1 Introduction

1.1 Overview

The California Department of Food and Agriculture (CDFA) and Wildlife Services (WS-California), a state office within the United States Department of Agriculture's (USDA's) Animal Plant and Health Inspection Service (APHIS), intend to prepare a joint Environmental Impact Report and Environmental Impact Statement (EIR/EIS) to provide a robust and comprehensive environmental analysis of current and proposed future wildlife damage management activities undertaken across California. The EIR/EIS will evaluate impacts associated with wildlife damage management activities performed by CDFA and California Counties under CDFA's proposed Wildlife Damage Management Program (WDMP or Program) as required by the California Environmental Quality Act (CEQA), and by the WS-California as required by the National Environmental Policy Act (NEPA). These activities would be undertaken in a collaborative effort between WS-California, CDFA, and California Counties to prevent damage to agricultural resources and infrastructure, protect natural resources, and promote human health and safety.

The first step in the environmental process is to publish a Notice of Preparation of an EIR (NOP) in the California State Clearinghouse for CEQA and a Notice of Intent to Prepare an EIS (NOI) in the *Federal Register* for NEPA. Publishing the NOP and NOI initiates the public scoping period, which began on September 10, 2020 and ended on November 10, 2020. Scoping is a process to determine the scope of issues to be addressed and to identify significant issues related to the proposed project or action. This scoping report includes a description of the Program, the purpose of the scoping report, a summary of the public scoping process, key issues identified before and during the scoping period, a summary of the comments received, and a description of future steps to be taken during the environmental review process.

1.2 Scoping Report

Scoping is the formal CEQA and NEPA coordination process to determine the scope and content of issues to be addressed during the environmental review, including the range of actions, concerns, environmental impacts, mitigation measures, and potential alternatives to be evaluated in the EIR/EIS. Scoping may also be used to identify issues that need not be evaluated in detail in the EIR/EIS. CDFA and USDA's WS-California's early scoping process has been conducted to ensure the scope and contents of the EIR/EIS provide sufficient information to permit informed public participation and agency decision-making. Activities conducted during the scoping process include soliciting agency, organization, and public input to develop a complete draft purpose and need statement, identification of a preliminary range of alternatives, and discussion of potentially significant environmental issues. The scoping report shall address requirements applicable to the scoping process, summarize the scoping comments received, and identify the scope and content of issues to be addressed in the EIR/EIS.

1.2.1 Scoping Requirements under CEQA and NEPA

1.2.1.1 CEQA

CEQA requires formal public announcement of the intent to prepare an EIR for a proposed project. In compliance with the State CEQA Guidelines (Title 14 California Code of Regulations Section 15082 for CEQA (14 CCR 15082), CDFA issued an NOP on September 10, 2020 to Responsible, Trustee, and Federal Agencies. The NOP presented general background information on the Program, the scoping process, the environmental issues to be addressed in the EIR, and the anticipated uses of the EIR. CEQA requires that Responsible or Trustee Agencies provide a response or a well-justified request for additional time within 30-days of release of the NOP (14 CCR 15082(b)). This response shall provide the lead agency with specific detail about the scope and content of the environmental information related to the Responsible or Trustee Agency’s area of statutory responsibility that must be included in the EIR. If a Responsible or Trustee Agency, or the State Clearinghouse (Governor’s Office of Planning and Research [OPR]) fails by the end of the 30-day period to provide the lead agency with a response to the notice or a well-justified request for additional time, the lead agency may presume that none of those entities have a response to make (14 CCR 15082(b)(2)). Further, for projects of statewide, regional, or areawide significance as defined in 14 CCR 15206, the lead agency shall conduct a least one (1) scoping meeting to address scope and content of the EIR (14 CCR 15082(c)(1)). Furthermore, 14 CCR 15083 states “[s]coping has been found to be an effective way to bring together and resolve the concerns of affected federal, state, and local agencies, and proponents of the action, and other interested persons including those who might not be in accord with the action on environmental grounds.”

1.2.1.2 NEPA

NEPA requires an early and open process for determining the scope of issues to be addressed and to identify the significant issues related to a proposed action. This process is referred to as scoping and is one of several public involvement aspects of the NEPA process, described in Title 43 Code of Federal Regulations (CFR) 46.235. As described, scoping is required for an EIS. Scoping is the way lead agencies engage state, local, and tribal governments, and the public in the early identification of concerns, potential impacts, relevant effects of past actions and possible alternative actions (43 CFR 46.235 (a)). Scoping is an opportunity to introduce and explain the interdisciplinary approach and solicit information as to additional disciplines that should be included. Scoping also provides an opportunity to bring agencies and applicants together to lay the groundwork for setting time limits, expediting reviews where possible, integrating other environmental reviews, and identifying any major obstacles that could delay the process.

1.2.1.3 CEQA/NEPA Noticing

In addition to the required CEQA/NEPA noticing (NOP/NOI) (refer to Appendix A and Appendix B), CDFA/~~USDA~~USDAWS-California also provided information about the scoping period and process publicly in the following ways (refer to Appendix C):

- Program website at www.CaliforniaWDM.org
- Direct e-mail reminder notice (referred to as an E-mail blast) (sent on September 10th, October 6th, and October 22nd, 2020 to the Program mailing list)
- CDFA News Release (published on September 10, 2020)
- Federal Register Notice (posted on September 10, 2020)

1.3 Program, WS-California Wildlife Damage Management Activities, and Objectives

1.3.1 Program

The Program shall encompass the range of wildlife damage management activities carried out by CDFA, California Counties, and WS-California (on behalf of California counties). The Program would include the following functional elements.

1. **Statewide Wildlife Management Protocols.** The CDFA shall develop guidelines and recommendations to inform and guide implementation of management activities conducted by CDFA and local agencies such as County Agricultural Commissioners (County-Level Activities).
2. **County-Level Activities.** Participating Counties would continue to carry out most wildlife damage management activities at the local level, with the support of WS-California as mutually agreed, and will be able to work with and receive support from CDFA if they so desire.
3. **Rapid Response.** The CDFA would respond to high-risk wildlife damage situations calling for rapid response activities (e.g., to address the introduction or spread of pests¹). The CDFA would do so in coordination and collaboration with the Counties, WS-California, and other state agencies.
4. **Information Processing and Adaptive Management.** The CDFA and WS-California would collect data on wildlife damage management activities conducted throughout the state to evaluate the efficacy of those activities and consider changes in activities, materials, and methods that will improve their efficacy and prevent impacts on natural resources and the environment.
5. **Program Education and CEQA Support.** The CEQA process for the Program would promote broader understanding and awareness about wildlife identification, biology, life history, damage impacts, and management activities.

1.3.2 WS-California Wildlife Damage Management Activities

The WS-California currently uses an integrated wildlife damage management approach to recommend and apply a range of legally available non-lethal and lethal techniques to manage wildlife damage and conflicts. The WS-California provides advice on wildlife damage prevention and management, information on sources of wildlife damage management materials, depredation investigations, training on the use of management methods, equipment loans (technical assistance), and assistance with the implementation of management methods (operational assistance). The WS-California conducts these activities both independently and jointly with federal and state agencies, California Counties, Native American tribes, and private landowners.

¹ One of the goals of CDFA is to protect against invasion of exotic pests and diseases. As defined in the California Food and Agriculture Code (Section 5006) "pest" includes (as subheading b) "any form of animal life" that that is, or is liable to be, dangerous or detrimental to the agricultural industry of the state.

The WS-California activities include the following functional elements in support of Wildlife Service’s mission to protect agriculture, property, natural resources, and human health and safety.

1. **Cooperative Resource Protection.** The WS-California is authorized to enter into cost share agreements with California Counties and other land/resource owners to implement wildlife damage management activities that resolve or minimize wildlife damage impacting agriculture and property (including infrastructure). The WS-California provides various services under these agreements, including education, technical assistance, and direct control (including the deployment of trained personnel and specialized equipment).
2. **Airport Wildlife Hazard Management.** The WS-California performs wildlife damage management activities pursuant to APHIS’ Airport Wildlife Hazards Program to resolve wildlife conflicts that threaten the flying public’s health and safety. The WS-California employs a network of trained and certified biologists that provide airport site visits and consultations, develop wildlife hazard assessments and wildlife hazard management plans, and conduct operational wildlife management on airfields.
3. **Endangered Species Protection.** The WS-California works in collaboration with U.S. Fish and Wildlife Service (USFWS), California Department of Fish and Wildlife (CDFW), conservation organizations, and other land/resource managers to protect threatened and endangered wildlife and plants from the impacts of predation, invasive species, and disease.
4. **Human Health and Safety.** The WS-California conducts wildlife damage management in protection of human health and safety. These activities include responding to wildlife that pose a risk to human health and safety through direct contact (e.g., bites/attacks) and disease transmission (e.g., zoonotic diseases and food contamination).
5. **Invasive Species.** The WS-California works in collaboration with USFWS, CDFW, conservation organizations, and other land/resource owners to implement wildlife damage management activities to control the spread of invasive species and mitigate the impacts to California’s ecosystems, native wildlife, and other resources.

1.3.3 Program and WS-California Wildlife Damage Management Activities Objectives

Following are the objectives of the Program and the WS-California WDM Activities, as described in the NOI and NOP.

The Program objectives are to:

- Inform the implementation of wildlife damage management activities conducted by state and local agencies throughout California.
- Provide rapid response to high-risk wildlife damage *or conflict* scenarios² to prevent harm to the agricultural industry, human health and safety, and natural resources.³

² “Conflict scenarios” refer to human-wildlife conflicts. This may include but is not limited to wildlife conflict associated with agriculture, infrastructure, property, and threats to human health and safety.

³ Note that this objective has been revised to add: “or conflict” for consistency with wildlife damage management activities objectives.

- Support the development and implementation of measures to avoid, minimize, and mitigate impacts to California’s important natural resources from wildlife management materials, technologies, and methods.⁴
- Build upon existing resources, including WS-California’s data reporting system, to develop a statewide information management, reporting, and data sharing system for wildlife damage incidents and management activities that will allow a robust evaluation of all management activities to support an integrated and adaptive wildlife damage management approach.

The WS-California WDM Activities objectives are to:

- Implement standardized procedures for evaluating complaints of wildlife damage, undertaking management strategies, and evaluating the effectiveness of management strategies.
- Utilize USDA APHIS WS national directives, United States Fish and Wildlife Biological Opinions of WS actions, and WS-California policies to develop and implement measures to avoid, minimize, and mitigate impacts to agriculture, natural resources, property, and human health and safety from wildlife control materials, technologies, and methods.
- Build upon existing resources, including WS-California’s data reporting system, to develop a statewide information management, reporting, and data sharing system for wildlife damage incidents and management activities that would allow a robust evaluation of all management activities to support an integrated and adaptive management approach.

1.4 EIR/EIS and Objectives

1.4.1 Program EIR/EIS

The EIR/EIS will describe the elements of the Program and WS-California WDM Activities include a discussion of the process to be followed for conducting different aspects of the Program. It will also discuss the process to identify future management approaches for use against an existing or future wildlife pests of concern. This includes providing a framework that may be used for subsequent CEQA/NEPA environmental analysis; including (1) tiering or project-level CEQA/NEPA documentation for wildlife damage management activities implemented by CDFA, California Counties, WS-California, and/or other agencies; and (2) future integration of new wildlife damage management approaches, strategies, and/or activities. Finally, the EIR/EIS will evaluate the potential environmental impacts of these activities.

1.4.2 Program EIR/EIS Objectives

The objectives of the California Program EIR/EIS are as follows:

- Provide comprehensive statewide CEQA review of the current and proposed future wildlife damage management activities conducted throughout California by CDFA and Counties under the Program framework. This EIR/EIS will serve as the basis for additional environmental analysis, if any is needed, at the County level.

⁴ Note that this objective has been revised to delete “unintended” in front of “unintended impacts to California’s important natural resources.”

- Provide comprehensive NEPA review of the current and future wildlife damage management activities WS-California conducts throughout California, including activities performed pursuant to agreements with Counties, other public agencies, and private landowners.
- Promote broader understanding and awareness about wildlife identification, biology, life history, damage impacts, and management activities through the statewide environmental review process.
- Develop measures to avoid, minimize, and mitigate impacts to California's important natural resources, including water courses, protected species, and natural habitats from wildlife control materials, technologies, and methods.

1.5 Organization of the Scoping Report

This scoping report is organized into chapters, as identified, and briefly described below.

Chapter 1, Introduction: Chapter 1 provides an overview of the intended purpose of the scoping report, legal requirements, and provides background on the Program and EIR/EIS.

Chapter 2, CEQA/NEPA Scoping Process: Chapter 2 describes the CEQA/NEPA scoping process, including a description of required notices, scoping meetings (webinars), and outreach materials and process.

Chapter 3, Summary of Comments Received: Chapter 3 presents a summary of the comments received and discusses the key issues raised.

Chapter 4, Next Steps: Chapter 4 provides details on the development and anticipated format of the Draft EIR/EIS, including future opportunities for public involvement.

Chapter 5, References Cited: Chapter 5 includes references for the scoping report.

Appendices: Appendices to the scoping report include the NOI, NOP, public outreach materials, comments received, and other documentation used in preparation of the scoping report.

2 CEQA/NEPA Scoping Process

2.1 Notice of Preparation/Notice of Intent (NOP/NOI)

2.1.1 Notice of Preparation

Pursuant to CEQA (14 CCR 15082), an NOP for the EIR was submitted to the OPR and distributed on September 10, 2020. The NOP was distributed to responsible, federal, and trustee agencies, Native American Tribal representatives, representatives of interest groups and associations, and individual members of the public. The NOP announced the intent of the CDFA to prepare an EIR/EIS for CDFA's proposed Program. It provided information about the scoping timeframe and scoping meetings (dates, times, and how to participate), as well as how to submit scoping comments via email, postal mail, or orally at the scoping meeting. It included a brief description of the statewide Program, and the potential environmental issues that will be analyzed in the EIR/EIS. It also included a link to the Program website. A copy of the NOP is available in Appendix A.

2.1.2 Notice of Intent

To comply with the CEQ regulations (40 CFR 1501.7) implementing NEPA, USDAWS-California published NOI to prepare an EIS in the Federal Register on September 10, 2020 (Federal Register no: 2020-19090).⁵ The NOI is the official regulatory notice indicating that a federal agency is commencing preparation of an EIS. The NOI states the intent of ~~the~~ USDAWS-California, in coordination with CDFA, to prepare an EIR/EIS analyzing alternatives for wildlife damage management in California. The NOI provided information about the scoping timeframe and scoping meetings (dates, times, and how to participate), as well as how to submit scoping comments via email (including comments posted on the *Federal Register* webpage), postal mail, or orally at the scoping meeting. It also included a link to the Program website. A copy of the NOI is available in Appendix B.

2.2 Public Outreach

2.2.1 Website, E-Mail, and Phone

Program Website

Information about the Program and the associated Program EIR/EIS scoping process has been posted on the website: www.CaliforniaWDM.org. The website includes a description of the Program, identifies how the public and organizations can be involved (including how to participate during scoping and how to sign up for the Program mailing list), and provides links to Program documentation and contact information (e-mail, postal mail, and phone number). The website includes translation services in Spanish, Chinese, and Vietnamese, and interpreters/translation service are available upon request.

⁵ The President's Council on Environmental Quality (CEQ) regulations have been revised with an effective date of September 10, 2020. The Notice of Intent (NOI) to prepare the EIS was published prior to the effective date of the revised regulations. Therefore, the EIS is being prepared in accordance with the 1978 version of the regulations.

Online videos of the scoping meetings (webinars) are available and the comments received during the scoping period shall also be available as part of this scoping report.

Program E-mail and Toll-Free Phone Number

To facilitate public outreach, a dedicated e-mail address (info@CaliforniaWDM.org) and toll-free phone number (1.866.943.5852) where callers could leave a voicemail, was established for the Program.

2.2.2 Mailing List/E-Mail Blasts

Mailing List

A Program mailing list (list of email addresses) of over 450 potentially interested parties is being maintained in the MailChimp Platform for the Program and is dynamically updated (interested parties are added and removed as requested). This Program mailing list was used to publicize the scoping period and webinars and will be used for future outreach. This Program mailing list includes federal and state agencies, Native American Tribes, organizations, and members of the public.

E-Mail Blast

To publicize the scoping period and webinars for the Program, an e-mail blast (a direct email reminder notice) was sent to the mailing list on September 10, October 6, and October 22, 2020. The text of the e-mail blasts is included in Appendix C.

2.2.3 Press Release

CDFA Press Release

A press release in English and Spanish was published by CDFA on September 10, 2020. This provided information about the Program and the associated Program EIR/EIS scoping process. The press release is included in Appendix C.

2.3 Public Meetings

2.3.1 Webinars

Meeting Format and Content

To provide government agencies, Native American Tribes, organizations, and the public with an opportunity to ask questions and provide comments on the scope of the EIR/EIS, two webinars (Zoom) were held during the NOP/NOI review period. CDFA and WS-California conducted these scoping webinars on two Tuesday evenings in October 2020 as the Program is considered a “project of statewide, regional, or area-wide significance.” These webinars were held to solicit input from stakeholders regarding the nature and scope of environmental impacts to be addressed in the draft EIR/EIS. Closed captioning of the webinars was provided.

