EXECUTIVE SUMMARY

Mr. John Piccetti of Columbus Distribution retained Clayton Group Services, Inc. (Clayton), a *Bureau Veritas* company, to conduct a Phase I Environmental Site Assessment of Columbus Salame Company at 493 Forbes Boulevard in South San Francisco, San Mateo County, California (“subject property”). The objective of the assessment was to provide an independent, professional opinion regarding recognized environmental conditions, as defined by ASTM, associated with the subject property. This assessment was requested in association with a property transaction.

This assessment was performed under the conditions of, and in accordance with Clayton’s Proposal Number PR-70ES06.319 dated February 21, 2006, using ASTM E1527-00, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* as a guideline. Any exceptions to, additions to, or deletions from the ASTM guidelines are described in the report. Details of the work performed, sources of information, and findings are presented in the report. Limitations of the assessment are described in Sections 1.2 and 1.3.

The 1.5-acre subject property is developed with an approximately 65,000-square-foot building which is occupied by Columbus Salame Company as a meat processing, packaging and distribution facility. The building was constructed in 1968 for its current purpose, and also contains a two-story office area. A small mechanical building is located on the northwestern portion of the property.

Environmental Summary

The subject property historically maintained four underground storage tanks (USTs) consisting of three 1,000-gallon gasoline tanks and one 10,000-gallon diesel tank. The diesel tank was removed in 1994 and closure was granted in 2003 by the San Mateo County Department of Environmental Health (SMCDEH). The three 1,000-gallon gasoline USTs were located adjacent to one another near the loading docks in the southeast portion of the property and were removed in 1986. Closure was granted for these three USTs in 2004; however, residual contamination remains in the ground.

This ESA has revealed no evidence of *recognized environmental conditions* as defined by ASTM, in connection with the subject property, except the following:

- The known presence of contamination in soil and groundwater beneath the subject property in the former location of the three gasoline USTs is a REC; however, the site has been granted regulatory closure and no further investigation or remediation is recommended.

1.0 INTRODUCTION

Mr. John Piccetti of Columbus Distribution, retained Clayton Group Services, Inc. (Clayton), a Bureau Veritas company, to conduct a Phase I Environmental Site Assessment of Columbus Salame Company located at 493 Forbes Boulevard in South San Francisco, San Mateo County, California (the “subject property”). The objective of the assessment was to provide an independent, professional opinion regarding recognized environmental conditions, as defined by ASTM, associated with the subject property. This assessment was requested in association with a property transaction.

1.1 PURPOSE

The objective of this environmental site assessment is to provide an independent, professional opinion regarding *recognized environmental conditions*, as defined by ASTM, associated with the subject property. The term *recognized environmental conditions* (RECs) is defined as the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be *de minimis* are not RECs.

1.2 METHODOLOGY AND EXCEPTIONS

This assessment was performed under the conditions of, and in accordance with Clayton’s Proposal Number RP-70ES06.319 dated February 21, 2006, using ASTM E1527-00, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* as a guideline.

The assessment included the following components:

- A site walkthrough inspection of the property for visual evidence of potential environmental concerns including existing or potential soil and groundwater contamination, as evidenced by soil or pavement staining or discoloration, stressed vegetation; indications of waste dumping or burial, pits, ponds, or lagoons; containers of hazardous substances or petroleum products; electrical and hydraulic equipment that may contain polychlorinated biphenyls (PCBs), such as electrical transformers and hydraulic hoists; and underground and aboveground storage tanks

- An investigation of historical use of the site by examining locally available aerial photographs (one source) and other readily available historical information such as fire insurance maps for evidence of prior land use that could have led to recognized environmental conditions.
- A review of information available on general geology and topography of the subject property, local groundwater conditions, sources of water, power, and sewer, and proximity to ecologically sensitive receptors, such as streams, that might be impacted by recognized environmental conditions and environmental issues.
- A review of environmental records available from the property owner or site contact including regulatory agency reports, permits, registrations, and consultants' reports for evidence of recognized environmental conditions.
- A site property line visual assessment of adjacent properties for evidence of potential offsite environmental conditions that may affect the subject property.
- A review of a commercial database summary of federal and state regulatory agency records pertinent to the subject property and offsite facilities located within ASTM-specified search distances from the subject property.
- Interviews with key site personnel, as available, regarding current and previous uses of the property, particularly activities involving hazardous substances and petroleum products.
- Review of previous environmental reports of the subject property
- Evaluation of information gathered and development of this report

This assessment did not include sampling or analysis of soil, groundwater or other materials

Resumes for environmental professionals involved in this assessment are included in Appendix A. Photographs taken at the time of the assessment are included behind the *Photographs* Tab.

1.3 LIMITING CONDITIONS OF ASSESSMENT

Information for the assessment was obtained from sources listed in Appendix B. This information, to the extent it was relied on to form our opinion, is assumed to be correct and complete. Clayton is not responsible for the quality or content of information from these sources.

The information and opinions rendered in this report are exclusively for use by Columbus Distribution. Clayton will not distribute or publish this report without consent except as required by law or court order. The information and opinions expressed in this report are given in response to a limited assignment and should be considered and implemented only in light of that

assignment. The services provided by Clayton in completing this project were consistent with normal standards of the profession. No other warranty, expressed or implied, is made.

2.0 SUBJECT PROPERTY DESCRIPTION

2.1 LOCATION AND LEGAL DESCRIPTION

The subject property is known as the Columbus Salame Company and is located at 493 Forbes Boulevard in a commercial and light industrial setting of South San Francisco, San Mateo County, California. (Figures 1 and 2, *Figures Tab*). The San Mateo County Tax Assessor's Parcel Number (APN) for the subject property is 015-082-040. According to the Assessor's Office, the current owner is identified as South City Real Estate Inc. The subject property is zoned for industrial use.

2.2 CURRENT USE OF SUBJECT PROPERTY

The 1.5-acre subject property is developed with an approximately 65,000-square-foot building which is utilized as meat processing, packaging and distribution facility for Columbus Salame Company. This building was constructed in 1968 and also contains a two-story office area. A small mechanical building is located on the northwestern portion of the property. The subject property has operated as a meat processing facility since first construction.

2.3 CURRENT USES OF ADJOINING PROPERTIES

The area surrounding the subject property consists of commercial and light industrial properties. Adjoining properties were observed (from the subject property or from public access areas) for signs of recognized environmental conditions and their potential to pose an environmental concern to the subject property (Figure 2, *Figures Tab*). The uses and features of adjoining properties are described below.

North: Railroad tracks with Pitco International beyond (437 Rozzi Place)

East: Genentech office building (501 Forbes Boulevard)

South: Forbes Boulevard with an undeveloped area beyond. A building undergoing demolition is located to the southwest (formerly Jessica McClintock, 494 Forbes Boulevard). Cell Genesys is located to the southeast (500 Forbes Boulevard).

West: Pacific-Agri Products (477 Forbes Boulevard)

The adjoining properties do not appear to present an environmental concern to the subject property, based on visual observations and information obtained during this assessment. The adjacent properties are further discussed in Section 4.0.

2.4 PHYSICAL SETTING

According to the United States Geological Survey's (USGS) 1995 *7.5-Minute Series San Francisco South, California Quadrangle Topographic Map*, elevations at the subject property range from 40-50 feet above mean sea level (amsl). The topography of the subject property is relatively flat. The regional topography slopes downward to the southeast. San Francisco Bay is the nearest surface water body to the subject property, located about ½ to ¾ miles to the north, east, and south.

According to the United States Department of Agriculture's (USDA) June 1991 *Soil Survey of San Mateo County, Eastern Part, and San Francisco County California*, soils at the subject property and vicinity are described as Urban land and Urban land Orthents, reclaimed complex. It is reported that this area is predominantly covered with asphalt and buildings. The soils in the area are reported as fill consisting of soil material, gravel, broken cement and asphalt, bay mud, and solid waste material.

According to a 2004 soil and groundwater investigation conducted at the subject property (see Section 3.6), soils at the subject property consist of sand and silty sand to a depth of approximately 22 feet bgs. Groundwater was encountered at depths of 16 to 18 feet bgs. Investigations at the western adjacent property have measured groundwater flow to the north-northwest (see Section 4.0).

3.0 HISTORICAL AND AGENCY REVIEW

3.1 AERIAL PHOTOGRAPHS

Aerial photographs, including the subject and nearby properties, were reviewed at Pacific Aerial Surveys in Oakland, California. Aerial photographs reviewed are summarized as follows:

- **1938 Aerial Photograph No. AV08-05; Scale: 1"= 1,666'**

The subject property and adjoining properties appear to be vacant and undeveloped with no distinguishable land features.

- **1946 Aerial Photograph No. AV9-12-5; Scale: 1"= 1,966'**

The subject and adjoining properties generally appear as they do in the 1938 aerial photograph.

- **1958 Aerial Photograph No. AV-279-10-25; Scale: 1"= 600'**

The subject and adjoining properties generally appear as they do in the 1946 aerial photograph.

- **1969 Aerial Photograph No. AV-933-07-15; Scale 1"= 1,000'**

The subject property appears to be developed with a structure generally resembling the existing structure. The area surrounding the building appears to be a paved parking area. Several automobiles are parked in the lot, and several large trucks are parked in the northern portion of the subject property. The northwest portion of the subject property consists of a parking area. What appear to be railroad tracks now border the subject property to the north. Adjacent properties appear similar to their current developments.

- **1975 Aerial Photograph No. AV 1188-06-1, Scale: 1"= 1,000'**

The subject and adjoining properties generally appear as they do in the 1969 aerial photograph.

- **1981 Aerial Photograph No. AV 2020-06-1, Scale: 1"= 1,000'**

The subject and adjoining properties generally appear as they do in the 1975 aerial photograph.

- **1989 Aerial Photograph No. AV-3556-6-19, Scale: 1"= 1,000'**

The subject and adjoining properties generally appear as they do in the 1981 aerial photograph.

- **1995 Aerial Photograph No. AV4916-7-16, Scale: 1"= 1,000'**

The subject and adjoining properties generally appear as they do in the 1989 aerial photograph.

- **1997 Aerial Photograph No. AV 660-7-17, Scale: 1"= 1,000'**

The subject and adjoining property generally appear as they do in the 1995 aerial photograph.

No readily apparent evidence of environmental concerns at the subject property or nearby properties was noted in the aerial photographs reviewed, except that the subject property and vicinity appeared to be developed from at least 1969 to 2000.

3.2 USGS TOPOGRAPHIC MAPS

Topographic maps published by the USGS for the subject property and nearby properties were obtained from the University of California at Berkeley. Topographic maps reviewed are summarized below:

- **1947 7.5-Minute Series San Francisco South, California Quadrangle Topographic Map; Scale: 1:24,000**

The subject property and adjoining properties contain no structures or other land features.

- **1956 7.5-Minute Series San Francisco South, California Quadrangle Topographic Map; Scale: 1:24,000**

The subject and adjoining properties generally appear as they do in the 1947 topographic map, except a feature labeled as a gravel pit is located on the western portion of the subject property and on the western adjoining property.

- **1968 (Photorevised from 1956) 7.5-Minute Series San Francisco South, California Quadrangle Topographic Map; Scale: 1:24,000**

The subject property appears to be developed with a structure that generally resembles the existing main building. A street resembling Forbes Boulevard now borders the subject property to the south. Railroad tracks now border the subject property to the north. The adjoining properties are depicted as containing structures resembling the existing structures.

