Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Robin Karp

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Ron Riskin

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise. Please adopt nonlethal methods, Considering all the devastating changes happening to our wild lands and wildlife, we need to help the wildlife we have now.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
roy rosenblatt

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Sally Hobson

Dear Wildlife Services - California,

I'm tremendously relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you please use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Every animal is a living being and has a right to exist. Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. It is essential that we, as compassionate human beings, work with these common-sense methods before killing coyotes and other native animals.

I very sincerely urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of every type of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Scott Dygert

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Sharon Chang

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Some of the ranchers in my county of Mendocino have been using nonlethal methods at preventing conflicts between livestock and wildlife. They work far better than lethal methods that harm non-targeted species. Plus, eliminating predators has far reaching negative effects on the environment, and it's biodiversity in plants and wildlife.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Shawnee McLemore

Dear Wildlife Services - California,

Wildlife Services is in place to serve wildlife, so it is good that Wildlife Services is preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. As this is done, it is critical that the program is reformed to prioritize the protection to wildlife and coexistence with wildlife when conflicts arise. It is our responsibility as the dominate species on the planet to protect and take care of wildlife, which is completely vulnerable to the many ways that people harm wildlife.

For example, nonlethal methods such as fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Thank you.

Sincerely,
Shayna Gardiner

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Shirley Cogdill

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Stan Fitzgerald

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
steve keena

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Susan Brooks

Dear Wildlife Services - California,

I want to thank Wildlife Services for finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise. It's known that predators like wolves, coyotes are critical in keeping balance in the ecosystem so grazing animals don't undermine the health of grasslands and forests and contribute to desertification and global warming.

Alliances with and respect of ranchers and agricultural have found non lethal methods such as guard dogs that have proven effective at preventing conflicts between livestock and wildlife. Let's continue to build those alliances and all will benefit. Both wildlife and agricultural can thrive without killing wildlife. I encourage you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Susan Powers

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Suzanne Wood

Dear Wildlife Services - California,

Predators and other species serve many significant functions in a thriving environment of which commercial livestock operations are small parts. To allow arbitrary killing of native animals by state or private interests reporting loss does little to preserve invaluable natural resources but harms the general environment. Use your powers as a true 'Wildlife Service' to stop decimation of endangered native animals and devise a self funding insurance program or other comparable steps for loss of commercial or other resources that would eliminate killing apex predators, native animals and the invaluable contributions they provide in complex biosomes while improving wildlife conservation programs

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Taochiung Chi

Dear Wildlife Services - California,

I studied California wildlife services and the impact on wildlife as a graduate student. I found that many if not most depredation problems were the result of human irresponsibility. Most of the problems could be addressed by proactive human behavior. It was unfortunate that many wildlife individuals lost their lives due to this irresponsible behavior and human encroachment into their habitat.

I'm relieved that Wildlife Services is finally preparing environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Thomas Rozner

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Val Marshall

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Vicki Markus

Subject: wild animals support healthy ecosystems
Date: Friday, October 9, 2020 12:33:44 PM

Dear Wildlife Services - California,

As the many powers in the world commit to conserving 30% of their wildlands we go about destroying them still. The very ecosystems that we depend upon for clean air, water, and soil in turn depend on the complex webs of life that make them up. Coyotes, Foxes, Bears, Cougars, are all important players in California ecosystems and should be left un-harassed to live out their lives fulfilling their niche duties.

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment. To this point, Wildlife Services has served only the ranching and agriculture industries--as their executioner du jour. It manages only the damage it does to wildlife. It's time that the Department of Agriculture ended this program as it currently stands, got rid of the snipers, the helicopters, the poison, the traps, putting in its place humane alternatives, and putting these industries in their proper place--off public lands which belong to American citizens, not to corporate profit.

Sincerely,

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Alfredo Kuba

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Barbara Mizrahi

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Charla Miller

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Debbie Tenenbaum

Subject: Stop the Slaughter of Wildlife
Date: Saturday, October 10, 2020 4:30:39 PM

Dear Wildlife Services - California,

We are very pleased that Wildlife Services is looking in the results of past actions. We recall in the 1970's writing, trying to change course, to save animals who have done nothing wrong. Finally, we have hope.

We can do better. Non lethal methods work! We are better than what we have been doing. The world is in a terrible crisis. Continuing archaic and non effective actions seems not only wrong but wasteful of tax dollars. All those beautiful animals...just trying to live their lives...all under such great pressure, non stop for all these decades. Reading where 21,000 animals were killed in California ALONE is heart stopping!

Please stop this slaughter. We are smart enough and good enough to do better. Before we leave this Earth, it would be such a gift for us to see the killing end.

Dear Wildlife Services - California,

There is always a consequence money vs nature, greed vs generosity. In the last few decades, the world have wiped out many species and the wild land they used to roam. What is this due to? Greed. Selfishness.

Who loses out? Animals who do not have a voice, trees that are cut down. Future generations who will not see animals in their natural habitat. This has got to STOP.

I am asking that you use non-deadly methods to control wild animals. There is not reason for these animals to die, just so that big agriculture can make bigger profits?

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
H W

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
K G

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Lauren Meredith

Subject: Prioritize Stewardship & Wise Coexistence With Wildlife!
Date: Saturday, October 10, 2020 4:27:14 PM

Dear Wildlife Services - California,

We're relieved that "Wildlife Services" (a shameful name in itself, for the truth of this department's role over the past decades) is FINALLY preparing an environmental impact statement to analyze the countless harms of its "wildlife damage management" program—it's greatly overdue! We ask that you use this opportunity, to reform the program to prioritize stewardship and wise coexistence with wildlife, when conflicts arise.

Nonlethal methods such as guard dogs, proper fencing and shelters (the Sonoma County Wildlife Rescue's "Predator Exclusion Educational Program" or "P.E.E.P." could teach you lot about this!), and scare tactics—including flashing lights, loud noises and ribbons attached to fences—have proven effective at preventing conflicts between domesticated animals and wildlife. Yet, too often, these common-sense and wiser methods (that don't disrupt the ecosystems' balance), aren't even considered before killing coyotes, wolves, bears, mountain lions, foxes, bobcats, etc., and nontarget native animals. It's SHAMEFUL, especially in this day and age—there's no excuse for this!

