## **1.0 EXECUTIVE SUMMARY**

GEO TEK, INC. (GEO TEK) has performed a Phase I Environmental Site Assessment (ESA) for the DGS California Correctional Institution (the “Site”), located at 24900 Highway 202 in the City of Tehachapi, Kern County, California. Our services were conducted in substantial conformance with the scope and limitations of the American Society of Testing and Materials (ASTM) E 1527-13, “*Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*”, which is approved to meet the requirements of the federal All Appropriate Inquiries (AAI) standards as set forth in the Code of Federal Regulations, Title 40, Section 312 (40 CFR 312), and GEO TEK Proposal No. PI100817-CR, dated November 2, 2017. Any additions or deletions from our scope of services are discussed in the appropriate sections of this assessment.

A representative of GEO TEK conducted a Site reconnaissance on September 25, 2018. The weather was warm with clear skies. The irregular shaped Site is comprised of a portion of one parcel of land (the “Parcel”), and encompasses a total of approximately 32 acres. The Site was accessed from the north, via Highway 202. The Site is primarily vacant land covered with volunteer vegetation. Dirt roads cross the Site. An abandoned water pipeline is present in the southern portion of the Site. No hazardous materials or wastes were observed on the Site. No visual indication of spills or leaks was observed. No pungent or acrid odors were observed emanating from the Site. No stressed vegetation was observed.

The Site is located on the campus of the California Correctional Institution. The area the Site occupies is characterized by vacant land to the north, south, and east, and abandoned water basins and the campus fire station to the west.

Based on readily available historic information, the Site appears to have been primarily vacant land since at least 1943. The vicinity has been generally vacant, with the correctional institution present, since 1943. The ponds to the west were present by 1994, and the solar array to the west was present by 2012. No historic recognized environmental conditions were identified.

The Site does not appear on the environmental database report obtained for this assessment. The adjacent Parcel appears on multiple databases. The most impactful is the leaking underground storage tank (LUST) database for a leaking tank reported in 1987. After many years of remediation and monitoring, the LUST case was closed in 2015. The Parcel also appears as a RCRA Generator and a landfill, and on many minor databases. The source areas for these listings is generally 2,000 feet east of the Site. Based on available information, these listings for the Parcel are not considered to represent a recognized environmental condition to

the Site. There are no additional facilities on the database report within the search distances specified by ASTM E 1527-13.

This Phase I Environmental Site Assessment has not revealed evidence of a recognized environmental condition at the subject Site. No additional investigation is recommended at this time.

This executive summary does not contain all the information that is found in the full report. The report should be read in its entirety to obtain a more complete understanding of the information provided and to aid in any decisions made or actions taken based on this information.

## **2.0 INTRODUCTION**

GEO TEK, INC. (GEO TEK) has performed a Phase I Environmental Site Assessment (ESA) for the DGS California Correctional Institution (the “Site”), located at 24900 Highway 202 in the City of Tehachapi, Kern County, California.

### **2.1 PURPOSE**

The purpose of this Phase I ESA was to identify and evaluate actual and potential environmental conditions involving the subject Site. It was not the purpose of this assessment to determine the degree or extent of contamination, if any, but rather the potential for contamination.

### **2.2 SCOPE OF WORK**

The Phase I ESA is a general characterization of environmental concerns based on reasonably ascertainable information and observations. GEO TEK performed the Phase I ESA in substantial accordance with ASTM E 1527-13. The following services were provided for the assessment:

- ◆ A reconnaissance of the Site and surrounding properties was conducted to visually assess current utilization and indications of potential surface contamination. This was accomplished by driving the Site boundaries, and then traversing the Site until the entire Site had been surveyed.
- ◆ A reconnaissance of the surrounding area for approximately one-half mile was conducted, without entering the properties, making observations concerning property uses, conditions, and housekeeping.
- ◆ A review of the geologic and hydrogeologic settings was conducted using reasonably ascertainable public records and documents.
- ◆ An environmental database report was obtained from a data service provider. This database report compiles and locates documented “hazardous waste” facilities within specific minimum search distances as defined by ASTM E 1527-13. If necessary, additional information on identified facilities was gathered by a file review at the appropriate federal, state, local, and/or tribal regulatory agency.
- ◆ A review of reasonably ascertainable historical records (including aerial photographs, topographic maps, building records, and city directories) was conducted to assess the

historical land utilization and indications of potential contamination or sources of contamination for the Site.

- ◆ This report was prepared, which relates the findings of this study and presents our conclusions and recommendations.

Specific items not included in this Scope of Services are soil analysis, water analysis, asbestos containing materials analysis, radon analysis, lead-based paint analysis, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, industrial hygiene, health and safety, ecological resources, endangered species, indoor air quality, vapor intrusion, high voltage power lines, and other items not within the scope of ASTM E 1527-13.

### **2.3 SIGNIFICANT ASSUMPTIONS**

Specific assumptions by GEOTEK for this assessment include:

- ◆ GEOTEK had permission to access the Site grounds;
- ◆ The client has provided GEOTEK with available geotechnical or environmental reports for the Site;
- ◆ The client has provided GEOTEK with known current or historic uses of hazardous materials at the Site, or with other specialized knowledge of the environmental history of the Site and surrounding area;
- ◆ The client is not the sole and absolute source of information;
- ◆ Seller has provided proper and complete access to their knowledge, both written and verbal, and GEOTEK can rely on the information.

### **2.4 LIMITATIONS AND EXCEPTIONS**

GEOTEK conducted a Phase I Environmental Site Assessment in substantial accordance with ASTM E 1527-13 and as authorized by FOREFRONT POWER. This study does not include sampling of soil, groundwater and/or the debris on-site for environmental testing. This report is intended for the use of FOREFRONT POWER and their immediate assignees. The contents should not be relied upon by any party other than the aforementioned without the express written consent of GEOTEK.

The findings, conclusions, and recommendations made in this report are based on the information that was made available to GEOTEK, in most instances from public records. The information is relevant to the date of our site work and should not be relied on to represent conditions at any later date. The opinions and conclusions expressed herein are based on information obtained during our assessment and on our experience and current standards of technical practice. GEOTEK makes no other warranties, either express or implied, concerning the completeness of the data furnished to us. GEOTEK cannot be responsible for conditions or consequences arising from relevant facts that were concealed, withheld, or not fully disclosed at the time our assessment was undertaken. GEOTEK is not responsible, nor liable for work, testing or recommendations performed or provided by others. This Phase I Environmental Site Assessment is not and should not be construed as a warranty or guarantee about the presence or absence of environmental hazards or contaminants, which may affect the subject site. Facts, conditions, and acceptable risk factors change with time; accordingly, this report should be viewed within this context.

Specific limitations to the scope of ASTM E 1527-13 due to contract limitations, availability of resources, and/or encountered Site conditions are discussed in the appropriate section(s) of this report.

## **2.5 SPECIAL TERMS AND CONDITIONS**

This assessment report is presented as fulfilling the standard requirements of most financial institutions, governmental regulatory agencies, ASTM, and generally accepted industry standards and practices. Please refer to GEOTEK Proposal No. P1100817-CR for complete terms and conditions for this assessment.

## **2.6 RELIANCE**

This assessment has been prepared for the exclusive use, and may be relied upon by, FOREFRONT POWER and its successors and assignees. Third party reliance letters may be issued upon request and upon the payment of the, then current, fee for such letters. All third parties relying on this report, by such reliance, agree to be bound by the General Conditions and Limitations agreed to FOREFRONT POWER. No reliance by any party is permitted without such agreement, regardless of the content of the reliance letter itself.

### **3.0 DESCRIPTION OF SITE AND SURROUNDING AREA**

The objective of describing the Site and surrounding area is to document current conditions as observed and to obtain information which would indicate the likelihood of a recognized environmental condition in connection with the Site. A representative of GEOTEK conducted a Site reconnaissance on September 25, 2018. The weather was warm with clear skies. The Site was accessed from the north, via Highway 202.

#### **3.1 SITE LOCATION AND LEGAL DESCRIPTION**

The Site is located at 24900 Highway 202 in the City of Tehachapi, Kern County, California. According to the U.S. Geological Survey (USGS) Cummings Mountain Quadrangle topographic map (7.5-minute series), the Site is located in the southeast quarter of Section 29, Township 32 South, Range 32 East, Mount Diablo Baseline and Meridian (see Figure 1 in Appendix A). The Kern County Assessor's Parcel Number (APN) is 376-013-02. The Site occupies approximately 32 acres of the parcel, which is considered to be separate from and adjacent to the Site for the purpose of this assessment (the "Parcel"). A copy of the Assessor's Parcel Map is included in Appendix B.

#### **3.2 SITE AND VICINITY GENERAL CHARACTERISTICS**

The Site is located on the campus of the California Correctional Institution. The area the Site occupies is characterized by vacant land. (see Figure 2 in Appendix A).

#### **3.3 CURRENT PROPERTY USE**

The Site is currently vacant land.

#### **3.4 SITE IMPROVEMENTS**

The Site is vacant land transected with dirt roads. An abandoned water pipeline is present along the southern portion of the Site. Photographs of the Site are included in Appendix C.

##### **3.4.1 Hazardous Substances**

No hazardous substances or wastes were observed on the Site. No pungent or acrid odors were observed emanating from the Site. No stressed vegetation was observed.

### **3.4.2 Storage Tanks**

GEO TEK did not observe evidence of underground or above-ground storage tanks (such as vent pipes, fill pipes, regular-shaped depressions, etc.) on the Site.

### **3.4.3 Poly-Chlorinated Biphenyls (PCBs)**

GEO TEK did not observe suspect equipment (transformers, elevators, vehicle lifts, trash compactors, etc.), which may contain PCBs on the Site.

### **3.4.4 Controlled Substances**

GEO TEK consulted the U.S. Drug Enforcement Agency (DEA) website to cross-check the Site address against published facilities subject to DEA enforcement. The Parcel did not appear on the list of published facilities. A copy of the DEA printout is included in Appendix B.