- **1973 (Photorevised from 1968) 7.5-Minute Series San Francisco South, California Quadrangle Topographic Map; Scale: 1:24,000**

The subject property generally appears as it does in the 1968 topographic map. The adjoining property to the southeast is developed with a structure generally resembling the existing building. The adjoining property to the north now is developed with a third building and generally resembles the existing structures.

- **1980 (Photorevised from 1968) 7.5-Minute Series San Francisco South, California Quadrangle Topographic Map; Scale: 1:24,000**

The subject and adjoining properties generally appear as they do in the 1973 topographic map.

- **1995 (Photorevised from 1968) 7.5-Minute Series San Francisco South, California Quadrangle Topographic Map; Scale: 1:24,000**

The subject and adjoining properties are shaded gray indicating development throughout the vicinity.

No readily apparent evidence of environmental concerns on the subject or adjoining properties was noted in the topographic maps reviewed, except that the subject property and vicinity appeared to be industrially developed from at least 1968 to 1995. In addition, a feature labeled as a gravel pit was located on the western portion of the subject property and on the western adjoining property from at least 1956 to 1995; however, the subject property was developed in 1968.

3.3 FIRE INSURANCE MAPS

Fire insurance maps that include the subject property and adjoining properties were requested from EDR. According to EDR, fire insurance maps covering the area of the subject property and adjoining properties were not available.

3.4 CITY DIRECTORIES

City directory research, of the subject and nearby properties on Forbes Boulevard was requested from EDR. EDR provided a city directory abstract that included a search of Haines Criss Cross Directories from 1971 to 2002, in approximately 5-year increments. According to the abstract, the subject property address was not listed in the researched directories from 1971 through 2002. The only adjoining property on Forbes Boulevard identified was Pacific Agri Products on the western adjoining property from 1981 to 2002.

No readily apparent evidence of environmental concerns at the subject or adjoining properties was noted in the city directory abstract reviewed.

3.5 AGENCY CONTACTS

3.5.1 Building, Planning, and/or Zoning Departments

Building Department files associated with the subject property were reviewed at the South San Francisco Building Department (SSFBD) to obtain information regarding the subject property. Records on file for the subject property address are summarized below:

Date	Description
7/14/67	Building, electrical, and plumbing permits for San Francisco Sausage Company for the construction of

Date	Description
	a building for meat processing
1/25/68	Plumbing permit for San Francisco Sausage Company for the installation of lawn sprinklers
June 1971	Building plans for an addition or modification of the existing building, and lighting details. Details illegible.
2/25/75	Electrical permit for San Francisco Sausage Company for the relocation of light fixtures
3/5/75	Electrical permit for San Francisco Sausage Company for a new gasoline dispenser
7/24/75	Letter from the County of San Mateo Health Division to Columbus Salami regarding the installation of boilers and proper piping.
January 1976	Building plans for the addition of a second floor
1/26/76	Building Permit for San Francisco Sausage Company for the addition of a new boiler room
6/3/76	Building permit for San Francisco Sausage Company for the removal and replacement of 1,200 square foot concrete floor
6/18/76	Plumbing permit for San Francisco Sausage Company for the installation of 2 floor drains
6/21/76	Electrical Permit for San Francisco Sausage Company for the installation of 2,000 Amp electrical service
July 1976	Plans for the installation of a new transformer, and the removal of the existing transformer in the northern portion of the subject property
7/21/76	Plumbing permit for San Francisco Sausage Company for the installation of water piping
9/27/76	Building permit for San Francisco Sausage Company for the installation of 4 evaporator units and 1 condenser
October 1976	Revised plans for the addition/alteration to the northwest corner of the existing building
10/7/76	Building permit for San Francisco Sausage Company for the alteration of the drip room and boiler room
1/4/77	Building permit for San Francisco Sausage Company for the alteration of existing covered dock and modification of offices
1/21/77	Plumbing and electrical permits for San Francisco Sausage Company for the installation of a new boiler

Date	Description
6/1/77	Building, electrical, and plumbing permits for San Francisco Sausage Company for interior modification to offices and restrooms
3/3/78	Electrical permit application for San Francisco Sausage Company
1/1/79	Plumbing and mechanical permits for San Francisco Sausage Company for the installation of 2 floor drains and 2 fixtures or traps
2/16/79	Building permit for San Francisco Sausage Company for the alteration of a 20' x20' mezzanine in general storage area
10/1/79	Electrical permit for San Francisco Sausage Company
9/26/80	Electrical permit for San Francisco Sausage Company Columbus Salami for the installation of a 60 hp, and a 10 hp generator
5/19/81	Building permit for Columbus Salame to demolish non-bearing walls and interior fixture work
1/26/81	Building permit for San Francisco Sausage Company for the addition of new second floor salami drying room
6/10/81	Plumbing and mechanical permit application for the installation of 4 sinks and 1 drain, including the installation of new water piping
6/15/81	Electrical permit for Columbus Salame
6/28/81	Electrical permit for Columbus Salame
9/24/82	Building, plumbing, and mechanical permits for San Francisco Sausage Company for the construction of a 20 foot by 20 foot spice mezzanine, including 2 floor drains, and sewer additions
8/15/91- 2/12/92	Correspondence between the City of South San Francisco, San Francisco Sausage Company Columbus Salami, and an architect for the addition of a second floor
3/10/83	Engineering Calculations for an overhead rail system
5/2/83	Plumbing permit for Columbus Salame for the installation of 4 drains and 4 waste repair vents
5/11/83	Building permit for Columbus Salame for cutting a 5' by 7' doorway
7/6/83	Building permit for San Francisco Sausage Company for the replacement of stud wall with concrete block and install overhead rail system.
9/9/83	Structural Calculations conducted by Lawrence Ray Jay Associates Inc. Consultant Engineers for building addition.

Date	Description
1/16/84	Building permit application for San Francisco Sausage Company for the construction of a free standing utility structure with parking underneath
3/12/84	Plumbing and electrical permit for Columbus Salami for the installation of 7 floor drains and 4 rainwater drains
9/13/84	Plumbing permit for Columbus Salame for 2 over 50 hp, 1,750 btu generator, 1 evaporator cooler, and 2 10MCFM ceiling fans
6/10/85	Building permit for San Francisco Sausage Company for the addition of a 2 story mechanical area
8/14/85	Plumbing permit for San Francisco Sausage Company for the installation of 3 sinks, 10 floor drains, 2 rainwater drains, 5 gas piping outlets and 1 water pipe. Completed in 1986.
March 1986	Plans for the installation of a separator in the southeast corner near the existing loading dock
3/12/86	Building permit for San Francisco Sausage Company for a new debris enclosure and sidewalk
5/21/86	Building permit for San Francisco Sausage Company for the alteration of the existing roof for new equipment, and a penthouse and framing design
11/26/85	Electrical permit for San Francisco Sausage Company for the installation of 3 compressors, 2 fans, and 2 evaporator coolers
4/8/88	Plumbing and mechanical permits for San Francisco Sausage Company for the installation of a new flue and 50 hp and 1750 btu generator
5/17/88	Plumbing permit for San Francisco Sausage Company for the installation of a sprinkler system
6/18/88	Electrical permit for San Francisco Sausage Company for the installation of 5 ceiling outlets, 3 5kw, 1 hp, and .75 kw per hp
12/10/2004	Electrical permit for the replacement of existing 2,000 amp service with 4,000 amp service and CMU exterior enclosures
3/16/2005	Building Permit to install an emergency ammonia discharge tank
8/29/2005	Building Permit to install a new outdoor accessory building for Nema I enclosure

No readily apparent evidence of environmental concerns at the subject property was noted in the building permits reviewed, except for a 1975 electrical permit for San Francisco Sausage Company for a new gasoline dispenser, and the presence of a separator in 1986.

3.5.2 Fire Department

The City of South San Francisco Fire Department (SSFFD) was contacted to obtain information regarding the subject property. According to a staff member of the SSFFD, records regarding hazardous materials, USTs, ASTs, spills, and releases are maintained by the San Mateo County Department of Environmental Health. The SSFFD has records on file regarding the 1994 removal of a 1,000-gallon “tank” as well as yearly fire inspection reports. No findings of environmental concern were indicated on the inspection reports. A November 2005 letter referenced the plans for connecting the vent pipes within the building to a 15,000-gallon water tank located in the northwest exterior of the property for emergency ammonia discharge.

3.5.3 Departments of Health/Environmental Services

The San Mateo County Department of Environmental Health (SMCDEH) was visited on March 2, 2006, to obtain information regarding the subject property. The following records on file for the subject property are summarized below:

Date	Description
5/31/85	Underground Storage Tank Permit Application for two 1,000-gallon unleaded gasoline tanks reportedly installed in 1975, and one 10,000-gallon diesel #2 oil tank reportedly installed in 1976
9/19/85	Interim Permit for storage of hazardous materials in two 1,000-gallon unleaded gasoline tanks, and one 10,000-gallon diesel #2 oil tank.
12/23/85	Underground Storage Tank Permit Application for the following tanks: <ul style="list-style-type: none"> • Two 1,000-gallon single-walled unleaded fuel tanks installed in 1975. • One 1,000-gallon single-walled tank installed in 1968, abandoned in 1975 by filling with water, and re-discovered 12/85. • One 10,000-gallon single-walled diesel #2 oil tank installed in 1976.
1986-1991	Accutite tank tightness inspection forms for a 10,000-gallon diesel UST. The tank was reportedly tight during all inspections, except for 1987 where the tank reportedly was not certified as being tight.
1/16/86	Interim Permit for the storage of hazardous materials in two 1,000-gallon unleaded fuel tanks, and one 10,000-gallon diesel #2 oil tank. One additional tank containing water is listed but scratched out. It is noted that a total of four tanks are authorized under this permit.
3/4/86	Underground Tank Program – Initial Permit Inspection Form. It is noted that a suction system is connected to all 3 tanks.
3/4/86	Certificate of Completion of Initial Inspection. This document certifies that an initial permitting inspection was completed by SMCDEH. Based on this inspection, the need for precision tank/pipeline testing, and a monitoring plan were required.
3/13/86	SMCDEH memo indicating that this facility has 3 USTs.