We urge you to WISELY and RESPONSIBLY replace Wildlife Services' vastly outdated program (which should have expired decades ago!), with one that relies on responsible stewardship for wise coexistence with wildlife—nonlethal measures and recognizes the PRICELESS ecological value of ALL wildlife and their crucial roles in our ecosystems, to maintain their well-being and balance. In the very least, they deserve humane, compassionate consideration when conflicts arise (which is most often due to the irresponsibility of the owners of domesticated animals—no doubt you know this yourselves). Please contact the Sonoma County Wildlife Rescue's "Predator Exclusion Educational Program" for assistance with this new program to ensure the highest efficiency for a win-win-win (for all involved, and especially the wildlife). Thank you.

Sincerely,
Lucille and Michael

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Marina Michel

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Michelle Kosinski

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Paula Carrier

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Rosa McCann

Dear Wildlife Services - California,

The USDA should be using sound, data-driven policies to address wildlife-human conflicts, not relying on 19th century savage killing sprees that are immoral and unnecessary. The USDA's Wildlife Services should instead implement effective, ethical, non-lethal methods. That would be the right thing to do for all concerned. I do NOT want California wildlife to be murdered and to disappear from this landscape. California native wildlife BELONG in California. They have the right to exist here just as much as humans.

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Stephen DuPar

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Theresa Wong

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Barbara Anders
Watsonville, CA 95076

Subject: Win-Win & Ecologically Sane :Coexistence With Wildlife
Date: Sunday, October 11, 2020 11:56:18 AM

Dear Wildlife Services - California,

It's about time, and I am grateful that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. Let me ask you now to reform the program to prioritize coexistence with wildlife when conflicts arise. This is the only ecologically sane and win win response.

Here we are in the 21st century with our vast knowledge, experience and technology and resorting to killing off our native wildlife is inhumane, ecologically unsound, unnecessary and lethal methods must be relegated back to the more barbaric and less knowledgeable past from when they came. I live in Los Angeles, and frequently encounter coyotes, and I am grateful for their presence as they have kept the rat populations down in my neighborhood. Nature is exquisitely intelligent !

And as you know, nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. It's so easy for me to scare a coyote out of my backyard when I needed to. I just used an air horn. Gone in seconds flat! And I am disturbed that for so long these common-sense methods aren't even tried before killing coyotes and other native animals.

Please, let's create a win win for environment, wildlife and livestock by replacing Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Constance Franklin

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise. The current indiscriminate nature of the Department's methods cause many non-target animals to suffer and/or die. It is vital that the ecosystem of which we are all a part be allowed to function as an intact system that continues to benefit us all.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

Please consider, for instance, how we generally rid ourselves of unwanted politicians and other such vermin. We just put up yard signs, send some mailers, and vote them out of office. Non-violent methods are best. Snares, poisoned letters, or tar-and-feathers are not the enlightened way to do it any more, as tempting as they may seem.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Lysbeth Gordon

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Sandra Butler

Dear Wildlife Services - California,

Thank you, it is about time! I grew up in the mountains of southern California and now live in a central coastal California rural area. Our families have always lived at peace with our wildlife neighbors. They and their families were here FIRST and we have no right to kill or displace them.

Therefore I'm greatly relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Araceli Aviles

Where nonlethal measures haven't worked - and I insist they be **legitimately** tried first, no excuses, losses to wildlife are **expected overhead** for ranchers choosing to do business in California - methods that cause unnecessary suffering such as snares and poison be dropped and oversight of trap placement and monitoring be stringent. There is NO excuse for torturing an animal that has become "inconvenient".

Dear Wildlife Services - California,

It makes me sad to know that so many wild creatures are killed in California. It's sick, and I don't know how the killers who work for your agency can live with themselves. So much slaughter.

Please replace Wildlife Services' 18th century program with one that uses nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Please prioritize coexistence with wildlife when conflicts arise by using nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences. These methods have proven effective at preventing conflicts between livestock and wildlife.

For other ideas, see the Ruaha Carnivore Project facebook page (<https://www.facebook.com/ruahacarnivoreproject>) and see the Center for Conservation Peacebuilding.

"Hyaenas are one of the biggest nuisances for pastoralists in our area and account for the vast majority of depredations in our area. Because of this we are keen to increase tolerance and our Community Camera Trap programme does just that linking presence of wildlife to tangible benefits."

Sincerely,
Joanne Vinton

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Marlene Testaguzza

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Teresa Zollars

Re: Proposed Wildlife Damage Management Program

Dear CaliforniaWDM,

This letter is written on behalf of the Rincon Band of Luiseño Indians (“Rincon Band” or “Band”), a federally recognized Indian Tribe and sovereign government. The Rincon Band has received the notification of the California Wildlife Damage Management joint environmental impact report and environmental impact statement (EIR/EIS). We kindly ask to be notified and involved in the entire CEQA environmental review process for the entirety of the project’s duration. Please also include the Band on all distribution lists for environmental document reviews, consultations, circulation of public documents, and notices for public hearings and scheduled approvals.

The Rincon Band requests consultation on the above mentioned project to learn more about any potential impacts to cultural resources. If you have additional questions or would like to schedule a meeting, please do not hesitate to contact our office at your convenience at (760) 297-2635 or via electronic mail at cmadrigal@rincon-nsn.gov. We look forward to working together to protect and preserve our cultural assets.

Sincerely,

Cheryl Madrigal

[EIR EIS Public Comment.pdf](#)

Providing a “*comprehensive environmental analysis of current wildlife damage management activities undertaken across California*” is an ambitious goal, but one that USDA and CDFA with their combined resources and experience can most likely achieve.

A more daunting task though is to consider the impact of these actions on every species across shifting conditions in the *future*. Obviously drastic changes in climate, water availability, and forage will alter the resilience of any species across time. In addition there are certain species whose stable population overall in the state is more precarious or non existent in certain specific regions.

No where is this more true than with the beaver.

Research continues to show us that beaver play a significant role in water storage, fire resilience and overall biodiversity. It follows that removal of beaver will have a differing impact depending on the environmental conditions present at a particular time. For example removing beaver during severe drought is more likely to significantly impact water availability for other species, as well as for groundwater and human consumption. Alternately, removal of beaver in an area in the process of recovering from a significant wildfire event will slow vegetation renewal, which will in turn slow wildlife recovery by making less forage and cover available for returning species.

In addition, removal of beaver in an area where their population is more tenuous prevents their foothold in that area and subsequently removes the ecosystem services they would have provided to other species. CDFW no longer monitors beaver population so it has become more difficult to see where the species is thriving and where recovery is more tenuous. However, a look at past depredation permits across the state shows that there are certain areas where the species is seen very infrequently or not at all.

