

## City of Monterey Environmental Checklist Form

1. **Project title:** City of Monterey Ryan Ranch Park Improvements
2. **Lead agency name and address:** City of Monterey, 580 Pacific Street, Monterey, CA 93940
3. **Contact person and phone number:** Kimberly Cole, AICP, Community Development Director
4. **Project location:** Highway 68 between Ragsdale Drive and Canyon Del Rey Boulevard
5. **Project sponsor's name and address:** City of Monterey, 580 Pacific Street, Monterey, CA 93940
6. **General Plan designation:** Parks and Open Space
7. **Zoning:** Open Space
8. **Description of project:** The City of Monterey currently owns and operates the Ryan Ranch Park located along Highway 68 between Ragsdale Drive and Canyon Del Rey Boulevard. The site remains in its natural setting and people enjoy walking/hiking and dogs on leash at the site. There is an existing unimproved parking area for park users.  
  
The site has been informally used for a disc golf course for many years. Proposed site improvements will include: re-installation of disc golf baskets, new accessible parking stall and sidewalk to the first golf tee and portable toilet. Periodic site maintenance will include mowing the area and maintenance of the portable toilet.
9. **Surrounding land uses and setting:** The project site is surrounded by industrial and business offices.
10. **Other public agencies whose approval is required:** Monterey County Airport Land Use Commission

### ENVIRONMENTAL FACTORS POTENTIALLY AFFECTED:

The environmental factors checked below would be potentially affected by this project, as indicated by the checklist on the following pages.

- .....Aesthetics
- .....Agriculture Resources
- .....Air Quality
- X ...Biological Resources
- X ...Cultural Resources
- .....Energy
- .....Geology/Soils
- .....Greenhouse Gas Emissions
- .....Hazards & Hazardous Materials
- .....Hydrology/Water Quality
- .....Land Use Planning
- .....Mineral Resources
- .....Noise
- .....Population/Housing
- .....Public Services
- .....Recreation
- .....Transportation/Traffic
- .....Tribal Cultural Resources
- .....Utilities/Service Systems

.....Mandatory Findings of Significance

**DETERMINATION:** On the basis of this initial evaluation:

.....I find that the proposed project **COULD NOT** have a significant effect on the environment, and a **NEGATIVE DECLARATION** will be prepared.

.....X.....I find that although the proposed project could have a significant effect on the environment, there will not be a significant effect in this case because revisions in the project have been made by or agreed to by the project proponent. A **MITIGATED NEGATIVE DECLARATION** will be prepared.

.....I find that the proposed project **MAY** have a significant effect on the environment, and an **ENVIRONMENTAL IMPACT REPORT** is required.

.....I find that the proposed project **MAY** have a "potentially significant impact" or "potentially significant unless mitigated" impact on the environment, but at least one effect (1) has been adequately analyzed in an earlier document pursuant to applicable legal standards, and (2) has been addressed by mitigation measures based on the earlier analysis as described on attached sheets. An **ENVIRONMENTAL IMPACT REPORT** is required, but it must analyze only the effects that remain to be addressed.

.....I find that although the proposed project could have a significant effect on the environment, because all potentially significant effects (a) have been analyzed adequately in an earlier Environmental Impact Report (EIR) or **NEGATIVE DECLARATION** pursuant to applicable standards, and (b) have been avoided or mitigated pursuant to that earlier EIR or **NEGATIVE DECLARATION**, including revisions or mitigation measures that are imposed upon the proposed project, nothing further is required.

**Public Review Period**

**Begins: August 23, 2019**  
**Ends: September 23, 2019**

**Public Meeting**

**Date:** TBD  
**Time:** 4:00 p.m.  
**Location:** City of Monterey Council Chamber at Few Memorial Hall of Records  
**Reviewing Body:** Planning Commission

Anyone interested in this matter is invited to comment on the document by written response or by personal appearance at the hearing.

**Signature:**  33FBFEF273720466...

**Date:** 8/19/2019 | 5:11 PM PDT

**Printed name:** Kimberly Cole, AICP  
**Title:** Community Development Director  
**Address:** 570 Pacific Street, Monterey, CA 93940  
**Phone Number:** 831-646-3759

SUBJECT AREA	Potentially Significant Impact	Less-than-significant with Mitigation	Less-than-significant Impact	No Impact	SUPPORTING INFORMATION
<b>I. AESTHETICS</b> – Except as provided in Public Resources Code Section 21099, would the project: :					
a) Have a substantial adverse effect on a scenic vista?			X		City of Monterey Community Development Department, City of Monterey General Plan Map 2
b) Substantially damage scenic resources, including, but not limited to, trees, rock outcroppings, and historic buildings within a state scenic highway?			X		City of Monterey Community Development Department
c) In nonurbanized areas, substantially degrade the existing visual character or quality of public views of the site and its surroundings? (Public views are those that are experienced from publicly accessible vantage point). If the project is an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?			X		City of Monterey General Plan, Urban Design Element
d) Create a new source of substantial light or glare, which would adversely affect day or nighttime views in the area?				X	City of Monterey Community Development Department

**Existing Setting:**

The City of Monterey (City) consists of approximately 10 square miles of coastal lands and forested hills. Much of the City is urbanized; however, its coastline and wooded ridges are devoted primarily to open space and recreational uses. Located an hour away from San Jose and an hour and a half from San Francisco, Monterey is frequently a vacation destination for inland and city residents. The Monterey region is well known for its scenic visual character. The City’s coastal areas provide expansive views of the Pacific Ocean (Monterey Bay). The adjacent beach and coastal bluff areas are visually intriguing and offer a variety of passive and active recreational opportunities. Fisherman’s Wharf and Cannery Row provide a variety of shops, art and craft galleries, boutiques, and restaurants in an historic seaport setting.

As identified in the City's General Plan, all major roads leading to Monterey are scenic highways. Highway 1, south of the City, is a State designated scenic highway. State Highway 68 (Monterey Salinas Highway) from Highway 1 to the Salinas River is a State and County designated scenic highway. In addition, Highway 68 along the western boundary of the City is identified as a "Proposed Scenic Road" in the City's General Plan.

**Discussion:**

- a-c)** The City's General Plan identifies "special places" which are considered to have significant visual resources. Part of the project site is located adjacent to Highway 68, a designated scenic highway. This part contains oak woodland. The proposed project will not impact these resources as it involves low impact park uses, the installation of disc golf baskets, minor parking lot and portable toilet improvements, and periodic maintenance. Therefore, impacts to scenic vistas, scenic resources, visual character or quality of public views of the site and its surroundings would be **less than significant**.
- d)** No lights are proposed. Therefore, **no impact** is anticipated.

SUBJECT AREA	Potentially Significant Impact	Less-than-significant with Mitigation	Less-than-significant Impact	No Impact	SUPPORTING INFORMATION
<p><b>II. AGRICULTURE AND FOREST RESOURCES</b> – In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. In determining whether impacts to forest resources, including timberland, are significant environmental effects, lead agencies may refer to information compiled by the California Department of Forestry and Fire Protection regarding the state’s inventory of forest land, including the Forest and Range Assessment Project and the Forest Legacy Assessment project; and forest carbon measurement methodology provided in Forest Protocols adopted by the California Air Resources Board. Would the project:</p>					
<p>a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?</p>				X	<p>City of Monterey, General Plan Conservation Element</p> <p>City of Monterey General Plan Update Initial Study 2003</p> <p>City of Monterey Zoning Ordinance</p> <p>Monterey County Important Farmland 2014 (California Department of Conservation, 2016a)</p>
<p>b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?</p>				X	<p>City of Monterey, General Plan Conservation Element</p> <p>City of Monterey General Plan Update Initial Study 2003</p> <p>City of Monterey Zoning Ordinance</p> <p>Monterey County Williamson Act FY 2015/2016 (California Department of Conservation, 2016b)</p>
<p>c) Conflict with existing zoning for, or cause rezoning of forest land (as defined in Public Resources Code Section 12220g), timberland (as defined by Public Resources Code Section 4526) or timberland zoned Timberland Production</p>				X	<p>City of Monterey, General Plan Conservation Element</p>

(as defined by Government Code Section 51104g)?					
d) Result in the loss of forest land or conversion of forest land to non-forest use?				X	City of Monterey, General Plan Conservation Element
e) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland to non-agricultural use or conversion of forest land to non-forest use?				X	City of Monterey, General Plan Conservation Element City of Monterey General Plan Update Initial Study 2003 City of Monterey Zoning Ordinance

**Existing Setting:**

While much of Monterey County is known for, and associated with, an abundance of agricultural operations, the City itself has no agricultural operations or potential for future agriculture resources or activities. The City does not have any forest lands zoned for Timberland Production. The City is primarily an urbanized environment.

**Discussion:**

**a-e)** The proposed project would not affect any identified agriculture resources, land identified for potential agricultural production, lands zoned for agricultural use, or lands under a Williamson Act contract or as protected by the federal Farmland Protection Policy Act. Agriculture operations are not an allowable use in the City’s Zoning Code. The City also does not have any identified forest land use, nor land identified for potential timberland production or use. Therefore, there would be **no impact** to farmland, agricultural land, forest land, or timberland.

SUBJECT AREA	Potentially Significant Impact	Less-than-significant with Mitigation	Less-than-significant Impact	No Impact	SUPPORTING INFORMATION
<b>III. AIR QUALITY</b> – Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project:					
a) Conflict with or obstruct implementation of the applicable air quality plan?			X		City of Monterey, General Plan Conservation Element, Policy c.2  2012-2015 Air Quality Management Plan (AQMP) for the Monterey Bay Air Resources District (MBARD; formerly MBUAPCD)  2008 CEQA Air Quality Guidelines (MBARD)
b) Result in cumulatively considerable net increase of any criteria pollutant for which the region is non-attainment under an applicable federal or state ambient air quality standard?			X		City of Monterey, General Plan Conservation Element Goal c and Policies c.1–c.3  2012-2015 AQMP for MBARD  2008 CEQA Air Quality Guidelines (MBARD)
c) Expose sensitive receptors to substantial pollutant concentrations?			X		City of Monterey, General Plan Conservation Element Goal c and Policies c.1–c.3  2012-2015 AQMP for MBARD  2008 CEQA Air Quality Guidelines (MBARD)
d) Result in other emissions (such as those leading to odors) adversely affecting a substantial number of people?			X		City of Monterey, General Plan  2008 CEQA Air Quality Guidelines (MBARD)

### Existing Setting:

The proposed project site is located within the North Central Coast Air Basin (NCCAB), which is comprised of Santa Cruz, San Benito and Monterey counties. A semi-permanent high-pressure system in the eastern Pacific is the controlling factor in the climate of the air basin. In late spring and summer, the high-pressure system is dominant and causes persistent west and northwesterly winds over the entire California coast. The onshore air currents pass over cool ocean waters to bring fog and relatively cool air into the coastal valleys. Warmer air aloft creates elevated inversions that restrict dilution of pollutants vertically, and mountains forming the valleys restrict dilution horizontally.

In the fall, the surface winds become weak, and the marine layer grows shallow, dissipating altogether on some days. The airflow is occasionally reversed in a weak offshore movement, and the relatively

stagnant conditions allow pollutants to accumulate over a period of days. It is during this season that the north or east winds develop that transport pollutants from either the San Francisco Bay Area or the Central Valley into the NCCAB. During winter and early spring, the Pacific high–pressure system migrates southward and has less influence on the air basin. Wind direction is more variable, but northwest winds still dominate. The general absence of deep, persistent inversions and occasional storm passages usually result in good air quality for the basin as a whole. The City of Monterey is bounded by pine-wooded hills to the south and by the crescent-shaped southerly end of the Monterey Bay to the north. Persistent sea breezes ventilate the area with respect to other metropolitan areas, and the City generally enjoys good air quality throughout the year.

The Federal Clean Air Act (FCAA) requires that the United States Environmental Protection Agency (EPA) establish National Ambient Air Quality Standards (NAAQS) for various pollutants. These pollutants are referred to as "criteria" pollutants because the EPA publishes criteria documents to justify the choice of standards. NAAQS defines the maximum amount of an air pollutant that can be present in ambient air. An AAQS is generally specified as a concentration averaged over a specific time period, such as 1-hour, 8-hours, 24-hours, or 1-year. The different averaging times and concentrations are meant to protect against different exposure effects. AAQS established for the protection of human health are referred to as primary standards, while standards established for the prevention of environmental and property damage are called secondary standards. The FCAA allows States to adopt additional or more health-protective standards. The State of California has established air quality standards (CAAQS) for some pollutants not addressed by NAAQS. The California Air Resources Board (ARB) has established CAAQS for H<sub>2</sub>S, SO<sub>4</sub><sup>2-</sup>, VCM, and visibility reducing particles.