Potential stakeholders on the mailing list were sent e-mail blasts inviting them to attend the webinars and register in advance online. An agenda of the webinar and presentation slides were made available.

The scoping webinars were held at the following times:

- Webinar #1: Tuesday, October 13, 2020, 5:30 p.m. to 6:20 p.m.
- Webinar #2: Tuesday, October 27, 2020, 5:30 p.m. to 8:30 p.m.

Presenters

Each webinar began at approximately 5:30 p.m. Presenters included representatives from CDFA and USDAWS-California, Dudek staff, the environmental consulting firm leading the preparation of the EIR/EIS; and Kearns & West, the public outreach/facilitation lead.

First USDAWS-California (Dennis Orthmeyer, WS-California State Director) and CDFA (Dr. Annette Jones, CDFA State Veterinarian) provided opening remarks, followed by a comprehensive overview of the EIR/EIS and timeline by Dudek Project Manager Steve Peterson. Next, Lisa Marie Alley, Facilitator from Kearns & West, led a question and answer session, followed by a public comment session (comments were limited to 3:00 minutes). In addition to providing an opportunity to take oral comments, the webinar provided guidance on how to provide written comments during the remainder of the scoping period (e.g., written emails, letters, etc.).

Program Team

The following USDAWS-California/CDFA representatives and supporting consultants participated in one or more of the webinars:

<u>USDAWS-California</u>	<u>CDFA</u>	<u>Consultant Team</u>
Dennis Orthmeyer	Dr. Annette Jones	Steve Peterson, Dudek
Mark Ono	Michele Dias	Christine Fukasawa, Dudek
Shannon Chandler	Sam Mercado	Angelica Chiu, Dudek
Rebecca Mihalco		Eric Williams, Dudek
		Lisa Marie Alley, Kearns & West
		Rafi Silberblatt, Kearns & West
		Chris Carr, Esq., Baker Botts (now Paul Hastings)
		Lucas Grunbaum, Esq., Baker Botts (now Paul Hastings)
		Florence Colby, Court Reporter

Webinar Attendance

For each webinar, attendees were asked to register ahead of time to receive the webinar link and/or phone call-in number ahead of time. However, registration was not required. The weblink/call-in phone numbers to the webinar were made available at least 30 minutes prior to the scheduled event. Over 30 attendees (excluding the Program Team) participated each webinar.

2.3.1.1 Webinar Meeting Materials

Webinar meeting materials are available on the Program website at www.CaliforniaWDM.org (and in Appendix C) and include:

- **Webinar Agenda** – Ahead of the webinars, an agenda including the approximate time, duration, and discussion topics along with a registration link and webinar link/phone number was provided.
- **Meeting Slides** – A PowerPoint presentation was provided which covered Opening Remarks and Meeting Logistics, EIR/EIS Overview and Timeline, Questions/Answer period, Public Comments, and Closing Remarks.
- **Webinar Transcript and Recordings** – A written transcript and Vimeo recording of the webinars have been posted to the website.

3 Summary of Comments Received

3.1 Introduction

All written and oral comments received in response to the NOP and NOI will be considered during preparation of the EIR/EIS. Oral comments received at the scoping meetings (webinars) were recorded and reviewed. A transcript of the webinars is included in Appendix D. In addition to the oral comments received during the webinars, over 5,200 written comments were received via postal mail, e-mail, and on the *Federal Register* website comment form during the scoping period and are included in Appendix E.

3.2 Review of Scoping Comments Received

Over 5,200 written comment letters (email, postal mail, or posted to the Federal Register comment form) were received. Approximately 74 of the comment letters were determined to be unique (containing original substantive comments), while the remaining comments letters were variations of a form letter (either the comment letter repeated the form letter verbatim or provided non-substantive variation by individual commenters).

The CEQ recommends that federal agencies address all substantive comments made during the NEPA process (CEQ 1981; 40 CFR 1503.4). In a NEPA context, the term “substantive” generally has been interpreted to include a comment that addresses a specific aspect of the project, the NEPA process, or the NEPA document, rather than simply expressing a preference for or against the project (AASHTO 2016). Subsequently, comments received during the scoping period that only expressed support for or opposition to the project (i.e., a preference without reference to a specific environmental impact issue or concern) are considered and included in the project record but will not be used to guide the substantive analysis developed in the environmental document.

To ensure that a neutral and transparent analysis was used to summarize the public comments received, this scoping report includes original copies of all comment letters submitted (see Appendix E). The issues presented in Section 3.3 are not intended to replicate the comments received verbatim, but instead provide an overall summary of the comments received, capturing the general views and opinions of the commenters in an organized fashion.

While analyzing the comments, several themes/key issues emerged that are discussed as follows. Comments which were not relevant to the CEQA/NEPA process were not summarized.

3.3 Key Issues/Themes

The following is a summary of comments that were received during the scoping period. They have been organized into themes/key issues. Similar comments and issues raised by different commenters have been combined into general statements for brevity.

3.3.1 Agricultural Resources

- Consider impacts to agricultural resources.
- Consider impacts of livestock grazing on public lands.

- Consider impacts that would occur to farms and ranches if wildlife damage management were not in-place.
- Consider the significant detrimental effects that overspray and manure from livestock and dairy operations have on other agricultural operations and their adverse effect on wildlife.

3.3.2 Biological Resources

Predator Control, Trophic Cascade, and Effects on Biological Diversity

- Recognize the ecological value of wildlife, the consequences of predator control (e.g., the impacts of increasing or decreasing predation on wild animal populations) on the environment, and benefits that predators play in the ecosystem.
- Consider impacts on ecosystem processes such as trophic cascades, wherein removal of individuals from one trophic level causes substantial shifts in abundance or species composition of other trophic levels.
- Consider how ecosystems could be affected by the food source for predators being changed from natural prey to domesticated animals.
- Consider the full range of ecological effects from the proposed actions, including but not limited to local, regional and state-wide biological diversity, food web effects, connections to ecological structure and function, interference with wildlife migration and movement, species outside California, riparian habitat or sensitive natural communities, and ecosystem services that humans depend on and need from public lands.
- Explain critical roles of predators and how predator damage management could result in an unintended trophic cascade.
- Discuss how ecosystem services will be integrated into management decision-making.
- Consider the localized impact of removal of individual predators, as opposed to looking simply at the overall state population of the species to determine levels of removal.
- Consider impact and effects related to disease incubation, genetics, predator maladaptation, and population.

Threatened and Endangered Species/Non-Target Species/Specific Species and Habitats

- Address risks to threatened and endangered species from poison baits, lethal traps (lethal control operations), and other methods that affect non-target species.
- Identify and quantify which species (including non-target species) and/or critical habitat might be directly, indirectly, or cumulatively impacted by each wildlife damage management alternative and provide mitigation.
- Discuss mitigation measure implementation, enforcement, and effectiveness to minimize impacts to non-target wildlife species and special status species. Describe the effectiveness of such measures to protect wildlife and indicate how they would be implemented and enforced.
- Consider impacts of wildlife damage management on beavers and their habitats and describe how this can relate to other environmental/ecological impacts including water storage, fire resilience, and overall biodiversity. Consider studies/literature specific to beaver depredation. Consider preparation of critical incident EIRs during specific periods of drought and low flow.

- Consider impacts of wildlife damage management on wolves. Consider the methods/activities to protect domesticated animals from wolves.
- Consider impact of wildlife damage management to target species such as mountain lions, coyotes, bobcats, feral horses, and others.
- Consider impacts of wildlife damage management on tri-colored blackbirds, condors, and bird species protected by the Migratory Birdy Treaty Act, and/or other state/federal regulations.
- Consider impacts of wildlife damage management on pets and/or companion animals.

Reference Information⁶

- Consider reports/resources/literature related to the following topics: Ecosystem impacts of predatory control, ecological importance of beavers, availability of nonlethal alternatives, ineffectiveness of lethal methods, humanness of wildlife damage management methods, public attitudes towards wildlife management, and criticisms of wildlife damage management, etc.
- Consider data from the Wildlife Rehabilitation Medical Database.
- Consider methods presented by the Ruaha Carnivore Project and refer to information from the Center for Conservation Peacebuilding.

Other Biological Resource Topics

- Provide the legal definition of “invasive species” and “wildlife: according to CDFW and CDFA.
- Summarize the USFWS biological opinion (BO) and include as an appendix to the Draft EIR/EIS.
- Consider that in the absence of wildlife damage management, private parties will carry out lethal control, in an unsupervised and untrained manner which could affect wildlife mortality, have secondary effects to non-target species, and that will not be recorded.

3.3.3 Environmental Justice⁷

- Identify if minority and low-income (environmental justice [EJ]) populations would be potentially affected by individual or cumulative actions by the Program and if there would be disproportionate adverse impacts. Recommend that U.S. Environmental Protection Agency EJSCREEN mapping and screening tool be used for this effort.
- If EJ populations are disproportionately affected, describe how this will be analyzed, what the mitigation measures are feasible, and how their effectiveness will be determined.
- Present opportunities for affected EJ communities to provide input into the environmental process.
- Specify whether the analysis meets the requirements for the USDA EJ Strategic Plan (2016–2020).
- Consider that a minority population does not need to meet a 50 percent standard if the affected area is meaningfully greater than the minority population. Also, consider using a 200 percent federal-poverty level as the basis of the EJ analysis.

⁶ An extensive list of articles and reports was provided in more than one comment letter. Specifically, refer to comment letters from the Center of Biological Diversity (CBD) and Wild Earth Guardians, in Appendix E for the complete listings of citations.

⁷ CEQA does not address environmental justice. Environmental justice is a required topic for NEPA.

3.3.4 Land Use/Planning

- Consider potential impacts of wildlife damage management activities/predatory control on different geographies, such as special management areas including wilderness and wilderness study areas, public vs. private areas, areas of critical environmental concern, and other protected areas (e.g., wild and scenic rivers).
- Consider potential impacts on small, backyard, and hobby-type farms.
- Discuss how the existing and proposed Program alternatives are consistent with the goals, objectives, and management decisions and actions prescribed in land use plans in the state (USFWS Habitat Conservation Plans, Bureau of Land Management Resource Management Plans, and U.S. Forest Service Land and Resource Management Plans).

3.3.5 Tribal Cultural Resources (Concerns of Native American Tribes)

- The following list of key issues also took comment responses to coordination with California Native American Tribes per Assembly Bill 52 requirements into consideration.
- Include a description of past concerns raised by the public and Native American Tribes and how these concerns have been addressed.
- Describe the process and outcome of government-to-government consultation between APHIS and Native American Tribal governments within California, issues that were raised, and how those issues were addressed.
- Explain how the proposed action would address Executive Order 13007 (EO 13007), distinct from Section 106 (Section 106 of the National Historic Preservation Act), and discuss how the proposed action would avoid adversely affecting the physical integrity, accessibility, or use of sacred sites.
- Provide a summary of all coordination with Tribes and with State Historic Preservation Officer/Tribal Historic Preservation Officer, including identification of National Register of Historic Places eligible sites and development of a Cultural Resource Management Plan.
- Consider impacts on Native American Tribes, culture, and resource uses.
- Avoid sacred Tribal sites (including seeps, springs, or other spiritual sites), provide adequate buffer zones, and inform Tribal organizations about the Program, Program changes, and/or discoveries.
- Request that all furs and other materials obtained by the Program be made available to Native American Tribes/organizations.
- Use “*Tribal Consultation: Best Practices in Historic Preservation*” as a general resource.
- Consult with U.S. Environmental Protection Agency Region 9 tribal program, as needed.

3.3.6 Hazards and Hazardous Materials

- Consider impacts related to hazards and hazardous materials. Specifically related to application of pesticides and/or wildlife carcasses that may contain toxins and contaminate water sources.
- Disclose all pesticides that would be used as part of the Program, addressing potential toxic hazards related to the application of the chemicals, and how they comply with regulations, and how impacts would be minimized.
- Discuss applicator training and worker safety standards.
- Address potential direct, indirect, and cumulative impacts of pesticide use on sensitive populations health including the elderly, children, and immunocompromised. Address in accordance with Executive Order 13045 (EO 13045).

3.3.6.1 Public Health and Safety⁸

- Consider the Program’s risks and benefits to human and pet (companion animal) safety. This includes community (feral) cats.
- Evaluate the risk that lethal methods/activities pose to the physical and psychological well-being of the public and pets (companion animals).

3.3.7 Humaneness/Cruelty⁹

- Consider and evaluate the humaneness of lethal methods/activities on animals. This includes disclosure of methods identified as “humane” through best management practice testing.
- Do not include methods/activities that are cruel to animals.

3.3.8 Noise

- Discuss the decibel levels associated with wildlife damage management equipment, tools, methods, and activities, such as noise from firearms, trailing hounds, all-terrain vehicles, pyrotechnics, and electronic calling devices.
- Evaluate how these techniques may impact non-target species and nearby human populations, including sensitive receptors.
- Compare the noise impacts of different alternatives (methods/activities) and quantify the number of sensitive receptors that would be exposed.

⁸ CEQA does not address public (human) health and safety. Public health and safety is a required topic for NEPA.

⁹ Although not a standard topic covered by CEQA/NEPA, humaneness/cruelty is a topic that was raised in scoping comments and shall be discussed in the EIR/EIS.

3.3.9 Socioeconomics¹⁰

General Topics

- Consider the impact of Program activities on other stakeholders such as wildlife photographers and wildlife tourism.
- General opposition to use of taxpayer dollars for wildlife damage management activities that only benefit the few and/or private property owners, landowners, farmers, and ranchers.

Cost/Benefit Analysis

- The economic impact analysis should compare the taxpayer cost of providing wildlife damage management services versus reimbursement to ranchers for lost livestock.
- Consider the Program's impacts on the economy for farmers, ranchers, and rural local economies that rely on agricultural production. This includes assessment of compensation programs.
- WS-California should conduct a cost-benefit analysis of its operations that includes the value of wildlife and functioning ecosystems. This should include review of relevant studies on wildlife intrinsic and ecological benefits.
- The EIR/EIS should strive to compare the economic impacts of wildlife damage on agricultural production with and without the technical assistance of CDFA and/or WS-California.

3.3.10 Water Quality

- Discuss if pesticides and/or animal carcasses from the Program could impact water quality, aquatic species, and water resources for wildlife and livestock. Consider options for managing wildlife carcasses (e.g., using sawdust or wood shavings to prevent sideways movement of fluids).
- Identify all source water protection areas statewide and discuss activities and potential contaminants caused by management activities.
- Disclose measures that would be taken to protect the source water protection areas. Consult the California State Water Resources Control Board, if needed.
- Discuss mitigation measures to address potential issues related to managing wildlife carcasses (potential contamination to water quality).
- Consider potential impacts on public drinking water.

3.3.11 Project Description

Current Wildlife Damage Management Practices/Proposed Approach

- Focus on an integrated approach to wildlife damage management that doesn't focus solely on lethal or non-lethal methods, serves an advisory role on wildlife damage prevention, depredation investigation, training, and technical assistance.
- Discuss how APHIS would consider additional target species in the future, if needed.

¹⁰ CEQA does not address socioeconomics. Socioeconomics is a required topic for NEPA.

- Describe monitoring and reporting of intentional take of target species and how this data shall inform future wildlife damage management activities. Discuss adaptive management strategy that will be implemented for the Program.
- Provide background information on the wildlife damage management and conflict in California, comparing past, present, and future methods, procedures, and implementation of management activities by APHIS and CDFA. Include information on the efficacy of past methods/activities (both short and long-term) used and summarize relevant data and monitoring reports. Describe methods/activities process in detail (i.e., the process for performing a method/activity).
- Describe how the Program will provide protection to California’s farming and ranching communities, public and private lands, resource lands, as well as human health and safety.
- Comprehensively describe what the Program includes and what WS-California wildlife damage management activities in the field are (i.e., describe what a WS-California agent does in the field).
- Provide a complete list of target species. Provide a table of statewide estimated target species population and take over a period of time (see the Shasta County EIR¹¹ as an example) (Shasta County 2020). State how levels of intentional take would be determined for each target species and an explanation for biological removal model(s) used. Provide detailed information about the model inputs.
- Comprehensively describe the variety of methods/activities (lethal and non-lethal) currently used for wildlife damage management and their efficacy, including but not limited to penning of animals, payment for loss of livestock/agricultural resources, and nonlethal methods.
- Describe what would happen in the absence of a wildlife damage management program.
- Include detailed information on performance criteria being used to avoid and minimize lethal wildlife take.

Species/Habitat/Locations

- Provide an analysis of all wildlife that are known to, or that are likely to cause conflicts.
- Include a complete list and description of target animals, and current methods for managing wildlife damage. Discuss how future target animals/species would be considered in the future. Describe how take is determined for target species and discuss the methodology for modeling.
- List which species require depredation permits from CDFW (black bear, mountain lion, feral pig, bobcat, and beaver) and USFWS (migratory birds, including sandhill cranes, pelicans, hawks, and owls).
- Discuss what work WS-California does to protect protected species.
- Deliver vital services to a variety of constituencies (farming and ranching communities, public and private resource lands, provide human health and safety) and include all portions of California including airports/airport districts.

