TABLE OF CONTENTS

TABLE OF CONTENTS	I
APPENDICES	III
LIST OF EXHIBITS	V
LIST OF TABLES	VII
LIST OF ABBREVIATED TERMS	IX
1 INTRODUCTION	1
1.1 Summary of Findings.....	1
1.2 Project Overview.....	4
1.3 Analysis Scenarios	5
1.4 Study Area.....	8
1.5 Senate Bill 743 – Vehicle Miles traveled (VMT)	14
1.6 Deficiencies	14
1.7 Recommendations	27
2 METHODOLOGIES	45
2.1 Level of Service	45
2.2 Intersection Capacity Analysis	45
2.3 Traffic Signal Warrant Analysis Methodology.....	47
2.4 Freeway Off-Ramp Queuing Analysis.....	49
2.5 Freeway Mainline Segment Analysis Methodology.....	49
2.6 Freeway Merge/Diverge Ramp Junction Analysis.....	50
2.7 Minimum Level of Service (LOS)	51
2.8 Deficiency Criteria.....	53
2.9 Project Fair Share Calculation Methodology	53
3 AREA CONDITIONS	55
3.1 Existing Circulation Network.....	55
3.2 General Plan Circulation Elements.....	55
3.3 City of Perris, City of Moreno Valley, City of Menifee, and City of San Jacinto General Plan Circulation Element	64
3.4 Truck Routes	64
3.5 Bicycle & Pedestrian Facilities.....	64
3.6 Transit Service.....	82
3.7 Existing Traffic Counts.....	82
3.8 Existing (2020) Intersection Operations Analysis	89
3.9 Existing (2020) Traffic Signal Warrants Analysis	89
3.10 Existing (2020) Off-Ramp Queuing Analysis.....	95
3.11 Existing (2020) Freeway Facility Analysis	95
3.12 Recommended Improvements	100
4 PROJECTED FUTURE TRAFFIC	103
4.1 Project Trip Generation.....	104
4.2 Project Trip Distribution.....	108
4.3 Modal Split	113
4.4 Project Trip Assignment	113
4.5 Background Traffic	136
4.6 Cumulative Development Traffic	136

4.7 Near-Term Traffic Conditions..... 141

4.8 Horizon Year (2040) Conditions 148

5 EAP (2030) TRAFFIC CONDITIONS 151

5.1 Roadway Improvements 151

5.2 EAP (2030) Traffic Volume Forecasts 151

5.3 Intersection Operations Analysis 151

5.4 Traffic Signal Warrants Analysis..... 160

5.5 Off-Ramp Queuing Analysis 163

5.6 Freeway Facility Analysis..... 163

5.7 Recommended Improvements 168

6 EAPC (2030) TRAFFIC CONDITIONS 173

6.1 Roadway Improvements 173

6.2 EAPC (2030) Traffic Volume Forecasts..... 173

6.3 Intersection Operations Analysis 173

6.4 Traffic Signal Warrants Analysis..... 183

6.5 Off-Ramp Queuing Analysis 183

6.6 Freeway Facility Analysis..... 188

6.7 Recommended Improvements 192

7 HORIZON YEAR (2040) TRAFFIC CONDITIONS 197

7.1 Roadway Improvements 197

7.2 Horizon Year (2040) Without MCP Without Project Traffic Volume Forecasts 197

7.3 Horizon Year (2040) Without MCP With Project Traffic Volume Forecasts 197

7.4 Horizon Year (2040) With MCP Without Project Traffic Volume Forecasts 210

7.5 Horizon Year (2040) With MCP With Project Traffic Volume Forecasts 210

7.6 Intersection Operations Analysis 210

7.7 Traffic Signal Warrants Analysis..... 233

7.8 Off-Ramp Queuing Analysis 237

7.9 Freeway Facility Analysis..... 241

7.10 Deficiencies and Recommended Improvements 252

8 LOCAL AND REGIONAL FUNDING MECHANISMS 263

8.1 Riverside County Transportation Uniform Mitigation Fee (TUMF) 263

8.2 County of Riverside Development Impact Fee (DIF) Program 263

8.3 Measure A 263

8.4 Fair Share Contribution 264

1 INTRODUCTION

This report presents the results of the traffic impact analysis (TIA) for the proposed Stoneridge Commerce Center Specific Plan (Specific Plan No. 239, Amendment No. 1) development (“Project”), which is located on a 582.6 acre site west of Lakeview Avenue between Ramona Expressway and Nuevo Road in the County of Riverside, as shown on Exhibits 1-1 and 1-2.

The purpose of this TIA is to evaluate the potential deficiencies related to traffic and circulation system deficiencies that may result from the development of the proposed Project, and to recommend improvements to resolve identified deficiencies and to achieve acceptable circulation system operational conditions. This traffic study has been prepared in accordance with the County of Riverside’s Traffic Analysis Guidelines for Level of Service and Vehicle Miles Traveled (December 2020) and through consultation with County of Riverside staff during the scoping process. (1) The approved Project Traffic Study Scoping agreement is provided in Appendix 1.1 of this TIA. As part of the scoping process, the County of Riverside has shared the scoping agreement with various commenting agencies and received comments from the City of Perris, City of Riverside, and Riverside County Transportation Commission (RCTC).

1.1 SUMMARY OF FINDINGS

The Project is proposing to construct the following improvements as design features in conjunction with development of the site:

- For Without Mid-County Parkway (MCP) alternative, Project to construct Antelope Road from Ramona Expressway to the Project’s southern boundary at its ultimate full-section width as a Major Highway (118-foot right-of-way) in compliance with the circulation recommendations found in the County of Riverside General Plan Circulation Element. For With MCP, the Project would construct Antelope Road from the Project’s southern boundary to the right-of-way for the future MCP interchange at Ramona Expressway. Project to construct Antelope Road from the Project’s southern boundary to Nuevo Road with 32-feet of pavement on the east and west sides to facilitate site access in compliance with the circulation recommendations found in the County of Riverside General Plan Circulation Element.
- For Without MCP alternative only, Project to construct Ramona Expressway from Antelope Road to the Project’s eastern boundary at its ultimate half-section width as an Expressway (184-foot to 220-foot right-of-way) in compliance with the circulation recommendations found in the County of Riverside General Plan Circulation Element.
- Project to construct Orange Avenue from the Project’s western boundary to the Project’s eastern boundary at its ultimate full-section width as an Arterial Highway (128-foot right-of-way) in compliance with the circulation recommendations found in the County of Riverside General Plan Circulation Element.
- Project to construct Street A from Ramona Expressway to Orange Avenue at its ultimate full-section width as a Local Street (60-foot right-of-way) in compliance with the circulation recommendations found in the County of Riverside General Plan Circulation Element. This improvement is applicable for the Without MCP alternative only.

EXHIBIT 1-1: PRELIMINARY LAND USE PLAN WITHOUT MID-COUNTY PARKWAY

EXHIBIT 1-2: PRELIMINARY LAND USE PLAN WITH MID-COUNTY PARKWAY

- Project to install traffic signals at the intersections of Antelope Road & Ramona Expressway, Antelope Road & Nuevo Road, and Street A & Ramona Expressway.

Additional details and intersection lane geometrics are provided in Section 1.7 *Recommendations* of this report.

1.2 PROJECT OVERVIEW

The Project is proposing to amend the Specific Plan with a mix of industrial and commercial uses, as described below and shown in Table 1-1:

- Without MCP With Project (Proposed Project Land Use): 8,476,776 square feet of light industrial uses, 1,069,398 square feet of business park uses, and 121,968 square feet of commercial retail uses
- With MCP With Project (Alternative Project Land Use): 8,476,776 square feet of light industrial uses, 936,540 square feet of business park uses, 126,542 square feet of commercial retail uses

The Riverside County Transportation Commission (RCTC) is currently planning the construction of a regional, grade-separated transportation facility referred to as the MCP between the I-215 Freeway (at Placentia Avenue) and SR-79. The MCP is a long-range transportation improvement as RCTC has not yet identified or secured funding of the MCP and the future proposed interchanges. As such, timing of the future MCP is currently unknown.

A portion of the MCP and future interchange is planned in the northwestern portion of the site, which would affect the development proposed within Planning Areas 6, 7, and 8A of the proposed Project. In order to accommodate both the potential for the future construction of the MCP while also providing for development of the site in the event that the MCP is not constructed as currently planned, two land use concept plans have been developed for the site (Without and With MCP). A preliminary land use plan for the proposed Project Without MCP is shown on Exhibit 1-1 (Proposed Project). The preliminary land use plan for the proposed Project With MCP is shown on Exhibit 1-2 (Alternative Project). The maximum allowable square footage, as permitted by the Specific Plan, will be evaluated for each of the land use designations below for the purposes of the TIA, as shown in Table 1-1

The anticipated Project opening year is 2030. Vehicular access will be provided to Ramona Expressway and Nuevo Road via Antelope Road, while truck access will be provided to Ramona Expressway only (see Exhibits 1-1 and 1-2). Regional access to the Project site is available from the I-215 Freeway via the Harley Knox Boulevard, Ramona Expressway, future Placentia Avenue, and Nuevo Road interchanges and SR-79 via Ramona Expressway. Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) Trip Generation Manual, (10th Edition, 2017) and the High Cube Warehouse Trip Generation Study (WSP, January 2019) were used to estimate the trip generation. (3) (4) The proposed Project is anticipated to generate the following:

- Without MCP With Project (Proposed Project): 23,894 vehicle trip-ends per day with 1,720 AM peak hour trips and 2,212 PM peak hour trips (of which 3,916 trip-ends per day are associated with trucks with 236 AM peak hour truck trips and 234 PM peak hour truck trips)

- With MCP With Project (Alternative Project): 23,624 vehicle trip-ends per day with 1,681 AM peak hour trips and 2,180 PM peak hour trips (of which 3,850 trip-ends per day are associated with trucks with 231 AM peak hour truck trips and 230 PM peak hour truck trips)

The assumptions and methods used to estimate the Project’s trip generation characteristics are discussed in greater detail in Section 4.1 *Project Trip Generation* of this report.

TABLE 1-1: PROJECT LAND USE SUMMARY TABLE

Planning Area	Land Use Designation	Without Mid-County Parkway		With Mid-County Parkway	
		Acres	Maximum Building Square Footage	Acres	Maximum Building Square Footage
1	Light Industrial	37.8	823,284	37.8	823,284
2	Light Industrial	114.6	2,495,988	114.6	2,495,988
3	Light Industrial	195.2	4,251,456	195.2	4,251,456

--	Circulation	37.3	N/A	34.4	N/A
TOTAL		582.6	9,668,142	573.9	9,539,858

1.3 ANALYSIS SCENARIOS

For the purposes of this traffic study, potential deficiencies to traffic and circulation have been assessed for each of the following conditions:

- Existing (2020) Conditions
- Existing plus Ambient Growth plus Project (EAP) (2030) Conditions (Buildout of Proposed Project Land Use Plan)
- Existing plus Ambient Growth plus Project plus Cumulative (EAPC) (2030) Conditions (Buildout of Proposed Project Land Use Plan)
- Horizon Year (2040) Without Project (Without MCP)
- Horizon Year (2040) With Project (Project Buildout Without MCP)

- Horizon Year (2040) Without Project (With MCP)
- Horizon Year (2040) With Project (Buildout of Alternative Project With MCP)

1.3.1 EXISTING (2020) CONDITIONS

Information for Existing (2020) conditions is disclosed to represent the baseline traffic conditions as they existed at the time this report was prepared. Traffic counts were conducted on March 11, 2020 when local schools were in session and operating on a typical bell schedule (prior to closures related to the COVID-19 pandemic). Traffic counts were collected based on vehicle classification and were converted to passenger car equivalent (PCE). Use of PCE accounts for the effects of large trucks present within the existing study area. By their size alone, these vehicles occupy the same space as two or more passenger cars. In addition, the time it takes for them to accelerate and slow-down is also much longer than for passenger cars and varies depending on the type of vehicle and number of axles.

1.3.2 EXISTING PLUS AMBIENT GROWTH PLUS PROJECT (2030) CONDITIONS

The EAP (2030) conditions analysis determines the potential circulation system deficiencies based on a comparison of the EAP traffic conditions to Existing conditions. The roadway network is similar to Existing conditions except for new connections to be constructed by the Project (does not assume the MCP). To account for background traffic growth, an ambient growth factor from Existing (2020) conditions of 21.9% (2 percent per year, compounded over 10 years) is included for EAP (2030) traffic conditions. The assumed ambient growth factor is based on the requirements per the County of Riverside traffic study guidelines. Consistent with Riverside County traffic study guidelines, the EAP analysis is intended to identify “Opening Year” deficiencies associated with the development of the proposed Project based on the expected background growth within the study area. For EAP (2030) traffic conditions, buildout of the Proposed Project land use plan has been evaluated (the MCP is a long-term facility that is not anticipated to be in place by 2030).

1.3.3 EXISTING PLUS AMBIENT GROWTH PLUS PROJECT PLUS CUMULATIVE (2030) CONDITIONS

The EAPC (2030) traffic conditions analysis determines the potential near-term cumulative circulation system deficiencies. The roadway network is similar to Existing conditions except for new connections to be constructed by the Project (does not assume the MCP). To account for background traffic growth, an ambient growth factor of 21.9% from Existing conditions are included for EAPC traffic conditions (2 percent per year, compounded over 10 years). For EAPC (2030) traffic conditions, buildout of the Proposed Project land use plan has been evaluated (the MCP is a long-term facility that is not anticipated to be in place by 2030).

Conservatively, the TIA estimates the area ambient traffic growth and then adds traffic generated by other known or probable related projects. These related projects are at least in part already accounted for in the assumed 21.9% of ambient growth; and some of these related projects may not be implemented and operational within the 2030 Opening Year time frame assumed for the Project. The resulting traffic growth utilized in the TIA (21.9% ambient growth factor plus traffic

generated by related projects) would therefore tend to overstate rather than understate background cumulative traffic deficiencies under 2030 conditions.

1.3.4 HORIZON YEAR (2040) CONDITIONS

Traffic projections for Horizon Year (2040) conditions were derived from the County of Riverside Transportation Analysis Model (RivTAM) using accepted procedures for model forecast refinement and smoothing.

This scenario evaluates two network alternatives:

- The County's currently adopted General Plan, with the future MCP, and the proposed circulation network modifications proposed by the Project. The Alternative Project land use plan has been evaluated for the purposes of this network alternative.
- The County's currently adopted General Plan and the proposed circulation network modifications proposed by the Project (does not include MCP, in the event that it is not constructed by Horizon Year). The Proposed Project land use plan, which includes commercial retail and business park uses within MCP alignment, has been evaluated for the purposes of this network alternative.

The Horizon Year conditions analyses will be utilized to determine if improvements funded through regional transportation mitigation fee programs, such as the Western Riverside Council of Governments (WRCOG) Transportation Uniform Mitigation Fee (TUMF) and Development Impact Fee (DIF) programs, can accommodate the long-range cumulative traffic at the target level of service (LOS) identified in the County of Riverside (lead agency) General Plan. (5) Each of these regional transportation fee programs are discussed in more detail in Section 8 *Local and Regional Funding Mechanisms*.

1.4 STUDY AREA

To ensure that this TIA satisfies the County of Riverside’s traffic study requirements, Urban Crossroads, Inc. prepared a project traffic study scoping package for review by County of Riverside staff prior to the preparation of this report.

1.4.1 STUDY AREA INTERSECTIONS

The 69 study area intersections listed in Table 1-2 were selected for evaluation in this TIA based on consultation with County of Riverside staff. Exhibit 1-3 shows the study area utilized for the Without MCP conditions while Exhibit 1-4 shows the study area utilized for the With MCP conditions. The study area includes intersections where the Project is anticipated to contribute 50 or more peak hour trips per the County of Riverside’s traffic study guidelines. (1) The “50 peak hour trip” criteria represent a minimum number of trips at which a typical intersection would have the potential to be substantively affected by a given development proposal. The 50 peak hour trip criterion is a traffic engineering rule of thumb that is accepted and widely used within Riverside County for estimating a potential area of influence (i.e., study area).

The intent of a Congestion Management Program (CMP) is to more directly link land use, transportation, and air quality, thereby prompting reasonable growth management programs that will effectively utilize new transportation funds, alleviate traffic congestion and related deficiencies, and improve air quality. The County of Riverside CMP became effective with the passage of Proposition 111 in 1990 and updated most recently updated in 2011. The RCTC adopted the 2011 CMP for the County of Riverside in December 2011. (6) CMP intersections are identified in Table 1-1. There are no study area intersections identified as a Riverside County CMP facility.

TABLE 1-2: INTERSECTION ANALYSIS LOCATIONS

ID	Intersection Location	Jurisdiction	CMP?
1	Harvill Av. & Cajalco Exwy.	County of Riverside	No

EXHIBIT 1-3: LOCATION MAP WITHOUT MID-COUNTY PARKWAY

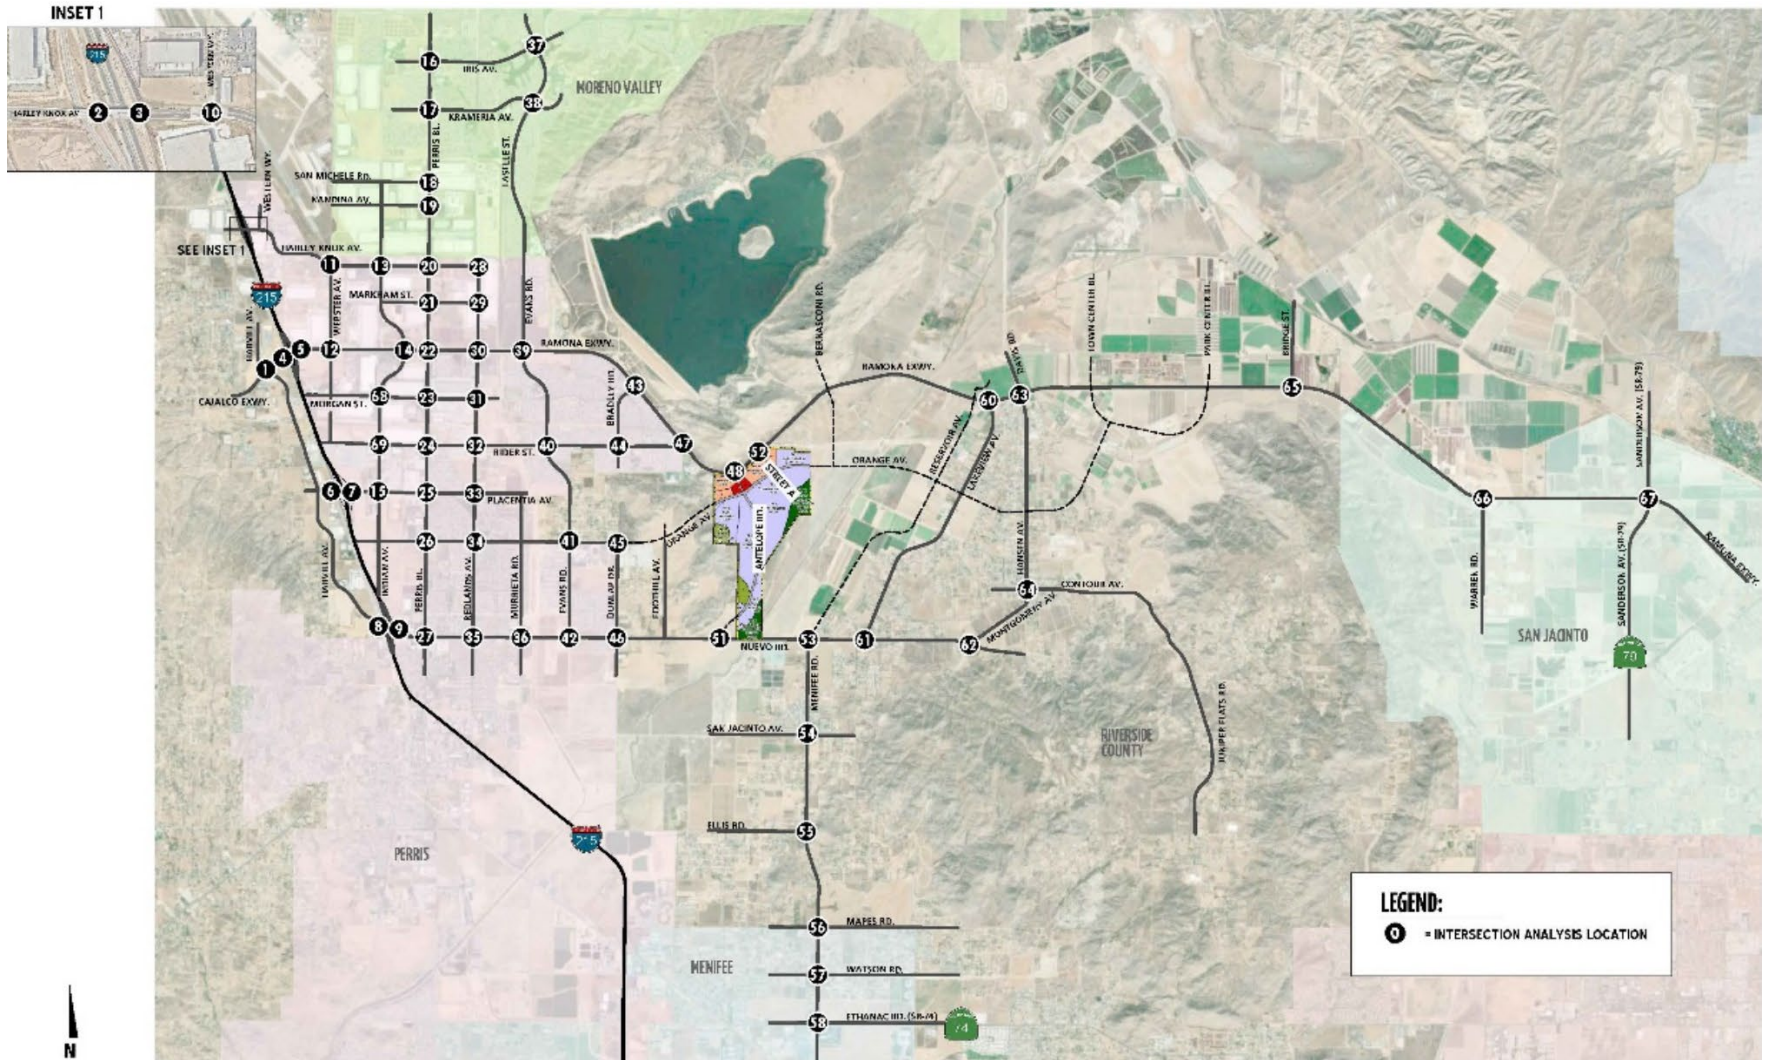

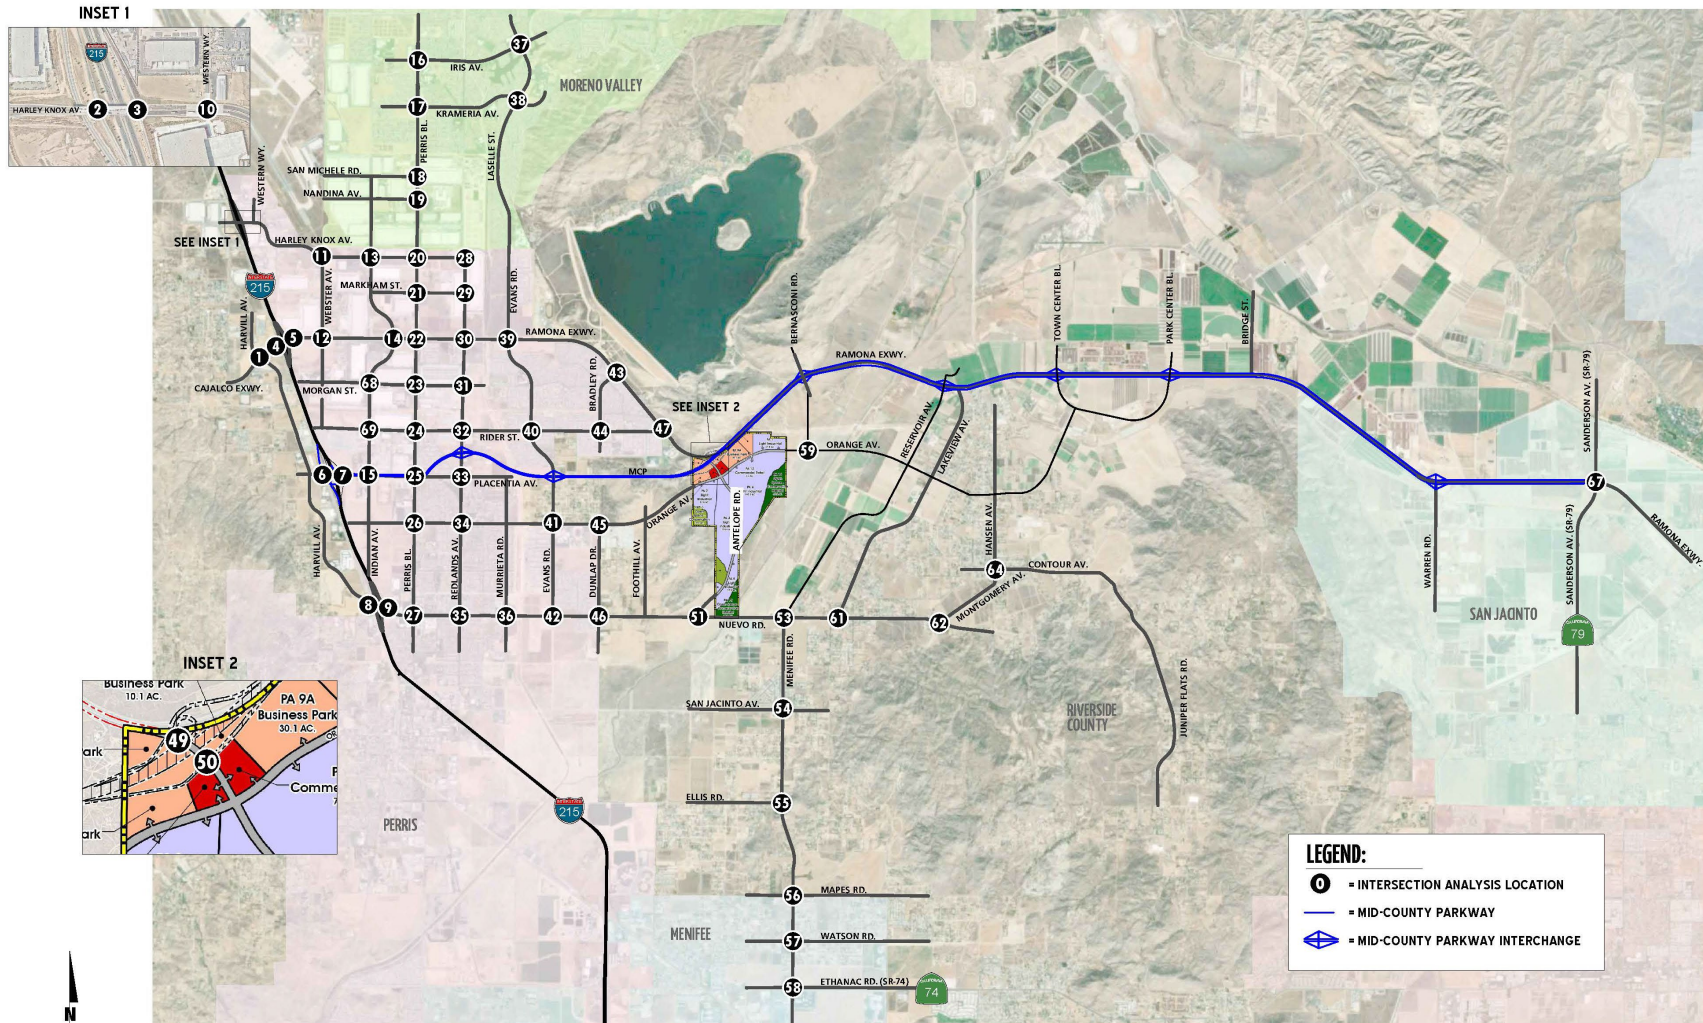

EXHIBIT 1-4: LOCATION MAP WITH MID-COUNTY PARKWAY

1.4.2 FREEWAY MAINLINE AND RAMP JUNCTION ANALYSIS

Study area freeway mainline analysis locations were selected based on Caltrans traffic study guidelines, which may require the analysis of State highway facilities. (2) Consistent with recent Caltrans guidance, and because deficiencies to freeway segments tend to dissipate with distance from the point of State Highway System (SHS) entry, quantitative study of freeway segments beyond those immediately adjacent to the point of entry typically is not required. This study evaluates the following freeway facilities adjacent to the point of entry to the SHS at the I-215 Freeway and Harley Knox Boulevard, Ramona Expressway, Placentia Avenue, and Nuevo Road (see Table 1-3):

TABLE 1-3: FREEWAY FACILITY ANALYSIS LOCATIONS

ID	Freeway Facilities
1	I-215 Freeway Southbound, North of Harley Knox Bl.
2	I-215 Freeway Southbound, Off-Ramp at Harley Knox Bl.
3	I-215 Freeway Southbound, On-Ramp at Harley Knox Bl.
4	I-215 Freeway Southbound, Harley Knox Bl. to Ramona Exwy.
5	I-215 Freeway Southbound, Off-Ramp at Ramona Exwy.
6	I-215 Freeway Southbound, On-Ramp at Ramona Exwy.
7	I-215 Freeway Southbound, Ramona Exwy. to Placentia Av.

19	I-215 Freeway Northbound, Off-Ramp at Ramona Exwy.
20	I-215 Freeway Northbound, Ramona Exwy. to Placentia Av.
21	I-215 Freeway Northbound, On-Ramp at Placentia Av. – Future Facility
22	I-215 Freeway Northbound, Off-Ramp at Placentia Av. – Future Facility
23	I-215 Freeway Northbound, Placentia Av. to Nuevo Rd.
24	I-215 Freeway Northbound, On-Ramp at Nuevo Rd.
25	I-215 Freeway Northbound, Off-Ramp at Nuevo Rd.
26	I-215 Freeway Northbound, South of Nuevo Rd.

1.5 SENATE BILL 743 – VEHICLE MILES TRAVELED (VMT)

Senate Bill 743 (SB 743), approved in 2013, endeavors to change the way transportation impacts will be determined according to the California Environmental Quality Act (CEQA). The Office of Planning and Research (OPR) has recommended the use of vehicle miles traveled (VMT) as the replacement for automobile delay-based LOS. In December 2018, the Natural Resources Agency finalized updates to CEQA Guidelines to incorporate SB 743 (i.e., VMT). While a lead agency has the option to immediately apply the new VMT based analysis methodology and thresholds for the purposes of evaluating transportation impacts, statewide application of the new guidelines is required July 1, 2020.

Caltrans traffic impact study and VMT guidelines have been adopted in September 2020. (2) Caltrans acknowledges automobile delay is no longer considered a CEQA impact for development projects and VMT is now utilized for determining project impacts on the SHS. The County of Riverside has also adopted their own VMT guidelines and thresholds in December 2020. (1) A VMT analysis for the Project has been prepared under separate cover. The LOS operations included in this TIA for intersections and freeway facilities are informational and may be used to support General Plan compliance but are not anticipated to support the environmental document for determining traffic impacts and mitigation measures.

1.6 DEFICIENCIES

This section provides a summary of deficiencies by analysis scenario. Section 2 *Methodologies* provides information on the methodologies used in the analysis and Section 5 *EAP (2030) Traffic Conditions*, Section 6 *EAPC (2030) Traffic Conditions*, and Section 7 *Horizon Year (2040) Traffic Conditions* includes the detailed analysis. A summary of LOS results for all analysis scenarios is presented on Exhibit 1-5.