The ARB designates a status for regional air basins as being in attainment or nonattainment with CAAQS. The EPA provides the designation for National standards. State designated attainment statuses are reviewed annually while the National designated attainment statuses are reviewed when either the standards change, or when an area requests that they be re-designated due to changes in the area's air quality. Most designations are made by regional air basin, but in some cases designations are made at the county level.

Designations are made by pollutant according to the following categories:

**Attainment** – Air quality in the area meets the standard.

**Nonattainment** – Air quality in the area fails to the applicable standard.

**Unclassified** – Insufficient data to designate area, or designations have yet to be made.

**Attainment/Unclassified** - An EPA designation which, in terms of planning implications, is essentially the same as Attainment.

Nonattainment designations are of most concern because they indicate that unhealthy levels of the pollutant exist in the area, which typically triggers a need to develop a plan to achieve the applicable standard. Current State and National designations are shown below:

**Table 1. NORTH CENTRAL COAST AIR BASIN ATTAINMENT STATUS – JANUARY 2015**

(Nonattainment pollutants are highlighted in **Bold**)

Pollutant	State Standards <sup>1</sup>	National Standards
Ozone (O <sub>3</sub> )	<b>Nonattainment</b> <sup>2</sup>	Attainment/Unclassified <sup>3</sup>
Inhalable Particulates (PM <sub>10</sub> )	<b>Nonattainment</b>	Attainment
Fine Particulates (PM <sub>2.5</sub> )	Attainment	Attainment/Unclassified <sup>4</sup>

Pollutant	State Standards <sup>1</sup>	National Standards
Carbon Monoxide (CO)	Monterey Co. – Attainment San Benito Co. – Unclassified Santa Cruz Co. – Unclassified	Attainment/Unclassified
Nitrogen Dioxide (NO <sub>2</sub> )	Attainment	Attainment/Unclassified <sup>5</sup>
Sulfur Dioxide (SO <sub>2</sub> )	Attainment	Attainment <sup>6</sup>
Lead	Attainment	Attainment/Unclassified <sup>7</sup>

**Notes:**

- 1) State designations based on 2010 to 2012 air monitoring data.
- 2) Effective July 26, 2007, the ARB designated the NCCAB a nonattainment area for the State ozone standard, which was revised in 2006 to include an 8-hour standard of 0.070 ppm.
- 3) On March 12, 2008, EPA adopted a new 8-hour ozone standard of 0.075 ppm. In April 2012, EPA designated the NCCAB attainment/unclassified based on 2009-2011 data.
- 4) This includes the 2006 24-hour standard of 35 µg/m<sup>3</sup> and the 2012 annual standard of 12 µg/m<sup>3</sup>.
- 5) In 2012, EPA designated the entire state as attainment/unclassified for the 2010 NO<sub>2</sub> standards.
- 6) In June 2011, the ARB recommended to EPA that the entire state be designated as attainment for the 2010 primary SO<sub>2</sub> standard. Final designations to be addressed in future EPA actions.
- 7) On October 15, 2008 EPA substantially strengthened the national ambient air quality standard for lead by lowering the level of the primary standard from 1.5 µg/m<sup>3</sup> to 0.15 µg/m<sup>3</sup>. Final designations were made by EPA in November 2011.

Source: MBARD, 2017

The Monterey Bay Air Resources District (MBARD; formerly Monterey Bay Unified Air Pollution Control District) is the regional agency tasked with managing air quality in the region. The MBARD, which the ARB oversees, has published CEQA Air Quality Guidelines that also are used in this assessment to evaluate air quality impacts of projects (MBARD, 2008). In an attempt to achieve NAAQS and CAAQS and maintain air quality, the MBARD has most recently completed the *2012-2015 Air Quality Management Plan (AQMP)* for achieving the O<sub>3</sub> CAAQS and the *2007 Federal Maintenance Plan for Maintaining the National Ozone Standard in the Monterey Bay Region* (MBARD, 2007).

The MBARD is in attainment or unclassified status for NAAQS and no national attainment plans apply to the region. The NCCAB is a nonattainment area for the CAAQS for both ozone and inhalable particulate matter (PM<sub>10</sub>). The MBARD adopted its first Attainment Plan for ozone in 1991. The AQMP for the Monterey Bay Area was the first plan prepared in response to the California Clean Air Act of 1988 that established specific planning requirements to meet the ozone standard. The California Clean Air Act requires that the AQMP be updated every three years. The most recent updates occurred in 2017 with the adoption of the 2012-2015 AQMP. The 2012-2015 AQMP addresses only attainment of the CAAQS ozone standards. Attainment of the CAAQS PM<sub>10</sub> standard is addressed in the MBARD's *Senate Bill 656 Implementation Plan*, which was adopted in December 2005. Maintenance of the NAAQS eight-hour standard for ozone is addressed in the MBARD's *Federal Maintenance Plan for the Monterey Bay Region*, which was adopted in March 2007. The MBARD does not have threshold for the ozone precursors nitrogen oxide and reactive organic gas for construction projects less than one year because this is accounted for in their emission inventories. The MBARD has established a daily emissions threshold for PM<sub>10</sub> for construction projects of 82 pounds per day (lbs/day).

**Discussion:**

- a) A project would conflict with or obstruct implementation of the 2012-2015 AQMP if it is inconsistent with the growth assumptions in the AQMP, in terms of population, employment, or regional growth. These population forecasts are developed, in part, on data obtained from local

jurisdictions and projected land uses and population projections identified in community plans. The proposed park uses will not generate population, employment or regional growth. More stringent and protective emissions standards for automobiles, power plants and other sources of ozone precursors have outpaced population growth with the net result being an improvement in air quality (2012-2015 AQMP). The project is limited to passive recreational uses. Therefore, the project would have **a less than significant** on air quality as it would not conflict with or obstruct implementation of the AQMP and its stringent and protective emissions standards, key programs, and rules which have and will continue to reduce emissions while population increases.

- b) Construction projects have the potential to generate fugitive particles and diesel exhaust that could result in an increase in criteria pollutants during construction activities and could also contribute to the existing nonattainment status of the NCCAB for ozone and inhalable particulates. As stated in the MBUAPCD 2008 CEQA Air Quality Guidelines (Section 5.3), emissions from construction activities represent temporary impacts that are typically short in duration, depending on the size, phasing, and project type. Air quality impacts can nevertheless be acute during construction periods, resulting in significant localized impacts to air quality. Emissions of concern related to construction activities are PM<sub>10</sub> and ozone.

Per the MBARD 2008 CEQA Guidelines, Table 5-3, a construction site with significant earthmoving (e.g., grading, excavation) is required to be below the 82 lbs/day threshold of significance for PM<sub>10</sub>. Due to the minor construction activities anticipated, this impact is considered less than significant.

Inhalable Particulates (PM<sub>10</sub>)

Construction activities (e.g., excavation, grading, on-site vehicles) which directly generate 82 lbs/day or more of PM<sub>10</sub> would have a significant impact on local air quality when they are located nearby and upwind of sensitive receptors. If ambient air quality in the project area already exceeds the CAAQS, a project would contribute substantially to this violation if it would emit 82 lbs/day or more.

Ozone

Construction activities using typical construction equipment such as dump trucks, backhoes, and cement trucks that temporarily emit precursors of ozone [i.e., volatile organic compounds (VOC) or oxides of nitrogen (NO<sub>x</sub>)] are accommodated in the emissions inventories of State- and federally-required air plans and will have a less-than-significant impact on the attainment and maintenance of ozone AAQS.

The MBARD has a 137 lbs/day threshold of significance for NO<sub>x</sub>. Construction projects requiring 137 or more lbs/day of earthmoving must implement mitigation.

Proposed construction activities to construct and maintain the park are minimal. The disc golf baskets will be installed by pedestrians. The parking space, portable restroom and sidewalk are minor improvements. Periodic maintenance (mowing, etc.) will occur. This impact is **less than significant**.

- c-d) Generally, residences, schools, parks and playgrounds are considered to be "sensitive receptors" in relation to air quality issues. Sensitive receptors adjacent to construction project sites could include churches and office buildings. As stated in above, construction activities may generate odors or pollutant concentrations that are objectionable to some persons using the existing park. However, these odors would be short-term, temporary and small in scale,

and would not cause a violation of any CO, PM<sub>10</sub>, or toxic air contaminant standards. Therefore, this would be a **less than significant** impact.

## **Existing Setting:**

Monterey County consists of more than 3,324 square miles of land (over two million acres) with a variety of habitats from rocky Pacific shores to open grasslands to high mountains at elevations exceeding 5,000 feet. The Monterey Bay area, located in northern Monterey County, is home to a diverse population of animal, bird, and plant species. The waters of Monterey Bay and the adjacent Pacific Ocean off the central California coast have been designated and protected as the Monterey Bay National Marine Sanctuary since 1992. The climate of the site is typical of the California central coast with mild year-round and morning coastal fog, generally cleared by afternoon breezes. Monterey typically experiences cool summer months, with temperatures averaging in the high 50s to low 60s, and warm "Indian Summer" weather in the fall. The average yearly rainfall is approximately 18 inches and is concentrated in the winter and early spring months.

## **Regulations**

### Migratory Bird Treaty Act

The Migratory Bird Treaty Act (MBTA) establishes special protection for migratory birds by regulating hunting or trade in migratory birds. The MBTA prohibits anyone to take, possess, buy, sell, purchase, or barter any migratory birds list in 50 CFR 10, including feathers or other part, nests, eggs, or products, except as allowed by implementing regulations (50 CFR 21). The definition of "take" includes any disturbance that causes nest abandonment and/or loss of reproductive effort (e.g., killing or abandonment of eggs or young).

### Monterey Tree Protection Ordinance

Monterey's image is that of a small-scale residential community beside the bay, framed by a forested hill backdrop and drawing its charm from a rich historical background, certain commercial enterprises, and natural scenic beauty. Trees within the City significantly contribute to this image. The Preservation of Trees and Shrubs Ordinance is intended to assure preservation of trees and replacement of trees when removal is unavoidable. The Ordinance also establishes a Landmark Tree Program.

### General Plan Conservation Element

The City's Conservation Element contains a variety of goals, policies and programs. Its elements protect the character and composition of existing native vegetative communities, as well as provide policy to conserve, manage, and restore habitats for endangered species, and protect biological diversity represented by special-status plant and wildlife species in the City of Monterey.

### Special-Status Species and Sensitive Habitats

The proposed project site was evaluated for the presence or potential presence of special-status plant and wildlife species. Special-status species are those plants and animals that have been formally listed or proposed for listing as endangered or threatened, or are candidates for such listing under the Federal Endangered Species Act (ESA) or the California Endangered Species Act (CESA). Listed species are afforded legal protection under the ESA and CESA. Species that meet the definition of Rare or Endangered under the California Environmental Quality Act (CEQA) Section 15380 are also considered special-status species. Species that meet this definition are typically provided management consideration through the CEQA process, although they are not legally protected under the ESA or CESA include: DFW species of special concern and fully protected species; species listed on the DFW's California Natural Diversity Database (CNDDDB) with no formal status designation but thought by

experts to be rare or in serious decline; plants listed as rare under the California Native Plant Protection Act (CNPPA) or on the California Native Plant Society (CNPS) California Rare Plant Ranks (CRPR) 1A and 1B; raptors and other migratory birds protected under the federal Migratory Bird Treaty Act (MBTA) of 1918 and California Fish and Game Code; and marine mammals protected under the Marine Mammal Protection Act of 1972 (MMPA).