¹¹ The Shasta County EIR referenced in the comment is assumed to be the Shasta County USDA APHIS-WS IWDM Program Cooperative Service Agreement EIR prepared in 2020. The Draft EIR and CEQA notices for this project are available online at: <https://ceqanet.opr.ca.gov/2019100323/3>

3.3.12 Alternatives/Methods

General Topics

- Indicate if alternatives are consistent with USFWS BO.
- Include a robust justification for any alternatives identified during scoping but not fully analyzed in the EIR/EIS.
- Alternatives in the EIR/EIS must comply with 40 CFR 1502.14 and 14 CCR 15126.6. All reasonable alternatives must be considered, particularly those that enhance environmental quality or avoid some or all of the environmental effects. The alternatives should fulfill the proposed action purpose and need.
- Alternatives should be developed to align with California’s biodiversity goals (Executive Order 82-20 [EO 82-20]).
- Analyze whether implementing more than one alternative could achieve greater environmental benefits.
- Quantify the potential direct, indirect, and cumulative environmental impact of each alternative, presenting the benefits and adverse impacts in comparative form.

Range of Alternatives

- The EIR/EIS should include a reasonable range of alternatives to the proposed activities. This may include a “suite” or “combination” of alternatives/approaches described as follows (numbered alternatives match those discussed/proposed in the NOP/NOI):
 - 1) **No Action Alternative** - An alternative that continues WS-California’s current wildlife damage and conflict management activities.
 - 2) **Reduced Environmental Impacts Alternative** - An alternative with restrictions on integrated wildlife damage management activities that reduces environmental impacts.
 - 3) **Varying Levels of Non-Lethal Activities Alternative** - An alternative that requires varying levels of nonlethal wildlife damage management.
 - 4) **A No WS-California Alternative** - A “no WS-California involvement” alternative.
- In addition to the alternatives discussed/proposed in the NOI/NOP, many comments requested consideration of one or more methods/activities and using an “integrated” approach that could consider a “suite” or “combination” of approaches. The following is an extensive list of other considerations as it relates to alternatives:
 - Include all legal control measures, both lethal and non-lethal.
 - Consider all wildlife species that are known to or that are likely to cause conflicts and all legal control measures, in a rural, suburban, and urban setting.
 - Consider limits on the use of toxicants (e.g., restricts or eliminates the use of toxicants where it could affect a threatened and endangered or non-target species) and who can apply toxicants (e.g., no use of toxicants by WS-California personnel).
 - Consider prohibition of the following five methods (referenced as being “inhumane,” “barbaric,” or “cruel,” a danger to people, companion animals, and non-target species) used in field operations: (1) foot and neck snares, (2) padded steel-jawed leghold traps, (3) body-crushing traps, (4) denning/chemicals used in denning operations, and (5) aerial gunning.

- Restrict use of toxicants to first-generation anti-coagulants and/or other toxicants that have been proven to pose very low risk of secondary poisoning of scavengers, predators, etc.
- Avoid methods that are lethal, inhumane/indiscriminate/controversial, toxic to the environment, hazardous to human health or pets, and/or could adversely affect non-target species.
- Consider limits on methods considered to be inhumane, hazardous to human health or pets, or that could adversely affect non-target species.
- Consider limits to WS-California activities on private lands.
- Consider limits on WS-California activities in wilderness study areas.
- Restrict use of lethal methods targeting beavers.
- Restrict use of lethal methods targeting predators. This alternative should consider scientific literature on populations of native carnivores on ecosystems, and effects of lethal predatory control on livestock losses.
- Restrict lethal methods to only when wildlife poses a clear and imminent risk to public health and safety or in situations where the public benefit is measurable, and the value exceeds the cost.
- Restrict methods/activities that only benefit private agriculture, livestock operations, or other private enterprises.
- Consider an alternative that strictly limits WS-California actions that are undertaken to benefit private agriculture, livestock operations, or other private enterprises (described as “subsidize[d]” actions). Instead consider actions that pursue the accomplishment of clear public benefits.
- Require proof of significant damage (>\$500 of damage is suggested) for “nuisance” animals. Require proof that the animal in question is responsible (perform DNA tracking).
- Require use of methods/activities such as daily checks/trap alarms (e.g., use of trap monitors) to “limit suffering.”
- Restrict the location where methods/activities take place (e.g., on public lands, within 500 feet of residential development [unless requested by the inhabitant]; activities should be limited to private lands, etc.).
- Considers the efficacy of method/activity and potential secondary effects.
- Considers public education, and quantifies the effort made towards public education about wildlife damage management.
- Considers a permit process for private operators to perform methods/activities.
- Only includes nonlethal methods/activities.
- Prioritizes non-lethal methods/activities first. This could include relocation, wildlife and domesticated animal lands seasonal management, technical assistance (removing bait, garbage, etc.), and several other methods (guard dogs, fencing, scare tactics, flashing lights, loud noises, and ribbons [fladry], are proven and effective methods for livestock management). Other non-lethal or more “humane” control methods mentioned include use of “eyespot” and a “trap, neuter, and return” program.
- Requires exhaustion of non-lethal methods/activities first, and only employs lethal methods/activities as necessary to address an immediate risk to human health or safety or to address a situation where CDFW has already evaluated the conflict and issued a depredation permit.

3.3.13 The CEQA/NEPA Process, EIR/EIS Document

CEQA/NEPA and the EIR/EIS Document

- Concerns about the NEPA process in a changing administration.
- Discuss the Program's consistency with existing laws and regulations (e.g., NEPA, National Forest Management Act, Federal Lands Policy and Management Act, Wilderness Act, and others).
- Discuss the regulatory framework of the Migratory Birdy Treaty Act and potential impacts from the wildlife damage management.
- Discuss how mitigation measures will be implemented and enforced, and if they are effective and if they will protect wildlife.
- Provide information about the Program, the EIR/EIS document, the CEQA/NEPA environmental process and schedule.
- Identify the responsible, trustee, and cooperating agencies.
- Reform the Program to prioritize coexisting with wildlife when conflicts arise.
- Provide justification for the purpose and need.
- Request that the Program ensure better transparency, alignment with public values (societal norms), and less actions that favor agricultural profit-making interests.

Format

- Write in concise, plain language, and use concepts that are easily understandable for the public.
- Provide references in a publicly accessible way (consider including them on the website), bookmark document sections, and include a table of contents for figures and maps.

3.3.14 Legal Issues

- The joint endeavor by USDAWS-California/CDFA should assist in resolution of potential litigation related to implementation of wildlife damage management activities in California and allow for the continuation of successful wildlife damage management activities that provide benefits to both wildlife and human constituents.
- Note that the EIR/EIS is necessary to satisfy legal requirements and ensure wildlife damage management activities are conducted in a manner that minimize potential negative interactions between people, property, and wildlife. It is critically important that rural communities and private property owners have the ability to resolve conflicts. It will also support private property, airport operations, and provide protection to endangered species.
- Consider and ensure compliance with the judgment issued in the Center for Biological Diversity lawsuit, which requires APHIS-WS-California to prepare an EIS (by 2023).
- Assess/consider timely responses to public information (Public Records Act) and Freedom of Information Act requests.

3.3.15 Other Topics

General Topics and Environmental Topics Not Listed Above

- Consider the cumulative impacts of private hunters/trappers on species population, the environment, and demographic shift.
- Discuss impacts related to climate change/greenhouse gas emissions.
- Discuss impacts related to wildfires and wildfire management/prescribed burning.
- Consider a “middle-ground” management policy for in the EIR/EIS.

CDFA/WS-California Mission

- Consider the interpretation of the WS-California mission.
- Consider if the proposed Program/WS-California actions are of clear public benefit that serves the public’s interest.
- The WS-California mission/cooperative actions should be reworded to “reduce damage by invasive species” rather than “manage damage by invasive species.” Consider the role of serving agriculture and promoting and protecting food production.
- Consider the concerns related to killing native wildlife on public lands being violation of the public trust doctrine.

Opposition

- General opposition to the current (WS-California) and Program in California (also referred to as the “no action alternative”). Specifically opposed to/against wildlife damage management methods/activities including but not limited to leg-hold traps, use of M-44s, and use of poisons and/or toxicants. This is typically also an expression in support of a program that uses and prioritizes non-lethal methods/activities.
- Request that the Program EIR/EIS reduce concerns from wildlife advocacy groups and opponents to the existing WS-California wildlife damage management program by avoiding more controversial methods and/or control activities that do not provide major benefits to the public (as compared to benefits to private agricultural/livestock operations).
- General opposition to all APHIS and WS-California activities.
- Opposition to the loss of birds and wildlife by wildlife damage management activities and work by APHIS WS-California.

Support

- General support for the current (WS-California) and proposed Program in California, and opposition to an alternative that would exclude WS-California involvement.
- General support for analyzing a variety of lethal and non-lethal methods/approaches for wildlife damage management as part of the Program.
- Support for the Program as the most cost-effective way to mitigate conflicts with predatory wildlife.
- Consider that the Program is essential to ensuring the economic viability of California farms and ranches and ensuring WS-California’s ability to effectively operate.
- Support control of invasive species.

INTENTIONALLY LEFT BLANK

4 Next Steps

4.1 CEQA/NEPA Environmental Process

Comments that relate to the scope and content of the CEQA/NEPA analysis will be used to inform the analysis contained in the draft EIR/EIS. Specifically, comments related to Program alternatives, Program coordination, and environmental considerations will be considered in preparation of the draft EIR/EIS. After the public draft EIR/EIS is circulated, comments will be considered by the lead agencies. Those comments will be considered in a response to comments as part of the final EIR/EIS, and a public hearing will be held. After the public hearing, the lead agencies will use that information to issue a decision (for NEPA, a notice in the Federal Register will be filed and a Record of Decision prepared). After the CEQA/NEPA review process is complete, additional permitting activities are anticipated.

4.1.1 List of Topics Anticipated to be Addressed in the Draft EIR/EIS

An evaluation of potential environmental impacts related to the following resource topics is anticipated to be included in the draft EIR/EIS.

- Agricultural Resources
- Air Quality, Greenhouse Gas Emissions, and Energy (Global Climate Change)
- Biological Resources
- Cultural Resources
- Environmental Justice
- Environmental Toxicology/Human Health Risk Assessment
- Hazards and Hazardous Materials
- Humaneness/Cruelty
- Hydrology/Water Quality
- Land Use/Planning
- Tribal Cultural Resources (Concerns of Native American Tribes)
- Noise
- Socioeconomics
- Wildfire
- Cumulative Impacts

4.1.2 List of Topics Anticipated to be Dismissed from Detailed Analysis in the Draft EIR/EIS

Upon review of the nature and scope of the Program and the scoping comments received, little or no potential for significant impacts exist for several CEQA checklist resource topics; these topics are planned to be eliminated from detailed analysis in the draft EIR/EIS. The EIR/EIS will include a discussion for why these topics have been dismissed. Reasons include the minor or temporary nature of impacts, the lack of exposure/dispersed nature of impacts to sensitive receptors, and in some cases, no impact at all.

- Aesthetics (Scenic Resources)/ Visual Resources
- Geology/Soils and Paleontological Resources
- Mineral Resources
- Population/Housing
- Public Services
- Recreation
- Transportation
- Utilities/Service Systems

4.2 Ongoing Outreach

Comments received during the scoping period will help identify concerned parties and key stakeholders for ongoing outreach and coordination. Outreach will occur through webpage Program updates and mailings. Additional interested parties who want to receive mailing of Program updates or have questions are encouraged to call 1.866.943.5852 or send an e-mail to the following address: info@CaliforniaWDM.org

Questions can also be mailed directly to the Program postal mail address:

California WDMP
2121 Broadway
P.O. Box 188797
Sacramento, California 95818

4.2.1 Website

The Program website (<http://www.CaliforniaWDM.org>) will continue to be publicly available throughout the CEQA/NEPA process. The website will be updated for the public to review as additional information becomes available about the Program and/or the CEQA/NEPA process. This will include notices regarding circulation of the draft EIR/EIS, guidance on how to provide comments, and details on upcoming public meetings.

4.2.2 Technical Advisory Committee

CDFA/USDAWS-California plans to convene a technical advisory of individuals with expertise on the topics of wildlife damage management. The committee is expected to help provide review and input on various aspects of the Program and environmental impact analysis. The exact structure and process for the committee is still in development. CDFA/USDAWS-California will further define the role and approach for the committee in the coming months.

4.2.3 Other Opportunities for Public Involvement

The public will have the opportunity to submit comments during the public review period for the draft EIR/EIS. This comment period will begin with circulation of the draft EIR/EIS. CDFA/USDAWS-California will announce the availability of the draft EIR/EIS and comment period by issuing a public Notice of Availability to the OPR and the Federal Register, and to other interested agencies and individuals via e-mail blast. CDFA/USDAWS-California will also post notices on the website and through other methods, as appropriate. The draft EIR/EIS will be made available for download in electronic format on the website, and to the extent feasible, as a hard copy upon written request to CDFA/USDAWS-California.

Interested state and federal agencies, Native American Tribes,¹² organizations, and individuals will be able to submit comments throughout the comment period, either online at the website (the Program

¹² Per the notification requirements of Assembly Bill 52 (AB 52) and Section 106, Native American Tribes have also been contacted as part of a separate outreach process.

website or using the Federal Register comment form), via email, or by mailing comments directly, as indicated in the public notices.

During the public review period CDFA/~~USDA~~WS-California will also conduct one or more public meetings. These public meetings (anticipated to include at least one webinar) are anticipated to include a presentation on the content of the draft EIR/EIS, the range of impacts analyzed, and the process that is being undertaken to produce the final EIR/EIS. Comments from the public will be accepted at these meetings (webinars), orally, or in a written format.

Notice of Preparation
(Posted September 10, 2020)

Notice of Preparation

Notice of Preparation

To: Responsible, Federal and Trustee Agencies
(Agency)
(Address)

From: California Department of Food and Agriculture
1220 N St., Suite 400
Sacramento, CA 95814

Subject: Notice of Preparation of a Draft Environmental Impact Report

The California Department of Food and Agriculture (CDFA) will be the Lead Agency and will prepare an environmental impact report for the project identified below. We need to know the views of your agency as to the scope and content of the environmental information which is germane to your agency's statutory responsibilities in connection with the proposed project. Your agency will need to use the EIR prepared by our agency when considering your permit or other approval for the project.

The project description, location, and the potential environmental effects are contained in the attached materials. A copy of the Initial Study (is is not) attached.

Due to the time limits mandated by State law, your response must be sent at the earliest possible date but not later than 30 days after receipt of this notice.

Please send your response to Dr. Annette Jones at the address shown above. We will need the name for a contact person in your agency.

Project Title: Wildlife Damage Management Program

Project Applicant, if any: N/A

Date September 10, 2020

Signature 

Title State Veterinarian

Notice of Preparation of the California Wildlife Damage Management Environmental Impact Report and Environmental Impact Statement

Introduction

The California Department of Food and Agriculture (CDFA) and Wildlife Services (WS-California), a state office within the U.S. Department of Agriculture's Animal and Plant Health Inspection Service (APHIS), intend to prepare a joint environmental impact report and environmental impact statement (EIR/EIS). This EIR/EIS provides environmental review of current and future wildlife damage management activities in California, including CDFA's proposed Wildlife Damage Management Program (Program) described below. The overall goal of the EIR/EIS is to review and analyze the environmental impacts of current and future wildlife damage management activities in California, including management, abatement, and, where necessary, targeted removal activities. It is anticipated that activities evaluated in the EIR/EIS would be carried out by CDFA, California Counties (Counties), and WS-California. The EIR/EIS will inform decision makers and the general public about the potential impacts of the wildlife damage management activities conducted in California, including but not limited to activities considered under the Program.

The EIR/EIS will be prepared as a "Program EIR" (PEIR) under the California Environmental Quality Act (CEQA). Under Section 15168 of the CEQA Guidelines, a PEIR may be prepared on a series of actions that can be characterized as one large project, including individual activities carried out under the same authorizing statutory or regulatory authority and having generally similar environmental effects which can be mitigated in similar ways. An initial study was not prepared because CDFA determined that an EIR is required for the Program.¹ All applicable environmental topics will be addressed in the EIR/EIS.

The joint EIR/EIS is being prepared by CDFA and WS-California in accordance with the provisions of CEQA and the State CEQA Guidelines, as well as the National Environmental Policy Act (NEPA) and applicable regulations. The CDFA will be the lead agency pursuant to CEQA while the WS-California will be the lead agency pursuant to NEPA. The CDFA and WS-California will consider comments from responsible and trustee agencies, cooperating agencies, property owners, and interested persons and parties regarding the scope and content of the environmental information to be included in the EIR/EIS.

Discretionary Action and Proposed Implementation Activities

The CDFA is mandated to protect California's agricultural industry.² As part of this mandate, CDFA must prevent the introduction and spread of any animals that are dangerous or detrimental to the agricultural industry of the state.³ The CDFA is also authorized to employ hunters and trappers to manage and eradicate harmful predatory animals.⁴

¹ Cal. Code Regs, tit. 14, Div. 6, Ch. 3 ("CEQA Guidelines") § 15063.

² Cal. Food and Agricultural Code § 401.

³ Cal. Food and Agricultural Code §§ 403, 461, 5006.

⁴ Cal. Food and Agricultural Code § 11221.