GEO TEK did not observe evidence of illegal or controlled substances being used or manufactured at the Site.

### **3.4.5 Indications of Solid Waste Disposal**

Indications of solid waste disposal were not observed on the Site.

### **3.4.6 Utility Supply**

Utility services were observed near the Site. Electricity services for the vicinity are provided by Southern California Edison Company (SCE). Natural gas service is provided by Southern California Gas Company. Water and sewer service for the Site is provided by the Tehachapi Utilities Department.

### **3.4.7 Drainage**

Natural drainage at the Site is generally interpreted to be toward the west, conforming to the natural topography in the area. Stormwater run-off is anticipated to follow the natural pattern. Standing water was not observed on the Site on the date of our reconnaissance.

### **3.4.8 Other Conditions of Concern**

A groundwater monitoring well was identified near the Site (not believed to be on the Site). Mr. Jon Read of CCI has no knowledge of why this monitoring well is present, but speculates it may have been part of the leaking underground storage tank investigation and clean-up conducted at the Parcel, although no record of a well this far east was identified.

No visual indication of dry wells, septic fields, cesspools, or other conditions of concern that would indicate a recognized environmental condition were observed during the site reconnaissance. No stressed vegetation was observed.

### **3.4.9 Interviews**

GEOTEK interviewed the following individuals while performing this assessment:

- Mr. Sean McCartney of FOREFRONT POWER, in the form of a User Questionnaire;
- Mr. Michael Lee of CCI;
- Mr. Jon Read of CCI.

Information from these interviews is incorporated into the appropriate sections of this report. Mr. Read also accompanied GEOTEK during the site reconnaissance.

## **3.5 CURRENT ADJOINING PROPERTY USE**

The Site is located on the campus of the California Correctional Institution. The area the Site occupies is characterized by vacant land to the north, south, and east, and abandoned water basins and the campus fire station to the west.

The adjacent Parcel is not anticipated to represent an environmental concern.

#### **4.0 CLIENT PROVIDED INFORMATION**

As a form of interview, Mr. Sean McCartney of FOREFRONT POWER completed a “User Questionnaire” for the Site in accordance with ASTM E 1527-13. A copy of the completed questionnaire is included in Appendix D.

#### **4.1 ENVIRONMENTAL CLEAN UP LIENS**

Mr. McCartney is not aware of any environmental clean-up liens at the Site.

#### **4.2 ACTIVITY AND USE LIMITATIONS**

Mr. McCartney is not aware of an activity use limitation at the Site.

#### **4.3 SPECIALIZED KNOWLEDGE**

Mr. McCartney indicated that he has no specific knowledge of the chemicals and process used at the Site.

#### **4.4 PURCHASE PRICE**

This transaction is a ground lease. Mr. McCartney has indicated that this question is not applicable.

#### **4.5 COMMONLY KNOWN INFORMATION**

Mr. McCartney indicated he has no knowledge of past uses of the Site. He is not aware of any specific chemicals, chemical spills, or environmental cleanups at the Site.

#### **4.6 OBVIOUS INDICATORS OF CONTAMINATION**

Mr. McCartney is not aware of obvious indicators of a likely environmental impact at the Site.

## **5.0 OWNER, PROPERTY MANAGER, AND OCCUPANT INFORMATION**

This section contains other relevant information regarding this assessment in accordance with ASTM.

### **5.1 INTERVIEWS**

GEO TEK interviewed Mr. Jon Read of CCI. Information from this interview is incorporated into the appropriate sections of this report.

### **5.2 REASON FOR PERFORMING PHASE I ESA**

This Phase I ESA was performed by request of FOREFRONT POWER in order to qualify for one of the Landowner Liability Protections offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2002, in the event it should become necessary.

### **5.3 OTHER USER PROVIDED INFORMATION**

GEO TEK was not provided with additional documents regarding the Site.

## **6.0 PROPERTY PHYSICAL SETTING**

Surface and subsurface environments are of interest because they control the movement of water-borne contaminants, which could be transported to and from the subject Site. GEOTEK reviewed information regarding the physical setting of the subject Site and immediately surrounding area.

### **6.1 REGIONAL GEOLOGY**

Tehachapi is located in the Tehachapi Mountains of California. The Tehachapi Mountains are largely the result of the movements of the Garlock Fault, located along the southeastern base of the range, a major transform fault which runs from the San Andreas Fault in the west to the Sierra Nevada Fault on the east and some distance beyond.

### **6.2 LOCAL GEOLOGIC SETTING AND TOPOGRAPHY**

The Site and Site area are part of the Tehachapi Mountains. The underlying rock type is identified as Quaternary age alluvium (CDMG, 1964). The surface soil is identified as Tehachapi sandy loam. This soil is described as well drained soil found on terraces and alluvial fans. It formed from alluvium derived from granite. Copies of the geologic map and soil survey report are included in Appendix B.

According to the Earthquake Fault Zones map of California, no faults have been mapped at the Site. No visual evidence of faults or fissures was observed during our Site reconnaissance.

Based on the USGS Cummings Mountain Quadrangle topographic map (7.5-Minute Series) the average elevation of the Site is approximately 3,950 feet above mean sea level (see Figure 1, Appendix A).

### **6.3 VICINITY SURFACE DRAINAGE**

Natural drainage at the Site is generally interpreted to be toward the west, conforming to the natural topography in the area. Stormwater run-off is anticipated to follow the natural pattern. Standing water was not observed on the Site on the date of our reconnaissance.

According to the Federal Emergency Management Agency (FEMA), the Site is located in Zone X, which is an area outside the 100-year flood plain (Community-Panel No. 06029C-3225E, September 26, 2008). The applicable portion of the FEMA map is included in Appendix B.

## **6.4 HYDROGEOLOGY**

According to a review of historical groundwater data (California Department of Water Resources and California State Water Resources Control Board groundwater well data), depth to groundwater has been documented at greater than 70 feet in the general Site area, with a flow direction toward the west. The Water Data Library report for a nearby well is included in Appendix B.

**7.0 ENVIRONMENTAL REGULATORY RECORDS REVIEW**

The records review is conducted to help identify known recognized environmental conditions at the Site and/or on adjacent or nearby properties which may have impacted the subject Site.

**7.1 ENVIRONMENTAL DATABASE RECORDS SEARCH**

GEOTEK obtained and reviewed an environmental database report of the federal and state environmental records specified by ASTM E 1527-13. The database report was provided by Environmental Data Resources, Inc. (EDR) of Shelton, Connecticut. Additionally, orphan or unmappable sites listed by EDR were reviewed for the approximate minimum search distances noted and included in our discussion, if applicable. Refer to Appendix E for a copy of the database report.

## 7.2 DISCUSSION OF REGULATORY RECORDS

### 7.2.1 National Priority List

The National Priority List (NPL) is the EPA's list of confirmed or proposed Superfund sites. Our review of this data includes sites which have been delisted from the NPL. The NPL is searched for a 1.0-mile distance.

The Site does not appear on the NPL. There are no facilities on the NPL within 1.0 mile of the Site.

### 7.2.2 Superfund Enterprise Management System

The Superfund Enterprise Management System (SEMS, formerly CERCLIS) is a compilation of sites that the EPA has investigated or is currently investigating for a release or threatened

release of hazardous substances. Our review of SEMS sites includes archive (no further remedial action planned) facilities. The SEMS list is searched for a 0.5-mile distance.

The Site does not appear on the SEMS list. The Parcel appears on the SEMS database.

The CCI appears on the SEMS list, but indicates a state/local lead. This listing appears to be associated with the LUST case, which will be discussed further in Section 7.2.10.

There are no additional facilities on the SEMS list within 0.5 mile of the Site.

### 7.2.3 Resource Conservation and Recovery Act

The Resource Conservation and Recovery Act compile selective information on facilities which generate, transport, store, treat and or dispose of hazardous waste. RCRA facilities can be listed on one of three databases:

- ◆ *Corrective Action Facilities (CORRACTS)* are facilities undergoing corrective action. A corrective action order is issued pursuant to RCRA Section 3008(h) when there has been a release of hazardous waste or constituents into the environment from a RCRA facility. The CORRACTS list is searched for a 1.0-mile distance.

The Site does not appear on the CORRACTS list. There are no facilities on the CORRACTS list within 1.0 mile of the Site.

- ◆ *Transportation, Storage, and Disposal Facilities (TSD)* includes facilities that transport, store or dispose of hazardous waste and are not listed on the RCRA Generators list. The TSD is searched for a 0.5-mile distance.

The Site does not appear on the RCRA TSD list. There are no facilities on the RCRA TSD list within 0.5 mile of the Site.

- ◆ *Generators List* identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Generators database is a compilation by the EPA of reporting facilities that generate hazardous waste. The RCRA generators list is searched for the Site and adjacent properties.

The Site is not listed on the RCRA Generators list. The adjacent Parcel is listed as a RCRA Generator.

The CCI is listed as a Small-Quantity generator, although it has historically been a Large-Quantity generator. The waste generated is not reported. However, there are no violations recorded. Based on this, it is our opinion that the adjacent CCI facility does not represent a recognized environmental condition to the Site.

#### **7.2.4 Emergency Response Notification System**

The Emergency Response Notification System (ERNS) is a national database used to collect information on reported releases of oil or hazardous substances. The ERNS list is searched for the Site. The Site does not appear on the ERNS list.

#### **7.2.5 Federal Institutional Control/Engineering Control Registries**

The EPA maintains two databases which list sites that have institutional and/or engineering controls in place as part of their operations. These databases are searched for the Site. The Site does not appear on either of these databases.

#### **7.2.6 State Response Sites**

The State Response Sites (SRS) records are the state equivalent to the federal National Priorities List (NPL) database. The SRS is searched for a 1.0-mile distance.