Date	Description
8/21/86	Letter from Columbus Salame to the SMCDEH regarding tightness testing for tank #3 the 10,000-gallon tank. In addition tanks #1 and #2 are scheduled for removal in September 1986.
11/7/86	Application for Permit to Abandon Underground Hazardous Storage Tank. Oil Heat Engineers is identified as the contractor to remove three 1,000 gallon steel gasoline tanks.
11/10/86	Handwritten notes by SMCDEH staff that observed the removal of two USTs, noting observation of what appeared to be gasoline-contaminated water in the excavation pit. The water was to be pumped out and additional soil excavated. It is noted that it was not possible to excavate the third gasoline tank at that time.
11/12/86	Handwritten notes by SMCDEH staff that witnessed the removal of a 1,000-gallon gasoline UST. The tank was observed to be intact. Two soil samples were collected, one at each end of the pit. The soil stockpile appeared to be clean with no odor. Soil sample results from 11/10/86 are noted but sample locations are not provided. It is noted that further excavation and aeration are planned.
11/13/86	Handwritten notes stating soil sample results of 10 ppm, and 79 ppm (sample locations not provided). Based on these results, backfilling of the tank removal excavation pit was approved on 11/12/86.
11/18/86	Letter from SMCDEH to San Francisco Sausage Company stating that a final permit for operation of the UST will be issued once inventory reconciliation records for the previous ninety days showing over and short measurement are within the allowable error requirement, and document verifying meters have been installed and are operating properly.
11/20/86	Handwritten notes by SMCDEH staff indicating a site visit and collection of vapor readings of a stockpile. Two readings were over 100 ppm. It was determined that further aeration is needed, and the "hole needs to be further excavated and soil aerated."
12/2/86	Handwritten notes by SMCDEH during gas tech sampling of stockpile. It was reported that vapors were not detected.
12/3/86	Handwritten notes by SMCDEH staff following additional excavation on the contaminated hole indicate that soil samples were collected at the time of the excavation and verbal results indicate 232 ppm and 10 ppm (constituents not identified). Further excavation was witnessed at the time of this visit to about 12 feet. Backfill of clean fill was approved. Soil removed at the time of this visit and during excavation the week before was to be aerated.
12/18/86	Handwritten notes by SMCDEH staff at the time of a site inspection. It was observed that the excavated hole had been backfilled, and the excavated soil was aerating.
12/30/86	Handwritten notes by SMCDEH staff at the time of a site visit. Gas tech readings of the aerating soil were taken. Vapors were not detected and the soil was approved for removal.
5/13/87	Hazardous Materials Inventory for San Francisco Sausage Co. Inc., includes: 84 gallons Sodium Hypochloride 55 gallons Polymethacryl Acid and Sodium salt

Date	Description
	110 gallons Gear Oil 1,000 lbs Detergent 10,000 gallons of Diesel Fuel #2 55 gallons of paint thinner (petroleum Naphtha) 55 gallons of Sanifoam Detergent 55 gallons of Caustic Soda-Sodium Hydroxide 500 gallons of Sanitizer (quaternary ammonium chloride) 600 lbs Prem Chem Detergent 3,000 lbs of ammonia 4,000 lbs of Freon
1991-2001	Hazardous Materials Business Plan Inspection/Review Report forms. No major violations.
3/20/91	Hazardous Waste Generator Inspection Report for San Francisco Sausage Company. The waste generated is identified as approximately 30-gallons waste oil per month. It is noted that proper labeling is needed, and that proper secondary containment is necessary for drums. It is also mentioned that waste oil needs to be removed every 90 days and the receipt of pick up must be kept on site.
3/21/91	Letter from SMCDEH stating that the facility has not been issued a final permit to operate hazardous materials USTs.
4/18/91	Underground Storage Tank Permit Application for Columbus Salame for a new permit. The following tanks are identified: <ul style="list-style-type: none"> • One 1,000-gallon single walled unleaded fuel tank installed in 1975, indicated as removed. • One 1,000-gallon single walled premium unleaded fuel tank installed in 1976, indicated as removed. • One 1,000-gallon single walled leaded fuel tank installed in 1968, indicated as removed. • One 10,000-gallon single walled diesel and aviation gas tank installed in 1976. This tank is identified as the purpose for the new permit.
8/12/92	Hazardous Waste Generator Inspection Report for San Francisco Sausage Company. No violations noted. The waste generated is identified as approximately 30 gallons of waste oil per month.
9/12/92	Application for Permit to Close Underground Hazardous Material Storage Tank for Columbus Salame. The tank was identified as a 10,000-gallon single-walled steel tank. The chemical composition of materials currently or previously stored in the tank was identified as diesel fuel and heating oil.
10/30/92	Permit to operate Hazardous Materials Underground Storage Tanks for Columbus Salame. The tank was identified as one 10,000-gallon diesel tank.
10/30/92	Underground Tank program Official Inspection Report for one 10,000-gallon diesel UST. No

Date	Description
	violations were noted. Comments on the inspection report indicate the owner needs to comply with new underground storage tank regulations by January 1, 1993.
8/11/93	Underground Tank Program Official Inspection Report for one 10,000-gallon diesel UST. No violations noted; however, comments indicate that San Francisco Sausage Co. needs to submit written monitoring plans that comply with new UST regulations by 9/11/93.
12/17/93	Underground Tank Program Official Inspection Report. Comments indicate that the owner needs to comply with UST regulation by January 17, 1994. Noted as a major violation.
February-March 1994	Accutite tank tightness inspection forms for a 10,000-gallon diesel UST. The tank was determined to be tight.
9/8/94	Underground Storage Tank Permit Application for Columbus Salame. The tank is identified as a 10,000-gallon single walled steel tank
1/21/94	Underground Tank Program Official Inspection Report indicating (apparently erroneously) that this is the initial inspection. Three 1,000-gallon gasoline USTs are identified as having been removed, and one 10,000-gallon diesel UST as remaining. Notes state that SMCDEH staff met with the owner, who requested another 30 days to decide about keeping the remaining diesel UST.
9/12/94	Environmental Health Permit issued to Columbus Salame for removal of the diesel UST.
11/4/94	Handwritten notes taken by SMCDEH staff at the time of extraction of a 10,000-gallon diesel UST in the northern portion of the subject property: Two soil samples were collected at the base of the excavation. No odor was observed; possible discoloration was noted in soil but was thought to be bay mud. Four discrete samples were collected from the stockpile. The inspector witnessed pit and stockpile samples. The tank was strapped down to a slab pit and that soil samples were obtained at the slab interface. Line sampling was to be scheduled in the future.
11/4/94	Underground Tank Program Official Inspection Report for the removal of a 10,000-gallon diesel tank. The tank was reportedly in good condition with no signs of holes; however the tar wrap at the fill end of the tank was partially dissolved. No water was reportedly in the excavation and Elizabeth Ronan of SMCDEH oversaw all sampling. It is reported that associated piping had yet to be removed and soil samples were not collected near the piping .
11/7/94	Handwritten notes taken by SMCDEH staff at the time of supply line sampling three days after the 10,000-gallon diesel UST removal: Soil samples taken at 2' each. Sample #4 was reportedly collected from soil that had "some sheen on the soil pooled with rainwater." Rainwater was pumped out and soil was excavated with shovels and a soil sample taken. Soil samples were wet and SEMCO did not have an ice chest onsite. The pit was backfilled.
12/20/94	Tank Removal Report for the diesel UST prepared by SEMCO Environmental Contractors & General Engineering. The scope of work is described as removal of one 10,000-gallon diesel tank on November 4, 1994. It was reported that the tank was in good condition with no holes, and that soil appeared to be clean and free of odor. Soil samples were collected from each end of the excavation at

Date	Description
	a depth of 11 feet 6 inches, and four samples were collected from the stockpiled soil. The samples were analyzed for Total Petroleum Hydrocarbons as Diesel (TPH-d), Total Petroleum Hydrocarbons as Gasoline (TPH-g), and Benzene, Toluene, Ethyl Benzene, and Xylenes (BTEX). Laboratory results were non detect for all constituents analyzed for (See Appendix D).
6/20/96	Hazardous Waste Generator Inspection Report for San Francisco Sausage Company. No major violations noted; however, it is noted that proper labeling is needed for waste oil drums and accumulation dates. It is recommended that waste solvent be stored in a separate container.
7/14/98	Extremely Hazardous Materials (EHM) Registration Form for 4,000 lbs of ammonia gas
1998-1999	<p>Hazardous Materials Management Plan (HMMP) for San Francisco Sausage Company. The following chemicals and their maximum daily amount are identified as being stored onsite:</p> <ul style="list-style-type: none"> • 265 gallons Sodium Hydroxide • 265 gallons Alkaline cleaner foam detergent • 200 gallons phosphoric acid • 1,000 gallons diesel fuel • 2,000 lbs Freon-22 • 6,000 lbs ammonia refrigeration gas • 110 gallon Potassium Sulfite (boiler treatment) • 110 gallons Polymethacrylic Acid (boiler treatment) • 110 gallons Sodium hydroxide solution (boiler treatment) • 165 gallons hydraulic oil 46 <p>It is noted that 300 gallons per year of waste oil are generated on site.</p>
8/2/01	Hazardous Waste Generator Inspection Report for San Francisco Sausage Company. The hazardous waste generated is identified as 4 drums of waste oil every 6 months. It is noted that updated documentation and labeling are needed. In addition, chemicals and waste oil need to be stored in proper secondary containment. Also, a 1,000-gallon diesel AST was observed that needed to be registered with Regional Water Quality Control Board (RWQCB).
8/2/01	Certified Unified Program Agency (CUPA) Spill Prevention Control and Countermeasure (SPCC) Plan Status/Referral Form for San Francisco Sausage Company. A copy of this form was forwarded to Julie Menack of the RWQCB. It indicates that the owner or operator is unaware of the Aboveground Tank Storage Act.
11/2/01	Letter from Julie Menack of the RWQCB to the San Francisco Sausage Company regarding compliance with the Aboveground Petroleum Storage Act. The letter states that the facility currently has aboveground petroleum storage in quantities requiring compliance with California Health and Safety.
4/7/03	SMCDEH no further action letter for the 10,000-gallon diesel UST.
7/1/2003	Permit # 03-1250 for the maintenance of ASTs/SPCCs, the storage of hazardous materials (less than 1,199 gallons) and the generation/recycling of waste oil. Permit valid until 7/1/2008.

Date	Description
9/27/2004	<i>Results of Soil and Groundwater Sampling</i> report, prepared by EKI for closure requirements regarding the three 1,000-gallon USTs removed in 1986.
12/20/2004	SMCDEH Letter "Removal of Underground Storage Tanks in 1986" granting no further action status
3/9/2005	Hazardous Waste Generator Inspection Report. The only recommendation cited is, "close all waste containers, empty containers must be managed properly and label hazardous waste storage area."

According to its closure letter, the SMCDEH reviewed the soil and groundwater report, and after discussing the case with the San Mateo County's Groundwater Protection Program, indicated that no further action was required, although residual contamination was noted to remain onsite. A copy of this letter is included as Appendix D.

No readily apparent evidence of environmental concerns at the subject property was noted in the SMCDEH permits reviewed, except historically there have been four USTs located on the subject property and the lack of secondary containment for aboveground storage of materials. No written report was found for three of the tank removals; however, their removal is well-documented. The historical USTs and associated removal and investigations are discussed in Section 3.6. The waste oil tank area was investigated in 2004 (see Section 3.6) and waste oil is currently stored within a secondary containment structure.

3.5.4 Regional Water Quality Control Board

The Regional Water Quality Control Board (RWQCB) San Francisco Bay Region office was contacted on February 23, 2006 regarding any files associated with the subject property. According to Ms. Melinda Wong, there are no files associated with the subject property on file with the RWQCB.

3.6 PREVIOUS ENVIRONMENTAL REPORTS

During this assessment, Clayton reviewed the following documents associated with the subject property:

Phase I Environmental Site Assessment, conducted by Clayton, dated April 16, 2003

The Phase I identifies the property and onsite operations to be similar to the current observations. Recognized environmental conditions and other concerns were identified as follows:

1. The historical presence of four (4) USTs, with evidence of a release observed during removal of the three gasoline USTs. Clayton recommended a subsurface investigation in the area of these former USTs.

2. The presence of seven (7) 55-gallon drums of waste oil in the northwestern portion of the subject property. The drums appeared to be in good condition; however, staining was observed on the concrete in the area and the concrete was cracked. Clayton recommended advancing a soil boring in this area to evaluate the subsurface conditions.
3. The lack of a Spill Prevention Control and Countermeasure Plan (SPCC) for the aboveground storage of materials. (The subject property has since implemented an SPCC plan).
4. The western adjoining property is indicated to be an active Leaking Underground Storage Tank (LUST) site with groundwater impacted, and the downgradient extent of the groundwater plume not defined. The SMCDEH had requested that a downgradient well be installed. Clayton recommended that results of the downgradient investigation be reviewed by the subject property owner to ensure that the subject property had not been impacted by this offsite release. See Section 4.0 for current information regarding this site.

