Feed and Manure Management	14.40	21.68	7.28
	15.30	22.77	7.47

VOC emissions from traffic and area sources were estimated using CalEEMod Version 2016.3.2. VOC emissions from feed and manure management (including cow housing, liquid manure, and solid manure) were estimated using the SJVAPCD dairy emissions calculator. See HRA Appendix A for calculator emissions.

“Remarks” for the Nunes Dairy Expansion Project CalEEMod (v.2016.3.2) Model Runs

“Remarks” are typically used in California Emissions Estimator Model (CalEEMod) to explain non-default inputs. For the current modeling, this document replaces the “remarks” section of the referenced CalEEMod model to provide more space to both identify non-default inputs and to explain how CalEEMod is used to calculate emissions for the current project. When defaults were retained and no further explanation was necessary, no “remarks” are recorded below.

Nunes Dairy Model Run – Existing Operations (2020)

Land Use

- The General Light Industrial land use subtype was used to represent the dairy project, an industrial agriculture project. According to the existing conditions Waste Management Plan, the existing dairy facilities are located on approximately 18 acres with approximately 177,410 square feet of roofed structures and 156,414 square feet of concrete operational areas. There are six existing residences.

Construction Phase

- This is an operational model only. Construction phases were deleted.

Vehicle Trips

- Because the residences are employee or owner residences on a working dairy, trip rate was modified to two trips per residence, with no Home-Work trips. Dairies operate 7 days a week. The existing operations generate approximately 9.2 average daily trips (ADTs) (or 0.052 trips per 1,000 square feet) in addition to 12 residential trips.

Nunes Dairy Model Run – Construction (2021)

Land Use

- The proposed dairy expansion would include the removal of some existing animal shelter structures and construction of one 85,800 square-foot freestall barn. All construction would occur in the existing footprint of the dairy.

Construction Phase

- Construction would begin in early 2021. To calculate the worst-case scenario, all project components were constructed in one phase.
- Off-road Equipment - While there would likely be a small construction crew, default equipment was used since construction details are unknown at this time.
- Trips and VMT – Demolition just involves animal shelters and would require fewer trips than a comparable building.

Vehicle Trips

- This is a construction model only. Operational data can be disregarded.

Nunes Dairy Model Run – Proposed Operations (2021)

Land Use

- The General Light Industrial land use subtype was used to represent the dairy project, an industrial agriculture project. According to the proposed conditions Waste Management Plan, the proposed dairy facilities would be located on approximately 18 acres with approximately 225,505 square feet of roofed structures and 144,820 square feet of concrete operational areas. There would continue to be six residences with implementation of the proposed project.

Construction Phase

- This is an operational model only. Most construction phases were deleted.

Vehicle Trips

- Because the residences are employee or owner residences on a working dairy, trip rate was modified to two trips per residence, with no Home-Work trips. Dairies operate 7 days a week. The proposed operations would generate approximately 18.9 ADTs (or 0.084 trips per 1,000 square feet) in addition to 12 residential trips.