1.6.1 EAP (2030) CONDITIONS

Intersections

The following study area intersections are anticipated to operate at a deficient LOS (i.e., LOS E or worse) during one or both peak hours for EAP (2030) traffic conditions:

- I-215 Southbound Ramps & Harley Knox Boulevard (#2) – LOS F AM and PM peak hours
- I-215 Northbound Ramps & Harley Knox Boulevard (#3) – LOS F AM and PM peak hours
- I-215 Southbound Ramps & Ramona Expressway (#4) – LOS F AM and PM peak hours
- I-215 Northbound Ramps & Ramona Expressway (#5) – LOS F AM and PM peak hours
- Indian Avenue & Placentia Avenue (#15) – LOS F AM and PM peak hours
- Perris Boulevard & Harley Knox Boulevard (#20) – LOS F PM peak hour only
- Perris Boulevard & Orange Avenue (#26) – LOS E PM peak hour only
- Redlands Avenue & Ramona Expressway (#30) – LOS F AM and PM peak hours
- Redlands Avenue & Rider Street (#32) – LOS F AM and PM peak hours
- Evans Road & Ramona Expressway (#39) – LOS F AM and PM peak hours
- Evans Road & Orange Avenue (#41) – LOS F AM peak hour only
- Menifee Road/Reservoir Boulevard & Nuevo Road (#53) – LOS E AM peak hour; LOS F PM peak hour
- Menifee Road & Mapes Road (#56) – LOS F AM and PM peak hours
- Menifee Road & Watson Road (#57) – LOS F AM and PM peak hours
- Menifee Road & Ethanac Road (SR-74) (#58) – LOS F AM and PM peak hours
- Lakeview Avenue & Ramona Expressway (#60) – LOS F AM and PM peak hours
- Lakeview Avenue & Nuevo Road (#61) – LOS E AM peak hour only
- Bridge Street & Ramona Expressway (#65) – LOS F AM and PM peak hours
- Sanderson Avenue (SR-79) & Ramona Expressway (#67) – LOS F AM and PM peak hours

Off-Ramp Queues

The following movement is anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows under EAP (2030) traffic conditions:

- I-215 Southbound Ramps & Ramona Expressway (#4), southbound left turn lane – PM peak hour only

Freeway Facilities

The following study area freeway segments and merge/diverge ramp junctions analyzed for this study are anticipated to continue to operate at an unacceptable LOS (i.e., LOS E or worse) during the peak hours for EAP (2030) traffic conditions, consistent with Existing (2020) traffic conditions:

- I-215 Freeway Northbound, North of Harley Knox Boulevard (#14) – LOS F AM and PM peak hours

- I-215 Freeway Northbound, Harley Knox Boulevard to Ramona Expressway (#17) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Ramona Expressway to Placentia Avenue (#20) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Placentia Avenue to Nuevo Road (#23) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, South of Nuevo Road (#26) – LOS F AM and PM peak hours

1.6.2 EAPC (2030) CONDITIONS

Intersections

The following study area intersections are anticipated to operate at a deficient LOS (i.e., LOS E or worse) during one or both peak hours for EAPC (2030) traffic conditions:

- Harvill Avenue & Cajalco Expressway (#1) – LOS E AM peak hour; LOS F PM peak hour
- I-215 Southbound Ramps & Harley Knox Boulevard (#2) – LOS F AM and PM peak hours
- I-215 Northbound Ramps & Harley Knox Boulevard (#3) – LOS F AM and PM peak hours
- I-215 Southbound Ramps & Ramona Expressway (#4) – LOS F AM and PM peak hours
- I-215 Northbound Ramps & Ramona Expressway (#5) – LOS F AM and PM peak hours
- I-215 Southbound Ramps & Placentia Avenue (#6) – LOS F PM peak hour only
- Webster Avenue & Harley Knox Boulevard (#11) – LOS F AM and PM peak hours
- Webster Avenue & Ramona Expressway (#12) – LOS F AM and PM peak hours
- Indian Avenue & Ramona Expressway (#14) – LOS F AM and PM peak hours
- Indian Avenue & Placentia Avenue (#15) – LOS F AM and PM peak hours
- Perris Boulevard & Iris Avenue (#16) – LOS E PM peak hour only
- Perris Boulevard & Harley Knox Boulevard (#20) – LOS F PM peak hour only
- Perris Boulevard & Ramona Expressway (#22) – LOS F AM and PM peak hours
- Perris Boulevard & Orange Avenue (#26) – LOS E PM peak hour only
- Redlands Avenue & Harley Knox Boulevard (#28) – LOS F AM peak hour only
- Redlands Avenue & Ramona Expressway (#30) – LOS F AM and PM peak hours
- Redlands Avenue & Rider Street (#32) – LOS F AM and PM peak hours
- Lasselle Street & Iris Avenue (#37) – LOS E AM and PM peak hours
- Lasselle Street & Krameria Avenue (#38) – LOS E AM and PM peak hours
- Evans Road & Ramona Expressway (#39) – LOS F AM and PM peak hours
- Evans Road & Orange Avenue (#41) – LOS F AM peak hour only
- Bradley Road & Ramona Expressway (#43) – LOS E AM peak hour only
- Dunlap Drive & Nuevo Road (#46) – LOS F AM and PM peak hours
- Ramona Expressway & Rider Street (#47) – LOS E AM peak hour; LOS F PM peak hour
- Antelope Road & Ramona Expressway (#48) – LOS F PM peak hour only

- Antelope Road & Nuevo Road (#51) – LOS F AM and PM peak hours
- Street A & Ramona Expressway (#52) – LOS F AM and PM peak hours
- Menifee Road/Reservoir Boulevard & Nuevo Road (#53) – LOS E AM peak hour; LOS F PM peak hour
- Menifee Road & San Jacinto Avenue (#54) – LOS F AM and PM peak hours
- Menifee Road & Ellis Road (#55) – LOS E AM peak hour; LOS F PM peak hour
- Menifee Road & Mapes Road (#56) – LOS F AM and PM peak hours
- Menifee Road & Watson Road (#57) – LOS F AM and PM peak hours
- Menifee Road & Ethanac Road (SR-74) (#58) – LOS F AM and PM peak hours
- Lakeview Avenue & Ramona Expressway (#60) – LOS F AM and PM peak hours
- Lakeview Avenue & Nuevo Road (#61) – LOS E AM peak hour only
- Hansen Avenue/Davis Road & Ramona Expressway (#63) – LOS F AM and PM peak hours
- Bridge Street & Ramona Expressway (#65) – LOS F AM and PM peak hours
- Warren Road & Ramona Expressway (#66) – LOS F PM peak hour only
- Sanderson Avenue (SR-79) & Ramona Expressway (#67) – LOS F AM and PM peak hours

Off-Ramp Queues

The following movements are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows under EAPC (2030) traffic conditions:

- I-215 Southbound Ramps & Ramona Expressway (#4), southbound left turn lane – AM and PM peak hours
- I-215 Southbound Ramps & Ramona Expressway (#4), southbound left-through lane – PM peak hour only

Freeway Facilities

the following study area freeway segments and merge/diverge ramp junctions analyzed for this study are anticipated to continue to operate at an unacceptable LOS (i.e., LOS E or worse) during the peak hours for EAPC (2030) traffic conditions:

- I-215 Freeway Southbound, North of Harley Knox Boulevard (#1) – LOS E AM peak hour; LOS F PM peak hour
- I-215 Freeway Southbound, Off-Ramp at Harley Knox Boulevard (#2) – LOS E AM peak hour; LOS F PM peak hour
- I-215 Freeway Southbound, On-Ramp at Harley Knox Boulevard (#3) – LOS F PM peak hour only
- I-215 Freeway Southbound, Harley Knox Boulevard to Ramona Expressway (#4) – LOS F PM peak hour only
- I-215 Freeway Southbound, Off-Ramp at Ramona Expressway (#5) – LOS F PM peak hour only
- I-215 Freeway Northbound, North of Harley Knox Boulevard (#14) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, On-Ramp at Harley Knox Boulevard (#15) – LOS F PM peak hour only

- I-215 Freeway Northbound, Harley Knox Boulevard to Ramona Expressway (#17) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Ramona Expressway to Placentia Avenue (#20) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Placentia Avenue to Nuevo Road (#23) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, South of Nuevo Road (#26) – LOS F AM and PM peak hours

1.6.3 HORIZON YEAR (2040) WITHOUT MCP CONDITIONS

Intersections

The following study area intersections are anticipated to operate at a deficient LOS (i.e., LOS E or worse) during one or both peak hours under Horizon Year (2040) Without MCP Without Project traffic conditions:

- Harvill Avenue & Cajalco Expressway (#1) – LOS F AM and PM peak hours
- I-215 Southbound Ramps & Harley Knox Boulevard (#2) – LOS F AM and PM peak hours
- I-215 Northbound Ramps & Harley Knox Boulevard (#3) – LOS F AM and PM peak hours
- I-215 Southbound Ramps & Ramona Expressway (#4) – LOS F AM and PM peak hours
- I-215 Northbound Ramps & Ramona Expressway (#5) – LOS F AM and PM peak hours
- I-215 Southbound Ramps & Placentia Avenue (#6) – LOS F PM peak hour only
- I-215 Southbound Ramps & Nuevo Road (#8) – LOS F PM peak hour only
- Webster Avenue & Harley Knox Boulevard (#11) – LOS F AM and PM peak hours
- Webster Avenue & Ramona Expressway (#12) – LOS F AM and PM peak hours
- Indian Avenue & Harley Knox Boulevard (#13) – LOS E AM and PM peak hours
- Indian Avenue & Ramona Expressway (#14) – LOS F AM and PM peak hours
- Indian Avenue & Placentia Avenue (#15) – LOS E AM peak hour; LOS F PM peak hour
- Perris Boulevard & Iris Avenue (#16) – LOS E AM peak hour; LOS F PM peak hour
- Perris Boulevard & Krameria Avenue (#17) – LOS F AM peak hour; LOS E PM peak hour
- Perris Boulevard & Harley Knox Boulevard (#20) – LOS E AM peak hour; LOS F PM peak hour
- Perris Boulevard & Ramona Expressway (#22) – LOS F AM and PM peak hours
- Perris Boulevard & Placentia Avenue (#25) – LOS F PM peak hour only
- Perris Boulevard & Orange Avenue (#26) – LOS F PM peak hour only
- Perris Boulevard & Nuevo Road (#27) – LOS E AM peak hour; LOS F PM peak hour
- Redlands Avenue & Harley Knox Boulevard (#28) – LOS F AM peak hour; LOS E PM peak hour
- Redlands Avenue & Ramona Expressway (#30) – LOS F AM and PM peak hours
- Redlands Avenue & Rider Street (#32) – LOS F AM and PM peak hours
- Redlands Avenue & Nuevo Road (#35) – LOS E AM and PM peak hours
- Lasselle Street & Iris Avenue (#37) – LOS E AM and PM peak hours
- Lasselle Street & Krameria Avenue (#38) – LOS F AM and PM peak hours

- Evans Road & Ramona Expressway (#39) – LOS F AM and PM peak hours
- Evans Road & Rider Street (#40) – LOS E AM peak hour only
- Evans Road & Orange Avenue (#41) – LOS F AM peak hour only
- Evans Road & Nuevo Road (#42) – LOS F AM and PM peak hours
- Bradley Road & Ramona Expressway (#43) – LOS F AM and PM peak hours
- Dunlap Drive & Nuevo Road (#46) – LOS F AM and PM peak hours
- Ramona Expressway & Rider Street (#47) – LOS F AM and PM peak hours
- Antelope Road & Ramona Expressway (#48) – LOS F AM and PM peak hours
- Antelope Road & Nuevo Road (#51) – LOS F AM and PM peak hours
- Menifee Road/Reservoir Boulevard & Nuevo Road (#53) – LOS F AM and PM peak hours
- Menifee Road & San Jacinto Avenue (#54) – LOS F AM and PM peak hours
- Menifee Road & Ellis Road (#55) – LOS F AM and PM peak hours
- Menifee Road & Mapes Road (#56) – LOS F AM and PM peak hours
- Menifee Road & Watson Road (#57) – LOS F AM and PM peak hours
- Menifee Road & Ethanac Road (SR-74) (#58) – LOS F AM and PM peak hours
- Bernasconi Road & Orange Avenue (#59) – LOS F AM and PM peak hours
- Lakeview Avenue & Ramona Expressway (#60) – LOS F AM and PM peak hours
- Lakeview Avenue & Nuevo Road (#61) – LOS F AM and PM peak hours
- Hansen Avenue/Davis Road & Ramona Expressway (#63) – LOS F AM and PM peak hours
- Bridge Street & Ramona Expressway (#65) – LOS F AM and PM peak hours
- Warren Road & Ramona Expressway (#66) – LOS F AM and PM peak hours
- Sanderson Avenue (SR-79) & Ramona Expressway (#67) – LOS F AM and PM peak hours

With the addition of Project traffic, the following additional study area intersections are anticipated to result in an unacceptable LOS, in addition to the intersections previously identified under Horizon Year (2040) Without MCP Without Project traffic conditions:

- Dunlap Drive & Orange Avenue (#45) – LOS F AM and PM peak hours
- Street A & Ramona Expressway (#52) – LOS F AM and PM peak hours

Off-Ramp Queues

The following movements are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows under Horizon Year (2040) Without MCP Without Project traffic conditions:

- I-215 Southbound Ramps & Ramona Expressway (#4), southbound left turn lane – AM and PM peak hours
- I-215 Southbound Ramps & Ramona Expressway (#4), southbound left-through lane – PM peak hour only

- I-215 Southbound Ramps & Ramona Expressway (#4), southbound right turn lane – AM peak hour only

With the addition of Project traffic, the following additional movements are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows for Horizon Year (2040) Without MCP With Project traffic conditions:

- I-215 Southbound Ramps & Harley Knox Boulevard (#2), southbound left-through lane – AM Peak hour only
- I-215 Southbound Ramps & Harley Knox Boulevard (#2), southbound right turn lane – AM Peak hour only

Freeway Facilities

The study area freeway segments and merge/diverge ramp junctions analyzed for this study are anticipated to operate at an acceptable LOS (i.e., LOS D or better) during the peak hours for Horizon Year (2040) Without MCP Without Project traffic conditions, with the exception of the following freeway segments and merge/diverge ramp junctions:

- I-215 Freeway Southbound, North of Harley Knox Boulevard (#1) – LOS F AM and PM peak hours
- I-215 Freeway Southbound, Off-Ramp at Harley Knox Boulevard (#2) – LOS F AM and PM peak hours
- I-215 Freeway Southbound, On-Ramp at Harley Knox Boulevard (#3) – LOS F PM peak hour only
- I-215 Freeway Southbound, Harley Knox Boulevard to Ramona Expressway (#4) – LOS F PM peak hour only
- I-215 Freeway Southbound, Off-Ramp at Ramona Expressway (#5) – LOS F PM peak hour only
- I-215 Freeway Southbound, On-Ramp at Ramona Expressway (#6) – LOS F PM peak hour only
- I-215 Freeway Southbound, Ramona Expressway to Placentia Avenue (#7) – LOS F PM peak hour only
- I-215 Freeway Southbound, Off-Ramp at Placentia Avenue (#8) – LOS F PM peak hour only
- I-215 Freeway Southbound, On-Ramp at Placentia Avenue (#9) – LOS F PM peak hour only
- I-215 Freeway Southbound, Placentia Avenue to Nuevo Road (#10) – LOS F PM peak hour only
- I-215 Freeway Southbound, Off-Ramp at Nuevo Road (#11) – LOS F PM peak hour only
- I-215 Freeway Southbound, On-Ramp at Nuevo Road (#12) – LOS F PM peak hour only
- I-215 Freeway Northbound, North of Harley Knox Boulevard (#14) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, On-Ramp at Harley Knox Boulevard (#15) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Off-Ramp at Harley Knox Boulevard (#16) – LOS F PM peak hour only
- I-215 Freeway Northbound, Harley Knox Boulevard to Ramona Expressway (#17) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, On-Ramp at Ramona Expressway (#18) – LOS F PM peak hour only
- I-215 Freeway Northbound, Off-Ramp at Ramona Expressway (#19) – LOS E PM peak hour only

- I-215 Freeway Northbound, Ramona Expressway to Placentia Avenue (#20) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, On-Ramp at Placentia Avenue (#21) – LOS E PM peak hour only
- I-215 Freeway Northbound, Placentia Avenue to Nuevo Road (#23) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Off-Ramp at Nuevo Road (#25) – LOS E AM peak hour only
- I-215 Freeway Northbound, South of Nuevo Road (#26) – LOS F AM and PM peak hours

With the addition of Project traffic, there are no additional study area freeway segments or merge/diverge ramp junctions that are anticipated to operate at an unacceptable LOS during the peak hours, in addition to the segments and ramp junctions identified under Horizon Year (2040) Without MCP Without Project.

1.6.4 HORIZON YEAR (2040) WITH MCP CONDITIONS

Intersections

The following study area intersections are anticipated to operate at an unacceptable LOS under Horizon Year (2040) Without MCP Without Project traffic conditions:

- Harvill Avenue & Cajalco Expressway (#1) – LOS F AM and PM peak hours
- I-215 Southbound Ramps & Harley Knox Boulevard (#2) – LOS E PM peak hour only
- I-215 Northbound Ramps & Harley Knox Boulevard (#3) – LOS F AM peak hour only
- I-215 Southbound Ramps & Ramona Expressway (#4) – LOS F PM peak hour only
- I-215 Northbound Ramps & Ramona Expressway (#5) – LOS F PM peak hour only
- Webster Avenue & Ramona Expressway (#12) – LOS F AM and PM peak hours
- Indian Avenue & Ramona Expressway (#14) – LOS E PM peak hour only
- Indian Avenue & Placentia Avenue (#15) – LOS F AM and PM peak hours
- Perris Boulevard & Iris Avenue (#16) – LOS E PM peak hour only
- Perris Boulevard & Harley Knox Boulevard (#20) – LOS E AM peak hour; LOS F PM peak hour
- Perris Boulevard & Placentia Avenue (#25) – LOS F AM and PM peak hours
- Perris Boulevard & Orange Avenue (#26) – LOS F PM peak hour only
- Perris Boulevard & Nuevo Road (#27) – LOS E AM and PM peak hours
- Redlands Avenue & Rider Street (#32) – LOS F AM and PM peak hours
- Redlands Avenue & Placentia Avenue (#33) – LOS F AM and PM peak hours
- Redlands Avenue & Nuevo Road (#35) – LOS E PM peak hour only
- Lasselle Street & Krameria Avenue (#38) – LOS E PM peak hour only
- Evans Road & Ramona Expressway (#39) – LOS E AM and PM peak hours
- Evans Road & Orange Avenue (#41) – LOS F AM and PM peak hours
- Evans Road & Nuevo Road (#42) – LOS F AM and PM peak hours
- Menifee Road/Reservoir Boulevard & Nuevo Road (#53) – LOS F AM and PM peak hours

- Menifee Road & San Jacinto Avenue (#54) – LOS F AM and PM peak hours
- Menifee Road & Ellis Road (#55) – LOS F AM and PM peak hours
- Menifee Road & Mapes Road (#56) – LOS F AM and PM peak hours
- Menifee Road & Watson Road (#57) – LOS F AM and PM peak hours
- Menifee Road & Ethanac Road (SR-74) (#58) – LOS F AM and PM peak hours
- Sanderson Avenue (SR-79) & Ramona Expressway (#67) – LOS F AM and PM peak hours

With the addition of Project traffic, the following additional study area intersections are anticipated to result in an unacceptable LOS, in addition to the intersections previously identified under Horizon Year (2040) Without MCP Without Project traffic conditions:

- Dunlap Drive & Orange Avenue (#45) – LOS F AM and PM peak hours
- Antelope Road & Nuevo Road (#51) – LOS F AM peak hour; LOS E PM peak hour

Off-Ramp Queues

There are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows under Horizon Year (2040) Without MCP Without Project and With Project traffic conditions.

Freeway Facilities

The study area freeway segments and merge/diverge ramp junctions analyzed for this study are anticipated to operate at an acceptable LOS (i.e., LOS D or better) during the peak hours for Horizon Year (2040) Without MCP Without Project traffic conditions, with the exception of the following freeway segments and merge/diverge ramp junctions:

- I-215 Freeway Southbound, North of Harley Knox Boulevard (#1) – LOS F AM and PM peak hours
- I-215 Freeway Southbound, Off-Ramp at Harley Knox Boulevard (#2) – LOS F AM and PM peak hours
- I-215 Freeway Southbound, On-Ramp at Harley Knox Boulevard (#3) – LOS F PM peak hour only
- I-215 Freeway Southbound, Harley Knox Boulevard to Ramona Expressway (#4) – LOS F PM peak hour only
- I-215 Freeway Southbound, Off-Ramp at Ramona Expressway (#5) – LOS F PM peak hour only
- I-215 Freeway Southbound, On-Ramp at Ramona Expressway (#6) – LOS F PM peak hour only
- I-215 Freeway Southbound, Ramona Expressway to Placentia Avenue (#7) – LOS F PM peak hour only
- I-215 Freeway Southbound, Off-Ramp at Placentia Avenue (#8) – LOS F PM peak hour only
- I-215 Freeway Southbound, On-Ramp at Placentia Avenue (#9) – LOS F PM peak hour only
- I-215 Freeway Southbound, Placentia Avenue to Nuevo Road (#10) – LOS F PM peak hour only
- I-215 Freeway Southbound, Off-Ramp at Nuevo Road (#11) – LOS F PM peak hour only
- I-215 Freeway Southbound, On-Ramp at Nuevo Road (#12) – LOS F PM peak hour only
- I-215 Freeway Northbound, North of Harley Knox Boulevard (#14) – LOS F AM and PM peak hours

- I-215 Freeway Northbound, On-Ramp at Harley Knox Boulevard (#15) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Off-Ramp at Harley Knox Boulevard (#16) – LOS F PM peak hour only
- I-215 Freeway Northbound, Harley Knox Boulevard to Ramona Expressway (#17) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, On-Ramp at Ramona Expressway (#18) – LOS F PM peak hour only
- I-215 Freeway Northbound, Off-Ramp at Ramona Expressway (#19) – LOS E PM peak hour only
- I-215 Freeway Northbound, Ramona Expressway to Placentia Avenue (#20) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, On-Ramp at Placentia Avenue (#21) – LOS E PM peak hour only
- I-215 Freeway Northbound, Placentia Avenue to Nuevo Road (#23) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Off-Ramp at Nuevo Road (#25) – LOS E AM peak hour only
- I-215 Freeway Northbound, South of Nuevo Road (#26) – LOS F AM and PM peak hours

With the addition of Project traffic, there are no additional study area freeway segments or merge/diverge ramp junctions that are anticipated to operate at an unacceptable LOS during the peak hours, in addition to the segments and ramp junctions identified under Horizon Year (2040) With MCP Without Project.

1.7 RECOMMENDATIONS

1.7.1 SITE ADJACENT AND SITE ACCESS RECOMMENDATIONS

The following recommendations are based on the improvements needed to accommodate site access. Exhibit 1-6 shows the site adjacent recommendations.

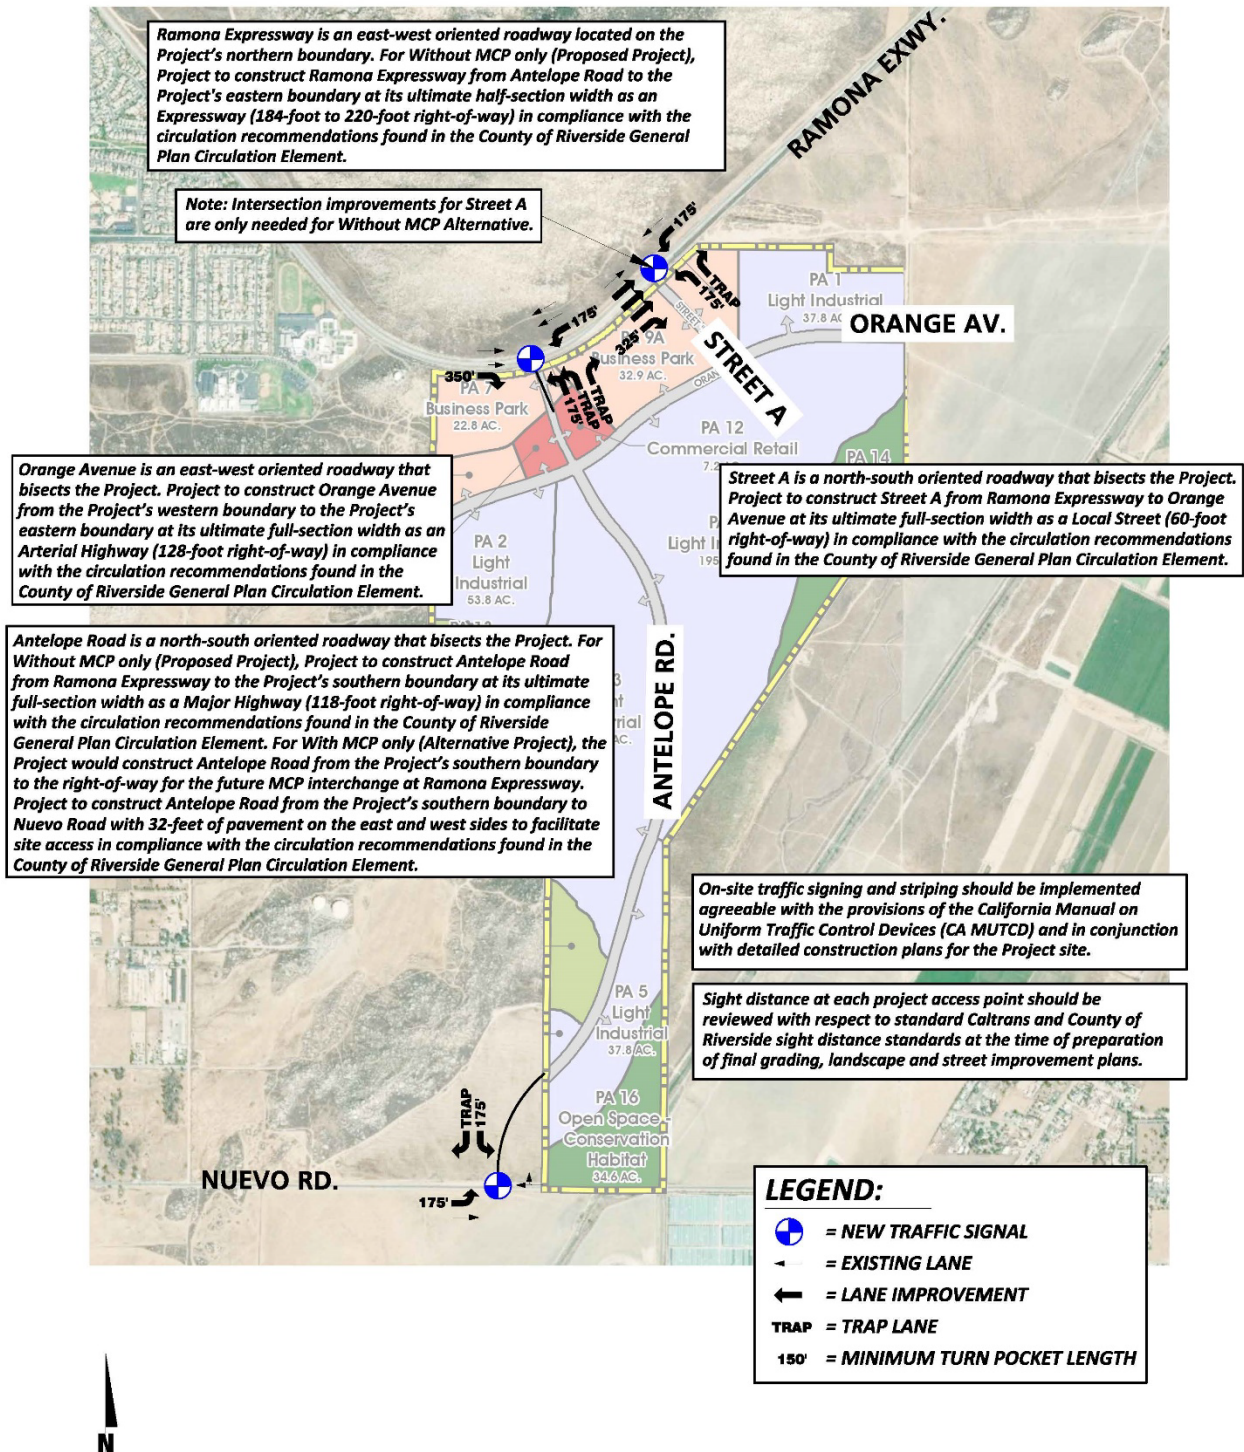

Recommendation 1.1 – Antelope Road & Ramona Expressway (#48) – The following improvements are necessary to accommodate site access:

- Project to install a traffic signal.
- Project to construct dual northbound left turn lanes (with a minimum of 175-feet of storage for the inner left turn lane and a trap lane for the outer left turn lane) and a right turn lane (trap lane).
- Project to construct an eastbound right turn lane with a minimum of 350-feet of storage.
- Project to construct a westbound left turn lane with a minimum of 175-feet of storage.

Recommendation 2.1 – Antelope Road & Nuevo Road (#51) – The following improvements are necessary to accommodate site access:

- Project to install a traffic signal.
- Project to construct a southbound left turn lane with a minimum of 175-feet of storage for the inner left turn lane and a right turn lane (trap lane).
- Project to construct an eastbound left turn lane with a minimum of 175-feet of storage.

EXHIBIT 1-6: SITE ADJACENT ROADWAY AND SITE ACCESS RECOMMENDATIONS

Recommendation 3.1 – Street A & Ramona Expressway (#52) – The following improvements are necessary to accommodate site access (applicable for Without MCP alternative only):

- Project to install a traffic signal.
- Project to construct a northbound left turn lane with a minimum of 175-feet of storage and a right turn lane (trap lane).
- Project to construct an eastbound right turn lane with a minimum of 325-feet of storage and a 2nd, 3rd and 4th through lane. The 3rd and 4th through lanes will remain unstriped until such time in the future when Ramona Expressway is widened to the east with additional receiving lanes.
- Project to construct a westbound left turn lane with a minimum of 175-feet of storage.

Recommendation 4.1 – Antelope Road is a north-south oriented roadway that bisects the Project. For Without MCP (Proposed Project), Project to construct Antelope Road from Ramona Expressway to the Project’s southern boundary at its ultimate full-section width as a Major Highway (118-foot right-of-way) in compliance with the circulation recommendations found in the County of Riverside General Plan Circulation Element. For With MCP (Alternative Project), the Project would construct Antelope Road from the Project’s southern boundary to the right-of-way for the future MCP interchange at Ramona Expressway. Project to construct Antelope Road from the Project’s southern boundary to Nuevo Road with 32-feet of pavement on the east and west sides to facilitate site access in compliance with the circulation recommendations found in the County of Riverside General Plan Circulation Element.

Recommendation 5.1 – Ramona Expressway is an east-west oriented roadway located on the Project’s northern boundary. For Without MCP only (Proposed Project), Project to construct Ramona Expressway from Antelope Road to the Project’s eastern boundary at its ultimate half-section width as an Expressway (184-foot to 220-foot right-of-way) in compliance with the circulation recommendations found in the County of Riverside General Plan Circulation Element.

Recommendation 6.1 – Orange Avenue is an east-west oriented roadway that bisects the Project. Project to construct Orange Avenue from the Project’s western boundary to the Project’s eastern boundary at its ultimate full-section width as an Arterial Highway (128-foot right-of-way) in compliance with the circulation recommendations found in the County of Riverside General Plan Circulation Element.

Recommendation 7.1 – Street A is a north-south oriented roadway that bisects the Project. Project to construct Street A from Ramona Expressway to Orange Avenue at its ultimate full-section width as a Local Street (60-foot right-of-way) in compliance with the circulation recommendations found in the County of Riverside General Plan Circulation Element. This improvement is applicable for the Without MCP alternative only.

On-site traffic signing and striping should be implemented agreeable with the provisions of the California Manual on Uniform Traffic Control Devices (CA MUTCD) and in conjunction with detailed construction plans for the Project site.

Sight distance at each project access point should be reviewed with respect to standard Caltrans and County of Riverside sight distance standards at the time of preparation of final grading, landscape and street improvement plans.