Results of Soil and Groundwater Sampling report, conducted by Erler & Kalinowski, Inc. (EKI), dated September 27, 2004

Soil and groundwater sampling was conducted at the subject property in July 2004 to evaluate the conditions onsite and obtain closure from the SMCDEH for the three USTs formerly located adjacent to the loading dock area (removed in 1986). Three boreholes were advanced to approximately 22 feet bgs. Soil and groundwater samples were analyzed for total petroleum hydrocarbons as gasoline (TPH-g), benzene, toluene, ethylbenzene, and xylenes (BTEX), diisopropyl ether (DIPE), ethyl terty-butyl ether (ETBE) methyl tert-butyl ether (MTBE) and tert-butyl alcohol (TBA) 1,2-dichloroethane (EDC), 1,2-dibromoethane (EDB) and ethanol. Soil analytical results reported detectable concentrations of TPH-g, BTEX and EDC in the vicinity of the former UST excavation. TPH-g was detected in soil at 244,000 ppb and xylenes were detected in soil up to 9,770 ppb collected from the backfill material in borehole B-2; these concentrations exceed their respective RWQCB environmental screening levels (ESLs) of 100,000 ppb and 1,500 ppb, respectively. EDC was detected at 9.63 ppb, which exceeds its ESL of 4.5 ppb. For groundwater, TPH-g was detected up to 711 ppb and EDC was detected at 40 ppb, exceeding their respective ESLs of 100 ppb and 0.5 ppb. Ethylbenzene and xylenes were also detected above their ESLs at 40 ppb and up to 111 ppb (ESLs were 30 and 13 ppb, respectively). The report was submitted to the SMCDEH for review.

Summary of Analytical Results for Soil Samples Collected From the Drum Storage Area, conducted by EKI, dated September 28, 2004

In response to Clayton's identification of stained and cracked concrete in the area of the waste oil storage enclosure, EKI conducted soil sampling in this area to evaluate soil conditions. A shallow borehole was advanced to 2 feet bgs. Soils encountered did not indicate a visible

indication that a release had occurred. Two soil samples were collected and analyzed for total extractable petroleum hydrocarbons (TEPH). TPH-d was detected at 25.31 ppb in the 0.75 to 1.25 feet bgs range and at 19.10 ppm in the 2.0 to 2.5 feet bgs range. TPH as motor oil was detected at 59.10 in the 0.75 to 1.25 feet bgs range and at 45.60 ppm in the 2.0 to 2.5 feet bgs range. The RWQCB ESL for shallow soils with commercial/industrial land use where groundwater is a current or potential source of drinking water is 100 ppm for both analytes. Therefore, concentrations of analytes did not exceed their ESLs.

3-Step Transaction Screen, prepared by Clayton, dated September 28, 2005

At the time of this assessment, conditions at the property were similar to the current conditions of the property.

Based upon review of these documents, no outstanding environmental concerns remain, with the exception of residual contamination in the area of the three USTs.

3.7 SUMMARY OF HISTORICAL REVIEW

The historical research conducted during this assessment has established the obvious uses of the subject property since 1938. Historically, the subject property was undeveloped from at least 1938 to around 1968. From 1968 to the present, the subject property has been developed for the processing, packaging, and distribution of salame. The subject property formerly maintained four USTs which were installed in 1968 and 1975. Three 1,000-gallon gasoline USTs were removed from the property in 1986 and received closure from the SMCDEH in 2004. One 10,000-gallon diesel fuel UST was removed in 1994 and received closure in 2003. No further action is currently required by the SMCDEH with respect to residual soil and groundwater impacts onsite.

4.0 STANDARD ENVIRONMENTAL RECORD SOURCES, FEDERAL, STATE, AND LOCAL

Available government database information prepared by EDR was reviewed to evaluate both the subject property and any listed sites within ASTM-recommended search distances which could potentially impact the subject property. Federal, state, and local databases reviewed are included in Appendix C.

4.1.1 Subject Property

The subject property was identified as in the Historical UST (HIST UST), the SWEEPS UST (former UST database-no longer maintained) and the California Facility Inventory Database (CA FID UST) databases associated with the presence of four historical USTs. Information regarding the four historical USTs and associated closure is detailed in Section 3.6. The subject property is

also identified in the San Mateo County Business Inventory (BI) as 1) a site maintaining an AST/SPCC plan, 2) a generator and recycler of waste oil/solvent, 3) a UST site (this listing is outdated as no USTs remain onsite) and 4) a facility storing hazardous materials no greater than 1,199 gallons. No environmental liens appear to be on record.

4.1.2 Adjacent Properties

The eastern adjacent property is identified under the name of Repro Media (501 Forbes Boulevard) in the San Mateo County BI as a conditionally-exempt generator of special wastes. No violations or indications of releases were noted. This property is also identified in the HAZNET and San Mateo County BI databases under the current tenant name, Genentech, Inc. Building 54. The HAZNET listing is in regards to the generation of metal sludge and photochemicals/photoprocessing waste, which was disposed of offsite by a recycler. The BI listing is in regards to the storage of less than 219 gallons of material. This property is also listed under the name of A B Dick Company in the RCRA-SQG database with no violations on record. No evidence of a release at eastern adjacent property is noted in the databases listed.

The western adjacent property is identified in the Resource Conservation and Recovery Act-Small Quantity Generator (RCRA-SQG) database under an apparent former tenant name of Performance Contracting, with no violations on record. This property is also identified in the LUST and Cortese databases under the name of Monfredini Property (as identified in Clayton's 2003 report). Clayton reviewed files associated with this site at the SMCDEH. This site is identified as an active LUST site for a release in 1986 and is undergoing investigation and remediation. The release area was located on the western side of the current Pacific-Agri Products building. Remedial efforts included quarterly monitoring and quarterly injections of hydrogen peroxide into Monitoring Well 1 (MW-1), which is in the area of the former UST excavation. Based upon a 1999 investigation, groundwater was expected to flow to the southeast. Since that time, groundwater flow has been consistently measured to the north-northwest, which is generally away from the subject property. Based upon the results of the most recent sampling at this western adjacent property, detailed in the *First Semi-Annual Groundwater Monitoring Report*, prepared by TEC, dated April 18, 2005, the highest levels of contamination are present near the UST excavation pit, where TPH-g was detected at 73,400 ppb, benzene at 11,100 ppb, and methyl tertiary butyl ether (MTBE) at 373 ppb. The monitoring wells located closest to the western boundary of the subject property (MW-2 and MW-4) were non-detect for constituents and have been non-detect since 2003. The groundwater plume has remained stable and defined to the northeast, east and south of the UST area. According to current file information, further delineation of the groundwater plume will be conducted to define the extent of contamination to the northwest and west of the plume. A second attempt letter from the SMCDEH to the property owner, dated November 2005, indicated that a work plan to establish the lateral extent of contamination on the property had not been submitted.

The southeastern adjacent property (across Forbes Boulevard), Cell Genesys (500 Forbes Boulevard), is identified in the RCRA-SQG database as a small generator with no violations on record. This property was also identified under the name of Hasbro in the HAZNET, LUST and San Mateo County BI list. The LUST status was granted closure in 1999.

In addition, Stelling Property, 485-489 Cabot Road, located approximately 0.21 mile south-southwest of and topographically crossgradient to the subject property is identified on the HAZNET and LUST databases. The LUST status is identified as "pollution characterization."

No other active sites located cross to upgradient from the subject property have cases involving groundwater are identified within a ¼-mile radius of the subject property. A complete list of sites is included in the EDR report in Appendix C.

Unmappable sites cannot be plotted with confidence, but can be located by zip code or city name. In general, a site cannot be geocoded due to inaccurate or missing information in the environmental database record provided by its applicable agency. Cross referencing addresses and site names, as well as a visual reconnaissance of surrounding properties, has been completed for the unmappable facility sites. The subject and adjacent properties were not identified on the unmappable sites listing in the environmental database report. No unmappable sites were identified with the potential to impact the subject property.

5.0 SITE RECONNAISSANCE AND INTERVIEWS

Ms. Marie Solum, Environmental Consultant from Clayton's San Francisco Regional Office, conducted the site walkthrough portion of the assessment on February 27, 2006, accompanied by Mr. Matthew Gatto, Assistant Project Manager of Columbus Salame. Clayton was provided full access to the interior and exterior portions of the subject property.

5.1 GENERAL OBSERVATIONS

At the time of the walkthrough, the areas associated with the subject property appeared to be in good condition.

Main Building

The building contains a product display area in the southern portion of the first floor. A second-story office area is located in the southern portion of the building. A loading dock area is located in the southeastern portion of the building. The loading dock area contains three docks with mechanical levelers.

The majority of the building is utilized for the processing and storage of meat products.

Mechanical Building

The mechanical building is located to the northwest of the main building

In the western portion of the ground floor are two ammonia aboveground storage tanks (ASTs) containing liquid ammonia for the facility's refrigeration system. The ASTs appeared to be in good condition with no visible signs of leakage. In the southeastern portion of the mechanical building is a 1,000-gallon diesel AST enclosed within the building's back up generator. The second floor of the mechanical building contains the associated piping and equipment for the distribution of the ammonia gas to the main building for refrigeration purposes.

Exterior Areas

An underground separator unit is located within a small structure adjacent to the loading docks, in the southeast corner of the property. All interior drains of the main building meat processing area reportedly are piped into the separator, solids are skimmed off, and the remaining liquid is discharged to the sanitary sewer. Discharged water is sampled for analysis on a quarterly basis.

The northern portion of the subject property is utilized for miscellaneous storage. A dumpster is located in the northeast corner of the property. Approximately six totes of floor cleaner and food additive chemicals are stored within a dedicated area on the concrete. Located near the mechanical building is a fenced-in waste oil collection area. The waste oil drums are situated within a secondary containment structure and no evidence of leakage was observed.

An approximately 15,000-gallon plastic AST associated with the ammonia emergency discharge is situated within a concrete-walled secondary containment system. According to Mr. Tony Hamedany, Technical Operations Manager, this tank contains water. In case of an emergency necessitating the discharge of ammonia, it can be routed into this AST and diluted with water instead of being released to the atmosphere.

Adjacent to the ammonia AST is a second black AST (approximately 6,000-gallons). Mr. Hamedany stated that this tank is only utilized for chilled water storage when repairs are being conducted to the refrigeration system.

Summarized below is the site inspection and findings overview. All items that are, or are known to have been present at the subject property are noted in the table. The table also notes items that may present concerns to the subject property. Additional information about items noted can be found in the referenced section of this report.