The Site does not appear on the on the SRS. There are no SRS facilities listed within a 1.0-mile distance of the Site.

#### **7.2.7 EnviroStor Database**

The EnviroStor Database (ENVIROSTOR, formerly CALSITES) records are the state equivalent to the federal CERCLIS database. EnviroStor is searched for a 0.5-mile distance.

The Site does not appear on the ENVIROSTOR database. There are no ENVIROSTOR facilities listed within a 0.5-mile distance of the Site.

#### **7.2.8 California Hazardous Material Incident Report System**

The California Hazardous Material Incident Report Systems (CHMIRS) is a state database used to collect information on reported hazardous materials incidents (accidental leaks and spills). The CHMIRS list is searched for a 0.25-mile distance.

The Site does not appear on the CHMIRS list. The adjacent CCI facility does.

There were six (6) different incidents reported, all involving spills or leaks from trucks or motorized equipment. In each case the material was remediated. It is our opinion these listings do not represent a recognized environmental condition to the Site.

There are no additional CHMIRS facilities located within 0.25 mile of the Site.

### **7.2.9 Solid Waste Facilities List**

The Solid Waste Fill/Landfill (SWF/LF), Solid Waste Assessment Test (SWAT), Solid Waste Information System (SWIS), and Waste Management Unit Database System (WMUDS) databases includes information pertaining to closed and open solid waste facilities operating in the state of California. The California Solid Waste Recycling information database (SWRCY) includes facilities that engage in recycling activities. The SWF/LF, SWAT, SWIS, WMUDS and SWRCY databases are searched for a 0.5-mile distance.

The Site does not appear on the SWF/LF, SWAT, SWIS, WMUDS, or SWRCY lists. The adjacent Parcel appears on the SWIS list twice.

One listing is identified as CCI Main Landfill, an unpermitted landfill no longer in use. According to Mr. Read, the old landfill is located over half a mile to the northwest of the Site. The second listing is identified as the Women's Prison Burn Dump. Mr. Read indicated it too was over half a mile away. Both landfills are closed, and no records of spills, leaks, or violations are recorded. Therefore, it is our opinion that these facilities do not represent a recognized environmental condition to the Site.

There are no additional facilities on the SWF/LF, SWAT, SWIS, WMUDS, or SWRCY lists within 0.5-mile of the subject Site.

### **7.2.10 Leaking Underground Storage Tanks List**

The California Leaking Underground Storage Tanks (LUST) list is a compilation of petroleum storage tank sites that have reported a release. The LUST list is searched for a 0.5-mile distance.

The Site did not appear on the LUST list. The adjacent CCI facility does appear on the LUST list.

According to records from the California Regional Water Quality Control Board, Central Valley Region (RWQCB), a leak was reported in 1987 during removal of two underground storage tanks. Soil and groundwater were found to be impacted by gasoline (including methyl-tertiary-butyl-ether [MTBE] and diesel. The source area is identified as the Motor Pool, located approximately 2,000 feet east of the Site. Investigations determined the groundwater was between 50 and 85 feet deep, with a flow direction to the west. Groundwater remediation via pumping and treatment, vapor extraction, and soil disposal were utilized to remediate the leak (URS 2014). The last quarterly monitoring report was issued in August 2014. A pre-closure letter was issued by the RWQCB in November 2014. Monitoring wells were reported destroyed in April 2015, and the facility was issued “Case Closed” status in December 2015. Copies of the URS 2014 report, the pre-closure letter, and the Well Decommissioning Report (URS 2015) are included in Appendix D. A copy of the closure letter could not be located, but the RWQCB records indicate a date of December 10, 2015.

There are no additional facilities listed on the LUST list within 0.5 mile of the Site.

### **7.2.11 Underground Storage Tanks List**

The California Underground Storage Tank (UST) list is a compilation of petroleum storage tank sites that are registered with the state of California. The UST list is searched for the Site and adjacent properties.

The Site does not appear on the UST list. The adjacent Parcel appears on the UST list.

The CCI is listed as currently having two (2) USTs and up to seven (7) former USTs. The former USTs contributed to the LUST case discussed in Section 7.2.10. The current USTs are reported to be double-walled and have not reported leaks or spills. They are also located approximately 2,000 feet west of the Site. Therefore, it is our opinion that these USTs do not represent a recognized environmental condition to the Site.

### **7.2.12 Spills, Leaks, Investigation and Cleanup Cost Recovery Listing (SLIC)**

The SLIC database is compiled by the CEPA California Regional Water Quality Control Board, San Diego Region. It is designed to protect and restore water quality from spills, leaks, and similar discharges. The SLIC is searched for a 0.5-mile distance.

The Site does not appear on the SLIC. There are no SLIC facilities listed within a 0.5-mile distance of the Site.

### **7.2.13 State Institutional Control/Engineering Control Registries**

The State of California maintains institutional and engineering control databases or registries. This lists sites with engineering or institutional controls in place. Institutional controls include administrative measures intended to prevent exposure to contaminants remaining on site. Engineering controls include various forms of caps, building foundations, liners, and treatment methods. The State Institutional Control/Engineering Control Registries is searched for the Site.

The subject Site does not appear on the State Institutional Control/Engineering Control Registries.

### **7.2.14 Tribal Databases**

Tribal governments are under the jurisdiction of the EPA for environmental concerns. Currently, the EPA Region 9 publishes LUST and UST information for tribes in Arizona, California, Hawaii, Nevada, and the Pacific Territories. The LUST database is searched for 0.5 mile, and the UST database is searched for 0.25 mile.

The Site does not appear on the Tribal LUST or UST databases. No facilities were identified on the Tribal LUST or UST databases within 0.5 mile of the Site.

### **7.2.15 Other Databases**

EDR compiles information from multiple federal, state, local, and proprietary databases. Most are secondary or tertiary or redundant. Facilities compiled on these other databases are evaluated based on the severity of the listing, distance, and location.

The adjacent Parcel appears on several databases, all of which appear to be redundant to the databases previously discussed.

### **7.2.16 Unmappable Facilities**

The database report usually contains a list of facilities that, for one reason or another, cannot be properly geocoded on a map.

The adjacent CCI facility was reported five (5) times on the unmappable facilities list in the database report. These listings appear to be part of the LUST case discussed in Section 7.2.10.

### **7.3 LOCAL REGULATORY AGENCY RECORDS**

GeoTek contacted the Kern County Environmental Health Division (KCEHD) regarding underground or above ground storage tanks, hazardous material permits or business plans, emergency responses, spills, inspections, or other information of an environmental or hazardous nature.

As of the date of this report, the KCEHD has not responded to our request. When the information is made available, and if that information changes the conclusions or recommendations of this report, an addendum to this report will be issued.

## **8.0 VAPOR ENCROACHMENT SCREEN**

The purpose of a Vapor Encroachment Screen (VES) is to identify, to the extent feasible, if a vapor encroachment condition exists at the Site.

Utilizing data from the environmental database report, it was determined that there are no current or historic auto stations, gas stations, or cleaners located up-gradient and/or within 600 feet of the Site. Therefore, it is our opinion that a vapor encroachment condition (VEC) does not likely exist at the Site.

## **9.0 SITE AND SURROUNDING AREA HISTORY**

In order to construct the history of the Site and the surrounding area, GEOTEK reviewed reasonably ascertainable public documents, including aerial photographs, topographic maps, building records, city directories, fire insurance maps, and county assessor history records.

### **9.1 HISTORICAL SITE USAGE**

#### **9.1.1 Aerial Photograph Review**

GEOTEK reviewed aerial photographs dated 1963, 1994, 1995, 2005, 2009, 2010, 2012, 2014, 2014-17, and 2017.

The 1963 aerial photograph shows the Site to be vacant land.

The 1994 and 1995 aerial photographs show no significant changes from the 1963 photograph.

The 2005 aerial photograph shows dirt roads transecting the Site.

The remaining aerial photographs show no significant changes to the Site from the 2005 photograph. The 2017 photograph is included as Figure 3 in Appendix A.

#### **9.1.2 Assessors Information**

GEOTEK inquired about the ownership of the Site at the Kern County Assessor's Office. According to records, the Site is owned by the State of California.

#### **9.1.3 Building Department Records**

GEOTEK requested available building records for the Parcel at the Tehachapi Building Department. We were informed that permits for "the prison" were not on file, as they are kept at the State Architects office in Sacramento. Therefore, building records for the Parcel are not reasonably ascertainable.

#### **9.1.4 Chain of Title**

GEOTEK has not received, nor was authorized to obtain Chain-of-Title documents as part of this assessment. The provided Title Report is not a chain-of-title document.

### **9.1.5 City Directory Review**

As the Site has no specific address, and has been part of the CCI campus since at least 1943, historic city directories were not reviewed for this assessment.

### **9.1.6 Sanborn Map Review**

Sanborn Fire Insurance Maps for the parcel were requested from EDR-Sanborn, which owns and maintains the largest and most complete collection of the maps. No coverage for the Site was available. The Sanborn Map Report is included in Appendix B.

### **9.1.7 Topographic Map Review**

GEO TEK reviewed the Cummings Mountain Quadrangle topographic map (15-Minute Series) dated 1943 and Cummings Mountain Quadrangle (7.5-Minute Series), dated 1966, 2012, and 2018.

The Site appears to be vacant land on the topographic maps. The CCI was identified in the vicinity on all the maps. The 2018 map shows little detail beyond the streets in the vicinity. The 2012 map is included as Figure I in Appendix A.

## **9.2 HISTORICAL IMMEDIATELY SURROUNDING PROPERTY USAGE**

### **9.2.1 Aerial Photograph Review**

GEO TEK reviewed aerial photographs dated 1963, 1994, 1995, 2005, 2009, 2010, 2012, 2014, 2014-17, and 2017.

The 1963 aerial photograph shows the vicinity to be primarily vacant land, with the CCI facility to the west.