1.7.2 OFF-SITE RECOMMENDATIONS

The recommended improvements needed to address the cumulative deficiencies identified under Existing (2020), EAP (2030), EAPC (2030), and Horizon Year (2040) Without MCP traffic conditions are shown in Table 1-4. The recommended improvements needed to address the cumulative deficiencies identified under Horizon Year (2040) With MCP traffic conditions are shown in Table 1-5. For those improvements listed in Tables 1-4 and 1-5 and not constructed as part of the Project, the Applicant's responsibility for the Project's contributions towards deficient intersections is fulfilled through payment of fair share and/or TUMF/DIF fees (if applicable) that would be assigned to construction of the identified recommended improvements, or as identified in the Project's Conditions of Approval. The Project Applicant would be required to pay TUMF/DIF and/or fair share fees consistent with the County's requirements (see Section 8 *Local and Regional Funding Mechanisms*).

TABLE 1-4: SUMMARY OF IMPROVEMENTS BY ANALYSIS SCENARIO – WITHOUT MID-COUNTY PARKWAY

#	Intersection Location	Jurisdiction	Recommended Improvements				Improvements in County DIF or TUMF ^{1,2}	Project Responsibility	Project Fair Share ⁴	
			Existing (2020)	EAP (2030)	EAPC (2030)	Horizon Year (2040) Without Project				Horizon Year (2040) With Project
1	Harvill Av. & Cajalco Exwy.	County of Riverside	None	None	Add 3rd EB through lane Add 3rd WB through lane	Same Same	Same Same	Yes (TUMF) Yes (TUMF)	Fees Fees	--

¹ Improvements Included in TUMF Nexus, or County of Riverside DIF fee programs.
² Program Improvements constructed by project may be eligible for fee credit. In lieu fee payment is at discretion of County. Represents the fair share percentage for the Project during the most impacted peak hour.
³ Although the Interchange is identified as a TUMF interchange, the interchange is not currently identified on the Central Zone 5-Year Transportation Improvement Program Amendment (adopted June 30, 2016).
⁴ Program Improvements constructed by project may be eligible for fee credit, at discretion of County. See Table B.1 for Fair Share Calculations.
⁵ Improvement is consistent with the Nuevo Road widening project that is currently under construction.
⁶ Improvement planned to be constructed as part of the I-215 Freeway/Placentia Avenue Interchange project, which is anticipated to be completed in 2022.

TABLE 1-5: SUMMARY OF IMPROVEMENTS BY ANALYSIS SCENARIO – WITH MID-COUNTY PARKWAY

Note: Improvements identified in *italics* are consistent with the improvements identified for Without Mid-County Parkway in an earlier analysis scenario (see Table 1-4).

¹ Improvements included in TUMF Nexus, or County of Riverside DIF fee programs.

² Program improvements constructed by project may be eligible for fee credit. In lieu fee payment is at discretion of County. Represents the fair share percentage for the Project during the most impacted peak hour.

³ Although the interchange is identified as a TUMF interchange, the interchange is not currently identified on the Central Zone 5-Year Transportation Improvement Program Amendment (adopted June 30, 2016).

⁴ Program improvements constructed by project may be eligible for fee credit, at discretion of County. See Table 8-1 for Fair Share Calculations.

⁵ Improvement is consistent with the Nuevo Road widening project that is currently under construction.

⁶ Improvement planned to be constructed as part of the I-215 Freeway/Placentia Avenue interchange project, which is anticipated to be completed in 2022.

⁷ Improvement is consistent with the Mid-County Parkway Traffic Technical Report (February 3, 2012, VRPA Technologies, Inc.) and assumed to be in place.

This Page Intentionally Left Blank

2 METHODOLOGIES

This section of the report presents the methodologies used to perform the traffic analyses summarized in this report. The methodologies described are generally consistent with County of Riverside and Caltrans traffic study guidelines. (1) (2)

2.1 LEVEL OF SERVICE

Traffic operations of roadway facilities are described using the term "Level of Service" (LOS). LOS is a qualitative description of traffic flow based on several factors such as speed, travel time, delay, and freedom to maneuver. Six levels are typically defined ranging from LOS A, representing completely free-flow conditions, to LOS F, representing breakdown in flow resulting in stop-and-go conditions. LOS E represents operations at or near capacity, an unstable level where vehicles are operating with the minimum spacing for maintaining uniform flow.

2.2 INTERSECTION CAPACITY ANALYSIS

The definitions of LOS for interrupted traffic flow (flow restrained by the existence of traffic signals and other traffic control devices) differ slightly depending on the type of traffic control. The LOS is typically dependent on the quality of traffic flow at the intersections along a roadway. The Highway Capacity Manual (HCM) methodology expresses the LOS at an intersection in terms of delay time for the various intersection approaches. (7) The HCM uses different procedures depending on the type of intersection control.

2.2.1 SIGNALIZED INTERSECTIONS

County of Riverside, City of Perris, City of Moreno Valley, City of Menifee, and City of San Jacinto

The County of Riverside, City of Perris, City of Moreno Valley, City of Menifee, and City of San Jacinto require signalized intersection operations analysis based on the methodology described in the HCM (6th Edition). Intersection LOS operations are based on an intersection's average control delay. Control delay includes initial deceleration delay, queue move-up time, stopped delay, and final acceleration delay. For signalized intersections LOS is directly related to the average control delay per vehicle and is correlated to a LOS designation as described in Table 2-1. Study area intersections have been evaluated using the Synchro (Version 10) analysis software package.

The traffic modeling and signal timing optimization software package Synchro (Version 10) is utilized to analyze signalized intersections. Synchro is a macroscopic traffic software program that is based on the signalized intersection capacity analysis as specified in the HCM. Macroscopic level models represent traffic in terms of aggregate measures for each movement at the study intersections. Equations are used to determine measures of effectiveness such as delay and queue length. The level of service and capacity analysis performed by Synchro takes into consideration optimization and coordination of signalized intersections within a network.

TABLE 2-1: SIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay (Seconds), V/C ≤ 1.0	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Operations with very low delay occurring with favorable progression and/or short cycle length.	0 to 10.00	A	F
Operations with low delay occurring with good progression and/or short cycle lengths.	10.01 to 20.00	B	F
Operations with average delays resulting from fair progression and/or longer cycle lengths. Individual cycle failures begin to appear.	20.01 to 35.00	C	F
Operations with longer delays due to a combination of unfavorable progression, long cycle lengths, or high V/C ratios. Many vehicles stop and individual cycle failures are noticeable.	35.01 to 55.00	D	F
Operations with high delay values indicating poor progression, long cycle lengths, and high V/C ratios. Individual cycle failures are frequent occurrences. This is considered to be the limit of acceptable delay.	55.01 to 80.00	E	F
Operation with delays unacceptable to most drivers occurring due to over saturation, poor progression, or very long cycle lengths	80.01 and up	F	F

Source: HCM, 6th Edition

A saturation flow rate of 1900 has been utilized for all study area intersections located within the study area. The peak hour traffic volumes are adjusted using a peak hour factor (PHF) to reflect peak 15-minute volumes. Common practice for LOS analysis is to use a peak 15-minute rate of flow. However, flow rates are typically expressed in vehicles per hour. The PHF is the relationship between the peak 15-minute flow rate and the full hourly volume (e.g. $PHF = [Hourly\ Volume] / [4 \times Peak\ 15\text{-minute}\ Flow\ Rate]$). The use of a 15-minute PHF produces a more detailed analysis as compared to analyzing vehicles per hour. Existing PHFs have been used for all analysis scenarios. Per the HCM, PHF values over 0.95 often are indicative of high traffic volumes with capacity constraints on peak hour flows while lower PHF values are indicative of greater variability of flow during the peak hour. (7)

2.2.2 UNSIGNALIZED INTERSECTIONS

The County of Riverside, City of Perris, City of Moreno Valley, City of Menifee, and City of San Jacinto require the operations of unsignalized intersections be evaluated using the methodology described the HCM. (7) The LOS rating is based on the weighted average control delay expressed in seconds per vehicle (see Table 2-2).

TABLE 2-2: UNSIGNALIZED INTERSECTION LOS THRESHOLDS

Description	Average Control Delay Per Vehicle (Seconds)	Level of Service, V/C ≤ 1.0	Level of Service, V/C > 1.0
Little or no delays.	0 to 10.00	A	F
Short traffic delays.	10.01 to 15.00	B	F
Average traffic delays.	15.01 to 25.00	C	F
Long traffic delays.	25.01 to 35.00	D	F
Very long traffic delays.	35.01 to 50.00	E	F
Extreme traffic delays with intersection capacity exceeded.	> 50.00	F	F

Source: HCM, 6th Edition

At two-way or side-street stop-controlled intersections, LOS is calculated for each controlled movement and for the left turn movement from the major street, as well as for the intersection as a whole. For approaches composed of a single lane, the delay is computed as the average of all movements in that lane. For all-way stop controlled intersections, LOS is computed for the intersection as a whole.

2.3 TRAFFIC SIGNAL WARRANT ANALYSIS METHODOLOGY

The term "signal warrants" refers to the list of established criteria used by the Caltrans and other public agencies to quantitatively justify or ascertain the potential need for installation of a traffic signal at an otherwise unsignalized intersection. This TIA uses the signal warrant criteria presented in the latest edition of the Caltrans California Manual on Uniform Traffic Control Devices (CA MUTCD). (8)

The signal warrant criteria for Existing conditions are based upon several factors, including volume of vehicular and pedestrian traffic, frequency of accidents, and location of school areas. The Caltrans CA MUTCD indicates that the installation of a traffic signal should be considered if one or more of the signal warrants are met. (8) Specifically, this TIA utilizes the Peak Hour Volume-based Warrant 3 as the appropriate representative traffic signal warrant analysis for existing study area intersections for all analysis scenarios. Warrant 3 is appropriate to use for this TIA because it provides specialized warrant criteria for intersections with rural characteristics (e.g. located in communities with populations of less than 10,000 persons or with adjacent major streets operating above 40 miles per hour). For the purposes of this study, the speed limit was the basis for determining whether Urban or Rural warrants were used for a given intersection.

Future intersections that do not currently exist have been assessed regarding the potential need for new traffic signals based on future average daily traffic (ADT) volumes, using the Caltrans planning level ADT-based signal warrant analysis worksheets.

Traffic signal warrant analyses were performed for the following unsignalized study area intersection shown in Table 2-3:

TABLE 2-3: TRAFFIC SIGNAL WARRANT ANALYSIS LOCATIONS

ID	Intersection Location	Jurisdiction
6	I-215 SB Ramps & Placentia Av. – Future Intersection	County of Riverside, Caltrans
7	I-215 NB Ramps & Placentia Av. – Future Intersection	Perris, Caltrans

54	Menifee Rd. & San Jacinto Av.	County of Riverside
55	Menifee Rd. & Ellis Rd.	County of Riverside
56	Menifee Rd. & Mapes Rd.	County of Riverside, Menifee
57	Menifee Rd. & Watson Rd.	Menifee
59	Bernasconi Rd. & Orange Av. – Future Intersection	County of Riverside
61	Lakeview Av. & Nuevo Rd.	County of Riverside
62	Montgomery Av. & Nuevo Rd.	County of Riverside
64	Hansen Av. & Contour Av.	County of Riverside
65	Bridge St. & Ramona Exwy.	County of Riverside

The Existing conditions traffic signal warrant analysis is presented in the subsequent section, Section 3 *Area Conditions* of this report. The traffic signal warrant analyses for future conditions are presented in Section 5 *EAP (2030) Traffic Conditions*, Section 6 *EAPC (2030) Traffic Conditions*, and Section 7 *Horizon Year (2040) Traffic Conditions* of this report.

It is important to note that a signal warrant defines the minimum condition under which the installation of a traffic signal might be warranted. Meeting this threshold condition does not require that a traffic control signal be installed at a particular location, but rather, that other traffic factors and conditions be evaluated in order to determine whether the signal is truly justified. It should also be noted that signal warrants do not necessarily correlate with LOS. An intersection may satisfy a signal warrant condition and operate at or above acceptable LOS or operate below acceptable LOS and not meet a signal warrant.

2.4 FREEWAY OFF-RAMP QUEUING ANALYSIS

Consistent with Caltrans requirements, the 95th percentile queuing of vehicles has been assessed at the off-ramps to determine potential queuing deficiencies at the freeway ramp intersections at the I-215 Freeway at Harley Knox Boulevard, Ramona Expressway, Placentia Avenue, and Nuevo Road interchanges. Specifically, the queuing analysis is utilized to identify any potential queuing and “spill back” onto the I-215 Freeway mainline from the off-ramps.

The traffic progression analysis tool and HCM intersection analysis program, Synchro, has been used to assess the potential deficiencies/needs of the intersections with traffic added from the proposed Project. Storage (turn-pocket) length recommendations at the ramps have been based upon the 95th percentile queue resulting from the Synchro progression analysis. The footnote from the Synchro output sheets indicates if the 95th percentile cycle exceeds capacity. Traffic is simulated for two complete cycles of the 95th percentile traffic in Synchro in order to account for the effects of spillover between cycles. In practice, the 95th percentile queue shown will rarely be exceeded and the queues shown with the footnote are acceptable for the design of storage bays.

Although only the 95th percentile queue has been reported in the tables, the 50th percentile queue can be found in the appendix alongside the 95th percentile queue for each ramp location. The queue length reported is for the lane with the highest queue in the lane group. The 50th percentile or average queue represents the typical queue length for peak hour traffic conditions, while the 95th percentile queue is derived from the average queue plus 1.65 standard deviations. The 95th percentile queue is not necessarily ever observed it is simply based on statistical calculations.

2.5 FREEWAY MAINLINE SEGMENT ANALYSIS METHODOLOGY

Consistent with recent Caltrans guidance, the traffic study has evaluated all freeway segments where the Project is anticipated to contribute 50 or more peak hour one-way trips, in an effort to conduct a conservative analysis and overstate as opposed to understand potential deficiencies.

The freeway system in the study area has been broken into segments defined by the freeway-to-arterial interchange locations. The freeway segments have been evaluated in this TIA based upon peak hour directional volumes. The freeway segment analysis is based on the methodology described in the HCM and performed using HCS7 software. The performance measure preferred by Caltrans to calculate LOS is density. Density is expressed in terms of passenger cars per mile per lane. Table 2-4 illustrates the freeway segment LOS descriptions for each density range utilized for this analysis.

The number of lanes for existing baseline conditions has been obtained from field observations conducted by Urban Crossroads in May 2020. These existing freeway geometrics have been utilized for Existing (2020), EAP (2030), EAPC (2030), and Horizon Year (2040) traffic conditions. The I-215 Freeway mainline volume data was obtained from the Caltrans Performance Measurement System (PeMS) website for the segments of the I-215 Freeway south of Nuevo

Road. The data was obtained from March 2020 when schools and business were open and operational (before the closures due to the COVID-19 pandemic). In an effort to conduct a conservative analysis, the maximum value observed within the 3-day period was utilized for the weekday morning (AM) and weekday evening (PM) peak hours. In addition, truck traffic, represented as a percentage of total traffic and actual vehicles (as opposed to PCE volumes) have been utilized for the purposes of the basic freeway segment analysis. (9)

TABLE 2-4: DESCRIPTION OF FREEWAY MAINLINE LOS

Level of Service	Description	Density Range (pc/mi/ln) ¹
A	Free-flow operations in which vehicles are relatively unimpeded in their ability to maneuver within the traffic stream. Effects of incidents are easily absorbed.	0.0 – 11.0
B	Relative free-flow operations in which vehicle maneuvers within the traffic stream are slightly restricted. Effects of minor incidents are easily absorbed.	11.1 – 18.0
C	Travel is still at relative free-flow speeds, but freedom to maneuver within the traffic stream is noticeably restricted. Minor incidents may be absorbed, but local deterioration in service will be substantial. Queues begin to form behind significant blockages.	18.1 – 26.0
D	Speeds begin to decline slightly and flows, and densities begin to increase more quickly. Freedom to maneuver is noticeably limited. Minor incidents can be expected to create queuing as the traffic stream has little space to absorb disruptions.	26.1 – 35.0
E	Operation at capacity. Vehicles are closely spaced with little room to maneuver. Any disruption in the traffic stream can establish a disruption wave that propagates throughout the upstream traffic flow. Any incident can be expected to produce a serious disruption in traffic flow and extensive queuing.	35.1 – 45.0
F	Breakdown in vehicle flow.	>45.0

¹ pc/mi/ln = passenger cars per mile per lane. Source: HCM (6th Edition)

2.6 FREEWAY MERGE/DIVERGE RAMP JUNCTION ANALYSIS

The freeway system in the study area has been broken into segments defined by freeway-to-arterial interchange locations where the Project is anticipated to contribute 50 or more peak hour trips (see Table 1-3). Although the HCM indicates the influence area for a merge/diverge junction is 1,500 feet, the analysis presented in this traffic study has been performed at all ramp locations with respect to the nearest on or off-ramp at each interchange in an effort to be consistent with Caltrans guidance/comments on other projects Urban Crossroads has worked on in the region.

The freeway facility analysis is performed using the HCS7 software and analyzes the freeway facility as a whole, including both freeway segments and ramp junctions. The measure of effectiveness (reported in passenger car/mile/lane) is calculated based on the existing number of travel lanes, number of lanes at the on and off-ramps both at the analysis junction and at upstream and downstream locations (if applicable) and acceleration/deceleration lengths at each merge/diverge point. Table 2-5 presents the merge/diverge area level of service descriptions for each density range utilized for this analysis.

TABLE 2-5: DESCRIPTION OF FREEWAY MERGE AND DIVERGE LOS

Level of Service	Density Range (pc/mi/ln) ¹
A	≤10.0
B	10.0 – 20.0
C	20.0 – 28.0
D	28.0 – 35.0
E	>35.0
F	Demand Exceeds Capacity

¹ pc/mi/ln = passenger cars per mile per lane. Source: HCM (6th Edition)

Similar to the basic freeway segment analysis, the I-215 Freeway volume data was obtained from the Caltrans maintained PeMS website for the segments of the I-215 Freeway south of Nuevo Road. The ramp data (per the count data presented in Appendix 3.1) was then utilized to flow conserve the mainline volumes to determine the remaining I-215 Freeway mainline segment volumes. Flow conservation checks ensure that traffic flows from north to south (and vice versa) of the interchange area with no unexplained loss of vehicles. The data was obtained from March 2020 when schools and business were open and operational (before the closures due to the COVID-19 pandemic). In an effort to conduct a conservative analysis, the maximum value observed within the 3-day period was utilized for the weekday morning (AM) and weekday evening (PM) peak hours. In addition, truck traffic, represented as a percentage of total traffic and actual vehicles (as opposed to PCE volumes) have been utilized for the purposes of the freeway ramp junction (merge/diverge) analysis. (9)

2.7 MINIMUM LEVEL OF SERVICE (LOS)

2.7.1 COUNTY OF RIVERSIDE

The definition of an intersection deficiency has been obtained from the County of Riverside General Plan. Riverside County General Plan Policy C 2.1 states that the County will maintain the following County-wide target LOS:

The following minimum target levels of service have been designated for the review of development proposals in the unincorporated areas of Riverside County with respect to transportation impacts on roadways designated in the Riverside County Circulation Plan which are currently County maintained, or are intended to be accepted into the County maintained roadway system:

- *LOS C shall apply to all development proposals in any area of the Riverside County not located within the boundaries of an Area Plan, as well as those areas located within the following Area Plans: REMAP, Eastern Coachella Valley, Desert Center, Palo Verde Valley, and those non-Community Development areas of the Elsinore, Lake Mathews/Woodcrest, Mead Valley and Temescal Canyon Area Plans.*
- *LOS D shall apply to all development proposals located within any of the following Area Plans: Eastvale, Jurupa, Highgrove, Reche Canyon/Badlands, Lakeview/Nuevo, Sun City/Menifee Valley, Harvest Valley/Winchester, Southwest Area, The Pass, San Jacinto Valley, Western Coachella*

Valley and those Community Development Areas of the Elsinore, Lake Mathews/Woodcrest, Mead Valley and Temescal Canyon Area Plans.

- *LOS E may be allowed by the Board of Supervisors within designated areas where transit-oriented development and walkable communities are proposed.*

The applicable minimum LOS utilized for the purposes of this analysis is LOS D per the County-wide target LOS for projects located within the Lakeview/Nuevo area plan.

2.7.2 CITY OF PERRIS

The definition of an intersection deficiency has been obtained from the City of Perris General Plan:

LOS D along all City maintained roads (including intersections) and LOS D along I-215 and SR-74 (including intersections with local streets and roads). An exception to the local road standard is LOS E, at intersections of any Arterials and Expressways with SR-74, the Ramona-Cajalco Expressway, or at I-215 Freeway ramps. (10)

LOS E may be allowed within the boundaries of the Downtown Specific Plan Area to the extent that it would support transit-oriented development and walkable communities. Increased congestion in this area will facilitate an increase in transit ridership and encourage development of a complementary mix of land uses within a comfortable walking distance from light rail stations.

2.7.3 CITY OF MORENO VALLEY

The definition of an intersection deficiency in the City of Moreno Valley is based on the City of Moreno Valley General Plan Circulation Element. The City of Moreno Valley General Plan states that target LOS C or LOS D be maintained along City roads (including intersections) wherever possible. LOS D is applicable to intersections and roadway segments that are adjacent to freeway on/off ramps and/or adjacent to employment generating land uses. Boundary intersections are assumed to be LOS D. LOS C is applicable to all other intersections and roadway segments. (11)

2.7.4 CITY OF MENIFEE

Per Policy C-1.2 of the City of Menifee General Plan, the following LOS will be utilized for study area intersections located within the City: Require development to achieve a peak hour LOS D or better at intersections, except at constrained intersections within close proximity to the I-215 Freeway, where LOS E may be permitted. (12)

2.7.5 CITY OF SAN JACINTO

Per the City of San Jacinto General Plan, the City has established a peak hour LOS D or better as acceptable for all intersections along the designated street and highway systems. (13)

2.7.6 CALTRANS

Caltrans endeavors to maintain a target LOS at the transition between LOS C and LOS D on SHS facilities, however, Caltrans acknowledges that this may not always be feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS. Consistent with the County of Riverside minimum LOS of LOS D, LOS D will be used as the target LOS for both arterial-to-freeway ramps and freeway mainline segments and ramp junctions.

2.8 DEFICIENCY CRITERIA

2.8.1 INTERSECTIONS

This section outlines the methodology used in this analysis related to identifying circulation system deficiencies. The following deficiency criteria has been utilized for the County of Riverside. To determine whether the addition of project-related traffic at a study intersection would result in a deficiency, the following will be utilized:

- A deficiency occurs at study area intersections if the pre-Project condition is at or better than LOS D (i.e., acceptable LOS), and the addition of project trips causes the peak hour LOS of the study area intersection to operate at unacceptable LOS (i.e., LOS E or F). Per the County of Riverside traffic study guidelines, for intersections currently operating at unacceptable LOS (LOS E or F), a deficiency will occur if the Project contributes 50 or more peak hour trips to pre-project traffic conditions.

2.8.2 CALTRANS FACILITIES

To determine whether the addition of project traffic to the SHS freeway segments would result in a deficiency, the following will be utilized:

- The traffic study finds that the LOS of a segment will degrade from D or better to E or F.
- The traffic study finds that the project will exacerbate an already deficient condition (i.e., contributing 50 or more peak hour trips). A segment that is operating at or near capacity is deemed to be deficient.

2.9 PROJECT FAIR SHARE CALCULATION METHODOLOGY

Improvements found to be included in the TUMF and/or DIF will be identified as such. For improvements that do not appear to be in either of the pre-existing fee programs, a fair share contribution based on the Project's proportional share may be imposed in order to address the Project's share of deficiencies in lieu of construction. It should be noted that fair share calculations are for informational purposes only and the County Traffic Engineer will determine the appropriate improvements to be implemented by a project (to be identified in the conditions of approval).

If the intersection is currently operating at acceptable LOS under Existing traffic conditions, the Project's fair share cost of improvements would be determined based on the following equation, which is the ratio of Project traffic to new traffic, where new traffic is total future traffic less existing baseline traffic:

$$\text{Project Fair Share \%} = \frac{\text{Project Traffic}}{(\text{Horizon Year (2040) Total Traffic} - \text{Existing (2020) Traffic})}$$

If the intersection does not currently exist, but will be constructed sometime in the future, the Project's fair share cost of improvements would be determined based on the following equation, which is the ratio of Project traffic to total future traffic:

$$\text{Project Fair Share \%} = \frac{\text{Project Traffic}}{(\text{Horizon Year (2040) Total Traffic})}$$

3 AREA CONDITIONS

This section provides a summary of the existing circulation network, the County of Riverside General Plan Circulation Network, and a review of existing peak hour intersection operations, traffic signal warrant, and freeway facility operations analyses.

3.1 EXISTING CIRCULATION NETWORK

Pursuant to the scoping agreement with County of Riverside staff (Appendix 1.1), the study area includes a total of 69 existing and future intersections as shown previously on Exhibit 1-2, where the Project is anticipated to contribute 50 or more peak hour trips or has been added at the direction of County staff. Exhibit 3-1 illustrates the study area intersections located near the proposed Project and identifies the number of through traffic lanes for existing roadways and intersection traffic controls.

3.2 GENERAL PLAN CIRCULATION ELEMENTS

As noted previously, the Project site is located within the County of Riverside. The roadway classifications and planned (ultimate) roadway cross-sections of the major roadways within the study area, as identified on County of Riverside General Plan Circulation Element, are described subsequently. Exhibit 3-2 shows the County of Riverside General Plan Circulation Element and Exhibit 3-3 illustrates the County of Riverside General Plan roadway cross-sections.

Expressways can accommodate eight travel lanes. These facilities serve regional through traffic where anticipated traffic volumes exceed four-lane capacity. Access from abutting property is generally restricted. The following roadway is classified as an Expressway within the study area:

- Ramona Expressway

Urban Arterial Highways can accommodate six or eight travel lanes. These facilities provide capacity for heavy through traffic where volumes are anticipated to exceed four-lane capacity. Urban arterial highways provide limited access to other roadways. The following roadways are classified as an Urban Arterial Highway within the study area:

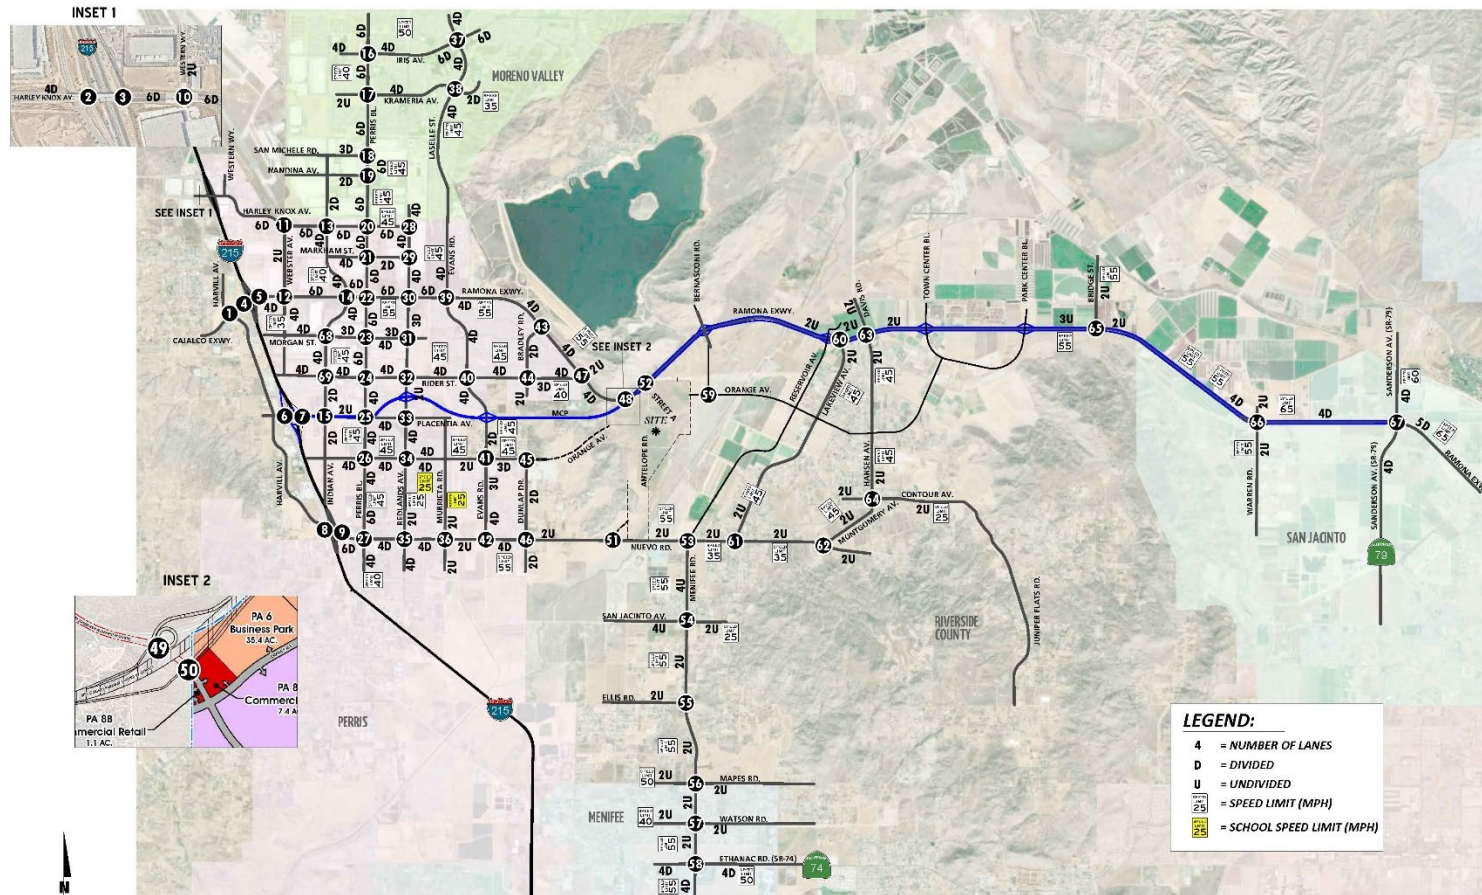

- Menifee Road
- San Jacinto Avenue
- Nuevo Road

Arterial Highways can accommodate six travel lines. These facilities primarily serve through traffic to which access from abutting property shall be kept at a minimum. The following roadway is classified as an Arterial Highway within the study area:

- Orange Avenue

NOT TO SCALE

SOURCE: COUNTY OF RIVERSIDE
December 12, 2017

Major Highways can accommodate four travel lanes. These facilities serve property zoned for major industrial and commercial uses, or to serve through traffic. The following roadway is classified as a Major Highway within the study area:

- Antelope Road

3.3 CITY OF PERRIS, CITY OF MORENO VALLEY, CITY OF MENIFEE, AND CITY OF SAN JACINTO

GENERAL PLAN CIRCULATION ELEMENT

Exhibits 3-4 and 3-5 show the City of Perris General Plan Circulation Element and roadway cross-sections, respectively. Exhibits 3-6 and 3-7 show the City of Moreno Valley General Plan Circulation Element and roadway cross-sections, respectively. Exhibits 3-8 and 3-9 show the City of Menifee General Plan Circulation Element and roadway cross-sections, respectively. Exhibits 3-10 and 3-11 show the City of San Jacinto General Plan Circulation Element and roadway cross-sections, respectively.

3.4 TRUCK ROUTES

The County of Riverside's General Plan does not provide designated truck routes. Truck routes for the proposed Project have been determined based on discussions with County staff. Exhibit 3-12 shows the City of Perris truck routes. It should be noted, Ramona Expressway is no longer a truck route within the City of Perris. As such, Project truck traffic has been limited to only utilize Ramona Expressway to access Redlands Avenue. Redlands Avenue is the closest available truck route to provide truck access to the north and south from Ramona Expressway. The City of Moreno Valley and City of Menifee truck routes are shown on Exhibits 3-13 and 3-14, respectively. These truck routes serve both the proposed Project and future cumulative development projects throughout the study area.