Onsite Environmental Features	Currently/ Historically Present (Y/N)	Possible Environmental Condition (Y/N)	Report Section
Hazardous Substances or Petroleum Products	Y	Y	3.5, 5.3
Underground Storage Tanks	Y	Y	3.5, 5.4.1
Aboveground Storage Tanks	Y	N	5.4.2
Odors	N		
Air Emissions (stacks, hoods, other point sources)	N		
Pools of Liquid	N		
Drums	N		
Unidentified Substance Containers	N		
Electrical Equipment/Possible PCBs	Y	N	5.6
Hydraulic Equipment/Possible PCBs	N		
Stains or Corrosion	Y	N	3.5
Drains	Y	N	5.2
Sumps	N		
Pits, Ponds, or Lagoons	N		
Stained Soil or Pavement	N		
Stressed Vegetation	N		
Evidence of Spills or Releases	Y	Y	3.5
Artificially Filled Areas (Solid Waste Disposal)	N		
Waste Water	Y	N	5.2
Wells	Y	N	3.5, 5.7
Septic Systems	N		
Dry Cleaning Operations	N		
Agricultural Use (Pesticides/herbicides)	N		
Oil/Gas Production or Exploration	N		
Railroad Spur	N		
Remedial Activities	N		

5.2 INTERVIEWS

At the time of the site inspection, Mr. Piccetti and Mr. Gatto provided Clayton with information regarding the historical and current operations conducted at the subject property. Mr. Piccetti stated that there were no changes in the property or operations since Clayton's last inspection

(September 2005 transaction screen assessment), with the exception of the addition of the ASTs. Mr. Piccetti provided Clayton with information the soil and groundwater sampling reports conducted at the subject property in 2004 (see Section 3.6).

Mr. Hamedany provided details regarding the purposes of the new ASTs.

The following utilities provide service to the subject property:

- Currently, there are power services (Pacific Gas & Electric Company (PG&E)), municipal sanitary sewer services (City of South San Francisco), and water services (City of South San Francisco) provided to the subject property.
- Waste/process water is generated during meat processing operations at the subject property. Floor drains within the processing area are routed to an underground separator where solids are skimmed off and the water is discharged to the sanitary sewer line. Clayton was informed that the city of South San Francisco conducts routine sampling as does a private firm who Columbus Salame contracts with.
- The storm water runoff from the subject property flows via the ground surface and then into storm drains located in the associated parking lots and to drains located along Forbes Boulevard.

The initial hookup dates for these services were not found during this assessment, but were most likely installed in 1968 when the existing building was constructed. The subject property plan is depicted on Figure 2.

5.3 HAZARDOUS MATERIAL AND WASTE

The subject property was assessed for signs of storage, use, or disposal of hazardous materials. The assessment consisted of noting evidence (e.g., drums, unusual vegetation patterns, staining) indicating that hazardous materials are currently or were previously located on the subject property. Clayton observed the storage of the following materials at the subject property:

- Approximately six (6) 55-gallon drums of waste oil are stored in an exterior, locked enclosure. The drums are situated upon a secondary containment structure. No evidence of a release was noted. Waste oil is generated from changes to the machinery and compressors. Waste oil filters are stored in this same enclosure.
- Water softening chemicals are stored in nine (9) 55-gallon plastic drums on the concrete within the second floor of the mechanical building.
- Approximately 4,000 lbs. of anhydrous ammonia is stored in ASTs within the refrigerant cooling system within the mechanical building
- Diesel fuel (approximately 1,000 gallons) is contained within an emergency generator unit within the mechanical building

- Approximately six 250-gallon plastic totes of floor cleaner and food additives are stored within an area on the northern portion of the subject property.

Clayton observed the above materials to be in good condition and properly labeled, with no evidence of leakage. Clayton did not observe rusty or corroded drums. Waste oil and waste oil filters are disposed on an as-needed basis by Evergreen Environmental. The subject property is permitted through the SMCDEH for the storage of hazardous materials, and as a generator/recycler of waste oil and for the maintenance of ASTs. The facility has an SPCC plan through Permit # 03-1250, which is valid through July 2008.

5.4 STORAGE TANKS

5.4.1 Underground Storage Tanks

The subject property was inspected for evidence of underground storage tanks (USTs) (e.g., vent piping, dispensing equipment, pavement variations).

Evidence of USTs was not observed during the assessment. In addition, no features were observed at the subject property that would require USTs to have been present and there are no USTs registered with the State of California (EDR, 2006). The subject property formerly maintained four USTs which have been granted closure by the SMCDEH (see Section 3.6).

5.4.2 Aboveground Storage Tanks

The subject property maintains the following ASTs:

- Two ammonia-containing ASTs were observed in the western portion of the mechanical building totaling approximately 4,000 pounds. In general the tanks appeared clean and in good condition.
- One approximately 1,000-gallon diesel AST is contained within the property's emergency generator unit. The AST is equipped with double-walled secondary containment and appeared clean and in good condition.
- One new approximately 15,000-gallon water AST is associated with the ammonia emergency release system
- One approximately 8,000-gallon plastic AST is utilized only to store water when facility maintenance is being conducted.

5.5 INDICATIONS OF SOLID WASTE DISPOSAL

Currently, non-hazardous solid waste is generated onsite. Waste is in the form of general refuse (e.g., paper, household trash) that is disposed in a dumpster on the northern portion of the property. The waste is collected and transported to an offsite disposal facility by a contracted company on a routine basis.

5.6 INDICATIONS OF POLYCHLORINATED BIPHENYLS (PCBS)

The subject property was inspected for the presence of potential polychlorinated biphenyl (PCB) sources, such as liquid-cooled electrical units (e.g., transformers, capacitors), and major sources of hydraulic fluid (e.g., elevators, lifts). One PG&E-owned, pad-mounted transformer was observed in the northwestern portion of the subject property just east of the mechanical building. The transformer was observed to be in good condition with no spills or leaks noted. The transformer identification number is T-443, no PCB labeling was observed. In addition one hydraulic lift was observed along the eastern exterior of the building. No leaks or spills on the surrounding concrete were observed. Much of the equipment associated with the production of meat products are hydraulic, and in general appeared clean with no visible signs of leaking or spills. No other potential PCB sources were observed.

Fluorescent light fixtures are present at the subject property. Many fluorescent light ballasts manufactured prior to 1980 may contain PCBs. Disposal of PCB-containing light ballasts may be regulated by local, state, or federal requirements.

5.7 WELLS

Evidence of wells was not observed at the subject property.

6.0 FINDINGS, OPINIONS, CONCLUSIONS, AND RECOMMENDATIONS

We have performed a Phase I Environmental Site Assessment in conformance with the guidelines of ASTM Practice E-1527 of the Columbus Salame property located at 493 Forbes Boulevard in South San Francisco, San Mateo County, California, the subject property. Any exceptions to or deletions from this practice are described in Sections 1.2 and 1.3.

6.1 FINDINGS AND OPINIONS

The environmental findings of Clayton's Phase I ESA are presented in this Section. Clayton evaluated the findings and their relevance to ASTM-defined RECs. The findings and opinions follow:

- The subject property historically maintained four underground storage tanks (USTs) consisting of three 1,000-gallon gasoline tanks and one 10,000-gallon diesel tank. The diesel tank was removed in 1994 and closure was granted in 2003 by the SMCDEH. The three 1,000-gallon gasoline USTs were located adjacent to one another near the loading docks in the southeast portion of the property and were removed in 1986. Closure was granted for these three USTs in 2004; however, residual contamination has been detected in soil and groundwater in the immediate vicinity in excess of ESLs; therefore, this finding is a REC.
- In Clayton's 2003 assessment, stained and cracked pavement was noted in the waste oil storage area as a REC, based on the potential for subsurface impacts. A 2004 soil investigation in this area determined that subsurface impacts from TEPH did not exceed the RWQCB ESLs. Therefore, this finding is not a REC.
- The western adjacent property is an active LUST site. The monitoring wells located closest to the western boundary of the subject property have been non-detect for target analytes since 2003. The groundwater plume has remained stable and defined to the northeast, east and south of the UST area. Based upon file information, further delineation of the groundwater plume will be conducted to define the extent of contamination to the northwest and west of the plume. This site does not appear to pose a significant environmental concern to the subject property. Therefore, this finding is not a REC.
- The non-ASTM issues that were evaluated during this ESA are not expected to adversely affect the subject property.

6.2 CONCLUSIONS AND RECOMMENDATIONS

This ESA has revealed no evidence of *recognized environmental conditions* (RECs), as defined by ASTM, in connection with the subject property, except for the following:

- The known presence of contamination in soil and groundwater beneath the subject property in the former location of the three gasoline USTs is a REC; however, the site has been granted regulatory closure and no further investigation or remediation is recommended.

In addition, it may be prudent to monitor the regulatory status of the western adjacent site LUST to be aware when closure is achieved.

APPENDIX A

RESUMES OF ENVIRONMENTAL PROFESSIONALS

Marie K. Solum

Environmental Consultant, Environmental Services

Summary of Professional Experience

Marie K. Solum has more than 3 years of professional experience in environmental consulting. She has conducted over 200 Phase I environmental site assessments (ESAs) involving a wide variety of residential, commercial, and industrial properties throughout the United States and Ontario, Canada. Her clients have included various lending institutions, property developers, attorneys, property management companies, insurance companies, and private corporations.

Ms. Solum has conducted these assessments in accordance with the requirements of the ASTM standard and various lending institution guidelines. Frequently, Ms. Solum has conducted limited assessments of asbestos-containing materials, lead-based paint, radon, mold and limited hazardous materials surveys.

Project Experience

Residential Properties

Ms. Solum has conducted Phase I ESAs involving apartment complexes, manufactured housing communities, nursing homes, senior citizens assisted-living centers, and farmsteads.

Commercial Properties

Ms. Solum has conducted Phase I ESAs involving numerous large, multi-tenant office complexes, retail stores, strip malls, former department stores, grocery stores, gasoline stations, restaurants, churches, and medical facilities.

Light Industrial/Industrial Facilities

Ms. Solum has conducted Phase I ESAs on light industrial facilities including automotive blanking operations, stamping facilities, powder coating operations, paper mills, various automotive component manufacturers, warehousing and distribution centers, concrete manufacturing, large industrial hazardous waste sites, tool and die shops, glass manufacturing centers, mattress manufacturers, metal stamping centers, car washes and car dealerships.

Undeveloped/Agricultural Land

Ms. Solum has conducted numerous assessments of undeveloped, vacant land. She has also assessed agricultural properties ranging from 150 to 700 acres in size.

Large Property Portfolios

Ms. Solum has contributed to the success of numerous multi-site projects involving properties throughout the United States. These projects have included Phase I ESAs of radio and cell tower sites, manufacturing facilities, and commercial retail stores.

Employment History

State of Rhode Island, No. 6057

Jon A. Rosso has more than 19 years of experience in the environmental consulting field, and has managed numerous large projects valued at up to \$40 million. He serves in senior technical, management, and litigation support capacities on a variety of multidisciplinary projects in the areas of waste management, groundwater hydrology, risk assessment, design, and civil engineering.

Mr. Rosso has specific expertise in remedial action planning, including remedial investigations and feasibility studies, and conceptual and detailed project design. He also directs and manages the construction of these projects, including the preparation of construction drawings and bid specifications, budgeting, cost estimating, scheduling, contracting, and agency permitting. As Director of Environmental Services, Mr. Rosso oversees Clayton's environmental risk management and remediation practice in Northern California, where he is responsible for the quality and budgets of complex environmental scenarios from inception to completion.

Mr. Rosso has significant experience with many cleanup technologies and understands the feasibility, practicality, and effectiveness of large-scale removal, groundwater extraction, encapsulation, groundwater treatment, vapor treatment, dual phase extraction, soil vapor extraction, air sparge systems, biodegradation, oxidation, chemical fixation, barrier systems, hydraulic control, and waste stabilization.

Mr. Rosso has planned and executed hundreds of investigations related to soil and groundwater contamination issues and has worked extensively with regulatory agencies throughout the United States. With a focus on practical solutions, Mr. Rosso has comprehensive understanding of state and federal environmental regulations, and particular expertise in client/agency negotiations leading to favorable client results.