The attached chart outlines this data based on the 7 years of PRA depredation permits reviewed by Worth A Dam. Looking at the chart it is clear, for example, that removing beaver in Marin or Riverside counties (places where they are rarely seen) is likely to have a very different impact on both the future population, and all the wildlife would benefit from their ecosystem services. While removing beaver in Placer or Fresno where they are more common has arguably less impact..

It is therefore recommended that USDA/CDFA adopt a policy of reassessing their EIR during critical impact periods for particular regions. A Critical Incident EIR should be required in areas affected by extreme drought, wildfire or in an area where the population is not robust. This will allow for a more thorough understanding of wildlife impact and help avert future litigation around these issues down the road.

Worth A Dam will resubmit this comment with references for your convenience before the deadline, but we wanted to make sure you had our initial thoughts in time for your first meeting tonight. We appreciate your openness in this process and your willingness to accept public input.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
JAMES FEICHTL

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Patrick Dorsey

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Kristen Beck

Subject: EIR/EIS changes
Date: Wednesday, October 14, 2020 3:01:31 PM

I oppose the current wildlife program in California as it has killed over 25,000 animals and birds using traps, snares, and poisons that are indiscriminate and harm non-target animals and all animals in a cruel way.

Hopefully this process results in changes that will require exhaustion of non-lethal methods before lethal methods can be used and restricts such lethal methods to private lands only.

I hope EIR/EIS will rely on hard science re the ecological consequences of predator control and will take into account the beneficial role that predators play in the eco-system.

Thank-you

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Steven Clifford

I am looking at the EIR/EIS fact sheet and I see on the bottom of page 1 there is a website link: www.californiaWDM.org. The sheet says that on this website there is information to learn about the wildlife management activities currently performed in California.

I do not see any list of current activities on that website that lists out the details e.g. how animals are removed/controlled and where/why that decision is made. Is there a link or document to this information. Thanks in advance for your time.

Best,
Caitlyn

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Carol Blaney

Subject: Public Comment for Oct 13th meeting

Providing a “*comprehensive environmental analysis of current wildlife damage management activities undertaken across California*” is an ambitious goal, but one that USDA and CDFA with their combined resources and experience can most likely achieve.

A more daunting task though is to consider the impact of these actions on every species across shifting conditions in the *future*. Obviously drastic changes in climate, water availability, and forage will alter the resilience of any species across time. In addition there are certain species whose stable population overall in the state is more precarious or non-existent in certain specific regions.

No where is this more true than with the beaver.

Research continues to show us that beaver play a significant role in water storage, fire resilience and overall biodiversity. It follows that removal of beaver will have a differing impact depending on the environmental conditions present at a particular time. For example removing beaver during severe drought is more likely to significantly impact water availability for other species, as well as for groundwater and human consumption. Alternately, removal of beaver in an area in the process of recovering from a significant wildfire event will slow vegetation renewal, which will in turn slow wildlife recovery by making less forage and cover available for returning species.

In addition, removal of beaver in an area where their population is more tenuous prevents their foothold in that area and subsequently removes the ecosystem services they would have provided to other species. CDFW no longer monitors beaver population so it has become more difficult to see where the species is thriving and where recovery is more tenuous. However, a look at past depredation permits across the state shows that there are certain areas where the species is seen very infrequently or not at all.

The attached chart outlines this data based on the 7 years of PRA depredation permits reviewed by Worth A Dam. Looking at the chart it is clear, for example, that removing beaver in Marin or Riverside counties (places where they are rarely seen) is likely to have a very different impact on both the future population, and all the

wildlife would benefit from their ecosystem services. While removing beaver in Placer or Fresno where they are more common has arguably less impact..

It is therefore recommended that USDA/CDFG adopt a policy of reassessing their EIR during critical impact periods for particular regions. A Critical Incident EIR should be required in areas affected by extreme drought, wildfire or in an area where the population is not robust. This will allow for a more thorough understanding of wildlife impact and help avert future litigation around these issues down the road.

Worth A Dam will resubmit this comment with references for your convenience before the deadline, but we wanted to make sure you had our initial thoughts in time for your first meeting tonight. We appreciate your openness in this process and your willingness to accept public input.

Comments submitted for inclusion into the record,

Providing a “*comprehensive environmental analysis of current wildlife damage management activities undertaken across California*” is an ambitious goal, but one that USDA and CDFA with their combined resources and experience can most likely achieve.

A more daunting task though is to consider the impact of these actions on every species across shifting conditions in the *future*. Obviously drastic changes in climate, water availability, and forage will alter the resilience of any species across time. In addition there are certain species whose population, while stable overall in the state, is more precarious or non existent in certain specific regions.

No where is this more true than with the beaver.

Research continues to show us that beaver play a significant role in water storage¹, fire resilience² and overall biodiversity³. It follows that removal of beaver will have a differing impact depending on the environmental conditions present at a particular time. For example removing beaver during severe drought is more likely to significantly impact water availability for other species, as well as for groundwater and human consumption⁴. Alternately, removal of beaver in an area in the process of recovering from a significant wildfire event will slow vegetation renewal, which will in turn slow wildlife recovery by making less forage and cover available for returning species⁵.

In addition, removal of beaver in an area where their population is more tenuous prevents their foothold in that area and subsequently removes the ecosystem services they would have provided to other species⁶. CDFW no longer monitors beaver population so it has become more difficult to see where the species is thriving and where recovery is more tenuous. However, a look at past depredation permits across the state shows that there are certain areas where the species is seen very infrequently or not at all⁷.

The attached chart outlines this data based on the 7 years of PRA depredation permits reviewed by Worth A Dam. Looking at the chart it is clear, for example, that removing beaver in Marin or Riverside counties (places where they are rarely seen) is likely to have a very different impact on both the future population, and all the wildlife would

benefit from their ecosystem services. While removing beaver in Placer or Fresno where they are more common has arguably less impact..

It is therefore recommended that USDA/CDFA adopt a policy of reassessing their EIR during critical impact periods for particular regions. A Critical Incident EIR should be required in areas affected by extreme drought, wildfire or in an area where the population is not robust. This will allow for a more thorough understanding of wildlife impact and help avert future litigation around these issues down the road.

