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the site being placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration.

EPA has removed these NFRAP sites from CERCLIS to lift unintended barriers to the redevelopment of these properties. This policy change is part of EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens promote economic redevelopment of unproductive urban sites.

*This list has been researched within half of a mile radius of the subject site.*

Site: TRUST SERVICES OF AMERICA  
Address: 220 N JUANITA AVE  
City: LOS ANGELES  
Map Loc: 20 - about .1 mile NW of the subject  
Status:

EPA ID#: CAD982361768  
Discovery of this Hazardous Waste site was brought to EPA's attention on 09/06/89. The Preliminary Assessment, consisting of collecting and documenting existing information about the source and nature of the site hazard was completed on 05/01/94.  
NFRAP as of 3/28/1991 0:00:00.

Site: CULLIGAN DI WATER SERV  
Address: 315 N HOOVER ST  
City: LOS ANGELES  
Map Loc: 55 - about .3 mile NE of the subject  
Status:

EPA ID#: CAD04935003  
Discovery of this Hazardous Waste site was brought to EPA's attention on 05/01/81. The Preliminary Assessment, consisting of collecting and documenting existing information about the source and nature of the site hazard was completed on 05/01/94.  
NFRAP as of 5/11/1984 0:00:00.

#### ERNS Emergency Response Notification System

The ERNS is a national computer database used to store information on unauthorized releases of oil and hazardous substances. The program is a cooperative effort of the Environmental Protection Agency, the Department of Transportation Research and Special Program Administrator's John Volpe National Transportation System Center and the National Response Center.

There are primarily five Federal statutes that require release reporting: the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) section 103; the Superfund Amendments and Reauthorization Act (SARA) Title III Section 304; the Clean Water Act of 1972(CWA) section 311(b)(3); and the Hazardous Material Transportation Act of 1974(HMTA) section 1809(b).

*This list has been researched within a quarter of a mile radius of the subject site.*

**RCRA**  
**RCRA Violators List (CORRACTS)**  
The Resource Conservation and Recovery Act of 1976 provides for "cradle to grave" regulation of hazardous wastes. RCRA requires regulation of hazardous waste generators, transporters, and storage/treatment/disposal sites. Evaluation to potential violations, ranging from manifest requirements to hazardous waste discharges, is typically conducted by the US EPA. This database is also known as Corrective Action Report (CORRACTS)  
If enforcement is required, it is typically delegated to a state agency.  
Any Institutional/Engineering controls issued under CORRACTS are described in the status detail for each site

Site: PEARS ENGINEERS  
Address: 3521 W TEMPLE ST  
City: LOS ANGELES  
Map Loc: 44 - about .3 mile NE of the subject  
Status: Id: CA0000619755XX X

**RCRA-D Resource Conservation and Recovery Information System - Treatment, Storage & Disposal**  
The Environmental Protection Agency regulates the treatment, storage and disposal of hazardous material through the Resource Conservation and Recovery Act (RCRA). All hazardous waste TSD facilities are required to notify EPA of their existence by submitting the Federal Notification of Regulated Waste Activity Form, (EPA Form 8700-12) or a state equivalent form as well as part A (EPA form 8700-23) and Part B of their Hazardous Waste Permit Application.

Status Codes: I Incinerator  
T Storage/Treatment facility other than Incinerator  
D Land Disposal Facility

No listings within 1 mile radius of the subject site.

**CDL**  
**Clandestine Drug Laboratories**  
The U.S. Department of Justice ("the Department") provides this information as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entities is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.  
No listings within half of a mile radius of the subject site.

**IDN**  
**Indian REServation LUST/VCP/UST**  
This database includes all environmental records from Indian Reservations such as Leaking Underground Tanks (LUST), Voluntary Cleanup Program (VCP) and Underground Storage Tanks (UST)  
No listings within half of a mile radius of the subject site.

**CALIFORNIA STATE SOURCES**  
**FL**  
**State Response Sites - Federal Lead**  
The Site Mitigation and Brownfields Reuse Database (SMBRD) identifies certain high priority hazardous waste sites the U.S. EPA is the lead agency. These sites are typically proposed, on or delisted from the National Priority List.  
No listings within 1 mile radius of the subject site.

**SR**  
**State Response Sites**  
The Site Mitigation and Brownfields Reuse Database (SMBRD) identifies certain potential hazardous waste sites. These are confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity and deemed generally high-priority and high potential risk.  
The information has been compiled into this database by the California Environmental Protection Agency, Department of Toxic Substance Control (DTSC) in accordance with Section 25559.6 of the California Health and Safety Code.  
This list has been researched within half of a mile radius of the subject site.

Site: CROSSROADS TRUSTAKA WESTMOREL  
Address: 221 N WESTMORELAND AVE  
City: LOS ANGELES  
Map Loc: 12 - about .1 mile NE of the subject  
Status: NRA

id: 19270328 061503 MANU - PRINTING & PUBLISHING

Actions:  
01/10/01: PERMISE EFA, EFRSA, VCA, EA (VCA) - completed on 07/22/02.  
01/10/01: PRELIMINARY ENDANGERMENT ASSESSMENT (PEAE) completed on 07/22/02.  
The site was formerly occupied by Newell Color Laboratory and utilized for printing and photo processing. Three separate subsurface investigations were performed at the site location. Initial sampling occurred on 5/4/01. A second subsurface investigation on 5/14/01 was a result of odor and visual observations made during the previous sampling activities. The final investigation occurred on 6/21/01 to further characterize the vertical and horizontal of total petroleum hydrocarbons (TPH) and Silver (AG) previously identified at the site location. Laboratory analysis identified TPH ranging from 140 to 8,300 ppm and silver up to 920 ppm. Groundwater was sampled on the last of the three subsurface investigations. Groundwater was encountered at depths between 22 and 28 feet below ground surface. No groundwater contamination was identified.

(01/07/02) Site reconnaissance with DTSC and consultant occurred. Currently awaiting submittal of site characterization workplan.

(02/15/02) Site Characterization workplan reportedly in progress. DTSC awaiting submittal of workplan.

(05/10/02) Site characterization workplan submitted to DTSC currently under review.

(08/10/03) Transferred to School. This is a school project.

(08/15/03) As of 6/15/03, schools unit is providing project oversight.