The CDFA cooperates with Counties, sister state agencies, and/or WS-California to achieve these statutory mandates. California has a “unique system” of County Agricultural Commissioners,⁵ and the Legislature has specified that where CDFA and County Agricultural Commissioners have joint responsibilities, wildlife damage management is performed at the County level by County Agricultural Commissioners while the CDFA primarily serves in an oversight and support capacity by providing data and issuing recommendations and policies.⁶ The CDFA may also undertake rapid response activities to respond to an emergency or high-risk wildlife damage scenario to promptly abate and prevent harm to the agricultural industry, human health and safety, or natural resources.⁷ Counties are authorized to work with CDFA to perform wildlife damage management activities and may work directly with WS-California to conduct these activities without need of CDFA involvement.⁸

The CDFA’s proposed discretionary action is the approval of the Program. After approval, implementation of the Program will involve a proposed array of wildlife damage management activities to be carried out by CDFA, Counties, WS-California, or any combination thereof. See “Discretionary Actions” section below for further details.

The Draft EIR/EIS, for which this Notice of Preparation (NOP) is being issued, will address the following:

- Analyze and, if necessary, guide County Agricultural Commissioners, WS-California, and/or CDFA in modifying wildlife damage management activities to mitigate environmental impacts while implementing the Program, as described below. The proposed wildlife damage management activities will occur throughout California on private and public lands as necessary to achieve CDFA’s mandate to protect the state’s agricultural industry, prevent the introduction and spread of harmful wildlife, and manage harmful predatory animals.
- Development and implementation of a process to provide streamlined CEQA environmental review for County-level wildlife damage management programs, including specific management activities conducted pursuant to a county program (collectively, “later activities”). The streamlined CEQA review process will evaluate and document whether the environmental effects of later activities are covered under the EIR/EIS and which feasible mitigation measures from the EIR/EIS must be incorporated into those later activities. This will include evaluation of whether later activities and impacts of specific wildlife damage activities are “within the scope” of the Program and EIR/EIS. A “within the scope” finding would facilitate the timely approval of later activities in a manner that ensures the incorporation of environmental protections and mitigation measures identified in the EIR/EIS. Where later activities do not qualify for a “within the scope” finding, site-specific mitigated negative declarations or EIRs will be prepared as necessary.

⁵ Cal. Food and Agricultural Code § 2276.5; see *generally* Cal. Food and Agricultural Code, Division 2 (Local Administration) at §§ 2001-2344.

⁶ Cal. Food and Agricultural Code §§ 2276.5, 2281, 5252.

⁷ Cal. Food and Agricultural Code §§ 403, 404.

⁸ Cal. Food and Agricultural Code § 2283.

Program Area

The Program will describe and formalize a framework for management, abatement, and, where necessary, targeted removal of individual wildlife that pose a threat to California's agricultural industry or human health and safety. Activities conducted under the Program are expected to occur across the state and within the various natural, urban, and agricultural environments that provide habitat for the wildlife species and animal communities to be managed under the Program. The Program envisions that specific management activities may be conducted wherever injurious wildlife species or communities are present, which is dictated by various factors such as suitable climatic and ecological conditions and proximity to human development. Therefore, the specific geographic area where each management activity or method may be used will depend on many factors, including, but not limited to, the size and density of wildlife populations; the severity of threats to agriculture, natural lands, and/or urban populations; and potential human health and safety impacts. The EIR/EIS will further define the Program Area for wildlife species to be managed under the Program, as well as for the management activities and methods proposed under the Program.

Program Description

Program Objectives

The objectives of the Program include:

- To inform the implementation of wildlife damage management activities conducted by state and local agencies throughout California.
- To facilitate the preparation of a comprehensive EIR that will analyze wildlife damage management activities undertaken throughout the state and serve as the basis for additional environmental analysis, if any is needed, for wildlife damage management activities undertaken at the County level.
- To provide rapid response to high-risk wildlife damage scenarios wherein prompt abatement is necessary to prevent harm to the agricultural industry, human health and safety, and/or natural resources.
- To provide leadership in addressing the impacts of wildlife on agriculture and increase the health and productivity of California's agricultural and natural resources.
- To maintain the availability of wildlife management materials that are effective and environmentally safe, and to support improvements to current, and the deployment of new, wildlife management materials, technologies, and methods in response to ongoing research.
- To promote broader understanding and awareness about wildlife identification, biology, life history, impacts and management activities through the CEQA/NEPA process.
- To elicit public agency and stakeholder participation in addressing wildlife impacts to agriculture, natural resources, and public health and safety.

- To support the development and implementation of measures to avoid, minimize, and mitigate unintended impacts to California’s important natural resources, including watercourses, protected species, and natural habitats, from wildlife management materials, technologies, and methods.
- To build upon existing resources, including WS-California’s data reporting system, to create a statewide information management, reporting, and data sharing system for wildlife damage incidents and management activities that would allow a robust evaluation of the efficacy of all non-lethal and lethal management activities to support an integrated and adaptive wildlife damage management approach.

Program Elements

It is anticipated that the Program would encompass five core or functional elements. These elements would comprise the main functions of the Program in furtherance of the Objectives set forth above.

Statewide Wildlife Management Protocols. The CDFA would develop guidelines and recommendations to inform and guide the implementation of wildlife damage management activities conducted by CDFA and local agencies such as County Agricultural Commissioners. The Program will establish an integrated and adaptive wildlife damage management approach that outlines acceptable practices, methodologies, and activities that may be implemented by CDFA and/or local agencies to manage wildlife across the state.

County-Level Activities. The locus of wildlife damage management would continue to be the Counties, reflecting California’s “unique system” of County Agricultural Commissioners. Participating Counties would continue to carry out wildlife damage management activities, with the support of WS-California as mutually agreed and would be able to work with and receive support from CDFA if they so desire. Specific county-level activities will be informed by the comprehensive statewide environmental analysis included in the EIR/EIS prepared for the Program.

Rapid Response. The CDFA would step up as appropriate to address high-risk wildlife damage situations calling for rapid response activities. It would do so in coordination and collaboration with the Counties, other state agencies, and WS-California. These activities will be informed by the comprehensive statewide environmental analysis included in the EIR/EIS prepared for the Program.

Information Processing and Adaptive Management. The CDFA would coordinate with WS-California to collect data on wildlife damage management activities conducted throughout the state in order to evaluate the efficacy of those activities and consider changes to the Program as appropriate to increase the efficacy of those activities. The CDFA and WS-California would coordinate with the Counties and state agencies in this process, which would occur at regular intervals. The CDFA, WS-California, and other entities may also use this data sharing process to consider changes in damage management materials and methods to improve management of injurious wildlife in the

state, both in terms of its efficacy and unintended impacts on natural resources and the environment.

The Program includes the creation of a Wildlife Management Advisory Committee. This Committee will have no regulatory or prescriptive authority but will meet periodically to review the efficacy of wildlife management activities conducted under the Program framework and consider new wildlife damage threats and management methods. The Committee may recommend changes to the Program and wildlife management activities to the Secretary, WS-California, and County Agricultural Commissioners.

Program Education and CEQA Support. The CEQA process for the Program would promote broader understanding and awareness about wildlife identification, biology, life history, impacts and management activities. CDFA will undertake additional CEQA review as needed to support future discrete wildlife damage management actions or activities undertaken by CDFA or the Counties, including for wildlife damage management materials and methods identified through the information sharing and adaptive management processes.

Discretionary Actions

CDFA Actions

The CDFA is mandated to protect the state's agricultural industry, prevent the introduction and spread of injurious wildlife, and manage harmful predatory animals.⁹ To meet this requirement, CDFA conducts a variety of activities – some of which have not been previously addressed by CEQA documents. The EIR/EIS will ensure comprehensive environmental review is completed before CDFA undertakes the following discretionary actions:

- Approval of the proposed Program.
- Authorization of existing wildlife damage prevention and management actions.
- Execution of cooperative agreements with state, local, and federal agencies for the purpose of managing or removing injurious wildlife, including harmful predatory animals.
- Issuance of instructions and recommendations to local agencies regarding the best-known means or methods for managing or removing injurious wildlife and procedures or methods to prevent future harm.¹⁰
- Undertaking the management or removal of injurious wildlife in the event a local agency has failed or neglected to use all reasonable means to manage or remove any injurious wildlife.¹¹

⁹ See footnotes 2 through 4 above.

¹⁰ FAC §§ 461, 5252, 2281

¹¹ FAC § 5254.

- Adoption of any regulations that are reasonably necessary to prevent the introduction and spread of injurious wildlife.¹²
- Employment of hunters and trappers to manage or remove coyotes and other harmful predatory animals and to remove or trap bears which are damaging livestock, agricultural crops, or standing timber.¹³
- Execution of a memorandum of understanding with the California Department of Fish and Wildlife prior to the implementation of any coyote management program to manage coyotes of public lands.¹⁴

WS-California Actions

WS-California provides federal leadership in managing problems caused by wildlife and solving problems that occur when human activity and wildlife are in conflict. WS-California strives to develop and use wildlife damage management strategies that are biologically sound, environmentally safe, and socially acceptable. In doing so, WS-California seeks to reduce damage caused by wildlife, reduce wildlife mortality, and continuously improve and modify wildlife damage management strategies. The EIR/EIS will provide comprehensive environmental review to inform WS-California decision on the following discretionary actions:

- Authorization and implementation of wildlife damage management actions.
- Execution of cooperative agreements with federal, state, and local agencies and private landowners for the purpose of managing wildlife conflicts and damage to agriculture, property, natural resources, and human health and safety.

CEQA Process

Scope of CEQA/NEPA Coverage

To the extent the impacts of the actions and activities described above are addressed in this EIR/EIS, no additional CEQA or NEPA compliance would be necessary. In providing CEQA/NEPA coverage for the range of discretionary actions taken in relation to the Program, the EIR/EIS supports the goal of providing a framework for tiered CEQA analysis. If the impacts of later actions or activities have not been disclosed or adequately evaluated in this EIR/EIS, a tiered CEQA document could be prepared pursuant to CEQA and the CEQA Guidelines. The lead agency for such later activities must comply with CEQA's public participation requirements when preparing the tiered document.

Issues for Detailed Consideration in the Analysis

This NOP presents general information on the Program, the scoping and overall CEQA/NEPA process, and the environmental issues to be addressed in the EIR/EIS. The CDFA has prepared this NOP pursuant to CEQA Guidelines Section 15082. In developing and evaluating reasonable alternatives to the Program, the EIR/EIS will identify alternatives that would feasibly attain the basic objectives of the Program but would avoid or substantially lessen any of the potentially

¹² FAC §§ 403, 407.

¹³ FAC §§ 11221, 11261, 11262.

¹⁴ FAC §§ 11281, 11283.

significant effects of the Program. During this process, CDFA and WS-California will also evaluate other issues of public concern identified as important for understanding the impacts of Program activities.

The primary purpose of the EIR/EIS is to analyze and disclose the direct and reasonably foreseeable indirect environmental impacts of wildlife damage management activities in California, including activities to be conducted under the proposed Program. The Draft EIR/EIS, as informed by public and agency input during the scoping period, will analyze and disclose the potentially significant environmental impacts associated with the Program and, where any such impacts are significant, will disclose and evaluate potentially feasible mitigation measures and alternatives that substantially lessen or avoid such effects.

Below is a preliminary list of potential environmental issues to be addressed in detail in the EIR/EIS. The analysis in the Draft EIR/EIS will determine whether these impacts could reasonably occur, whether such direct or reasonably foreseeable indirect impacts are significant based on identified thresholds of significance, and whether such impacts can be avoided or substantially lessened by potentially feasible mitigation measures and alternatives. Certain issues may be removed from detailed consideration in the EIR/EIS in the event further analysis shows those issues are not potentially significant.

- Aesthetics (Scenic Resources)/Visual Resources
- Agricultural Resources/Forestry Resources (Agricultural Economics, Rangeland)
- Air Quality, Greenhouse Gas Emissions, and Energy (Global Climate Change)
- Biological Resources
- Cultural Resources
- Environmental Justice
- Environmental Toxicology/Human Health Risk Assessment
- Tribal Cultural Resources (Concerns of Native American Tribes)
- Geology/Soils and Paleontological Resources
- Hazards and Hazardous Materials
- Hydrology
- Water Quality
- Land Use/Planning
- Mineral Resources
- Noise
- Population/Housing
- Public Services
- Recreation
- Socioeconomics
- Transportation
- Utilities/Service Systems
- Wildfire
- Cumulative Impacts
- Significant and Irreversible Impacts
- Growth-Inducing Impacts
- Unavoidable Adverse Effects

Scoping Meetings

In order for the public and agencies to have an opportunity to ask questions and submit comments on the scope of the EIR/EIS, several virtual public scoping meetings will be held during the NOP and Notice of Intent (NOI) review periods. Because the Program is a project of statewide significance, a scoping meeting is required and two (2) scoping meetings are planned. The scoping meetings will be held to solicit input from the public and interested public agencies regarding the nature and scope of environmental impacts to be addressed in the draft EIR/EIS.

Due to public health and safety concerns and current local and state orders concerning COVID-19, these scoping meetings are anticipated to be held virtually. Each meeting is expected to be approximately 3 hours.

The dates and times of the virtual public scoping meetings are:

- October 13, 2020 at 5:30-8:30 PM PST.
- October 27, 2020 at 5:30-8:30 PM PST.

Once the Draft EIR/EIS is completed, it will undergo public review for 60 days. Written and oral comments received in response to the Draft EIR/EIS will be addressed in a Response to Comments document which, together with the Draft EIR/EIS, will constitute the final EIR/EIS. The Final EIR/EIS, in turn, will inform the CDFA's exercise of discretion as a lead agency under CEQA in deciding whether or how to approve the Program.

Submittal of Scoping Comments

This NOP is being circulated to local, state, and federal agencies, and to interested organizations and individuals who may wish to review and comment on the Program at this stage in the process. In addition, CDFA and WS-California have created a website where individuals can access Program documents and keep informed of the overall progress and upcoming scheduled events. Interested persons are encouraged to visit the Program website at: www.CaliforniaWDM.org.

Written comments concerning the scope and content of this EIR/EIS are welcome. Your response to and input regarding the scope of the EIR/EIS should be sent at the earliest possible date, but not later than **November 10, 2020**.

Please submit comments via the following methods:

- By emailing comments to: info@CaliforniaWDM.org
- By visiting the following website: www.CaliforniaWDM.org
- By participating in the virtual scoping meetings on October 13th and 27th. Additional details on how to participate can be found at www.CaliforniaWDM.org.
- By mailing written comments to:

California WDM
2121 Broadway
P.O. Box 188797
Sacramento, CA 95818

After the comment period closes, CDFA and WS-California will review and consider all comments received during the comment period and any other relevant information in the development of the EIR/EIS. All comments received will be available for public review as required and allowed by law. Upon completion of the Draft EIR/EIS, a notice announcing its availability and an opportunity to comment will be published in the Federal Register, the State Clearinghouse, and County clerk offices.

Appendix B

Notice of Intent
(Posted September 10, 2020)

BILLING CODE 3410-34-P

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

[Docket No. APHIS-2020-0081]

Joint Environmental Impact Report and Environmental Impact Statement for Wildlife Damage Management in California

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Notice of intent to prepare an environmental impact statement and proposed scope of study.

SUMMARY: We are advising the public that the Animal and Plant Health Inspection Service, working in coordination with the California Department of Food and Agriculture, intends to prepare a joint environmental impact report (EIR) and environmental impact statement (EIS) analyzing alternatives for wildlife damage management in California in accordance with the California Environmental Quality Act and the National Environmental Policy Act. This notice proposes issues and alternatives for consideration in the joint EIR/EIS and requests public comments to further delineate the scope of the alternatives, environmental issues, and other issues of public concern to be considered in the EIR/EIS.

DATES: Two virtual public scoping meetings will be held on October 13, 2020, 5:30 p.m. to 8:30 p.m. PST, and October 27, 2020, 5:30 p.m. to 8:30 p.m. PST. We will consider all comments that we receive on or before November 10, 2020.

ADDRESSES: You may submit comments by any of the following methods:

- California Wildlife Damage Management EIR/EIS Webpage: Go to www.CaliforniaWDM.org.
- Electronic Mail: Send electronic mail (email) to comments@CaliforniaWDM.org.
- At the virtual scoping meetings on October 13 and 27, 2020. Details for participation can be found at www.CaliforniaWDM.org.
- Postal Mail/Commercial Delivery: Send your comment to California Wildlife Damage Management EIR/EIS, ATTN: Scoping Comments, 2121 Broadway, P.O. Box 188797, Sacramento, CA 95818.

Supporting documents and any comments received on this topic may be viewed at www.CaliforniaWDM.org.

FOR FURTHER INFORMATION CONTACT: Mr. Dennis Orthmeyer, USDA-APHIS-Wildlife Services, 3419-A Arden Way, Sacramento, CA 95825; (916) 979-2675; Dennis.L.Orthmeyer@usda.gov. Further information is also available on the California Wildlife Damage Management EIR/EIS Webpage (see ADDRESSES above).

SUPPLEMENTARY INFORMATION:

Background

California wildlife provides many positive ecological, cultural, economic, and aesthetic benefits. However, some wildlife species are involved in conflicts with humans, including damaging agricultural resources and property, preying upon or harassing livestock, damaging infrastructure, and threatening human health and safety. In certain instances, wildlife species may impede efforts by wildlife management agencies to protect and enhance natural resources. Wildlife may also prey upon populations of threatened or endangered species or damage habitat restoration efforts.