3.5 BICYCLE & PEDESTRIAN FACILITIES

In an effort to promote alternative modes of transportation, the County of Riverside also includes a trails and bikeway system. The trails and bikeway system, shown on Exhibit 3-15, shows the proposed trails connected with major features within the County. There is a proposed community trail and design guidelines trail along Ramona Expressway, along the Project's frontage. There is a proposed community trail that bisects the Project site. Field observations conducted in March 2020 indicates nominal pedestrian and bicycle activity within the study area. The City of Perris proposed bikeways and trails are shown on Exhibit 3-16, the City of Moreno Valley Bike Plan is shown on Exhibit 3-17, the City of Menifee Bikeway and Community Pedestrian network is shown on Exhibit 3-18, and the City of San Jacinto Bikeway Plan is shown on Exhibit 3-19.

EXHIBIT 3-9: CITY OF MENIFEE GENERAL PLAN ROADWAY CROSS-SECTIONS

NOTES:

These standard sections are for typical roadway segments and may vary slightly based on intersection land requirements, physical site constraints, and/or environmental issues. Proposed roadway sections should always provide the greatest width possible. Any deviation from these sections is at the discretion of City Engineer.

Sidewalks may be curb-adjacent or separated from roadway by a landscaped parkway.

★ Shoulders may accommodate exclusive bike lanes, shared NEV/bike lanes, or on-street parking subject to approval by City Engineer.

3.6 TRANSIT SERVICE

The County of Riverside is currently served by the Riverside Transit Authority (RTA), a public transit agency serving the unincorporated Riverside County region. RTA Route 30 runs along Walnut Avenue, Sherman Road, and Rider Street, as shown on Exhibit 3-20. However, there are currently no existing bus routes that serve the roadways within the study area in close proximity to the proposed Project. Transit service is reviewed and updated by RTA periodically to address ridership, budget and community demand needs. Changes in land use can affect these periodic adjustments which may lead to either enhanced or reduced service where appropriate. As such, it is recommended that the Project Applicant work in conjunction with RTA to potentially accommodate bus service to the site.

3.7 EXISTING TRAFFIC COUNTS

The intersection LOS analysis is based on the traffic volumes observed during the peak hour conditions using traffic count data collected on March 11, 2020, when local schools were in session and operating on a typical bell schedule (prior to closures related to the COVID-19 pandemic). The following peak hours were selected for analysis:

- Weekday AM Peak Hour (peak hour between 7:00 AM and 9:00 AM)
- Weekday PM Peak Hour (peak hour between 4:00 PM and 6:00 PM)

At the time traffic counts were collected, there was a roadway closure along Nuevo Road due to construction activity. It is our understanding that the roadway closure on Nuevo Road is expected to remain in place until late 2020. As such, historic counts from 2018 and 2019 were utilized to compare to recently collected 2020 traffic counts. Adjustments to the 2020 traffic counts were made to reflect traffic patterns without the Nuevo Road closure for the baseline condition. Adjustments include adding 2018/2019 traffic counts (with the application of a growth factor of 2% per year) in combination with manual adjustments to the 2020 data related to the current detour in place.

The raw manual peak hour turning movement traffic count data sheets are included in Appendix 3.1. These raw turning volumes have been flow conserved between intersections with limited access, no access, and where there are currently no uses generating traffic. The traffic counts collected in March 2020 include the vehicle classifications as shown below:

- Passenger Cars
- 2-Axle Trucks
- 3-Axle Trucks
- 4 or More Axle Trucks

EXHIBIT 3-20: EXISTING TRANSIT ROUTES

LEGEND:

 = RTA ROUTE 30

To represent the effect large trucks, buses, and recreational vehicles have on traffic flow, all trucks were converted into passenger car equivalent (PCE). By their size alone, these vehicles occupy the same space as two or more passenger cars. In addition, the time it takes for them to accelerate and slow-down is also much longer than for passenger cars and varies depending on the type of vehicle and number of axles. For this analysis, the following PCE factors have been used to estimate each turning movement: 1.5 for 2-axle trucks, 2.0 for 3-axle trucks, and 3.0 for 4+-axle trucks. These factors are consistent with the values recommended for use in the County of Riverside transportation analysis guidelines. (1)

Existing weekday ADT volumes on arterial highways throughout the study area are shown on Exhibit 3-21. Where actual 24-hour tube count data was not available, Existing ADT volumes were based upon factored intersection peak hour counts collected by Urban Crossroads, Inc. using the following formula for each intersection leg:

$$\text{Weekday PM Peak Hour (Approach Volume + Exit Volume)} \times 12.37 = \text{Leg Volume}$$

A comparison of the PM peak hour and daily traffic volumes of various roadway segments within the study area indicated that the peak-to-daily relationship is approximately 8.08 percent. As such, the above equation utilizing a factor of 12.37 estimates the ADT volumes on the study area roadway segments assuming a peak-to-daily relationship of approximately 8.08 percent (i.e., $1/0.0808 = 12.37$) and was assumed to sufficiently estimate ADT volumes for planning-level analyses. Existing weekday AM and weekday PM peak hour intersection volumes (in actual vehicles) are shown on Exhibit 3-22. For the purposes of this analysis, PCE volumes have been utilized and are provided in Appendix 3.2.

3.8 EXISTING (2020) INTERSECTION OPERATIONS ANALYSIS

Existing peak hour traffic operations have been evaluated for the study area intersections based on the analysis methodologies presented in Section 2.2 *Intersection Capacity Analysis* of this report. The intersection operations analysis results are summarized in Table 3-1 which indicates that all of the study area intersections are currently operating at an acceptable LOS during the peak hours (i.e., LOS D or better), with the exception of the following intersections:

- Redlands Avenue & Rider Street (#32) – LOS F AM peak hour only
- Evans Road & Orange Avenue (#41) – LOS E AM peak hour only
- Menifee Road & Watson Road (#57) – LOS F AM peak hour; LOS E PM peak hour
- Menifee Road & Ethanac Road (SR-74) (#58) – LOS E AM peak hour only
- Bridge Street & Ramona Expressway (#65) – LOS E PM peak hour only
- Sanderson Avenue (SR-79) & Ramona Expressway (#67) – LOS F AM and PM peak hours

Consistent with Table 3-1, a summary of the peak hour intersection LOS for Existing conditions is shown on Exhibit 3-23. The intersection operations analysis worksheets are included in Appendix 3.2 of this TIA.

3.9 EXISTING (2020) TRAFFIC SIGNAL WARRANTS ANALYSIS

Traffic signal warrants for Existing traffic conditions are based on existing peak hour intersection turning volumes. The following unsignalized study area intersections currently warrant a traffic signal for Existing (2020) traffic conditions:

- Redlands Avenue & Rider Street (#32)
- Menifee Road/Reservoir Boulevard & Nuevo Road (#53)
- Menifee Road & San Jacinto Avenue (#54)
- Menifee Road & Mapes Road (#56)
- Menifee Road & Watson Road (#57)
- Lakeview Avenue & Nuevo Road (#61)
- Bridge Street & Ramona Expressway (#65)

Existing conditions traffic signal warrant analysis worksheets are provided in Appendix 3.3.

TABLE 3-1: INTERSECTION ANALYSIS FOR EXISTING (2020) CONDITIONS

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

¹ When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; d = Defacto Right Turn Lane; > = Right Turn Overlap

² Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all-way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

³ AWS = All-way Stop; CSS = Cross-street Stop; RA = Roundabout; TS = Traffic Signal

⁴ Minimum acceptable LOS for each applicable jurisdiction.

⁵ Intersection will be constructed when the Mid-County Parkway is constructed. As such, the intersection does not exist under this scenario.

This Page Intentionally Left Blank

EXHIBIT 3-23: EXISTING (2020) SUMMARY OF LOS

This Page Intentionally Left Blank

3.10 EXISTING (2020) OFF-RAMP QUEUING ANALYSIS

A queuing analysis was performed for the off-ramps at the I-215 Freeway at Harley Knox Boulevard, Ramona Expressway, and Nuevo Road interchanges to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially “spill back” onto the I-215 Freeway mainline. Queuing analysis findings are presented in Table 3-2. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline. As shown in Table 3-2, there are no movements that are currently experiencing queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows. Worksheets for Existing (2020) traffic conditions off-ramp queuing analysis are provided in Appendix 3.4.

3.11 EXISTING (2020) FREEWAY FACILITY ANALYSIS

Existing (2020) mainline directional volumes for the AM and PM peak hours are provided on Exhibit 3-24. As shown in Table 3-3, the study area freeway segments and merge/diverge ramp junctions analyzed for this study are currently operating at an acceptable LOS (i.e., LOS D or better) during the peak hours for Existing (2020) traffic conditions. Existing (2020) freeway facility analysis worksheets are provided in Appendix 3.5.

It should be noted that although the I-215 Freeway is found to operate at an acceptable LOS based on the HCS analysis, field observations indicate constrained flow conditions during the peak hours in the northbound direction. According to the Caltrans PeMS data, the I-215 Freeway Northbound experiences speeds as low as 25 miles per hour during the morning and evening peak hours. The freeway is slow moving, therefore, fewer vehicles are being captured and reflected in the PeMS data. The LOS for the I-215 Freeway mainline analyses is based on the PeMS data and HCS software. Due to limitations of the software, such as limiting the speed limit input to no lower than 45 miles per hour, HCS is unable to replicate constrained flow conditions. As a result, the LOS is reported as acceptable although the freeway is considered at capacity during the peak hours for the freeway segments and ramp junctions, as observed in the field, at the following freeway facilities:

- I-215 Freeway Northbound, North of Harley Knox Boulevard (#14) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Harley Knox Boulevard to Ramona Expressway (#17) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Ramona Expressway to Placentia Avenue (#20) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Placentia Avenue to Nuevo Road (#23) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, South of Nuevo Road (#26) – LOS F AM and PM peak hours

For the purposes of this analysis, the applicable locations have been identified with LOS F operations and denoted with a footnote in the analysis summary tables.

¹ Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

² 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

³ Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the I-215 Freeway mainline.

TABLE 3-3: EXISTING (2020) FREEWAY FACILITY ANALYSIS

BOLD = LOS does not meet Caltrans requirements (i.e., unacceptable LOS or LOS E/F).

¹ Number of lanes are in the specified direction and is based on existing conditions.

² Density is measured by passenger cars per mile per lane (pc/mi/ln).

³ LOS = Level of Service

⁴ Analysis with constrained flow results in acceptable LOS, however, field observations indicate congestion during the peak hour. As such, the freeway is considered at capacity.

EXHIBIT 3-24: EXISTING (2020) FREEWAY MAINLINE VOLUMES

LEGEND:
 ← 100/200 = AM/PM PEAK HOUR VOLUMES
 NOTE: VOLUMES IN ACTUAL VEHICLES (NOT PCE)

3.12 RECOMMENDED IMPROVEMENTS

Improvement strategies have been recommended at intersections and freeway facilities that have been identified as deficient under Existing (2020) traffic conditions in an effort to achieve an acceptable LOS (i.e., LOS D or better).

3.12.1 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

Table 3-3 indicates the physical improvements needed to address LOS deficiencies at each of the study area intersections under Existing (2020) traffic conditions. The following improvements are recommended to improve the Existing (2020) deficiencies back to acceptable levels. Intersection analysis worksheets for Existing (2020) traffic conditions, with improvements, are provided in Appendix 3.6.

Redlands Avenue & Rider Street (#32) – The following improvement is necessary to improve the existing deficiency to acceptable levels:

- Install a traffic signal.

Evans Road & Orange Avenue (#41) – The following improvements are necessary to improve the existing deficiency to acceptable levels:

- Add a 2nd northbound through lane.
- Restripe the southbound approach to provide one left turn lane, one through lane, and one shared through-right turn lane.
- Add a 2nd eastbound through lane.
- Add a 2nd westbound through lane.

Menifee Road & Watson Road (#57) – The following improvements are necessary to improve the existing deficiency to acceptable levels:

- Install a traffic signal.
- Add a northbound left turn lane.
- Add a southbound left turn lane.
- Add an eastbound left turn lane.
- Add a westbound left turn lane.

Menifee Road & Ethanac Road (SR-74) (#58) – The following improvements are necessary to improve the existing deficiency to acceptable levels:

- Add a southbound left turn lane.
- Modify the traffic signal to protect the northbound and southbound left turns.

TABLE 3-4: INTERSECTION ANALYSIS FOR EXISTING (2020) CONDITIONS WITH IMPROVEMENTS

#	Intersection	Traffic Control ³	Intersection Approach Lanes ¹												Delay ² (secs.)		Level of Service

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

¹ When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free-Right Turn Lane; 1 = Improvement

² Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all-way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

³ CSS = Cross-street Stop; AWS = All-way Stop; TS = Traffic Signal; TS = Improvements

⁴ Improvement includes modifying the traffic signal to protect the northbound and southbound left turns.

Bridge Street & Ramona Expressway (#65) – The following improvements are necessary to improve the existing deficiency to acceptable levels:

- Install a traffic signal.

Sanderson Avenue (SR-79) & Ramona Expressway (#67) – The following improvements are necessary to improve the existing deficiency to acceptable levels:

- Add a 3rd northbound through lane.
- Add a 3rd southbound through lane.
- Add a southbound free right turn lane.
- Add a 3rd eastbound through lane.
- Add a 3rd westbound through lane.

3.12.2 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES

As shown previously in Table 3-2, there are currently no peak hour queuing issues at the I-215 Freeway and Harley Knox Boulevard, Ramona Expressway, and Nuevo Road interchanges for Existing (2020) traffic conditions. As such, no improvements have been recommended.

3.12.3 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON FREEWAY FACILITIES

The Project Study Report/Project Development Support in Riverside County on I-215 and SR-60 between Nuevo Road (I-215) & I-215/SR-60 Junction and Box Springs Road (I-215) & Day Street (SR-60), also known as the I-215 North Project, includes the construction of an high-occupancy vehicle (HOV) lane in each direction of the I-215 Freeway between Nuevo Road and Box Springs Road within the existing median. (15) (16)

At this time, the I-215 North Project has no anticipated start or completion date. As such, no improvements have been recommended to address the Existing deficiencies on the SHS, because the improvement to the I-215 Freeway is assumed to be a long-range improvement. As such, no improvements have been recommended to address existing deficiencies on the study area freeway facilities.

4 PROJECTED FUTURE TRAFFIC

This section presents the traffic volumes estimated to be generated by the Project's trip assignment onto the study area roadway network. The Project is proposing to amend the Specific Plan with a mix of industrial and commercial uses, as described below and shown previously in Table 1-1:

- Without MCP/Proposed Project: 8,476,776 square feet of light industrial uses, 1,069,398 square feet of business park uses, and 121,968 square feet of commercial retail uses
- With MCP/Alternative Project: 8,476,776 square feet of light industrial uses, 936,540 square feet of business park uses, 126,542 square feet of commercial retail uses

The maximum allowable square footage, as permitted by the Specific Plan, will be evaluated for each of the land use designations for the purposes of the TIA.

The RCTC is currently planning the construction of the MCP, a regional, grade-separated transportation facility between the I-215 Freeway (at Placentia Avenue) and SR-79. The MCP is a long-range transportation improvement as RCTC has not yet identified or secured funding of the MCP and the future proposed interchanges. As such, timing of the future MCP is currently unknown.

A portion of the MCP and future interchange is planned in the northwestern portion of the site, which would affect the development proposed within Planning Areas 6, 7, and 8A of the proposed Project. In order to accommodate both the potential for the future construction of the MCP while also providing for development of the site in the event that the MCP is not constructed as currently planned, two land use concept plans have been developed for the site (Without and With MCP).

The anticipated Project opening year is 2030. Vehicular and truck traffic access will be provided to Ramona Expressway and Nuevo Road via Antelope Road. Regional access to the Project site is available from the I-215 Freeway via the Harley Knox Boulevard, Ramona Expressway, Placentia Avenue, and Nuevo Road interchanges and SR-79 via Ramona Expressway. For the purposes of this analysis, the land use plan for the Proposed Project land use plan has been evaluated for EAP and EAPC traffic conditions, as the Project would not build within the MCP alignment until such time it was certain that the MCP would not be developed. The EAP and EAPC traffic conditions assumes the existing roadway network (no MCP alignment is assumed to be in place). For Horizon Year (2040) traffic conditions, the operations analysis has been conducted for both Without MCP and With MCP roadway network. The Without MCP conditions evaluates buildout of the Proposed Project land use plan with development within the MCP alignment, whereas the With MCP conditions evaluates buildout of the Alternative Project land use plan (without development within the MCP alignment).

4.1 PROJECT TRIP GENERATION

Trip generation represents the amount of traffic that is attracted and produced by a development and is based upon the specific land uses planned for a given project. Trip generation rates (in Actual Vehicles and PCE) for the Project are shown in Table 4-1. These estimates are based on the trip-generation statistics published in the Institute of Transportation Engineers (ITE) Trip Generation Manual, (10th Edition, 2017) and the High Cube Warehouse Trip Generation Study (WSP, January 2019) were used to estimate the trip generation. (3) (4)

For purposes of the Traffic Impact Analysis, the following ITE land use codes and vehicle mixes will be utilized for the light industrial and business park areas:

- ITE land use code 140 (Manufacturing) has been used to derive site specific trip generation estimates for up to 847,678 square feet (10% of the light industrial area). A manufacturing facility is an area where the primary activity is the conversion of raw materials or parts into finished products. Size and type of activity may vary substantially from one facility to another. In addition to the actual production of goods, manufacturing facilities generally also have office, warehouse, research, and associated functions. The vehicle mix has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). (17) This study provides the following vehicle mix: AM Peak Hour: 92.0% passenger cars and 8.0% trucks; PM Peak Hour: 93.0% passenger cars and 7.0% trucks; Weekday Daily: 90.0% passenger cars and 10.0% trucks. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.
- ITE land use code 150 (Warehousing) has been used to derive site specific trip generation estimates for up to 427,759 square feet (Proposed Project land use plan) or 374,616 square feet (Alternative Project land use plan) (40% of the business park area). The vehicle mix has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). (17) This study provides the following vehicle mix: AM Peak Hour: 87.0% passenger cars and 13.0% trucks; PM Peak Hour: 85.0% passenger cars and 15.0% trucks; Weekday Daily: 73.0% passenger cars and 27.0% trucks. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.
- ITE land use code 154 (High-Cube Transload and Short-Term Storage Warehouse) has been used to derive site specific trip generation estimates for up to 2,966,872 square feet (35% of the light industrial area). High-cube transload/short-term storage warehouse data regarding the truck percentage and vehicle mix has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). (17) This study provides the following vehicle mix: AM Peak Hour: 80.0% passenger cars and 20.0% trucks; PM Peak Hour: 84.0% passenger cars and 16.0% trucks; Weekday Daily: 84.0% passenger cars and 16.0% trucks. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.

TABLE 4-1: PROJECT TRIP GENERATION RATES

Land Use ¹	Units ²	ITE LU Code	AM Peak Hour			PM Peak Hour			Daily
			In	Out	Total	In	Out	Total

¹ Trip Generation Source: Institute of Transportation Engineers (ITE), Trip Generation Manual, Tenth Edition (2017).

² TSF = thousand square feet

³ Vehicle Mix Source: ITE Trip Generation Handbook Supplement (2020), Appendix C.

Truck Mix: South Coast Air Quality Management District's (SCAQMD) recommended truck mix, by axle type.

Normalized % - Without Cold Storage: 16.7% 2-Axle trucks, 20.7% 3-Axle trucks, 62.6% 4-Axle trucks.

Normalized % - With Cold Storage: 34.7% 2-Axle trucks, 11.0% 3-Axle trucks, 54.3% 4-Axle trucks.

⁴ Vehicle Mix Source: High Cube Warehouse Trip Generation Study, WSP, January 29, 2019.

Inbound and outbound split source: ITE Trip Generation Manual, Tenth Edition (2017) for ITE Land Use Code 154.

⁵ PCE factors: 2-axle = 1.5; 3-axle = 2.0; 4+-axle = 3.0.

- ITE land use code 157 (High-Cube Cold Storage Warehouse) has been used to derive site specific trip generation estimates for up to 1,695,355 square feet (20% of the light industrial area). High-cube cold storage warehouses include warehouses characterized by the storage and/or consolidation of manufactured goods (and to a lesser extent, raw materials) prior to their distribution to retail locations or other warehouses. High-cube cold storage warehouses are facilities typified by temperature-controlled environments for frozen food or other perishable products. The High-Cube Cold Storage Warehouse vehicle mix (passenger cars versus trucks) has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). (17) This study provides the following vehicle mix: AM Peak Hour: 73.0% passenger cars and 27.0% trucks; PM Peak Hour: 77.0% passenger cars and 23.0% trucks; Weekday Daily: 65.0% passenger cars and 35.0% trucks. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 34.7%; 3-Axle = 11.0%; 4+-Axle = 54.3%.
- High-Cube Fulfillment Center Warehouse has been used to derive site specific trip generation estimates for up to 2,966,872 square feet. The ITE Trip Generation Manual Supplement (February 2020) has trip generation rates for high-cube fulfillment center use for both non-sort and sort facilities (ITE land use code 155). While there is sufficient data to support use of the trip generation rates for non-sort facilities, the sort facility rate appears to be unreliable because they are based on limited data (i.e., one to two surveyed sites). The proposed Project is speculative and whether a non-sort or sort facility end-user would occupy the buildings is not known at this time. Lastly, the ITE Trip Generation Handbook recommends the use of local data sources where available. (18) As such, the best available source for high-cube fulfillment center use would be the trip-generation statistics published in the High-Cube Warehouse Trip Generation Study (WSP, January 29, 2019) which was commissioned by the Western Riverside Council of Governments (WRCOG) in support of the Transportation Uniform Mitigation Fee (TUMF) update in the County of Riverside. (4) The WSP trip generation rates were published in January 2019 and are based on data collected at 11 local high-cube fulfillment center sites located throughout Southern California (specifically Riverside County and San Bernardino County). However, the WSP study does not include a split for inbound and outbound vehicles, as such, the inbound and outbound splits per the ITE Trip Generation Manual for Land Use Code 154 have been utilized.
- Based on the types of uses anticipated to be developed within the business park area, the trip generation rates for ITE land use code 130 (Industrial Park) have been used to derive site specific trip generation estimates for up to 641,639 square feet (Proposed Project land use plan) or 561,924 square feet (Alternative Project land use plan) (60% of the business park area). The vehicle mix has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). (17) This study provides the following vehicle mix: AM Peak Hour: 88.0% passenger cars and 12.0% trucks; PM Peak Hour: 90.0% passenger cars and 10.0% trucks; Weekday Daily: 85.0% passenger cars and 15.0% trucks. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.

The following ITE land use codes will be utilized in order to calculate a conservative trip generation for the commercial retail area:

- Free-Standing Discount Superstore (ITE Land Use Code 813) for up to 100,000 square feet of the commercial retail area.
- Shopping Center (ITE Land Use Code 820) for up to 21,968 square feet (Proposed Project land use plan) or 26,542 square feet (Alternative Project land use plan).

PCE factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+ axles). PCEs allow the typical “real-world” mix of vehicle types to be represented as a single, standardized unit, such as the passenger car, to be used for the purposes of capacity and level of service analyses.

As the project is proposed to include shopping center, gas station, and other complementary uses, pass-by percentages have been obtained from the ITE Trip Generation Handbook (3rd Edition, 2017). (18)

The trip generation summary illustrating daily and peak hour trip generation estimates for the proposed Project in actual vehicles and PCE for Without MCP conditions are shown in Table 4-2 and Table 4-3, respectively. The trip generation summary illustrating daily and peak hour trip generation estimates for the proposed Project in actual vehicles and PCE for With MCP conditions are shown in Table 4-4 and Table 4-5, respectively. The proposed Project is anticipated to generate the following:

- Without MCP/Proposed Project: 23,894 vehicle trip-ends per day with 1,720 AM peak hour trips and 2,212 PM peak hour trips (of which 3,916 trip-ends per day are associated with trucks with 236 AM peak hour truck trips and 234 PM peak hour truck trips) (see Table 4-2)
- With MCP/Alternative Project: 23,624 vehicle trip-ends per day with 1,681 AM peak hour trips and 2,180 PM peak hour trips (of which 3,850 trip-ends per day are associated with trucks with 231 AM peak hour truck trips and 230 PM peak hour truck trips) (see Table 4-4)

The operations analyses for the purposes of this TIA utilize the PCE trip generation consistent with the County’s guidelines and other traffic studies prepared in the County of Riverside.

4.2 PROJECT TRIP DISTRIBUTION

The Project trip distribution represents the directional orientation of traffic to and from the Project site. Trip distribution is the process of identifying the probable destinations, directions or traffic routes that will be utilized by Project traffic. The potential interaction between the planned land uses and surrounding regional access routes are considered, to identify the route where the Project traffic would distribute. In addition, truck routes for neighboring agencies have been taken into consideration in the development of the trip distribution patterns for heavy trucks. Specifically, the City of Perris prohibits truck traffic along Ramona Expressway to access the I-215 Freeway. As such, Project truck traffic has been limited to utilize only the portion of Ramona Expressway within the City of Perris to access Redlands Avenue. Redlands Avenue is the closest available truck route to provide truck access to the north and south from Ramona Expressway. Passenger car trip distribution patterns for both near-term and long-range (With MCP) traffic conditions have been developed based on a select zone run of the traffic analysis zone (TAZ) containing the Project from the Riverside Transportation Analysis Model (RivTAM).

TABLE 4-2: PROJECT (WITHOUT MID-COUNTY PARKWAY) TRIP GENERATION SUMMARY (ACTUAL VEHICLES)

¹ TSF = thousand square feet

² TOTAL TRIPS = Passenger Cars + Truck Trips.

As noted previously, the development of the Project is affected by the proposed grade-separated MCP along the existing Placentia Avenue/Ramona Expressway alignment. The MCP is a long-range proposed facility. However, the initial phase of the MCP is underway with the construction of the Placentia Avenue and I-215 Freeway interchange by RCTC in conjunction with Caltrans District 8. The interchange is anticipated to be completed by late 2021, as such, the interchange will be in place by the proposed Project's Opening Year (2030).

Exhibits 4-1 and 4-2 show the Project truck and passenger car trip distribution patterns for near-term traffic conditions (without the MCP). These travel patterns consider the existing infrastructure and the infrastructure that is likely to be in place by the Project's Opening Year of 2030 (including the I-215/Placentia Avenue interchange). However, the MCP is not assumed to be in place for near-term EAP and EAPC traffic conditions. The Project truck trip distribution shown on Exhibit 4-1 is also utilized for long-range Without MCP traffic conditions. 4-3 show the Project passenger car trip distribution patterns for long-range conditions, which includes the extension of Orange Avenue, but also does not include the future MCP.

Exhibits 4-4 and 4-5 show the Project truck and passenger car trip distribution patterns for long-range conditions, with the inclusion of the MCP. These travel patterns assume the completion of the proposed grade-separated facility between the I-215 Freeway and SR-79 (including various interchanges along the proposed alignment), in conjunction with other anticipated long-range circulation improvements, such as the extension of Orange Avenue to the east of the existing terminus.

4.3 MODAL SPLIT

The traffic reducing potential of public transit, walking, or bicycling have not been considered in this TIA. Essentially, the traffic projections are "conservative" in that these alternative travel modes might be able to reduce the forecasted traffic volumes (employee trips only).

4.4 PROJECT TRIP ASSIGNMENT

The assignment of traffic from the Project area to the adjoining roadway system is based upon the Project trip generation, trip distribution, and the arterial highway and local street system improvements that would be in place by the time of initial occupancy of the Project. Based on the identified Project traffic generation and trip distribution patterns, Project ADT and peak hour intersection turning movement volumes for near-term conditions is shown on Exhibits 4-6 and 4-7, respectively. Project ADT and peak hour intersection turning movement volumes for Long-Range (Without MCP) conditions are shown on Exhibits 4-8 and 4-9, respectively. Project ADT and peak hour intersection turning movement volumes for Long-Range (With MCP) conditions are shown on Exhibits 4-10 and 4-11, respectively.

4.5 BACKGROUND TRAFFIC

Future year traffic forecasts have been based upon a background (ambient) growth factor of 2% per year for 2030 traffic conditions. The ambient growth factor is intended to approximate traffic growth. The total ambient growth is 21.9% for 2030 traffic conditions (compounded growth of 2 percent per year over 10 years). This ambient growth rate is added to existing traffic volumes to account for area-wide growth not reflected by cumulative development projects.

Ambient growth has been added to daily and peak hour traffic volumes on surrounding roadways, in addition to traffic generated by the development of future projects that have been approved but not yet built and/or for which development applications have been filed and are under consideration by governing agencies.

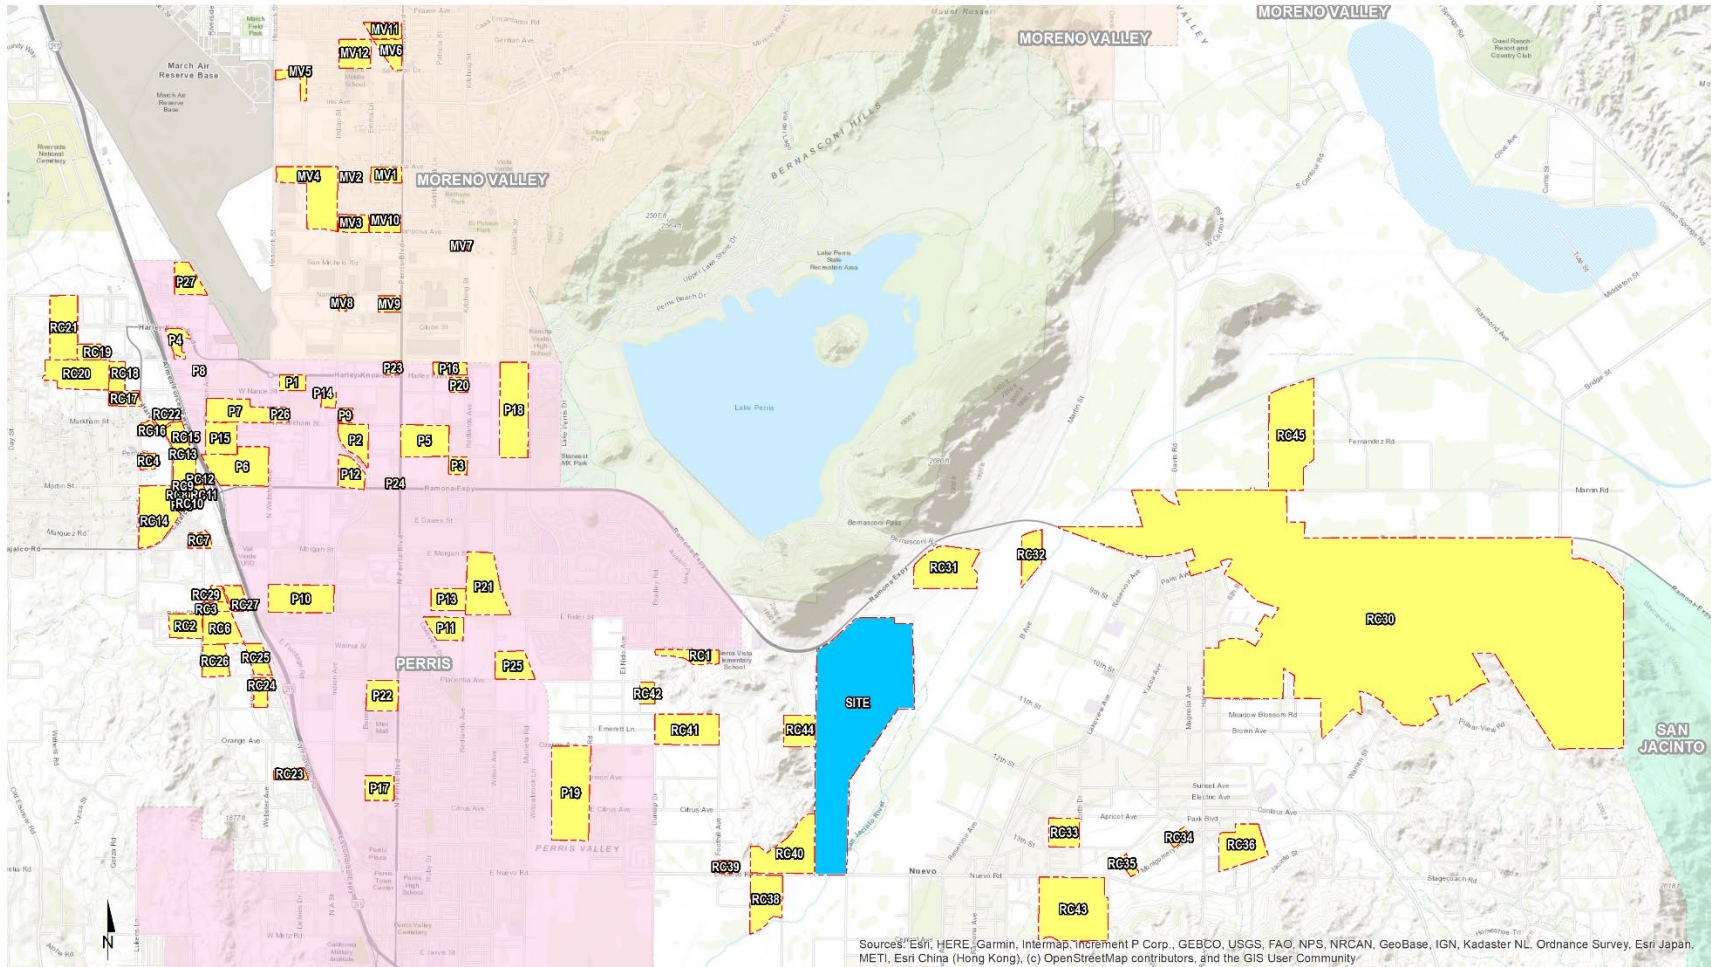

The currently adopted Southern California Association of Governments (SCAG) 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS) (May 2020) growth forecasts for the County of Riverside identifies projected growth in population of 370,500 in 2016 to 525,600 in 2045, or a 41.9 percent increase over the 29-year period. (19) The change in population equates to roughly a 1.21 percent growth rate, compounded annually. Similarly, growth over the same 29-year period in households is projected to increase by 59.2 percent, or 1.62 percent annual growth rate. Finally, growth in employment over the same 29-year period is projected to increase by 83.4 percent, or a 2.11 percent annual growth rate. This results in an average of 1.65 percent annual growth rate. As such, the 2.0 percent per year ambient growth rate utilized in this TIA would appear to conservatively estimate annual traffic growth, and overstate as opposed to understate future traffic forecasts.