Worth A Dam will resubmit this comment with references for your convenience before the deadline, but we wanted to make sure you had our initial thoughts in time for your first meeting tonight. We appreciate your openness in this process and your willingness to accept public input.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
andres suarez

Dear Wildlife Services - California,

Please find better ways to coexist with wildlife. We are lucky in California to have the wildlife we still have. Species extinction is happening at a drastic rate and it's important to figure out how to coexist rather than drive species to extinction. Not to mention, it is also inhumane and cruel. Please find another way.

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Donna Kuehn

Tribal Historic & Cultural Preservation Department

Project: AB52 Consultation Proposed Wildlife Program

Dear California Department of Food and Agriculture,

On behalf of the Tribal Historic and Cultural Preservation (THCP) Department of the Fernandeño Tataviam Band of Mission Indians (FTBMI), thank you for the formal notification and opportunity to participate in the consultation for the Proposed Damage Management Program. This message constitutes a formal request for tribal consultation under the provisions of the California Environmental Quality Act (CEQA) (as amended, 2015) and CA Public Resources Code section 21080.3.1. The THCP Department would like to schedule a call to discuss the Project, incorporation of Tribal perspectives into CEQA/environmental documents, and management protocols that are inclusive of Tribes. Can you provide me with your availability for November to schedule a meeting? I appreciate your time and look forward to discussing this project with you.

Respectfully,

Jairo F. Avila, M.A., RPA.

Re: Scoping Comments for Wildlife Damage Management in California

Dear Mr. Orthmeyer:

On behalf of the Center for Biological Diversity, the Humane Society of the United States, International Fund for Animal Welfare, Western Watersheds Project, Predator Defense and Animal Welfare Institute, I write to provide comments on the scope of the alternatives and environmental issues to be considered in the Environmental Impact Report/Environmental Impact Statement (EIR/EIS) for wildlife damage management in California.

These comments aim to help the California Department of Food and Agriculture and APHIS-Wildlife Services comply with the National Environmental Policy Act ("NEPA"), 42 U.S.C. § 4332(2)(C), and the California Environmental Quality Act ("CEQA"), Public Resources Code 21000-21189.

The Center for Biological Diversity, along with several partners, brought the litigation that led to the court order requiring that APHIS-Wildlife Services prepare - by the end of 2023 - an EIS for its wildlife damage management program in California. We appreciate the opportunity to provide input on this environmental analysis.

Scope of Alternatives

An agency's duty to consider alternatives to the proposed action has been described as the "heart" of the NEPA process. 40 C.F.R. § 1502.14. All reasonable alternatives must receive a "rigorous exploration and objective evaluation . . . particularly those that might enhance environmental quality or avoid some or all of the adverse environmental effects." 40 C.F.R. §

1500.8(a)(4). The discussion of alternatives is intended to provide a "clear basis for choice among options by the decisionmaker and the public." 40 C.F.R. § 1502.14. Federal courts have consistently held that an agency's failure to consider a reasonable alternative is fatal to an agency's NEPA analysis. *See, e.g., Muckleshoot Indian Tribe v. U.S. Forest Serv.*, 177 F.3d 800, 814 (9th Cir. 1999) ("A viable but unexamined alternative renders [the] environmental impact statement inadequate.").

Here, Wildlife Services proposes to consider at least four alternatives: 1) An alternative that continues its current wildlife damage and conflict management activities (the no action alternative); 2) Alternatives with restrictions on integrated wildlife damage management to reduce environmental impacts (e.g., no use of toxicants); 3) Alternatives that require varying levels of nonlethal wildlife damage management; and 4) No WS-California involvement alternative.

I ask that you also consider alternatives that would restrict **where** Wildlife Services can perform lethal wildlife damage management. Conflicts between wildlife watchers, hikers, and wildlife advocates are most likely to occur where lethal methods occur on public lands. Public lands should serve as safe havens for wildlife and killing wildlife reduces opportunities to view wildlife. Moreover, many hikers and others would be disturbed by viewing an animal caught in a trap, and traps put companion animals and small children at risk of injury. As such, I request an alternative that limits lethal wildlife damage management to private lands. Restricting lethal control within areas occupied by rare or endangered wildlife (like mountain lions or wolves) could be another aspect of a reasonable alternative. In addition, a reasonable alternative could prohibit wildlife damage management on wilderness and wilderness study areas, as traps and gunshots are a sign of people that disturbs the peacefulness of such pristine areas.

Regarding the alternatives that restrict types of methods, I ask that you analyze an alternative that bans the use of the most inhumane, indiscriminate, and controversial methods of killing wildlife. These include snares (foot/leg, neck), foothold traps, body-gripping traps, and poisons. These methods are the most likely to injure or kill nontarget animals, such as endangered wildlife and companion animals, and they also can cause terrible suffering. Another reasonable alternative would be one that limits the suffering of wildlife in such traps by requiring daily trap checks or use of trap alarms.

I commend your inclusion of alternatives that require varying levels of nonlethal wildlife damage management prior to implementing lethal methods. Numerous studies show the effectiveness of nonlethal methods at preventing and addressing most conflicts with wildlife. Moreover, nonlethal methods do not implicate the humaneness and ethical problems inherent in killing California's wildlife. Nonlethal methods have broad public support and can even be cheaper over time. As such, I ask that one alternative provide for exclusive use of nonlethal methods.

New Information Relevant to Wildlife Damage Management

Numerous studies have been published that would help inform Wildlife Services' environmental analysis of its wildlife damage management program in California. The studies

below discuss the ecosystem impacts of predator control and the ecological importance of beavers. They demonstrate the availability of nonlethal alternatives and the ineffectiveness of some lethal methods. New information regarding the humaneness of control methods and changing public attitudes have also emerged. And several comprehensive criticisms of Wildlife Services have been published that should be considered in the EIR/EIS.

The citations for these articles and reports are included below, and I have mailed a USB with electronic copies as well.

Re: Scoping Comments for Wildlife Damage Management in California

Dear Mr. Orthmeyer:

On behalf of the Center for Biological Diversity, the Humane Society of the United States, International Fund for Animal Welfare, Western Watersheds Project, Predator Defense and Animal Welfare Institute, I write to provide comments on the scope of the alternatives and environmental issues to be considered in the Environmental Impact Report/Environmental Impact Statement (EIR/EIS) for wildlife damage management in California.