Jon A. Rosso, P.E.

Project Experience

Superfund Site Remediation

Superfund Site – Former Petroleum Recycling Facility

Mr. Rosso served as program manager for implementation of removal activities at an abandoned waste oil recycling facility in Patterson, California. The site contained about 5.5 million gallons of hazardous waste and hazardous waste water, tank-bottoms sludge, and waste oil, as well as 1,200 drums of used oil filters and miscellaneous chemicals. Wastewater and sludge were found to be Resource Conservation and Recovery Act (RCRA) hazardous waste and to contain dioxin compounds. Initiated under a CERCLA Unilateral Order issued by the EPA, the work was funded through a steering committee representing 21 potentially responsible parties (PRPs) cooperating to fund the remediation. Mr. Rosso was directly responsible for developing all bid specifications. He reviewed and approved all budgets, including change orders and modifications. Working with the PRPs, Mr. Rosso managed the investigation of waste materials, regulatory interaction, community relations, cost recovery, treatability analysis, value engineering, waste disposal, and site decontamination. The largest removal action ever ordered by the EPA in Region IX, the project was completed with final agency sign off in August 2000. Region IX officials have publicly praised this project, calling it a “model effort for Superfund removal projects.”

Former Petroleum Fuel Terminals Investigation and Remediation

Oil Industry

Mr. Rosso is currently serving as the program manager for a group of major oil companies that are engaged in the investigation, negotiation, and remediation of historical petroleum bulk plants and pipeline areas in San Francisco. The project involves remedial investigations, feasibility studies, interim remedial activities, and remedial action plans for three operable units covering approximately 12 acres and several city streets in the Mission Bay redevelopment area, near the San Francisco Bay. Working with the property owners, the City and County of San Francisco, and the Regional Water Quality Control Board (RWQCB), Mr. Rosso has guided the multimillion-dollar remediation project through several major milestones, including negotiation, design, cost estimating, permitting, contracting, and construction. Activities completed to date include: excavation of approximately 52,000 tons of soils; removal of 12,000 linear feet of pipeline; installation and operation of dewatering and treatment systems; removal of approximately 7,000 gallons of separate phase hydrocarbons; site restoration; and installation of 600 linear feet of separate phase hydrocarbon collection galleries. Investigation, design and remedial work continue on subsequent phases of the project, with final completion anticipated during 2004.

Trichloroethane (TCA) Investigation and Remediation

Manufacturing Industry

Mr. Rosso was the project manager, construction manager, and engineer of record for the investigation and remediation of a historical release of more than 1 million pounds of TCA into overburden and bedrock groundwater at a major manufacturing facility in Rhode Island. The groundwater contamination threatened one of the state’s primary drinking water aquifers. Sampling from a network of surface water monitoring points and various well types indicated that the dissolved plume encompassed an area of about 200 acres and extended more than a mile from the

Jon A. Rosso, P.E.

site. The TCA product, a DNAPL, was found over a quarter mile away from the original source at a depth of 400 feet below the ground surface.

Under Mr. Rosso's direction, the remediation plan included installing a half-mile-long interceptor subdrain system to hydraulically control and extract the overburden and bedrock groundwater for treatment. The majority of the interceptor subdrain was to be constructed on property that had originally been a land grant from the King of England and is a registered historic property. Archeological investigations required by the remediation permitting and planning process uncovered a prehistoric feature approximately 4,000 to 7,000 years old, requiring complete removal and preservation. The archeological investigation, permitting, and removal were performed efficiently and did not impact the project schedule. The remedial design and permit process involved approvals from six divisions of the Rhode Island Department of Environmental Management (RIDEM), the United States Army Corps of Engineers (USACE), United USEPA, the U.S. Department of Interior, and various historic preservation commissions.

Mr. Rosso assisted legal counsel with property access, easements, and well closure agreements. In particular, a revised and amended consent agreement with RIDEM was successfully negotiated, allowing construction and operation of the interceptor subdrain to proceed. This agreement consolidated key permitting authority among the various divisions and created a freshwater wetland delineation and mitigation plan. As the project manager, construction manager, and engineer of record, Mr. Rosso was responsible for hiring and managing the consultants and contractors, developing the plans and specifications, evaluating bids, awarding the contracts, and approving all payments. Project activities ultimately led to site containment using a system that was essentially passive, with very reasonable annual operating costs.

Litigation Support

Steel Industry

Mr. Rosso provided litigation support to defend a steel company from a claim that historic operations of its plant contaminated an adjacent property that recycled steel barrels. At issue was a claim that heavy residual petroleum fuel known as Bunker fuel spilled on the client's property and migrated cross-gradient to the adjacent property. Working with an expert witness in chemistry, Mr. Rosso evaluated previous investigations by others, historical aerial photographs and records, regulatory files, depositions, cost estimates, and various remedial investigations and feasibility studies.

Based on analysis of the available data and computer modeling techniques, Mr. Rosso and Dr. James Bruya (a chemical expert) developed a theory that numerous chemical products were spilled as part of the barrel recycling process and were subsequently affected by caustic cleaning solutions. The theory speculated that modified chemical compounds observed in soil and groundwater samples were then incorrectly interpreted to be residual petroleum fuel hydrocarbons by analytical laboratories that used qualitative analytical techniques. To explore the plaintiff's theory of migration and Clayton's theory regarding the contamination source, a comprehensive subsurface investigation and laboratory testing program was implemented for both properties—ultimately demonstrated that the source of contamination was the barrel cleaning facility.

Mediation and Litigation Support

Transportation Industry

Jon A. Rosso, P.E.

Mr. Rosso provided mediation and litigation support for a major overnight courier corporation to defend it from claims by the San Francisco International Airport regarding cost recovery for remediation of hazardous waste encountered during the construction of a new taxiway. The project involved developing defense arguments through extensive historical research, evaluation of investigations by multiple parties, identification of various types of fuel hydrocarbons, analysis of airport cost claims and construction schedule impacts. Mr. Rosso's work provided a strong basis for the client to negotiate with the airport.

Tetrachloroethene (PCE) Investigation and Remediation *Manufacturing Industry*

A release of more than 60,000 pounds of PCE into groundwater occurred at a major manufacturing facility in Security, Colorado. The groundwater contamination affected the main aquifer for the area, which supplied 35,000 people with drinking water. Mr. Rosso served as a senior technical advisor for investigation and remediation of the site. The project team used a network of more than 100 monitoring wells, municipal wells, and domestic wells to define the vertical and lateral extent of the plume, which was more than six miles long. Mr. Rosso developed various alternative remedial plans configured to fit on various offsite properties, evaluated the effectiveness of the scenarios, and developed detailed cost estimates for each conceptual plan, including long-term operation costs. The remedial alternatives included groundwater extraction and treatment for hydraulic control, chemical reaction walls, soil bentonite walls, air sparging, chemical injection and reaction, and natural attenuation. Based on extensive aquifer testing, subsurface investigation, and computer modeling, a hydraulic control system was designed and presented to the Colorado Department of Public Health, which approved the plan. The system was implemented and has been effective.

Former Petroleum Fuel Terminals Investigation and Remediation *Oil Industry*

Mr. Rosso is currently serving as the program manager for a group of PRPs engaged in the investigation, negotiation, and remediation of historical petroleum bulk plants and pipeline areas in Stockton, California. The project involves completion of remedial investigations, feasibility studies, interim remedial activities, and remedial action plans for two operable units covering approximately 10 acres of near shore properties and city streets adjacent to the Stockton shipping channel and Mormon Slough.

Site Investigations, Evaluations, and Remediation *State Superfund Sites – Landfills*

Mr. Rosso investigated, evaluated, and remediated two California State Superfund landfills that contained chromium-contaminated furnace bricks. Historically, a local winery placed the bricks in the uncontrolled landfills after removing them from glass bottle furnaces during remodeling; the bricks subsequently released hexavalent and trivalent chromium to groundwater. The assessment involved installing monitoring well networks at each landfill to define the vertical and lateral extent of groundwater contamination. Based on review of historical aerial photographs, extensive exploratory trenching programs were developed to locate the bricks within each landfill. The most cost-effective remedial alternative included complete removal of the contaminated bricks (approximately 5,000 cubic yards) and extraction and treatment of shallow groundwater. These actions resulted in site closure and removal from the state Superfund list.

Jon A. Rosso, P.E.
Site Assessment and Subsurface Investigation
Municipal Redevelopment Agency

As a senior environmental consultant to the San Francisco Redevelopment Agency, Mr. Rosso conducted a site assessment and subsurface investigation for the proposed parking facility at the San Francisco Giants' new baseball park. The environmental site assessment (ESA) identified several issues: (1) the property had been part of a major fuel oil handling facility operating between 1920 and 1930; (2) the site was underlain with 20 to 30 feet of rubble debris from the 1906 earthquake and fire; (3) significant quantities of heavy hydrocarbons underlay the property. A subsurface investigation designed to characterize the subsurface and quantify the remedial issues for construction of the parking structure confirmed that earthquake debris were present and contaminated with lead, hydrocarbons, and PAHs. Fuel characterization analyses indicated that the hydrocarbons were residual fuel oil and crude oil. Mr. Rosso reviewed various remedial options with the San Francisco Department of Public Health and reached agreement that the most cost effective and practical remedial plan was to encapsulate the material onsite. These activities were completed in a timely manner, allowing the project to proceed as scheduled on a sound environmental and fiscal basis.

Landfill Investigations
Real Estate Development

A 1,000-acre development was planned for Orinda, California. As part of the environmental assessment of the property, Mr. Rosso investigated four major onsite landfills that contained construction debris. The landfills were delineated using historic aerial photographs and topographic mapping, which indicated more than 100,000 cubic yards of construction debris. Mr. Rosso designed a subsurface investigation to investigate and characterize the landfills, some of which extend 60 feet below ground surface. The laboratory-testing program demonstrated that three of the landfills did not contain hazardous compounds and could be used as general fill in the development. One of the landfills, located in a former quarry, contained high concentrations of lead, hydrocarbons, and PCBs. The contaminated fill material was primarily soil mixed with metal debris, tires, and asphalt. Interviews with former ranch personnel identified the material as CalTrans shoulder scrapping. As part of a remedial feasibility study, Mr. Rosso developed surface-water and bedrock groundwater investigations for the fourth landfill, developing a remedial action plan based on the results. Due to toxicity and solubility issues with the fill, the most practical remedial solution was excavation and offsite disposal, which was implemented, allowing the development project to move forward.

Emergency Response and Remediation
Transportation Industry

Mr. Rosso was the onsite technical advisor and project manager for the emergency response and remediation of a massive toxic chemical spill due to a 23-car train derailment north of Houston, Texas. The remedial action included the rapid restoration of the railroad line and the protection of a nearby river. Working with the contractor, Mr. Rosso identified the lateral and vertical extent of soil contamination and developed a remedial program, which involved removing 700,000 gallons of hazardous liquids, excavating 14,000 cubic yards of soil, and restoring the remediated area with a low permeability cap. Working with the Texas regulatory agencies, Mr. Rosso implemented a follow-up groundwater investigation, which concluded that only minor residual contamination existed following the remediation.

