Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
James Posakony

Dear Wildlife Services - California,

I am glad that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise. Too many innocent wild animals are harmed by traps, poisons and other non-specific animal control methods.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

Californians want to promote the needs and interests of wildlife over those of the agriculture industry. And in fact, it's shocking to learn that in California, more than 21,000 native animals were killed last year at the behest of the agriculture industry. This must cease! That's one reason why I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Jane Barbarow

Dear Wildlife Services - California,

Thank you that you are now considering non-lethal methods in your damage management program. I used to live in a rural region with coyotes, and rattlesnakes. I once watched a pair of coyotes set up my young dog. She and I both learned an important lesson and I installed a coyote proof fence around my house yard and outbuildings. I learned to avoid and not fear the rattlers.

Now I live in another rural area with mountain lions, bears, deer and elk. The bear introduced itself within the first month of my move in. The solution again was fencing and this time I added height and hot wires. I enjoy viewing the wildlife and they respect the hot wire.

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals. Please don't use any poisons ever; the collateral damage to other species and toxins moving up the food chain are too great.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Janet Hoover
Garden Grove, CA 92845

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Jason Nolasco

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise. Having spent and spending extensive time in the wilderness and in boundary zones, our environment and we are significantly better off with our full compliment of creatures, including predators. Better to pay for the occasional sheep or calf taken than slaughtering wild creatures and endangering/killing pet dogs, etc.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment. Past time to join the 21st Century.

Sincerely,
Jeff Depew

Subject: Prioritize Preservation of Humans Over Predatory Wildlife
Date: Friday, October 9, 2020 12:35:18 PM

Dear Wildlife Services - California,

I wish to comment on the planned environmental impact statement to analyze the "wildlife damage management" program. I ask that you use this opportunity to rededicate the program to demonstrated cost-effective methods to mitigate conflicts with predatory wildlife.

Nonlethal methods such as fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife in the short run, but as predators become accustomed to these methods, they become ineffective and are a waste to time and resources. The use of guard dogs can be effective, but these animals require care and feeding, and are at risk of injury and death at the hands of the predatory wildlife they are ostensibly there to repel. This injury and death can come from either direct attack or exposure to disease. Either route makes these domesticated animals suffer needlessly and increases the costs to maintain them as a deterrent.

The reality is that management of the overall numbers of predatory species, by euthanasia of select numbers of these species, is the most cost-effective method. It also teaches survivors to respect humans and human structures, which saves human lives. Without this, you end up with mountain bike enthusiasts and small children mauled or killed as has happened more than once in Orange County, CA.

I urge you to rededicate Wildlife Services' program to effective predatory species population management.

Sincerely,
Jeffrey Thompson

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Jennifer Cushnie

Subject: Non-Lethal Measures are the Best for Wildlife and People
Date: Friday, October 9, 2020 2:21:26 PM

Dear Wildlife Services - California,

The use of snares and poisons not only hurt wildlife but the land and the people who use the land as well. Poisons enter the soil and eventually the water table. Snares are a cruel punishment for nature's creatures and the unknowing person that may unexpectedly step into one. Using more humane methods FIRST should be the foundation of any conflicts with wildlife.

Wildlife Services preparation of an environmental impact statement to analyze the many harms done to wildlife as a result of its program is way overdue. Please reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Jessica De Ruiter

Dear Wildlife Services - California,

We know this situation is up for scrutiny because it has been acknowledged by you and by your willingness to allow public input.

Please consider wildlife in California a necessary part of our ecosystem and thus spare as much as possible to be in harmony with the land and it's people.

I live in bear country and we have found ways to discourage bear impact on our tourism and livelihoods that do not require us to put the bears down.

Please be considerate of our wildlife and it's impact on our ecosystem as well as the draw it affords tourism.

Wildlife is part of the American Dream and people want to see healthy animals roaming free when they come to visit the mountains, deserts and oceans of California.

Thanks for opening up this dialog, may it bear good fruit towards a healthy economic and ecologic opportunity for all of California.