The 1994 aerial photograph shows detention ponds to the west, part of the CCI facility.

The 1995, 2005, 2009, and 2010 aerial photographs show no significant changes from the 1994 photograph.

The 2012 aerial photograph shows a solar power array present to the west. No other significant changes were observed from the previous photographs.

The remaining aerial photographs show no significant changes from the 2012 photograph. The 2017 photograph is presented as Figure 3 in Appendix A.

### **9.2.2 City Directory Review**

Since the vicinity has been primarily part of the CCI, city directories were not reviewed as part of this assessment.

### **9.2.3 Sanborn Map Review**

Sanborn Fire Insurance Maps for the Site were requested from EDR-Sanborn, which owns and maintains the largest and most complete collection of the maps. According to EDR, no coverage was available for the property; therefore, it is not likely that coverage would be available for the adjoining properties.

### **9.2.4 Topographic Map Review**

GEO TEK reviewed the Cummings Mountain Quadrangle topographic map (15-Minute Series) dated 1943 and Cummings Mountain Quadrangle (7.5-Minute Series), dated 1966, 2012, and 2018.

The CCI was identified in the vicinity on all the maps. The 2018 map shows little detail beyond the streets in the vicinity. The 2012 map is included as Figure 1 in Appendix A.

## **9.3 HISTORICAL USE SUMMARY**

Based on readily available historic information, the Site appears to have been primarily vacant land since at least 1943. The vicinity has been generally vacant, with the correctional institution present, since 1943. The ponds to the west were present by 1994, and the solar array to the west was present by 2012. No historic recognized environmental conditions were identified.

No historic information was readily available or reasonably obtainable prior to 1943. This represents data failure according to ASTM E 1527-13. Data gaps from 1943 to 1963, 1966 to 1994, and 1995 to 2005 are due to the limited resources which are readily available and reasonably ascertainable in the local area. However, it is our opinion that additional historic information, if it were to become available, is not likely to change the conclusions or recommendations of this assessment.

## **10.0 SIGNIFICANT DATA GAPS**

No significant data gaps were discovered while performing this Phase I Environmental Site Assessment. Therefore, it is our opinion that sufficient information was obtained to identify current Site conditions and past Site usage.

Minor data gaps include:

- ◆ Gaps in the historic records from 1943 to 1963, 1966 to 1994, and 1995 to 2005;
- ◆ GEOTEK was not provided with, nor authorized to obtain, a chain-of-title report for this assessment;
- ◆ As of the date of this report, the KCEHD has not responded to our request for information.

However, it is our opinion that additional information, if it were to become available, is not likely to change the conclusions or recommendations of this assessment.

## **11.0 CONCLUSIONS AND RECOMMENDATIONS**

GEOTEK has performed a Phase I Environmental Site Assessment (ESA) for the subject Site in substantial conformance with the scope and limitations of ASTM E 1527-13 and GEOTEK Proposal No. P1100817-CR, dated November 2, 2017. Any exceptions to, or deletions from, this practice are described in the appropriate section(s) of this report.

This Phase I Environmental Site Assessment has not revealed evidence of a recognized environmental condition at the subject Site. No further investigation is recommended at this time.

## **12.0 CERTIFICATIONS**

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject Site. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

The qualifications of the Project Team are included in Appendix F.

We appreciate this opportunity to be of service. If you have any questions, or if we can be of further service, please contact us at (951) 710-1160.

Sincerely,

# Custom Soil Resource Report for Kern County, California, Southeastern Part

**DGS California Correctional  
Institution**

# Preface

---

Soil surveys contain information that affects land use planning in survey areas. They highlight soil limitations that affect various land uses and provide information about the properties of the soils in the survey areas. Soil surveys are designed for many different users, including farmers, ranchers, foresters, agronomists, urban planners, community officials, engineers, developers, builders, and home buyers. Also, conservationists, teachers, students, and specialists in recreation, waste disposal, and pollution control can use the surveys to help them understand, protect, or enhance the environment.

Various land use regulations of Federal, State, and local governments may impose special restrictions on land use or land treatment. Soil surveys identify soil properties that are used in making various land use or land treatment decisions. The information is intended to help the land users identify and reduce the effects of soil limitations on various land uses. The landowner or user is responsible for identifying and complying with existing laws and regulations.

Although soil survey information can be used for general farm, local, and wider area planning, onsite investigation is needed to supplement this information in some cases. Examples include soil quality assessments (<http://www.nrcs.usda.gov/wps/portal/nrcs/main/soils/health/>) and certain conservation and engineering applications. For more detailed information, contact your local USDA Service Center (<https://offices.sc.egov.usda.gov/locator/app?agency=nrcs>) or your NRCS State Soil Scientist ([http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2\\_053951](http://www.nrcs.usda.gov/wps/portal/nrcs/detail/soils/contactus/?cid=nrcs142p2_053951)).

Great differences in soil properties can occur within short distances. Some soils are seasonally wet or subject to flooding. Some are too unstable to be used as a foundation for buildings or roads. Clayey or wet soils are poorly suited to use as septic tank absorption fields. A high water table makes a soil poorly suited to basements or underground installations.

The National Cooperative Soil Survey is a joint effort of the United States Department of Agriculture and other Federal agencies, State agencies including the Agricultural Experiment Stations, and local agencies. The Natural Resources Conservation Service (NRCS) has leadership for the Federal part of the National Cooperative Soil Survey.

Information about soils is updated periodically. Updated information is available through the NRCS Web Soil Survey, the site for official soil survey information.

# How Soil Surveys Are Made

---

Soil surveys are made to provide information about the soils and miscellaneous areas in a specific area. They include a description of the soils and miscellaneous areas and their location on the landscape and tables that show soil properties and limitations affecting various uses. Soil scientists observed the steepness, length, and shape of the slopes; the general pattern of drainage; the kinds of crops and native plants; and the kinds of bedrock. They observed and described many soil profiles. A soil profile is the sequence of natural layers, or horizons, in a soil. The profile extends from the surface down into the unconsolidated material in which the soil formed or from the surface down to bedrock. The unconsolidated material is devoid of roots and other living organisms and has not been changed by other biological activity.

Currently, soils are mapped according to the boundaries of major land resource areas (MLRAs). MLRAs are geographically associated land resource units that share common characteristics related to physiography, geology, climate, water resources, soils, biological resources, and land uses (USDA, 2006). Soil survey areas typically consist of parts of one or more MLRA.

The soils and miscellaneous areas in a survey area occur in an orderly pattern that is related to the geology, landforms, relief, climate, and natural vegetation of the area. Each kind of soil and miscellaneous area is associated with a particular kind of landform or with a segment of the landform. By observing the soils and miscellaneous areas in the survey area and relating their position to specific segments of the landform, a soil scientist develops a concept, or model, of how they were formed. Thus, during mapping, this model enables the soil scientist to predict with a considerable degree of accuracy the kind of soil or miscellaneous area at a specific location on the landscape.

Commonly, individual soils on the landscape merge into one another as their characteristics gradually change. To construct an accurate soil map, however, soil scientists must determine the boundaries between the soils. They can observe only a limited number of soil profiles. Nevertheless, these observations, supplemented by an understanding of the soil-vegetation-landscape relationship, are sufficient to verify predictions of the kinds of soil in an area and to determine the boundaries.

Soil scientists recorded the characteristics of the soil profiles that they studied. They noted soil color, texture, size and shape of soil aggregates, kind and amount of rock fragments, distribution of plant roots, reaction, and other features that enable them to identify soils. After describing the soils in the survey area and determining their properties, the soil scientists assigned the soils to taxonomic classes (units). Taxonomic classes are concepts. Each taxonomic class has a set of soil characteristics with precisely defined limits. The classes are used as a basis for comparison to classify soils systematically. Soil taxonomy, the system of taxonomic classification used in the United States, is based mainly on the kind and character of soil properties and the arrangement of horizons within the profile. After the soil

scientists classified and named the soils in the survey area, they compared the individual soils with similar soils in the same taxonomic class in other areas so that they could confirm data and assemble additional data based on experience and research.

The objective of soil mapping is not to delineate pure map unit components; the objective is to separate the landscape into landforms or landform segments that have similar use and management requirements. Each map unit is defined by a unique combination of soil components and/or miscellaneous areas in predictable proportions. Some components may be highly contrasting to the other components of the map unit. The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The delineation of such landforms and landform segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, onsite investigation is needed to define and locate the soils and miscellaneous areas.

Soil scientists make many field observations in the process of producing a soil map. The frequency of observation is dependent upon several factors, including scale of mapping, intensity of mapping, design of map units, complexity of the landscape, and experience of the soil scientist. Observations are made to test and refine the soil-landscape model and predictions and to verify the classification of the soils at specific locations. Once the soil-landscape model is refined, a significantly smaller number of measurements of individual soil properties are made and recorded. These measurements may include field measurements, such as those for color, depth to bedrock, and texture, and laboratory measurements, such as those for content of sand, silt, clay, salt, and other components. Properties of each soil typically vary from one point to another across the landscape.

Observations for map unit components are aggregated to develop ranges of characteristics for the components. The aggregated values are presented. Direct measurements do not exist for every property presented for every map unit component. Values for some properties are estimated from combinations of other properties.

While a soil survey is in progress, samples of some of the soils in the area generally are collected for laboratory analyses and for engineering tests. Soil scientists interpret the data from these analyses and tests as well as the field-observed characteristics and the soil properties to determine the expected behavior of the soils under different uses. Interpretations for all of the soils are field tested through observation of the soils in different uses and under different levels of management. Some interpretations are modified to fit local conditions, and some new interpretations are developed to meet local needs. Data are assembled from other sources, such as research information, production records, and field experience of specialists. For example, data on crop yields under defined levels of management are assembled from farm records and from field or plot experiments on the same kinds of soil.