The Animal and Plant Health Inspection Service (APHIS) Wildlife Services' California office (WS-California) provides Federal leadership and expertise in managing wildlife conflicts in California to allow people and wildlife to coexist. WS-California currently uses an integrated approach to recommend and apply a range of legally available nonlethal and lethal techniques for reducing wildlife damage and conflicts. WS-California works to resolve bird and mammal conflicts with agriculture, infrastructure, property, airport operations, and threatened and endangered species protection. WS-California also works to reduce conflicts with wildlife that threaten human health and safety.

WS-California currently provides advice on wildlife damage prevention and management, information on sources of wildlife damage management materials, depredation investigations, training on the use of damage management methods, and technical assistance. WS-California also assists with implementation of wildlife damage management methods. WS-California receives requests for assistance from the public, private entities, other agencies and governmental bodies, and Native American Tribes.

WS-California's wildlife damage management activities are authorized and coordinated pursuant to Federal law (the Acts of March 2, 1931 (7 U.S.C. 8351–8352), as amended, and December 22, 1987 (7 U.S.C. 8353)), as well as memoranda of understanding and agreements with various Federal, State, Tribal, and local agencies and other governmental bodies. WS-California conducts its actions in accordance with applicable Federal, State, local, and Tribal laws, regulations, species management plans, and land management plans.

WS-California has entered into a memorandum of understanding (MOU) with the California Department of Food and Agriculture (CDFA) to develop a joint environmental review of both agencies' roles in wildlife damage management in California.

Proposed Action

WS-California and CDFG are cooperating as joint lead agencies to prepare an environmental impact report and environmental impact statement (EIR/EIS) evaluating alternatives for both agencies' involvement in managing wildlife damage and conflict in California. WS-California will serve as the lead agency for the EIS portion of the joint analysis. CDFG will serve as the lead agency for the EIR portion of the joint analysis. This EIR/EIS is being developed in accordance with the California Environmental Quality Act (California Public Resources Code 21000 *et seq.*, CEQA) and the National Environmental Policy Act (42 U.S.C. 4321 *et seq.*, NEPA). In the EIS portion of the combined report, WS-California intends to evaluate the environmental impacts of managing wildlife damage and threats to agricultural resources, property, natural resources, and human health and safety.

The scope of the analysis will include WS-California's cooperative activities with Federal and State agencies, California counties, Tribes, and local municipalities managing human-wildlife conflicts caused by birds and mammals. Cooperative activities may include:

- Reducing damage to agricultural resources;
- Reducing damage to infrastructure and property;
- Reducing wildlife strike hazards at airports;
- Managing damage by invasive species;
- Reducing threats to human health and safety associated with wildlife; and
- Protecting threatened and endangered species.

Once completed, the EIR/EIS will replace all of WS-California's district level environmental assessments on wildlife damage management in California.

Scoping

This notice opens a public scoping period for the EIR/EIS. Please review the information in this notice and the supplemental information, which may be viewed on the California Wildlife Damage Management EIR/EIS Webpage (see ADDRESSES above). Copies of supplemental information may be requested from WS-California (see FOR FURTHER INFORMATION CONTACT above). You can also register online to receive notices regarding this project at: <https://public.govdelivery.com/accounts/USDAAPHIS/subscriber/new>.

WS-California is particularly interested in receiving comments regarding biological, cultural, or ecological issues that the analysis should address (see Environmental Issues for Consideration in the EIR/EIS Analysis below). We also encourage comments that assist us in further delineating the scope of alternatives, environmental impacts, and other issues of public concern. To promote informed decision-making, we especially encourage commenters to submit any scientific data, studies, or research that you feel is relevant to the analysis. Comments may be submitted electronically or by mail (see instructions in ADDRESSES above) on or before November 10, 2020.

To facilitate public and agency involvement in the EIR/EIS process, we will hold two public meetings during the scoping period on October 13 and October 27, 2020 (see DATES above). Due to current local and State orders concerning COVID-19, the meetings will be virtual in format. The scoping meetings will solicit input from the public and interested public agencies regarding the scope of environmental impacts to be addressed in the draft EIR/EIS.

Further information concerning the scoping process, including links to attend the virtual scoping meetings, can be obtained through the California Wildlife Damage Management

EIR/EIS Webpage (see ADDRESSES above), or by contacting WS-California (see FOR FURTHER INFORMATION CONTACT above).

Alternatives

The EIS will consider a range of reasonable alternatives:

- An alternative that continues WS-California's current wildlife damage and conflict management activities (the no action alternative);
- Alternatives with restrictions on integrated wildlife damage management to reduce environmental impacts (e.g., no use of toxicants);
- Alternatives that require varying levels of nonlethal wildlife damage management; and
- No WS-California involvement alternative.

Additional alternatives may be identified through the public scoping process.

Environmental Issues for Consideration in the EIR/EIS Analysis

The primary purpose of the EIR/EIS is to analyze and disclose environmental impacts of wildlife damage management activities conducted throughout the State of California by WS-California, CDFG, and California counties. WS-California, CDFG, and the cooperating agencies have identified the following preliminary issues that will drive the analysis of the alternatives in the EIS. The public is encouraged to submit comments on these or other issues that should be considered:

- Impacts on wildlife populations;
- Effects on nontarget animal populations including species federally listed under the Endangered Species Act (61 U.S.C. 1531 *et seq.*);
- Impacts on ecosystem processes (e.g., trophic cascades);

- Impacts on Special Management Areas, including Wilderness and Wilderness Study Areas;
- Humaneness of methods;
- Impacts of the alternatives on Native American culture and resource uses; and
- Risks and benefits to human and pet safety.

More information on CEQA-specific issues considered in the EIR portion of the analysis can be found in CDFA’s Notice of Preparation available on the California Wildlife Damage Management EIR/EIS Webpage (see ADDRESSES above). After the comment period closes, WS-California and CDFA will review and consider all comments received during the comment period any other relevant information when developing the draft EIR/EIS. Upon completion of the draft EIS/EIR, a document announcing its availability and an opportunity to comment will be published in the *Federal Register*.

Done in Washington, DC, this 24th day of August 2020 .

Mark Davidson

Administrator, Animal and Plant Health Inspection Service.

CALIFORNIA DEPARTMENT OF FOOD AND AGRICULTURE AND WILDLIFE SERVICES-CALIFORNIA ANNOUNCE PUBLIC SCOPING PERIOD FOR WILDLIFE DAMAGE MANAGEMENT PROGRAM

Release #20-125

Español

SACRAMENTO, September 10, 2020 – Today, the California Department of Food and Agriculture (CDFA) and Wildlife Services-California (WS-California), a state office within the U.S. Department of Agriculture’s Animal and Plant Health Inspection Service, announced a 60-day public comment period as they prepare to draft a joint Environmental Impact Report and Environmental Impact Statement (EIR/EIS) to provide comprehensive environmental analysis of current and future wildlife damage management activities undertaken across California.

The EIR/EIS is a crucial step as CDFA carries out its responsibility to protect California’s agricultural and natural resources and promote human health and safety. This process will allow CDFA and WS-California to conduct an environmental analysis to assess the impacts of both existing and future wildlife damage management activities. The final product will include a process to evaluate and include new developments and potential environmental impacts while providing for public participation throughout.

The EIR/EIS will evaluate impacts associated with wildlife damage management activities performed by CDFA and California counties under CDFA's proposed Wildlife Damage Management Program (WDMP) as required by the California Environmental Quality Act (CEQA), and by WS-California as required by the National Environmental Policy Act (NEPA).

The CDFA and WS-California are initiating the public scoping period to solicit input from public agencies and members of the public regarding the development and scope of the EIR/EIS. The scoping period will begin on September 10, 2020 and conclude on November 10, 2020.

In conjunction with the public review period for the document, the CDFA and WS-California invite the public to participate by attending the public scoping meetings. These virtual scoping meetings are an opportunity to learn about and submit feedback on the scope of the EIR/EIS and the wildlife damage management activities to be evaluated in the EIR/EIS. Due to public health and safety requirements concerning COVID-19, these public scoping meetings will be conducted virtually. Public scoping meetings are scheduled for the following dates and times:

- Tuesday, October 13 from 5:30 p.m. – 8:30 p.m.
- Tuesday, October 27 from 5:30 p.m. – 8:30 p.m.

To participate via the webinar, please register here:

Subject: CDFA Announces Public Scoping Period for Wildlife Damage Management EIR/EIS

CDFA Announces Public Scoping Period for Wildlife Damage Management EIR/EIS

Today, the California Department of Food and Agriculture and Wildlife Services (WS-California), a state office within the U.S. Department of Agriculture's (USDA) Animal Plant and Health Inspection Service (APHIS), announced a 60-day public comment period as they prepare to draft a joint Environmental Impact Report and Environmental Impact Statement (EIR/EIS) to provide comprehensive environmental analysis of current and proposed future wildlife damage management activities undertaken across California.

The EIR/EIS is a crucial step as CDFA carries out its responsibility to protect California's agricultural and natural resources and promote human health and safety. This process will allow CDFA and WS-California to conduct an environmental analysis to assess the impacts of both existing and future wildlife damage management activities. The final product will include a process to evaluate and include new developments and potential environmental impacts while providing for public participation throughout the damage mitigation process.

The EIR/EIS will evaluate impacts associated with wildlife damage management activities performed by CDFA and California Counties under CDFA's proposed Wildlife Damage Management Program (WDMP) as required by the California Environmental Quality Act (CEQA), and by WS-California as required by the National Environmental Policy Act (NEPA).

Information materials include:

- [Notice of Preparation](#)
- [Notice of Intent](#)
- [EIR/EIS Fact Sheet](#)

The CDFA and WS-California are initiating the public scoping period to solicit input from public agencies and members of the public regarding the development and scope of the EIR/EIS. The scoping period will **begin on September 10, 2020 and conclude on November 10, 2020**. In conjunction with the public review period for the document, the CDFA and WS-California invites the public to participate by attending the virtual public scoping meetings being held on October 13 and October 27 from 5:30 p.m. – 8:30 p.m.

For more information about the public scoping meetings and how you can participate, read:

- [Scoping Flyer](#)

To sign up for our mailing list and receive information about the proposed program and how you can participate please visit: www.CaliforniaWDM.org

We hope you will participate in the process.

Best Regards,
Dr. Annette Jones

How to Participate

Participant's audio and video are automatically turned off.

If you have a question, click on the **Raise Hand** button.

If you are joining by phone, **push *9**.

How to Participate

The moderator will call on you when it is your turn to speak and unmute your line.

Please keep your devices on mute when you are not speaking. This ensures the best possible audio quality for all participants.

How to Participate

Please be respectful.

Threatening, profane, or other inappropriate language is not allowed.

Disruptive participants will be removed from the webinar.

02

Wildlife Damage Management EIR/EIS Overview and Timeline

Steve Peterson

Chris Carr

The CDFA and USDA Wildlife Services-California (WS-California) entered into a Memorandum of Understanding (MOU) in April 2017 to facilitate this project.

The MOU provides a framework for coordination and cooperation on statewide integrated wildlife damage management activities.

The MOU defined this environmental review process, supporting the goals and mission of the cooperating agencies and facilitating public participation.

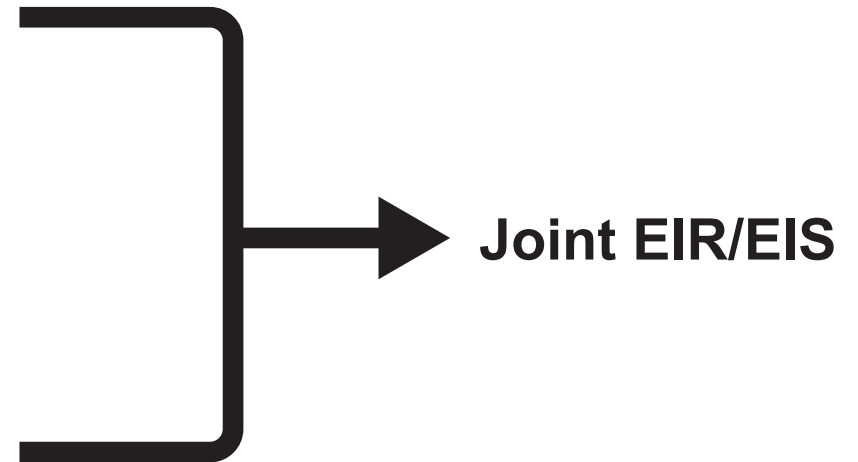

This environmental review process consists of the preparation of a joint environmental impact analysis document.

This review process includes CDFA's compliance with the California Environmental Quality Act (CEQA) and WS-California's compliance with the National Environmental Policy Act (NEPA).

The CDFR serves as the CEQA “Lead Agency” and WS-California serves as the NEPA “Lead Agency” for this joint Programmatic CEQA Environmental Impact Report (EIR) and NEPA Environmental Impact Statement (EIS).

California Environmental Quality Act (**CEQA**)
Environmental Impact Report (**EIR**)

National Environmental Policy Act (**NEPA**)
Environmental Impact Statement (**EIS**)

The CDFA is mandated to protect California's agricultural industry. As part of this mandate, CDFA must prevent the introduction and spread of any animals that are dangerous or detrimental to the agricultural industry of the State.

The CDFA is also authorized to employ hunters and trappers to manage and eradicate harmful predatory animals.

The CDFA cooperates with Counties, other State Agencies, and/or WS-California to achieve these statutory mandates.

California has a “unique system” of County Agricultural Commissioners, and the Legislature has specified that where CDFA and County Agricultural Commissioners have joint responsibilities, wildlife damage management is performed at the County level by County Agricultural Commissioners.

The CDFA primarily serves in an oversight and support capacity by providing data and recommendations.

The CDFA may also undertake rapid response activities to respond to an emergency or high-risk wildlife damage management scenario to promptly abate and prevent harm to the agricultural industry, human health and safety, or natural resources.

Counties are authorized to work with CDFA to perform wildlife damage management activities and may work directly with WS-California to conduct these activities without need of CDFA's involvement.

The WS-California currently provides advice on wildlife damage prevention and management, information on sources of wildlife damage management materials, depredation investigations, training on the use of damage management methods, and technical assistance.

WS-California also assists with implementation of wildlife damage management methods.

WS-California receives requests for assistance from the public, private entities, other agencies and governmental bodies, and Native American Tribes.

The program will consider all Counties as potential Wildlife Damage Management Program participants, including those Counties that do not currently conduct or participate in these activities.

County Wildlife Damage Management Programs

The CDFA portion of the program would encompass the following core functions:

Statewide
Wildlife
Damage
Management
Protocols

County-
Level
Activities

Rapid
Response

Information
Processing
and Adaptive
Management

Program
Education
and CEQA
Support

The USDA portion of the program would encompass the following core functions:

Resolve Wildlife
Conflicts

Protect people, pets,
and livestock from
wildlife-borne diseases

Guard natural resources,
such as timber, from
wildlife damage and
educate the public about
wildlife and wildlife
damage management

Support local agriculture
- approximately
75 percent of
WS-California's
cooperative agreements
are with California small
farmers and ranchers

Respond to
Emergencies

Protect human health
and safety at airports,
collaborating closely
with the Federal Aviation
Administration,
Department of Defense,
and other Government
agencies

Protect Threatened
and Endangered
Species

Monitoring and
Controlling Wildlife
Diseases

Protecting food safety
and public health
through wildlife disease
monitoring

It is the objective of the EIR/EIS to analyze and, if necessary, guide County Agricultural Commissioners, WS-California, and/or CDFA in modifying wildlife damage management activities to mitigate environmental impacts.

The program identified in the EIR/EIS will develop and implement a process to provide streamlined CEQA environmental review for County-level wildlife damage management programs, including specific management activities conducted pursuant to a County program.

The CDFA and WS-California will support the North American Model of Wildlife Conservation, based on the principle that wildlife resources are owned collectively and held in trust by Government for the benefit of present and future generations.

The defined Wildlife Damage Management Response process is endorsed by CDFA and WS-California and will be considered as part of the EIR/EIS analysis process.