(07/22/02) Proponent submitted PEAE for review. DTSC reviewed and requested additional site characterization. Proponent conducted additional field activities and submitted RI report to DTSC. DTSC reviewed and issued comments. Proponent then transferred project to schools unit, thus completing Scope of work with Site Mitigation.

(10/10/01) A Voluntary Cleanup Agreement between the owner and the Department of Toxic Substances Control (DTSC) was entered. Two documents: Environmental Site Assessment Subsurface Soil Investigation dated June 2001 (previously submitted), and Environmental Site Assessment Subsurface Soil and Groundwater Investigation dated July 2001 (previously submitted) were reviewed by the DTSC.

(11/29/01) Comments pertaining to the submitted documents were sent to consultant representing site location. Scope meeting between DTSC and client is scheduled for first part of December 2001.

(12/14/01) A scoping meeting was held on 12/14/01 to discuss further site characterization of the site.

**ME Military Evacuation Sites**

This category the Site Mitigation and Brownfields Reuse Program Database SMBRPD, contains Formerly Used Defense Sites (FUDS) and Open or Closed military facilities with confirmed or unconfirmed releases and where DTSC is involved in investigation and/or remediation, either in a lead or support capacity. Sites with confirmed releases are generally considered high-priority and high potential risk.

*This list has been researched within half of a mile radius of the subject site.*

Site: NEWELL COLOUR  
Address: 221 N WESTMORELAND AVE  
City: LOS ANGELES  
Map Loc: 12 - about .1 mile NE of the subject  
Status: NRA

id: 71003148

The present status - was reported as of .  
The lead agency for this site is .

**EP Expedited Remedial Action Program**

The Expedited Remedial Action Program is a pilot program limited to 30 sites. These are confirmed release sites worked on by Responsible Parties with oversight of the cleanup by DTSC. These confirmed sites are generally high-priority and high potential risk.

*This list has been researched within half of a mile radius of the subject site.*

Site: CULLIGAN DEIONIZED WATER SERVI  
Address: 315 N HOOVER ST  
City: LOS ANGELES  
Map Loc: 55 - about .4 mile NE of the subject  
Status: NRA

id: 80001345

The present status - was reported as of 2008-01-01.  
The lead agency for this site is .

**LUR Brownfields Reuse Program Facility Sites with Land Use Restrictions**

The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

*This list has been researched within half of a mile radius of the subject site.*

Site: CENTRAL REGION ELEMENTARY SCHO  
Address: COUNCIL STREET & JUANITA AVE & MADISON A  
City: LOS ANGELES  
Map Loc: 2 - about .0 mile NW of the subject  
Status: id: 60000872

**CA Hazardous Waste sites - Permitted and Corrective Action**

Permitted and Corrective Action sites are RCRA-permitted facilities undergoing cleanup activities or permitted to handle Hazardous Waste.

*This list has been researched within half of a mile radius of the subject site.*

Site: CULLIGAN DEIONIZED WATER SERVI  
Address: 315 N HOOVER ST  
City: LOS ANGELES  
Map Loc: 55 - about .4 mile NE of the subject  
Status: id: 60001345

**HIS Historical Site**

This category of The Site Mitigation and Brownfields Reuse Program Database (SMBRPD), contains sites from an older database where no site type was identified. Most of these sites have a status of Referred or No Further Action. DTSC is working to clean up this data by identifying an appropriate site type for each Historic site.

*This list has been researched within half of a mile radius of the subject site.*

Site: TRUST SERVICES OF AMERICA  
Address: 218 N JUANITA AVE  
City: LOS ANGELES  
Map Loc: 16 - about .1 mile NW of the subject  
Status: id: 19290296 050688 MANU - PETROLEUM & COAL PRODUCTS

The present status - was reported as of 1998-05-06.  
The lead agency for this site is:  
Completed tasks:  
-1991-06-20 \* Discovery. From EPA CERCLA PA #1  
Completed tasks:  
199 105-20 Site Screening

Completed tasks:  
1995-05-10 Site Screening NFA FOR DTSC, PETRO report. Site is located in three lots: 1) 218 N. Juanita Avenue; LEUM EXCLUSION  
the site currently leased by Lynde-Ordway Co., inc. Carroll Trust has owned since 1940s and LOC leased it since then  
1990 geophysical surveys located three underground tanks on the property. 2) 220 N. Juanita Avenue; it is currently a vacant lot. The Parker Judge owned in 1938. Paint Engineers owned and operated in 1946. Carroll Trust since 1953. 3) 222 N. Juanita Avenue; Hennessey Juices leased it since 1959. The Los Angeles unified school district conducted these investigations to purchase the property. Revealed petroleum contamination in the soil. Standard solvent was detected in the soil. Contaminants: The highest level was 4500 mg/kg volatile organics and chlorinated hydrocarbons were also detected in the soil. Contaminants: he highest level was also detected in the groundwater. FT recommended NFA for EPA Medium priority PEA required.

Site: CULLIGAN DEIONIZED WATER SERVIC  
Address: 315 N HOOVER ST  
City: LOS ANGELES  
Map Loc: 55 - about .3 mile NE of the subject  
Status: id: 19350464 011884 MANU - INDUSTRIAL MACHINERY & EQUIPMENT

Potential contaminants of concern include \* ORGANIC LIQUIDS WITH METALS, \* UNSPECIFIED ACID SOLUTION, \* UNSPECIFIED SLUDGE WASTE, \* OTHER INORGANIC SOLID WASTE, \* UNSPECIFIED ORGANIC LIQUID MIXTURE, Chromium VI, Nickel. The present status - \* RCRA 3012 - PAST HAZ WASTE DISP INVEN SITE WAS reported as of 1994-01-18.  
The lead agency for this site is:  
Completed tasks:  
1993-09-26 \* Discovery. FACILITY IDENTIFIED ID

Completed tasks:  
1984-01-18 Preliminary Assessment. Report: SOU FROM ERRIS  
RCE ACT: CHEM WATER SOFTENING-DEIONZT & REGENERATION OF PORTABLE ION EXCHANGE UNITS USED FOR INDST WASTEWATER TREATMENT AT PLATING & AEROSPACE COMPANIES. FAC TYPE: TANKS OR & IN SOLN) FOR STORAGE SANITARY SEWER FOR DISP. INCIDENT: RELEASE OF HAZ WASTES INTO LOCAL TIMES PRIOR TO 11/19/82 375,000,000GAJD. ENF HISTORY: 12/6/82 REQ TO CRIMINAL INQUIRY. RELEASE OF WASTE. RESULT: DENIAL OF APPLICATION FOR HZD WASTE FAC PERMIT. FINE BY CITY & SENTENCE FOR THE OWNER. SUBMIT TO EPA PRELIM ASSESS DONE RCRA 3012

**LUST Leaking Underground Storage Tanks - California State**

The Leaking Underground Storage Tanks Information System is maintained by the State Water Resource Board pursuant to Section 25295 of the Health and Safety Code.