Predictions about soil behavior are based not only on soil properties but also on such variables as climate and biological activity. Soil conditions are predictable over long periods of time, but they are not predictable from year to year. For example, soil scientists can predict with a fairly high degree of accuracy that a given soil will have a high water table within certain depths in most years, but they cannot predict that a high water table will always be at a specific level in the soil on a specific date.

After soil scientists located and identified the significant natural bodies of soil in the survey area, they drew the boundaries of these bodies on aerial photographs and

identified each as a specific map unit. Aerial photographs show trees, buildings, fields, roads, and rivers, all of which help in locating boundaries accurately.

## MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:24,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

 Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Kern County, California, Southeastern Part  
 Survey Area Data: Version 9, Sep 20, 2018

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Nov 3, 2014—Mar 6, 2017

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

## Map Unit Descriptions

The map units delineated on the detailed soil maps in a soil survey represent the soils or miscellaneous areas in the survey area. The map unit descriptions, along with the maps, can be used to determine the composition and properties of a unit.

A map unit delineation on a soil map represents an area dominated by one or more major kinds of soil or miscellaneous areas. A map unit is identified and named according to the taxonomic classification of the dominant soils. Within a taxonomic class there are precisely defined limits for the properties of the soils. On the landscape, however, the soils are natural phenomena, and they have the characteristic variability of all natural phenomena. Thus, the range of some observed properties may extend beyond the limits defined for a taxonomic class. Areas of soils of a single taxonomic class rarely, if ever, can be mapped without including areas of other taxonomic classes. Consequently, every map unit is made up of the soils or miscellaneous areas for which it is named and some minor components that belong to taxonomic classes other than those of the major soils.

Most minor soils have properties similar to those of the dominant soil or soils in the map unit, and thus they do not affect use and management. These are called noncontrasting, or similar, components. They may or may not be mentioned in a particular map unit description. Other minor components, however, have properties and behavioral characteristics divergent enough to affect use or to require different management. These are called contrasting, or dissimilar, components. They generally are in small areas and could not be mapped separately because of the scale used. Some small areas of strongly contrasting soils or miscellaneous areas are identified by a special symbol on the maps. If included in the database for a given area, the contrasting minor components are identified in the map unit descriptions along with some characteristics of each. A few areas of minor components may not have been observed, and consequently they are not mentioned in the descriptions, especially where the pattern was so complex that it was impractical to make enough observations to identify all the soils and miscellaneous areas on the landscape.

The presence of minor components in a map unit in no way diminishes the usefulness or accuracy of the data. The objective of mapping is not to delineate pure taxonomic classes but rather to separate the landscape into landforms or

## Custom Soil Resource Report

landform segments that have similar use and management requirements. The delineation of such segments on the map provides sufficient information for the development of resource plans. If intensive use of small areas is planned, however, onsite investigation is needed to define and locate the soils and miscellaneous areas.

An identifying symbol precedes the map unit name in the map unit descriptions. Each description includes general facts about the unit and gives important soil properties and qualities.

Soils that have profiles that are almost alike make up a *soil series*. Except for differences in texture of the surface layer, all the soils of a series have major horizons that are similar in composition, thickness, and arrangement.

Soils of one series can differ in texture of the surface layer, slope, stoniness, salinity, degree of erosion, and other characteristics that affect their use. On the basis of such differences, a soil series is divided into *soil phases*. Most of the areas shown on the detailed soil maps are phases of soil series. The name of a soil phase commonly indicates a feature that affects use or management. For example, Alpha silt loam, 0 to 2 percent slopes, is a phase of the Alpha series.

Some map units are made up of two or more major soils or miscellaneous areas. These map units are complexes, associations, or undifferentiated groups.

A *complex* consists of two or more soils or miscellaneous areas in such an intricate pattern or in such small areas that they cannot be shown separately on the maps. The pattern and proportion of the soils or miscellaneous areas are somewhat similar in all areas. Alpha-Beta complex, 0 to 6 percent slopes, is an example.

An *association* is made up of two or more geographically associated soils or miscellaneous areas that are shown as one unit on the maps. Because of present or anticipated uses of the map units in the survey area, it was not considered practical or necessary to map the soils or miscellaneous areas separately. The pattern and relative proportion of the soils or miscellaneous areas are somewhat similar. Alpha-Beta association, 0 to 2 percent slopes, is an example.

An *undifferentiated group* is made up of two or more soils or miscellaneous areas that could be mapped individually but are mapped as one unit because similar interpretations can be made for use and management. The pattern and proportion of the soils or miscellaneous areas in a mapped area are not uniform. An area can be made up of only one of the major soils or miscellaneous areas, or it can be made up of all of them. Alpha and Beta soils, 0 to 2 percent slopes, is an example.

Some surveys include *miscellaneous areas*. Such areas have little or no soil material and support little or no vegetation. Rock outcrop is an example.

This notice informs you of THE TAXABLE VALUE of your property. It also serves to inform you of your opportunity to request reconsideration of our findings. If you believe that your property was worth less than the indicated amount, you should first discuss the matter with the Assessor's staff by calling (661)-868-3485.

Pursuant to the State Constitution, property shall be taxed in proportion to its value. This law requires the property be appraised at its 1975-76 market value unless it has been sold, newly constructed, or had a change in ownership after March 1, 1975. In the latter cases, the property will have a new base year market value as of date of the sale, new construction or change in ownership. The base year value is subject to an annual rate of inflation not to exceed 2 percent increase per year. The taxable value of real property on the local roll shall be the lesser of: (a) factored base year value, (b) current market value, or (c) the value of the property if it was damaged or destroyed by calamity pursuant to Revenue and Taxation Code § 170

Within 12 months following the month of notification of the assessment, if the Assessor agrees that a ~~re~~duction of value is warranted and legal and proper, he may adjust the value. Or, if the assessment roll has been completed, he may aid you in applying to the local assessment appeals board for relief. A written stipulation may be made and filed with the application to the Kern County Assessment Appeals Board in accordance with the Revenue and Taxation Code § 1607. This section provides that the taxpayer need not attend the scheduled equalization hearing and testify to the property's value, if you and the Assessor agree to the value and sign a written stipulation to this effect. The Board can either accept the stipulation or reject it and set a new hearing date. Applications for Change in Assessment for value not agreed upon with the Assessor must be filed in writing by the taxpayer or his representative with the Clerk of the Assessment Appeals Board between July 2 and November 30 of the current fiscal year. The Clerk of the Assessment Appeals Board is located at the County Administrative Center, 5th floor, 1115 Truxtun Ave, Bakersfield, CA 93301, and the phone number is (661)-868-3585. If you have not received this notice at least 15 days prior to November 30, then you have 60 days from receipt of this notice or the mailing of your tax bill that reflects an increase in the base year value (whichever is earlier) to file an application for change in assessment. This application must include an affidavit declaring under penalty of perjury that the notice was not timely received. Applications for reduced assessment of the base year value must be filed for the year in which the base year value was initially enrolled or in any of the following three assessment years. This assessment notice also serves to notify owners of land enforceably restricted by contractual agreements under the WILLIAMSON ACT that the Assessor will enroll the lesser of the agricultural preserve value, the indexed base year taxable value, or the current market value. The lesser value will be enrolled unless either party to the contract expressly prohibits such a valuation pursuant to Revenue and Taxation Code § 423.

Pursuant to state law, a copy of the local assessment roll is available for public inspection during regular office hours (8-5) Monday through Friday in the Assessor's Office at 1115 Truxtun Ave, 2nd floor.

EXCLUSIONS - Certain sales/transfers of property between parents and children and certain sales/transfers from grandparents to grandchildren may qualify for exclusion from reassessment thereby maintaining your lower property tax liability. Please contact our office at (661)-868-3300 for further information.

## USER QUESTIONNAIRE

### INTRODUCTION

In order to qualify for one of the *Landowner Liability Protections* offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2002, the *user* must provide the following information (if available) to the *environmental professional*. Failure to provide this information could result in a determination that “*all appropriate inquiry*” is not complete.

(1) Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal, tribal, state or local law?

CIRCLE YES or NO

If yes, please explain in detail.

(2) Are you aware of any Activity Use Limitations (AUL), such as *engineering controls*, land use restrictions or *institutional controls* that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law?

YES or NO

If yes, please explain.

(3) As the user of this Environmental Site Assessment (ESA) do you have any specialized knowledge or familiarity related to the *property* or nearby properties? For example, are you involved in the same line of business as the current or former *occupants* of the *property* or its neighboring *property*, so that you may have specific knowledge of the chemicals and processes used by this type of business?

YES or NO

If yes, please explain.

(4) Does the purchase price being paid for this *property* reasonably reflect the fair market value of the *property*?

YES or NO N/A

If you believe that there is a difference, have you considered whether the lower purchase price is because contamination is known or believed to be present at the *property*?

YES or NO N/A

If yes, please explain.

(5) Are you aware of commonly known or *reasonably* ascertainable information that would help the *environment professional* to identify conditions pinpointing releases or threaten releases of hazardous materials and/ or chemicals? For example, as user,

(a.) Do you know of any past uses of the *property*? YES or NO

(b.) Do you know of specific chemicals that are present or once were present at the *property*? YES or NO

(c.) Do you know of any chemical spills or any other chemical releases that have taken place at the *property*? YES or NO

(d.) Do you know of any environmental cleanups that have taken place at the *property*? YES or NO

If any yes, please explain.

(6) As the user of this Environmental Site Assessment (ESA), based on your knowledge and experience related to the *property* are there any *obvious* indicators that point to the presence or likely presence of a contamination at the *property*?

YES or NO

If yes, please explain.

California Correctional Institute  
Motor Pool Site, 24900 State Highway 202  
Tehachapi, California**

Dear Mr. Whiting:

URS Corporation Americas (URS), on behalf of the California Department of Corrections and Rehabilitation (CDCR), has prepared this second quarter 2014 (2Q14) groundwater monitoring report for the California Correctional Institute in Tehachapi, California (site) (Figure 1).