4.6 CUMULATIVE DEVELOPMENT TRAFFIC

A cumulative project list was developed for the purposes of this analysis through consultation with planning and engineering staff from the County of Riverside, City of Perris, City of Moreno Valley, and City of Menifee. The cumulative project list includes known and foreseeable projects that are anticipated to contribute traffic to the study area intersections.

Where applicable, cumulative projects anticipated to contribute measurable traffic (i.e. 50 or more peak hour trips) to study area intersections have been manually added to the study area network to generate EAPC forecasts. In other words, this list of cumulative development projects has been reviewed to determine which projects would likely contribute measurable traffic through the study area intersections (e.g., those cumulative projects in close proximity to the proposed Project). For the purposes of this analysis, the cumulative projects that were determined to affect one or more of the study area intersections are shown on Exhibit 4-12, listed in Table 4-6, and have been considered for inclusion.

¹ SFDR = Single Family Detached Residential

² DU = Dwelling Units; TSF = Thousand Square Feet; AC = Acres

Although it is unlikely that all of these cumulative projects would be fully built and occupied by Year 2030, they have been included in an effort to conduct a conservative analysis and overstate as opposed to understate potential traffic deficiencies. Any other cumulative projects located beyond the cumulative study area that are not expected to contribute measurable traffic to study area intersections have not been included since the traffic would dissipate due to the distance from the Project site and study area intersections. Any additional traffic generated by other projects not on the cumulative projects list is accounted for through background ambient growth factors that have been applied to the peak hour volumes at study area intersections as discussed in Section 4.5 *Background Traffic*. Cumulative Only ADT and peak hour intersection turning movement volumes are shown Exhibits 4-13 and 4-14, respectively.

4.7 NEAR-TERM TRAFFIC CONDITIONS

The “buildup” approach combines existing traffic counts with a background ambient growth factor to forecast EAP (2030) and EAPC (2030) traffic conditions. An ambient growth factor of 21.9% accounts for background (area-wide) traffic increases that occur over time up to the year 2030 from the year 2020 (2.0 percent per year growth rate, compounded over a 10-year period). Traffic volumes generated by the Project are then added to assess the near-term traffic conditions. The 2030 roadway network is similar to the Existing conditions roadway network, with the exception of future driveways proposed to be developed by the Project and the I-215 Freeway/Placentia Avenue interchange. However, the near-term (2030) conditions do not assume the MCP would be completed and operational.

The near-term traffic analysis includes the following traffic conditions, with the various traffic components:

- Existing Plus Ambient Growth Plus Project (2030)
 - Existing 2020 counts
 - Ambient growth traffic (21.9%)
 - Project traffic
- Existing Plus Ambient Growth Plus Project Plus Cumulative (2030)
 - Existing 2020 counts
 - Ambient growth traffic (21.9%)
 - Cumulative Development traffic
 - Project traffic

LEGEND:

10(10) = AM(PM) PEAK HOUR INTERSECTION VOLUMES

4.8 HORIZON YEAR (2040) CONDITIONS

“Buildout” traffic projections for Horizon Year conditions are based on traffic model forecasts and were derived from the RivTAM using accepted procedures for model forecast refinement and smoothing for study area intersections located within the County of Riverside. The Horizon Year traffic conditions analyses was utilized to determine if improvements funded through regional transportation mitigation fee programs, such as the TUMF, can accommodate the long-range traffic at the target LOS identified in the County of Riverside General Plan.

The traffic forecasts reflect the area-wide growth anticipated between Existing (2020) conditions and Horizon Year (2040) traffic conditions. In most instances the traffic model zone structure is not designed to provide accurate turning movements along arterial roadways unless refinement and reasonableness checking is performed. Therefore, the Horizon Year peak hour forecasts were refined using the model derived long range forecasts, base (validation) year model forecasts, along with existing peak hour traffic count data collected at each analysis location in March of 2020. The RivTAM has a base (validation) year of 2012 and a horizon (future forecast) year of 2040. The RivTAM 2040 model utilized for the purposes of this analysis assumes buildout of the County of Riverside and includes the future MCP.

The refined future peak hour approach and departure volumes obtained from the model output data are then entered into a spreadsheet program consistent with the National Cooperative Highway Research Program (NCHRP Report 255), along with initial estimates of turning movement proportions. A linear programming algorithm is used to calculate individual turning movements which match the known directional roadway segment forecast volumes computed in the previous step. This program computes a likely set of intersection turning movements from intersection approach counts and the initial turning proportions from each approach leg.

Since the RivTAM 2040 model includes the MCP network, the Horizon Year (2040) Without MCP traffic forecasts were estimated utilizing 1.65 percent per year, compounded annually (or 17.8 percent total) from EAPC (2030) traffic conditions. As previously discussed in Section 4.5 *Background Traffic*, the currently adopted SCAG 2020 RTP/SCS growth forecasts for the County of Riverside identifies a projected average growth of 1.65 percent per year. Typically, the model growth is prorated and is subsequently added to the existing (base validation) traffic volumes to represent Horizon Year traffic conditions. In an effort to conduct a conservative analysis, reductions to traffic forecasts from either Existing, EAP, and EAPC traffic conditions were not assumed as part of the Without MCP conditions analysis. As such, in conjunction with the addition of cumulative projects that are not consistent with the General Plan, additional growth has also been applied on a movement-by-movement basis, where applicable, to estimate reasonable Horizon Year forecasts. Horizon Year turning volumes were compared to EAPC (2030) volumes in order to ensure a minimum growth as a part of the refinement process. The minimum growth includes any additional growth between EAPC (2030) and Horizon Year (2040) traffic conditions that is not accounted for by the traffic generated by cumulative development projects and ambient growth rates assumed between Existing (2020) and EAPC (2030) conditions.

The future Horizon Year (2040) Without Project Without MCP and With MCP peak hour turning movements were then reviewed by Urban Crossroads, Inc. for reasonableness, and in some cases, were adjusted to achieve flow conservation, reasonable growth, and reasonable diversion between parallel routes. Flow conservation checks ensure that traffic flow between two closely spaced intersections, such as two adjacent driveway locations, is verified in order to make certain that vehicles leaving one intersection are entering the adjacent intersection and that there is no unexplained loss of vehicles. The result of this traffic forecasting procedure is a series of traffic volumes which are suitable for traffic operations analysis.

RivTAM does not include a truck component or have data that is unusually low. As such, in an effort to conduct a conservative analysis, the presence of trucks has been accounted for based on the manual volume adjustments made to demonstrate growth above EAPC (2030) traffic forecasts, which are presented and evaluated in PCE (see Section 3.7 *Existing Traffic Counts* for discussion on PCE). As such, the Horizon Year (2040) forecasts are also assumed to be in PCE for the purposes of this analysis. Post-processing worksheets for Horizon Year (2040) Without Project traffic conditions are provided in Appendix 4.1.

5 EAP (2030) TRAFFIC CONDITIONS

This section discusses the methods used to develop EAP (2030) traffic forecasts, and the resulting intersection operations, traffic signal warrant, and freeway facility operations analyses.

5.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for EAP (2030) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for EAP conditions only (e.g., intersection and roadway improvements at the Project's frontage and driveways). This also includes the construction of Antelope Road between Ramona Expressway and Nuevo Road.
- The Nuevo Road widening improvements (from Murrieta Road to Evans Road) are assumed to be completed. These improvements were currently under construction through the City of Perris at the time of this report's preparation.
 - The intersection of Murrieta Road and Nuevo Road will include restriping the eastbound approach to accommodate a left turn lane, two through lanes, and one shared through-right turn lane.
 - The intersection of Evans Road and Nuevo Road will include the addition of 2nd and 3rd eastbound through lanes, the addition of a 3rd westbound through lane, and restriping the westbound right turn lane as a shared through-right turn lane.
 - Nuevo Road will be a divided 6-lane facility between Murrieta Road and Evans Road once completed.
- The I-215 Freeway/Placentia Avenue interchange is assumed to be completed and in place.
- Note: The MCP is not assumed to be in place for EAP (2030) conditions.

5.2 EAP (2030) TRAFFIC VOLUME FORECASTS

This scenario includes Existing (2020) traffic volumes plus an ambient growth factor of 21.9% and the addition of Project traffic. The weekday ADT volumes and peak hour volumes which can be expected for EAP (2030) traffic conditions are shown on Exhibits 5-1 and 5-2, respectively. EAP (2030) traffic conditions assumes that the MCP is not constructed and operational, and that no development will occur on-site within the MCP alignment.

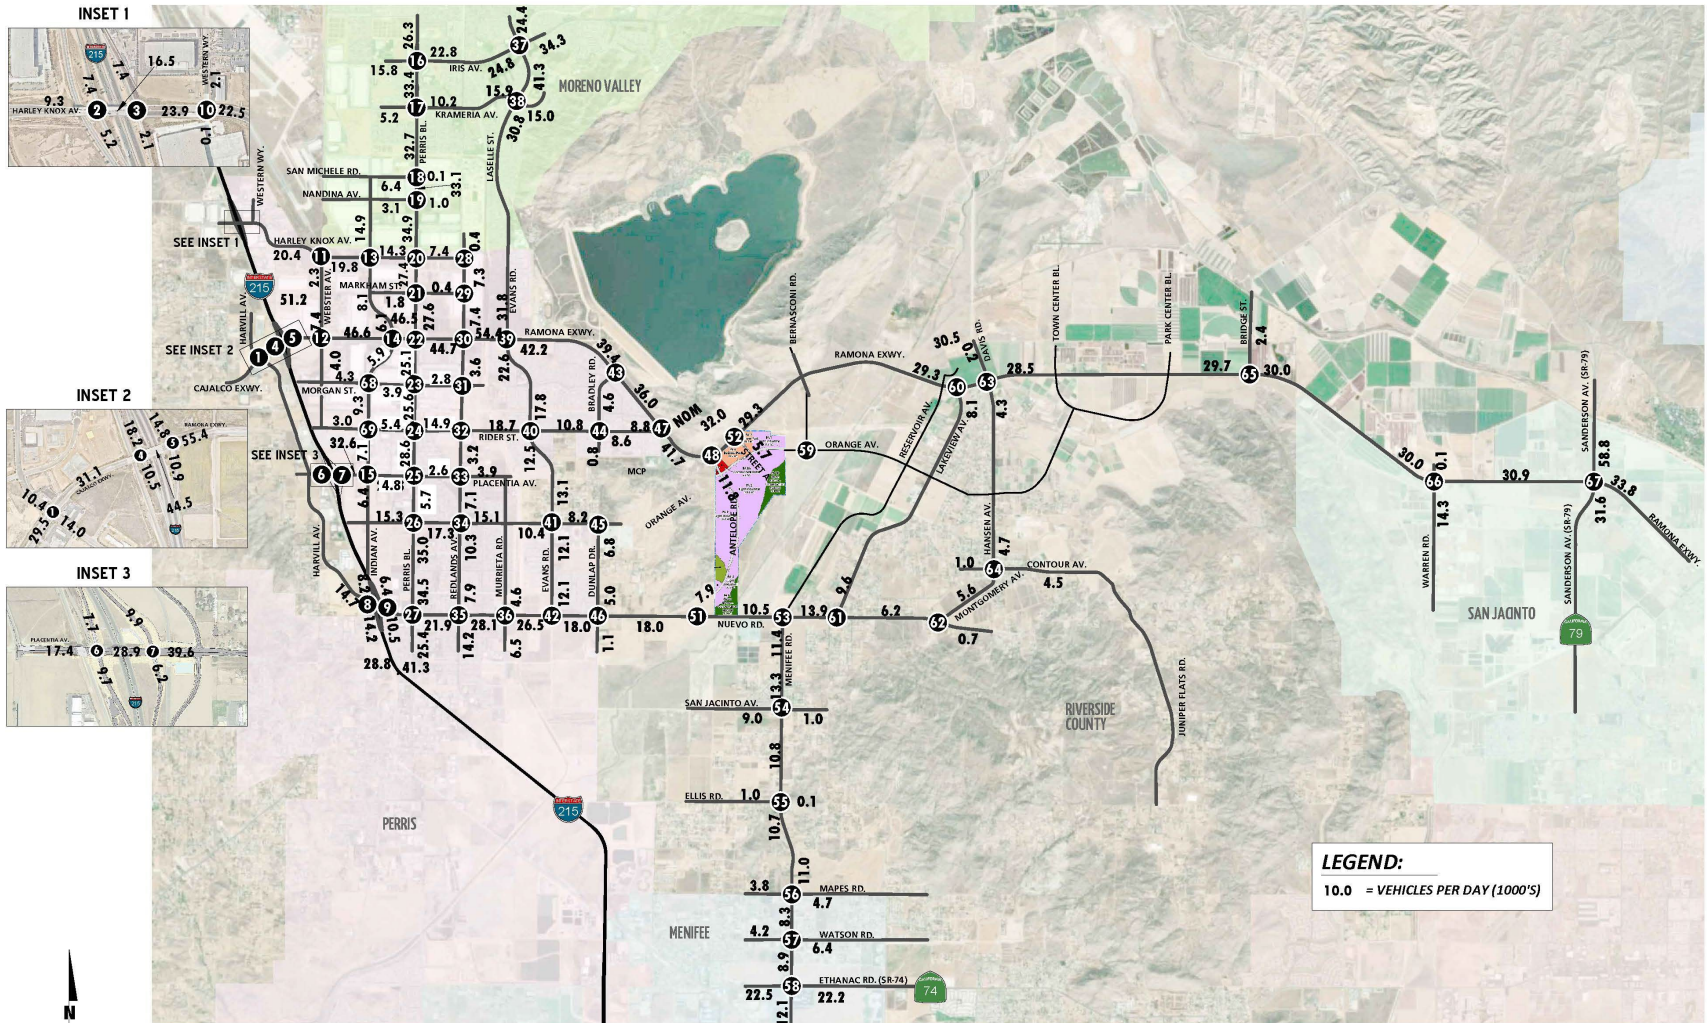

5.3 INTERSECTION OPERATIONS ANALYSIS

LOS calculations were conducted for the study intersections to evaluate their operations under EAP conditions with roadway and intersection geometrics consistent with Section 5.1 *Roadway Improvements*. As shown in Table 5-1, all study area intersections are anticipated to continue to operate at an acceptable LOS during the peak hours for EAP (2030) traffic conditions, with the exception of the following intersections:

- I-215 Southbound Ramps & Harley Knox Boulevard (#2) – LOS F AM and PM peak hours

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

¹ Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all-way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

² AWS = All-way Stop; CSS = Cross-street Stop; RA = Roundabout; TS = Traffic Signal; **TS** = Improvement

³ A traffic signal is assumed as part of the I-215 Freeway/Placentia Avenue interchange project. The I-215 Freeway/Placentia Avenue interchange project is anticipated to be completed by 2022. As such, these improvements have been assumed to be in place for EAP (2030) conditions.

⁴ Minimum acceptable LOS for each applicable jurisdiction.

⁵ The Nuevo Road widening is anticipated to be completed by the end of 2020. As such, the Nuevo Road widening is assumed under EAP (2030) traffic conditions.

⁶ Intersection will be constructed when the Mid-County Parkway is constructed. As such, the intersection does not exist under this scenario.

- I-215 Northbound Ramps & Harley Knox Boulevard (#3) – LOS F AM and PM peak hours
- I-215 Southbound Ramps & Ramona Expressway (#4) – LOS F AM and PM peak hours
- I-215 Northbound Ramps & Ramona Expressway (#5) – LOS F AM and PM peak hours
- Indian Avenue & Placentia Avenue (#15) – LOS F AM and PM peak hours
- Perris Boulevard & Harley Knox Boulevard (#20) – LOS F PM peak hour only
- Perris Boulevard & Orange Avenue (#26) – LOS E PM peak hour only
- Redlands Avenue & Ramona Expressway (#30) – LOS F AM and PM peak hours
- Redlands Avenue & Rider Street (#32) – LOS F AM and PM peak hours
- Evans Road & Ramona Expressway (#39) – LOS F AM and PM peak hours
- Evans Road & Orange Avenue (#41) – LOS F AM peak hour only
- Menifee Road/Reservoir Boulevard & Nuevo Road (#53) – LOS E AM peak hour; LOS F PM peak hour
- Menifee Road & Mapes Road (#56) – LOS F AM and PM peak hours
- Menifee Road & Watson Road (#57) – LOS F AM and PM peak hours
- Menifee Road & Ethanac Road (SR-74) (#58) – LOS F AM and PM peak hours
- Lakeview Avenue & Ramona Expressway (#60) – LOS F AM and PM peak hours
- Lakeview Avenue & Nuevo Road (#61) – LOS E AM peak hour only
- Bridge Street & Ramona Expressway (#65) – LOS F AM and PM peak hours
- Sanderson Avenue (SR-79) & Ramona Expressway (#67) – LOS F AM and PM peak hours

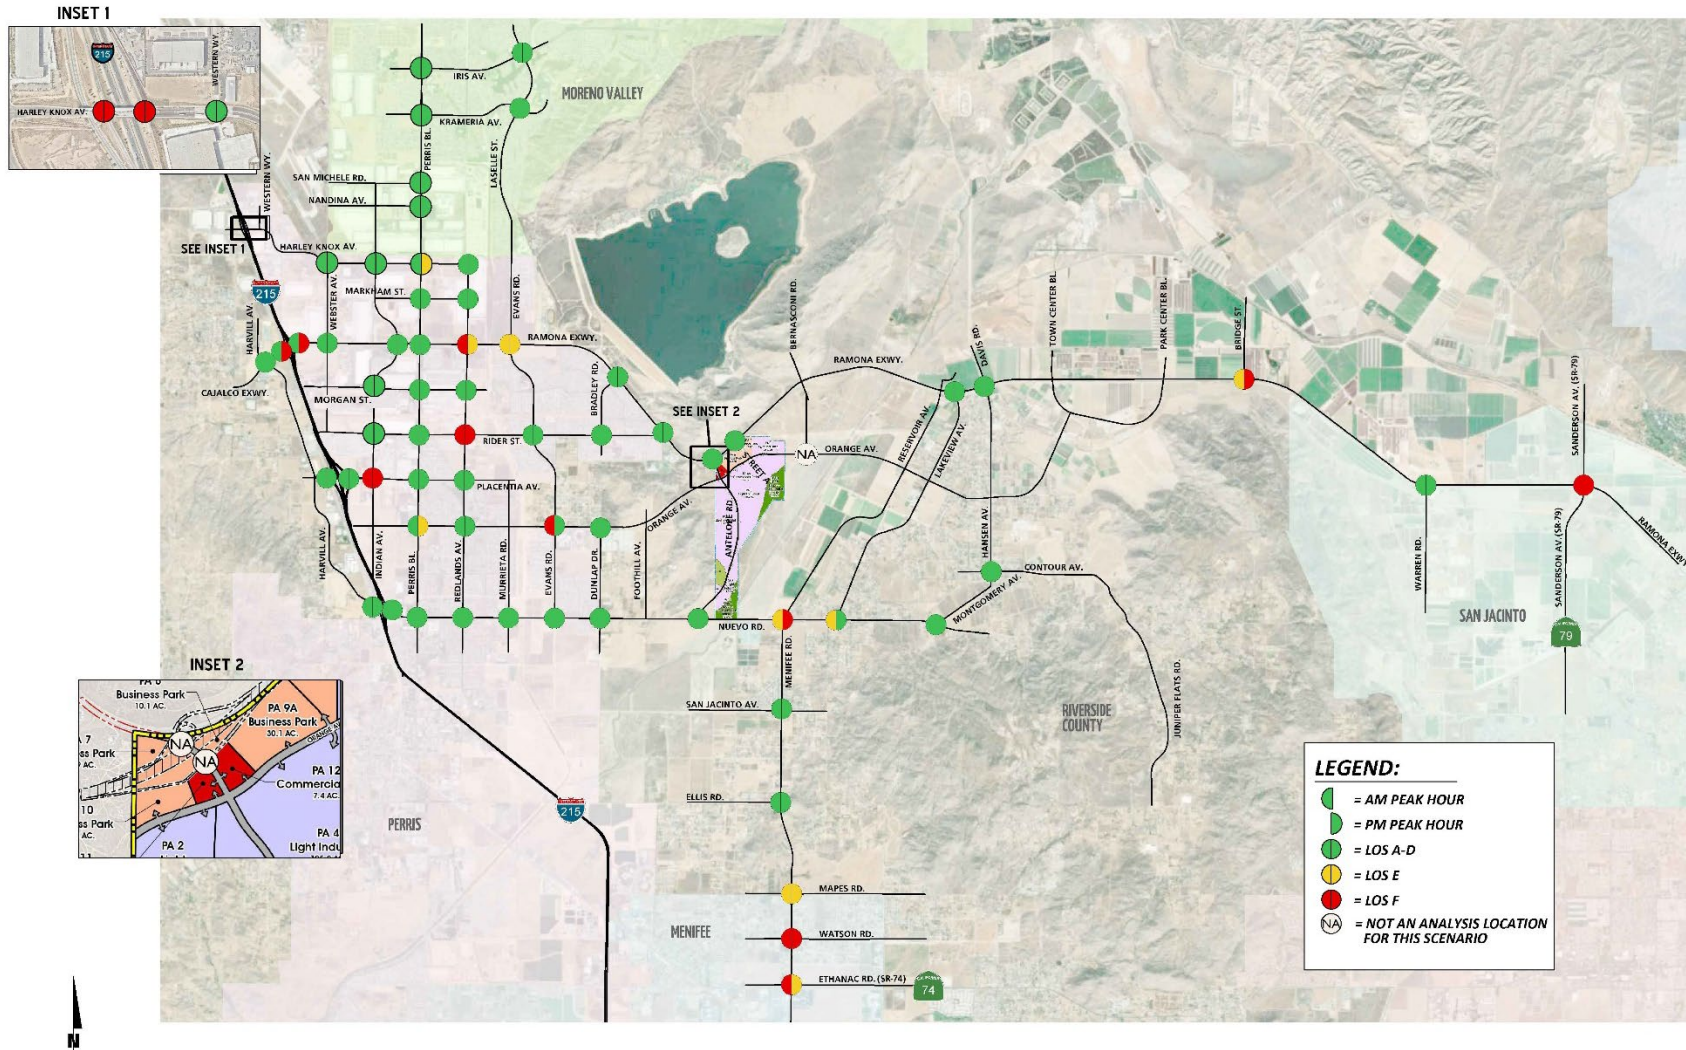

A summary of the peak hour intersection LOS for EAP (2030) traffic conditions is shown on Exhibit 5-3. The intersection operations analysis worksheets for EAP (2030) traffic conditions are included in Appendix 5.1 of this TIA.

5.4 TRAFFIC SIGNAL WARRANTS ANALYSIS

Traffic signal warrants have been performed (based on CA MUTCD) for EAP (2030) traffic conditions based on daily volumes. The following additional unsignalized study area intersections are anticipated to meet planning-level ADT traffic signal warrants under EAP (2030) traffic conditions, in addition to the intersections previously warranted under Existing (2020) traffic conditions (see Appendix 5.2):

- I-215 SB Ramps & Placentia Avenue (#6)
- I-215 NB Ramps & Placentia Avenue (#7)
- Indian Avenue & Placentia Avenue (#15)
- Redlands Avenue & Placentia Avenue (#33)
- Antelope Road & Ramona Expressway (#48)
- Antelope Road & Nuevo Road (#51)
- Street A & Ramona Expressway (#52)
- Bernasconi Road & Orange Avenue (#59)

EXHIBIT 5-3: EAP (2030) SUMMARY OF LOS

This Page Intentionally Left Blank

5.5 OFF-RAMP QUEUING ANALYSIS

A queuing analysis was performed for the off-ramps at the I-215 Freeway at Harley Knox Boulevard, Ramona Expressway, Placentia Avenue, and Nuevo Road interchanges to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially “spill back” onto the I-215 Freeway mainline. Queuing analysis findings are presented in Table 5-2. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline. As shown in Table 5-2, the following movement is anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows under EAP (2030) traffic conditions:

- I-215 Southbound Ramps & Ramona Expressway (#4), southbound left turn lane – PM peak hour only

Worksheets for EAP (2030) traffic conditions off-ramp queuing analysis are provided in Appendix 5.3.

5.6 FREEWAY FACILITY ANALYSIS

EAP (2030) mainline directional volumes for the AM and PM peak hours are provided on Exhibit 5-4. As shown in Table 5-3, the following study area freeway segments and merge/diverge ramp junctions analyzed for this study are anticipated to continue to operate at an unacceptable LOS (i.e., LOS E or worse) during the peak hours for EAP (2030) traffic conditions, consistent with Existing (2020) traffic conditions:

- I-215 Freeway Northbound, North of Harley Knox Boulevard (#14) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Harley Knox Boulevard to Ramona Expressway (#17) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Ramona Expressway to Placentia Avenue (#20) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Placentia Avenue to Nuevo Road (#23) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, South of Nuevo Road (#26) – LOS F AM and PM peak hours

As such, no additional freeway facilities would operate at a deficient LOS with the addition of Project traffic. EAP (2030) freeway facility analysis worksheets are provided in Appendix 5.4.

TABLE 5-2: PEAK HOUR FREEWAY OFF-RAMP QUEUING SUMMARY FOR EAP (2030) CONDITIONS

¹ Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

² 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

³ Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the I-215 Freeway mainline.

BOLD = LOS does not meet Caltrans requirements (i.e., unacceptable LOS or LOS E/F).

¹ Number of lanes are in the specified direction and is based on existing conditions.

² Density is measured by passenger cars per mile per lane (pc/mi/ln).

³ LOS = Level of Service

⁴ Analysis with constrained flow results in acceptable LOS, however, field observations indicate congestion during the peak hour. As such, the freeway is considered at capacity.

 NOTE: VOLUMES IN ACTUAL VEHICLES (NOT PCE)

5.7 RECOMMENDED IMPROVEMENTS

Improvement strategies have been recommended at intersections and freeway facilities that have been identified as deficient under EAP (2030) traffic conditions in an effort to achieve an acceptable LOS (i.e., LOS D or better). Since these improvements are required with the addition of Project traffic, the Project may be conditioned to provide the recommended improvements. If the improvements are eligible under TUMF/DIF or other funding program, the Project can seek credits against its fee obligation (see Table 1-4 and Table 1-5).

5.7.1 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

The effectiveness of the recommended improvement strategies to address EAP (2030) traffic deficiencies are presented in Table 5-4. Worksheets for EAP (2030) conditions, with improvements, HCM calculation worksheets are provided in Appendix 5.5.

5.7.2 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES

As shown previously in Table 5-2, there is one movement anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows under EAP (2030) traffic conditions. Table 5-5 shows the effectiveness of the improvement strategies at the intersection that experiences off-ramp queuing issues under EAP (2030) traffic conditions. With the proposed intersection improvements at the study area freeway ramp-to-arterial intersection (see Table 5-4), the analysis indicates that there are no queuing issues anticipated that may potentially “spill back” onto the I-215 Freeway mainline during the peak hours for EAP (2030) traffic conditions (see Table 5-5). Off-ramp queuing analysis worksheets, with improvements, for EAP (2030) are provided in Appendix 5.6.

5.7.3 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON FREEWAY FACILITIES

The I-215 North Project includes the construction of an HOV lane in each direction of the I-215 Freeway between Nuevo Road and Box Springs Road within the existing median. (15) (16) At this time, the I-215 North Project has no anticipated start or completion date. As such, no improvements have been recommended to address the EAP (2030) deficiencies on the SHS, because the improvement to the I-215 Freeway is assumed to be a long-range improvement. As such, no improvements have been recommended to address existing deficiencies on the study area freeway facilities.

TABLE 5-4: INTERSECTION ANALYSIS FOR EAP (2030) CONDITIONS WITH IMPROVEMENTS

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

¹ When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free-Right Turn Lane; 1 = Improvement

² Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all-way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

³ CSS = Cross-street Stop; AWS = All-way Stop; TS = Traffic Signal; **TS** = Improvements

⁴ Improvement includes modifying the traffic signal to protect the northbound and southbound left turns.

TABLE 5-5: PEAK HOUR FREEWAY OFF-RAMP QUEUING SUMMARY FOR EAP (2030) CONDITIONS WITH IMPROVEMENTS

Intersection	Movement	Available Stacking Distance (Feet)	EAP (2030)			
			95th Percentile Queue (Feet)		Acceptable? ¹	
			AM Peak Hour	PM Peak Hour	AM	PM
I-215 Southbound Ramps & Ramona Exwy.	SBL	530	508 ²	651 ^{2,3}	Yes	Yes
	SBL/T	1,100	508 ²	656 ²	Yes	Yes
	SBR	530	176	130	Yes	Yes

¹ Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

² 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

³ Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the I-215 Freeway mainline.

6 EAPC (2030) TRAFFIC CONDITIONS

This section discusses the methods used to develop EAPC (2030) traffic forecasts, and the resulting intersection operations, traffic signal warrant, and freeway facility operations analyses.

6.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for EAPC (2030) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for EAP conditions only (e.g., intersection and roadway improvements at the Project's frontage and driveways). This also includes the construction of Antelope Road between Ramona Expressway and Nuevo Road.
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for EAPC (2030) conditions only (e.g., intersection and roadway improvements along the cumulative development's frontages).
- The Nuevo Road widening improvements (from Murrieta Road to Evans Road) are assumed to be completed.
- The I-215 Freeway/Placentia Avenue interchange is assumed to be completed and in place.
- Note: The MCP is not assumed to be in place for EAPC (2030) conditions.