Wildlife Damage Response Process

The EIR/EIS will consider a range of reasonable alternatives:

An alternative that continues WS-California's current wildlife damage management and conflict management activities (the no action alternative)

Alternatives with restrictions on integrated wildlife damage management to reduce environmental impacts (e.g., no use of toxicants)

Alternatives that require varying levels of nonlethal wildlife damage management; and No CDFA or WS-California involvement alternative

Additional alternatives may be identified through the public scoping process

EIR/EIS Overview/Issues for Detailed Analysis

- Aesthetics (Scenic Resources)/
Visual Resources
- Agricultural Resources/Forestry
Resources (Agricultural Economics,
Rangeland)
- Air Quality, Greenhouse Gas Emissions,
& Energy (Global Climate Change)
- Biological Resources
- Cultural Resources
- Environmental Justice
- Environmental Toxicology/Human
Health Risk Assessment
- Tribal Cultural Resources (Concerns of
Native American Tribes)
- Geology/Soils and Paleontological
Resources
- Hazards and Hazardous Materials

EIR/EIS Overview/Issues for Detailed Analysis (continued)

- Hydrology
- Water Quality
- Land Use/Planning
- Mineral Resources
- Noise
- Population/Housing
- Public Services
- Recreation
- Socioeconomics
- Transportation
- Utilities/Service Systems
- Wildfire
- Cumulative Impacts
- Required CEQA Sections
 - Growth Inducement
 - Cumulative Impacts
 - Alternatives
- Required NEPA Sections
 - Purpose and Needs Statement
 - Public Health and Safety

**Within the analyses described above,
the following issues will be considered:**

Impacts on wildlife populations
and habitats

Effects on non-target animal
populations including species
protected by the federal and
California Endangered Species
Acts and other applicable wildlife
laws and regulations;
Impacts on ecosystem processes
(e.g., trophic cascades)

Impacts on Special Management Areas, including Wilderness and Wilderness Study Areas

Humaneness
of methods

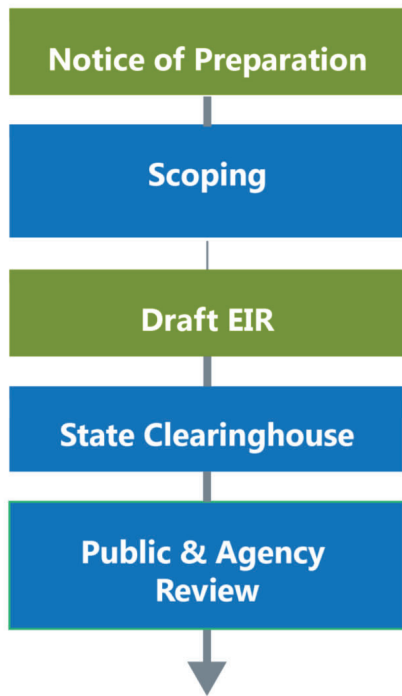

Impacts of the
alternatives on Native
American culture and
resource uses

Risks and
benefits to
human and pet
safety

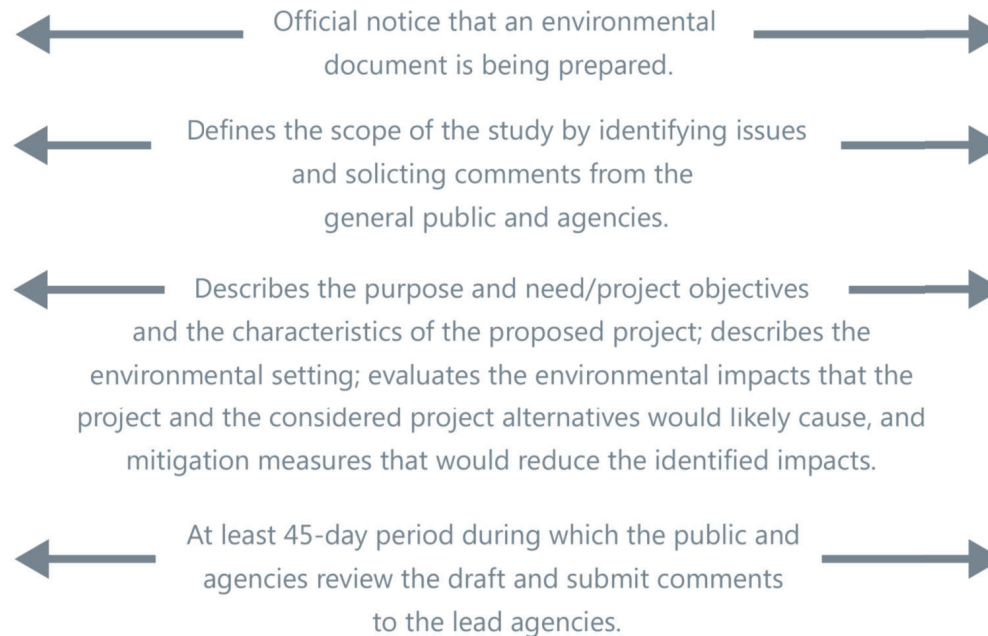

EIR/EIS Overview/Document Development Process

KEY ■ Documentation and disclosure ■ Public and stakeholder participation

CEQA (Environmental Impact Report)

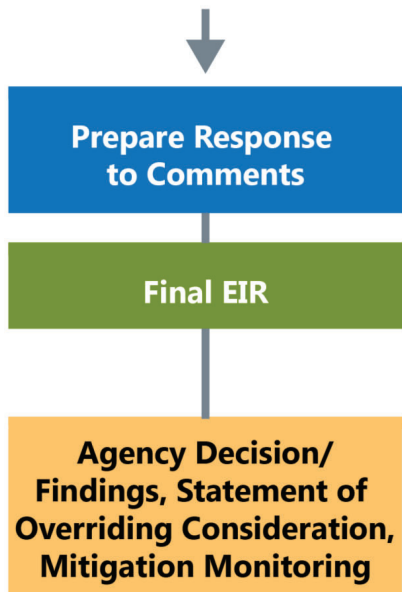

NEPA (Environmental Impact Statement)

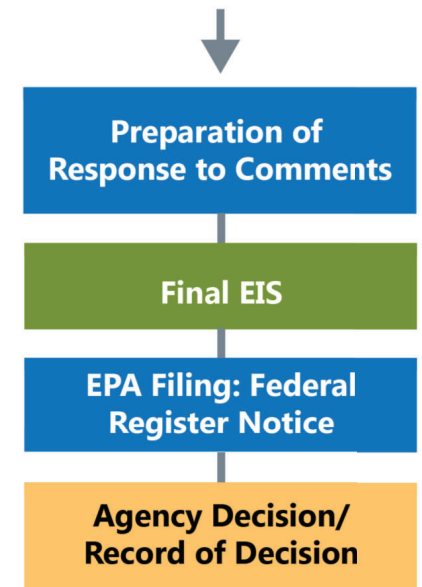

EIR/EIS Overview/Document Development Process (continued)

KEY ■ Documentation and disclosure ■ Public and stakeholder participation ■ CEQA/NEPA compliant fully informed decision

CEQA (Environmental Impact Report)

NEPA (Environmental Impact Statement)

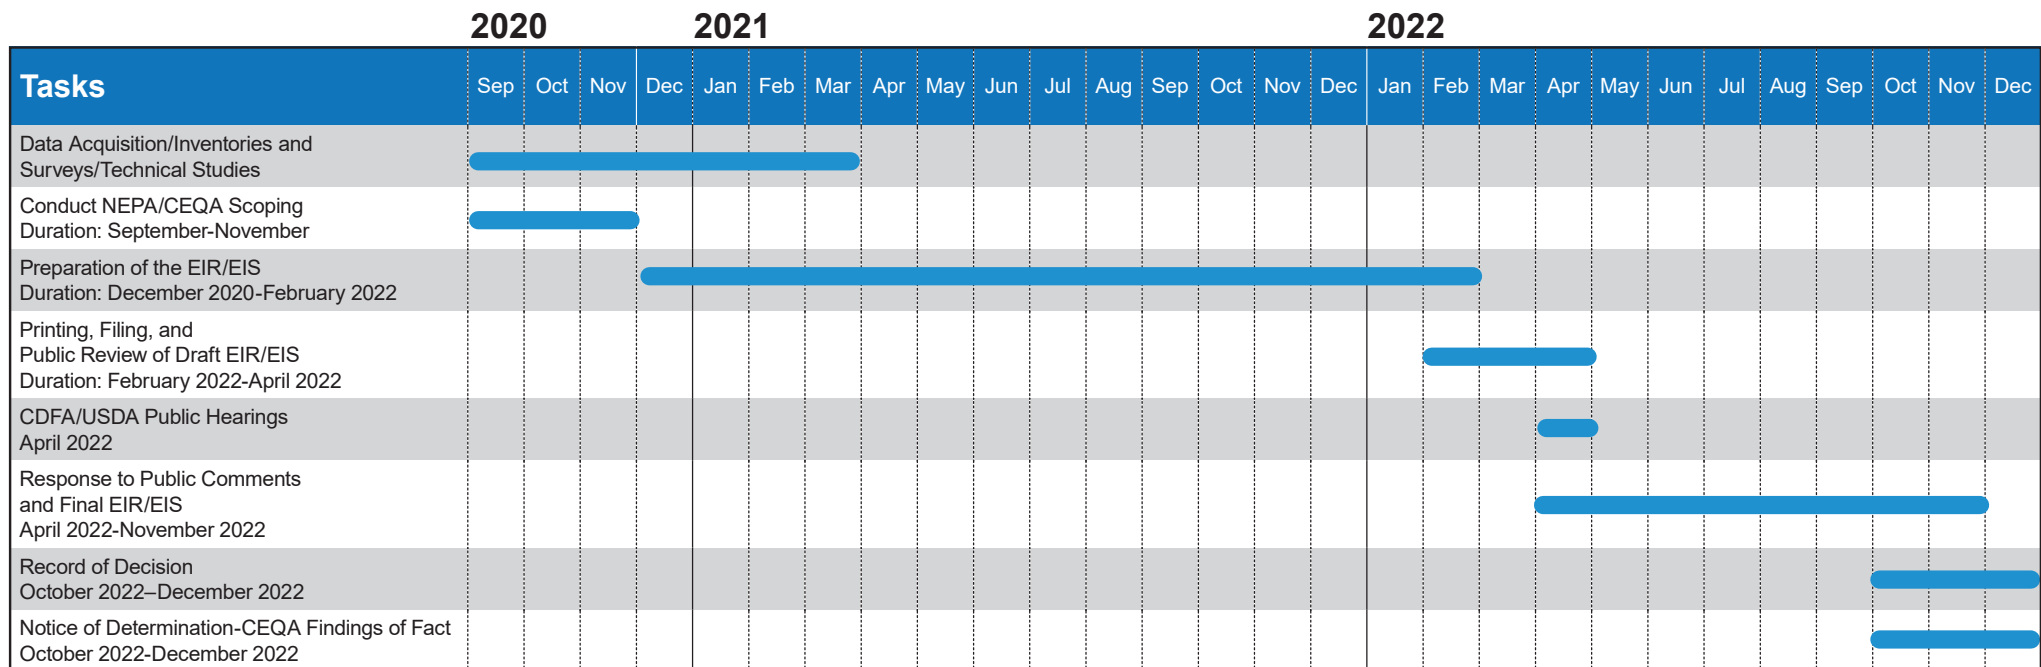

← Comments on the EIR/EIS considered by the lead agencies. →

← Addresses the comments on the draft document and from any public hearing, presents the final evaluation of project-induced environmental impacts and ways to mitigate significant impacts. →

← Lead agency uses information from the final document and the project record to issue a decision and document commitments and mitigation. →

4 FLORENCE A. COLBY, a Certified Shorthand Reporter in
5 and for the State of California.

6 ---oOo---

7 PROCEEDINGS

8 ---oOo---

9 MR. PETERSON: Okay. Hello and welcome to the
10 second public scoping meeting for the California
11 Wildlife Damage Management EIR/EIS Project. My name is
12 Steve Peterson. We'll begin with other introductions
13 in a moment, but we thought we'd let everyone get a
14 chance to get up and running on the technology, so
15 we'll be on hold for a minute, but we'll be starting in
16 just a few minutes.

17 (A brief recess was taken.)

18 It looks like it's 5:35 so let's go ahead and
19 get started. And as folks logged on, they probably got
20 a message saying that this meeting is in fact being
21 recorded, and so also I want to let you know that in
22 addition to be recorded, it ultimately will be posted
23 on the project website which we hope that you folks had
24 an opportunity to visit.

25 So with that, I'd like to say welcome. My

1 name is Steve Peterson. I am a project manager with
2 Dudek. We are the prime consultants preparing the
3 environmental impact report environmental impact
4 statement for the California Wildlife Damage Management
5 program, and I am joined by my colleague and friend,
6 Lisa Marie Alley of Kearns and West, and we'll be
7 navigating the program along with the assistance of a
8 couple of other folks who we'll introduce in just a
9 moment.

10 We will be joined by Dennis Orthmeyer who is
11 the Wildlife Services State Director US Department of
12 Food and Agriculture APIS program. We hope that
13 Dr. Annette Jones will join us. If not, we do have a
14 statement that she recorded in the prior meeting two
15 weeks ago, and with that we also have Chris Carr, who
16 is project counsel who will be joining us as well.

17 So, Lisa Marie, if you'd like to go through
18 the outline of the program, we'll go from there.

19 MS. ALLEY: Thank you so much, Steve, and
20 welcome everyone to tonight's second scoping meeting
21 during this public involvement process for this
22 project.

23 Tonight, we are going to go have five main
24 areas that we are going to be focusing on. One is the
25 opening remarks with some logistics about how you can

1 participate in the meeting. The second will be an
2 overview at a high level of the what the EIR/EIS
3 program is intending to do in the timeline.

4 We will then take a series of questions and
5 answers, primarily focus on the process and things
6 regarding that. Your comments will come later during
7 the public comment period where we're soliciting your
8 comment and input as we develop this program, and then
9 we'll have some follow up and some closing remarks.

10 So with that, I would like to turn it over to
11 Dennis Orthmeyer with USDA to make some opening
12 statements.

13 MR. ORTHMEYER: Thank you, Lisa Marie. My
14 name is Dennis Orthmeyer, and I am the State Director
15 for Wildlife Service in California. I want to thank
16 you for joining today's public scoping webinar on the
17 California Wildlife Damage Management EIR and EIS.
18 Wildlife Services in California in coordination with
19 the California Department of Food and Agriculture
20 intends to prepare a joint NEPA environmental impact
21 statement and CEQA environmental impact report to
22 provide a robust and comprehensive environmental
23 analysis of current and proposed wildlife damage
24 management activities undertaken throughout California
25 when our assistance is needed.

1 Every day integrated wildlife damage
2 management activities helps citizens, organizations,
3 industries, and government agencies resolve conflict
4 with wildlife to safeguard human health and safety, and
5 to protect health and value to American agricultural
6 and natural resources as well as protect property.

7 As a non-regulatory agency, wildlife service
8 is an oriented program that embraces the public trust
9 doctrine and North American model for wildlife
10 conservation. We work to ensure that native wildlife
11 populations are conserved and conflicts are managed
12 through science based management approach.

13 This proposed wildlife damage management
14 program is critical to upholding our mission of
15 promoting prosperous agricultural helping rural
16 Americans thrive, and preserving our nation's natural
17 resources through conservation and healthy private
18 working lands.

19 Thank you for joining today's webinar. We are
20 looking forward to hearing your comments.

21 MS. ALLEY: Thank you, Dennis, and now we are
22 going to show a brief opening remarks that Dr. Jones
23 gave at the last scoping meeting two weeks ago. If you
24 just give us a moment, we are going to pull that video
25 up.

1 (Whereupon a video was played.)

2 Thank you, Lisa Marie. Hello, everyone. I am
3 Dr. Annette Jones with the California Department of
4 Food and Agriculture. As the state veterinarian and
5 director of animal health, and food safety services, I
6 serve as the state's veterinary authority on animal
7 health and food safety on behalf of the EIR/EIS.

8 Our mandate at CDFA is to promote and protect
9 the food production in California. This responsibility
10 encompasses the prevention of wildlife damage to
11 agriculture and livestock in various agricultural and
12 public infrastructures often in collaboration with
13 county agricultural commissioners and other State and
14 Federal agencies. We are proposing the Wildlife Damage
15 Management program to protect California's agriculture
16 from damage caused by wildlife, to protect human health
17 and safety, and to protect our natural resources.

18 Again, thank you for joining us tonight, and
19 your participation in this public scoping process. We
20 look forward to your input. I'll turn it back over to
21 you, Lisa Marie.

22 MS. ALLEY: That was a recording from
23 Dr. Jones from last week's -- two weeks ago public
24 scoping meeting. If you just give us a moment to get
25 the slides back up.

1 Now, we're going to go through some of the
2 purpose of tonight's meeting, the logistics, and some
3 ground rules that we've established.

4 So tonight's purpose of the meeting in the
5 scoping process is to inform you, the public, and
6 partner agencies, about the proposed project. We are
7 also going to be talking about the timeline, how you
8 can submit your comments, and have your voices heard in
9 the process. We will also be providing a time to do Q
10 and A, and to receive those comments as we advance the
11 program -- timeline, excuse me.

12 So our goal tonight is to have the question
13 and answer session begin around 6:00 p.m., then we will
14 turn it over to the public comment period. Our meeting
15 does go tonight until 8:30 p.m.

16 Now, let's talk about how you can participate
17 in tonight's conversation. If you have a question, or
18 you need something, you can use the raised hand
19 function on the Zoom webinar. I think by now we have
20 been doing a lot of these, so most people know where
21 that's located, but we wanted to provide you with a
22 screen shot. To ask questions this is a Q and A
23 feature that we will be utilizing later on. If we can
24 go to the next slide please.

25 Also, I do see we have a number of people

1 joining us by the phone tonight. If you do want to
2 make a comment during the comment period or ask a
3 question, we ask that you star nine.

4 So when it's your turn to ask a question or
5 provide public comment later on in the meeting, we will
6 have you on mute until we call on you, and then we will
7 un-mute you. We do ask everyone to keep themselves on
8 mute until you are called upon just to help with
9 background audio.

10 Finally, we wanted to talk about some of the
11 ground rules. Please be respectful. Let's not use
12 profanity and inappropriate language, and we do want to
13 caution people that if there is some disruptive
14 language or others, we will remove you from the
15 webinar.