Sensitive habitats include riparian corridors, wetlands and other waters of the U.S., habitats for legally protected species, areas of high biological diversity, areas supporting rare or special-status wildlife habitat, and unusual or regionally restricted habitat types. Habitat types considered sensitive include those listed on the CNDDDB's working list of high priority and rare natural communities (i.e., those habitats that are Rare or Endangered within the borders of California) (DFW, 2010), those that are occupied by species listed under ESA or are critical habitat in accordance with ESA, and those that are defined as Environmentally Sensitive Habitat Areas (ESHA) under the Coastal Act or "essential fish habitat" under the Magnuson-Stevens Fishery Conservation and Management Act or protected under the Marine Life Protection Act. Specific habitats may also be identified as sensitive in City or County General Plans or ordinances. Sensitive habitats are regulated under federal regulations (such as the Clean Water Act, the Rivers and Harbors Act, and Executive Order 11990 – Protection of Wetlands), state regulations (such as CEQA and the DFW Streambed Alteration Program), or local ordinances or policies (such as City or County tree ordinances, Habitat Management Plan areas, and General Plan elements).

#### **Discussion:**

- a) A Biological Impact Analysis was prepared for the proposed project. The report identifies that the chaparral, scrub, woodland and grassland habitats on site provide suitable habitat for a number of special-status plant species.

The current and anticipated continued use of the site as a disc golf course is expected to involve relatively low levels of daily use by the public on a seasonal basis. The continued operation of the disc golf course is not expected to have an impact on special-status plants, as the locations of the previously established disc golf holes and walking paths within the park, where the large majority of disturbance from foot-traffic would occur, are in areas where special-status plants are not expected to be present. The disturbance associated with disc golf use would be minor, periodic, and would not result in any temporary or permanent disturbance to, or loss of special-status plant species habitat. Additionally, proposed maintenance activities, such as mowing, would be limited to the annual grassland areas of the project site, and not conducted in the chaparral or other vegetation communities on site that have the highest potential to support special-status plants. For these reasons, the proposed project would have a **less than significant impact** on special-status plant species.

#### *Special-status Wildlife Species*

Based on an evaluation of the habitats present on the Ryan Ranch property, a review of CNDDDB records, and observations from the field reconnaissance visits, one special-status wildlife species, Monterey dusky-footed woodrat, is known to occur on the project site.

Monterey dusky-footed woodrat. As previously discussed, Monterey dusky-footed woodrat stick nests were observed throughout the coast live oak woodland and chaparral habitats on site during the site visits. Although Monterey dusky-footed woodrat occurs on the project site, this species would not be impacted by disc golf use or maintenance activities, such as mowing. Mowing activities will be limited to the grassland areas of the project site and will avoid the woodland and chaparral habitats where woodrat nests are present. Continued use of the site for disc golf will not result in

removal of, or disturbance to, existing woodrat stick nests. Furthermore, woodrats are a nocturnal species and use of the golf course during daylight hours would not result in impacts to woodrat behaviors such as foraging, breeding, or dispersal. For these reasons, the proposed project would have a less than significant impact on Monterey dusky-footed woodrat.

Nesting birds and raptors. Several vegetation communities/land cover types within and adjacent to the project site provide suitable nesting habitat for a number of native and migratory bird and raptor species. All native nesting raptors and migratory birds in California, regardless of their status, are protected by the federal Migratory Bird Treaty Act (MBTA) of 1918 and Section 3503 and 3503.5 of the California Fish and Game Code which respectively protect active nests and eggs of any bird and individuals and nests/eggs of raptors. Impacts to nesting birds could occur in the grassland dominated areas of the site as a result of mowing activities. Mowing could result in direct destruction of nesting habitat or nests, or by reducing reproductive success at nests due to increased noise, vibration, and disturbance during mowing activities. Implementation of Mitigation Measure 1 would reduce impacts to nesting birds to a **less than significant level**.

**Mitigation Measure 1:** Mowing activities associated with maintaining the disc golf course should be conducted outside of the nesting bird season (March 1- July 30) to the maximum extent practicable to avoid impacts to nesting birds. If mowing activities cannot be avoided during the nesting season, a preconstruction survey for nesting birds shall be conducted in all potential nesting habitat within the mowing zone, including a 250-foot buffer from mowing areas for raptors. The survey shall be completed by a qualified biologist not more than two weeks prior to mowing to determine if native birds are nesting on or near the site.

- If active bird nests are observed during the surveys, a suitable avoidance buffer from the nests will be determined by the biologist. The nest(s) and associated avoidance buffers will be delineated with high-visibility flagging by the biologist based on species and location. These nests would be avoided until the chicks have fledged and the nests are no longer active, as determined by the biologist.

- b) Sensitive natural vegetation communities include riparian corridors, wetlands, habitats for state and/or federally protected species and other special-status species, areas of high biological diversity, areas providing important wildlife habitat, unusual or regionally-restricted habitat types, and communities that are of limited distribution statewide or within a county or region. Sensitive natural vegetation communities are evaluated by CDFW and are assigned global (G) and state (S) ranks based on rarity of, and threats to, these vegetation communities in California. Natural communities with ranks of S1-S3 are considered Sensitive Natural Communities to be addressed in the CEQA environmental review process.

Three sensitive natural communities, all ranked S3 by CDFW have been identified on the Ryan Ranch property and consist of: California oatgrass prairie, creeping ryegrass turfs, and mixed chaparral (maritime chaparral). Mowing in the grassland portions of the site, could disturb the California oatgrass prairie and creeping ryegrass turfs, and/or impact the reproductive success of these communities and species assemblages. Mowing these communities at the time of seed development could adversely impact seed development and production and, ultimately, impact the long-term viability of these communities on the property. Implementation of Mitigation Measure 2, below, would reduce impacts to sensitive natural communities to a **less than significant level**.

**Mitigation Measure 2:** Mowing activities conducted in the grassland areas of the site should completely avoid the areas of California oatgrass prairie and creeping ryegrass turfs. If avoidance is not feasible, a project-specific mowing strategy should be developed and implemented to ensure the

timing and implementation of mowing activities will not impact these two sensitive communities. The plan will be focused on management strategies to reduce mowing.

- c) No potentially jurisdictional wetlands or non-wetland waters of the United States or State are present on the Ryan Ranch property based on the field reconnaissance visits conducted on May 10, 2018 and July 7, 2019. Therefore, the proposed project would have **no impact** on such resources.
- d) Wildlife corridors are landscape features, usually linear in shape, that facilitate the movement of animals (or plants) over time between two or more patches of otherwise disjunct habitat. Corridors can be small and even man made (e.g., highway underpasses, culverts, bridges), narrow linear habitat areas (e.g., riparian strips, hedgerows), or wider landscape-level extensions of habitat that ultimately connect even larger core habitat areas. Depending on the size and extent, wildlife corridors can be used during animal migration, foraging events, and juvenile dispersal, and ultimately serve to facilitate genetic exchange between core populations, provide avenues for plant seed dispersal, enable increased biodiversity and maintenance of ecosystem integrity within habitat patches, and help offset the negative impacts of habitat fragmentation (Hilty et al. 2006).

The project site is surrounded by State Highway 68 and rural private residences to the south, residential and business development to the west, residential development to the east, and natural areas comprised of oak woodland and maritime chaparral extend towards South Boundary Road to the north. The surrounding natural areas have connectivity to known natural wildlife corridors and natural habitat areas of the Fort Ord open space north of the project site.

Continued use of the site as a disc golf course and related maintenance activities may result in a temporary and infrequent disruption of local wildlife movements during daylight hours, but these activities are not expected to result in any permanent or substantial changes in wildlife use or movement. Furthermore, the site is not currently used as a native wildlife nursery. Consequently, the proposed project will have a **less than significant impact** on native resident or migratory fish or wildlife species, native wildlife nursery sites, or on established wildlife corridors.

- e) The proposed project would not conflict with any local policies or ordinances protecting biological resources. The proposed project falls within the jurisdiction of the City of Monterey's Tree Ordinance (Chapter 37 of the City Code). Because the proposed project does not involve any tree trimming or tree removal, and it complies with the City's Tree Ordinance, the project would not conflict with local policies or ordinances protecting biological resources. The project has **no impact**.
- f) There are no adopted Habitat Conservation Plans, Natural Community Conservation Plans, or other approved habitat conservation plans that cover the project site. The project site is located outside of the Fort Ord Habitat Conservation Plan area. Therefore, the project would not conflict with an adopted Habitat Conservation Plan, Natural Community Conservation Plan or other approved habitat conservation plan. The project has **no impact**.

SUBJECT AREA	Potentially Significant Impact	Less-than-significant with Mitigation	Less-than-significant Impact	No Impact	SUPPORTING INFORMATION
<b>V. CULTURAL RESOURCES – Would the project:</b>					
a) Cause a substantial adverse change in the significance of a historical resource as defined in 15064.5?				X	City of Monterey, Monterey City Code (M.C.C.), Chapter 38, Zoning Code, Article 15 H Historic Overlay District  City of Monterey, Historic Master Plan  City of Monterey, Historic Ordinance
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to 15064.5?		X			Archaeological Sensitivity Map, Figure 8, Draft EIR, City of Monterey General Plan Update, July 2004
c) Disturb any human remains, including those interred outside of formal cemeteries?		X			Archaeological Sensitivity Map, Figure 8, Draft EIR, City of Monterey General Plan Update, July 2004

**Existing Setting:**

According to the City’s General Plan, the City is one of the most historic cities in the United States, and preservation of historic resources has long been a concern of Monterey citizens. Over the past three centuries, the City has served, at various times, as a Spanish mission, a center of government, a major commercial port, and a cultural center. The dramatic ocean scenery, abundant wildlife, pine forests, and historic communities continue to attract explorers, dignitaries, seafarers, artists, writers, and vacationers. Today, Monterey thrives as a cultural center and tourist destination. The City currently has a population of almost 30,000 people and is host to more than two million visitors annually.

**Discussion:**

- a) The project site is vacant and there are no known historic resources located at the project site. Therefore, the project has **no impact**.
- b-c) No significant site changes are proposed. Future maintenance may include ground disturbing activities such as mowing grasses. The site is located in a low archaeological sensitivity area, as mapped in the City of Monterey General Plan Draft EIR. Unidentified (e.g., buried) cultural resources may be found during any ground disturbing activities. This would be a potentially significant impact that can be reduced to a **less-than-significant** level with implementation of the **mitigation measures** identified below.

**Mitigation 3:** If archaeological materials or features are discovered at any time during construction, work shall be halted within 50 meters (150 feet) of the find until it can be evaluated by a qualified professional archaeologist (defined as one who is certified by the Society of Professional Archaeologists). If the find is determined to be significant, appropriate mitigation measures shall be formulated and implemented to ensure that no substantial adverse change, including alteration of the resource or its immediate surroundings such that the significance of an historical resource would be materially impaired.

**Mitigation 4:** If human remains are discovered at any time during construction, work shall be halted within 50 meters (150 feet) of the find.

- The contractor shall call the Monterey County Coroner and await the Coroner's clearance. If the coroner determines the remains are Native American, the Coroner shall contact the Native American Heritage Commission (NAHC) within 24 hours.
- NAHC shall notify the most likely descendent.
- The Native American descendent, with permission of the land owner or representative, may inspect the site of the discovery and recommend the means for treating or disposing with appropriate dignity the human remains and any associated grave goods.
- The Native American descent shall complete their inspection and make their recommendation within 24 hours of their notification by the Native American Heritage Commission. The recommendation may include the removal and analysis of human remains and associate items; preservation of the Native American human remains and associated items in place; relinquishment of Native American human remains and associated items to the descendants for treatment; other culturally appropriate treatment. If the NAHC is unable to identify a descendent or the descendent identified fails to make a recommendation within 24 hours, the landowner shall reinter the human remains and items associated with the Native American burials with appropriate dignity on the property in a location not subject to further subsurface disturbance.
- If the landowner and Native American descendent reach agreement on the appropriate procedure, the landowner shall follow this procedure.
- If the landowner and Native American descent cannot reach agreement, the parties shall consult with the Native American Heritage Commission. The landowner shall consider and if agreeable follow the identified procedure.
- If the landowner and Native American descendant cannot reach agreement after consultation, the Native American human remains shall be reinterred on the property with appropriate dignity.

VI. ENERGY – Would the project:					
a) Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources during project construction or operation?			X		City of Monterey Community Development Department
b) Conflict with or obstruct a state or local plan for renewable energy or energy efficiency?			X		City of Monterey Community Development Department

**Existing Setting:**

The City of Monterey is part of Monterey Bay Community Power (MBCP), a regional Community Choice Energy project. MBCP was formed to provide locally controlled, carbon free electricity to residents and businesses in Monterey, San Benito and Santa Cruz counties. The goals of MBCP are to increase utilization of renewable power, create local and sustainable energy sources and create green jobs.