6.2 EAPC (2030) TRAFFIC VOLUME FORECASTS

This scenario includes Existing (2020) traffic volumes plus an ambient growth factor of 21.9%, the addition of traffic generated by cumulative development projects, and the addition of Project traffic. The weekday ADT volumes and peak hour volumes which can be expected for EAPC (2030) traffic conditions are shown on Exhibits 6-1 and 6-2, respectively. EAPC (2030) traffic conditions assumes that the MCP is not constructed and operational, and that no development will occur on-site within the MCP alignment.

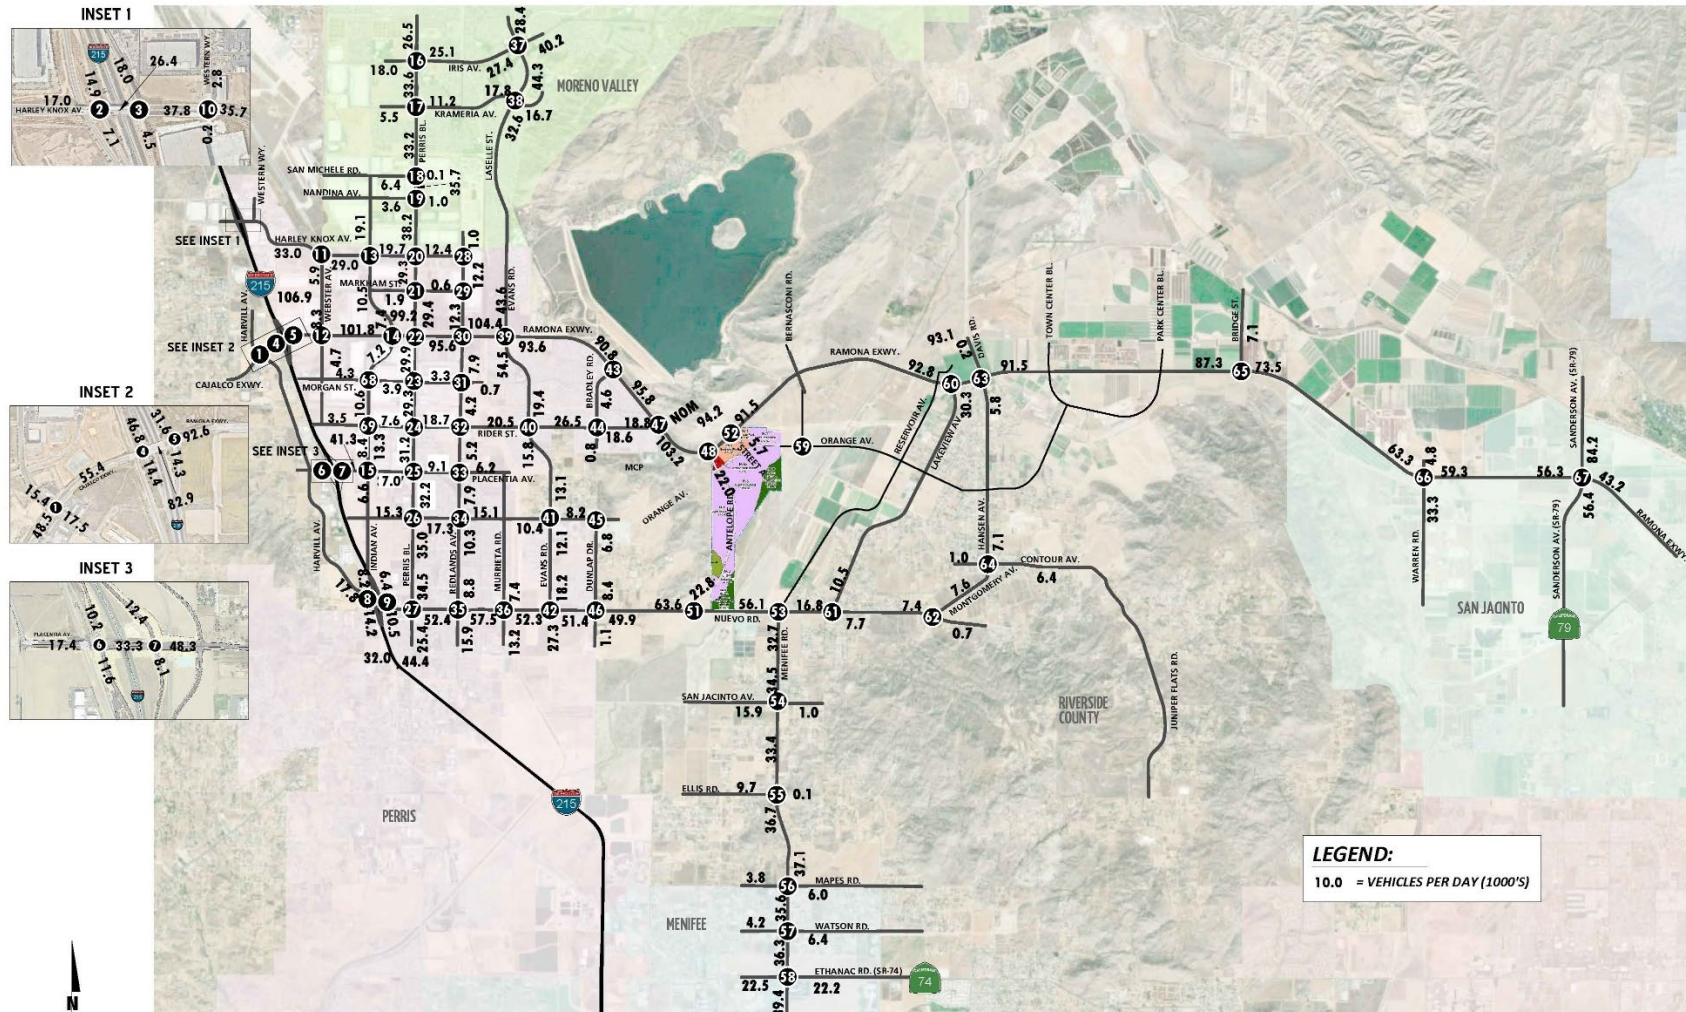

6.3 INTERSECTION OPERATIONS ANALYSIS

LOS calculations were conducted for the study intersections to evaluate their operations under EAPC conditions with roadway and intersection geometrics consistent with Section 6.1 *Roadway Improvements*. As shown in Table 6-1, all study area intersections are anticipated to continue to operate at an acceptable LOS during the peak hours for EAPC (2030) traffic conditions, with the exception of the following intersections:

- Harvill Avenue & Cajalco Expressway (#1) – LOS E AM peak hour; LOS F PM peak hour
- I-215 Southbound Ramps & Harley Knox Boulevard (#2) – LOS F AM and PM peak hours
- I-215 Northbound Ramps & Harley Knox Boulevard (#3) – LOS F AM and PM peak hours
- I-215 Southbound Ramps & Ramona Expressway (#4) – LOS F AM and PM peak hours
- I-215 Northbound Ramps & Ramona Expressway (#5) – LOS F AM and PM peak hours

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

- ¹ Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all-way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.
- ² AWS = All-way Stop; CSS = Cross-street Stop; RA = Roundabout; TS = Traffic Signal; **TS** = Improvement
- ³ A traffic signal is assumed as part of the I-215 Freeway/Placentia Avenue interchange project. The I-215 Freeway/Placentia Avenue interchange project is anticipated to be completed by 2022. As such, these improvements have been assumed to be in place for EAPC (2030) conditions.
- ⁴ Minimum acceptable LOS for each applicable jurisdiction.
- ⁵ The Nuevo Road widening is anticipated to be completed by the end of 2020. As such, the Nuevo Road widening is assumed under EAPC (2030) traffic conditions.
- ⁶ Intersection will be constructed when the Mid-County Parkway is constructed. As such, the intersection does not exist under this scenario.

- I-215 Southbound Ramps & Placentia Avenue (#6) – LOS F PM peak hour only
- Webster Avenue & Harley Knox Boulevard (#11) – LOS F AM and PM peak hours
- Webster Avenue & Ramona Expressway (#12) – LOS F AM and PM peak hours
- Indian Avenue & Ramona Expressway (#14) – LOS F AM and PM peak hours
- Indian Avenue & Placentia Avenue (#15) – LOS F AM and PM peak hours
- Perris Boulevard & Iris Avenue (#16) – LOS E PM peak hour only
- Perris Boulevard & Harley Knox Boulevard (#20) – LOS F PM peak hour only
- Perris Boulevard & Ramona Expressway (#22) – LOS F AM and PM peak hours
- Perris Boulevard & Orange Avenue (#26) – LOS E PM peak hour only
- Redlands Avenue & Harley Knox Boulevard (#28) – LOS F AM peak hour only
- Redlands Avenue & Ramona Expressway (#30) – LOS F AM and PM peak hours
- Redlands Avenue & Rider Street (#32) – LOS F AM and PM peak hours
- Lasselle Street & Iris Avenue (#37) – LOS E AM and PM peak hours
- Lasselle Street & Krameria Avenue (#38) – LOS E AM and PM peak hours
- Evans Road & Ramona Expressway (#39) – LOS F AM and PM peak hours
- Evans Road & Orange Avenue (#41) – LOS F AM peak hour only
- Bradley Road & Ramona Expressway (#43) – LOS E AM peak hour only
- Dunlap Drive & Nuevo Road (#46) – LOS F AM and PM peak hours
- Ramona Expressway & Rider Street (#47) – LOS E AM peak hour; LOS F PM peak hour
- Antelope Road & Ramona Expressway (#48) – LOS F PM peak hour only
- Antelope Road & Nuevo Road (#51) – LOS F AM and PM peak hours
- Street A & Ramona Expressway (#52) – LOS F AM and PM peak hours
- Menifee Road/Reservoir Boulevard & Nuevo Road (#53) – LOS E AM peak hour; LOS F PM peak hour
- Menifee Road & San Jacinto Avenue (#54) – LOS F AM and PM peak hours
- Menifee Road & Ellis Road (#55) – LOS E AM peak hour; LOS F PM peak hour
- Menifee Road & Mapes Road (#56) – LOS F AM and PM peak hours
- Menifee Road & Watson Road (#57) – LOS F AM and PM peak hours
- Menifee Road & Ethanac Road (SR-74) (#58) – LOS F AM and PM peak hours
- Lakeview Avenue & Ramona Expressway (#60) – LOS F AM and PM peak hours
- Lakeview Avenue & Nuevo Road (#61) – LOS E AM peak hour only
- Hansen Avenue/Davis Road & Ramona Expressway (#63) – LOS F AM and PM peak hours
- Bridge Street & Ramona Expressway (#65) – LOS F AM and PM peak hours
- Warren Road & Ramona Expressway (#66) – LOS F PM peak hour only
- Sanderson Avenue (SR-79) & Ramona Expressway (#67) – LOS F AM and PM peak hours

A summary of the peak hour intersection LOS for EAPC (2030) traffic conditions is shown on Exhibit 6-3. The intersection operations analysis worksheets for EAPC (2030) traffic conditions are included in Appendix 6.1 of this TIA.

6.4 TRAFFIC SIGNAL WARRANTS ANALYSIS

Traffic signal warrants have been performed (based on CA MUTCD) for EAPC (2030) traffic conditions based on daily volumes. There are no additional unsignalized study area intersections anticipated to meet planning-level ADT traffic signal warrants under EAPC (2030) traffic conditions, in addition to the intersections previously warranted under Existing (2020) and EAP (2030) traffic conditions (see Appendix 6.2).

6.5 OFF-RAMP QUEUING ANALYSIS

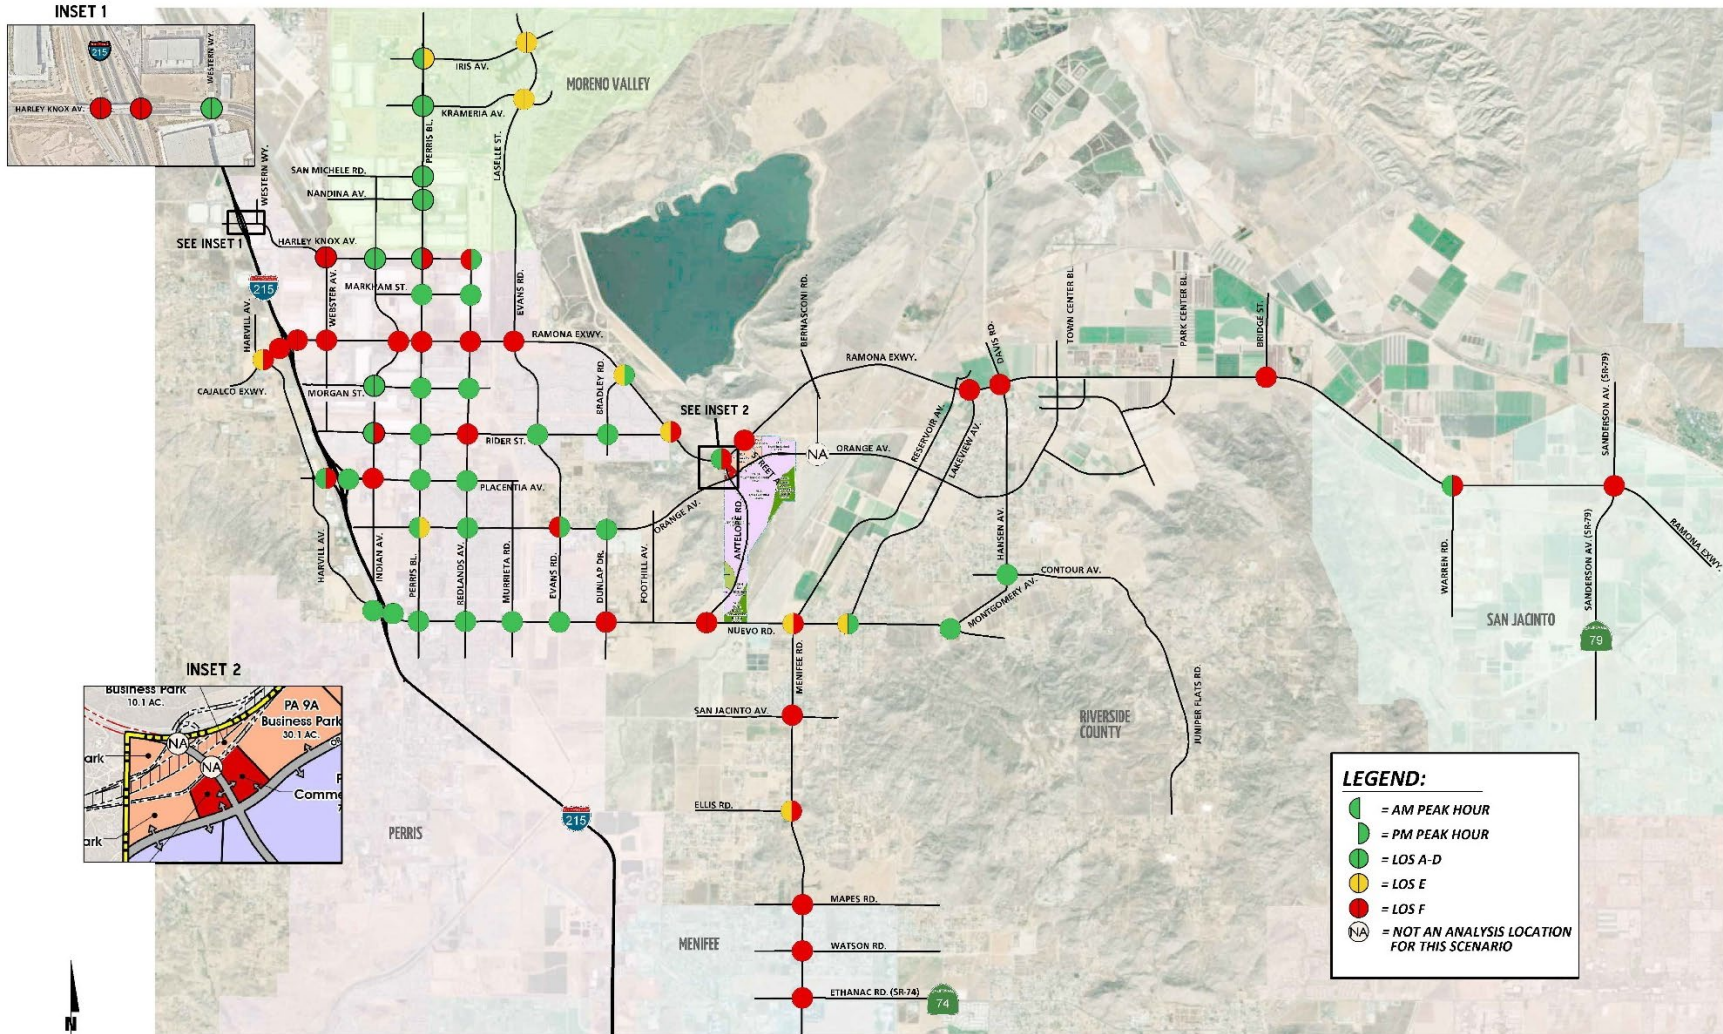

A queuing analysis was performed for the off-ramps at the I-215 Freeway at Harley Knox Boulevard, Ramona Expressway, Placentia Avenue, and Nuevo Road interchanges to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially “spill back” onto the I-215 Freeway mainline. Queuing analysis findings are presented in Table 6-2. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline. As shown in Table 6-2, the following movements are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows under EAPC (2030) traffic conditions:

- I-215 Southbound Ramps & Ramona Expressway (#4), southbound left turn lane – AM and PM peak hours
- I-215 Southbound Ramps & Ramona Expressway (#4), southbound left-through lane – PM peak hour only

Worksheets for EAPC (2030) traffic conditions off-ramp queuing analysis are provided in Appendix 6.3.

	NBR	370	408 ^{2,3}	221	Yes	Yes

¹ Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

² 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

³ Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the I-215 Freeway mainline.

6.6 FREEWAY FACILITY ANALYSIS

EAPC (2030) mainline directional volumes for the AM and PM peak hours are provided on Exhibit 6-4. As shown in Table 6-3, the following study area freeway segments and merge/diverge ramp junctions analyzed for this study are anticipated to continue to operate at an unacceptable LOS (i.e., LOS E or worse) during the peak hours for EAPC (2030) traffic conditions:

- I-215 Freeway Southbound, North of Harley Knox Boulevard (#1) – LOS E AM peak hour; LOS F PM peak hour
- I-215 Freeway Southbound, Off-Ramp at Harley Knox Boulevard (#2) – LOS E AM peak hour; LOS F PM peak hour
- I-215 Freeway Southbound, On-Ramp at Harley Knox Boulevard (#3) – LOS F PM peak hour only
- I-215 Freeway Southbound, Harley Knox Boulevard to Ramona Expressway (#4) – LOS F PM peak hour only
- I-215 Freeway Southbound, Off-Ramp at Ramona Expressway (#5) – LOS F PM peak hour only
- I-215 Freeway Northbound, North of Harley Knox Boulevard (#14) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, On-Ramp at Harley Knox Boulevard (#15) – LOS F PM peak hour only
- I-215 Freeway Northbound, Harley Knox Boulevard to Ramona Expressway (#17) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Ramona Expressway to Placentia Avenue (#20) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Placentia Avenue to Nuevo Road (#23) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, South of Nuevo Road (#26) – LOS F AM and PM peak hours

EAPC (2030) freeway facility analysis worksheets are provided in Appendix 6.4.

TABLE 6-3: FREEWAY FACILITY ANALYSIS FOR EAPC (2030) CONDITIONS

Freeway	Direction	Mainline Segment	Lanes ¹	EAPC (2030)

BOLD = LOS does not meet Caltrans requirements (i.e., unacceptable LOS or LOS E/F).

¹ Number of lanes are in the specified direction and is based on existing conditions.

² Density is measured by passenger cars per mile per lane (pc/mi/ln).

³ LOS = Level of Service

⁴ Analysis with constrained flow results in acceptable LOS, however, field observations indicate congestion during the peak hour. As such, the freeway is considered at capacity.

EXHIBIT 6-4: EAPC (2030) FREEWAY MAINLINE VOLUMES

LEGEND:
 ← 100/200 = AM/PM PEAK HOUR VOLUMES
 NOTE: VOLUMES IN ACTUAL VEHICLES (NOT PCE)

6.7 RECOMMENDED IMPROVEMENTS

Improvement strategies have been recommended at intersections and freeway facilities that have been identified as deficient under EAPC (2030) traffic conditions in an effort to achieve an acceptable LOS (i.e., LOS D or better).

6.7.1 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

The effectiveness of the recommended improvement strategies to address EAPC (2030) traffic deficiencies are presented in Table 6-4. If not constructed by the Project, the Project Applicant shall contribute to these improvements through payment of County DIF/TUMF fees or fair share contribution as identified in Table 1-4 and Table 1-5. Worksheets for EAPC (2030) conditions, with improvements, HCM calculation worksheets are provided in Appendix 6.5.

6.7.2 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON OFF-RAMP QUEUES

As shown previously in Table 6-2, there is one movement anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows under EAPC (2030) traffic conditions. Table 6-5 shows the effectiveness of the improvement strategies at the intersection that experiences off-ramp queuing issues under EAPC (2030) traffic conditions. With the proposed intersection improvements at the study area freeway ramp-to-arterial intersection (see Table 6-4), the analysis indicates that there are no queuing issues anticipated that may potentially “spill back” onto the I-215 Freeway mainline during the peak hours for EAPC (2030) traffic conditions (see Table 6-5). Off-ramp queuing analysis worksheets, with improvements, for EAPC (2030) are provided in Appendix 6.6.

6.7.3 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON FREEWAY FACILITIES

The I-215 North Project includes the construction of an HOV lane in each direction of the I-215 Freeway between Nuevo Road and Box Springs Road within the existing median. (15) (16) At this time, the I-215 North Project has no anticipated start or completion date. As such, no improvements have been recommended to address the EAPC (2030) deficiencies on the SHS, because the improvement to the I-215 Freeway is assumed to be a long-range improvement. As such, no improvements have been recommended to address existing deficiencies on the study area freeway facilities.

TABLE 6-4: INTERSECTION ANALYSIS FOR EAPC (2030) CONDITIONS WITH IMPROVEMENTS

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

¹ When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free-Right Turn Lane; 1 = Improvement

² Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all-way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

³ CSS = Cross-street Stop; RA = Roundabout; AWS = All-way Stop; TS = Traffic Signal; **TS** = Improvements

⁴ Per the City of Perris General Plan, LOS E is permitted at intersections along the Ramona-Cajalco Expressway.

⁵ Improvement consists of modifying the traffic signal to implement a 130-second cycle. No physical improvements are necessary.

⁶ Improvement includes modifying the traffic signal to implement a 130-second cycle.

⁷ Improvement includes modifying the traffic signal to protect the northbound and southbound left turns.

Table 6-5: Peak Hour Freeway Off-Ramp Queuing Summary for EAPC (2030) Conditions With Improvements

Intersection	Movement	Available Stacking Distance (Feet)	EAPC (2030)			
			95th Percentile Queue (Feet)		Acceptable? ¹	
			AM Peak Hour	PM Peak Hour	AM	PM
I-215 Southbound Ramps & Ramona Exwy.	SBL	530	392	637 ^{2,3}	Yes	Yes
	SBL/T	1,100	443	723 ²	Yes	Yes
	SBR	530	366	190	Yes	Yes

¹ Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

² 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

³ Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the I-215 Freeway mainline.

7 HORIZON YEAR (2040) TRAFFIC CONDITIONS

This section discusses the methods used to develop Horizon Year (2040) Without and With MCP for both Without and With Project traffic forecasts, and the resulting intersection operations, traffic signal warrant, and freeway facility operations analyses.

7.1 ROADWAY IMPROVEMENTS

The lane configurations and traffic controls assumed to be in place for Horizon Year (2040) conditions are consistent with those shown previously on Exhibit 3-1, with the exception of the following:

- Project driveways and those facilities assumed to be constructed by the Project to provide site access are also assumed to be in place for Horizon Year (2040) conditions only (e.g., intersection and roadway improvements along the Project's frontage and driveways). This also includes the construction of Antelope Road between Ramona Expressway and Nuevo Road.
- Driveways and those facilities assumed to be constructed by cumulative developments to provide site access are also assumed to be in place for Horizon Year (2040) conditions only (e.g., intersection and roadway improvements along the cumulative development's frontages).
- The Nuevo Road widening improvements (from Murrieta Road to Evans Road) are assumed to be completed.
- The I-215 Freeway/Placentia Avenue interchange is assumed to be completed and in place.
- Street A is assumed to intersect with Ramona Expressway for Without MCP conditions only.
- The MCP is assumed to be constructed and in place for With MCP conditions only.
- The future extension of Orange Avenue to the east and west is assumed to be completed between the existing terminus at Dunlap Drive to the east into The Villages of Lakeview.

7.2 HORIZON YEAR (2040) WITHOUT MCP WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

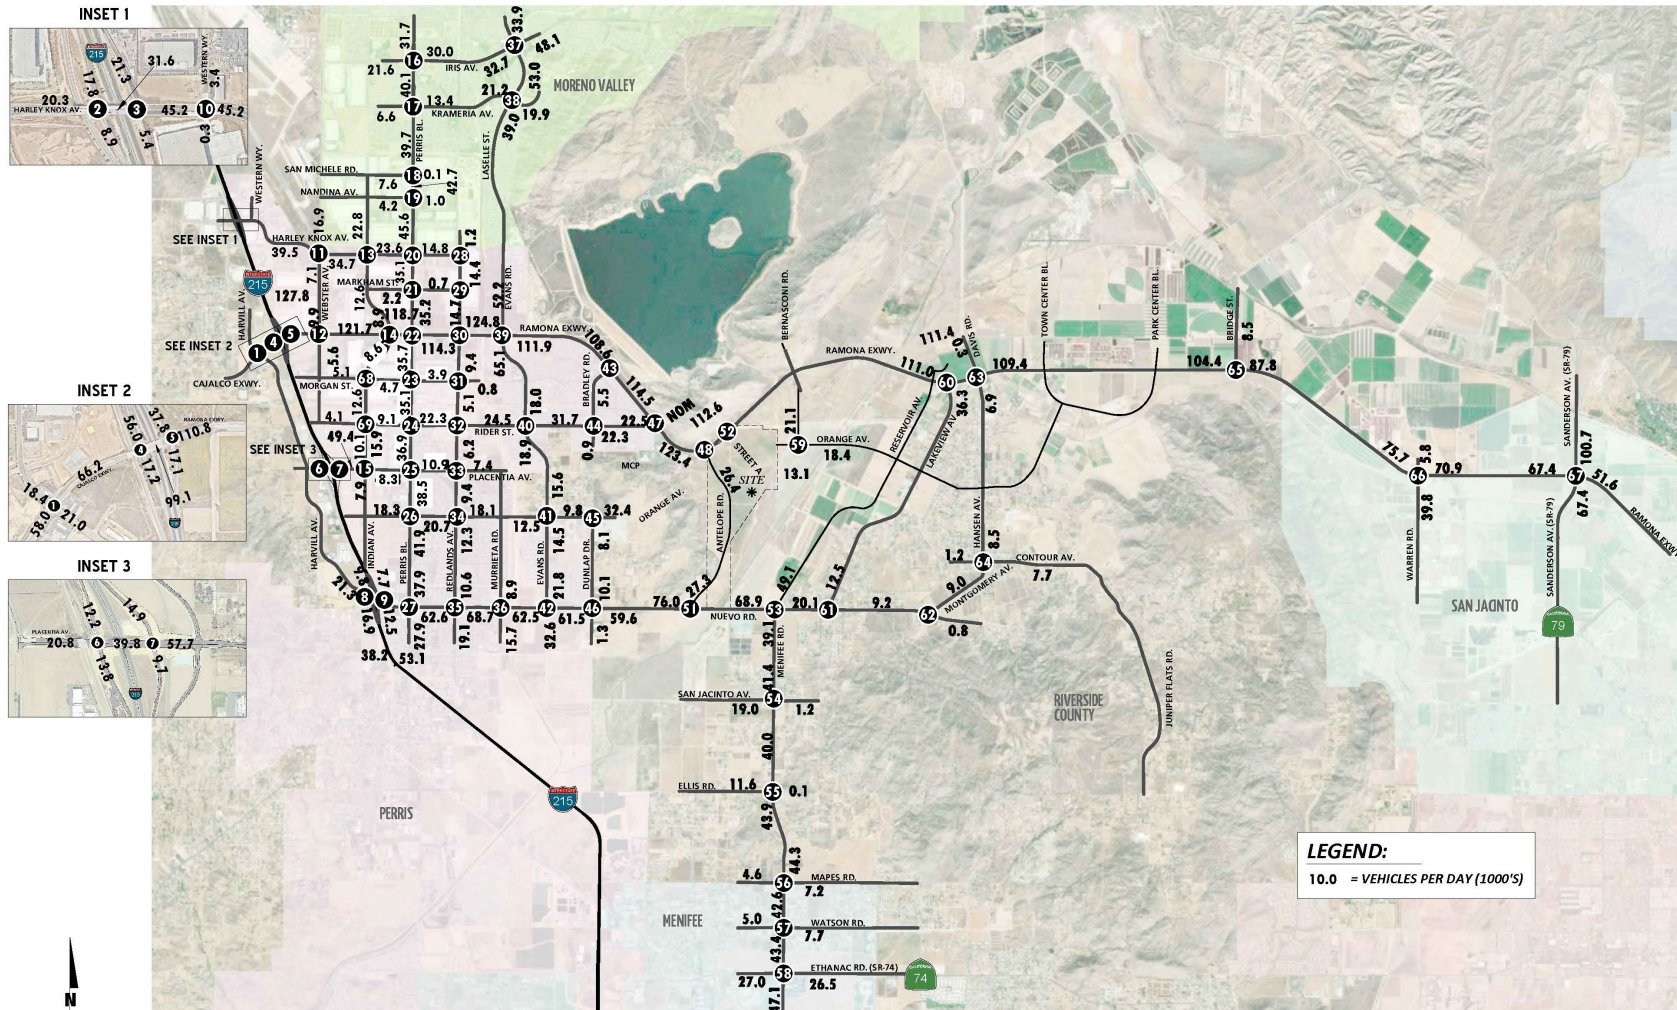

This scenario includes an ambient growth rate of 1.65 percent per year, compounded annually (or 17.2 percent total) from EAPC (2030) conditions (see Section 4.8 *Horizon Year Volume Development* of this TIA for a detailed discussion on the methodology). The Horizon Year (2040) Without Project traffic forecasts reflect the future roadway network discussed in Section 7.1 *Roadway Improvements* and does not include the MCP. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Horizon Year (2040) Without Project traffic conditions are shown on Exhibits 7-1 and 7-2, respectively.

7.3 HORIZON YEAR (2040) WITHOUT MCP WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the Horizon Year (2040) Without MCP traffic forecasts plus proposed Project volumes. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Horizon Year (2040) With Project traffic conditions are shown on Exhibits 7-3 and 7-4, respectively.

LEGEND:

10(10) = AM(PM) PEAK HOUR INTERSECTION VOLUMES

7.4 HORIZON YEAR (2040) WITH MCP WITHOUT PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-processed volumes obtained from the RivTAM consistent with the currently adopted General Plan Circulation Element (see Section 4.8 *Horizon Year Volume Development* of this TIA for a detailed discussion on the post-processing methodology). The Horizon Year (2040) Without Project traffic forecasts reflect the future roadway network contemplated by the County's General Plan, which includes the MCP. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Horizon Year (2040) Without Project traffic conditions are shown on Exhibits 7-5 and 7-6, respectively.

7.5 HORIZON YEAR (2040) WITH MCP WITH PROJECT TRAFFIC VOLUME FORECASTS

This scenario includes the refined post-processed volumes obtained from the RivTAM consistent with the currently adopted General Plan Circulation Element and includes the MCP, plus proposed Project volumes. The weekday ADT and weekday AM and PM peak hour volumes which can be expected for Horizon Year (2040) With Project traffic conditions are shown on Exhibits 7-7 and 7-8, respectively.