Sincerely,
Jill Adams

Dear Wildlife Services - California,

Please consider alternatives to killing any more predatory wildlife in California. These animals are already up against incredible challenges to survive in a dwindling amount of natural land and exhausted natural resources. We don't need to unnecessarily contribute further to their demise. Please choose non-lethal options to protect wildlife and prevent unnecessary conflicts.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Jim Lieberman

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Joanne Britton

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Most of the conflicts arise where humans cross into or occupy areas that for thousands of years have been wildlife corridors. We need to allow these animals to use their traditional territory.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Jon Anderholm

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Joseph Rodriguez

Dear Wildlife Services - California,

Hooray! The Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. Please take this opportunity to reform the program to choose coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

Please replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals. Owners of animals must also be required to provide effective sheltering for their animals to prevent loss to wild predators. Prevention is also the best and least effective strategy. I have met with ranchers who employ these alternative methods effectively. They work and should be used.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment. Our wildlife is under tremendous stress from habitat loss due to fire and development. We should not add to these negative impacts by inhumane and needless killing.

Dear Wildlife Services - California,

I'm writing to ask that Wildlife Services prioritize wildlife in their work. We have decimated wildlife populations in the last 70 years, losing a huge percentage of most species, and we simply cannot afford to continue to kill animals as wantonly as we have in the past - including Wildlife Services.

There are many nonlethal ways to manage conflicts between predators and ranching (see below), and we need to use those alternatives.

In addition, we need to think about reclaiming some of the public land now used for ranching and return it to the wild.

I'm glad to know Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Subject: Poison is not the answer!
Date: Friday, October 9, 2020 11:05:15 AM

Dear Wildlife Services - California,

It always makes me cry when I read about the death of a non-target wild animal whose death was due to the consumption of poison. It is a tragedy when these animals needlessly suffer and die when there are other ways to protect livestock. By putting poison into the food chain, more animals and potentially even humans are threatened. Furthermore, putting poison into the environment is not a good idea when there are water sources nearby.

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I have been alarmed by the actions of Wildlife Services for many years and have written many letters and made many phone calls. Historically it's only response problems with wildlife been to kill, kill, kill. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Livestock operations that use them find that they work. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals. This is completely unacceptable. Livestock operations that won't use non-lethal methods need to either change or go out of business. I am sick and tired of wildlife being made to pay the price for lazy, unethical, incompetent livestock operators. I am also sick and tired of Wildlife Services seeing killing as its only response.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures, is ethical and recognizes the ecological value of wildlife and the need for humane treatment. I bitterly resent tax payer dollars being used for the unethical killing of wildlife because Wildlife Services is too lazy to do anything else or puts the needs and wishes of unethical, incompetent livestock operations over the desire of a majority of the public that wildlife be protected not massacred. I look forward to a swift change in the approach that Wildlife Services takes toward wildlife. It is well beyond time.

Sincerely,
Karen Jacques

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

I have personally worked on a cattle ranch up in the Colorado Rockies (in my youth!) and can attest to the efficacy of non-lethal management tools. Surely the money spent in dangerous and indiscriminate poisons, traps, etc. could be put to use in educating ranchers and general public as to hazing, lights & noise and other non-lethal tools; as a bonus, their own dogs, children and the non-predator wildlife surrounding them will not mistakenly suffer from indiscriminating consequences.

Sincerely,
Kathleen Gray

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Kathy Olavarri

Dear Wildlife Services - California,

I am very concerned about my tax money being spent to needlessly murder wildlife which is iconic to the West. It seems to me like willful cruelty for its own sake, especially when no lethal deterrents have been proven to work.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

I rely on coyotes, bobcats, snakes and raptors to help control the rodents on my rural property. These animals are a precious resource and should be treated with the utmost respect. As many studies show, killing off established residents, coyotes, cougars, wolves, etc., usually bring in more of the species to fill the vacuum. Non-lethal deterrents ultimately is a wiser economic choice.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Kelly Frazier

Dear Wildlife Services - California,

I am thrilled (and relieved!) that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. These practices are used across the world. The U.S. needs to catch up with the times and update our practices. We should be a leader in this space!