This section includes tank cases located on military installation.

Status Codes:	
0	No action
1A	Leak being confirmed
3A	Final site assessment workplan submitted
3B	Final site assessment underway
5C	Pollution characterization
5R	Remediation plan
7	Remedial action underway
8	Post remedial action monitoring
9	Case closed
P	Case purged from agency list

**SWIS Solid Waste Information System**

As legislated under the Solid Waste Management and Resource Recovery Act of 1972, the California Waste Management Board maintains lists of certain facilities, i.e. Active solid waste disposal sites, Inactive or Closed solid waste disposal sites and Transfer facilities.

No listings within half of a mile radius of the subject site.

**REGIONAL SOURCES**

**RCRA-G Resource Conservation and Recovery Information System - Generators**

The Environmental Protection Agency regulates generators of hazardous material through the Resource Conservation and Recovery Act (RCRA). All hazardous waste generators are required to notify EPA of their existence by submitting the Federal Notification or Regulated Waste Activity Form (EPA Form 8700-12) or a state equivalent form. The notification form provides basic identification information and specific waste activities.

Status Codes: L - Generators who generate at least 1000 kg/mo of non-acutely hazardous waste (more than 100 kg/mo of acutely hazardous waste)  
S - Generator who generate 100 kg/mo but less than 1000 kg/mo of non-acutely haz waste  
T - Transporter.

*This list has been researched within the vicinity of the subject site.*

Site: WHITE HOUSE PL PC  
Address: 108 S BIMINI PL  
City: LOS ANGELES  
Map Loc: 3 - about .0 mile W of the subject  
Status: L - Large Generator

Permit id#: CAR000165256

Activities at this facility include:

Site: JAY G LISSNER A PARTNERSHIP  
Address: 3417 W 1ST ST  
City: LOS ANGELES  
Map Loc: 4 - about .1 mile E of the subject  
Status: S - Small Generator

Permit id#: CAD982035081

Site: AMERICAN INDUSTRIAL  
Address: 201 N WESTMORELAND AVE  
City: LOS ANGELES  
Map Loc: 5 - about .1 mile NE of the subject  
Status: S - Small Generator

Permit id#: CAD983656901

Acknowledge date 02/16/1993.

Site: LOS ANGELES USD VIRGIL JR HG S  
Address: 152 N VERMONT AVE  
City: LOS ANGELES  
Map Loc: 8 - about .1 mile W of the subject  
Status: S - Small Generator

Permit id#: CAD982022741

Acknowledge date 03/31/1991  
Activities at this facility include:

Site: LOS ANGELES UNIFIED SCHOOL DIS  
Address: 101 N VERMONT AVE  
City: LOS ANGELES  
Map Loc: 9 - about .1 mile W of the subject  
Status: S - Small Generator

Permit id#: CAR000118166

Activities at this facility include:

**USP Permitted Underground Storage Tanks - State Water Quality Control Board**  
The Cortes Bill (AB2013), enacted in 1983, required registration of all underground storage tanks (UST) with the State Water Quality Control Board by July 1, 1984. About 176,000 tanks and surface impoundments were registered between 1984 and 1987. An amendment (AB 1413) was passed in 1987, effectively removing the State Board from the registration process starting January 1, 1988. The data reflects the information collected by the state between 1984 and 1987 as well as recent time and includes all tanks and surface impoundments in use or closed after 1974.  
Home and farm heating fuel tanks with capacities of 1,100 gallons or less and "structures such as sumps, separators, storm drains, catch basins, oil field gathering lines, refinery pipelines, lagoons, evaporation ponds, well cellars, separation sumps, lined and unlined pits, sumps and lagoons" except those defined as UST under HSWA or may be regulated to protect water quality under the Porter-Cologne Water Quality Control Act are excluded.  
*This list has been researched within a quarter of a mile radius of the subject site.*

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 332 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

## EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

### TARGET PROPERTY INFORMATION

#### ADDRESS

3500 W 1ST STREET  
LOS ANGELES, CA 90004

#### COORDINATES

Latitude (North): 34.0730890 - 34° 4' 23.12"  
Longitude (West): 118.2894820 - 118° 17' 22.13"  
Universal Transverse Mercator: Zone 11  
UTM X (Meters): 381014.8  
UTM Y (Meters): 3770815.5  
Elevation: 268 ft. above sea level

### USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

Target Property Map: 5630741 HOLLYWOOD, CA  
Version Date: 2012

### AERIAL PHOTOGRAPHY IN THIS REPORT

Portions of Photo from: 20140515, 20140513

RGA LUST..... Recovered Government Archive Leaking Underground Storage Tank

### **SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

## EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### **STANDARD ENVIRONMENTAL RECORDS**

#### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 01/09/2018 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

<u>Equal/Higher Elevation</u>	<u>Address</u>	<u>Direction / Distance</u>	<u>Map ID</u>	<u>Page</u>

#### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 4 RCRA-LQG sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/11/2017 has revealed that there are 15 RCRA-SQG sites within approximately 0.25 miles of the target property.

### **State- and tribal - equivalent CERCLIS**

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 01/30/2018 has revealed that there are 23 ENVIROSTOR sites within approximately 1 mile of the target property.

### **State and tribal leaking storage tank lists**

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 29 LUST sites within approximately 0.5 miles of the target property.

## EXECUTIVE SUMMARY

### **Local Lists of Registered Storage Tanks**

SWEEPS UST: Statewide Environmental Evaluation and Planning System. This underground storage tank listing was updated and maintained by a company contacted by the SWRCB in the early 1990's. The listing is no longer updated or maintained. The local agency is the contact for more information on a site on the SWEEPS list.

A review of the SWEEPS UST list, as provided by EDR, and dated 06/01/1994 has revealed that there are 19 SWEEPS UST sites within approximately 0.25 miles of the target property.