16 Now, what I would like to do is turn it over
17 to Steve to talk about the details of the program and
18 the process.

19 MR. PETERSON: Thank you, Lisa Marie, I
20 appreciate that. With that, I'll go ahead and walk
21 through the program.

22 Obviously, there's a lot more detail that's
23 available to you on the project website, which is
24 Californiawdm.org. If you haven't been there already,
25 we strongly encourage you to visit it. A lot of the

1 foundational information and background documentation
2 is available there as well as ways to communicate with
3 us as we go through the process. So with that, I'll
4 take a walk through how we got to where we are this
5 evening.

6 In 2017, California Department of Food and
7 Agricultural or CDFA, and the U.S. Department of
8 Agriculture, USDA, entered into a memorandum of
9 understanding to facilitate the process that we are
10 going through. The MOU provides a framework that these
11 agencies work together on a statewide approach to
12 integrating Wildlife Damage Management activities in a
13 unified way.

14 It also identified the environmental review
15 process that we are currently undertaking as well as
16 supporting the overall goals of both the Federal
17 Government and the State Government, and the
18 cooperating agencies, and allowing the public to
19 participate in this process to provide comment and
20 direction.

21 The document, itself, will be a joint
22 environmental impact analysis document, and I'll get
23 into the nuts and bolts of that in a minute, but the
24 short version is that by having a joint document, there
25 will be a single set of discussions related to both

1 State and Federal environmental compliance related to
2 the National Environmental Policy Act, and the
3 California Environmental Quality Act, and we'll walk
4 through that process and what it might mean for your
5 consideration of the project.

6 Again, those are the two foundational pieces
7 of the process, and we are responding to both CEQA and
8 NEPA. Within these processes, CEQA and NEPA both
9 require that a lead agency be identified. And for
10 those purposes, CDFA and USDA are those agencies that
11 serve that function. So they are the clearing house
12 and ultimately the agency decision makers for those
13 processes.

14 Again, this is a process by which they'll be a
15 unified analysis that has as a unified project
16 description with different discrete pieces that we'll
17 go into in a moment.

18 CDFA is mandated to be the protector of
19 agriculture within California, and as part of that,
20 controlling animals that are dangerous or detrimental
21 to the agriculture industry of California is the key
22 element of their mission.

23 Also, there has been, and continues to be
24 activities by CDFA to employ hunters and trappers to
25 manage and eradicate those animals of concern. CDFA

1 works with counties in a unique system by which the
2 agricultural commissioners are working very closely
3 with the California Department of Food and
4 Agricultural, and with that, they have joint
5 responsibilities and shared functions that are led by
6 county agricultural commissioners within individual
7 counties.

8 Within the program that's proposed, CDFA will
9 primarily serve in an oversight support capacity, and
10 will focus on providing data and recommendations to
11 help with adaptive management as processes move forward
12 throughout the state.

13 Also CDFA has identified the need to continue
14 to have rapid response capability to respond to issues
15 of emergency or high risk settings or scenarios, such
16 as what's recently happening with nutria within the
17 Central Valley of California.

18 Again, counties are authorized to work with
19 CDFA, but also they have the capability to work
20 directly with Wildlife Services California, the USDA
21 partner in this process, and that is an on-going set of
22 activities that has been going on along with the State
23 function for over 100 years.

24 Wildlife Services California currently
25 provides advice, prevention management, wildlife damage

1 management materials, degradation investigations, as
2 well as training methodology and technical assistance
3 in response to requests. The implementation of actual
4 wildlife damage management methods is also within their
5 suite of services and wildlife services serves a wide
6 variety of entities beyond county government such as
7 the public at large, private companies, other
8 governmental agencies, such as U.S. Fish and Wildlife
9 Service, other governmental bodies, and the Native
10 American Tribes within the State of California.

11 The program that's being considered within
12 this joint analysis to consider all counties within
13 California, even though there are some counties that do
14 not currently have a Wildlife Damage Management program
15 that is active, so while those counties may not
16 currently be active, they'll be considered as part of
17 the analysis on both direct impacts and cumulative
18 impacts.

19 This map shows the current status of
20 cooperative programs with the Federal Government,
21 Wildlife Services California. As you can see, there
22 are many counties that have independent programs that
23 they conduct on their own, and in collaboration with
24 other counties as well as coordination with the State
25 and the Federal Government. And as I mentioned a

1 moment ago, there are a number of counties that
2 currently do not have a program in place.

3 So with that, there are a number of functions
4 that would be taken forward by CDFA. Again, coming up
5 with statewide Wildlife Damage Management protocols,
6 understanding and coordinating information related to
7 countywide activities, again, rapid response, and also
8 the information processing adaptive management
9 function.

10 Program Education, and CEQA support are also
11 functions that this program is being brought forward by
12 CDFA to accomplish. USDA has some key functions that
13 have been listed here obviously resolving wildlife
14 conflicts, protecting people, pets, and livestock
15 beyond the mission of CDFA, and also protecting natural
16 resources, such as timber, and also making sure that
17 wildlife damage management is accomplished for a
18 variety of settings as well as providing education for
19 the public and other -- other functions.

20 It's important to note that the wild life
21 services function is really focused in a great degree
22 to local agricultural. As the graphic shows that
23 approximately 75 percent of the activities that
24 wildlife services conducts are responsive to small
25 farmers and ranchers. Wildlife services also has an

1 emergency function as does the CDFA, and in addition to
2 these functions, there are Federal Aviation
3 Administration and Department of Defense functions
4 related to aviation, and specifically to bird striking,
5 those issues.

6 As I mentioned a moment ago, U.S. Fish and
7 Wildlife service is actually a client of Wildlife
8 Services in activities to protect rare threatening
9 endangered species that are subject to degradation by
10 other species. Also making sure that monitoring and
11 controlling wildlife diseases is accomplished, and
12 there's a very strong food safety function related to
13 agricultural, and what that means to the protection of
14 food supplies, and other food stuffs.

15 In short, the objective of the EIR/EIS is to
16 analyze and guide the county ag commissioners and work
17 collaboratively between wildlife services and CDFA to
18 modify wildlife damage management activities to be
19 conducted in a manner to mitigate environmental impacts
20 to the greatest degree possible. Those are primary
21 goals of both NEPA and CEQA, and that would be the key
22 focus of this particular document.

23 Also, as I mentioned a moment ago, there is a
24 nexus and a linkage between the county led activities
25 or county level activities and the programatic document

1 that we preparing related to CEQA. So with that,
2 county governments could have the option to tier from
3 the program document that's being prepared to specify
4 management actions in a manner that is consistent with
5 what's being considered within this analysis.

6 Also, both CDFA, and Wildlife Services will
7 support the North American Wildlife Conservation, and
8 also as Dennis mentioned, acknowledge and show strong
9 support for the preservation of public press resources
10 throughout the State of California.

11 Again, the defined Wildlife Damage Management
12 response process has long been endorsed by CDFA and
13 Wildlife Services, and will be considered as a key part
14 of this analysis. That function is shown in this
15 graphic, which very simplistically identifies the
16 process by which decision making is conducted and
17 response is provided. So in essence, there is a
18 process that is undertaken in every occasion; that
19 methodology is very well defined, and that will be one
20 of the foundational pieces of the impact analysis.

21 The council on environmental quality stated
22 many years ago that alternatives are the heart of NEPA
23 and that also applies to CEQA. And so the range of
24 alternatives that is being considered at this juncture
25 is listed here looking at current operations,

1 alternatives or integrated damage management programs
2 being another alternative that'll be considered. Also,
3 looking at non lethal programs, and also a variety of
4 other things. But we strongly encourage folks that are
5 participating in this process to provide suggestions
6 and recommendations related to other alternatives that
7 should be considered as part of this impact assessment
8 process.

9 The suite of resources that will be addressed
10 are listed here. I am not going to read through them,
11 but this is the proposed range of the impact analysis
12 that will be conducted as part the impact analysis for
13 both CEQA and NEPA.

14 Again, these are very, very detailed analyses
15 specific to each topical area, each resource area, and
16 also within both CEQA and NEPA there are nuances that
17 require different things between the two different
18 functions. For CEQA, growth inducement, cumulative
19 impacts, and also a strong -- very strong statement
20 related alternatives is part of the CEQA guidelines,
21 and also under NEPA, a purpose and needs statement is
22 required as is public health and safety analysis.

23 So, again, within the impact, the analysis
24 described above, these issues will focus on impacts for
25 wildlife populations and habitats, effects on non

1 target animals and habitats including Federally and
2 State listed endangered species, other regulations and
3 laws and ecosystem processes.

4 Other considerations that will be addressed is
5 the humaneness and the methods used in these programs,
6 the effects, or the potential effects on Native
7 American culture and resources, and human, and human
8 pet issues.

9 Here's a graphic that's been presented in this
10 image, in the subsequent image, that shows a couple of
11 things. One is the parallel processes that we are
12 conducting. As you'll see on the website, there are
13 two documents that are shared there. One is the CEQA
14 notice preparation which was logged with the State
15 Clearing House on the 10th of September, and also the
16 Federal Notice of Intent to prepare an environmental
17 impact statement, which was published in the Federal
18 Register also on September 10th.

19 We're currently conducting scoping, and we're
20 preparing a draft document which will serve as both as
21 both the draft EIR and the draft EIS. At that point,
22 it will be filed with the State Clearing House for the
23 CEQA function, and EPA filing with the Federal
24 Register, and then we'll go through another public
25 outreach process by which we'll be soliciting your

1 comments and critiques related to that impact analysis,
2 and we'll looking to interested and responsible
3 agencies to provide those types of comments as well.

4 Within the process, after the end of the
5 document-review period, all comments received will be
6 put together in a compendium, will be assigned specific
7 responses, and those responses will be published as
8 part of the final document which will serve as both the
9 final EIR and EIS. Mechanically, what happens then, is
10 the Federal Register filing on the Federal side, and
11 then ultimately, on the State side, the agency
12 decision, the finding of fact, and statement of both
13 are at a consideration, if needed. Also, in
14 mitigation, margin program will be adopted, and on the
15 Federal side, the agency's decision and the rod or the
16 record of decision will be published.

17 The process that we are undertaking, as you
18 can see, we're currently conducting scoping, and that
19 will end in November, and then we're going to be
20 preparing the document proper. We look to release the
21 public draft document in February of 2020[sic]. So we
22 are going to be very busy in working through the impact
23 analyses for all the research areas that I mentioned a
24 few moments ago. And that's target date for taking.
25 Currently, we the projected this process will be

1 concluded in December of 2022, and that's the process
2 and the schedule that we working with at this juncture.

3 With that, what I'd like to do, is give it
4 that back to Lisa Marie, and she can facilitate any
5 questions and answers along with our colleague,
6 Angelica Chu who is manning the chat box.

7 MS. ALLEY: Thank you, Steve. We are now
8 going to move into the question and answer portion of
9 tonight's meeting. Please note, public comments will
10 be received after this. Right now we're looking to
11 have -- ask anyone with a question about the process,
12 or the time line of things of that nature.

13 If you do have a question, you can put it into
14 the Q and A box. We have received a couple questions
15 so far that we were able to answer in that function.
16 Does anyone have a preface-related question at this
17 time?

18 All right. Hearing no questions, we are now
19 going to move into the public comment period. We are
20 asking that you limit your public comment to three
21 minutes at this time. We are asking if you would like
22 too please leave a public comment to raise your hand.
23 We will call on you in the order we receive them. We
24 are also going to have a timer going for those that are
25 on the phone. If you would like to leave a comment,

1 push star 9.

2 We also want to remind folks that there are
3 additional ways to make public comments on this process
4 via e-mail, via US Postal Mail, and through a voice a
5 mailbox we set up, which we'll go over all of those
6 things after the public comment period.

7 So actually, let's see, we did get -- so we
8 have one quick question, Steve, I want to get some
9 clarity on about when the draft EIR/EIS would be
10 released? Is it February of 2020, 2021, or 2022?

11 MR. PETERSON: I am sorry if I mumbled a bit,
12 it's 2022.

13 MS. ALLEY: So thank you for answering that.
14 So what we are going to do now is, I see one more
15 question in there. Let me get back to you, Sarah, on
16 that in just a moment. Why don't we start with the
17 comment portion of the meeting, and please forgive me
18 if I mispronounce your name. But we are going to start
19 with the a gentleman named John Buckley. John if you
20 could unmute yourself, and once you start speaking, we
21 will start that three-minute timer.

22 John, we do not hear you. I see that you are
23 off -- now, you are muted, John. Now you are unmuted,
24 but we still do not hear you. Why don't we move to the
25 next person to provide a comment, and John we'll come

1 back to you in a minute. We'll have our colleague,
2 Angelica, reach out to you via the computer to see if
3 we can figure out what's going on.

4 Next up, we are going to go to Lizzy Pennock.
5 Lizzy, if you could unmute yourself, please.

6 MS. PENNOCK: Hi, can you hear me?

7 MS. ALLEY: Yes, we can.

8 MS. PENNOCK: Hi, thank you. Hi, my name is
9 Lizzy Pennock, and I am an intern with the Western
10 Wildlife Nonprofit Wild Earth Guardian. Today I will
11 speak to the impacts of Wildlife Services lethal
12 management methods on special management areas
13 including wilderness and wilderness study areas.

14 The EIR/EIS must consider the impact of
15 conducting lethal wildlife damage management activities
16 on California's wildernesses, wilderness study areas,
17 and other protected areas. Wilderness areas must be
18 administered in a manner that will leave them
19 unimpaired for future use and enjoyment as wilderness,
20 and that would provide for the protection of these
21 areas and the preservation of their wilderness
22 character.

23 Wilderness is defined as an area where the
24 community of life is untrammelled by humans, and the
25 land retained its primeval character as -- in which to

1 protect it and manage so as to preserve its natural
2 condition. Agencies administering wilderness areas are
3 responsible for preserving the wilderness character of
4 the area.

5 The EIR/EIS must include an analysis of the
6 potential effects of predator control on wilderness.
7 It must disclose in detail environmental impacts
8 including but not limited to the effects of killing
9 carnivores to benefit ungulates, endangered species and
10 domestic livestock on the wilderness character. The
11 importance of predators in wilderness cannot be
12 overstated. Both the bureau of land management and the
13 forest service manuals recognize the importance of
14 predators and the importance of national processes in
15 determining wildlife population.

16 In considering alternatives, the EIR/EIS must
17 address how any predator control that alters the
18 natural and untrammled conditions of wilderness by
19 killing native predators is consistent with the
20 specific statutory mandates governing each of the many
21 wilderness areas in California.

22 Public services must disclose how its planned
23 actions and methods are consistent or not consistent
24 with the mandate to preserve natural, untrammled, and
25 undeveloped conditions imposed by the act, or any

1 additional mandates imposed by each wilderness'
2 establishing legislation.

3 To comply with governing law, all impacts from
4 wildlife services activities must be compared to the
5 baseline levels of disturbance present in each
6 wilderness study area when it was designated, and on
7 all of the relevant resources the wilderness study area
8 was designated to protect.

9 Further, the public must be informed about
10 activities which might be conducted in these areas that
11 the public may evaluate whether the proposed activities
12 are consistent with the specific legislative mandates
13 and management plans governing management of these
14 areas.

15 High specific analysis is required for
16 wildlife services to ensure compliance of guiding
17 legislation including, but not limited to NEPA, the
18 National Forest Management Act, The Federal Lands
19 Policy and Management Act, The Wilderness Act and
20 others. Public services California cannot proceed with
21 predator control activities -- with lethal predator
22 control activities in wilderness study areas without
23 this analysis because otherwise it will violate these
24 laws. Thank you, that's the end of my comments.

25 MS. ALLEY: Thank you so much, Lizzy.

1 Next up is Carol Blaney. Carol, if you could
2 unmute yourself. I see that you are still on mute.
3 There you go. Thank you, Carol.

4 MS. BLANEY: Thank you. My name is Carol
5 Blaney. I am a biologist, and a retired ranger
6 naturalist from the national park service in Yosemite.

7 The first thing I would like to say is ditto
8 to everything Lizzy Pennock just said.

9 And, second, I would like to say that I'd like
10 to reject the no action alternative, and wildlife
11 services current approach to managing wildlife in
12 California is not functional.

13 In 2018, wildlife services killed nearly
14 30,000 native California animals, including black
15 bears, bobcats, mountain lions, coyotes, eagles, and
16 hawks, and target and non target animals are both
17 killed by the lethal methods that are currently used.

18 From a biological prospective, all of these
19 animals are crucial to the survival and health of
20 California's native ecosystems and our economy as well.
21 This killing of wild animals with poisons both kill
22 target and non target animals, and also moves poison
23 around in the food chain. Traps kill target and non
24 target animals, and they also cause horrible pain and
25 suffering. One of the things that's been called into

1 question is the humanness of such methods, and I think
2 that that needs to be fully considered in every
3 decision for future planning.

4 Tuft carnivores are targets of these -- our
5 efforts, and we know now from decades of research that
6 targeting and removing tuft carnivores actually does
7 not work. Think of the studies in Yellowstone where
8 wolves are reintroduced and whole ecosystems changed
9 and become productive. Removing tuft carnivores
10 actually weakens ecosystems.

