

Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

SCH #: _____

Project Title: Orosi High School Recreation Complex Phase 2

Lead Agency: Cutler-Orosi Joint Unified School District

Contact Name: Raffi Soghomonian

Email: RKSoghomonian@cojUSD.org Phone Number: 559-528-4763

Project Location: Orosi, California Tulare County
City *County*

Project Description (Proposed actions, location, and/or consequences).

The proposed project would include the installation of 19 light standards within the previously developed recreational complex area in Orosi, California (see Figure 1). Eight 70-foot light standards would be installed around the existing football field and junior varsity soccer field, six 60- to 80-foot light standards would be installed around the existing baseball field, and five 60- to 70-foot light standards would be installed around the existing softball field. The proposed project also includes the installation of three 960-square foot buildings that would house restrooms and concessions. The existing facilities and proposed facilities are shown on Figure 2.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

Mitigation Measure AQ-1: The following measures shall be implemented by the construction contractor during construction activities:

- All disturbed areas, including storage piles, which are not being activity utilized for construction purposes, shall be effectively stabilized of dust emissions using water, chemical stabilizer/suppressant, covered with tarp/other suitable cover or vegetative ground cover.
- All on-site unpaved roads/off-site unpaved access roads shall be effectively stabilized of dust emissions using water or chemical stabilizer/suppressant.
- All land clearing, grubbing, scraping, excavation, land leveling, grading, cut and fill, and demolition activities shall be effectively controlled of fugitive dust emissions utilizing application of water or by presoaking.
- With the demolition of buildings up to six stories in height, all exterior surfaces of the building shall be wetted during demolition.
- When materials are transported off-site, all material shall be covered, or effectively wetted to limit visible dust emissions, and at least six inches of freeboard space from the top of the container shall be maintained.
- All operations shall limit or expeditiously remove the accumulation of mud or dirt from adjacent public streets at the end of each workday. (The use of dry rotary brushes is expressly prohibited except where preceded or accompanied by sufficient wetting to limit the visible dust emissions.) (Use of blower devices is expressly forbidden.)
- Following the addition of materials to, or the removal of materials from, the surface of outdoor storage piles, said piles shall be effectively stabilized of fugitive dust emissions utilizing sufficient water or chemical stabilizer/suppressant.
- Within urban areas, track-out shall be immediately removed when it extends 50 or more feet from the site and at the end of each workday.
- An owner/operator of any site with 150 or more vehicle trips per day, or 20 or more vehicle trips per day by vehicles with three or more axles shall implement measures to prevent carryout and track-out.

3.7.2 Mitigation Measures Mitigation Measure GEO-1: During construction, if paleontological resources are encountered, all ground-disturbing activities shall be redirected within 50 feet of the find until a qualified paleontologist can be contacted to evaluate the find and make recommendations. If found to be significant and proposed project activities cannot avoid paleontological resources, a paleontological evaluation and monitoring plan to be implemented. Adverse impacts to paleontological resources shall be mitigated, which may include monitoring, data recovery, analysis, final report, and the accession of all fossil material to a paleontological repository. Upon completion of project ground-disturbing activities, a report documenting methods, findings, and recommendations shall be prepared and submitted to the paleontological repository.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

Provide a list of the responsible or trustee agencies for the project.

- * California Department of Education, School Facilities and Transportation Unit
- * Department of Toxic Substance Control
- Division of the State Architect
- California State Clearing House
- Native American Heritage Commission