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment. Our predators (and all creatures) are critical links in healthy ecosystems. With threats due to climate change and habitat loss, we should be doing our very best to protect at risk species.

I look forward to hearing about the new practices that come out of the assessment and hope to see major changes down the pipeline.

Thank you for reading my letter and for considering these important changes.

Sincerely,
Kelsey Jessup

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Kevin Boner

Subject: So called Wildlife Services must work for coexistence with wildlife as the highest priority in California and everywhere
Date: Friday, October 9, 2020 7:08:00 AM

Dear Wildlife Services - California,

I ask that you use this opportunity to reform the "wildlife damage management" program to promote coexistence with wildlife when conflicts arise.

1. Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.
2. What is the big drive to open more wild lands to cattle? Why is it cattle over wild animals? The writing is on the wall that the big ag and big cattle practices of the last 60 years are part of the reason we have global warming. The garden of Eden we once had is gone but it's those very ecosystems of animals, plants and trees absorb carbon and cool our earth. Let the wild places be wild.
3. The cattle no longer needs to be on our public wild spaces. Bring the cattle back to the farms where they belong on the plots of land that have fresh cover crop growing. Cattle must be rotated from one fresh cover crop plot to the next while planting goes into the plot that they have just eaten.
4. Lets start living with the life on our planet, instead of killing it and stamping it out. We are going to die ourselves if we do not find a way to preserve our biodiversity and drawdown carbon back into the soil. I urge you to replace Wildlife Services' outdated programs with nonlethal measures that recognize the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

We are all on this planet together. Wild life has just as much right to live on this earth as we humans. Personally they have more right because they are not causing the problems we humans are to our earth. As the human species we should use our intelligence to coexist. Quit killing off everything that does not comply. We are the ones out of compliance, we are the invasive species. I appreciate your time.

Respectfully
Kimberly Ward

Sincerely,
Kimberly Ward

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Kristina Wolf

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Laura Collins

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Laurence Laverty

Subject: We Can Coexistence With Wildlife!!
Date: Friday, October 9, 2020 9:36:36 AM

Dear Wildlife Services - California,

I am thrilled to know that Wildlife Services is preparing an environmental impact statement, analyzing the "wildlife damage management" program! I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

As California becomes more crowded and wildlife is stressed by climate change, it is important to support it rather than eliminate it. Nonlethal methods can be very effective in lessening conflicts between livestock and wildlife but they are little used. And by the way, most livestock producers are already subsidized by the State. Shouldn't the taxpayer have a say in valuing livestock vs. wildlife? In my mind they should be at least equal.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment. Thank you for your time and consideration.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Leah Shelleda

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Leslie Sayre

Dear Wildlife Services - California,

The horrible impacts of "Wildlife Services," one of the greatest misnomers known to mankind, are legion in Mendocino County. The former "officer" is now hired privately by ranchers to continue his reign of terror against bears, mountain lions, and coyotes. His traps as a Wildlife Service officer caught dogs, cats, and livestock in addition to native animals.

Please use best practices, not cruelty, in managing conflicts with animals. Many times these conflicts arise from human idiocy, such as leaving garbage strewn about or chickens in slap-hazard pens. Education, not eradication!

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Linnea Due

Dear Wildlife Services - California,

Nature manages itself, nothing gets too far ahead before the built in balancing mechanisms take effect, keeping healthy populations of all flora and fauna. If there is imbalance it is simply because human impact made it happen, and “culling” is never the answer. That only creates more imbalance, more problems, more misguided attempts to “manage” nature. Non-lethal measures should always be employed, comprehensively and earnestly, before considering anything else.

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Subject: Realign wildlife management methods for better outcomes
Date: Friday, October 9, 2020 10:45:52 AM

Dear Wildlife Services - California,

Thank you to Wildlife Services for taking your role and mission and better aligning it with proven and common sense methods that prioritize *coexistence* with wildlife, if or when conflicts arise.

By preparing the environmental impact statement for the wildlife damage management program, there will be clear evidence that the current failure to first deploy nonlethal methods (such as guard dogs, fencing and scare tactics like flashing lights, loud noises and Mylar ribbons attached to fences) is resulting in unnecessarily killing coyotes and other native animals.