### **Other Ascertainable Records**

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/11/2017 has revealed that there is 1 RCRA NonGen / NLR site within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

DRYCLEANERS: A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial; garment pressing and cleaners' agents; linen supply; coin-operated laundries and cleaning; drycleaning plants except rugs; carpet and upholster cleaning; industrial launderers; laundry and garment services.

A review of the DRYCLEANERS list, as provided by EDR, has revealed that there are 2 DRYCLEANERS sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 8 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 10 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Info:  
Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Voluntary Cleanup Agreement  
Completed Date: 10/10/2001  
Comments: A Voluntary Cleanup Agreement between the owner and the Department of Toxic Substances Control (DTSC) was entered. Two documents, Environmental Site Assessment Subsurface Soil Investigation dated June 2001 (previously submitted), and Environmental Site Assessment Subsurface Soil and Groundwater Investigation dated July 2001 (previously submitted) were reviewed by the DTSC.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Preliminary Endangerment Assessment Report  
Completed Date: 07/22/2002  
Comments: Proponent submitted PEAE for review. DTSC reviewed and requested additional site characterization. Proponent conducted additional field activities and submitted RI report to DTSC. DTSC reviewed and issued comments. Proponent then transferred project to schools unit, thus completing Scope of work with Site Mitigation.

**FINDS:**

Registry ID: 110002664359

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Completed Info:**

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: \* Discovery  
 Completed Date: 06/20/1991  
 Comments: From EPA CERCLA PA fit report. Site is located in three lots. 1) 218 N. Juanita Avenue: the site currently leased by Lynde-Ordway Co., Inc. Carroll Trust has owned since 1940s and LOC leased it since then. 1990 geophysical surveys located three underground tanks on the property. 2) 220 N. Juanita Avenue: it is currently a vacant lot. The Parker Judge owned in 1938. Paint Engineers owned and operated in 1946. Carroll Trust since 1953. 3) 222 N. Juanita Avenue: Hansen's Juices leased it since 1989. The Los Angeles unified school district conducted Phase I & II investigations to purchase the property. Revealed petroleum contamination in the soil. Stoddard solvent was detected in the soil. The highest level was 4500 mg/kg volatile organics and chlorinated hydrocarbons were also detected in the soil. Contamina- tion has also been detected in the groundwater. FIT recommended NFA for EPA. Medium priority PEA required.

FINDS:

Registry ID: 110002649028

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**FINDS:**

Registry ID: 110002683392

**Environmental Interest/Information System**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Completed Sub Area Name: Not reported  
Completed Document Type: 5 Year Review Reports  
Completed Date: 06/15/2011  
Comments: DTSC provided two comments on the Report that should be addressed in future reports. DTSC also concurred with the recommendations to reduce O&M activities to an annual basis and to remove soil vapor probe MW-1-28 from routine monitoring activities; however, monitoring should continue at soil vapor probe MW-4-15.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Operations and Maintenance Report  
Completed Date: 06/15/2011  
Comments: DTSC provided two comments on the Report that should be addressed in future reports. DTSC also concurred with the recommendations to reduce O&M activities to an annual basis and to remove soil vapor probe MW-1-28 from routine monitoring activities; however, monitoring should continue at soil vapor probe MW-4-15.

Completed Area Name: PROJECT WIDE  
Completed Sub Area Name: Not reported  
Completed Document Type: Operations and Maintenance Report  
Completed Date: 07/19/2012  
Comments: DTSC concurred with the Report recommendations: 1) no further modifications to the routine O&M activities are recommended; and 2) LAUSD have a technician inspect and service the ventilation equipment located in the electrical and elevator equipment rooms of the parking garage.

Status Date: 12/18/1997

**SCH:**

Facility ID: 19700001  
Site Type: School Cleanup  
Site Type Detail: School  
Site Mgmt. Req.: NONE SPECIFIED  
Acres: 23.9  
National Priorities List: NO  
Cleanup Oversight Agencies: SMBRP  
Lead Agency: SMBRP  
Lead Agency Description: DTSC - Site Cleanup Program  
Project Manager: Johnson Abraham  
Supervisor: Shahir Haddad  
Division Branch: Southern California Schools & Brownfields Outreach  
Site Code: 304236  
Assembly: 53  
Senate: 24  
Special Program Status: Not reported  
Status: Certified / Operation & Maintenance  
Status Date: 06/30/2011  
Restricted Use: NO  
Funding: School District  
Latitude: 34.06092  
Longitude: -118.2970  
APN: 5094-006-900 to 901, 5094-006-902 and 903, 5094-006-904 to 905, 5094-007-900  
Past Use: HOTEL  
Potential COC: Benzene, Lead, Methane, TPH-diesel, TPH-gas, Hydrogen sulfide  
Confirmed COC: Benzene, Lead, Methane, 30024-NO, TPH-gas, Hydrogen sulfide  
Potential Description: SOIL

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: N/A
Date Made Active in Reports: 01/05/2018	Last EDR Contact: 04/27/2018
Number of Days to Update: 14	Next Scheduled EDR Contact: 07/16/2018
	Data Release Frequency: Quarterly

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: N/A
Date Made Active in Reports: 01/05/2018	Last EDR Contact: 04/27/2018
Number of Days to Update: 14	Next Scheduled EDR Contact: 07/16/2018
	Data Release Frequency: Quarterly

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 08/15/2011
Number of Days to Update: 56	Next Scheduled EDR Contact: 11/28/2011
	Data Release Frequency: No Update Planned

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/22/2017	Telephone: N/A
Date Made Active in Reports: 01/05/2018	Last EDR Contact: 04/27/2018
Number of Days to Update: 14	Next Scheduled EDR Contact: 07/16/2018
	Data Release Frequency: Quarterly

## ***Federal CERCLIS list***

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 11/07/2016	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/05/2017	Telephone: 703-603-8704
Date Made Active in Reports: 04/07/2017	Last EDR Contact: 04/06/2018
Number of Days to Update: 92	Next Scheduled EDR Contact: 07/16/2018
	Data Release Frequency: Varies

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 01/09/2018	Source: EPA
Date Data Arrived at EDR: 02/06/2018	Telephone: 800-424-9346
Date Made Active in Reports: 04/13/2018	Last EDR Contact: 04/27/2018
Number of Days to Update: 66	Next Scheduled EDR Contact: 07/30/2018
	Data Release Frequency: Quarterly