**Discussion:**

- a) General park use and maintenance would require some energy to operate mowers and general maintenance equipment. Maintenance activities would occur periodically as needed. No permanent, long-term or substantial energy consumption would occur during or as a result of the project. Therefore, impacts related to wasteful, inefficient or unnecessary consumption of energy resources would be **less than significant**.
- b) Maintenance activities could be performed with mowers and general maintenance equipment. Energy required to complete maintenance activities would be limited to the short-term use of equipment that requires gasoline or electricity. Due to the limited duration and scope of energy-consuming activities, substantial use of energy would not occur. Therefore, the project would not conflict with the goals of MBCP and impacts would **be less than significant**.

<b>VI. GEOLOGY AND SOILS – Would the project:</b>					
a) Directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury or death involving:  i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.				X	City of Monterey, General Plan Safety Element Goal a, Policies a.1–a.7  City of Monterey, General Plan, Map 11-Showing Seismic Hazards
ii) Strong seismic ground shaking?				X	City of Monterey, General Plan Safety Element Goal a, Policies a.1–a.7
iii) Seismic-related ground failure, including liquefaction?				X	City of Monterey, General Plan Safety Element Goal a, Policies a.1–a.7
iv) Landslides?				X	City of Monterey, General Plan Safety Element Goal a, Policies a.1–a.7  City of Monterey, General Plan Safety Element Policies b.1–b.6  City of Monterey, General Plan, General Plan Map 12-Showing Steep Slopes
b) Result in substantial soil erosion or the loss of topsoil?				X	City of Monterey, General Plan Safety Element Goal a, Policies a.1–a.7  City of Monterey, General Plan
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction, or collapse?				X	City of Monterey, General Plan Safety Element Goal a, Policies a.1–a.7  City of Monterey, General Plan, General Plan Map 12-Showing Steep Slopes
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994),				X	City of Monterey, General Plan

creating substantial risks to life or property?					
e) Have soils incapable of adequately supporting the use of septic tanks or alternative wastewater disposal systems where sewers are not available for the disposal of wastewater?				X	City of Monterey, General Plan
f) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?				X	City of Monterey

**Existing Setting:**

The City is underlain by a major geologic feature, the Salinian Block, which in turn is underlain by granitic basement rock. The Salinian Block is bounded on the northeast by the San Andreas Fault and on the southwest by the Palo Colorado-San Gregorio Fault. The block is approximately 50 miles wide and 300 miles long. The types of soils and geologic formations that underlie the City are varied, ranging from unconsolidated dune sands along the Monterey Bay to exposed granite and sandstone.

California is one of the most active seismic regions in the United States. The City lies adjacent to the boundary zone between the North American and Pacific tectonic plates. The faults associated with this zone are predominantly northwest-trending strike-slip faults that have a right-lateral slip. The General Plan identifies three faults that traverse the City, including the Chupines Fault, the Navy Fault, and the Berwick Fault. Information available on the activity of these faults is generally not conclusive, but each is assumed to be potentially active.

Active faults in the proposed project vicinity include: the San Andreas-1906 Segment, located approximately 24 miles northeast of the proposed project site; the Palo Colorado-Sur, located approximately 8 miles southwest of the proposed project site; the Rinconada, located approximately 7 miles northeast of the proposed project site; and the Monterey Bay-Tularcitos, located approximately 4 miles from the proposed project site.

Topography and slope within the City is quite variable. Lands along the margin on Monterey Bay tend to be relatively flat, but sloped towards the bay. Much of the upland portion of the City is incised by a series of intermittent stream channels that have cut into surface soil and subsurface geologic formations, leaving a series of mesas that trend towards the bay. Much of the City is built on these mesas and on the more level margins of the bay. The northern terminus of the Santa Lucia Mountains is the major regional landform that forms the backdrop to the City. Due to slope and access constraints, development within this area tends to be less dense. Steep slopes within the City tend to be located along stream channels and within the hillside areas.

Numerous soil types are located within the City. Each soil type has unique characteristics and potential development limitations and erosion characteristics. Generally, the erosion potential of soils and their expansion properties (soil expansion and contraction can result in damage to building foundations, roads, etc.) are of the greatest interest from a development impact perspective.

Coastal areas along Monterey Bay, especially dune deposits, are highly susceptible to coastal erosion from waves and tidal events. Erosion potential varies along the length of the coast. Variability in erosion rates is caused by several factors, including sea level, wave patterns influenced by the form of the ocean floor, storm patterns, and the structure and character of dunes in localized areas. Historic

average coastal bluff retreat rates have been highest in the former Fort Ord area, averaging up to eight feet per year. Average erosion rates decrease down coast to about three to five feet per year in Sand City. Further south, within the City, average erosion rates are believed to be about one to two feet per year (PWA, 2008). Coastal erosion would be a significant factor for any development proposed along the margin of Monterey Bay.

**Discussion:**

**a.i-iv, b, c and d)** The City of Monterey is not located in an Alquist-Priolo Earthquake Fault Zone as mapped by the State Geologist. The nearest known active or potentially active fault is the Monterey Bay-Tularcitos, located approximately 1 mile from the site. Earthquakes on any of the local faults or on other faults located in the vicinity or region could produce significant seismic shaking at the proposed project. However, as identified in the City General Plan EIR there are no known active faults, faults on which movement has occurred within the last 11,000 years, within the City and no Alquist-Priolo Special Studies Zones. No occupancy structures are proposed. Therefore, there is **no impact**.

The City General Plan EIR identifies seismic shaking as the most significant hazard across the City. Hazards from liquefaction, differential settlement, and slope failure are anticipated to be much less widespread as the surface and subsurface conditions that give rise to liquefaction during seismic shaking event is geographically limited. Seismic impacts will be minimized by adhering to City requirements and policies within the City's General Plan. **No impact** is anticipated because no structures for human occupancy are proposed to be constructed. The park will be used for passive recreation uses (disc golf, dog walking, and hiking).

**e)** The project has **no impact** on septic tanks or alternative wastewater disposal systems because a portable toilet is proposed to service periodic park users. The portable toilet will be periodically serviced to address any waste needs.

**f)** The proposed park improvements are minimal (re-installation of disc golf baskets) and installation of a parking stall/sidewalk on already disturbed ground. The project has **no impact** on a unique paleontological resource or unique geologic feature.

SUBJECT AREA	Potentially Significant Impact	Less-than-significant with Mitigation	Less-than-significant Impact	No Impact	SUPPORTING INFORMATION
<b>VII. GREENHOUSE GAS EMISSIONS</b> – Would the project:					
a) Generate greenhouse gas emissions, either directly or indirectly, that may have a significant impact on the environment?			X		Project Description; California Air Resources Board; MBARD
b) Conflict with an applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of greenhouse gases?				X	Project Description; California Air Resources Board City of Monterey Climate Action Plan (City of Monterey, 2016)

### Existing Setting:

Greenhouse gases (GHGs) are emitted by both natural processes and human activities. Of these gases, carbon dioxide (CO<sub>2</sub>) and methane (CH<sub>4</sub>) are emitted in the greatest quantities from human activities. Emissions of CO<sub>2</sub> are largely by-products of fossil fuel combustion, whereas CH<sub>4</sub> results from off-gassing associated with agricultural practices and landfills. Scientific modeling predicts that continued GHG emissions at or above current rates would induce more extreme climate changes during the 21<sup>st</sup> century than were observed during the 20<sup>th</sup> century. Different types of GHGs have varying global warming potentials. The global warming potential of a GHG is the potential of a gas or aerosol to trap heat in the atmosphere. Because GHGs absorb different amounts of heat, a common reference gas (CO<sub>2</sub>) is used to relate the amount of heat absorbed to the amount of the gas emissions, referred to as “carbon dioxide equivalent” (CO<sub>2</sub>e), and is the amount of a GHG emitted multiplied by its global warming potential.

According to the ARB, some of the potential impacts in California of global warming may include loss of snow pack, sea level rise, more extreme heat days per year, more high ozone days, more large forest fires, and more drought years (ARB, October 2007). While these potential impacts identify the possible effects of climate change at a global and potentially statewide level, in general, scientific modeling tools are currently unable to precisely predict what impacts would occur locally.

### Greenhouse Gas Emissions and Links to Global Climate Change

With regard to climate change impacts, the MBARD has not identified a significance threshold for GHG emissions or a methodology for analyzing air quality impacts related to GHG emissions. The State has identified 1990 emission levels as a goal through adoption of California Assembly Bill (AB 32). To meet this goal, California would need to generate lower levels of GHG emissions than current levels. However, no standards have yet been adopted quantifying 1990 emission targets. For this analysis, the proposed project and the associated potential development’s contribution to global climate change would be considered significant if it would be inconsistent with AB 32’s goal of reducing 2020 greenhouse gas emissions to 1990 levels from sources associated with projected growth (i.e., motor vehicles, direct energy use, waste-related activities) or expose persons to significant risks associated with the effects of global climate change.

The greenhouse effect is a natural process by which some of the radiant heat from the sun is captured in the lower atmosphere of the earth, thus maintaining the temperature and making the earth habitable. The gases that help capture the heat are called greenhouse gases. Some GHGs occur naturally in the atmosphere, while others result from human activities. Naturally occurring GHGs include water vapor, carbon dioxide, methane, nitrous oxide, and ozone. Certain human activities, however, add to the levels of most of these naturally occurring gases as describe below:

- Carbon dioxide (CO<sub>2</sub>) is released to the atmosphere when solid waste, fossil fuels (oil, natural gas, and coal), and wood and wood products are burned.
- Methane (CH<sub>4</sub>) is emitted during the production and transport of coal, natural gas, and oil. Methane emissions also result from the decomposition of organic waste in solid waste landfills and from the raising of livestock.
- Nitrous oxide (N<sub>2</sub>O) is emitted during agricultural and industrial activities, as well as during combustion of solid waste and fossil fuels.
- High global warming potential (GWP) gases that are not naturally occurring, including hydrofluorocarbons (HFCs), perfluorocarbons (PFCs), and sulfur hexafluoride (SF<sub>6</sub>), are generated in a variety of industrial processes.

Each GHG differs in its ability to absorb heat in the atmosphere. High GWP gases such as HFCs, PFCs, and SF<sub>6</sub> are the most heat-absorbent. Methane traps over 21 times more heat per molecule than CO<sub>2</sub>, and N<sub>2</sub>O absorbs 310 times more heat per molecule than CO<sub>2</sub>. Often, estimates of GHG emissions are presented in CO<sub>2</sub>e, which weighs each gas by its GWP. Table 2 shows the GWP for different GHGs for a 100-year time horizon.

**Table 2. Global Warming Potential for Greenhouse Gases**

Greenhouse Gas	Global Warming Potential
Carbon Dioxide (CO <sub>2</sub> )	1
Methane (CH <sub>4</sub> )	21
Nitrous Dioxide (N <sub>2</sub> O)	310
Hydrofluorocarbons (HFCs), Perfluorocarbons (PFCs)	90- 11,700
Sulfur Hexafluoride (SF <sub>6</sub> )	23,900

Source: *Bay Area Air Quality Management District, 2010*

Projects which are not consistent with the AQMP have not been accommodated in the AQMP and will have a significant cumulative impact on regional air quality unless emissions are totally offset. A project that is inconsistent with the AQMP has not been accommodated in the emissions budget and will have a significant cumulative impact on attainment of the state's ozone AAQS unless project emissions are totally offset.

Since global climate change is certainly a cumulative impact, this analysis considers that the proposed project would have a significant impact if it would:

- Result in substantial net increases in greenhouse gases and CO<sub>2</sub>e emissions. In the absence of generally accepted thresholds of significance for projects, a substantial increase, for purposes of this analysis, occurs when a project exceeds thresholds of significance for criteria pollutants. This approach is consistent with guidance from the California Air Pollution Control Officers' Association (CAPCOA), which notes that implementing CEQA without an explicit threshold prior to formal guidance from the State of California's Office of Planning and Research is appropriate. In fact, this approach is consistent with CAPCOA's belief that by defining substantial emissions

of GHGs to performance standards (e.g., criteria pollutant emission thresholds), lead agencies would amass information and experience with specific project categories that would support establishing explicit thresholds in the future.

