Project Description

Caltrans proposes to conduct geotechnical drilling on State Route (SR) 299 at Post Mile (PM) 11.98 and 16.45 to support the design and installation of two culverts. The purpose of the geotechnical drilling is to characterize the subsurface soil conditions to determine appropriate trenchless culvert installation methods. The investigation would involve 4 vertical mud-rotary borings, 75-100 feet in depth, which would be constructed as piezometers to measure ground water elevations within the fill prism. Drilling would occur from the existing paved lanes of SR 299, requiring temporary lane closure and traffic-control. Drilling is estimated to be completed over 12 working days. All work would occur within the State Right of Way.