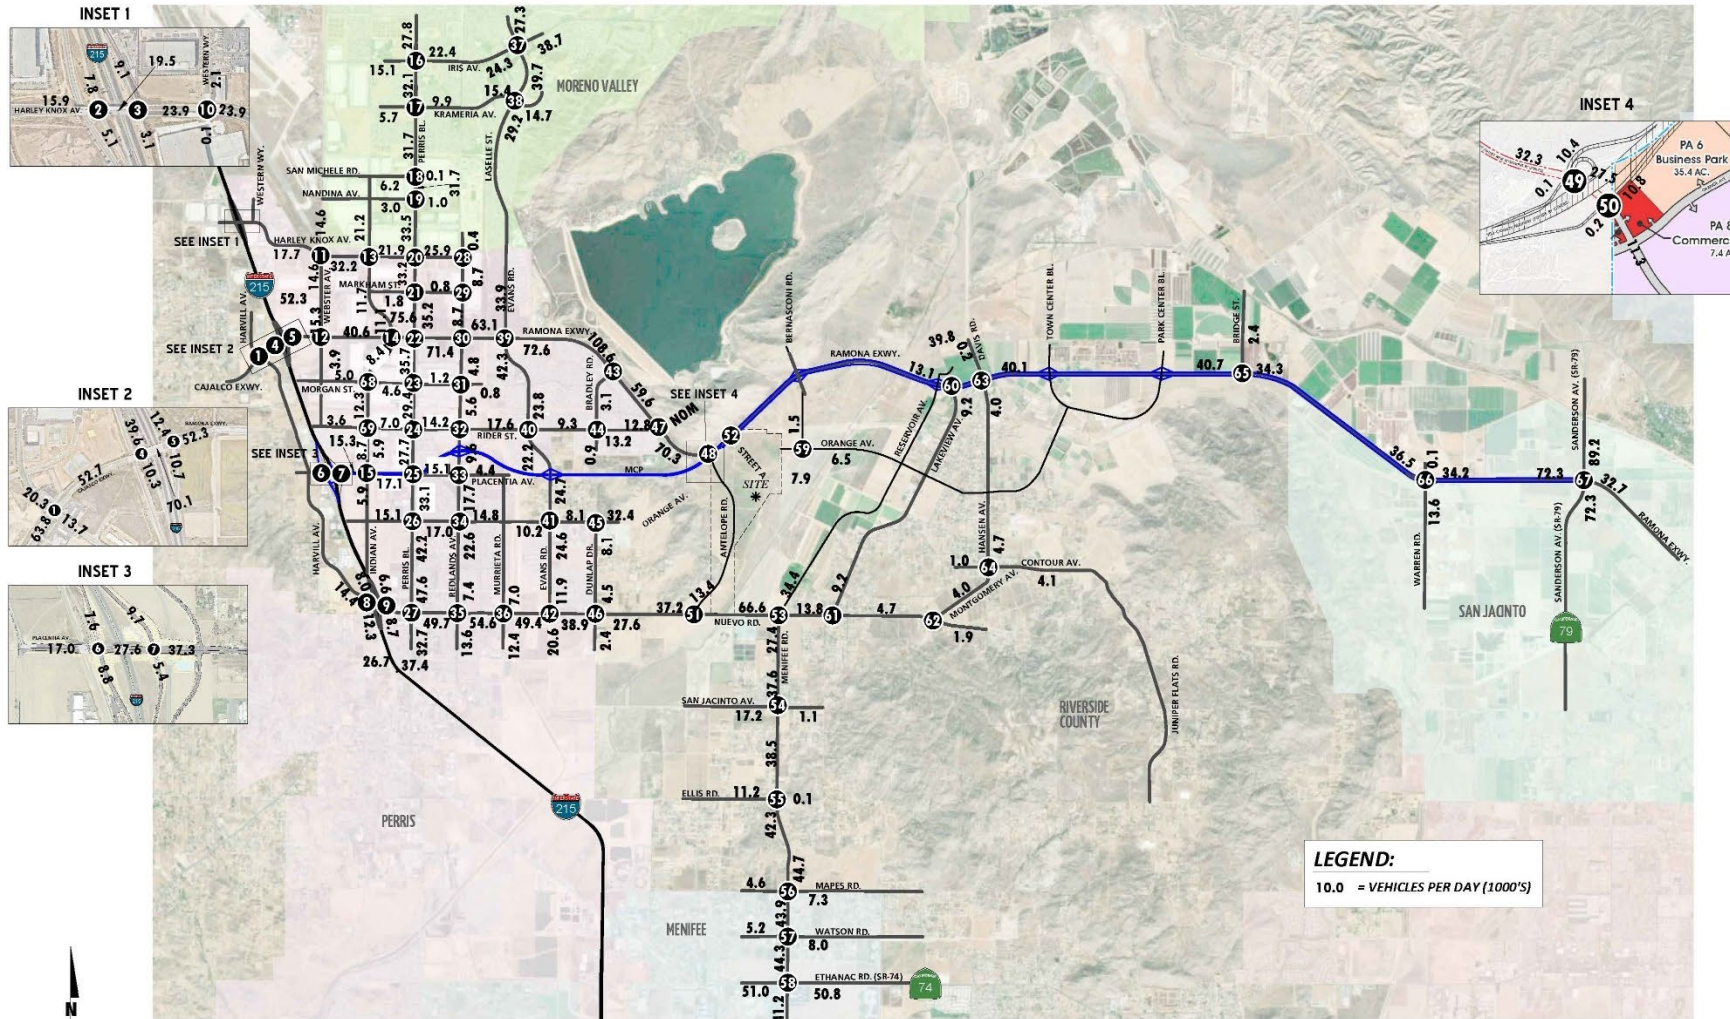

7.6 INTERSECTION OPERATIONS ANALYSIS

7.6.1 HORIZON YEAR (2040) WITHOUT MCP WITHOUT PROJECT TRAFFIC CONDITIONS

Level of service calculations were conducted for the study intersections to evaluate their operations under Horizon Year (2040) Without MCP Without Project traffic conditions with existing roadway and intersection geometrics consistent with those described under Section 7.1 *Roadway Improvements*. As shown in Table 7-1 and illustrated on Exhibit 7-9, the following study area intersections are anticipated to operate at an unacceptable LOS under Horizon Year (2040) Without MCP Without Project traffic conditions:

- Harvill Avenue & Cajalco Expressway (#1) – LOS F AM and PM peak hours
- I-215 Southbound Ramps & Harley Knox Boulevard (#2) – LOS F AM and PM peak hours
- I-215 Northbound Ramps & Harley Knox Boulevard (#3) – LOS F AM and PM peak hours
- I-215 Southbound Ramps & Ramona Expressway (#4) – LOS F AM and PM peak hours
- I-215 Northbound Ramps & Ramona Expressway (#5) – LOS F AM and PM peak hours
- I-215 Southbound Ramps & Placentia Avenue (#6) – LOS F PM peak hour only
- I-215 Southbound Ramps & Nuevo Road (#8) – LOS F PM peak hour only
- Webster Avenue & Harley Knox Boulevard (#11) – LOS F AM and PM peak hours
- Webster Avenue & Ramona Expressway (#12) – LOS F AM and PM peak hours
- Indian Avenue & Harley Knox Boulevard (#13) – LOS E AM and PM peak hours
- Indian Avenue & Ramona Expressway (#14) – LOS F AM and PM peak hours
- Indian Avenue & Placentia Avenue (#15) – LOS E AM peak hour; LOS F PM peak hour
- Perris Boulevard & Iris Avenue (#16) – LOS E AM peak hour; LOS F PM peak hour
- Perris Boulevard & Krameria Avenue (#17) – LOS F AM peak hour; LOS E PM peak hour

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

¹ Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all-way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

² AWS = All-way Stop; CSS = Cross-street Stop; RA = Roundabout; TS = Traffic Signal; **TS** = Improvement

³ A traffic signal is assumed as part of the I-215 Freeway/Placentia Avenue interchange project. The I-215 Freeway/Placentia Avenue interchange project is anticipated to be completed by 2022. As such, these improvements have been assumed to be in place for Horizon Year (2040) conditions.

⁴ Minimum acceptable LOS for each applicable jurisdiction.

⁵ The Nuevo Road widening is anticipated to be completed by the end of 2020. As such, the Nuevo Road widening is assumed under Horizon Year (2040) traffic conditions.

⁶ Intersection will be constructed when the Mid-County Parkway is constructed. As such, the intersection does not exist under this scenario.

- Perris Boulevard & Harley Knox Boulevard (#20) – LOS E AM peak hour; LOS F PM peak hour
- Perris Boulevard & Ramona Expressway (#22) – LOS F AM and PM peak hours

The intersection operations analysis worksheets for Horizon Year (2040) Without MCP Without Project traffic conditions are included in Appendix 7.1 of this report.

7.6.2 HORIZON YEAR (2040) WITHOUT MCP WITH PROJECT TRAFFIC CONDITIONS

As shown in Table 7-1 and illustrated on Exhibit 7-10, the following additional study area intersections are anticipated to result in an unacceptable LOS with the addition of Project traffic, in addition to the intersections previously identified under Horizon Year (2040) Without MCP Without Project traffic conditions:

- Dunlap Drive & Orange Avenue (#45) – LOS F AM and PM peak hours
- Street A & Ramona Expressway (#52) – LOS F AM and PM peak hours

The intersection operations analysis worksheets for Horizon Year (2040) Without MCP With Project traffic conditions are included in Appendix 7.2 of this report.

7.6.3 HORIZON YEAR (2040) WITH MCP WITHOUT PROJECT TRAFFIC CONDITIONS

Level of service calculations were conducted for the study intersections to evaluate their operations under Horizon Year (2040) With MCP Without Project traffic conditions with existing roadway and intersection geometrics consistent with those described under Section 7.1 *Roadway Improvements*. As shown in Table 7-2 and illustrated on Exhibit 7-11, the following study area intersections are anticipated to operate at an unacceptable LOS under Horizon Year (2040) With MCP Without Project traffic conditions:

- Harvill Avenue & Cajalco Expressway (#1) – LOS F AM and PM peak hours
- I-215 Southbound Ramps & Harley Knox Boulevard (#2) – LOS E PM peak hour only
- I-215 Northbound Ramps & Harley Knox Boulevard (#3) – LOS F AM peak hour only
- I-215 Southbound Ramps & Ramona Expressway (#4) – LOS F PM peak hour only
- I-215 Northbound Ramps & Ramona Expressway (#5) – LOS F PM peak hour only
- Webster Avenue & Ramona Expressway (#12) – LOS F AM and PM peak hours
- Indian Avenue & Ramona Expressway (#14) – LOS E PM peak hour only
- Indian Avenue & Placentia Avenue (#15) – LOS F AM and PM peak hours
- Perris Boulevard & Iris Avenue (#16) – LOS E PM peak hour only
- Perris Boulevard & Harley Knox Boulevard (#20) – LOS E AM peak hour; LOS F PM peak hour
- Perris Boulevard & Placentia Avenue (#25) – LOS F AM and PM peak hours
- Perris Boulevard & Orange Avenue (#26) – LOS F PM peak hour only
- Perris Boulevard & Nuevo Road (#27) – LOS E AM and PM peak hours
- Redlands Avenue & Rider Street (#32) – LOS F AM and PM peak hours
- Redlands Avenue & Placentia Avenue (#33) – LOS F AM and PM peak hours
- Redlands Avenue & Nuevo Road (#35) – LOS E PM peak hour only
- Lasselle Street & Krameria Avenue (#38) – LOS E PM peak hour only
- Evans Road & Ramona Expressway (#39) – LOS E AM and PM peak hours

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

- ¹ Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all-way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.
- ² AWS = All-way Stop; CSS = Cross-street Stop; RA = Roundabout; TS = Traffic Signal; TS = Improvement
- ³ A traffic signal is assumed as part of the I-215 Freeway/Placentia Avenue interchange project. The I-215 Freeway/Placentia Avenue interchange project is anticipated to be completed by 2022. As such, these improvements have been assumed to be in place for Horizon Year (2040) conditions.
- ⁴ Minimum acceptable LOS for each applicable jurisdiction.
- ⁵ The Nuevo Road widening is anticipated to be completed by the end of 2020. As such, the Nuevo Road widening is assumed under Horizon Year (2040) traffic conditions.
- ⁶ With the completion of the Mid-County Parkway, this intersection will not exist. As such, the intersection is not analyzed for this scenario.

- Evans Road & Orange Avenue (#41) – LOS F AM and PM peak hours
- Evans Road & Nuevo Road (#42) – LOS F AM and PM peak hours
- Menifee Road/Reservoir Boulevard & Nuevo Road (#53) – LOS F AM and PM peak hours
- Menifee Road & San Jacinto Avenue (#54) – LOS F AM and PM peak hours
- Menifee Road & Ellis Road (#55) – LOS F AM and PM peak hours
- Menifee Road & Mapes Road (#56) – LOS F AM and PM peak hours
- Menifee Road & Watson Road (#57) – LOS F AM and PM peak hours
- Menifee Road & Ethanac Road (SR-74) (#58) – LOS F AM and PM peak hours
- Sanderson Avenue (SR-79) & Ramona Expressway (#67) – LOS F AM and PM peak hours

The intersection operations analysis worksheets for Horizon Year (2040) With MCP Without Project traffic conditions are included in Appendix 7.3 of this report.

7.6.4 HORIZON YEAR (2040) WITH MCP WITH PROJECT TRAFFIC CONDITIONS

As shown in Table 7-2 and illustrated on Exhibit 7-12, the following additional study area intersections are anticipated to result in an unacceptable LOS with the addition of Project traffic, in addition to the intersections previously identified under Horizon Year (2040) Without MCP Without Project traffic conditions:

- Dunlap Drive & Orange Avenue (#45) – LOS F AM and PM peak hours
- Antelope Road & Nuevo Road (#51) – LOS F AM peak hour; LOS E PM peak hour

The intersection operations analysis worksheets for Horizon Year (2040) With MCP With Project traffic conditions are included in Appendix 7.4 of this report.

7.7 TRAFFIC SIGNAL WARRANTS ANALYSIS

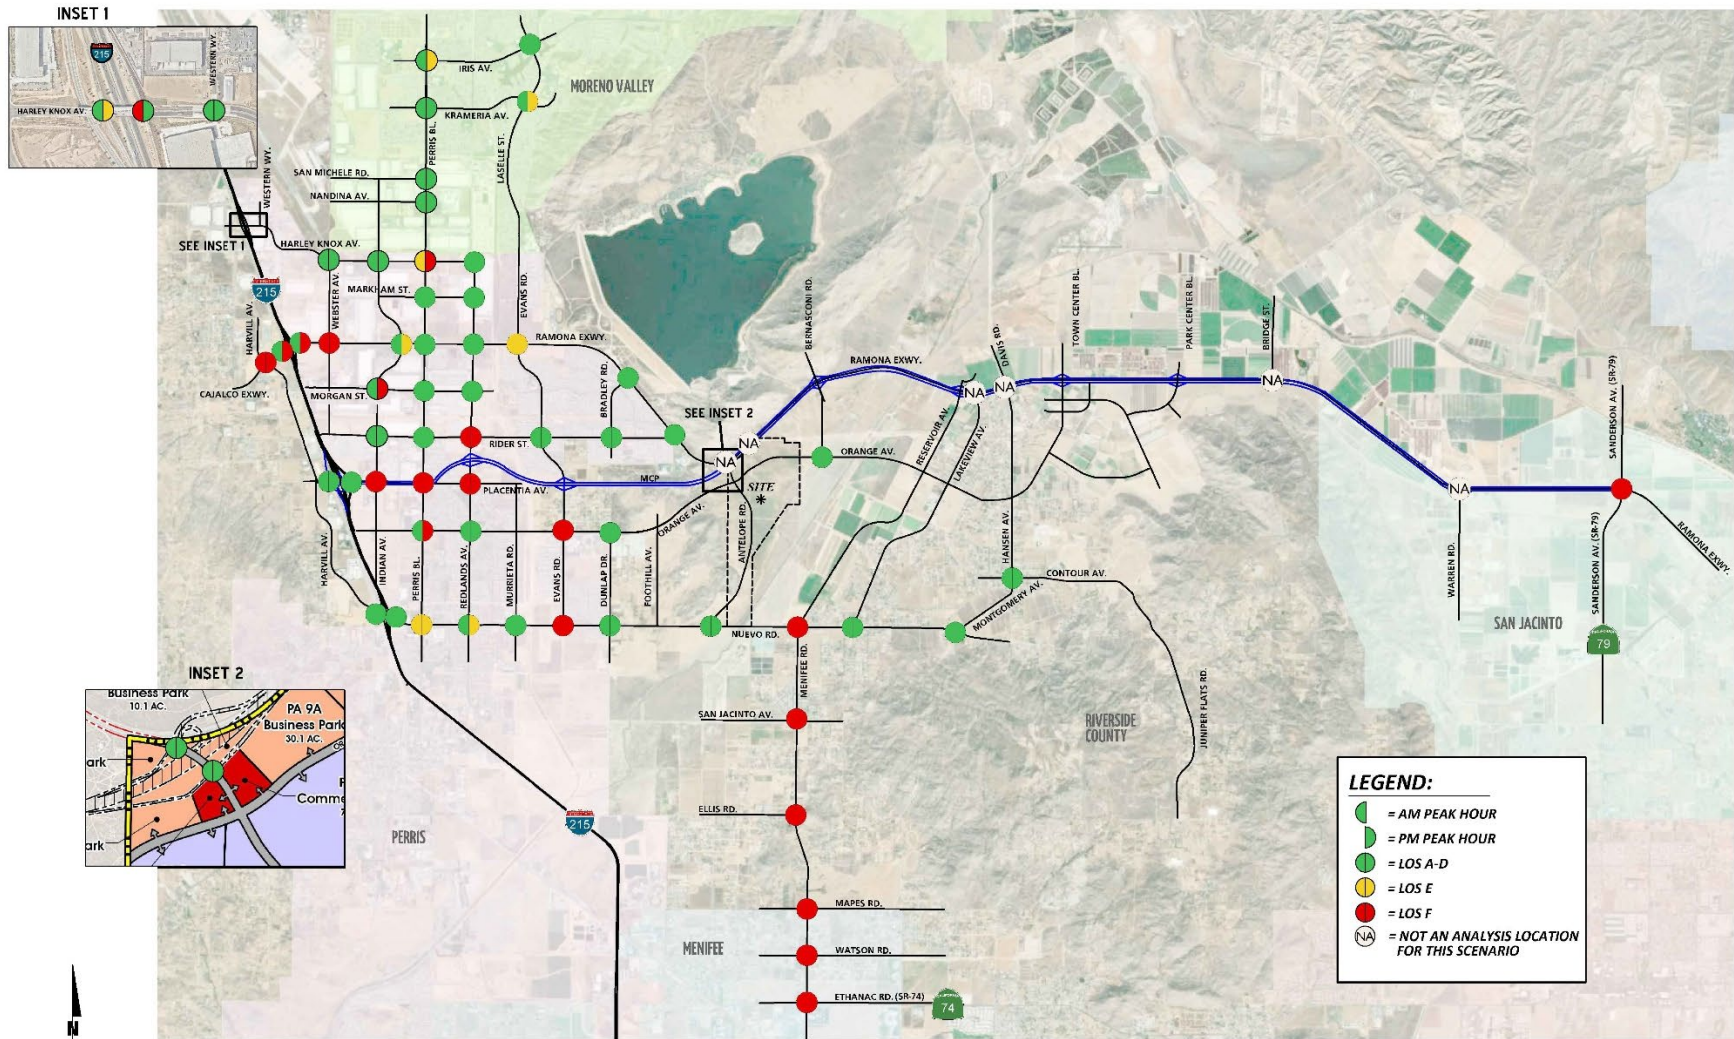

7.7.1 HORIZON YEAR (2040) WITHOUT MCP WITHOUT PROJECT TRAFFIC CONDITIONS

Traffic signal warrants have been performed (based on CA MUTCD) for Horizon Year (2040) Without MCP Without Project traffic conditions based on daily volumes. The following additional unsignalized study area intersections are anticipated to meet planning-level ADT traffic signal warrants under Horizon Year (2040) Without MCP Without Project traffic conditions, in addition to the intersections previously warranted under Existing (2020) and EAP (2030) traffic conditions (see Appendix 7.5):

- Dunlap Drive & Orange Avenue (#45)
- Menifee Road & Ellis Road (#55)
- Hansen Avenue & Contour Avenue (#64)

This Page Intentionally Left Blank

EXHIBIT 7-12: HORIZON YEAR (2040) WITH MCP WITH PROJECT SUMMARY OF LOS

This Page Intentionally Left Blank

7.7.2 HORIZON YEAR (2040) WITHOUT MCP WITH PROJECT TRAFFIC CONDITIONS

There are no additional unsignalized study area intersections anticipated to meet planning-level ADT traffic signal warrants under Horizon Year (2040) Without MCP With Project traffic conditions, in addition to the intersections previously warranted under Existing (2020), EAP (2030), and Horizon Year (2040) Without MCP Without Project traffic conditions (see Appendix 7.6).

7.7.3 HORIZON YEAR (2040) WITH MCP WITHOUT PROJECT TRAFFIC CONDITIONS

There are no additional unsignalized study area intersections anticipated to meet planning-level ADT traffic signal warrants under Horizon Year (2040) With MCP Without Project traffic conditions, in addition to the intersections previously warranted under Existing (2020) and EAP (2030) traffic conditions (see Appendix 7.7).

7.7.4 HORIZON YEAR (2040) WITH MCP WITH PROJECT TRAFFIC CONDITIONS

There are no additional unsignalized study area intersections anticipated to meet planning-level ADT traffic signal warrants under Horizon Year (2040) With MCP With Project traffic conditions, in addition to the intersections previously warranted under Existing (2020) and EAP (2030) traffic conditions (see Appendix 7.8).

7.8 OFF-RAMP QUEUING ANALYSIS

7.8.1 HORIZON YEAR (2040) WITHOUT MCP WITHOUT PROJECT TRAFFIC CONDITIONS

A queuing analysis was performed for the off-ramps at the I-215 Freeway at Harley Knox Boulevard, Ramona Expressway, Placentia Avenue, and Nuevo Road interchanges to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially “spill back” onto the I-215 Freeway mainline. Queuing analysis findings are presented in Table 7-3 for Without MCP conditions. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline. As shown in Table 7-3, the following movements are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows under Horizon Year (2040) Without MCP Without Project traffic conditions:

- I-215 Southbound Ramps & Ramona Expressway (#4), southbound left turn lane – AM and PM peak hours
- I-215 Southbound Ramps & Ramona Expressway (#4), southbound left-through lane – PM peak hour only
- I-215 Southbound Ramps & Ramona Expressway (#4), southbound right turn lane – AM peak hour only

Worksheets for Horizon Year (2040) Without MCP Without Project traffic conditions off-ramp queuing analysis are provided in Appendix 7.9.

**TABLE 7-3: PEAK HOUR FREEWAY OFF-RAMP QUEUING SUMMARY FOR HORIZON YEAR (2040)
WITHOUT MID-COUNTY PARKWAY CONDITIONS**

¹ Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

² 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

³ Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the I-215 Freeway mainline.

7.8.2 HORIZON YEAR (2040) WITHOUT MCP WITH PROJECT TRAFFIC CONDITIONS

As shown in Table 7-3, the following additional movements are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows for Horizon Year (2040) Without MCP With Project traffic conditions:

- I-215 Southbound Ramps & Harley Knox Boulevard (#2), southbound left-through lane – AM Peak hour only
- I-215 Southbound Ramps & Harley Knox Boulevard (#2), southbound right turn lane – AM Peak hour only

Worksheets for Horizon Year (2040) Without MCP With Project traffic conditions off-ramp queuing analysis are provided in Appendix 7.10.

7.8.3 HORIZON YEAR (2040) WITH MCP WITHOUT PROJECT TRAFFIC CONDITIONS

A queuing analysis was performed for the off-ramps at the I-215 Freeway at Harley Knox Boulevard, Ramona Expressway, Placentia Avenue, and Nuevo Road interchanges to assess vehicle queues for the off ramps that may potentially result in deficient peak hour operations at the ramp-to-arterial intersections and may potentially “spill back” onto the I-215 Freeway mainline. Queuing analysis findings are presented in Table 7-4 for With MCP conditions. It is important to note that off-ramp lengths are consistent with the measured distance between the intersection and the freeway mainline. As shown in Table 7-4, there are no movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows under Horizon Year (2040) With MCP Without Project traffic conditions. Worksheets for Horizon Year (2040) With MCP Without Project traffic conditions off-ramp queuing analysis are provided in Appendix 7.11.

7.8.4 HORIZON YEAR (2040) WITH MCP WITH PROJECT TRAFFIC CONDITIONS

As shown in Table 7-4, with the addition of Project traffic, there are no additional movements that are anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows for Horizon Year (2040) With MCP With Project traffic conditions. Worksheets for Horizon Year (2040) With MCP With Project traffic conditions off-ramp queuing analysis are provided in Appendix 7.12.

¹ Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

² 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

³ Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the I-215 Freeway mainline.

7.9 FREEWAY FACILITY ANALYSIS

7.9.1 HORIZON YEAR (2040) WITHOUT MCP WITHOUT PROJECT TRAFFIC CONDITIONS

Horizon Year (2040) Without MCP Without Project mainline directional volumes for the AM and PM peak hours are provided on Exhibit 7-13. As shown in Table 7-5, the study area freeway segments and merge/diverge ramp junctions analyzed for this study are anticipated to operate at an acceptable LOS (i.e., LOS D or better) during the peak hours for Horizon Year (2040) Without MCP Without Project traffic conditions, with the exception of the following freeway segments and merge/diverge ramp junctions:

- I-215 Freeway Southbound, North of Harley Knox Boulevard (#1) – LOS F AM and PM peak hours
- I-215 Freeway Southbound, Off-Ramp at Harley Knox Boulevard (#2) – LOS F AM and PM peak hours
- I-215 Freeway Southbound, On-Ramp at Harley Knox Boulevard (#3) – LOS F PM peak hour only
- I-215 Freeway Southbound, Harley Knox Boulevard to Ramona Expressway (#4) – LOS F PM peak hour only
- I-215 Freeway Southbound, Off-Ramp at Ramona Expressway (#5) – LOS F PM peak hour only
- I-215 Freeway Southbound, On-Ramp at Ramona Expressway (#6) – LOS F PM peak hour only
- I-215 Freeway Southbound, Ramona Expressway to Placentia Avenue (#7) – LOS F PM peak hour only
- I-215 Freeway Southbound, Off-Ramp at Placentia Avenue (#8) – LOS F PM peak hour only
- I-215 Freeway Southbound, On-Ramp at Placentia Avenue (#9) – LOS F PM peak hour only
- I-215 Freeway Southbound, Placentia Avenue to Nuevo Road (#10) – LOS F PM peak hour only
- I-215 Freeway Southbound, Off-Ramp at Nuevo Road (#11) – LOS F PM peak hour only
- I-215 Freeway Southbound, On-Ramp at Nuevo Road (#12) – LOS F PM peak hour only
- I-215 Freeway Northbound, North of Harley Knox Boulevard (#14) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, On-Ramp at Harley Knox Boulevard (#15) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Off-Ramp at Harley Knox Boulevard (#16) – LOS F PM peak hour only
- I-215 Freeway Northbound, Harley Knox Boulevard to Ramona Expressway (#17) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, On-Ramp at Ramona Expressway (#18) – LOS F PM peak hour only
- I-215 Freeway Northbound, Off-Ramp at Ramona Expressway (#19) – LOS E PM peak hour only
- I-215 Freeway Northbound, Ramona Expressway to Placentia Avenue (#20) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, On-Ramp at Placentia Avenue (#21) – LOS E PM peak hour only
- I-215 Freeway Northbound, Placentia Avenue to Nuevo Road (#23) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Off-Ramp at Nuevo Road (#25) – LOS E AM peak hour only
- I-215 Freeway Northbound, South of Nuevo Road (#26) – LOS F AM and PM peak hours

BOLD = LOS does not meet Caltrans requirements (i.e., unacceptable LOS or LOS E/F).

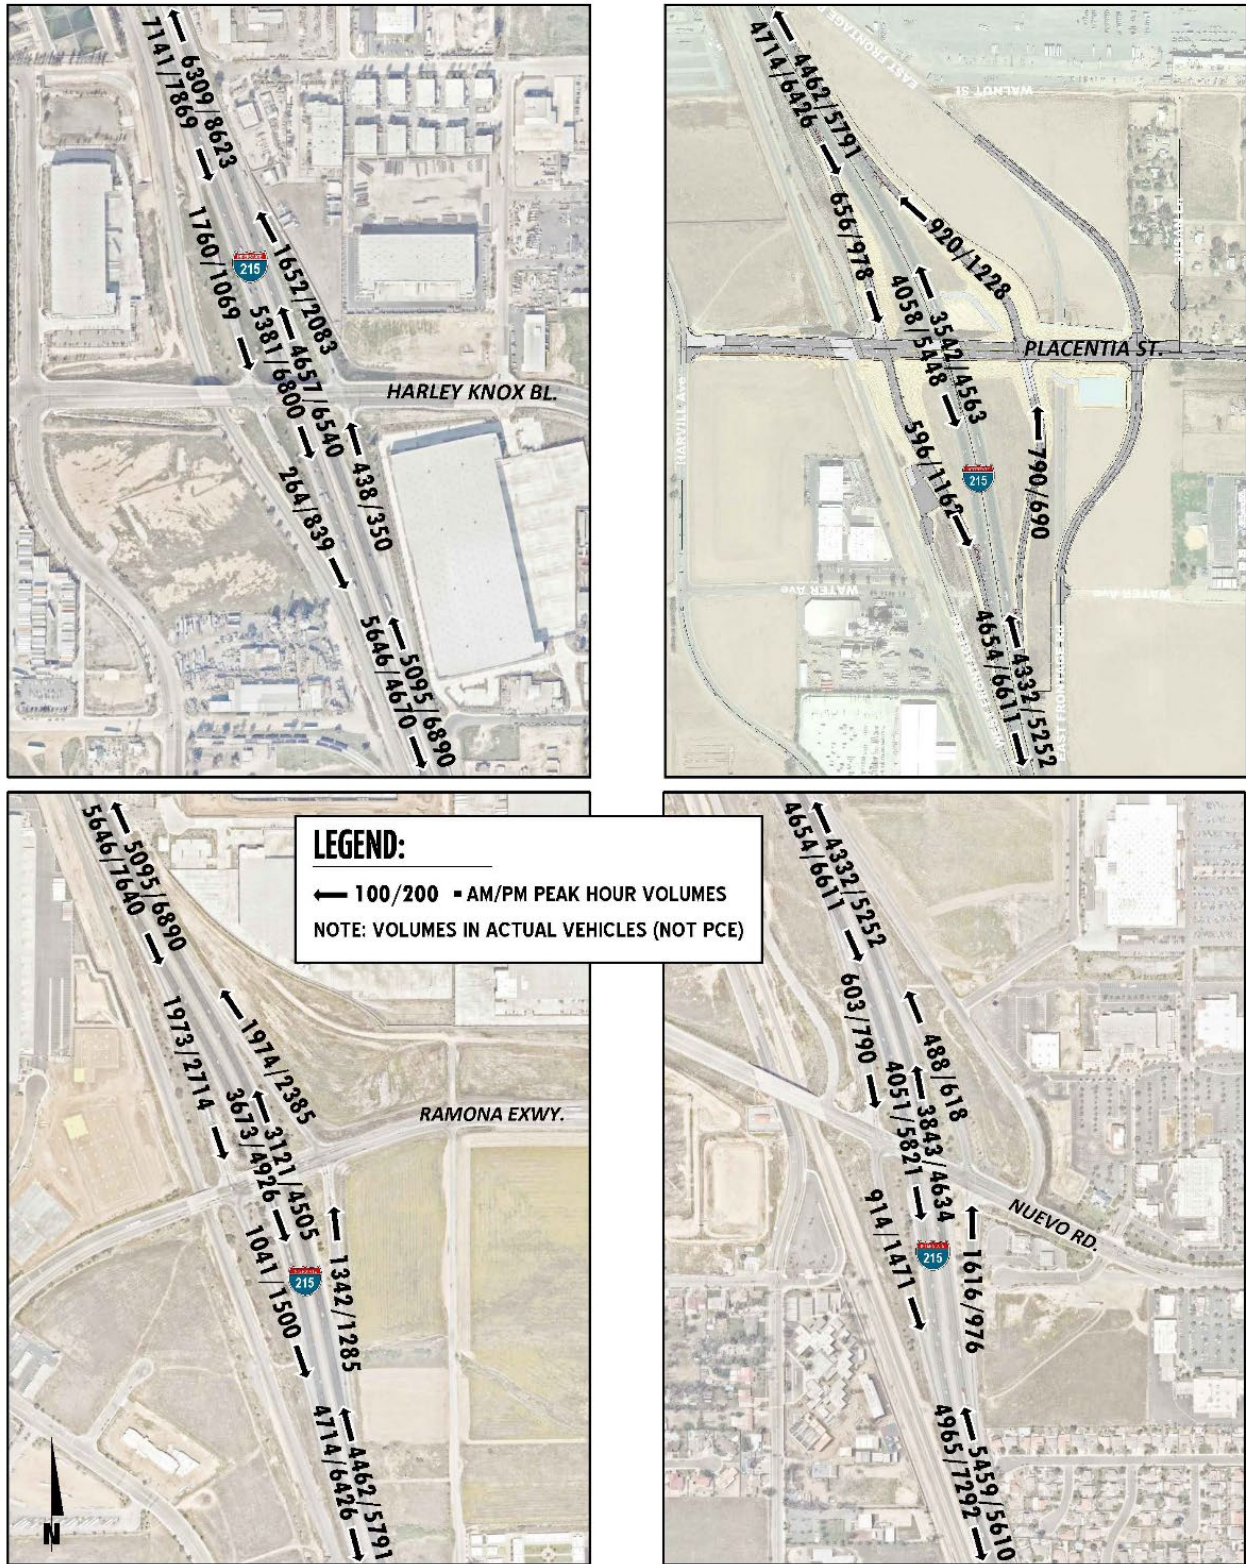

¹ Number of lanes are in the specified direction and is based on existing conditions.