These comments aim to help the California Department of Food and Agriculture and APHIS-Wildlife Services comply with the National Environmental Policy Act ("NEPA"), 42 U.S.C. § 4332(2)(C), and the California Environmental Quality Act ("CEQA"), Public Resources Code 21000-21189.

The Center for Biological Diversity, along with several partners, brought the litigation that led to the court order requiring that APHIS-Wildlife Services prepare - by the end of 2023 - an EIS for its wildlife damage management program in California. We appreciate the opportunity to provide input on this environmental analysis.

Scope of Alternatives

An agency's duty to consider alternatives to the proposed action has been described as the "heart" of the NEPA process. 40 C.F.R. § 1502.14. All reasonable alternatives must receive a "rigorous exploration and objective evaluation . . . particularly those that might enhance environmental quality or avoid some or all of the adverse environmental effects." 40 C.F.R. §

1500.8(a)(4). The discussion of alternatives is intended to provide a "clear basis for choice among options by the decisionmaker and the public." 40 C.F.R. § 1502.14. Federal courts have consistently held that an agency's failure to consider a reasonable alternative is fatal to an agency's NEPA analysis. *See, e.g., Muckleshoot Indian Tribe v. U.S. Forest Serv.*, 177 F.3d 800, 814 (9th Cir. 1999) ("A viable but unexamined alternative renders [the] environmental impact statement inadequate.").

Here, Wildlife Services proposes to consider at least four alternatives: 1) An alternative that continues its current wildlife damage and conflict management activities (the no action alternative); 2) Alternatives with restrictions on integrated wildlife damage management to reduce environmental impacts (e.g., no use of toxicants); 3) Alternatives that require varying levels of nonlethal wildlife damage management; and 4) No WS-California involvement alternative.

I ask that you also consider alternatives that would restrict **where** Wildlife Services can perform lethal wildlife damage management. Conflicts between wildlife watchers, hikers, and wildlife advocates are most likely to occur where lethal methods occur on public lands. Public lands should serve as safe havens for wildlife and killing wildlife reduces opportunities to view wildlife. Moreover, many hikers and others would be disturbed by viewing an animal caught in a trap, and traps put companion animals and small children at risk of injury. As such, I request an alternative that limits lethal wildlife damage management to private lands. Restricting lethal control within areas occupied by rare or endangered wildlife (like mountain lions or wolves) could be another aspect of a reasonable alternative. In addition, a reasonable alternative could prohibit wildlife damage management on wilderness and wilderness study areas, as traps and gunshots are a sign of people that disturbs the peacefulness of such pristine areas.

Regarding the alternatives that restrict types of methods, I ask that you analyze an alternative that bans the use of the most inhumane, indiscriminate, and controversial methods of killing wildlife. These include snares (foot/leg, neck), foothold traps, body-gripping traps, and poisons. These methods are the most likely to injure or kill nontarget animals, such as endangered wildlife and companion animals, and they also can cause terrible suffering. Another reasonable alternative would be one that limits the suffering of wildlife in such traps by requiring daily trap checks or use of trap alarms.

I commend your inclusion of alternatives that require varying levels of nonlethal wildlife damage management prior to implementing lethal methods. Numerous studies show the effectiveness of nonlethal methods at preventing and addressing most conflicts with wildlife. Moreover, nonlethal methods do not implicate the humaneness and ethical problems inherent in killing California's wildlife. Nonlethal methods have broad public support and can even be cheaper over time. As such, I ask that one alternative provide for exclusive use of nonlethal methods.

New Information Relevant to Wildlife Damage Management

Numerous studies have been published that would help inform Wildlife Services' environmental analysis of its wildlife damage management program in California. The studies

below discuss the ecosystem impacts of predator control and the ecological importance of beavers. They demonstrate the availability of nonlethal alternatives and the ineffectiveness of some lethal methods. New information regarding the humaneness of control methods and changing public attitudes have also emerged. And several comprehensive criticisms of Wildlife Services have been published that should be considered in the EIR/EIS.

The citations for these articles and reports are included below, and I have mailed a USB with electronic copies as well.

Comparing costs and benefits of lethal and non-lethal human-wildlife conflict mitigation on livestock farms. *Oryx* 49: 687-695 (finding that non-lethal methods of human-wildlife conflict mitigation can reduce depredation and can be economically advantageous compared to lethal methods of predator control).

Smith, L. 2014. Wolf-livestock nonlethal conflict avoidance: A review of the literature. A Project of Western Wildlife Outreach, *available at* https://wdfw.wa.gov/sites/default/files/2019-02/wolf_livestock_conflict_avoidance_literature_review_11_2014_final_submitted_version.pdf (providing a review of the literature on nonlethal wolf-livestock conflict avoidance).

Humaneness of Wildlife Damage Management Methods

Andreasen, A.M., et al. 2018. Survival of Cougars Caught in Non-Target Foothold Traps and Snares. *The Journal of Wildlife Management* 82(5): 906-917, *available at* https://www.researchgate.net/publication/324001913_Survival_of_cougars_caught_in_non-target_foothold_traps_and_snares_Trapping_and_Cougar_Survival (results suggesting that capture in non-target foothold traps decreases survival of adult female cougars directly by causing injuries that eventually result in mortality, and indirectly by increasing susceptibility to other forms of mortality).

Iossa, G., et al. 2007. Mammal trapping: a review of animal welfare standards of killing and restraining traps. *Animal Welfare* 16: 335-352, *available at* http://www.wolfmatters.org/uploads/2/4/0/2/24020064/mammal_trapping-1.pdf (concluding that that many of the practices commonly used to trap mammals cannot be considered humane).

Neill, L.O., et al. 2007. Minimizing Leg-Hold Trapping Trauma for Otters With Mobile Phone Technology. *Journal of Wildlife Management* 71(8): 2776-2780 (finding that functioning trap alarms reduced the injuries suffered from an average cumulative score of 77.7 to just 5.5 on the International Organization for Standardization 10990-5 trauma scale).

Proulx, G. et al. 2015. Humaneness and Selectivity of Killing Neck Snares Used to Capture Canids in Canada: A Review. *Canadian Wildlife Biology and Management* 4 (1): 55-65, *available at* http://alphawildlife.ca/wp-content/uploads/2015/03/127-2015-1-Proulx_FINAL-Kiling-Neck-Snares.pdf (reviewing scientific information related to the humaneness and selectivity of killing neck snares used to capture canids and recommending phase-out all killing snares for which efficient and more humane alternatives exist).