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Date of Government Version: 01/09/2018	Source: EPA
Date Data Arrived at EDR: 02/06/2018	Telephone: 800-424-9346
Date Made Active in Reports: 04/13/2018	Last EDR Contact: 04/27/2018
Number of Days to Update: 66	Next Scheduled EDR Contact: 07/30/2018
	Data Release Frequency: Quarterly

## ***Federal RCRA CORRACTS facilities list***

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 12/11/2017	Source: EPA
Date Data Arrived at EDR: 12/26/2017	Telephone: 800-424-9346
Date Made Active in Reports: 02/09/2018	Last EDR Contact: 03/28/2018
Number of Days to Update: 45	Next Scheduled EDR Contact: 07/09/2018
	Data Release Frequency: Quarterly

## ***Federal RCRA non-CORRACTS TSD facilities list***

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/11/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/26/2017	Telephone: (415) 495-8895
Date Made Active in Reports: 02/09/2018	Last EDR Contact: 03/28/2018
Number of Days to Update: 45	Next Scheduled EDR Contact: 07/09/2018
	Data Release Frequency: Quarterly

## ***Federal RCRA generators list***

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/11/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/26/2017	Telephone: (415) 495-8895
Date Made Active in Reports: 02/09/2018	Last EDR Contact: 03/28/2018
Number of Days to Update: 45	Next Scheduled EDR Contact: 07/09/2018
	Data Release Frequency: Quarterly

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/11/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/26/2017	Telephone: (415) 495-8895
Date Made Active in Reports: 02/09/2018	Last EDR Contact: 03/28/2018
Number of Days to Update: 45	Next Scheduled EDR Contact: 07/09/2018
	Data Release Frequency: Quarterly

## RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

Date of Government Version: 12/11/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 12/26/2017	Telephone: (415) 495-8895
Date Made Active in Reports: 02/09/2018	Last EDR Contact: 03/28/2018
Number of Days to Update: 45	Next Scheduled EDR Contact: 07/09/2018
	Data Release Frequency: Quarterly

## ***Federal institutional controls / engineering controls registries***

### LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 02/16/2018	Source: Department of the Navy
Date Data Arrived at EDR: 02/22/2018	Telephone: 843-820-7326
Date Made Active in Reports: 05/11/2018	Last EDR Contact: 05/09/2018
Number of Days to Update: 78	Next Scheduled EDR Contact: 08/27/2018
	Data Release Frequency: Varies

### US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 02/13/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/27/2018	Telephone: 703-603-0695
Date Made Active in Reports: 05/11/2018	Last EDR Contact: 02/27/2018
Number of Days to Update: 73	Next Scheduled EDR Contact: 06/11/2018
	Data Release Frequency: Varies

### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 02/13/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/27/2018	Telephone: 703-603-0695
Date Made Active in Reports: 05/11/2018	Last EDR Contact: 02/27/2018
Number of Days to Update: 73	Next Scheduled EDR Contact: 06/11/2018
	Data Release Frequency: Varies

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## ***Federal ERNS list***

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 01/16/2018  
Date Data Arrived at EDR: 01/19/2018  
Date Made Active in Reports: 03/23/2018  
Number of Days to Update: 63

Source: National Response Center, United States Coast Guard  
Telephone: 202-267-2180  
Last EDR Contact: 03/27/2018  
Next Scheduled EDR Contact: 07/09/2018  
Data Release Frequency: Quarterly

## ***State- and tribal - equivalent NPL***

RESPONSE: State Response Sites

Identifies confirmed release sites where DTSC is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk.

Date of Government Version: 01/30/2018  
Date Data Arrived at EDR: 01/31/2018  
Date Made Active in Reports: 03/19/2018

Next Scheduled EDR Contact: 08/13/2018  
Data Release Frequency: Quarterly

## ***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

Date of Government Version: 01/30/2018  
Date Data Arrived at EDR: 01/31/2018

### UST CLOSURE: Proposed Closure of Underground Storage Tank (UST) Cases

UST cases that are being considered for closure by either the State Water Resources Control Board or the Executive Director have been posted for a 60-day public comment period. UST Case Closures being proposed for consideration by the State Water Resources Control Board. These are primarily UST cases that meet closure criteria under the decisional framework in State Water Board Resolution No. 92-49 and other Board orders. UST Case Closures proposed for consideration by the Executive Director pursuant to State Water Board Resolution No. 2012-0061. These are cases that meet the criteria of the Low-Threat UST Case Closure Policy. UST Case Closure Review Denials and Approved Orders.

## **State and tribal Brownfields sites**

### BROWNFIELDS: Considered Brownfields Sites Listing

A listing of sites the SWRCB considers to be Brownfields since these are sites have come to them through the MOA Process.

Date of Government Version: 03/26/2018	Source: State Water Resources Control Board
Date Data Arrived at EDR: 03/27/2018	Telephone: 916-323-7905
Date Made Active in Reports: 05/04/2018	Last EDR Contact: 03/27/2018
Number of Days to Update: 38	Next Scheduled EDR Contact: 07/09/2018
	Data Release Frequency: Quarterly

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Date of Government Version: 01/19/2018	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/19/2018	Telephone: 202-566-2777

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

## **Local Lists of Hazardous waste / Contaminated Sites**

### **US HIST CDL: National Clandestine Laboratory Register**

A listing of clandestine drug lab locations that have been removed from the DEAs National Clandestine Laboratory Register.

Date of Government Version: 02/22/2018	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 03/01/2018	Telephone: 202-307-1000
Date Made Active in Reports: 05/11/2018	Last EDR Contact: 02/27/2018
Number of Days to Update: 71	Next Scheduled EDR Contact: 06/11/2018
	Data Release Frequency: No Update Planned

### **HIST CAL-SITES: Calsites Database**

The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

Date of Government Version: 08/08/2005	Source: Department of Toxic Substance Control
Date Data Arrived at EDR: 08/03/2006	Telephone: 916-323-3400
Date Made Active in Reports: 08/24/2006	Last EDR Contact: 02/23/2009
Number of Days to Update: 21	Next Scheduled EDR Contact: 05/25/2009
	Data Release Frequency: No Update Planned

### **SCH: School Property Evaluation Program**

This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Date of Government Version: 01/30/2018	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 01/31/2018	Telephone: 916-323-3400
Date Made Active in Reports: 03/19/2018	Last EDR Contact: 05/02/2018
Number of Days to Update: 47	Next Scheduled EDR Contact: 08/13/2018
	Data Release Frequency: Quarterly

### **CDL: Clandestine Drug Labs**

A listing of drug lab locations. Listing of a location in this database does not indicate that any illegal drug lab materials were or were not present there, and does not constitute a determination that the location either requires or does not require additional cleanup work.