Results from the EIS will be essential to getting the importance of valuing wildlife and the stewardship role of Wildlife Services back on track in this regard: to insure both the need for policy to accept and enhance our mutual need for coexistence, showing respect and acknowledgment that wildlife is deserving of humane treatment via non lethal means of management.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Lisa Salazar

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Lori Quigley

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

I live in the foothills of the southern Sierra Nevada, and appreciate the balance of nature when my neighbors refrain from shooting coyotes, They are the predator for ground squirrels, which can take over without coyotes. I hope you will come to understand the ecological niche that our wildlife lives within, and treat them humanely.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Lynette Ridder

Dear Wildlife Services - California,

I have been sickened over the years by the wanton disregard for life shown by so-called "wildlife services" who seem to act in behalf of Big Ag treating our wild animals as if they were so much trash rather than living beings with as much right to life as the rest of us.

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Macrina Rodriguez

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

I understand the need to protect livestock. Truly, I do. But to anyone who thinks the easiest solution to that is killing wildlife, I urge them to simply go outside, look up at the stars, and realize how small we are on this planet. Our animal counterparts will, and should, ultimately outlive us, and it's simply inhumane how we treat them as less-than and prioritize our own needs over those of the planet's. There is a way for us all to coexist peacefully if we just put in the effort.

Dear Wildlife Services - California,

Reform your "wildlife damage management" program!

Employ non-lethal management methods.

Stop cruel and unnecessary snaring and poisons.

Replace these barbaric practices with use of guard dogs, fencing and scare tactics, for example.

PROTECT our native wild animals and support a balanced, healthy eco-system.

Sincerely,

Margaret Spaulding

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Marianna Mejia Contact

Dear Wildlife Services - California,

As a long-time volunteer at a wildlife rehabilitation hospital in Marin County, CA. I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

At our wildlife hospital many of the animals were brought in due to injuries from easily preventable situations. Educating the public was one of the most important roles we played. This holds true outside of urban neighborhoods as well.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Marianna Riser

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Marsha Vomastic

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Mary Brooks

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise. It is so important to learn to live with wildlife--we all have been born together on the earth and were meant to be here.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Serve wildlife as your agency was created to do.

If we don't find ways to coexist with the other wonderful creatures here on earth, we will certainly go further and further in the direction of our own extinction. Our arrogance is certainly our weakness that may cause us to foolishly disrupt all the safeguards that were created by Someone. This isn't actually our planet to use however we wish.

How we treat all life forms reflects how we treat each other. Look around. It is abysmal what mayhem we are wreaking.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Meghan Ruggieri

There are many deterrents I have employed through a long life of co-habiting with wildlife. We constantly interfere with the natural systems that in fact make life for us work well. As someone has said, science works, it's just hard to get everyone to agree on how to employ it's knowledge.

Dear Wildlife Services - California,

While I'm pleased that Wildlife Services is preparing an environmental impact statement to analyze the effects of its "wildlife damage management" program, now is the time to reform the program to emphasize coexistence with wildlife instead of warring against them.

Nonlethal methods such as guard dogs, fencing and scare tactics have proven effective at preventing conflicts between livestock and wildlife. Yet these common-sense methods are rarely tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the place of all wildlife in healthy ecosystems.

Sincerely,
Michael Lewis

Dear Wildlife Services - California,

As you know scientifically, predator populations remain dependent upon that of prey, falling in response to prey reductions.

Thus, it is not in the least necessary to lethally manage native predators.

Previous WS policies have in fact resulted in erratically fluctuating behavioral changes, as well as further depopulating vitally necessary predator populations, locally extirpating, genetically impoverishment, and causing higher likelihood of extinctions of apex predators.

This has twofold problematic effects:

1. Predators become maladapted by WS actions, behaviorally, while prey populations, always far higher, explode into ecologically destructive levels and disease incubation reservoirs.
2. Due to predator natural adaptation, grave loss of their checks on diseased prey populations occurs, extending into significant time periods when these normal and natural constraints cannot be restored, or healthy prey individuals cannot be selected for - diseased and dysfunctional prey genetically and behaviorally damage the living system for longer, and uncontrollable, periods.