The following paragraphs present site background and a summary of sampling activities and analytical results. This report relies on background information, including analytical data, furnished to URS by CDCR and/or other third parties. URS has relied on this information as furnished, and is neither responsible for, nor has confirmed accuracy of, this information.

## **BACKGROUND**

### **UST Removal**

During excavation and removal of a 4,000-gallon and a 500-gallon underground storage tank from the Motor Pool area in 1987, petroleum hydrocarbons were observed in soil beneath both tanks. Petroleum hydrocarbons were also detected in soil adjacent to a leaking underground product line. To mitigate the releases at the site, a soil vapor extraction (SVE) system was installed that operated from January to September 1991 and again from February to July 1996. The system removed an estimated 5,000 pounds of hydrocarbons (Environmental Profiles, Inc., 1996).

### **Initial Investigations**

Between 1991 and 1998, multiple subsurface investigations were conducted at the site to assess impacts to soil and groundwater (Staal, Gardner, and Dunne, Inc., 1991; Holguin, Fahan & Associates, Inc., 1998). During this period, several borings were drilled and sampled, and three monitoring wells (MW-1, MW-2, and MW-3) were installed and groundwater samples were collected. The investigation results showed hydrocarbon-impacted soil and groundwater at the Motor Pool site. Elevated concentrations of benzene, total petroleum hydrocarbons as gasoline (TPH-g) and diesel (TPH-d), and methyl tertiary-butyl ether (MTBE) were detected in the groundwater (Smith-Gutcher and Associates, Inc., 2000).

In August 2001, AMEC Earth & Environmental, Inc. (AMEC) drilled and sampled five borings and installed three additional monitoring wells (MW-4, MW-5, and MW-6). In February 2002, AMEC coordinated the drilling of two additional soil borings, one triple-nested monitoring well (MW-7A, MW-7B, and MW-7C), five monitoring wells (MW-8 through MW-12), and three double-nested SVE wells (VE-4, VE-5, and VE-6) to better define the extent of fuel hydrocarbons in soil and groundwater and to prepare for interim remediation. The results of the August 2001 and February 2002 investigations showed migration of dissolved-phase hydrocarbons, primarily MTBE, toward the west-southwest from the source area.

### **Soil Vapor Extraction Remediation**

To reduce source area hydrocarbons in the vadose and capillary fringe zones at the Motor Pool site, AMEC designed and coordinated the construction of an interim SVE system during May and October of 2002 (AMEC, 2002). The SVE system was upgraded and restarted in 2002. From December 12, 2004, to June 16, 2005, the SVE system was shut down due to relatively low influent concentrations. To check for rebounding of contaminants in the unsaturated zone, the system was restarted June 16, 2005. Subsequently, due to low influent concentrations, the system was shut down again and has not operated since that time. Details regarding the former system operations are presented in the 1Q07 monitoring report (AMEC, 2007).

### **Investigation of Plume Extent**

In mid-January 2003, AMEC drilled and sampled eight borings and installed six monitoring wells (BRW-1, MW-13, MW-14, OW-1, OW-2, and TW-1) and two triple-nested monitoring wells (MW-15A, MW-15B, and MW-15C, MW-16A, MW-16B, and MW-16C). The monitoring wells were installed to better define the extent of MTBE and fuel hydrocarbons in soil and groundwater. Using the groundwater test and observation wells, AMEC performed a pump test to evaluate aquifer characteristics in the Motor Pool vicinity (AMEC, 2003). In October 2003, AMEC drilled and sampled three borings and installed an additional three monitoring wells (MW-17, MW-18, and MW-19). The monitoring wells were installed to better define the gradient extent of MTBE.

In December 2004, 12 monitoring wells (MW-20 through MW-29, PMW-13 and PMW-14) were installed to better evaluate the extent of MTBE-impacted groundwater downgradient of the Motor Pool site (AMEC, 2005). Subsurface investigation using HydroPunch sampling (HP-1 through HP-6) was conducted on June 19 and 20, 2006, to better define the extent of the MTBE plume (AMEC, 2007). Most recently, Tetra Tech, Inc. (Tetra Tech) installed wells MW-30 through MW-33 in September 2009 to assess the lead edge of the plume for groundwater contamination.

As a result of the activities discussed above, a total of 60 wells have been constructed on site: 44 groundwater monitoring wells, 6 groundwater extraction wells, and 10 vapor extraction wells. Table 1 summarizes well construction details.

### **Source Area Groundwater Treatment System**

The source area groundwater treatment system (SAS) was constructed in September 2004 and is equipped with a 500-gallon sparge tank and a 5-horsepower (hp) blower upstream of the settling tank. The treatment system was later modified to facilitate removal of MTBE by replacing the 500-gallon sparge tank with a 2,000-gallon sparge tank. The system ran periodically by pumping from wells TW-1 and PMW-15. The tank was equipped with an air diffuser and a 1.5-hp blower to aerate the groundwater and volatilize the MTBE contamination. The air stream and the contaminants from the air stripper were vented through a vapor-phase carbon vessel to remove the contaminants before the air was released to the atmosphere.

During 2004, the system was operated under the Regional Water Quality Control Board (RWQCB [now CVWB]) General Order No. R5-2003-0044 for petroleum hydrocarbon remediation sites until a specific waste discharge requirements (WDR) order was issued for the Motor Pool treatment system. Before the meeting with RWQCB on January 27 and 28, 2005, site-specific WDR Order No. R5-2005-0021 was adopted. The SAS was shut down on December 8, 2006, to facilitate upgrades to the existing system and build the new treatment system at the downgradient plume area groundwater treatment system (PAS). The SAS was brought online again on March 26, 2007, and at the time the SAS treated groundwater from the source area with a capacity of 10 gallons per minute (gpm). The SAS operated until December 27, 2007, when it was shut down due to insufficient water in extraction well TW-1. The SAS treated approximately 5.9 million gallons of groundwater from September 2004 until it was shut down in December 2007.

### **Plume Area Treatment System**

The PAS was constructed near West Administration Drive and CCI View Drive to treat groundwater and prevent further downgradient migration of the MTBE plume. This downgradient system was designed to have a maximum treatment capacity close to that allowed by the WDR (49 gpm). The PAS started treatment on February 9, 2007. The operation included pumping and treatment from wells PMW-13, PMW-15, MW-24, MW-25, and MW-26. On a monthly basis since inception, while the system was operational, influent and effluent water samples were collected per WDR R5-2005-0021.

The PAS system includes the following major components:

- Human interface panel (a touchscreen that enables users to change the settings for pumps, blowers, pressure sensors, etc.)
- Up to five extraction wells with 0.5-hp Sta-Rite pumps with a maximum pumping capacity of 7 gpm
- Three 2,000-gallon sparge tanks (Alpha, Beta, and Omega) with a diffuser (3-inch polyvinyl chloride pipe with small holes at the bottom 1-foot section of pipe)
- 5-hp rotron blowers that supply air to the diffuser in the tanks
- Three 10-gallon moisture separators (knock-out pots)

The system extracted groundwater, using electric pumps, from the extraction wells. Groundwater from each well was directed through an influent flow meter before being sent into three inline 2,000-gallon cascading sparge tanks, where it was aerated via blown air through a diffuser. The sparge tanks were used to remove contaminants from the groundwater through air/liquid contact. A 5-hp blower supplied pressurized air to a 3-inch diffuser in each tank. Each blower has an air pressure sensor and was controlled by the human interface control panel. With sufficient flow and pressure, the system generated agitation and bubbles to volatilize the organic compounds. Treated water was directed through a flow meter before being discharged to the unlined percolation basin. The instantaneous flow rate and cumulative treatment volume were recorded.

The PAS operated until March 25, 2010, when it was shut down because the remediation objectives had been met (as evidenced by the low residual concentrations of MTBE). During its operation, the system treated 8.6 million gallons of groundwater (Tetra Tech, 2010a).

### **Downgradient Investigation**

Tetra Tech installed four wells (MW-30 through MW-33) in September 2009 and sampled those wells in October 2009, January 2010, April 2010, and July 2010. MTBE was not detected in any well samples collected during those groundwater monitoring events (Tetra Tech, 2010b).

Because of the effectiveness of the treatment system, contaminant levels have decreased significantly at the site and a decision was made to terminate groundwater treatment activities; the system was shut down on March 25, 2010. The results of the semiannual groundwater monitoring activities presented in this report were performed to comply with monitoring requirements and to determine if increased contamination (rebound) would occur following the termination of groundwater treatment.

## **SENSITIVE RECEPTOR SURVEY**

### **Supply wells**

On October 22, 2013, URS contacted Department of Water Resources (DWR) to review available logs of wells located approximately 1,000 feet from the plume boundary at the site (Figure 2). DWR provided 42 well logs of wells within the search radius. Three of the 42 wells (Well 1, Well 1A, and Well B) are at the facility and are discussed below.

Well 1, Well 1A, and Well B were included in the DWR well search. However, Mr. Paul Vasquez, CDCR Associate Hazardous Materials Specialist, has no knowledge of these well designations but assumes they were Wells 8, 9, and 10. Wells 8 and 9 were abandoned in the 1960s and Well 10 was abandoned in the mid-1990s.

Mr. Vasquez indicated that there are three wells currently operating (Well A, Well B, and Well 12), but none of them are within 1,000 feet of the plume boundary. The closest well, Well 12, is approximately 1.22 miles from the plume. Wells A, B, and 12 were not identified in the DWR well search.

The remaining 39 wells were either outside of that search radius or were unmappable due to limited geographical information provided on the well logs.

On October 29, 2013, URS also contacted Environmental Data Resources, Inc. (EDR), an environmental risk management information company, to identify public wells within a default radius of 1 mile (Appendix C). EDR identified eight wells within this search radius. However, according to the Low-Threat Closure Policy, only wells located within 1,000 feet of the plume boundary are considered to be sensitive receptors. No supply wells were identified within 1,000 feet of the plume boundary.

