

## LAKWOOD/FLORENCE INTERSECTION IMPROVEMENTS, DOWNEY, CALIFORNIA

### Cultural Resources Records Search

#### *Studies*

The South Central Coastal Information Center completed a California Historic Resources Information System (CHRIS) records search (Attachment A) which concluded that there have been 2 cultural resources studies completed within one-half mile of the Project. One of them includes at least a portion of the current Project site.

**Table 1: Cultural Resources Studies Within One-Half Mile of the Project Site**

Report Number	Author/Year	Type of Study
LA-07748	Bonner/2006	Survey, cell tower. 0 resources
LA-10525*	Strauss and Tomes/2003	Survey. 5 resources
*Located on the project site		

*LA-10525:* This survey was a cultural resources assessment for the proposed Lakewood Boulevard Street Improvement Project. The linear project extended through the current Project site; however, the five resources recorded were not within ½ mile of the Project site.

#### *Resources*

The records search concluded that no cultural resources have been recorded within the Project Site. One is recorded within a 1/2-mile radius of the Project site.

**Table 2: Cultural Resources Within One-Half Mile of the Project Site**

Site Number	Recorder/Year (most recent)	Description
P-19-177349	Hess and Beach/1983	McDonald's Drive-in Restaurant and Sign

P-19-177349: This resources, a McDonald's restaurant and sign, is the oldest operating McDonalds in the United States, originally opening in August 1953. Two McDonald's restaurants that were built prior to this one have since been demolished.

### Paleontological Records Search

The Natural History Museum of Los Angeles County (NHMLAC) completed a Vertebrate Paleontology Records Check on November 14, 2019 (Attachment B) that determined no paleontological resources are recorded on the Project Site; however, fossils have been found and recorded in similar sedimentary deposits nearby that may occur at depth on the Project site.

*Surface deposits in the entire proposed project area consist of younger Quaternary Alluvium, as overbank deposits from the San Gabriel River that flows just to the east. These younger Quaternary deposits usually do not contain significant fossil vertebrates, at least in the uppermost layers, but the underlying older Quaternary deposits found at varying depths may well contain significant vertebrate fossils. Our closest vertebrate fossil locality from the older Quaternary deposits is LACM 3347, situated east-southeast of the proposed project area north of Leffingwell Road east of La Mirada Boulevard, that produced a fossil specimen of horse, Equus, at a depth of only two feet below the surface. Our next closest vertebrate fossil localities from these Quaternary deposits are LACM 7701-7702, northwest of the proposed project area in the City of Commerce near the intersection of Atlantic Avenue and the Long Beach Freeway (I-710), that produced fossil specimens of threespine stickleback, Gasterosteus aculeatus, salamander, Batrachoseps, lizard, Lacertilia, snake, Colubridae, rabbit, Sylvilagus, pocket mouse, Microtus, harvest mouse, Reithrodontomys, and pocket gopher, Thomomys, at 11 to 34 feet below grade (McLeod 2019).*

According to McLeod (2019), surface grading or shallow excavations in the younger Quaternary Alluvium probably will not uncover significant vertebrate fossil remains. However, excavations that extend down into the older Quaternary deposits could encounter significant fossils. Excavations below the uppermost layers in the proposed project area, therefore, should be monitored by a qualified paleontologist. Sediment samples should also be collected from the older deposits to determine their small fossil potential. Any fossils recovered should be curated in an accredited scientific institution

### **Native American Scoping**

On October 31, 2019, VCS contacted the Native American Heritage Commission (NAHC) to request a sacred lands file search and to obtain a local tribal contacts list. The NAHC responded on November 19, 2019, but the response went directly to Edwin Norris, Public Works Director of the City of Downey. The City is conducting AB 52 consultation separately.

Patrick Maxon, RPA  
Director, Cultural Services

Re: Record Search Results for Lakewood/Florence Intersection

The South Central Coastal Information Center received your records search request for the project area referenced above, located on the South Gate and Whittier, CA USGS 7.5' quadrangles. The following reflects the results of the records search for the project area and a ½-mile radius:

As indicated on the data request form, the locations of resources and reports are provided in the following format:  custom GIS maps  shape files  hand-drawn maps

Resources within project area: 0	None
Resources within ½-mile radius: 1	SEE ATTACHED MAP or LIST
Resources listed in the 2012 OHP Historic Properties Directory within project area: 0	None
Resources listed in the 2012 OHP Historic Properties Directory within ½-mile radius: 36	SEE ATTACHED LIST FOR INDIVIDUAL PROPERTY STATUS CODES – resource locations from the OHP HPD may or may not be plotted on the custom GIS map or provided as a shape file
Reports within project area: 1	LA-10525
Reports within ½-mile radius: 1	SEE ATTACHED MAP or LIST

Please forward a copy of any resulting reports from this project to the office as soon as possible. Due to the sensitive nature of archaeological site location data, we ask that you do not include resource location maps and resource location descriptions in your report if the report is for public distribution. If you have any questions regarding the results presented herein, please contact the office at the phone number listed above.