- Expose persons to significant risk associated with the effects of global climate change.
- Conflict with or obstruct implementation of the goals or strategies of Executive Order S-3-05.
- Be inconsistent with the ARB's 44 Early Action Measures for AB 32 compliance.
- Be subject to the CARB mandatory reporting requirements (generally required for projects producing more than 25,000 annual metric tons of CO<sub>2</sub>e).
- Be inconsistent with the recommended global warming mitigation measures from the Attorney General, CAPCOA, Office of Planning and Research, or other appropriate sources.

**Discussion:**

- a) General park use and maintenance activities would generate GHG emissions through the burning of fossil fuels and other emission sources required for the operation of equipment, motor vehicles and worker trips, thus potentially contributing to cumulative impacts related to climate change. These emissions are anticipated to be **less than significant** in that a passive recreational park is proposed (disc golf, dog walking, etc.).
- b) AB 32, signed in September 2006, requires the State's global warming emissions to be reduced to 1990 levels by 2020. After completing a comprehensive review and update process, the ARB approved a 1990 statewide GHG level and 2020 limit of 427 MMT CO<sub>2</sub>e (ARB, 2007). Senate Bill (SB) 97, signed in August 2007, acknowledges that global climate change (GCC) requires analysis under CEQA. In March 2010, the California Resources Agency adopted amendments to the State CEQA Guidelines for the feasible mitigation of GHG emissions or the effects of GHG emissions. The adopted amendments give lead agencies the discretion to set quantitative or qualitative thresholds for the assessment and mitigation of GHG and GCC impacts.

SB 375, signed in August 2008, requires the inclusion of sustainable communities strategies (SCS) in regional transportation plans (RTPs) for the purpose of reducing GHG emissions. The bill requires the ARB to set regional targets for the purpose of reducing GHG from passenger vehicles for 2020 and 2035.

The City's Climate Action Plan (CAP) includes GHG emissions reduction strategies for both the community (emissions within the City borders) and government operations (emission resulting from the activities associated with managing the City). The CAP establishes emissions reduction targets for year 2020 totaling approximately 49,113 metric tons of CO<sub>2</sub>e. The CAP emissions reduction targets exceed the goals set by AB32.

None of these statewide regulations include requirements that apply to the proposed project and no local or regional plans to reduce GHG emissions are currently in place. In addition, none of the reduction strategies in the CAP pertains to construction-generated GHG emissions. Therefore, the project does not conflict with any applicable plan, policy, or regulation adopted for the purpose of reducing the emissions of GHG. **No impacts** would occur as a result of the proposed project.

f) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?				X	City of Monterey, General Plan
g) Expose people or structures either directly or indirectly to a significant risk of loss, injury or death involving wildland fires?			X		Monterey City Code (M.C.C.), Chapter 13, Fire Protection General Plan Map 14, Showing Fire Hazard Severity Zones

## **Existing Setting:**

The setting information provided below is based on information provided in the City's General Plan and General Plan EIR.

### Hazardous Materials

In terms of hazardous materials usage, many types of hazardous wastes are used throughout the City in residential, commercial, and industrial applications. The Monterey County Environmental Health Division is responsible for managing the use, storage, and disposal of hazardous materials in amounts over a specific threshold (the threshold varies among uses and types of materials). The Environmental Health Division keeps an inventory of hazardous materials users and is responsible for working with users to develop plans that ensure the materials are safely used, stored, transported, and disposed.

### Fire

Fire hazards can generally be divided into two main types: (1) fires within urban areas that primarily involve specific sites and structures; and (2) fires within undeveloped or minimally developed areas, commonly called wildland fires. Most of the land within the present city limits is developed with urban uses. The City of Monterey Fire Department responds to both structure and wildland fires within the planning area. The City of Monterey Fire Department maintains three stations and operates several fire prevention programs. In the event that the City does not have the capacity to safely handle a structural or wildland fire, it can request additional firefighting resources through the Monterey County Mutual Aid Plan. The Monterey County Mutual Aid Plan enables any jurisdiction that participates in the plan to receive support from fire protection services of other jurisdictions that participate in implementing the plan. Response times to nearly all areas of the City are within the Department's recommended range of five to seven minutes.

The Monterey City Code (M.C.C.) Chapter 13, Fire Protection, adopted the California Fire Code. Amendments to this chapter of the code, as well as amendments to the City's General Plan Map 14, Showing Fire Hazard Severity Zones, were adopted by the City Council, to be in compliance with legislation (Government Code Section 51175). This legislation calls for the California Department of Forestry and Fire Protection (CAL FIRE) Director to evaluate fire hazard severity in Local Responsibility Areas and make a recommendation to the local jurisdiction when the Very High Fire Hazard Severity Zone (VHFHSZ) exists. Based on the findings of the CAL FIRE Director, there are both High and Very High Fire Hazard Severity Zone within the City of Monterey City limits (See Map 14 at the City's website: <http://www.monterey.org/Portals/0/Policies-Procedures/Planning/GeneralPlan/14-Fire-Zone-Map.pdf>).

### Airport Safety

Monterey Peninsula Airport operations have the potential to create safety issues related to safe operation of approaching and departing aircraft. The Monterey Regional Airport Master Plan shows "runway protection zones" at each end of the main airport runway. Within these areas, land use controls are exercised to minimize potential safety conflicts with activities that take place within the zones. Such controls and guidelines include the prohibition or limitation of uses that involve large assemblages of people, limitations on building heights and heights of other potential obstructions, and prohibition of new structures. Existing land uses that are within the western approach safety zone include much of the U.S. Navy Golf Course, the Monterey County Fairgrounds, and a small section of residential development. Uses within the eastern protection zone include commercial and residential development at the Highway 218/Highway 68 intersection. Smaller additional safety areas extend beyond the primary protection zone wherein specific development standards apply in order to minimize conflicts with airport operations.

The County of Monterey Airport Land Use Commission has adopted the 2019 Monterey Regional Airport Land Use Compatibility Plan (ALUCP). This plan identifies compatible uses and restrictions for the area surrounding the airport.

#### Emergency Preparedness/Emergency Response

The City of Monterey Fire Department and City of Monterey Police Department coordinate emergency response within the City. The City operates its Emergency Operations Center (EOC) as the center of emergency response coordination and actions. During an emergency, all response activities are managed by the EOC, including information, equipment, volunteers, and other resources. Plans for responses to emergency situations are formulated by fire and police officials, and actions to implement those plans are communicated to emergency response teams that operate out of the EOC and throughout the City. The City also operates the Citizens Emergency Response Training (CERT) program. The main goal of the CERT program is to help Monterey residents to be self-sufficient in a major disaster by developing multifunctional teams that are cross-trained in basic skills. The City's emergency response efforts are coordinated under the broader umbrella of the State of California Office of Emergency Services. The County of Monterey also has an emergency response office. The County Environmental Health Division Hazardous Materials Branch and the City of Seaside Hazardous Materials Team would likely be the first agencies to provide support to the City in the event that the City does not have the capacity or capability to fully address a hazard. Both agencies are fully trained and equipped to respond to a variety of hazardous materials related incidents.

#### **Discussion:**

- a-b)** The proposed project includes a passive park and periodic maintenance. Maintenance activities would not involve the use of hazardous materials other than routine materials required to run machinery such as gasoline. The transport, use, and storage of hazardous materials during maintenance activities would be conducted in accordance with best management practices. Therefore, the proposed project would not create a substantial hazard to the public through the routine transport, use or disposal of hazardous materials or through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment. Impacts would be **less than significant**.
- c)** There are no schools within one-quarter mile of the proposed project site and the proposed project does not propose emitting or handling acutely hazardous materials. Therefore, **no impacts** related to these topics are anticipated.
- d)** A review of the State Water Resources Control Board's GeoTracker website indicated that the project site does not include known hazardous materials. The site has been historically vacant and **no impact** is anticipated.
- e)** The project site is located within the 2019 Monterey Regional Airport Land Use Compatibility Plan (ALUCP) area. The Airport Land Use Commission (ALUC) reviewed this project on July 29, 2019 and determined the project was consistent with the Airport Land Use Compatibility Plan. The project impact is **less than significant**.
- f)** The proposed project site is adjacent to Highway 68, an evacuation route, as identified in the City's General Plan. The proposed park would not result in any conditions that are not already assumed in the emergency response or emergency evacuation plans. Therefore, **no impact** would result.

- g)** The proposed park uses would not include the construction of new structures. Some maintenance activities would involve work crews in a vacant, park setting. Exposure to wildland fires at the park site would be minimal and maintenance activities would reduce wildland fire hazard potential and should improve the situation. This impact is **less than significant**.

sources of polluted runoff; or iv. Impede or redirect flood flows?					
d) In a flood hazard, tsunami, or seiche zones, risk release of pollutants due to project inundation?				X	General Plan Public Facilities Element Policy I.2, Safety Element Flood Hazards Program c.1-c.4  FEMA Flood Insurance Rate Maps for County of Monterey, City of Monterey
e) Conflict with or obstruct implementation of a water quality control plan or sustainable groundwater management plan?			X		General Plan Public Facilities Element Policy I.2  City of Monterey Public Works Department  Monterey Regional Storm Water Management Program (MRSWMP)

**Existing Setting:**

The setting information provided below is based on information provided in the City’s General Plan, General Plan EIR, and the Monterey Regional Storm Water Management Program.

Drainage Patterns

The City owns and maintains a storm drainage system that collects and transports stormwater to the Monterey Bay. The system includes over 10 miles of pipelines and drainage channels. Stormwater runoff is collected through catch basins and stormwater inlets that direct runoff into the pipelines and channels. A series of stormwater outfalls are located along the margin of the Bay through which stormwater is discharged.

Flooding

Areas of the City of Monterey are located in 100-year and 500-year flood zones and are subject to significant storm wave inundation that causes erosion of coastal bluffs and potential damage to property. Per the Flood Zones of the General Plan and FEMA Flood Insurance Rate Maps the proposed project site is located outside both the 100-year and 500-year floodplains. The proposed project site is not subject to flood hazard from tsunamis, or seismic sea waves, which are generated by submarine earthquakes, volcanic eruptions, and landslides. California, in particular, has numerous potentially active submarine faults offshore and therefore is at risk for a tsunami. The proposed project is not subject to coastal flooding, wave action, storm surge and seismic effects, and related issues.

Water Quality and Storm Water Regulation

The City maintains approximately 10 miles of storm drainage infrastructure – drainage channels, storm drains, pipelines, culverts, pump stations, and outfalls - within the City of Monterey. The existing drainage system collects non-point surface water runoff and conveys it through channels, pipelines, and culverts that, in most instances, eventually terminate at the Monterey Bay.

Monterey's storm water collection system is not tied into the sanitary sewer collection system. Therefore, storm water flows are, for the most part, not treated prior discharge. Storm water flows are discharged to local waterways including the Monterey Bay at multiple drainage outfalls located throughout Monterey's coastal area.

Monterey's discharge of storm water to local surface waters is regulated by the federal Clean Water Act, National Pollutant Discharge Elimination System (NPDES) Permit Program, and the California Porter-Cologne Act, and permitted through the Central Coast Regional Water Quality Control Board. The City storm water permit and ordinance require local regulation of water pollution and prevention through the mandated implementation of best management practices (BMPs) to protect the water quality of local waterways.

Storm water design requirements for public and private development projects, such as LID, are mandated by the State and Central Coast Regional Water Quality Control Board (RWQCB) through the City's Phase II municipal storm water permit coverage. Through Monterey Municipal Code Chapter 31.5 Article 2 Urban Storm Water Quality Management and Discharge Control, the City implements storm water regulations in compliance with State Water Resources Control Board (SWRCB) Water Quality Order No. 2013-0001-DWQ National Pollutant Discharge Elimination System (NPDES) General Permit No. CAS000004 Waste Discharge Requirements for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems ("NPDES General Permit"). This includes the implementation and enforcement of the Central Coast Regional Water Quality Control Board Resolution No. R3-2013-0032 Post-Construction Stormwater Management Requirements for Development Projects in the Central Coast Region to reduce pollutants in storm water discharges from land development to the maximum extent practicable and to protect water quality. Along with many other components, improvements to the planning area must address storm water drainage and management, including permit mandates that require LID, such as water quality treatment, retention, and/or peak flow management (hydromodification). Specific required steps will be taken when the specific project is funded and therefore ready to be designed. These steps including determining the subject site's watershed management zone, amount of impervious surface proposed across development site, and whether water quality management measures are required as a part of the design of the project. Site specific engineering analyses will be necessary and required to for drainage design purposes.