Jon A. Rosso, P.E.
Site Remediation Plans
Real Estate Redevelopment

As project manager, Mr. Rosso prepared site remediation plans for a mixed-use, master-planned, water-oriented development to be built on 50 acres along the shore of San Francisco Bay. Historically, the site was part of a highly industrialized area, which included major steel production and fabrication facilities. Mr. Rosso studied past manufacturing operations and existing site conditions and evaluated various previous investigations conducted by others. As part of this study and studies by others, more than 275 soil samples were collected and chemically analyzed. Statistical evaluation of the data indicated that hydrocarbons and heavy metals were present in near-surface soil in localized areas of the site and did not substantially affect the groundwater. The remediation plan, developed in association with regulatory agencies, consisted of excavating and removing 40,000 cubic yards of contaminated soil from various areas of the site followed by chemical fixation, compaction, and encapsulation of the excavated soil beneath a 5-acre concrete parking structure on the property. The plan was approved and implemented, allowing the development to proceed as planned and in compliance with environmental regulations.

Subsurface Evaluation
Transportation Industry

As project manager, Mr. Rosso evaluated subsurface conditions for the expansion of a private waste water treatment plant and major access road at the San Francisco International Airport. These renovation projects were located adjacent to major jet fuel distribution facilities not owned by the Airport. The investigation focused on identifying, delineating, and quantifying fuel products in the subsurface. The laboratory testing program included fuel fingerprinting and fuel characterization techniques. The investigation identified jet fuel products floating on the groundwater in several areas. To protect foundation and pipeline construction workers within the jet fuel contaminated areas, remedial activities delineated the areas of concern and minimized the uncertainty for the expansion project bidding contractor. This resulted in a more accurate bid and minimized change orders.

Site Assessments and Remediation
Chemical Industry

Mr. Rosso was project manager for the assessment and remediation of two inactive evaporation ponds containing 9,000 cubic yards of residual sludge materials from aluminum anodizing processes at a California chemical manufacturing facility. Interacting with the California RWQCB on behalf of the client and one of its subsidiaries, Mr. Rosso developed a site characterization program that focused on defining the subsurface conditions, soil quality, and extent of groundwater contamination. These assessment activities involved drilling and continuously sampling soil borings, installing monitoring and extraction wells, logging geophysical subsurface conditions, and chemically testing soil and groundwater samples. Evaluation studies included investigating the effects of high pH on groundwater geochemistry, treatability studies for nonhazardous disposal of sludge, aquifer testing, and computer modeling for groundwater extraction systems. The remediation consisted of excavating the sludge material, disposing of the material as nonhazardous waste, controlled backfilling and surface grading of the former pond areas, and monitoring geochemical transformations in the groundwater. These activities brought the site into compliance with state environmental regulations.

Jon A. Rosso, P.E.
Site Characterization and Remedial Plans
Food Processing and Distribution Plant

As a senior technical consultant, Mr. Rosso directed site characterization activities and developed remedial plans for a 70-acre food processing and distribution facility in California. Mr. Rosso conducted an ESA of the property and identified several areas of concern, including multiple fuel and solvent handling facilities and the former presence of 18 underground storage tanks (USTs), primarily in a fuel tank farm area. Investigations of the UST areas indicated significant releases to the subsurface. Free-floating fuel product was found on the groundwater surface. Fuel characterization techniques identified the floating fuel product as a mixture of gasoline and diesel. Various remedial options reviewed in detail included horizontal extraction wells, bioremediation, injection of hydrogen peroxide, product extraction, soil vapor extraction, groundwater sparging, and excavation. Evaluations indicated that the most cost-effective and practical remedial plan was to remove the free product and monitor the natural attenuation of the plume. In addition to onsite issues, chlorinated organic solvents were found in groundwater entering the property from an upgradient source. Mr. Rosso identified potential offsite sources of chlorinated solvents through the use regulatory records and historic aerial photography. This information enabled the client to choose a remedial course of action, allowing a major rehabilitation of the facility to proceed on schedule.

Trichloroethene (TCE) Investigations
Manufacturing Facility

As a senior technical advisor, Mr. Rosso investigated the presence of TCE in groundwater beneath two adjacent manufacturing facilities in central California. He assisted the downgradient property owner and its environmental counsel by evaluating the work of opposing consultants, assessing and delineating the extent of contamination, and developing a variety of possible remedial actions. The work also included assessing groundwater flow and using numerical simulation models to estimate the fate and transport of chemicals and the extraction systems' zone of capture. These investigations demonstrated the upgradient facility as the major source of contamination. Mr. Rosso provided litigation support to the environmental counsel for the downgradient property owner, evaluated remedial alternatives, and prepared community relations plans. The most cost-effective measures proved to be groundwater extraction and treatment and soil vapor extraction from the vadose zone. As a result of these activities, the client received a favorable settlement.

Contamination Source Investigation
Real Estate Redevelopment

As part of the redevelopment of downtown Hartford, Connecticut, a major bank was foreclosing on several contiguous properties. The ESAs and subsurface investigations by others identified chlorinated solvents in the groundwater on the properties. The main issue for the bank involved the source of the contamination, which the previous consultant believed was onsite. Based on Mr. Rosso's evaluation of the data, subsurface conditions, and hydrogeologic regime, it appeared that an offsite source was responsible for the chlorinated solvents in the groundwater. A review of regulatory records identified a nearby property that was previously used by a barrel cooperage, which had recycled steel barrels. The former cooperage had been replaced with an office building for the Connecticut Department of Public Works. Regulatory records indicated that the barrel cooperage had recycled chlorinated solvents and apparently had buried a large number of drums, which were uncovered during construction of the office building. Computer analysis and models demonstrated

Jon A. Rosso, P.E.

that the source of contamination was most likely the former barrel cooperage. These findings allowed the bank to fund the redevelopment project.

Employment History

Clayton Group Services, Inc. – Pleasanton, California
Director, Environmental Services
1998 to Present

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

493 FORBES BOULEVARD
SOUTH SAN FRANCISCO, CA 94080

COORDINATES

Latitude (North): 37.657000 - 37° 39' 25.2"
Longitude (West): 122.389400 - 122° 23' 21.8"
Universal Transverse Mercator: Zone 10
UTM X (Meters): 553859.4
UTM Y (Meters): 4167730.0
Elevation: 43 ft. above sea level

USGS TOPOGRAPHIC MAP ASSOCIATED WITH TARGET PROPERTY

Target Property: 37122-F4 SAN FRANCISCO SOUTH, CA
Source: USGS 7.5 min quad index

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

FEDERAL RECORDS

NPL..... National Priority List
Proposed NPL..... Proposed National Priority List Sites
Delisted NPL..... National Priority List Deletions
NPL Liens..... Federal Superfund Liens
CERCLIS..... Comprehensive Environmental Response, Compensation, and Liability Information System
RCRA-TSDF..... Resource Conservation and Recovery Act Information
ERNS..... Emergency Response Notification System
HMIRS..... Hazardous Materials Information Reporting System
US ENG CONTROLS..... Engineering Controls Sites List

EXECUTIVE SUMMARY

US INST CONTROL	Sites with Institutional Controls
DOD	Department of Defense Sites
US BROWNFIELDS	A Listing of Brownfields Sites
CONSENT	Superfund (CERCLA) Consent Decrees
ROD	Records Of Decision
UMTRA	Uranium Mill Tailings Sites
ODI	Open Dump Inventory
TRIS	Toxic Chemical Release Inventory System
TSCA	Toxic Substances Control Act
FTTS	FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

EDR PROPRIETARY RECORDS

Manufactured Gas Plants... EDR Proprietary Manufactured Gas Plants

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

FEDERAL RECORDS

CERCLIS-NFRAP:As of February 1995. CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund Action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

A review of the CERC-NFRAP list, as provided by EDR, and dated 10/24/2005 has revealed that there are 2 CERC-NFRAP sites within approximately 0.5 miles of the target property.

CORRACTS:CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/29/2005 has revealed that there are 2 CORRACTS sites within approximately 1 mile of the target property.

RCRAInfo:RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/15/2005 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

MATAFRANO, INC (Continued)

U001594768

Facility Type: Not reported
Facility Status: Active - Any facility with a continuous or seasonal discharge that is under Waste Discharge Requirements.
Agency Type: Not reported
Waste Type: Not reported
Threat to Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.
Reclamation: Not reported
POTW: Not reported
NPDES Number: CAS000001 The 1st 2 characters designate the state. The remaining 7 are assigned by the Regional Board

Background Info : The Wildberg Brothers Site, (aka Boliden Metech) is an abandoned metal reclamation plant which operated at this location between 1907 and 1986. The site is approximately 5 1/2 acres in size. The Site was reportedly used as an antimony smelting plant which operated for an unknown duration beginning in 1875. The Site was purchased in 1907 by the Wildberg Brothers Company who operated a metal reclamation facility. The operations included milling, sampling, assaying of scrap materials, electrolytic deposition of silver, cyanide stripping of gold, and copper concentration. Gold, platinum, palladium, silver and copper were recovered as finished products. Wildberg Brothers sold the facility to Refinement International (RMI) in 1980. RMI primarily used the facility for precious metal scrap processing and refining. Stripping operations created a cyanide waste stream which was treated and discharged under permit to the sanitary sewer system. RMI sold the facility to Boliden Metech in 1983. Boliden used the facility primarily for precious metal scrap processing, but did not engage in refining operations at the Site. Operations conducted onsite consisted of material sorting, sampling, and assaying before the materials were containerized for shipment to Boliden facilities overseas for processing. Boliden processed approximately 5,000 pounds of spent cyanide stripping solution for gold recovery. The solution was pumped into a holding tank and zinc or aluminum was added to precipitate approximately 95% of the gold. The remaining solution was evaporated, mixed with silica, fired, and the remaining silicate solids were shipped overseas for further processing. Boliden discontinued all operations at the site in May 1986. All buildings on the site, with the exception of Building 1, the Office Building, Building 2, the Laboratory; and Buildings 11-12, the Melt Shop, and Mechanical Processing area, were demolished at that time. In 1980 overflow from the lagoon was observed spilling onto adjacent property owned by the Healy Tibbitts Construction Company. Sediment and groundwater samples taken by Healy-Tibbitts at that time showed no soil or groundwater contamination had occurred. The lagoon/pond area was dredged and filled by Refinement International in 1981, under a dredging permit from the U.S. Corps of Engineers. In

1982 California Environmental Technology and Kaldveer Associates Inc. investigated soil contamination in the lagoon area. Based on the EPA report of the Healy Tibbits site, and the confirmation samples taken by DHS on the Wildberg Brothers Site, DHS certified that all known areas of contamination on the site had been remediated in November 1987. The certification covered only those areas that DHS was able to sample, and did not include the areas which had been built over. In 1988 Boliden demolished the remaining buildings on the Site. The San Francisco Bay, Regional Water Quality Control Board (RWQCB) required an investigation of possible groundwater contamination on the site. Kaldveer Associates then installed three monitoring wells on the Site, and reported concentrations of 8 parts per billion and 15 parts per billion of trichloroethene (TCE) in two of the wells. In 1995 the Department of Toxic Substances Control (DTSC), the successor agency to the DHS Toxic Substances Control Program, required Boliden Metech to complete a Preliminary Endangerment Assessment (PEA) on those areas of the Site where buildings had been demolished, and to complete a Five Year Review of those areas of the Site certified in 1987. On November 22, 1995, Boliden Metech and DTSC executed Voluntary Cleanup Agreement, to provide DTSC oversight of these activities at the Site. In August 1995, ACC Environmental Consultants collected soil samples from 19 locations and three groundwater monitoring wells. Monitoring well 2 (MW-2) showed a trace concentration of 2.5 parts per billion (ppb) of trichloroethene, which is below the Maximum Contaminant Level (MCL) set by the Federal Clean Water Act. Elevated concentrations of manganese were also found in MW-2, but the U.S. Environmental Protection Agency (EPA) has set no MCL or water quality criteria standard for manganese. One soil sample (5-1-1) from beneath the former laboratory building showed a concentration of 930 parts per million (ppm) of lead, which is above residential cleanup levels. The remaining samples were below residential standards. Boliden therefore removed approximately 10 cubic feet of soil having lead concentration above 800 ppm on October 11, 1995. Confirmation samples from these "hot spot" removal areas, showed a lead concentration of 41 ppm in the area of the removal action, far below the health-based cleanup level required by DTSC for residential and/or unrestricted use of the property. Based on the document review, the PEA completed in 1995, the oversight of a Removal Action by DTSC in October 1995, and confirmation samples taken following the removal action in 1995, DTSC confirms that the Remedial Action completed in 1995 has been effective in restoring the Wildberg Brothers site to residential standards, and No Further Action will be required on the Site.

