

# Sample Summary for Electronic Document Submittal

15 copies of this document may be included when a Lead Agency is submitting electronic copies of environmental impact reports, negative declarations, mitigated negative declarations, or notices of preparation to the SCH. The SCH will still accept other summaries, such as an EIR summary prepared pursuant to CEQA Guidelines Section 15123, attached to the electronic copies of the document.

Lead Agency: State Water Resources Control Board

Project Title: Myers Flat Distribution System Improvement Project

Project Location: Myers Flat Humboldt  
*City* *County*

Please provide a Project Description (Proposed Actions, location, and/or consequences).

The Myers Flat pipeline replacement and improvement project will replace 5,550 feet of existing 4-inch steel transmissions lines with 6-inch PVC lines. Additionally, two dead-ends in the transmission system will be connected to existing junctions with 2,550 feet of new pipes to create a fully looped pipe network. The primary objective of the proposed project is to replace the aging 2-inch and 4-inch steel and PVC pipes which are prone to breaking and leaks with new 6-inch capacity PVC or HDPE pipe, new gate valves, fire hydrants, water meters, and water service connections which would result in continued service to water system customers and all fire hydrants meeting fire flow requirements (1,000 gpm).

Please identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

**BIOLOGICAL RESOURCES**

BIO-1 Conservation Measure to Protect Amphibians-While the site visits did not identify any special status species amphibians within the project site, that does not confirm absence of Northern Red-legged and Foothill yellow-legged Frogs; therefore, Mitigation Measure BIO-1 is included to reduce any potential impacts to special-status amphibians to a less than significant level.

BIO-3 Conservation Measures to Protect Salmonids, Sturgeon and Lamprey-The special-status fish species listed above are not expected to be impacted by the proposed project given the distance from the project site to aquatic habitat. However, potential impacts could occur; therefore, Mitigation Measure BIO-3 is included to reduce any potential impacts to salmonids, sturgeon, or lamprey to a less than significant level.

**CULTURAL RESOURCES**

CR-1 Identify and Avoid or Minimize Impacts to Unknown Historical and/or Archaeological Resources.Evaluation and Treatment of Paleontological Resources

CR-2 Evaluation and Treatment of Paleontological Resources

If applicable, please describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

N/A There are no known areas of controversy associated with this Project

Please provide a list of the responsible or trustee agencies for the project.

TRUSTEE AGENCY ASSOCIATED WITH THIS PROJECT

1. California Department of Fish & Wildlife.