Date of Government Version: 06/30/2017	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 08/18/2017	Telephone: 916-255-6504
Date Made Active in Reports: 09/21/2017	Last EDR Contact: 05/02/2018
Number of Days to Update: 34	Next Scheduled EDR Contact: 07/23/2018
	Data Release Frequency: Varies

### **TOXIC PITS: Toxic Pits Cleanup Act Sites**

Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

Date of Government Version: 07/01/1995	Source: State Water Resources Control Board
Date Data Arrived at EDR: 08/30/1995	Telephone: 916-227-4364
Date Made Active in Reports: 09/26/1995	Last EDR Contact: 01/26/2009
Number of Days to Update: 27	Next Scheduled EDR Contact: 04/27/2009
	Data Release Frequency: No Update Planned

### **US CDL: Clandestine Drug Labs**

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

	Data Release Frequency: Semi-Annually

## DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 02/08/2018	Source: DTSC and SWRCB
Date Data Arrived at EDR: 02/08/2018	Telephone: 916-323-3400

## MCS: Military Cleanup Sites Listing (GEOTRACKER)

Military sites (consisting of: Military UST sites; Military Privatized sites; and Military Cleanup sites [formerly known as DoD non UST]) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

Date of Government Version: 03/12/2018	Source: State Water Resources Control Board
Date Data Arrived at EDR: 03/14/2018	Telephone: 866-480-1028
Date Made Active in Reports: 03/21/2018	Last EDR Contact: 12/12/2018
Number of Days to Update: 7	Next Scheduled EDR Contact: 06/25/2018
	Data Release Frequency: Quarterly

## SPILLS 90: SPILLS90 data from FirstSearch

Spills 90 includes those spill and release records available exclusively from FirstSearch databases. Typically, they may include chemical, oil and/or hazardous substance spills recorded after 1990. Duplicate records that are already included in EDR incident and release records are not included in Spills 90.

Date of Government Version: 06/06/2012	Source: FirstSearch

Date Made Active in Reports: 02/22/2013	Last EDR Contact: 01/03/2013
Number of Days to Update: 50	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

## **Other Ascertainable Records**

### RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

Data Release Frequency: Quarterly

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

Date of Government Version: 08/30/2013

Data Release Frequency: Quarterly

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

Date of Government Version: 11/02/2017	Source: Environmental Protection Agency
Date Data Arrived at EDR: 11/17/2017	Telephone: 202-564-8600

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

Data Release Frequency: Varies

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

Date of Government Version: 12/31/2016

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Date Made Active in Reports: N/A	Last EDR Contact: N/A
Number of Days to Update: N/A	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

#### EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

### CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 01/03/2018	Source: Department of Energy & Environmental Protection

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

## AHA Hospitals:

Source: American Hospital Association, Inc.  
Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

## Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services  
Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

## Nursing Homes

Source: National Institutes of Health  
Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

## Public Schools

Longitude (West):	118.289482 - 118° 17' 22.14"
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	381014.8
UTM Y (Meters):	3770815.5
Elevation:	268 ft. above sea level

### **USGS TOPOGRAPHIC MAP**

Target Property Map:	5630741 HOLLYWOOD, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **FEMA FLOOD ZONE**

<u>Flood Plain Panel at Target Property</u>	<u>FEMA Source Type</u>
06037C1610F	FEMA FIRM Flood data
<u>Additional Panels in search area:</u>	<u>FEMA Source Type</u>
06037C1620F	FEMA FIRM Flood data

## **NATIONAL WETLAND INVENTORY**

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>
HOLLYWOOD	YES - refer to the Overview Map and Detail Map

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### ***Site-Specific Hydrogeological Data\*:***

Search Radius:	1.25 miles
Status:	Not found

## **AQUIFLOW®**

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>
1	1/4 - 1/2 Mile NNW	Not Reported
2	1/4 - 1/2 Mile SW	SW
A3	1/4 - 1/2 Mile SW	Varies
A4	1/4 - 1/2 Mile SW	Not Reported
1G	1/4 - 1/2 Mile NNW	Not Reported
2G	1/4 - 1/2 Mile SW	SW
3G	1/4 - 1/2 Mile SW	Varies
4G	1/4 - 1/2 Mile SW	Not Reported

All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

## GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### ROCK STRATIGRAPHIC UNIT

Era: Cenozoic  
System: Tertiary  
Series: Miocene  
Code: Tm (decoded above as Era, System & Series)

### GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

### OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures: sandy loam  
 gravelly - sandy loam  
 silt loam  
 clay  
 fine sand  
 gravelly - sand  
 sand  
 fine sandy loam

Surficial Soil Types: sandy loam  
 gravelly - sandy loam  
 silt loam  
 clay  
 fine sand  
 gravelly - sand  
 sand  
 fine sandy loam

Shallow Soil Types: fine sandy loam  
 gravelly - loam  
 sandy clay  
 sandy clay loam  
 clay  
 silty clay  
 sand

Deeper Soil Types: gravelly - sandy loam  
 sandy loam  
 very gravelly - sandy loam  
 stratified  
 very fine sandy loam  
 weathered bedrock  
 sand  
 gravelly - fine sandy loam  
 silty clay loam  
 clay loam

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

## WELL SEARCH DISTANCE INFORMATION

# GEOCHECK® - PHYSICAL SETTING SOURCE MAP FINDINGS RADON

## AREA RADON INFORMATION

State Database: CA Radon

### Radon Test Results

Zipcode	Num Tests	> 4 pCi/L
90004	54	0

Federal EPA Radon Zone for LOS ANGELES County: 2

- Note: Zone 1 indoor average level > 4 pCi/L.  
 : Zone 2 indoor average level >= 2 pCi/L and <= 4 pCi/L.  
 : Zone 3 indoor average level < 2 pCi/L.