completely covered over by the construction of a commercial business park.
 DTSC notified that 10 buildings on the Site had been demolished. PEA required to determine if contamination present beneath buildings.
 Site was referred to Surveillance & Enforcement and RWQCB. Completed RA. Ten cubic yards of lead contaminated soil was removed and disposed.
 Site certified as remediation complete for lagoon/pond, Building 9 UST area, slag pile area, copper treatment area, and metal storage area.
 Signed VCA.
 Completed PEA. No Further Action was required.
 5YEAR - Completed Five-Year Review. 1987 remedial action provided effective cleanup, and No Further Action will be required at the Site.
 RI/FS - Completed RIFS. Ecology and Environment (E&E) prepared a site assessment for the Healy-Tibbitts Site for the U.S. Environmental Protection Agency, for the federal Superfund program, and concluded No Further Action was required at the Healy-Tibbitts Site. The Healy-Tibbitts investigation led to the investigation of the Wildberg Brothers site as a potential hazardous waste site. The following areas of the Wildberg facility were identified as areas of potential contamination: The lagoon/pond area, an underground tank area, near Building 9, a slag pile located between Buildings 9 and 12, the Copper Treatment Building, Building 14, and the metal storage area near the south boundary fence.
 Certified Site.
 Site Discovery. Facility was identified from a site drive-by.

Threat to Water Quality:	

Moderate Threat to Water Quality. A violation could have a major adverse impact on receiving biota, can cause aesthetic impairment to a significant human population, or render unusable a potential domestic or municipal water supply. Awsthetic impairment would include nuisance from a waste treatment facility.

Facility Type:	Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
Complexity:	Category A - Any major NPDES facility, any non-NPDES facility (particularly those with toxic wastes) that would be a major if discharge was made to surface or ground waters, or any Class I disposal site. Includes any small-volume complex facility (particularly those with toxicwastes) with numerous discharge points, leak detection systems or ground water monitoring wells.
Prime Waste:	Process Waste (Waste produced as part of the industrial/manufacturing process) - Nonhazardous Solid Wastes/Influent or Solid Wastes that contain nonhazardous putrescible and non putrescible solid, semisolid, and liquid wastes (E.G., garbage, trash, refuse, paper, demolition and construction wastes, manure, vegetable or animal solid and semisolid waste).

Waste Discharge Requirements: H
 Base Meridian: Not reported
 Waste List: False
 Facility Description: Not reported
 Self-Monitoring Rept. Frequency: Monthly Submittal
 Threat to Water Quality:
 Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
 Facility Type: Industrial - Facility that treats and/or disposes of liquid or semisolid wastes from any servicing, producing, manufacturing or processing operation of whatever nature, including mining, gravel washing, geothermal operations, air conditioning, ship building and repairing, oil production, storage and disposal operations, water pumping.
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.
 Prime Waste: Process Waste (Waste produced as part of the industrial/manufacturing process) - Designated/Influent or Solid Wastes that pose a significant threat to water quality because of their high concentrations (E.G., BOD, Hardness, TRF, Chloride). 'Manageable' hazardous wastes (E.G., inorganic salts and heavy metals) are included in this category.

RCRAInfo Corrective Action Summary:

Event: Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.

Event Date: 09/27/2004

Event: CMS Workplan Approved

Event Date: 06/28/2002

Event: Stabilization Measures Implemented, Other Activity

Event Date: 06/28/2002

Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

Event Date: 09/29/2000

Event: Igration of Contaminated Groundwater under Control, More information is needed to make a determination.

Event Date: 09/29/2000

Event: RFI Approved

Event Date: 09/18/2000

Event: Certification Of Remedy Completion Or Construction Completion

Event Date: 09/18/2000

Site Description : The property is composed of a number of subareas where different activities took place. Contaminated areas include heavy metal contaminated soil and slag areas, oil shed areas, oil tanks, acid sewage basin, acid sewage pond, and various railroad carunloading areas. The site is approximately 1000 feet from the San Francisco Bay.

HOMART DEVELOPMENT CORP/EDWARDS WIRE & ROPE (Continued) S100833559

Hazardous Waste Desc : Contaminants include polychlorinated biphenyls (PCBs), lead (Pb) and acidic ground water. Most of the PCB and oil-contaminated soil has been removed. Soil contaminated with lead still remains.

Threat To Public Health & Env : The major pathways of exposure are through migration of the acidic ground water to the San Francisco Bay and direct contact with metal-contaminated soil during excavation for site development.

Site Activity Status : During 1981 and 1982, Homart investigated and mitigated PCB contaminated areas onsite. In 1984, Homart isolated and treated lead contaminated soil on one parcel of the property.

Project Revenue Source Co. : Not Reported
 PRS Company Address : Not reported
 Not reported

Project Revenue Source Desc : Homart Development Co. owns the property and has paid for all cleanup costs to date.

 RAB: Not reported
 FUDS History : The U.S. Army acquired 8.62 acres for use as an anti-aircraft missile launch site. On 8 September 1951, 8.13 acres were acquired by lease from Merck and Co. Between June and November 1952, 0.49 acres were acquired by donated license. Two additional licenses were dated 29 June 1952 (amended 29 June 1956) and 10 November 1952. The property was declared excess to the General Services Administration on 31 December 1958. The license for 0.4 acres was terminated on 18 May 1959. The other two licenses were terminated on 7 October 1958 and 31 December 1958. Piles of concrete debris are located on site and pose a possible threat.

FUDS Description :

The 8.62-acre site is located on Point San Bruno, which is south of the Oyster Point Marina and north of San Francisco Airport. There is a parking lot, a vacant lot, and a warehouse on the property, all of which are being used and well maintained. The majority of the former AAA Battery 40 site is owned by Merck and Company. The property currently contains Merck and Company's warehouse, administrative building, a parking lot, and a vacant lot.

RCRAInfo Corrective Action Summary:

Event: Current Human Exposures under Control, Yes, Current Human Exposures Under Control has been verified. Based on a review of information contained in the EI determination, current human exposures are expected to be under control at the facility under current and reasonably expected conditions. This determination will be re-evaluated when the Agency/State becomes aware of significant changes at the facility.

- Event: Migration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the EI determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of significant changes at the facility.
- Event Date: 04/17/2000

EPA Waste Codes Addendum

Code	Description
------	-------------

D001	IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
------	--

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/14/05	Source: EPA
Date Data Arrived at EDR: 11/02/05	Telephone: N/A
Date Made Active in Reports: 12/07/05	Last EDR Contact: 01/31/06
Number of Days to Update: 35	Next Scheduled EDR Contact: 05/01/06
	Data Release Frequency: Quarterly

NPL Site Boundaries

Proposed NPL: Proposed National Priority List Sites

Date of Government Version: 10/14/05	Source: EPA
Date Data Arrived at EDR: 11/02/05	Telephone: N/A
Date Made Active in Reports: 12/07/05	Last EDR Contact: 01/31/06
Number of Days to Update: 35	Next Scheduled EDR Contact: 05/01/06
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 10/14/05	Source: EPA

Date Made Active in Reports: 12/07/05	Last EDR Contact: 01/31/06
Number of Days to Update: 35	Next Scheduled EDR Contact: 05/01/06
	Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Last EDR Contact: 12/21/05
Next Scheduled EDR Contact: 03/20/06
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

RCRA: Resource Conservation and Recovery Act Information

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

	Data Release Frequency: Varies

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities—especially those without EPA Brownfields Assessment Demonstration Pilots—minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients—States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Number of Days to Update: 46	Next Scheduled EDR Contact: 04/03/06
	Data Release Frequency: Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 11/04/05

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/03	Source: EPA

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation

Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

GEOCHECK[®] - PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

COLUMBUS SALAME
493 FORBES BOULEVARD
SOUTH SAN FRANCISCO, CA 94080

TARGET PROPERTY COORDINATES

Latitude (North):	37.65700 - 37° 39' 25.2"
Longitude (West):	122.3894 - 122° 23' 21.8"
Universal Transverse Mercator:	Zone 10
UTM X (Meters):	553859.4
UTM Y (Meters):	4167730.0
Elevation:	43 ft. above sea level

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

USGS Topographic Map: 37122-F4 SAN FRANCISCO SOUTH, CA
General Topographic Gradient: General South
Source: USGS 7.5 min quad index

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data:*

Search Radius: 1.25 miles
Status: Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

Soil Map ID: 2

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

GEOCHECK[®] - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

Soil Map ID: 3

Soil Component Name: ORTHENTS

Soil Surface Texture: variable

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	60 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

California Drinking Water Quality Database

Source: Department of Health Services

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

APPENDIX D

NO FURTHER ACTION LETTER

HEALTH DEPARTMENT

December 20, 2004

Mr. John Piccetti
San Francisco Columbus Sausage
493 Forbes Blvd.
South San Francisco, CA 94080

RECEIVED

JAN 21 2005

ERLER & KALINOWSKI, INC.

SUBJECT: Removal of Underground Storage Tanks (USTs) in 1986
493 Forbes Blvd., South San Francisco, CA 94080

Dear Mr. Piccetti:

I am in receipt of the Results of Soil and Groundwater Sampling Report (Report), for CD Holding, Inc. dated September 27th, 2004 from Logan O. Hansen of Erler & Kalinowski, Inc. regarding the investigation of three USTs historically removed at the above referenced site under San Mateo County supervision, in order to satisfy UST regulations. This letter confirms the removal of three underground storage fuel tanks under San Mateo County supervision at the above-mentioned site. Two USTs (1,000 gallon each, unleaded gasoline) were removed, according to the record, on November 10, 1986; one UST (1,000 gallon unleaded gasoline) was removed, according to the record, on November 12, 1986.

Based on my review of the information and findings presented in the Erler & Kalinowski, Inc. report, San Mateo County's file, and after discussing your case with Mr. Charles Ice from the San Mateo County's Groundwater Protection Program and with the provision that the information provided to this office, in the report, is accurate and representative of existing conditions, it is our position that no further action is required at this time.

Please be advised that this letter does not relieve you of any liability under the California Health and Safety Code for past, present, or future operations at the site. Nor does it relieve you of the responsibility to clean up existing, additional, or previously unidentified conditions at the site, which cause or threaten to cause pollution or nuisance or otherwise pose a threat to water quality or public health.

Additionally, be advised that changes in the present or proposed use of the site may require further site characterization and mitigation activity. It is the owner's responsibility to notify this agency of any changes in report content, future contamination findings, or site usage.

If you have any questions, please contact me at (650) 363- 4420.

Sincerely,

F. Estuardo Montufar

Hazardous Materials Specialist IV