Rochlitz, I., et al. 2010. The Impact of Snares on Animal Welfare. Report for OneKind. University of Cambridge, Centre for Animal Welfare and Anthrozoology, Department of Veterinary Medicine, *available at* http://www.wolfmatters.org/uploads/2/4/0/2/24020064/onekind_report_on_snaring_chapter_1.pdf (reviewing the scientific literature and summarizing the problems with snares).

Santiago-Avila, F.J., W.S. Lynn, and A. Treves. 2018. Inappropriate consideration of animal interests in predator management: Towards a comprehensive moral code. In *Large Carnivore Conservation and Management: Human Dimensions and Governance*, ed. T. Hovardos, Taylor & Francis, London, *available at* https://faculty.nelson.wisc.edu/treves/pubs/pre-proofSantiago-Avila_etal_2018b.pdf (discussing the ethics of predator control).

Woodroffe, R. and S.M. Redpath. 2015. When the hunter becomes the hunted. *Science* 348: 1312, *available at* https://www.researchgate.net/publication/281414973_CONSERVATION_When_the_hunter_becomes_the_hunted (arguing that predator management must become more evidence-based, as well as more responsive to changing social perspectives).

Comprehensive Criticisms of Wildlife Damage Management

Bergstrom, B. J., L.C. Arias, A.D. Davidson, A.W. Ferguson, L.A. Randa, and S.R. Sheffield. 2014. License to Kill: Reforming Federal Wildlife Control to Restore Biodiversity and Ecosystem Function. *Conservation Letters* 7: 131-142, *available at* <http://onlinelibrary.wiley.com/doi/10.1111/conl.12045/full> (recommending that Wildlife Services and its government partners involved in wildlife conflict management "emphasize training livestock producers in methods of nonlethal control, with sparing use of lethal control by methods that are species-specific, and cease all lethal control in federal wilderness areas and for the purpose of enhancing populations of common game species").

Bergstrom, B. J. 2017. Carnivore Conservation: Shifting the Paradigm from Control to Coexistence. *Journal of Mammalogy* 98(1): 1-6, *available at* <https://academic.oup.com/jmammal/article/98/1/1/2977253> (presenting data and arguments from the perspectives of ecology, wildlife biology and management, social science, ethics, and law and policy showing that nonlethal methods of preventing depredation of livestock by large carnivores may be more effective, more defensible on ecological, legal, and wildlife-policy grounds, and more tolerated by society than lethal methods).

The Humane Society of the United States. 2015. Wildlife Disservice: The USDA Wildlife Services' Inefficient and Inhumane Wildlife Damage Management Program, *available at* <http://www.humanesociety.org/assets/pdfs/wildlife/wildlife-services-white-paper-2015.pdf> (reviewing the science and summarizing the problems with Wildlife Services).

The Humane Society of the United States. 2019. Government Data Confirm That Cougars Have a Negligible Effect on U.S. Cattle and Sheep Industries, *available at* <https://www.humanesociety.org/sites/default/files/docs/Cougar-Livestock-6.Mar.19-Final.pdf> presenting data showing that cougars kill few cattle and sheep .

Russell, A.J. 2015. Services Gone Wild: Has Wildlife Services' Predator Control Program Gone Too Far? 26 *Vill. Envtl. L.J.* 123, *available at* <http://digitalcommons.law.villanova.edu/elj/vol26/iss1/4> (reviewing the literature and discussing the negative impacts of both federal and state predator control programs).

Slagle, K. et al. 2017. Attitudes toward predator control in the United States: 1995 and 2014. *Journal of Mammalogy* 98(1): 7-16, *available at* <https://academic.oup.com/jmammal/article/98/1/7/2977228> (finding that lethal predator controls such as shooting animals from aircraft (aerial gunning), neck snares, gassing of pups in dens, leg-hold traps and poisons are unpopular with the American public).

Thank you for the opportunity to participate in this important environmental review. If you have any questions about these comments, please call me at 651-955-3821 or email me at cadkins@biologicaldiversity.org.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,

Annette Jones, D.V.M
Director and State Veterinarian
California Wildlife Damage Management Program
PO Box 188797
Sacramento, CA 95811

RE: Formal Notification of Proposed Wildlife Damage Management Program – California
Environmental Quality Act (CEQA), Public Resources Code Section 21080.3.1(b), and California
Assembly Bill (AB) 52

Dear Ms. Jones:

Thank you for your letter dated September 22, 2020 regarding formal notification of the California Wildlife Damage Management joint environmental impact report and environmental impact statement (EIR/EIS). We appreciate your effort to contact us and wish to respond.

The KaKoon Ta Ruk Band of Ohlone-Indians of the Big Sur Rancheria has reviewed the document provided and concluded that the project has the potential of being within the aboriginal territories of KaKoon Ta Ruk Band of Ohlone-Costanoan Indians. Therefore, we would like to initiate formal consultation with the lead Agency. At the time of consultation, if you could please provide any additional details regarding the projects.

Please contact the following individual to coordinate a date and time for the consultation meeting:

Isaac Bojorquez,
Tribal Chairperson
Email: ohlone_1@yahoo.com

Please refer to identification number KKTR-09222020 in any correspondence concerning these projects.

Thank you for providing us the opportunity to comment.

Shurruru,

Isaac Bojorquez
Tribal Chairman

Subject: Couple Questions
Date: Friday, October 23, 2020 11:29:10 AM

Greetings, and thank you for the thorough California Wildlife Damage Management EIR/ EIS site. I had a couple questions:

1. The Fact Sheet mentions that "responsible, trustee, and cooperating agencies" will be consulted during the draft phase. Who does this include?
2. What is a ballpark timeline between the end of scoping (Nov. 10) and a first draft?

Thanks!

Dear Wildlife Services - California,

I'm happy to learn that Wildlife Services started to work on an EIS (Environmental Impact Statement) to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

With most wildlife habitats shrinking due to development, pollution, fires, floods, etc. we cannot afford to additionally and unnecessarily kill thousands of wild animals unless the remaining wild populations collapse due to low numbers.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Date: Monday, October 26, 2020 2:27:38 PM

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Jossy Zamora

RE: Comments on Docket No. APHIS-2020-0081 - Joint Environmental Impact Report and Environmental Impact Statement (EIR/EIS) for Wildlife Damage Management in California

Dear Mr. Orthmeyer:

The Sacramento County Farm Bureau appreciates the opportunity to provide scoping comments on a Joint Environmental Impact Report and Environmental Impact Statement (EIR/EIS) for Wildlife Damage Management in California. An EIR/EIS that can deliver vital services to a variety of constituencies and alleviate human/wildlife conflicts in a professional manner is critical to the ensuring the viability of California's farmers and ranchers. It is our hope that the intended program provide needed protection to California's farming and ranching communities, public and private resource lands, as well as human health and safety.