---

### Federal Area Radon Information for LOS ANGELES COUNTY, CA

Number of sites tested: 63

Area	Average Activity	% <4 pCi/L	% 4-20 pCi/L	% >20 pCi/L
Living Area - 1st Floor	0.711 pCi/L	98%	2%	0%
Living Area - 2nd Floor	Not Reported	Not Reported	Not Reported	Not Reported
Basement	0.933 pCi/L	100%	0%	0%

# PHYSICAL SETTING SOURCE RECORDS SEARCHED

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Current USGS 7.5 Minute Topographic Map

Source: U.S. Geological Survey

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

Source: FEMA

Telephone: 877-336-2627

Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

### State Wetlands Data: Wetland Inventory

Source: Department of Fish & Game

Telephone: 916-445-0411

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### STATE RECORDS

#### Water Well Database

Source: Department of Water Resources

Telephone: 916-651-9648

#### California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

## OTHER STATE DATABASE INFORMATION

#### California Oil and Gas Well Locations

Source: Department of Conservation

Telephone: 916-323-1779

Oil and Gas well locations in the state.

### RADON

#### State Database: CA Radon

Source: Department of Health Services

Telephone: 916-324-2208

Radon Database for California

#### Area Radon Information

Source: USGS

Telephone: 703-356-4020

The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

#### EPA Radon Zones

Source: EPA

Telephone: 703-356-4020

Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

## Appendix D. Questionnaire

## Appendix

*This page intentionally left blank.*

## Environmental Site Assessment Questionnaire for Client

The following information is requested to evaluate the potential for environmentally-related impacts and property contamination. This questionnaire is to be completed by the User of the Phase I Environmental Site Assessment, as defined by ASTM E-1527-13, or its authorized representative.

### PART I

1. <u>Project description</u> : Bright Star School requested the preparation of a Phase I Environmental Site Assessment (ESA) as part of its due diligence responsibilities for the proposed building of a school.
2. <u>Property address(es) and Assessor Parcel Number(s) (APN)</u> : The site is located at 3500 West 1 <sup>st</sup> Street in Los Angeles, California. APN for the parcel is 5501-014-004, -020, -022, -024, and -025.
3. <u>Current property owner (name, address, telephone number)</u> : Good News Central Church, 3500 West 1 <sup>st</sup> Street Los Angeles, CA, (213)-386-0097.
4. <u>Current property development/improvements</u> : The property is developed as the Good News Central Church with approximately four structures.
5. <u>Date(s) of current property development/improvements</u> : The site was developed starting in the late 1930s.
6. <u>Past property use, development/improvements</u> : Prior to the construction of Good News Central Church, the site was developed for commercial use.
7. <u>Neighboring property uses</u> : The surrounding community is a mix of residential and commercial development.

**PART II**

- 
1. Are you aware of any environmental cleanup liens against the property that are filed under federal, tribal, local or state law?    **Yes**  **No**
- 
2. Are you aware of any activity and land use limitations, such as engineering controls, land use restrictions, or institutional controls that are in place at the property and/or have been filed or recorded in a registry under federal, tribal, state or local law?    **Yes**  **No**
- 
3. Do you have any specialized knowledge or experience related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the *property* or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?    **Yes**  **No**
- 
4. Are you aware of any commonly known or reasonably ascertainable information about the property that would help the environmental professional to identify conditions indicative of releases or threatened releases? For example,
- (a) do you know of specific chemicals that are present at the *property*?
- (b) do you know of spills or other chemical releases that have taken place at the *property*?
- (c) do you know of any environmental cleanups that have taken place at the *property*?
- 
5. Based on your knowledge and experience related to the *property*, are there any obvious indicators that point to the presence or likely presence of contamination at the *property*?    **Yes**  **No**
- 
6. If a property transaction is occurring in conjunction with this environmental assessment, does the purchase price of this *property* reasonably reflect the fair market value of the *property*? If you conclude that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?     **Yes**    **No**
- 
7. Are you aware of any past or present above ground or underground storage tanks on the *property*? To your knowledge, has there ever been any hazardous substances or wastes stored on the *property*?    **Yes**  **No**

If a "Yes" response was provided to Questions 1 – 5 or a "No" response was provided to Question 6, please provide details below:

---

I certify that the information provided herein is true and correct to the best of my knowledge as of the date signed below.

Name (Printed/Typed): Elijah Sugay

Signature: 

Date: 06/22/2018

## Appendix E. Qualifications

## Appendix

# DENISE CLENDENING, PhD

## Associate Principal, Site Assessment Services

Denise has over 27 years of experience providing technical oversight and performing human health risk assessments, site assessments, and investigations of chemical waste at multiple sites including Resource Conservation & Recovery Act (RCRA) and Superfund sites. She is adept at applying alternatives that are economical yet protective of human health and the environment. She conducts realistic assessments and calculates target cleanup levels based on site-specific exposure scenarios. Her work has involved pesticides, heavy metals, solvents, and petroleum-contaminated soils. She assists multiple school districts in California with site assessment, public relations, and the Department of Toxic Substance Control (DTSC) school site approval process. She participates in public hearings and school board meetings and coordinates her projects with the CEQA process.

Before joining PlaceWorks, Denise managed large divestiture environmental due diligence projects for the electric power industry and was involved in numerous environmental projects for oil field operation. Her experience also includes the development and testing of risk assessment software and teaching training courses in risk assessment using different software programs.

Denise has established a very good reputation with regulatory agencies and negotiates risk-related issues on behalf of her clients. She is a member of the Los Angeles Regional Water Quality Control Board Underground Storage Tank Advisory Board and has extensive experience with site closure activities with the DTSC, Environmental Protection Agency, Regional Water Quality Control Boards, and local oversight agencies throughout California.

## HIGHLIGHTS OF EXPERIENCE

### ENVIRONMENTAL & HEALTH RISK ASSESSMENTS

- » Xerox Corporation Preliminary Environmental Assessment and Health Risk Assessment | Santa Ana CA
- » Human Health Risk Evaluation, Literature Research for American Petroleum Institute
- » City of Redlands Health Risk Assessment | Redlands CA
- » Caltrans Risk Assessment and Groundwater Impact Analysis | California
- » Risk Assessments and Indoor Air Sampling for Confidential Client(s) | Various Locations
- » Human Health & Ecological Risk Assessment – Technical Review | Various Locations
- » Landfill Risk Assessments | Various Locations
- » Risk Assessments for Pesticide Contaminated Soil | Various Locations
- » Human Health Risk Assessment for Confidential Mineral Resources Client | Arizona
- » Human Health Risk Assessment at Whites Point Nike Missile Site | Los Angeles County CA
- » Human Health Risk Assessment at Fort MacArthur | Los Angeles County CA