To address regional urban runoff issues and develop innovative approaches to storm water management, the City collaborates with other local permittees in the Monterey Regional Storm Water Management Program (MRSWMP). The MRSWMP is a regional storm water management, implementation, and education program that assists the City and region with permit compliance. By Ordinance and permit implementation, the City regulates applicable new and redevelopment projects for storm water control; construction activities for erosion, sediment, and discharge control; identifies and enforces illicit connections and illicit discharges; and implements good housekeeping practices for municipal operations to protect local water quality.

### Water Supply

It is the goal of the City of Monterey and the General Plan to obtain a long-term, sustainable water supply, including evaluation of water supply options outside the present Monterey Peninsula Water Management District (MPWMD) framework. Water is supplied to most of the Monterey Peninsula by the California American Water Company (Cal Am) through wells in Carmel Valley, dams on the Carmel River, and a well on the Seaside Aquifer. The City is wholly within the MPWMD, which is responsible for developing long-term water supply for the Monterey Peninsula cities in the district.

The Monterey Peninsula is subject to a Cease and Desist Order (CDO) imposed by the State Water Resources Control Board (SWRCB) on California American Water (the water purveyor) in 2009. Both the CDO and the action by the California Public Utilities Commission (Decision 11-03-048 rendered March 24, 2011) implemented a water moratorium on customers of California American Water. All projects are subject to both orders for Change or Intensification of Use and the addition of New Connections.

According to the General Plan, the City had reached the limits of its allocation and still has very little water available to meet the City's goals. The MPWMD has not provided a stable, long-term source of water, and many of the alternatives proposed by the district would provide only enough water for short-term needs. The City has a limited amount of water available for new residential or commercial development. To mitigate this problem, the City has incorporated programs to address water capacity, including giving preference in the City's water allocation process to projects meeting fair-share housing goals and to affordable housing projects.

**Discussion:**

- a) The proposed park uses and periodic maintenance would not introduce pollutants or new sources of wastewater into the City's surface waters or groundwater because the project site will remain vacant. The project has **no impact**.
- b) The proposed park uses and periodic maintenance would not draw groundwater, directly intrude into the groundwater table or add substantial impermeable surfaces that would interfere with groundwater recharge. The project has **no impact**.
- c-c.iv The proposed park uses and periodic maintenance does not alter the course of a stream of river. The project adds only minor areas of impervious surface (one parking space and sidewalk) above existing decomposed granite and any impact to drainages is anticipated to be **less than significant**.
- d) The project site is not located in a flood hazard, tsunami or seiche zone. Therefore, **no impacts** would result.
- e) The Central Coast RWQCB Water Quality Control Plan for the Central Coastal Basin (2017) is the water quality control plan applicable to the Cities of Monterey and Seaside, outlining water quality management practices for surface water and groundwater. The Water Quality Control Plan describes waste discharge requirements and requirements for NPDES permitting. The park will allow passive uses (disc golf and dog walking) and periodic maintenance. The project has **a less than significant impact** on the implementation of a water quality control plan or sustainable groundwater management plan.

SUBJECT AREA	Potentially Significant Impact	Less-than-significant with Mitigation	Less-than-significant Impact	No Impact	SUPPORTING INFORMATION
<b>X. LAND USE AND PLANNING – Would the project:</b>					
a) Physically divide an established community?				X	City of Monterey, General Plan
b) Cause a significant environmental impact due to a conflict with any land use plan, policy or regulation adopted for the purpose of avoiding or mitigating an environmental effect?			X		City of Monterey, General Plan and Area Plans  City of Monterey, Monterey City Code (M.C.C.) Chapter 38, Zoning Ordinance  Monterey Regional Airport Land Use Compatibility Plan (ALUCP), 2019

**Existing Setting:**

The City of Monterey is a small-scale community that is largely residential and visitor serving in nature. The majority of land in the City already contains some development. Primary land uses include residential development at low to moderate density and visitor-serving, professional office, and retail commercial uses. A number of small, vacant parcels do exist within the City. Most are designated for single-family residential development. Approximately 138 acres of land located east of the Ryan Ranch industrial park that were part of the former Fort Ord were annexed to the City just prior to the 2005 General Plan Update, and this area represents the most significant vacant land resource in the City.

**Discussion:**

- a) The proposed park uses and periodic maintenance would not divide an established community. **No impact** would occur as a result of the proposed project.
- b) The City’s General Plan Land Use Map designates the project site for Parks and Open Space and the Zoning Map as Open Space. The Parks Master Plan also identifies the site for park use. The project is consistent with these planning documents.

The project site is located within the 2019 Monterey Regional Airport Land Use Compatibility Plan (ALUCP) area. The Airport Land Use Commission (ALUC) reviewed this project on July 29, 2019 and determined the project was consistent with the Airport Land Use Compatibility Plan. The project impact is **less than significant**.

SUBJECT AREA	Potentially Significant Impact	Less-than-significant with Mitigation	Less-than-significant Impact	No Impact	SUPPORTING INFORMATION
<b>XI. MINERAL RESOURCES – Would the project:</b>					
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?				X	City of Monterey, General Plan Conservation Element City of Monterey, General Plan Initial Study, Page 11
b) Result in the loss of availability of a locally important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?				X	City of Monterey, General Plan Conservation Element City of Monterey, General Plan Initial Study, Page 11

**Existing Setting:**

While there are, at present, one small-scale commercial sand removal operation in the Marina area, there are no mineral resources within the City’s limits.

**Discussion:**

**a–b)** No mineral resources exist within the proposed project site and **no impacts** are anticipated.

SUBJECT AREA	Potentially Significant Impact	Less-than-significant with Mitigation	Less-than-significant Impact	No Impact	SUPPORTING INFORMATION
<b>XII. NOISE – Would the project result in:</b>					
a) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance or applicable standards of other agencies?			X		City of Monterey, General Plan Noise Element goals, policies, and programs
b) Generation of excessive groundborne vibration or groundborne noise levels?				X	City of Monterey, General Plan Noise Element goals, policies, and programs
c) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?			X		City of Monterey, General Plan Noise Element Policies b.1–b-5  City of Monterey, General Plan Map 17-Showing Airport Noise Contours  Monterey Regional Airport Land Use Compatibility Plan (ALUCP), 2019  Monterey Regional Airport Master Plan Environmental Impact Report (EIR), 2018

**Existing Setting:**

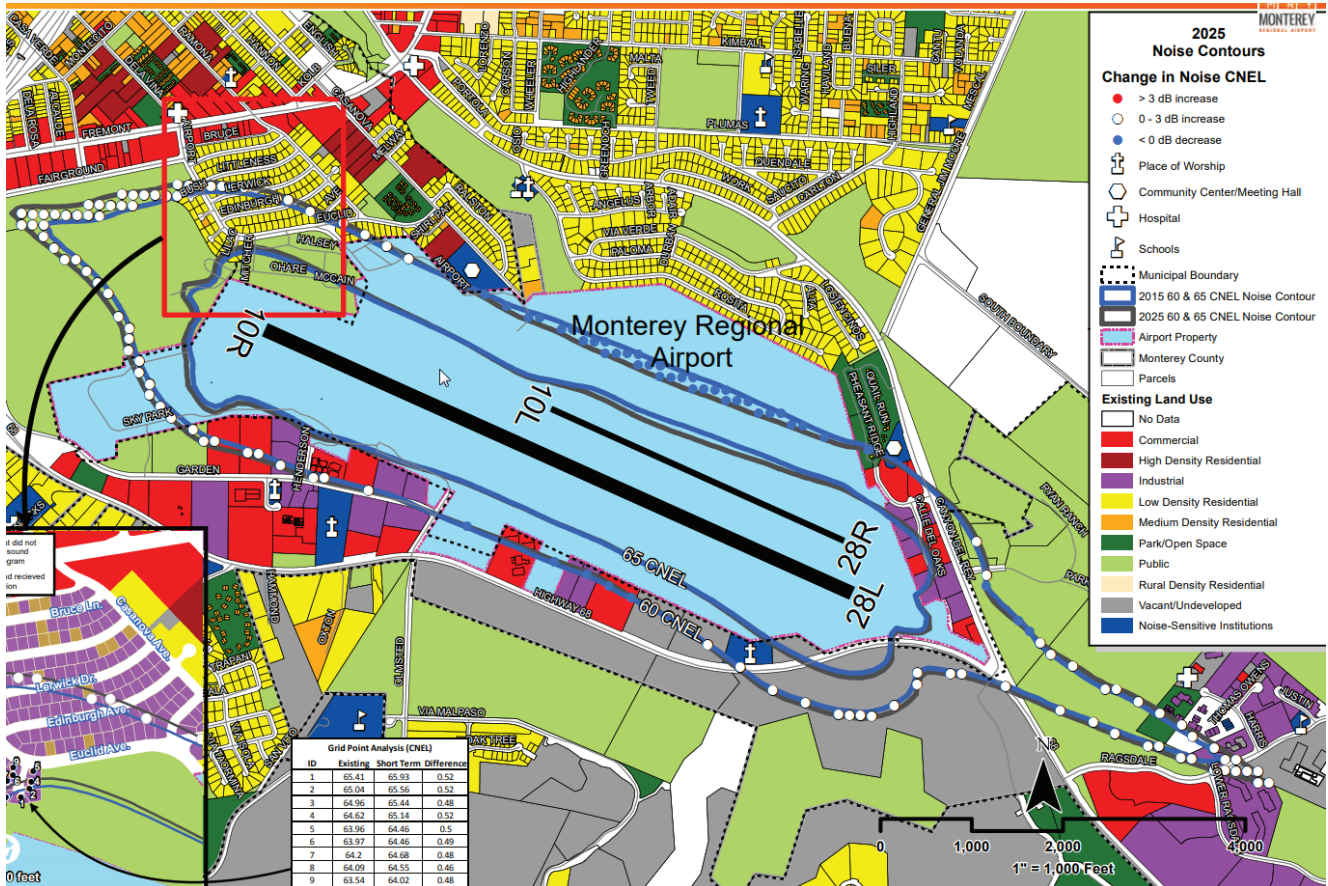

The City of Monterey General Plan identified the major noise sources affecting the community as motor vehicles (autos, trucks, buses, motorcycles) and aircraft. Some events at the fairgrounds have also generated noise complaints. No stationary source, such as an industrial plant, is known to create noise at an unacceptable level.

The City of Monterey Zoning Code contains maximum noise levels for uses.

**Discussion:**

- a) The proposed park uses are passive and will not generate substantial temporary or permanent increase in ambient noise levels. Periodic maintenance will involve mowing and possible tree trimming. Due to the limited scope of the maintenance efforts, the impact is **less than significant**. Also, the project involves construction of one parking space and a sidewalk to the first disc golf station. This construction effort will be limited to a few days and while it could result in a temporary increase in ambient noise levels its impact is less than significant due to the site’s remote location and limited project scope. Furthermore, the City limits construction between the hours of 7 am to 7 pm Monday – Friday, 8 am to 6 pm Saturday, and 10 am to 5 pm Sunday. Therefore, this would be a **less-than-significant impact**.

- b) The proposed park uses and periodic maintenance is not anticipated to generate excessive groundbourne vibration or groundborne noise levels due to their limited scope and passive nature. The project has **no impact** on groundbourne vibration and groundborne noise levels.
- c) The project site is located in proximity to the Monterey Regional Airport. The site is located outside the 65dB contour. However, a portion of the site within the 60dB contour as shown below.

The Noise Compatibility Guidelines establish that areas below 65 DB are appropriate for various recreational uses. The City of Monterey General Plan states that within the 60-64 CNEL to require acoustical sties of proposed new residential and other noise sensitive development. In this case, no permanent structures are proposed and use of the passive park will be limited. Therefore, this impact is **less than significant**.

SUBJECT AREA	Potentially Significant Impact	Less-than-significant with Mitigation	Less-than-significant Impact	No Impact	SUPPORTING INFORMATION
<b>XIII. POPULATION AND HOUSING – Would the project:</b>					
a) Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?				X	City of Monterey, General Plan
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?				X	City of Monterey, General Plan

**Existing Setting:**

The 2014 - 2023 Regional Housing Needs Allocation Plan prepared by the Association of Monterey Bay Area Governments (AMBAG) identified a future housing need in Monterey of 650 new dwelling units for the period of 2014 - 2023. The City’s General Plan is required to show adequate sites for the 650 units to be in compliance with state law requirements.