The Farm Bureau is a non-governmental, non-profit, voluntary membership organization whose purpose is to protect and promote agricultural interests throughout the state of California and to find solutions to the problems of the farm, the farm home, and the rural community. As California's largest farm organization, Farm Bureau is comprised of 53 county Farm Bureaus currently representing more than 35,000 agricultural, associate, and collegiate members in 56 counties. Farm Bureau strives to protect and improve the ability of farmers and ranchers engaged in production agriculture to provide a reliable supply of food and fiber through responsible stewardship of California's resources.

As provided by existing California law, the California Department of Food and Agriculture (CDFA) is mandated to promote and protect California's agricultural industry. ^[1] CDFA is also mandated to seek and maintain the economic well-being of agriculturally dependent rural communities in California. ^[2] Further authorities are vested within CDFA related to the prevention and introduction of animals detrimental and dangerous to the agricultural industry, and the authorization to employ hunters and trappers to manage predatory animals. ^[3] Additionally, in concert with the U.S Department of Agriculture-Animal Plant Health Inspection Service' (USDA-APHIS) Wildlife Services, CDFA provides expertise in managing wildlife conflicts with agriculture, infrastructure, private property, airport operations and endangered species protection. ^[4]

Sacramento County Farm Bureau believes that the development of the programmatic EIR/EIS is necessary for the state and federal agencies to meet statutory obligations while also minimizing potential negative interactions between people, property and wildlife. Its critically important that rural communities and private property owners have the ability to resolve conflicts involving wildlife that may have become habituated to depredating livestock, may be responsible for serious

environmental degradation, or pose a risk to human health and safety. The integrated approaches utilized by the responsible agencies is not solely focused on lethal or non-lethal techniques to resolve problem wildlife, but also serves as an advisory role on wildlife damage prevention, depredation investigation, training and technical assistance. Additionally, we believe a joint endeavor between WS-California and CDFA should assist in resolving potential litigation related to implementation and allow for the continuation of a successful program that provides benefit to both wildlife and human constituencies.

Sacramento County Farm Bureau appreciates the opportunity to provide these scoping comments on behalf of California's farmers and ranchers. We look forward to participating further in the development of the California Wildlife Damage Management Program and providing additional written comment on the Draft EIR/EIS document once available for public comment.

Respectfully,

Ken Oneto

To whom it may concern:

I'm the retired Amador County Agricultural Commissioner and have been involved with the Federal Wildlife Services Program the entire twenty-four years I was with Amador County. My family has been raising, cattle, goats and sheep since the turn of the century on the same land. We have seen it all, damage from bears, coyotes, lions, dogs (both wild and domesticated), beavers and humans. We need this program so I give you a great thank you for undertaking this project.

The following are my thoughts, I not sure if this what you wanted or needed at this time. Once I started to write down some notes, it got a little out of hand. I hope that you can use some of the comments or ideas in your study.

CALIFORNIA WILDLIFE DAMAGE MANAGEMENT **EIR/EIS**

1. Impacts on wildlife populations
 - a. I would hope that you are looking at the impacts of predation on wild animal population.
 - b. Are you going to looking at the effects the wolf will be having in California as the get established?
 - i. High lighting the work Wildlife Services has done on non-lethal means of protecting domesticated animals from wolfs.
2. Effects on non-target animal populations, included protected species
 - a. Will you be looking at the work that Wildlife Services does to protect, protected species?
3. Impacts on ecosystem processes (e.g., trophic cascades)
 - a. Could the ecosystems be impacted by the food source for predators being changed from natural pray to domesticated animals?
 - i. If so, should these praetor animals be removed from the ecosystems?
4. Impacts on Native American culture and resources
5. Risks and benefits to human and pet safety
 - a.

6. Impacts on Special Management Areas (e.g., Wilderness and Wilderness Study Areas) and other protected places
7. Humaneness of methods
8. Efficacy of management activity
9. Impacts on small, backyard, hobby type farms
10. The work that the program is doing in supporting Fish and Wildlife Study on Mountain Lions
11. Will you be looking at some of myths that surround this program
 - a. Penning animals will protect them from attack
 - b. Offering payment of killed animals
 - c. That Wildlife Services uses leg hold traps
 - d. That the Governors order that says that you need to scare a Mountain Lion twice before you can take the lion will keep damage from happening.
12. What would ranchers and farms do if this program were not in place? Would they take animals, on their own even though it was against the law?
13. Explain what a wildlife service agent does in the field.
 - a. Neocortices
 - b. Tracking
 - c. Scat ID
 - d. Public Education
 - e. Training
 - f. Eradication (shooting is a very safe way to eliminate the death of a non-target species.)
 - g. Time spent checking traps
14. Work done by Wildlife Specialist at International and local airports
 - a. What are the results of this program
 - b. Who would do this work if it was not provided by the program
15. How do we educate the public, on what Wildlife Services does

RE: Comments on Docket No. APHIS-2020-0081 - Joint Environmental Impact Report and Environmental Impact Statement (EIR/EIS) for Wildlife Damage Management in California

VIA: Email to info@CaliforniaWDM.org

Dear Mr. Orthmeyer:

Monterey County Farm Bureau represents family farmers and ranchers in the interest of protecting and promoting agriculture throughout our County. Since 1917, Farm Bureau strives to improve the ability of those engaged in production agriculture to provide a reliable supply of food and fiber through responsible stewardship of our local resources.

Our County Farm Bureau is a non-governmental, non-profit, voluntary membership organization whose purpose is to protect and promote agricultural interests throughout our County and to find solutions to the problems of the farm, the farm home, and the rural community. As California's largest farm organization, California Farm Bureau is comprised of 53 county Farm Bureaus, including ours, currently representing more than 35,000 Agricultural, Associate, and Collegiate members in 56 counties.

Our Board of Directors appreciates the opportunity to provide scoping comments on a Joint Environmental Impact Report and Environmental Impact Statement (EIR/EIS) for Wildlife Damage Management in California. An EIR/EIS that can deliver vital services to a variety of constituencies and alleviate human/wildlife conflicts in a professional manner is critical to the ensuring the viability of California's farmers and ranchers.