## EDUCATION

- » PhD, Soil Physics, University of California, Riverside
- » MS, Soil Science, University of California, Riverside
- » BS, Geology, University of California, Riverside

## CERTIFICATIONS

- » Oil Spill Response Training

## AFFILIATIONS

- » Soil Science Society of America
- » American Geophysical Union
- » American Chemical Society
- » Society of Risk Analysis
- » Coalition of Adequate School Housing

Team member since 2005

## DENISE CLENDENING

Associate Principal

### SITE ASSESSMENTS

- » Site Remediation for Hull Middle School | Torrance CA
- » PEA for New High School, William S. Hart UHSD | Castaic CA
- » Phase I for Property at East Briar Drive | San Bernardino County CA
- » PEA for Stella Academy Middle School | Los Angeles CA
- » Phase I for Valley Boulevard Widening | City of Industry CA
- » Oil Field Preliminary Environmental Assessment | Culver City CA
- » Lead-Based Paint Evaluations | Various Locations
- » Cogeneration Facilities Permit Applications | Various Locations throughout California
- » NRG Energy Environmental Due Diligence Investigations | California
- » AES Environmental Due Diligence Work Plans | California
- » Remedial Investigation and Remedial Action for Jersey Avenue Elementary School Site (Congresswomen Grace Napolitano presented award for special congressional recognition for project), Little Lake City School District | City of Santa Fe Springs CA
- » Preliminary Environmental Assessments for over 100 school sites throughout California
- » Phase I ESA and PEAs for four school sites, Moreno Valley USD
- » Phase I ESAs, PEAs, SSIs and RAWs for eight school sites, San Bernardino County Superintendent of Schools
- » Phase I ESA for Elementary School No. 19, Rialto USD
- » PEA and SSI for the New High School No. 3 Site, Colton Joint USD
- » Phase I ESA and PEAs for four school sites, Lynwood USD
- » Phase I ESA for the Proposed Elementary School No. 8, San Ysidro School District
- » Phase I ESA for the Proposed K–8 Parker Dam School, Needles USD
- » PEAs for three school sites and environmental and legislative support services, Santa Ana USD
- » Phase I ESA, PSHA, and PEA for Community Day School, Eastside USD
- » PEAs for five school sites in Clovis | Clovis CA
- » PEA for redevelopment project for the City of South Gate | South Gate CA
- » Phase I ESA for Arrowhead Springs Resort I | San Bernardino CA
- » Phase I ESA for two Charter Schools for Green Dot Public Schools | Los Angeles CA
- » Phase I and Phase II ESA for Former Service Station | Los Angeles CA
- » Phase I ESAs, PEA, SSIs, and fill testing for multiple school sites, Pomona USD
- » PEA and methane gas testing, Encinitas USD
- » Phase I ESA and lead testing for multiple sites, Fontana USD
- » Proponent’s Environmental Assessment for PUC | Long Beach CA
- » Initial Site Assessments for Street Widening Projects | Santa Ana CA
- » Phase I ESAs for Renaissance Community Fund | Corona CA

### TITLE 5/CDE RISK ASSESSMENTS

- » Geohazard Assessment for Inglewood Site, Today’s Fresh Start Charter School
- » PEAs and Title 5 Assessments for three school sites, Redlands USD
- » Title 5 Compliance Study Reports for four sites, Whittier Union High School District
- » Prairie Vista Lead Testing, Hawthorne USD
- » Environmental Support and Risk Assessment for school sites, San Dieguito Union High School District
- » Human Health Risk Assessment School Site, Pomona USD
- » Title 5 Hazard and Constraints Analysis for four school sites, Irvine USD
- » Title 5 Hazard and Constraints Analysis for school site, Rialto USD

# MICHAEL WATSON, PG

## Project Geologist

With over a decade in the environmental consulting industry, Mike is proficient in providing field and office support to project managers performing site assessment and remediation. He performs site assessments, geohazard studies, air quality and industrial hygiene assessments, groundwater investigations, and remedial actions. Mike also manages materials acquisition, field equipment maintenance, and subcontractor coordination on large field investigations and monitoring programs.

A dedicated geologist, Mike continually strives to refine his knowledge, methods, and efficacy. He is especially committed to his current work for numerous school districts throughout California, where he assists in site assessment services and the Department of Toxic Substances Control's school site approval process. He performs Phase I ESAs, PEAs, geohazard studies, supplemental site investigations, remedial investigation reports, removal action documents, feasibility study reports, Title 5 Constraints Studies, and fill testing reports. In addition, he assists with the management and implementation of field investigations, assembles project data, and arranges methodical and comprehensive procedures to attain the client's goals.

## HIGHLIGHTS OF EXPERIENCE

### SITE ASSESSMENTS

- » PEAs, Phase I ESAs, Geohazards Study Reports, and Title 5 Studies for various schools | Moreno Valley USD
- » PEAs and Fill Testing for various schools | Clovis USD
- » PEA for Proposed Castaic High School | William S. Hart Union High School District
- » Phase I ESA for Proposed K-8 Parker Dam School | Needles USD
- » Removal Action, Fill Testing, and Quarterly Groundwater Sampling for Central Region High School No. 13 | Los Angeles USD
- » Removal Actions for Chaffey West Community Day School and Chino Early Education Center | San Bernardino County Superintendent of Schools
- » Phase I ESA for Citrus Creek Residential Development | Upland CA
- » Phase I ESA for the Arrowhead Springs Resort | San Bernardino CA
- » Phase I/II ESAs for Former Gas Station | Los Angeles CA
- » Quarterly Groundwater Sampling, Remedial Investigation and Remedial Action for Santa Fe Springs Athletic Fields | Little Lake City School District/Santa Fe Springs CA
- » Environmental Services for various schools | Hayward USD

### REGULATORY COMPLIANCE & STRATEGIC PLANNING

- » Environmental Auditing for General Motors Railroad Locomotive Service Facility | Commerce CA
- » Construction Site Review Implementation, RAW, and Methane Mitigation System Inspection for Hull Middle School | Torrance USD
- » Underground Storage Tank Closure Report and Construction Response – Removal of Six Hydraulic Lifts for Central Region Elementary School No. 13 | Los Angeles USD
- » Removal Action, Oil Well Reabandonment, Crude Oil Pipeline Removal, Construction Response Services, and Construction Site Review Implementation for Harry Bridges Span K-8 | Los Angeles USD

## EDUCATION