**Discussion:**

**a-b)** The proposed park uses and periodic maintenance does not include housing, places of employment, roads, or any other development that could impact population or induce growth, nor will the project displace existing housing. The project has **no impact** on population or housing.

SUBJECT AREA	Potentially Significant Impact	Less-than-significant with Mitigation	Less-than-significant Impact	No Impact	SUPPORTING INFORMATION
<b>XIV. PUBLIC SERVICES</b> – Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:					
a) Fire protection?			X		City of Monterey, General Plan Public Facilities Element Goal c, Policies c.1–c.5  City of Monterey Fire Department
b) Police protection?			X		City of Monterey, General Plan Public Facilities Element Goal b, Policies b.1–b.3  City of Monterey Police Department
c) Schools?				X	City of Monterey, General Plan Public Facilities Element Goal d, Policies d.1–d.6  Monterey Peninsula Unified School District
d) Parks?			X		City of Monterey, General Plan Public Facilities Element Goal j, Policies j.1–j.6  City of Monterey Parks and Recreation Department  City of Monterey Maintenance Division-Parks & Beaches  City of Monterey Parks and Recreation Master Plan, 2016  City of Monterey Zoning Ordinance
e) Other public facilities?				X	City of Monterey, General Plan Public Facilities Element Goals a, e, f–i, k–p ; Policies f.1–f.7, i.1–i.3, k.1–p.2 ; Programs m.1.1–m.2.1  City of Monterey Public Works Department  City of Monterey Maintenance Division-Streets & Utilities  City of Monterey Parks and Recreation Department

**Existing Setting:**

The major public facilities in the City of Monterey are police and fire, park and recreation facilities, schools, military, cultural, conference center, health care, civic center, cemeteries, harbor, sewage treatment, storm drain system, water supply, and reduction and recycling of waste.

**Discussion:**

- a-b)** The proposed park uses may impact fire and police as additional services may be needed to emergency response. However, the periodic maintenance should reduce the site's fire hazard potential. Due to the remote location and minimal users, this impact will be **less than significant**.
  
- d)** The park will need the appropriate level of maintenance for an open space area. This will involve some mowing and site maintenance. This impact will be **less than significant**.
  
- c & e)** The project does not result in new housing or employment opportunities. **No impact** to school or other public facilities is anticipated.

SUBJECT AREA	Potentially Significant Impact	Less-than-significant with Mitigation	Less-than-significant Impact	No Impact	SUPPORTING INFORMATION
<b>XV. RECREATION</b>					
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?			X		City of Monterey, General Plan Public Facilities Element Goal j, Policies j.1–j.6  Monterey City Code (M.C.C.) Chapter 38, Zoning Ordinance, Article 9, Open Space District  Monterey City Code (M.C.C.) Chapter 33, Subdivision, Article 3, §33-29(c) Park and Recreation dedication and fees  City of Monterey Parks and Recreation Master Plan, 2016
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities, which might have an adverse physical effect on the environment?			X		City of Monterey Parks and Recreation Department  City of Monterey Parks and Recreation Master Plan, 2016

**Existing Setting:**

The City of Monterey Parks and Recreation Department manages a wide range of park and recreation facilities. The Open Space Element provides background information and goals and policies regarding the City’s open space and park resources implemented by the Parks and Recreation Master Plan. Significant recreation facilities include the Monterey Sports Center, community centers, neighborhood park facilities, and beach parks. Neighborhood parks also include various athletic fields, tennis courts, and other park facilities.

**Discussion:**

**a-b)** The proposed park uses and periodic maintenance will supplement the City’s existing park inventory. It will have a positive impact on the supply of park facilities for the community. The proposed site modifications are minor and are anticipated to have a **less than significant impact**.

SUBJECT AREA	Potentially Significant Impact	Less-than-significant with Mitigation	Less-than-significant Impact	No Impact	SUPPORTING INFORMATION
<b>XVI. TRANSPORTATION/TRAFFIC – Would the project:</b>					
a) Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities?			X		City of Monterey Public Works Department, Traffic Engineering Division
b) Conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision b?			X		City of Monterey Public Works Department, Traffic Engineering Division
c) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?				X	City of Monterey Public Works Department, Traffic Engineering Division
d) Result in inadequate emergency access?				X	City of Monterey, General Plan, Circulation Element  City of Monterey Fire and Police Departments

### Existing Setting:

The setting information provided below is based on information provided in the City's General Plan and General Plan EIR.

#### Roadway Classification

The City has a roadway classification system, which includes freeways, major arterials, minor arterials, collectors, and local streets.

#### Transit Service

Monterey-Salinas Transit (MST) is the principal transit service for the City and the surrounding communities. MST is a joint powers agency with a board of directors that includes a representative from the City. Thirteen MST routes currently serve the citizens of the community. Simoneau Plaza located in downtown Monterey is the transfer center for all routes serving the City. Senior and disabled citizens can use the MST fixed-route and Direct Area Response Transit (DART). MST also operates the RIDES program for disabled citizens. These routes operate on weekdays and Saturdays from approximately 7:00 AM to 11:00 PM and from approximately 7:30 AM to 5:30 PM on Sundays and holidays.

#### Existing Bikeway and Pedestrian Facilities

The City maintains an extensive network of Class 1, 2, and 3 bicycle paths and pedestrian sidewalks. The most notable bicycle and pedestrian path is the City's Recreational Trail that is located along the coastal side of the City. The Recreational Trail is a dual use facility that offers people destination opportunities, such as the restaurants or retail stores along Cannery Row or Fisherman's Wharf, or one of many parks for relaxing or wildlife viewing and sightseeing. The City maintains sidewalks on almost all City roadways, and some roadways have bicycle lanes.

**Discussion:**

- a-b)** The proposed park uses and periodic maintenance are a low intensity use. No changes to the circulation system including transit, roadway, bicycle or pedestrian facilities are proposed. The number of park users on a regular basis are minimal. Therefore, the project would not conflict with any transportation program or standard, and its impacts to the circulation system and related components would be **less than significant**.
- c)** The proposed project would not result in the construction of any new roadways and, therefore, would not increase hazards due to design features. The project also does not introduce incompatible equipment (e.g. farm equipment). Any maintenance equipment will be transported to the City via a car or truck/trailer combination. **No impact** would occur as a result of the proposed project.
- d)** The project will not impact emergency access as no significant physical changes are proposed. **No impact** would occur as a result of the proposed project.

SUBJECT AREA	Potentially Significant Impact	Less-than-significant with Mitigation	Less-than-significant Impact	No Impact	SUPPORTING INFORMATION
<p><b>XVII. TRIBAL CULTURAL RESOURCES</b> – Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in PRC Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is::</p>					
<p>a) Listed or eligible for listing on the California Register of Historical Resources, or in a local register of historical resources as defined by PRC section 5020.1(k), or</p>			X		<p>Archaeological Sensitivity Map, Figure 8, Draft EIR, City of Monterey General Plan Update, July 2004</p>
<p>b) A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC Section 5024.1. In applying the criteria set forth in subdivision (c) of PRC Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe.</p>			X		<p>Archaeological Sensitivity Map, Figure 8, Draft EIR, City of Monterey General Plan Update, July 2004</p>
<p><b>Existing Setting:</b></p> <p>The City is located within the ethnographic territory, indigenous homeland and language family of the Ohlone/Costanoan-Esselen Nation (OCEN).</p> <p><b>Discussion:</b></p> <p><b>a -b)</b> The project site is located in a low archaeology area and it is unlikely any resources will be discovered. The project sites is not listed or eligible for listing on the California Register of Historical Resources or in a local register. In compliance with Assembly Bill 52 (AB 52) the City of Monterey informed Ms. Louise J. Miranda Ramirez, Chairwoman of the OCEN, of the project via letter dated June 4, 2019. The Native American Heritage Commission designated Ms. Ramirez as the most likely descendant of the OCEN Tribe. The OCEN responded on July 15, 2019, to request a consultation. Consultation was initiated and concluded on August 7, 2019. Based on comments received through the consultation, impacts to tribal cultural resources as a result of the proposed project would be <b>less than significant</b>.</p>					

SUBJECT AREA	Potentially Significant Impact	Less-than-significant with Mitigation	Less-than-significant Impact	No Impact	SUPPORTING INFORMATION
<b>XVIII. UTILITIES AND SERVICE SYSTEMS – Would the project:</b>					
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?				X	City of Monterey Public Works Department City of Monterey, General Plan Monterey One Water
b) Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years?				X	City of Monterey Public Works Department City of Monterey, General Plan Water Peninsula Water Management District Rules and Regulations California American Water Company Monterey One Water
c) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity serve the project's projected demand in addition to the provider's existing commitments?				X	City of Monterey Public Works Department
d) Generate solid waste in excess of State or local standards or in excess of the capacity of local infrastructure or otherwise impair the attainment of solid waste reduction goals?			X		City of Monterey Community Development Department – Sustainability Division
e) Comply with federal, state and local management and reduction statutes and regulations related to solid waste?			X		City of Monterey Community Development Department – Sustainability Division

**Existing Setting:**

The setting information provided below is based on information provided in the City's General Plan and General Plan EIR.

Wastewater

The City maintains the sanitary sewer collection system within its jurisdictional boundaries. The existing sanitary sewer collection system conveys sewage from sewer point sources within the City, such as homes, businesses, and public facilities, to a regional wastewater treatment plant for treatment and disposal. The sanitary sewer collection system operated by the City consists of approximately 102 miles of sewer pipeline maintained by City personnel and seven sewer lift stations.

Monterey's sewage is conveyed through pipelines to the Monterey One Water sewer treatment plant in the City of Marina for treatment and disposal. Per Monterey One Water, sixty percent (60%) of incoming wastewater is highly treated through its water recycling facility and distributed for irrigation uses on farmlands in northern Monterey County. Monterey One Water performs secondary treatment of the remaining wastewater, which is then discharged through an ocean outfall two miles into Monterey Bay.

Local sewer collection pipelines of various capacities exist underground within the City and eventually flow to larger sewer mains that feed into the Monterey One Water interceptor pipeline. The interceptor pipeline receives sewer flows from both Pacific Grove and Monterey and carries those flows to the wastewater treatment plant. Monterey's existing sewer collection system is an aged one, and requires on-going maintenance and rehabilitation. The City is completing a multiyear program to repair and replace sanitary sewer collection system structures. The existing capacity of the system is adequate to convey the sewer loads generated.

Water Supply - Potable Water

The Planning Area is served by the California-American Water Company (Cal-Am). It is the goal of the City of Monterey and the General Plan to obtain a long-term, sustainable water supply, including evaluation of water supply options outside the present Monterey Peninsula Water Management District (MPWMD) framework. Water is supplied to most of the Monterey Peninsula by the California American Water Company (Cal Am) through wells in Carmel Valley, dams on the Carmel River, and a well on the Seaside Aquifer. The City is wholly within the MPWMD, which is responsible for developing long-term water supply for the Monterey Peninsula cities in the district.

Cal-Am supplies water to the residential, municipal, and commercial needs of the Monterey Peninsula area communities. Cal-Am's water distribution system distributes water from two main sources: the Carmel River and the Seaside Basin coastal subarea.

*State Water Resources Control Board Order Number 95-10*

In 1995, in response to complaints that Cal-Am was illegally taking water from the Carmel River, the State Water Resources Control Board (State Water Board) issued Order No. WR 95-10 directing Cal-Am to implement actions to terminate its unlawful diversion. Order No. 95-10 recognized that Cal-Am had legal rights to divert 3,376 acre-feet annually (afa) of water from the Carmel River Basin, but found that Cal-Am was diverting a total of 14,046 afa for this purpose, an excess of approximately 10,730 afa, "without a valid basis of right." The Order also determined that such diversions have historically had an adverse effect on the riparian corridor along portions of the river, wildlife that depend on riparian habitat, and steelhead and other fish which inhabit the river. The 3,376 afa rights are not subject to instream flow requirements.