### **Surface Water**

URS reviewed the USGS Topographic North Quadrangle of Tehachapi, California for surface water bodies within 1,000 feet of the site. No surface water bodies were identified.

### **Schools/Day Care Facilities**

URS did not identify any schools or day care facilities within 1,000 feet of the site.

### **Hospitals**

According to Mr. Vasquez, the facility contains an infirmary for inmates. The infirmary is located approximately 1,500 feet south of the plume boundary, which is outside the search radius.

No other hospitals were identified within 1,000 feet of the site.

### **Senior Citizen Care Facilities**

URS did not identify any senior citizen care facilities within 1,000 feet of the site.

## **GROUNDWATER MONITORING ACTIVITIES**

On June 11, 2014, URS conducted semi-annual groundwater monitoring at the site, which included:

- Measuring groundwater levels in each on-site monitoring well
- Purging and collecting groundwater samples from all monitoring wells containing sufficient water for sampling
- Submitting groundwater samples to a California-certified laboratory for analysis of TPH-g by Method 8015, and benzene, toluene, ethylbenzene, and xylenes, and volatile organic compounds (which include MTBE, ethyl tertiary butyl ether, di-isopropyl ether, tert-amyl methyl ether, and tert-butyl alcohol) by United States Environmental Protection Agency Method SW8260B
- Measuring groundwater temperature, electrical conductivity, pH, and turbidity in the sampled monitoring wells

Prior to purging and using an electronic water level meter, the depth-to-groundwater and total depth of each well were measured, to an accuracy of 0.01 foot below ground surface, to a known surveyed point at each well location. These measurements were used to calculate the purge volume and groundwater elevation for each well.

As each well was purged, temperature, pH, specific conductivity, and turbidity were monitored periodically to verify that groundwater entering the well was indicative of aquifer conditions. Once stability was reached and the above parameters indicated that the groundwater in each well was representative of the aquifer, a water sample was collected from the well. Groundwater samples were carefully transferred to pre-cleaned, laboratory-provided sample containers. Once collected, the sample containers were labeled with the time and date of collection, project and sample identification codes, sampler's initials, type of analysis to be performed, and preservative method.

The samples were then sealed in plastic bags and stored in an ice-filled chest at approximately 4 degrees Celsius until delivery to the laboratory. Each groundwater sample was delivered to the laboratory within the designated holding time and was accompanied by the appropriate chain-of-custody documentation. The groundwater samples were submitted to Curtis & Tompkins Laboratories in Berkeley, California, for analysis.

### **Groundwater Monitoring Results**

Depth to groundwater was measured in site wells on June 11, 2014. Groundwater elevations were then calculated using these measurements. Groundwater elevations ranged from 3818.27 feet above mean sea level (msl) in MW-30 to 3859.87 feet msl in MW-16C. During this quarter, the general direction of groundwater flow is to the west at a varying gradient of 0.03 feet per foot. Tables 2 and 4, and Figure 3 provide gradient data and groundwater flow direction. Appendix A provides groundwater sampling field data sheets.

Well MW-2 was not sampled due to insufficient water. MTBE concentrations continue to decrease and were not detected in PMW-13 and PMW-15 this quarter. MTBE was detected only in MW-3 at a concentration of 130 micrograms per liter (  $\mu\text{g/L}$ ), which continues to be a decrease since 1Q13. PCE was detected in MW-3 and PMW-15 at concentrations of 5.6  $\mu\text{g/L}$  and 0.7  $\mu\text{g/L}$ , respectively. These concentrations are consistent with previous detections at these two locations.

Groundwater monitoring data for this quarter are summarized in Table 3 and presented on Figure 4. Table 5 summarizes historical groundwater monitoring data. Appendix B provides the laboratory analytical data report and chain-of-custody documentation. Groundwater analytical data were submitted electronically to the State Water Resources Control Board GeoTracker System per Article 12, Chapter 17, Division 3, Title 23 of the California Code of Regulations. Appendix D includes GeoTracker upload confirmation sheets.

## SUMMARY

Based on the results of groundwater monitoring activities, URS concludes the following:

- During this quarter, the general direction of groundwater flow is to the west at a gradient of 0.03 feet per foot.
- MTBE concentrations continue to decrease and were not detected in PMW-13 and PMW-15 during this quarter.
- MTBE was detected only in MW-3 at a concentration of 130 µg/L, which continues to decrease since 1Q13.
- PCE was detected in MW-3 and PMW-15 at concentrations of 5.6 µg/L and 0.7 µg/L, respectively.

## RECOMMENDATIONS

Based on the most recent sample results collected at monitoring wells from this quarter and previous sample events, the data satisfies the LTCP groundwater specific criteria 2. The criterion's specific attributes are discussed below:

- a. The contaminant plume is less than 250 feet in length. The distance between MW-3, the source area monitoring well with the highest concentration detected in 2Q14, to PMW-13, which is non-detect in 2Q14, is approximately 250 feet. Based on these detections it is reasonable to assume the plume length in excess of WQOs is no more than 250 and more than likely considerably less than 250 feet. To the south, MW-14 has had no detections of MTBE since 2003, effectively bounding the plume to the south/ cross gradient direction. PMW-13 bounds the plume to the west/down gradient direction. TW-1 and OW-1 were both non-detect in 2009 and 2006, respectively, defining the extent of the plume to the north/upgradient direction.
- b. There is no free product at the site.
- c. The nearest existing water supply well or surface water body is greater than 1,000 feet from the defined plume boundary (see the included sensitive receptor survey)
- d. The dissolved concentration of benzene is less than 3,000 µg/L and the dissolved concentration of MTBE is less than 1,000 µg/L.

Based on these data, URS recommends proceeding with a formal request for closure under the Low Threat Underground Storage Tank Case Closure Policy as the site satisfies the general and media-specific criteria for closure.

**CASE NARRATIVE**

Laboratory number: 258103  
Client: URS Corporation  
Project: CDCR CAL CORR  
Location: CA Correctional Institution-Tehachapi  
Request Date: 06/13/14  
Samples Received: 06/13/14

This data package contains sample and QC results for six water samples, requested for the above referenced project on 06/13/14. The samples were received cold and intact.

Volatile Organics by GC/MS (EPA 8260B):

Low response was observed for tert-butyl alcohol (TBA) in the CCV analyzed 06/20/14 13:21; this analyte met minimum response criteria, and affected data was qualified with "b". High recoveries were observed for toluene and chlorobenzene in the MSD for batch 212391; the parent sample was not a project sample, the BS/BSD were within limits, the associated RPDs were within limits, and these analytes were not detected at or above the RL in the associated samples. High RPD was observed for tert-butyl alcohol (TBA) in the BS/BSD for batch 212391; this analyte was not detected at or above the RL in the associated samples. No other analytical problems were encountered.

**Environmental Interest/Information System**

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used

to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

PCS (Permit Compliance System) is a computerized management information system that contains data on National Pollutant Discharge Elimination System (NPDES) permit holding facilities. PCS tracks the permit, compliance, and enforcement status of NPDES facilities.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### *Federal NPL site list*

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## *Federal Delisted NPL site list*

### DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

## *Federal CERCLIS list*

### CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

## *Federal CERCLIS NFRAP site List*

### CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

#### **RCRA-TSDF: RCRA - Treatment, Storage and Disposal**

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

### US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

### ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

## ADDITIONAL ENVIRONMENTAL RECORDS

### *Local Brownfield lists*

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

### Local Lists of Hazardous waste / Contaminated Sites

#### US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

## DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

**HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing**

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

**HIST FTTS INSP: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing**

A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

**SSTS: Section 7 Tracking Systems**

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

### RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

### RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g. the fire department) should an accident occur.

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

### 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

### EDR US Hist Auto Stat: EDR Exclusive Historic Gas Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

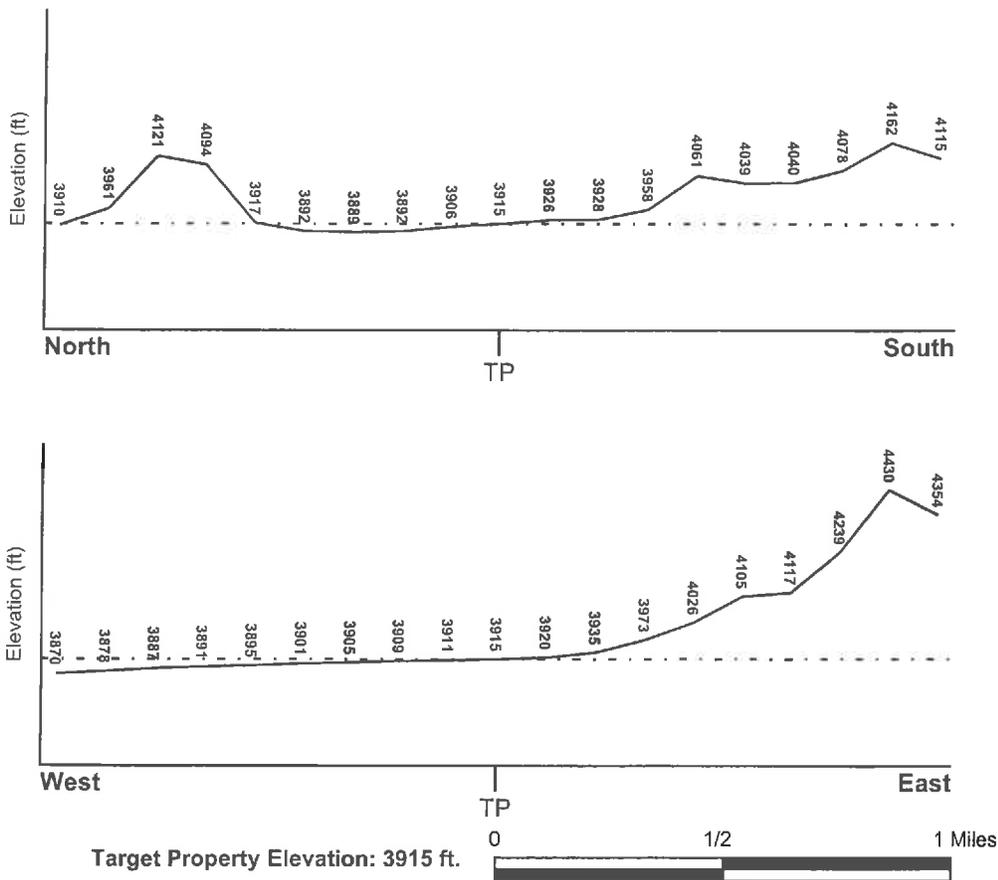

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

## HYDROLOGIC INFORMATION

**Flood Zone Data:** This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

**NWI:** National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)  
Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