The provision of CHRIS Data via this records search response does not in any way constitute public disclosure of records otherwise exempt from disclosure under the California Public Records Act or any other law, including, but not limited to, records related to archeological site information maintained by or on behalf of, or in the possession of, the State of California, Department of Parks and Recreation, State Historic Preservation Officer, Office of Historic Preservation, or the State Historical Resources Commission.

Due to processing delays and other factors, not all of the historical resource reports and resource records that have been submitted to the Office of Historic Preservation are available via this records search. Additional information may be available through the federal, state, and local agencies that produced or paid for historical resource management work in the search area. Additionally, Native American tribes have historical resource information not in the CHRIS Inventory, and you should contact the California Native American Heritage Commission for information on local/regional tribal contacts.

Should you require any additional information for the above referenced project, reference the record search number listed above when making inquiries. Requests made after initial invoicing will result in the preparation of a separate invoice.

Thank you for using the [California Historical Resources Information System](#),

Isabela Kott  
 GIS Technician/Staff Researcher

re: Vertebrate Paleontology Records Check for paleontological resources for the proposed Lakewood Boulevard and Florence Avenue Intersection Improvement Project, in the City of Downey, Los Angeles County, project area

Dear Patrick:

I have conducted a thorough search of our paleontology collection records for the locality and specimen data for the proposed Lakewood Boulevard and Florence Avenue Intersection Improvement Project, in the City of Downey, Los Angeles County, project area as outlined on the portion of the Whittier USGS topographic quadrangle map that you sent to me via e-mail on 31 October 2019. We do not have any vertebrate fossil localities that lie directly within the proposed project area, but we do have localities nearby from sedimentary deposits similar to those that may occur at depth in the proposed project area.

Surface deposits in the entire proposed project area consist of younger Quaternary Alluvium, as overbank deposits from the San Gabriel River that flows just to the east. These younger Quaternary deposits usually do not contain significant fossil vertebrates, at least in the uppermost layers, but the underlying older Quaternary deposits found at varying depths may well contain significant vertebrate fossils. Our closest vertebrate fossil locality from the older Quaternary deposits is LACM 3347, situated east-southeast of the proposed project area north of Leffingwell Road east of La Mirada Boulevard, that produced a fossil specimen of horse, *Equus*, at a depth of only two feet below the surface. Our next closest vertebrate fossil localities from these Quaternary deposits are LACM 7701-7702, northwest of the proposed project area in the

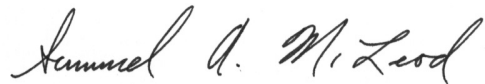

City of Commerce near the intersection of Atlantic Avenue and the Long Beach Freeway (I-710), that produced fossil specimens of threespine stickleback, *Gasterosteus aculeatus*, salamander, *Batrachoseps*, lizard, Lacertilia, snake, Colubridae, rabbit, *Sylvilagus*, pocket mouse, *Microtus*, harvest mouse, *Reithrodontomys*, and pocket gopher, *Thomomys*, at 11 to 34 feet below grade.

Surface grading or very shallow excavations in the younger Quaternary Alluvium exposed in the proposed project area are unlikely to encounter significant fossil vertebrates. Deeper excavations that extend down into older Quaternary deposits, however, may well uncover significant vertebrate fossil remains even at a relatively shallow depth. Any substantial excavations in the proposed project area, therefore, should be closely monitored to quickly and professionally collect any vertebrate fossil remains without impeding development. Sediment samples should also be collected and processed to determine the small fossil potential in the proposed project area. Any fossils recovered during mitigation should be deposited in an accredited and permanent scientific institution for the benefit of current and future generations.

This records search covers only the vertebrate paleontology records of the Natural History Museum of Los Angeles County. It is not intended to be a thorough paleontological survey of the proposed project area covering other institutional records, a literature survey, or any potential on-site survey.

Sincerely,

A handwritten signature in cursive script that reads "Samuel A. McLeod". The signature is written in black ink and is positioned above the typed name.