On November 30, 2007, both MPWMD and Cal-Am jointly obtained an additional right to divert water from the river. Due to the overdraft condition of the Seaside Groundwater Basin, the State Water Board issued Permit 20808A authorizing the diversion of up to 2,246 afa water from the river to underground storage in the Seaside Groundwater Basin from December through May of each year, if specified streamflow requirements are met. On November 30, 2011, a second right (Permit 20808C) was authorized for up to 2,900 afa subject to instream flow requirements, The State Water Board also issued

Cal-Am an appropriative right for 1,484 afa subject to instream flow requirements, but this may only be used in the Carmel River Basin. The amount of rights authorized by the State Water Board is a maximum; the actual availability of water is dependent on streamflow. The MPWMD estimates the long-term average yield of rights subject to instream flows totals approximately 2,400 afa. However, due to physical constraints in the Cal-Am system, not all of this water may currently be produced.

Through various conservation efforts over the past 13 years, Cal-Am has reduced its annual illegal diversion of the Carmel River Basin to approximately 7,150 acre-feet. Cal-Am continues its effort towards providing an alternative potable water source.

*State Water Resources Control Board Cease and Desist Order*

On October 20, 2009, the State Water Resources Control Board issued a Cease and Desist Order (CDO) to Cal-Am. Among other matters, the CDO alleges that Cal-Am has failed to comply with Condition 2 of Order 95-10 that requires Cal-Am to terminate its unauthorized diversions from the river, that Cal-Am's diversions continue to have adverse effects on the public trust resources of the river and should be reduced, and that the ongoing diversion is a violation of Water Code Section 1052 prohibiting the unauthorized diversion or use of water.

The CDO seeks to compel Cal-Am to reduce the unauthorized diversions by specified amounts each year, starting in water year 2008-09 and continuing through water year 2016 when Cal Am must cease all unauthorized diversions. The adopted CDO prohibits Cal-Am from providing new service connections and increasing use at existing service addresses that were not provided a "will serve commitment" (or similar commitment) before October 20, 2009. The 2016 deadline was extended by the SWRCB.

Water availability within the Cal-Am system remains under careful state scrutiny since State Water Resources Control Board Order No. 95-10 was imposed in 1995. State Board Order No. 95-10 requires Cal-Am to reduce the water it pumps from the Carmel River by 20 percent now, and up to 75 percent in the future. Also, any new water that is developed must first completely offset Cal-Am's unlawful diversions from the Carmel River, an estimated 10,730 acre-feet (AF) per year, before any water produced by Cal-Am can be used for new construction or expansions in use.

*MPWMD Water Use Credit and Transfer Programs*

In 1992, as part of its oversight of water allocation and distribution, MPWMD adopted Ordinance 60 establishing a program whereby a water customer may obtain and reuse water use credits when water use on a particular property is reduced or discontinued. A reduction of water use, whether by changing to a less-intensive use, by retrofitting equipment with water conserving devices, or by demolishing a building, results in a water use credit that may be used later on the same site. When a residential property owner applies to MPWMD for the water use credit, MPWMD calculates the amount of the credit based upon the number and types of water-using fixtures that will be discontinued. When a commercial property owner applies to the MPWMD for a water use credit, the MPWMD will determine credits based upon one of several methods:

The commercial water use factor associated with the historical use(s) may be used when a use is either being abandoned or permanently reduced to a lower intensity use; a quantification of water saved may be used when inefficient equipment is replaced with highly water efficient equipment; or historic records may be used to determine the past (abandoned) use. With a few exceptions, the water use credit is valid for 60 months and can be extended for 60 months. After the 60-month period, any remaining unused water use credit expires. Water use credits affected by the CDO will be reinstated at its conclusion with a term equal to the amount of time the CDO impacted the credit.

In 1993, MPWMD adopted Rule 28 to allow Water Use Credit Transfers between commercial properties. The rule was amended in 1995, to allow Water Use Credit Transfers from an existing commercial use to a jurisdiction's water allocation. The Water Use Credit rules are designed to provide incentives for undertaking extraordinary retrofitting and/or installation of proven new technology and to provide a mechanism for offsetting potential intensification in use.

The Water Credit rules also allow former uses to be reoccupied if a Water Credit has not been abandoned and expired or moved to another Site. Water savings after the Water Credits have been applied to a Water Permit can be minimal. The goal is that there is no increase in use.

#### *City of Monterey Allocation*

In 1981, MPWMD's Resolution 81-7 authorized an annual allocation of 5,746 acre-feet of potable water to the City. Subsequent annual allotments were made and were adjusted up to 6,125.48 acre-feet to more accurately reflect the City's actual water use. In 1993, the City received from MPWMD a water allocation of 308 afa from Cal-Am's Paralta Well in the Seaside Basin coastal subarea. This was the last allocation from MPWMD.

In 1986, the City Council reserved the remaining supply of the City's allocation for seven categories of uses and established procedures for determinations of water usage. The purpose for establishing the unallocated reserve was to provide a water account that could be used to address unanticipated or emergency water requests, such as increased usage caused by increased visitors, use by the Federal Government, State and other agencies beyond the jurisdiction of the City, and unanticipated emergencies. The categories have changed over time, and since 2006, are assigned as follows: 1) Affordable Housing, 2) Public Projects (reserve), 3) Public Projects (high priority), 4) Single Family Remodels, 5) Other Residential, 6) Commercial Projects, and 7) Economic and Environmental Sustainability. The City has established a Water Waiting list for those projects that have received all of their required discretionary approvals but do not have adequate water resources to develop this project. As of June 13, 2013, there were 37 projects on the wait list, accounting for over 35.2 acre feet of water.

The MPWMD has adopted rules that allow the transfer of water between uses and adjacent sites under the same ownership, though these rules are under strict regulation by MPWMD. The City conducted an inventory of water usage and availability helped to determine the presence of water credits on a particular site that may be available for an expanded use. The identification of water credits assisted in the identification of opportunity sites that could achieve Project objectives prior to the identification and delivery of a new water source to the City.

Additionally, The City owns two open space parcels adjacent to the Ryan Ranch Business Park, one of which is located on the former Fort Ord that has access to water. The Marina Coast Water District is the water purveyor for the former Fort Ord, and water allocations were made to the jurisdictions within its boundaries. The City of Monterey was allocated approximately 65 acre-feet (af) from the Fort Ord allocation for the City's entire 130+ acres. The City can allocate a portion of the 65 af for the open space parcel as it deems appropriate.

#### Storm Water

See discussion in section IX.

#### Solid Waste

The regional waste collection facility is located in the City of Marina and is operated by the Monterey Regional Waste Management District. Locally, there is a transfer facility in Ryan Ranch operated by Monterey Disposal Service.

**Discussion:**

- a-b)** The proposed project does not include any public utilities or service systems (expanded water, wastewater, stormwater, drainage, electric, natural gas or telecommunications facilities). The site will be operated as a passive park. The project has **no impact**.
- c)** A portable restroom will be installed and will be serviced as needed. As a result, the project has **no impact** on wastewater services.
- d-e)** Trash cans will be provided and emptied. This is a **less than significant** impact that can be accommodated with periodic trash service.

SUBJECT AREA	Potentially Significant Impact	Less-than-significant with Mitigation	Less-than-significant Impact	No Impact	SUPPORTING INFORMATION
<b>XX. WILDLIFE</b> – If located in or near state responsibility areas or lands classified as very high fire hazard severity zones, would the project:					
a) Substantially impair an adopted emergency response plan or emergency evacuation plan?				X	City of Monterey, General Plan
b) Due to slope, prevailing winds, and other factors, exacerbate wildfire risks, and thereby expose project occupants to pollutant concentrations from a wildfire or the uncontrolled spread of a wildfire?				X	City of Monterey Fire Department
c) Require the installation or maintenance of associated infrastructure (such as roads, fuel breaks, emergency water sources, power lines or other utilities) that may exacerbate fire risk or that may result in temporary or ongoing impacts to the environment?				X	City of Monterey Fire Department
d) Expose people or structures to significant risks, including downslopes or downstream flooding or landslides as a result of runoff, post-fire slope instability or drainage changes?				X	City of Monterey Fire Department
<p><b>Existing Setting:</b>  <u>Emergency Preparedness/Emergency Response</u>                      The City of Monterey Fire Department and City of Monterey Police Department coordinate emergency response within the City. The City operates its Emergency Operations Center (EOC) as the center of emergency response coordination and actions. During an emergency, all response activities are managed by the EOC, including information, equipment, volunteers, and other resources. Plans for responses to emergency situations are formulated by fire and police officials, and actions to implement those plans are communicated to emergency response teams that operate out of the EOC and throughout the City. The City also operates the Citizens Emergency Response Training (CERT)</p>					

program. The main goal of the CERT program is to help Monterey residents to be self-sufficient in a major disaster by developing multifunctional teams that are cross-trained in basic skills. The City's emergency response efforts are coordinated under the broader umbrella of the State of California Office of Emergency Services. The County of Monterey also has an emergency response office. The County Environmental Health Division Hazardous Materials Branch and the City of Seaside Hazardous Materials Team would likely be the first agencies to provide support to the City in the event that the City does not have the capacity or capability to fully address a hazard. Both agencies are fully trained and equipped to respond to a variety of hazardous materials related incidents.

### Fire

Fire hazards can generally be divided into two main types: (1) fires within urban areas that primarily involve specific sites and structures; and (2) fires within undeveloped or minimally developed areas, commonly called wildland fires. Most of the land within the present city limits is developed with urban uses. The City of Monterey Fire Department responds to both structure and wildland fires within the planning area. The City of Monterey Fire Department maintains three stations and operates several fire prevention programs. In the event that the City does not have the capacity to safely handle a structural or wildland fire, it can request additional firefighting resources through the Monterey County Mutual Aid Plan. The Monterey County Mutual Aid Plan enables any jurisdiction that participates in the plan to receive support from fire protection services of other jurisdictions that participate in implementing the plan. Response times to nearly all areas of the City are within the Department's recommended range of five to seven minutes.

The Monterey City Code (M.C.C.) Chapter 13, Fire Protection, adopted the California Fire Code. Amendments to this chapter of the code, as well as amendments to the City's General Plan Map 14, Showing Fire Hazard Severity Zones, were adopted by the City Council to be in compliance with legislation (Government Code Section 51175). This legislation calls for the California Department of Forestry and Fire Protection (CAL FIRE) Director to evaluate fire hazard severity in Local Responsibility Areas and make a recommendation to the local jurisdiction when the Very High Fire Hazard Severity Zone (VHFHSZ) exists. Based on the findings of the CAL FIRE Director, there are both High and Very High Fire Hazard Severity Zone within the City of Monterey City limits (See Map 14 at the City's website: <http://www.monterey.org/Portals/0/Policies-Procedures/Planning/GeneralPlan/14-Fire-Zone-Map.pdf>).

### **Discussion:**

**a-d)** The proposed park uses and periodic maintenance do not include new development or other substantial changes to the site that would impact vulnerability to wildfire, impede emergency response access or impede evacuation routes/plans/response. No maintenance infrastructure (roads, fuel breaks, emergency water sources, power lines or utilities) will need to be constructed. People nor structures will be subject to risk from downslopes, flooding or landslides. **No impact** is anticipated.

SUBJECT AREA	Potentially Significant Impact	Less-than-significant with Mitigation	Less-than-significant Impact	No Impact	SUPPORTING INFORMATION
<b>XXI. MANDATORY FINDINGS OF SIGNIFICANCE</b>					
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?		X			City of Monterey, General Plan
b) Does the project have impacts that are individually limited, but cumulatively considerable? (“Cumulatively considerable” means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.)		X			City of Monterey Community Development Department  City of Monterey, General Plan  California Air Resources Board (CARB)
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?				X	City of Monterey, General Plan

**Discussion:**

- a) The proposed project would not degrade the quality of the environment as documented herein. Potential impacts to biological resources and unknown cultural resources have been addressed by proposed mitigation measures 1-4. With the implementation of these **mitigation measures**, the proposed project’s potential impacts would be **less than significant**.
- b) The proposed project would result in **less than significant** impacts to the various resource categories as mitigated. When considered cumulatively along with past, current, and probable future projects that may occur in the area, the proposed project’s contribution is considered negligible and would not be cumulatively considerable.
- c) The proposed project would not result in substantial adverse effects on human beings, directly or indirectly because the site will be utilized for park purposes (positive impact on people). The proposed project has **no impact**.