### PRECLOSURE NOTIFICATION, UNDERGROUND STORAGE TANK RELEASE, CALIFORNIA CORRECTIONAL INSTITUTION, 24900 HIGHWAY 202, TEHACHAPI, KERN COUNTY, RB CASE 5T15000320

Based on the information contained in the case file, it appears that case closure may be appropriate for the underground storage tank release. In accordance with the criteria contained in the State Water Resources Control Board's *Low-Threat Underground Storage Tank Case Closure Policy*, the Central Valley Regional Water Quality Control Board (Central Valley Water Board) is required to provide the opportunity for interested parties in the vicinity, to participate in the case closure process.

The enclosed Public Notice has been transmitted to the parties listed on the attachment. Public comments will be accepted regarding the case closure **until 6 January 2015** (a period of 60 days). You will be notified of any comments that are received. Unless comments adverse to closure are received, Central Valley Water Board staff will notify you to properly destroy monitoring wells and dispose of all waste generated by the investigation and remediation work. Upon receipt of notification that these tasks have been completed, staff will conduct a closure inspection of the Site, and if no problems are discovered, a case closure letter will be transmitted.

If you have any questions regarding this letter, please contact John Whiting at (559) 445-5504 or by email at [jwhiting@waterboards.ca.gov](mailto:jwhiting@waterboards.ca.gov).

## PUBLIC NOTICE

### CONSIDERATION OF CASE CLOSURE, UNDERGROUND STORAGE TANK RELEASE, CALIFORNIA CORRECTIONAL INSTITUTION, 24900 HIGHWAY 202, TEHACHAPI, KERN COUNTY, RB CASE 5T15000320

**To: Offsite Property Owners and Other Interested Persons**

This letter is to inform interested parties of the Central Valley Regional Water Quality Control Board (Central Valley Water Board) consideration of closing the case, and to request comments from interested parties. In 1987, a gasoline release from an underground storage tank system was discovered in the motor pool area at the facility. The responsible party conducted investigation(s) to determine the extent of affected soil and groundwater, and implemented cleanup to remove the effects of the release. A human health risk assessment during 2013 determined that there should be no threat to human health. The proposed case closure is based on Central Valley Water Board staff's conclusion that the site satisfies the criteria contained in the State Water Resources Control Board (State Water Board) *Low-Threat Underground Storage Tank Case Closure Policy*. All technically and economically feasible cleanup has been completed. The remaining petroleum hydrocarbons should continue to naturally degrade, and not threaten public health or groundwater.

You may participate in the case closure process by reviewing technical reports, asking questions, and providing comments. Details of the site assessment and cleanup are available to interested parties through the State Water Board GeoTracker website (<http://geotracker.waterboards.ca.gov/>) by searching for case number 5T15000320. This information may also be reviewed at the Central Valley Water Board office at 1685 "E" Street in Fresno, California. Comments regarding the proposed closure need to be submitted to the Central Valley Water Board office **by 6 January 2015**.

Interested parties with questions or comments regarding the site or the proposed action should contact John Whiting, at the above address, by e-mail at [jwhiting@waterboards.ca.gov](mailto:jwhiting@waterboards.ca.gov), or by telephone at (559) 445-5504.

**Re: Well Decommissioning Report  
California Correctional Institute  
Motor Pool Site, 24900 State Highway 202  
Tehachapi, California**

Dear Mr. Whiting:

URS Corporation Americas (URS) has prepared this report on behalf of the California Department of Corrections and Remediation (CDCR) for their site at 24900 State Highway 202, Tehachapi, California (Figure 1). This report documents the final site activities compliant with the Regional Water Quality Control Board, Central Valley Region, requirements to receive site closure (Attachment A).

Background information and other data have been furnished to URS by CDCR and/or third parties, which URS has used in preparing this report. URS has relied on this information as furnished, and is neither responsible for nor has confirmed the accuracy of this information.

## **SCOPE OF WORK**

### **Permitting**

URS received appropriate permits from the Kern County Environmental Health Services Department (KCEHSD) before field activities began (Attachment B).

### **Utility Clearance**

Well locations were clearly marked and Underground Service Alert was notified 48 hours before field activities began.

### **Well Abandonment Methods**

Between April 6 and 17, 2015, Vironex Technical Services of Santa Ana, California, pressure-grouted 50 groundwater monitoring wells. The work was overseen by URS (Figure 1). Grout was pumped under approximately 20 pounds per square inch of pressure from total depth to the ground surface at each well. URS regularly communicated the actual grout volumes per

well by email to KCEHSD, as requested. Well destruction activities were completed to KCEHSD's satisfaction.

The well lids and concrete pads were removed at each location and replaced with concrete or clean native soil to match the surrounding ground surface.

No drill cuttings were generated during well abandonment activities. Well lids, concrete, and bollards were disposed of as construction debris by Benz Sanitation of Tehachapi, California.

If you have any questions or comments regarding this letter, please call me at (916) 679-2055.

Sincerely,  
URS Corporation Americas

### **WELL DESTRUCTION, UNDERGROUND STORAGE TANK RELEASE, CALIFORNIA CORRECTIONAL INSTITUTION, 24900 HIGHWAY 202, TEHACHAPI, KERN COUNTY, RB CASE 5T15000320**

Based on review of the case file data, the Central Valley Regional Water Quality Control Board (Central Valley Water Board) staff has determined that case closure ("No Further Action"), appears appropriate. Pursuant to Section 25296.20 of the California Health and Safety Code, the Central Valley Water Board provided interested parties in the site vicinity with the opportunity to comment on the proposed closure. A public notice was sent to interested parties on 6 November 2014, and no adverse comments to closure were received during a 60 day period.

Final case closure requires destruction of the remediation and groundwater monitoring wells be completed in accordance with California Department of Water Resources (DWR) requirements, and Kern County regulations. Waste piles, drums, debris and other investigation or remediation derived waste need to be removed from the site, and properly managed in accordance with applicable local or state requirements.

By **4 May 2015**, please submit a report documenting the well destruction and waste removal. Once appropriate documentation has been received, and a final site inspection has been conducted, the Central Valley Water Board anticipates issuing a case closure letter. All submittals need to be uploaded to the GeoTracker database. Paper copies are not normally required, but Central Valley Water Board staff may request copies of a report, data tables, or maps and figures, in certain instances.

Should you have any questions regarding this matter, please contact John Whiting at (559) 445-5504 or by email at [jwhiting@waterboards.ca.gov](mailto:jwhiting@waterboards.ca.gov).

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal CERCLIS list***

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response,

## EXECUTIVE SUMMARY

Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 07/17/2018 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

HIST CORTESE: The sites for the list are designated by the State Water Resource Control Board [LUST], the Integrated Waste Board [SWF/LS], and the Department of Toxic Substances Control [CALSTATES]. This listing is no longer updated by the state agency.

A review of the HIST CORTESE list, as provided by EDR, and dated 04/01/2001 has revealed that there is 1 HIST CORTESE site within approximately 0.5 miles of the target property.

Environmental Interest/Information System  
COMMUNITY WATER SYSTEM

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## **STANDARD ENVIRONMENTAL RECORDS**

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

## **ADDITIONAL ENVIRONMENTAL RECORDS**

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

### DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

## CERS: CalEPA Regulated Site Portal Data

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

## WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Dear Certified Asbestos Consultant or Technician:

Enclosed is your certification card. **To maintain your certification, you must abide by the rules printed on the back of the certification card.**

Your certification is valid for a period of one year. If you wish to renew your certification, you must apply for renewal at least 60 days before the expiration date shown on your card. [8 CCR 341.15(h)(1)].

Please hold and do not send copies of your required AHERA refresher renewal certificates to our office until you apply for renewal of your certification.

Certificates must be kept current if you are actively working as a CAC or CSST. The grace period is only for those who are not actively working as an asbestos consultant or site surveillance technician.

Please contact our office at the above address, fax number or email; of any changes in your contact/mailling information within 15 days of the change.

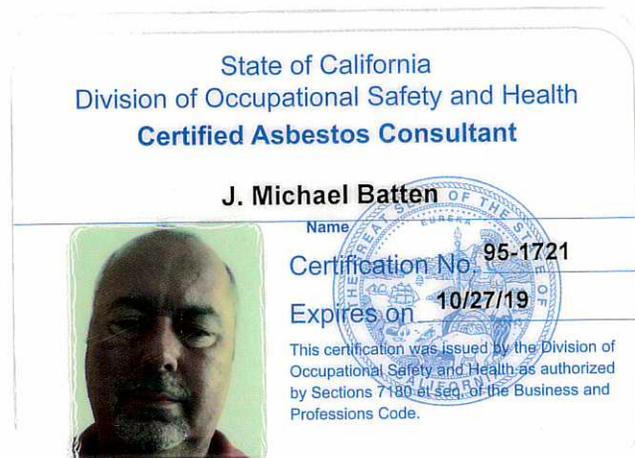

Sincerely,

Jeff Ferrell  
Senior Safety Engineer