First and foremost, it is our hope that the intended program provides needed protection to Monterey County's farming and ranching sectors, public and private resource lands around the State, as well as human health and safety.

As provided by existing California law, the California Department of Food and Agriculture (CDFA) is mandated to promote and protect California's agricultural industry.¹ CDFA is also mandated to seek and

¹ California Food and Agricultural Code (FAC) § 401.

maintain the economic well-being of agriculturally dependent rural communities in California.² Further authorities are vested within CDFA related to the prevention and introduction of animals detrimental and dangerous to the agricultural industry, and the authorization to employ hunters and trappers to manage predatory animals.³ Additionally, in concert with the U.S Department of Agriculture-Animal Plant Health Inspection Service (USDA-APHIS) Wildlife Services, CDFA provides expertise in managing wildlife conflicts with agriculture, infrastructure, private property, airport operations and endangered species protection.⁴

Monterey County Farm Bureau believes that the development of the programmatic EIR/EIS is necessary for the State and Federal agencies to meet statutory obligations while also minimizing potential negative interactions between people, property and wildlife. Its critically important that rural communities and private property owners have the ability to resolve conflicts involving wildlife that may have become habituated to depredating livestock, may be responsible for serious environmental degradation, or pose a risk to human health and safety.

The integrated approaches utilized by the responsible agencies should not be solely focused on lethal or non-lethal techniques to resolve problem wildlife, but also serves as an advisory role on wildlife damage prevention, depredation investigation, training and technical assistance. Additionally, we believe a joint endeavor between WS-California and CDFA should assist in resolving potential litigation related to implementation and allow for the continuation of a successful program that provides benefit to both wildlife and human constituencies.

On behalf of the Board of Directors of Monterey County Farm Bureau, we appreciate the opportunity to provide these scoping comments on behalf of our County's farmers and ranchers. We look forward to participating further in the development of the California Wildlife Damage Management Program and providing additional written comment on the Draft EIR/EIS document once available for public comment.

Sincerely,

Norman C. Groot
Executive Director

Subject: FW: California Wildlife Damage Management EIR/EIS Scoping Meeting

From: Dale Steele <dalet.steele@gmail.com>

Sent: Wednesday, October 28, 2020 6:45 PM

To: Dudek Webinar <webinar@dudek.com>

Subject: Re: California Wildlife Damage Management EIR/EIS Scoping Meeting

I attended the webinar last night but did not ask any questions then. I am submitting comments and questions now instead.

I would like to request that the EIR/EIS quantify any educational component of the CA Wildlife Damage Management program. As described now the wildlife damage management program appears to perpetuate a reaction based approach to wildlife/human conflict. With increasing development pressure on habitat and intensive ag practices, it is more important than ever to apply Best Management Practices and effective educational outreach to avoid and minimize such conflict. I would also like to request that the EIR/EIS include detailed information on any performance criteria now being used to avoid and minimize lethal wildlife take to be included in the EIR/EIS. If such criteria are not now in use in the wildlife damage management program I would like to request an explanation for why these tools are not being used.

Thanks for the opportunity to provide comments on the Wildlife Damage Management program.

Dale Steele

I live in a semi-rural area. "Wildlife Services" is keenly aware of it's nature as the name itself is Orwellian. Wildlife is certainly not being serviced but rather killed in a blunt manner.

There is a strong culture in the American West that ranchers and farmers are to be cultivated. I am not opposed to assisting this fiercely independent-minded group but respect for sentient life is sadly lacking. The use of lethal force should be "de minimis" and a culture that respects Nature would be most welcome.

The 21st century requires an updated and modern approach. This should be part of a pragmatic philosophy at the agency.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Helia Zarkhosh

Greetings.

I am a landowner in Carmel Valley, an area rich with both ranching and agriculture. We live among coyotes, wildcats, bobcats, wild boar, deer, all manor of raptor birds, skunks, the occasional racoon, etc. Of course, we also live among ranchers, farmers, and vintners. I myself am involved in the local wine industry,

I believe that our wild animals should not be harmed, let alone killed, "just in case" they might harm local livestock or crops. While our local livestock, farmers and ranchers deserve protection, that is not a reason to attack wild animals before they even intrude on anyone or cause any harm themselves.

Please develop a plan that respects the integrity of our natural surroundings in a balanced way. Cruelty to wild animals is not justified by ag profits, and gratuitous assaults on animals cannot be justified at all.

Thank you for your consideration.

Subject: Wildlife Damage Management

From John Buckley
Twain Harte, CA

The webinar meeting was generally well organized with appropriate presentations and the Q and A. It was puzzling why I personally was unable to provide comments due to technical issues when I participate nearly every day in other Zoom meetings without any problems.

However, I appreciated the chance to hear the overview information that was presented.

Separate from the complete comments I will submit, I share the following for whatever value my input may have.

Those of you who are closely aligned with WS-California and CDFA are philosophically and politically supportive of Wildlife Services maximizing benefits for agriculture and for those who judge wildlife to be pests, threats, or undesirable on their properties. You, Steve Peterson, Lisa Marie Alley, Dennis Orthmeyer, and Dr. Jones are strong supporters and true believers in the current mission and management approach of WS-California.

Yet all of you are aware that of those who have knowledge of the activities done by CA-Wildlife Services, a large percentage of CA citizens and wildlife advocacy groups see WS-California as completely at odds with the middle ground views of Californians and the way that they want their tax dollars to be spent.

To cut to the chase, in this time of such extreme polarization and political divisiveness, WS-California can move through this environmental review process with the intent to primarily come out at the end with basically the same management direction and program authorities that now are the core of WS-California...

OR...

WS-California could meaningfully seek to significantly reduce public dismay and opposition to the methods and programs used to achieve objectives — and end up with a still-effective and beneficial program to assist agriculture and property owners. But instead of attempting to rationalize and end up with approval for most of what the current program allows — WS-California could honestly look for minimizing outcry and strategically scale back actions that do not produce major benefits for the public, but primarily provide very narrow benefits for Ag or livestock operations.

So — It is unlikely that you will be a decision-maker in this process, but if you and others who obviously support the mission of WS-California could openly advocate for reducing many of the most controversial aspects of the program of work that now generates opposition, the change toward middle ground might lead to even greater pride in how WS-California accomplishes its mission.