It's essential, then, that WS discontinue all lethal management, as the vast gram it imposes lasts far beyond any temporary relief it may momentarily effect.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and predators.

These proven-effective methods are most often not implemented before attempting to eradicate coyotes, gray wolves, who, incidentally, were themselves a strong check on coyote populations.

Many livestock deaths are still falsely attributed through colloquial rumors, to predators, when in fact they result from poor and absent husbandry, along with concomitant purposeful attempt at fraud.

I urge you to replace Wildlife Services does have monitoring skills useful for ESA evaluation, and since our public lands tend to be insufficiently protected from poachers and human violations threatening native wildlife populations, the public would be far better served by WS investigative skill, than we are at present.

Due to the vast, likely accelerating losses of ALL wildlife in the past half century, a clear change of WS mandate is in order one which protects wildlife and natural systems, in the face of excess mistaken modification and over exploitation numerically shown to be diminishing our priceless public heritage.

Thank you for considering this loss and actively changing WS mandate.

Sincerely,
Michael McLaughlin

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Michelle Alvarado

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Mil Drysdale

Dear Wildlife Services - California,

Please live up to the name of the agency, "wild life SERVICES", by developing a program that allows coexistence with wildlife, not death because they get in the way.

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Nancy Haiston

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Nannette Leonard
Rohnert Park, CA 94928

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Noah Haydon

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

In nature, the wildlife population balances itself. It is development of the land by humans that upsets this natural balance.

But instead of killing animals that might harm livestock or fowl, we should employ humane methods to manage these populations.

Why is there no “trap, neuter and return” program to manage population? Why do we resort to cruelty when more humane intervention is possible.

Wildlife Services should look upon the environmental impact investigation as an opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Paul Hunrichs

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Pela Tomasello

Dear Wildlife Services - California,

I'm pleased the US Wildlife Services is preparing an environmental impact statement to analyze the harms caused by the current "Wildlife Damage Management" program.

Please use this opportunity to reform the program to prioritize the matter of "coexistence with wildlife" when conflicts arise.

I urge you to replace the Wildlife Services' current program with one that:

- 1.) Provides reasonable consideration to ecological value of wildlife and the need for humane treatment and respect
- 2.) And as such, prioritizes the use of "nonlethal measures" to manage issues with wildlife.

The use of "nonlethal methods" should have top priority in any course of action by stakeholders. This seems a reasonable plan to follow before the use of more extreme tactics are resorted to.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
phyllis faber

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Rhianna Lynch

Dear Wildlife Services - California,

This is a great opportunity. Now that Wildlife Services is preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program, you can finally reform the program. Instead of damaging our wilderness, you can begin to coexist with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

Please - before more disastrous damage occurs - replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,

Subject: Please : Prioritize Coexistence With Wildlife
Date: Friday, October 9, 2020 6:45:58 AM

Dear Wildlife Services - California,

Respectfully.

As a Rural American, it has come to my attention that OUR nation's taxpayer-funded public servant employees of Wildlife Services is preparing an environmental impact statement. It will analyze the harmful counterproductive measures within its wildlife damage management program.

Please take this opportunity to:

- . reform the current program
- . prioritize coexistence with wildlife when conflicts arise

As you are aware, non-lethal methods have been proven effective in preventing conflicts between livestock and wildlife. Methods include:

- . guard dogs
- . fencing
- . scare tactics
- . flashing lights
- . loud noises
- . ribbons attached to fences

That said, simple is better.

Too often these common-sense methods are ignored, or not implemented—before choosing to kill coyotes and other native animals.

As one of multiple millions of Rural Americans and one of your 330,000,000 taxpaying, voting employers—please:

- . amend and-or replace Wildlife Services' outdated program
- . create one that relies on non-lethal measures
- . recognize the ecological value of wildlife
- . recognize the need for humane treatment

With appreciation of your time and thoughtful consideration of this concern.

Every good intention.

Sincerely,
Rita A

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.