² Density is measured by passenger cars per mile per lane (pc/mi/ln).

³ LOS = Level of Service

⁴ Analysis with constrained flow results in acceptable LOS, however, field observations indicate congestion during the peak hour. As such, the freeway is considered at capacity.

EXHIBIT 7-13: HORIZON YEAR (2040) WITHOUT MCP WITHOUT PROJECT FREEWAY MAINLINE VOLUMES

Horizon Year (2040) Without MCP Without Project freeway facility analysis worksheets are provided in Appendix 7.13.

7.9.2 HORIZON YEAR (2040) WITHOUT MCP WITH PROJECT TRAFFIC CONDITIONS

Horizon Year (2040) Without MCP With Project mainline directional volumes for the AM and PM peak hours are provided on Exhibit 7-14. With the addition of Project traffic, there are no additional study area freeway segments or merge/diverge ramp junctions that are anticipated to operate at an unacceptable LOS during the peak hours, in addition to the segments and ramp junctions identified under Horizon Year (2040) Without MCP Without Project (see Table 7-5). Horizon Year (2040) Without MCP With Project freeway facility analysis worksheets are provided in Appendix 7.14.

7.9.3 HORIZON YEAR (2040) WITH MCP WITHOUT PROJECT TRAFFIC CONDITIONS

Horizon Year (2040) With MCP Without Project mainline directional volumes for the AM and PM peak hours are provided on Exhibit 7-15. As shown in Table 7-6, the study area freeway segments and merge/diverge ramp junctions analyzed for this study are anticipated to operate at an acceptable LOS (i.e., LOS D or better) during the peak hours for Horizon Year (2040) With MCP Without Project traffic conditions, with the exception of the following freeway segments and merge/diverge ramp junctions:

- I-215 Freeway Southbound, North of Harley Knox Boulevard (#1) – LOS F PM peak hour only
- I-215 Freeway Southbound, Off-Ramp at Harley Knox Boulevard (#2) – LOS F PM peak hour only
- I-215 Freeway Southbound, On-Ramp at Harley Knox Boulevard (#3) – LOS F PM peak hour only
- I-215 Freeway Southbound, Harley Knox Boulevard to Ramona Expressway (#4) – LOS F PM peak hour only
- I-215 Freeway Southbound, Off-Ramp at Ramona Expressway (#5) – LOS F PM peak hour only
- I-215 Freeway Southbound, On-Ramp at Ramona Expressway (#6) – LOS F PM peak hour only
- I-215 Freeway Southbound, Ramona Expressway to Placentia Avenue (#7) – LOS F PM peak hour only
- I-215 Freeway Southbound, Off-Ramp at Placentia Avenue (#8) – LOS F PM peak hour only
- I-215 Freeway Southbound, On-Ramp at Placentia Avenue (#9) – LOS F PM peak hour only
- I-215 Freeway Southbound, Placentia Avenue to Nuevo Road (#10) – LOS F PM peak hour only
- I-215 Freeway Southbound, Off-Ramp at Nuevo Road (#11) – LOS F PM peak hour only
- I-215 Freeway Southbound, On-Ramp at Nuevo Road (#12) – LOS F PM peak hour only
- I-215 Freeway Northbound, North of Harley Knox Boulevard (#14) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, On-Ramp at Harley Knox Boulevard (#15) – LOS F AM and PM peak hours
- I-215 Freeway Northbound, Off-Ramp at Harley Knox Boulevard (#16) – LOS F AM and PM peak hours

- I-215 Freeway Northbound, Off-Ramp at Nuevo Road (#25) – LOS F AM peak hour only
- I-215 Freeway Northbound, South of Nuevo Road (#26) – LOS F AM and PM peak hours

Horizon Year (2040) With MCP Without Project freeway facility analysis worksheets are provided in Appendix 7.15.

7.9.2 HORIZON YEAR (2040) WITH MCP WITH PROJECT TRAFFIC CONDITIONS

Horizon Year (2040) With MCP With Project mainline directional volumes for the AM and PM peak hours are provided on Exhibit 7-16. With the addition of Project traffic, there are no additional study area freeway segments or merge/diverge ramp junctions that are anticipated to operate at an unacceptable LOS during the peak hours, in addition to the segments and ramp junctions identified under Horizon Year (2040) With MCP Without Project. Horizon Year (2040) With MCP With Project freeway facility analysis worksheets are provided in Appendix 7.16.

EXHIBIT 7-16: HORIZON YEAR (2040) WITH MCP WITH PROJECT FREEWAY MAINLINE VOLUMES

7.10 DEFICIENCIES AND RECOMMENDED IMPROVEMENTS

Improvement strategies have been recommended at intersections and freeway facilities that have been identified as deficient under Horizon Year (2040) Without MCP and With MCP traffic conditions in an effort to achieve an acceptable LOS (i.e., LOS D or better).

7.10.1 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES AT INTERSECTIONS

The effectiveness of the recommended improvement strategies to address Horizon Year (2040) Without MCP and With MCP traffic deficiencies are presented in Tables 7-7 and 7-8, respectively. If not constructed by the Project, the Project Applicant shall contribute to these improvements through payment of County DIF/TUMF fees or fair share contribution as identified in Table 1-4 and Table 1-5. Worksheets for Horizon Year (2040) Without MCP Without Project and With Project conditions, with improvements, HCM calculation worksheets are provided in Appendices 7.17 and 7.18, respectively. Worksheets for Horizon Year (2040) With MCP Without Project and With Project conditions, with improvements, HCM calculation worksheets are provided in Appendices 7.19 and 7.20, respectively.

7.10.2 RECOMMENDED IMPROVEMENTS TO ADDRESS OFF-RAMP QUEUES

Without MCP

As shown previously in Table 7-3, there are movements anticipated to experience queuing issues during the weekday AM or weekday PM peak 95th percentile traffic flows under Horizon Year (2040) traffic conditions. Table 7-9 shows the effectiveness of the improvement strategies at the intersections that experience off-ramp queuing issues under Horizon Year (2040) Without MCP traffic conditions. With the proposed intersection improvements at the study area freeway ramp-to-arterial intersection (see Table 7-7) for Without MCP conditions, the analysis indicates that there are no queuing issues anticipated that may potentially “spill back” onto the I-215 Freeway mainline during the peak hours for both Without and With Project traffic conditions (see Table 7-9). Off-ramp queuing analysis worksheets with improvements for Horizon Year (2040) Without MCP Without Project and With Project traffic conditions are provided in Appendices 7.21 and 7.22, respectively.

With MCP

As shown previously in Table 7-4, there are no peak hour queuing issues anticipated at the I-215 Freeway and Harley Knox Boulevard, Ramona Expressway, Placentia Avenue, and Nuevo Road interchanges for Horizon Year (2040) With MCP traffic conditions. As such, no improvements have been recommended.

TABLE 7-7: INTERSECTION ANALYSIS FOR HORIZON YEAR (2040) WITHOUT MID-COUNTY PARKWAY CONDITIONS WITH IMPROVEMENTS

#	Intersection	Traffic Control ³	Intersection Approach Lanes ¹												Delay ² (secs.)		Level of Service

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

¹ When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free-Right Turn Lane; 1 = Improvement

² Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all-way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

³ CSS = Cross-street Stop; TS = Traffic Signal; **TS** = Improvements

⁴ Per the City of Perris General Plan, LOS E is permitted at intersections along the Ramona-Cajalco Expressway.

⁵ Improvement includes modifying the traffic signal to protect the northbound and southbound left turns.

⁶ Improvement consists of modifying the traffic signal to implement a 130-second cycle. No physical improvements are necessary.

⁷ Improvement includes modifying the traffic signal to implement a 120-second cycle.

⁸ Improvement includes modifying the traffic signal to protect the eastbound and westbound left turns.

⁹ Improvement includes modifying the traffic signal to implement a 130-second cycle.

¹⁰ Improvement consists of modifying the traffic signal to implement a 120-second cycle. No physical improvements are necessary.

BOLD = LOS does not meet the applicable jurisdictional requirements (i.e., unacceptable LOS).

¹ When a right turn is designated, the lane can either be striped or unstriped. To function as a right turn lane there must be sufficient width for right turning vehicles to travel outside the through lanes.

L = Left; T = Through; R = Right; > = Right-Turn Overlap Phasing; >> = Free-Right Turn Lane; 1 = Improvement

² Per the Highway Capacity Manual (6th Edition), overall average intersection delay and level of service are shown for intersections with a traffic signal or all-way stop control. For intersections with cross street stop control, the delay and level of service for the worst individual movement (or movements sharing a single lane) are shown.

³ CSS = Cross-street Stop; TS = Traffic Signal; **TS** = Improvements

⁴ Per the City of Perris General Plan, LOS E is permitted at intersections along the Ramona-Cajalco Expressway.

⁵ Improvement consists of modifying the traffic signal to implement a 130-second cycle. No physical improvements are necessary.

⁶ Improvement includes modifying the traffic signal to protect the northbound and southbound left turns.

TABLE 7-9: PEAK HOUR OFF-RAMP QUEUING SUMMARY FOR HORIZON YEAR (2040) WITHOUT MID-COUNTY PARKWAY CONDITIONS WITH IMPROVEMENTS

Intersection	Movement ⁴	Available Stacking Distance ⁵ (Feet)	2040 Without Project				2040 With Project			
			95th Percentile Queue (Feet)		Acceptable? ¹		95th Percentile Queue (Feet)		Acceptable? ¹	
			AM Peak Hour	PM Peak Hour	AM	PM	AM Peak Hour	PM Peak Hour	AM	PM
I-215 Southbound Ramps & Harley Knox Bl.	SBL/T	1,330	585	462 ²	Yes	Yes	875 ²	562 ²	Yes	Yes
	SBR	270	304 ³	0	Yes	Yes	304 ³	0	Yes	Yes
I-215 Southbound Ramps & Ramona Exwy.	SBL	530	487	767 ^{2,3}	Yes	No	487	767 ^{2,3}	Yes	Yes
	SBL/T	1,100	592 ²	860 ²	Yes	Yes	592 ²	860 ²	Yes	Yes
	SBR	530	508 ²	215	Yes	Yes	508 ²	215	Yes	Yes

¹ Stacking Distance is acceptable if the required stacking distance is less than or equal to the stacking distance provided. An additional 15 feet of stacking which is assumed to be provided in the transition for turn pockets is reflected in the stacking distance shown on this table, where applicable.

² 95th percentile volume exceeds capacity, queue may be longer. Queue shown is maximum after two cycles.

³ Although 95th percentile queue is anticipated to exceed the available storage for the turn lane, the adjacent through lane has sufficient storage to accommodate any spillover without spilling back and affecting the I-215 Freeway mainline.

7.11.3 RECOMMENDED IMPROVEMENTS TO ADDRESS DEFICIENCIES ON FREEWAY FACILITIES

The I-215 North Project includes the construction of an high-occupancy vehicle (HOV) lane in each direction of the I-215 Freeway between Nuevo Road and Box Springs Road within the existing median. (15) (16) For the purposes of this TIA, these improvements have been analyzed for Horizon Year (2040) traffic conditions. Caltrans typically assumes a reduction of 14 percent per HOV lane to the freeway mainline through volumes in this region to account for vehicles utilizing the HOV lanes. The analysis has been performed assuming the same on and off-ramp configurations as existing baseline conditions. The reduction to the I-215 Freeway mainline volumes has been applied to account for the proposed HOV lane.

As shown in Table 7-10 and 7-11, the I-215 Freeway facilities are anticipated to improve operations, however there are some study area freeway segments and ramp junctions that are anticipated to continue to operate at an unacceptable LOS during the peak hours. Worksheets for Horizon Year (2040) Without Project and With Project conditions freeway facility level of service analysis, with improvements, are provided in Appendix 7.23 and 7.24, respectively.

		South of Nuevo Rd.	3	38.1	23.4	E	C

BOLD = LOS does not meet Caltrans requirements (i.e., unacceptable LOS or LOS E/F).

¹ Number of lanes are in the specified direction and is based on existing conditions.

² Density is measured by passenger cars per mile per lane (pc/mi/ln).

³ LOS = Level of Service

⁴ Analysis with constrained flow results in acceptable LOS, however, field observations indicate congestion during the peak hour. As such, the freeway is considered at capacity.

8 LOCAL AND REGIONAL FUNDING MECHANISMS

Transportation improvements within the County of Riverside are funded through a combination of improvements constructed by the Project, development impact fee programs or fair share contributions. Fee programs applicable to the Project are described below.

8.1 RIVERSIDE COUNTY TRANSPORTATION UNIFORM MITIGATION FEE (TUMF)

The TUMF program is administered by the WRCOG based upon a regional Nexus Study most recently updated in 2016 to address major changes in right of way acquisition and improvement cost factors. (5) This regional program was put into place to ensure that development pays its fair share and that funding is in place for construction of facilities needed to maintain the requisite level of service and critical to mobility in the region. TUMF is a truly regional mitigation fee program and is imposed and implemented in every jurisdiction in Western Riverside County.

8.2 COUNTY OF RIVERSIDE DEVELOPMENT IMPACT FEE (DIF) PROGRAM

The Project is located within the County's Lakeview/Nuevo Area Plan and therefore will be subject to County of Riverside DIF in an effort by the County to address development throughout its unincorporated area. The DIF program consists of two separate transportation components: the Roads, Bridges and Major Improvements component and the Traffic Signals component. Eligible facilities for funding by the County DIF program are identified on the County's Public Needs List, which currently extends through the year 2020. (21) A comprehensive review of the DIF program is now planned in order to update the nexus study. This will result in development of a revised "needs list" extending the program time horizon from 2010 to 2030.

The cost of signaling DIF network intersections is identified under the Traffic Signals component of the DIF program. County staff generally defines DIF eligible intersections as those consisting of two intersecting general plan roadways. If the intersection meets this requirement, it is potentially eligible for up to \$235,000 of credit, which is subject to negotiations with the County.

8.3 MEASURE A

Measure A, Riverside County's half-cent sales tax for transportation, was adopted by voters in 1988 and extended in 2002. It will continue to fund transportation improvements through 2039. Measure A funds a wide variety of transportation projects and services throughout the County. RCTC is responsible for administering the program. Measure A dollars are spent in accordance with a voter-approved expenditure plan that was adopted as part of the 1988 election.

8.4 FAIR SHARE CONTRIBUTION

Project improvements may include a combination of fee payments to established programs, construction of specific improvements, payment of a fair share contribution toward future improvements or a combination of these approaches. Improvements constructed by development may be eligible for a fee credit or reimbursement through the program where appropriate (to be determined at the City's discretion). When off-site improvements are identified with a minor share of responsibility assigned to proposed development, the approving jurisdiction may elect to collect a fair share contribution or require the development to construct improvements. Detailed fair share calculations, for each peak hour, have been provided in Table 8-1 for Without MCP and Table 8-2 for With MCP for the applicable deficient study area intersection. These fees are collected with the proceeds solely used as part of a funding mechanism aimed at ensuring that regional highways and arterial expansions keep pace with the projected population increases.

TABLE 8-1: PROJECT FAIR SHARE CALCULATIONS – WITHOUT MID-COUNTY PARKWAY

Riverside, CA 92501

**SUBJECT: STONERIDGE COMMERCE CENTER SPECIFIC PLAN TRAFFIC IMPACT ANALYSIS SCOPING
AGREEMENT**

Dear Mr. Kevin Tsang:

The firm of Urban Crossroads, Inc. is pleased to submit this scoping letter regarding the traffic impact analysis for Stoneridge Commerce Center Specific Plan (Specific Plan No. 239, Amendment No. 1) (“Project”), which is located on a 582.9 acre site west of Lakeview Avenue between Ramona Expressway and Nuevo Road in the County of Riverside. This letter describes the proposed Project trip generation, trip distribution, and analysis methodology, which have been used to establish the draft proposed Project study area and analysis locations.

PROJECT DESCRIPTION

The Project is anticipated to have an Opening Year of 2030. The Project is proposing to amend the Specific Plan with a mix of industrial and commercial uses, as described below and shown on the subsequent land use summary table (Table 1):

- Without Mid-County Parkway (MCP): 8,476,776 square feet of light industrial uses, 1,069,398 square feet of business park uses, and 121,968 square feet of commercial retail uses
- With MCP: 8,476,776 square feet of light industrial uses, 936,540 square feet of business park uses, 126,542 square feet of commercial retail uses

The Riverside County Transportation Commission (RCTC) is currently planning the construction of a regional, grade-separated transportation facility referred to as the Mid-County Parkway (MCP) between the I-215 Freeway (at Placentia Avenue) and SR-79. The MCP is a long-range transportation improvement as RCTC has not yet identified or secured funding of the MCP and the future proposed interchanges. As such, timing of the future MCP is currently unknown.

A portion of the MCP and future interchange is planned in the northwestern portion of the site, which would affect the development proposed within Planning Areas 6, 7, and 8A of the proposed Project. In order to accommodate both the potential for the future construction of the MCP while also providing for development of the site in the event that the MCP is not constructed as currently planned, two land use concept plans have been developed for the site (Without and With MCP). A preliminary land use

plan for the proposed Project Without MCP is shown on Exhibit 1. The preliminary land use plan for the proposed Project With MCP is shown on Exhibit 2.

The maximum allowable square footage, as permitted by the Specific Plan, will be evaluated for each of the land use designations below for the purposes of the Traffic Impact Analysis:

TABLE 1: PROJECT LAND USE SUMMARY TABLE

Planning Area	Land Use Designation	Without Mid-County Parkway		With Mid-County Parkway	
		Acres	Maximum Building Square Footage ¹	Acres	Maximum Building Square Footage ¹
1	Light Industrial	37.8	823,284	37.8	823,284

Details on the land use assumptions for the Specific Plan land use designations are discussed in further detail in the following section.

The Project's location in relation to the proposed study area is shown on Exhibit 3 without the MCP and the future with MCP circulation system is shown on Exhibit 4. Access to the Project site will be accommodated via future Antelope Road between Ramona Expressway and Nuevo Road. The future Orange Avenue will also provide access to the west and east, ultimately connecting with the existing Orange Avenue alignment to the west (under long-range traffic conditions).

TRIP GENERATION

Trip generation represents the amount of traffic that is attracted and produced by a development and is based upon the specific land uses planned for a given project. In order to develop the traffic characteristics of the proposed project, trip-generation statistics published in the Institute of Transportation Engineers (ITE) Trip Generation Manual (10th Edition, 2017) and the High Cube Warehouse Trip Generation Study (WSP, January 2019) were used to estimate the trip generation.

For purposes of the Traffic Impact Analysis, the following ITE land use codes and vehicle mixes will be utilized for the light industrial and business park areas:

- ITE land use code 140 (Manufacturing) has been used to derive site specific trip generation estimates for up to 847,678 square feet (10% of the light industrial area). A manufacturing facility is an area where the primary activity is the conversion of raw materials or parts into finished products. Size and type of activity may vary substantially from one facility to another. In addition to the actual production of goods, manufacturing facilities generally also have office, warehouse, research, and associated functions. The vehicle mix has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). This study provides the following vehicle mix: AM Peak Hour: 92.0% passenger cars and 8.0% trucks; PM Peak Hour: 93.0% passenger cars and 7.0% trucks; Weekday Daily: 90.0% passenger cars and 10.0% trucks. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.
- ITE land use code 150 (Warehousing) has been used to derive site specific trip generation estimates for up to 427,759 square feet Without the MCP and 374,616 square feet With the MCP (40% of the business park area). The vehicle mix has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). This study provides the following vehicle mix: AM Peak Hour: 87.0% passenger cars and 13.0% trucks; PM Peak Hour: 85.0% passenger cars and 15.0% trucks; Weekday Daily: 73.0% passenger cars and 27.0% trucks. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.
- ITE land use code 154 (High-Cube Transload and Short-Term Storage Warehouse) has been used to derive site specific trip generation estimates for up to 2,966,872 square feet (35% of the light industrial area). High-cube transload/short-term storage warehouse data regarding the truck

percentage and vehicle mix has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). This study provides the following vehicle mix: AM Peak Hour: 80.0% passenger cars and 20.0% trucks; PM Peak Hour: 84.0% passenger cars and 16.0% trucks; Weekday Daily: 84.0% passenger cars and 16.0% trucks. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.

- ITE land use code 157 (High-Cube Cold Storage Warehouse) has been used to derive site specific trip generation estimates for up to 1,695,355 square feet (20% of the light industrial area). High-cube cold storage warehouses include warehouses characterized by the storage and/or consolidation of manufactured goods (and to a lesser extent, raw materials) prior to their distribution to retail locations or other warehouses. High-cube cold storage warehouses are facilities typified by temperature-controlled environments for frozen food or other perishable products. The High-Cube Cold Storage Warehouse vehicle mix (passenger cars versus trucks) has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). This study provides the following vehicle mix: AM Peak Hour: 73.0% passenger cars and 27.0% trucks; PM Peak Hour: 77.0% passenger cars and 23.0% trucks; Weekday Daily: 65.0% passenger cars and 35.0% trucks. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 34.7%; 3-Axle = 11.0%; 4+-Axle = 54.3%.
- High-Cube Fulfillment Center Warehouse has been used to derive site specific trip generation estimates for up to 2,966,872 square feet of the proposed Project. The ITE Trip Generation Manual Supplement (February 2020) has trip generation rates for high-cube fulfillment center use for both non-sort and sort facilities (ITE land use code 155). While there is sufficient data to support use of the trip generation rates for non-sort facilities, the sort facility rate appears to be unreliable because they are based on limited data (i.e., one to two surveyed sites). The proposed Project is speculative and whether a non-sort or sort facility end-user would occupy the buildings is not known at this time. Lastly, the ITE Trip Generation Manual recommends the use of local data sources where available. As such, the best available source for high-cube fulfillment center use would be the trip-generation statistics published in the High-Cube Warehouse Trip Generation Study (WSP, January 29, 2019) which was commissioned by the Western Riverside Council of Governments (WRCOG) in support of the Transportation Uniform Mitigation Fee (TUMF) update in the County of Riverside. The WSP trip generation rates were published in January 2019 and are based on data collected at 11 local high-cube fulfillment center sites located throughout Southern California (specifically Riverside County and San Bernardino County). However, the WSP study does not include a split for inbound and outbound vehicles, as such, the inbound and outbound splits per the ITE Trip Generation Manual for Land Use Code 154 have been utilized.

- Based on the types of uses anticipated to be developed within the business park area, the trip generation rates for ITE land use code 130 (Industrial Park) have been used to derive site specific trip generation estimates for up to 641,639 square feet Without the MCP and 561,924 square feet With the MCP (60% of the business park area). The vehicle mix has been obtained from the ITE's Trip Generation Manual Supplement (dated February 2020). This study provides the following vehicle mix: AM Peak Hour: 88.0% passenger cars and 12.0% trucks; PM Peak Hour: 90.0% passenger cars and 10.0% trucks; Weekday Daily: 85.0% passenger cars and 15.0% trucks. The truck percentages were further broken down by axle type per the following SCAQMD recommended truck mix: 2-Axle = 16.7%; 3-Axle = 20.7%; 4+-Axle = 62.6%.

The following ITE land use codes will be utilized in order to calculate a conservative trip generation for the commercial retail area:

- Free-Standing Discount Superstore (ITE Land Use Code 813) for up to 100,000 square feet of the commercial retail area.
- Shopping Center (ITE Land Use Code 820) for up to 21,968 square feet Without the MCP and 26,542 square feet With the MCP

PCE factors were applied to the trip generation rates for heavy trucks (large 2-axles, 3-axles, 4+-axles). PCEs allow the typical "real-world" mix of vehicle types to be represented as a single, standardized unit, such as the passenger car, to be used for the purposes of capacity and level of service analyses. The PCE factors are consistent with the recommended PCE factors in Appendix B of the San Bernardino County Congestion Management Program (CMP) (2016 Update), as these factors are more conservative than Riverside County's PCE factor of 2.0 for all heavy trucks.

Trip generation rates are summarized on Table 2 for actual vehicles and passenger car equivalent (PCE). The operations analyses for the Traffic Impact Analysis will utilize the PCE trip generation consistent with the County's guidelines and other traffic studies prepared in the County of Riverside. The trip generation summary illustrating daily and peak hour trip generation estimates for the proposed Project in actual vehicles and PCE for Without MCP conditions are shown on Table 3 and Table 4, respectively. The trip generation summary illustrating daily and peak hour trip generation estimates for the proposed Project in actual vehicles and PCE for With MCP conditions are shown on Table 5 and Table 6, respectively. The proposed Project is anticipated to generate the following:

- Without MCP: 23,894 vehicle trip-ends per day with 1,720 AM peak hour trips and 2,212 PM peak hour trips (of which 3,916 trip-ends per day are associated with trucks with 236 AM peak hour truck trips and 234 PM peak hour truck trips) (see Table 3)
- With MCP: 23,624 vehicle trip-ends per day with 1,681 AM peak hour trips and 2,180 PM peak hour trips (of which 3,850 trip-ends per day are associated with trucks with 231 AM peak hour truck trips and 230 PM peak hour truck trips) (see Table 5)

TRIP DISTRIBUTION

The Project trip distribution represents the directional orientation of traffic to and from the Project site. Trip distribution is the process of identifying the probable destinations, directions or traffic routes that will be utilized by Project traffic. The potential interaction between the planned land uses and surrounding regional access routes are considered, to identify the route where the Project traffic would distribute. In addition, truck routes for neighboring agencies have been taken into consideration in the development of the trip distribution patterns for heavy trucks. Specifically, the City of Perris prohibits truck traffic along Ramona Expressway to access the I-215 Freeway. As such, truck traffic is proposed to utilize the existing truck routes of Redlands Avenue to Harley Knox Boulevard to access the I-215 Freeway. Passenger car trip distribution patterns for both near-term and long-range (with MCP) traffic conditions have been developed based on a select zone run of the traffic analysis zone (TAZ) containing the Project from the Riverside Transportation Analysis Model (RivTAM).

As noted previously, the development of the Project is affected by the proposed grade-separated MCP along the existing Placentia Avenue/Ramona Expressway alignment. The MCP is a long-range proposed facility. However, the initial phase of the MCP is underway with the construction of the Placentia Avenue and I-215 Freeway interchange by RCTC in conjunction with Caltrans District 8. The interchange is anticipated to be completed by late 2021, as such, the interchange will be in place by the proposed Project's Opening Year (2030).

Exhibits 5 and 6 show the Project truck and passenger car trip distribution patterns for near-term traffic conditions (without the MCP). These travel patterns consider the existing infrastructure and the infrastructure that is likely to be in place by the Project's Opening Year of 2030 (including the I-215/Placentia Avenue interchange).

Exhibits 7 and 8 show the Project truck and passenger car trip distribution patterns for long-range traffic conditions (with the MCP). These travel patterns assume the completion of the proposed grade-separated facility between the I-215 Freeway and SR-79 in conjunction with other anticipated long-range circulation improvements, such as the completion of the Orange Avenue extension.

ANALYSIS SCENARIOS

Consistent with the County's TIA guidelines, intersection analysis will be provided for the following analysis scenarios:

- Existing (2020) Conditions
- Existing plus Ambient Growth plus Project (EAP) (2030) Conditions (Project Buildout With MCP)
- Existing plus Ambient Growth plus Project plus Cumulative (EAPC) (2030) Conditions (Project Buildout With MCP)
- Horizon Year (2040) Without Project (Without MCP)
- Horizon Year (2040) With Project (Project Buildout Without MCP)
- Horizon Year (2040) Without Project (With MCP)
- Horizon Year (2040) With Project (Project Buildout With MCP)

Both EAP and EAPC traffic conditions will be evaluated using the land use plan which assumes the MCP (less intense). In the event that the MCP does not move forward in the future, Horizon Year (2040) has been evaluated assuming both Without and With MCP conditions. All study area intersections will be evaluated using the Highway Capacity Manual (HCM) 6th Edition analysis methodology.

CUMULATIVE PROJECTS

A preliminary list of cumulative projects is provided in Table 7 and are shown on Exhibit 9. These cumulative projects are based on information collected from the City of Perris, City of Moreno Valley, and the County of Riverside. It is requested that the County of Riverside provide current cumulative projects within the study area for inclusion in the Traffic Impact Analysis. The Planning Department for the Cities of Menifee, Hemet, and San Jacinto will also be contacted to obtain a current list of cumulative projects within their respective agencies.

TRAFFIC COUNTS

Traffic counts (classified by vehicle type) were collected on March 11, 2020 when local schools were in session and operating on a typical bell schedule (prior to closures related to the Covid-19 pandemic). There was a roadway closure along Nuevo Road due to construction activity, as such, historic counts have been obtained for the affected intersections. It is our understanding that the roadway closure on Nuevo is was expected to be in place until late 2020. As such, historic counts will be compared to recent traffic counts and adjusted accordingly for the affected locations.

Mr. Kevin Tsang
County of Riverside, Transportation Department
April 10, 2020

CONCLUSION

Urban Crossroads, Inc. is pleased to submit this letter documenting the Project trip generation, trip distribution, and the recommended intersection analysis locations for the Stoneridge Commerce Center Specific Plan Traffic Impact Study. We will continue to move forward towards completing the traffic study after receiving jurisdiction approval or comments finalizing the study area.

If you have any questions, please contact me directly at (949) 336-5978.

Respectfully submitted,

URBAN CROSSROADS, INC.

Aric Evatt
President

Charlene So, PE
Associate Principal

³ Vehicle Mix Source: ITE Trip Generation Handbook Supplement (2020), Appendix C.

Truck Mix: South Coast Air Quality Management District's (SCAQMD) recommended truck mix, by axle type.

Normalized % - Without Cold Storage: 16.7% 2-Axle trucks, 20.7% 3-Axle trucks, 62.6% 4-Axle trucks.

Normalized % - With Cold Storage: 34.7% 2-Axle trucks, 11.0% 3-Axle trucks, 54.3% 4-Axle trucks.

⁴ Vehicle Mix Source: High Cube Warehouse Trip Generation Study, WSP, January 29, 2019.

Inbound and outbound split source: ITE Trip Generation Manual, Tenth Edition (2017) for ITE Land Use Code 154.

⁵ PCE factors: 2-axle = 1.5; 3-axle = 2.0; 4+-axle = 3.0.