11 And the thrust of all my comments is that
12 future decisions and planning should be made with more
13 effective scientific methods in mind looking first at
14 non-lethal methods of all kinds and exhausting those.
15 Looking at examples of where non-lethal methods have
16 worked, and one example is the Yosemite management of
17 black bear population which initially was completely
18 lethal leaving hundreds of bear carcasses all over, and
19 now is a multi-disciplinary effort to include
20 education, public education, bear management
21 specifically, and those are the kinds of approaches
22 that actually work in the long run. Removal of a
23 single predator, or multiple predators might seem to
24 work intially as a quick fix that kills them, but in
25 the long run, the kind of management that needs to

1 happen, needs to be planned for, is multi-disciplinary
2 and proactive, not reactive by simple lethal methods.
3 And so I would like to suggest that limiting the use of
4 lethal methods, especially those that have hit
5 non-target animals hard and endangered and threatened
6 species hard is crucial, and those are the end of my
7 comments. Thank you so much.

8 MS. ALLEY: Thank you, Carol.

9 Next up, we are going to take Kate Spencer.
10 Kate, if you can take yourself off mute.

11 MS. SPENCER: Good evening. Can you hear me?

12 MS. ALLEY: Yes, we can, thank you.

13 MS. SPENCER: Good. Thank you for this
14 opportunity to comment. I am a whale watching captain
15 on Monterey Bay. I am a biologist, and I have worked
16 in wildlife rehab. So I would like to comment on
17 behalf of predators. I would like to ditto everything
18 that Lizzy Pennock and Carol Blaney just said, and
19 advocate for killing fewer animals, minimizing the use
20 of lethal methods that are excessively painful, and
21 those that kill non-target animals as well.

22 I operate one of several profitable whale
23 watching companies on Monterey Bay, so I am in wild
24 like tourism, and many of my best customers spend many
25 tens of thousands of dollars a year traveling to see

1 and photograph wildlife. So I'd like to suggest that
2 even though I realize it's not part of the mandate of
3 the this program, that you should consider that there
4 are other stakeholders and wildlife photography and
5 wildlife tourism are a big growing field, and a very
6 important part of California's economy.

7 I do applaud control of invasive species like
8 nutria, that's great. I want to support management
9 that preserves natural ecosystems and protects
10 agriculture from invasives, but healthy ecosystems rely
11 on healthy predator populations especially in wild
12 areas.

13 We also need to consider that habitat for wild
14 things is decreasing rapidly with the human wildland
15 interface eroding. We are seeing a lot of that with
16 the current fires, and eroding not only existing
17 habitat, but that is the fires and as well the human
18 encroachment are pressing animals into areas where they
19 can't just be in the wild places. So it's a humane
20 issue that animals that survive the fires may be
21 traveling into other areas, they may become nuisances
22 for agricultural, but we need to consider that when we
23 have this much wildland that has burned, animals need a
24 chance to survive until their proper habitat has
25 recovered, and they can move back into those areas.

1 And just remember that even people who live in cities
2 and never leave them want to know that there are lots
3 of wild animals out there and are very concerned about
4 the humane effects of the government killing animals on
5 their behalf; a lot of people do not actually want
6 that.

7 So I would encourage you to look at minimizing
8 the lethal methods, especially those that are the least
9 humane that kill other species, and require an
10 exhaustion of all non-lethal methods before there is
11 any use of lethal methods, and limit the use of lethal
12 methods to private lands, and I would request that
13 EIR/EIS must rely on the current science on the
14 ecological consequences of lethal predator control, and
15 effectiveness of non-lethal preventive methods, and
16 that they should both consider the issues of humaneness
17 when considering which methods to authorize. Thank you
18 very much, that's what I have to say.

19 MS. ALLEY: Thank you for your comments, Kate.

20 Next up, we're step going to go to Jennifer
21 Haig. Jennifer, if you can up unmute yourself, we will
22 go to you next. There you are, I hear you.

23 MS. HAIG: I'm using the temporarily unmuted
24 feature because I never saw the mute. Okay.

25 Hello, my name is Jennifer Haig. I'm a

1 legislative affairs manager with the Animal Legal
2 Defense Fund which is headquartered in Cotati,
3 California and represents over 20,000 members in the
4 state.

5 My comments today are that the EIR/EIS should
6 address the risk to human and pet safety for any
7 methods that Wildlife Services proposes to use,
8 specifically abolishing lethal management practices.
9 Any lethal indiscriminate killing method creates the
10 potential for the wrong animal to be trapped, injured,
11 or killed including companion animals. Indiscriminate
12 methods such as M44s, for example, have killed 50 or
13 more family dogs throughout the U.S. between 1990 and
14 2017. While we know M44s mostly band in California
15 except on Federal tribal land, other indiscriminate
16 lethal methods have had similar effects. And the
17 indiscriminate nature of traps, for instance, proposes
18 grave danger to companion animals when traps are hidden
19 along wildlife trails that may be used by companion
20 animals.

21 In 2012, the Sacramento Bee reported that
22 Wildlife Services trapped, snared, and poisoned, had
23 accidentally killed more than 50,000 animals across the
24 country since 2000 including more than 1100 dogs, some
25 of whom were family pets. And according to a 2015

1 White Paper by the Humane Society of the United States,
2 when pets are harmed, it is typically because Wildlife
3 Services sets traps and M44s close to paths, roadways,
4 and property lines, and fails to notify nearby
5 residents and recreational users of public land.

6 In August 2011 in Gresham, Oregon, for
7 example, a seven-year old Border Collie was killed by a
8 Kona Bear trap set by a Wildlife Services at a lake in
9 a residential neighborhood. The trap was on
10 neighborhood common property less than 50 feet from the
11 family's fence, an area where the family's children
12 regularly played.

13 In FY 2012, 1476 unintended animals were
14 caught in foothold traps including four cats and a dog.
15 In the same year, 866 non-target animals were taken in
16 snares including 23 dogs and 4 cats. In addition to
17 pets inadvertently being caught in traps, humans may
18 also accidentally become prey to a trap themselves, or
19 be bitten by their pet when trying to free it from a
20 trap as an animal caught in the trap may be extremely
21 agitated. At the very least, they'll traumatized by
22 seeing their beloved pet suffer, if not die in front of
23 their eyes.

24 Given these examples, we ask that the safety
25 of unintended targets, such as pets and humans relative

1 to Wildlife Services' operations be considered in the
2 scoping of the EIR/EIS, thank you.

3 MS. ALLEY. Thank you, Jennifer.

4 Next up is Johanna Hamburger.

5 MS. HAMBURGER: Hi, Lisa Marie. Can you hear
6 me?

7 MS. ALLEY: Yes, I can, go ahead, thank you.

8 MS. HAMBURGER: Good evening. My name is
9 Johanna Hamburger. I'm the director and senior staff
10 attorney of the terrestrial wildlife program for the
11 Animal Welfare Institute. My comments this evening
12 will address the inhumanness of many of the methods
13 that Wildlife Services uses in California, and we are
14 most concerned about the use of foot and neck snares,
15 padded leg-hold traps, body crushing traps like Kona
16 bears, denning operations as well as aerial gunning,
17 and these five methods are particularly cruel, and also
18 pose a danger to people, companion animals, and
19 non-target species. Piece.

20 Regarding foot and neck-hold snares, Roshlets
21 in 2010 concluded that their use is never justified for
22 four primary reasons. The first reason is that snares
23 cause severe injuries, pain, suffering as well as
24 prolonged death in trapped animals. And, second, the
25 mortality and morbidity of animals caught in snares is

1 higher than for a lot of other traps. Third, animals
2 caught in snares are exposed to the elements of thirst,
3 hunger, and attacked by predators, and lastly snares
4 are inherently indiscriminate and commonly catch non-
5 target species including threatened and endangered
6 species.

7 Regarding padded jaw and leg-hold traps, many
8 trapped animals will violently struggle when retrained
9 which causes lacerations, strained and torn tendons,
10 and ligaments, extreme swelling, and broken bones, and
11 teeth. And in the summer heat, many animals cannot
12 survive for long without water, and in harsh winter
13 conditions, animals often lose a limb or freeze to
14 death after being caught, and for non-target animals
15 who are caught, studies routinely demonstrate that
16 those animals have increased morbidity and mortality
17 even after they're released. And for all of those
18 reasons, these types of traps have been condemned
19 inhumane by the National Animal Control Association of
20 the United States, The World Veterinary Association, as
21 well as the American Animal Hospital Association, and I
22 would recommend that if the traps are used, that a trap
23 monitor be employed with these types of devices.

24 Denning is another inhumane practice sometimes
25 used by Wildlife Services in California, and this

1 method often causes the death of entire animal families
2 including young. There's also a significant risk for
3 non target animals to be killed in those operations.

4 And, lastly, regarding aerial gunning, this
5 method is inherently inhuman for several reasons.

6 First, this method causes extreme stress due to noise
7 from the aircraft, and from gunfire which can harm the
8 hearing of multiple species. Second, this method
9 forces animals to expend critical energy reserves to
10 escape which may effect survival and reproduction.
11 Third, target animals often are not killed by the first
12 shot which prolongs suffering, and can allow maimed
13 animals to escape. And, lastly, there's a significant
14 likelihood the dependant young will be orphaned because
15 these operations often coincide with pre-coyote birth
16 injuries. We therefore ask that you consider
17 alternatives that eliminate these five methods from
18 guild operations. Thanks very much for providing this
19 opportunity to comment.

20 MS. ALLEY: Thank you so much, Johanna.

21 Next up is John Buckley. John, you were
22 there, there you are. So John, I see that you are
23 talking in the microphone but we're not hearing
24 anything.

25 Eric, he is unmuted, correct?

1 MR. WILLIAMS: Correct.

2 MS. ALLEY: There, John, we hear you.

3 MR. BUCKLEY: Okay, thank, you. Real quickly,
4 it sounds like there's an echo here, I'm not sure why,
5 but I share that is a -- in fact, if you guys are
6 having the echo, I will stop, because it's not going to
7 be productive. Are you also hearing the echo.

8 MS. ALLEY: We are hearing the echo, John. Do
9 you also have your -- are you dialed in as well?

10 MR. BUCKLEY: No, I am only using the
11 computer, and there's no reason to there to be echo,
12 since I do lots of Zoom calls, but I will send the
13 comments in writing, thank you.

14 MS. ALLEY: Thank you, John.

15 Next up, we have Manda Current.

16 MS. CURRENT: Okay, I'm unmuted.

17 MS. ALLEY: Yes, we hear you.

18 MS. CURRENT: Okay, great, great. I
19 appreciate all you that people have made and their
20 understanding of the issues around the harm that's
21 being done with the management of predators and
22 trapping of animals. My background more is an
23 educator, and I have worked in film education and river
24 health and world recovery. And I wanted to just bring
25 the children that I work with into the story. It's

1 probably been over 800 students that I have worked with
2 in Southern California, and Northern California, and
3 then maybe another 200 in New Mexico, and they are very
4 upset about what's going on with predators, and how
5 they are being treated, and they have a really firm
6 understanding about the importance of them and keystone
7 issues on the environment and climate change, and they
8 don't really see that being paid attention to, and they
9 are smart enough to understand that good science is not
10 being followed.

11 So I would like to see a change in the culture
12 of what's going on in the management system, let alone
13 the very harmful means for treating some of the animals
14 and then the kind of innocent bystanders -- the
15 bystanders that are killed in the process. Thanks for
16 letting me share.

17 MS. ALLEY: Thank you so much, Manda. Does
18 anyone else have a comment that they would like to make
19 during this public comment period? If you do, we ask
20 that you raise your hand, and we'll come to you in the
21 order that they're raise.

22 We also have a question that came in from
23 Sarah Hayes that we think is more appropriate as a
24 comment. So, Sarah, is if you would like to raise your
25 hand and put that on the record as a formal comment, we

1 would advise you, and invite you to do so, and if you
2 are on the phone and you would like to provide a
3 comment, you can push star nine.

4 MS. HAYES: No, I'm -- I'm on my computer.

5 MS. ALLEY: Hi Sarah, would you like to
6 provide a comment?

7 MS. HAYES: Yes.

8 MS. ALLEY: Go ahead.

9 MS. HAYES: I'm extremely concerned with the
10 current administration's attempts to weaken the effect
11 of NEPA, and I am having problems understanding how
12 that is going to work in terms of protecting wildlife
13 and wild -- wilderness areas, and I guess that's pretty
14 much it. I am real just concerned about the -- well,
15 the current person in office is attempting to get rid
16 of NEPA, and I want -- and as I said, I'd like to know
17 how this is going to fit into the final report, and I
18 guess that's it.

19 MS. ALLEY: All right, Sarah, thank you for
20 your comment.

21 Anyone else have a comment at this time? If
22 they do, please raise your hand.

23 All right. Seeing none, I would like to move
24 to the next slide. I would like remind the folks
25 participating tonight that the comment period is open

1 until November 10th. You can still provide comments
2 through the postal mail, through e-mail, or the on our
3 voicemail that we've set up. All of this information
4 is also available on the program's website. And with
5 that, I am going to turn it over to Steve for some
6 closing remarks and our next steps.

7 MR. PETERSON: Thank you, Lisa Marie, I
8 appreciate that, and thank you, everyone, for your
9 comments. We really appreciate them, and we are going
10 to be taking them down and taking them forward as we
11 start the impact assessment process proper.

12 As Lisa Marie mentioned, we have a variety of
13 way that you can continue to reach out to us initially
14 in the scoping period which ends on November the 10th,
15 and we strongly encourage you to do that.

16 Also, we hope that you'll register with the
17 project website, Californiawdm.org, so that we can keep
18 you abreast of our progress, and also to identify the
19 future opportunities to participate.

20 After the end of the scoping period, the next
21 significant opportunity will be at the time of the
22 release of the draft -- the draft joint EIR/EIS
23 document.

24 For tonight's purposes, we will be staying
25 with the phone open for the next two hours if there's

1 anyone else that want's to speak or there are
2 additional comments that folks want to make. We did
3 advertise this as a 5:30 to 8:30 meeting, so we are
4 going to provide folks with an opportunity to speak if
5 they weren't able to get on initially.

6 So the core elements of the project team will
7 be available, and this webinar will be continuing for
8 the next two hours. So with that, that concludes our
9 presentation. And with that, we really appreciate your
10 participation, and look forward to working with you to
11 take this process forward.

12 (The part of the meeting concluded at the hour of 6:25
13 p.m.)

REPORTER'S CERTIFICATION

I, FLORENCE A. COLBY, a Certified Shorthand Reporter, DO HEREBY CERTIFY:

That the foregoing witness was by me duly sworn; that the deposition was then taken before me at the time and place herein set forth; that the testimony and proceedings were reported stenographically by me and later be transcribed into typewritten form under my direction; that the foregoing is a true record of the testimony and taken at that time.

I further certify that I am neither counsel for, not in any way related to any party to said action, nor in any way interested in the result or outcome thereof.

IN WITNESS WHEREOF, I have subscribed my name on November 19, 2020.

FLORENCE A. COLBY, CSR #12433

ERIC WILLIAMS	Technical Support

1 BE IT REMEMBERED THAT, pursuant to Notice
2 of Taking Meeting, and on Tuesday, October 27, 2020, at
3 the hour of 5:30 via video conferencing, before me,
4 FLORENCE A. COLBY, a Certified Shorthand Reporter in
5 and for the State of California.

6 ---oOo---

7 PROCEEDINGS

8 ---oOo---

9 MR. PETERSON: Okay. Hello and welcome to the
10 second public scoping meeting for the California
11 Wildlife Damage Management EIR/EIS Project. My name is
12 Steve Peterson. We'll begin with other introductions
13 in a moment, but we thought we'd let everyone get a
14 chance to get up and running on the technology, so
15 we'll be on hold for a minute, but we'll be starting in
16 just a few minutes.

17 (A brief recess was taken.)

18 It looks like it's 5:35 so let's go ahead and
19 get started. And as folks logged on, they probably got
20 a message saying that this meeting is in fact being
21 recorded, and so also I want to let you know that in
22 addition to be recorded, it ultimately will be posted
23 on the project website which we hope that you folks had
24 an opportunity to visit.

25 So with that, I'd like to say welcome. My

1 name is Steve Peterson. I am a project manager with
2 Dudek. We are the prime consultants preparing the
3 environmental impact report environmental impact
4 statement for the California Wildlife Damage Management
5 program, and I am joined by my colleague and friend,
6 Lisa Marie Alley of Kearns and West, and we'll be
7 navigating the program along with the assistance of a
8 couple of other folks who we'll introduce in just a
9 moment.

10 We will be joined by Dennis Orthmeyer who is
11 the Wildlife Services State Director US Department of
12 Food and Agriculture APIS program. We hope that
13 Dr. Annette Jones will join us. If not, we do have a
14 statement that she recorded in the prior meeting two
15 weeks ago, and with that we also have Chris Carr, who
16 is project counsel who will be joining us as well.

17 So, Lisa Marie, if you'd like to go through
18 the outline of the program, we'll go from there.

19 MS. ALLEY: Thank you so much, Steve, and
20 welcome everyone to tonight's second scoping meeting
21 during this public involvement process for this
22 project.

23 Tonight, we are going to go have five main
24 areas that we are going to be focusing on. One is the
25 opening remarks with some logistics about how you can

1 participate in the meeting. The second will be an
2 overview at a high level of the what the EIR/EIS
3 program is intending to do in the timeline.

4 We will then take a series of questions and
5 answers, primarily focus on the process and things
6 regarding that. Your comments will come later during
7 the public comment period where we're soliciting your
8 comment and input as we develop this program, and then
9 we'll have some follow up and some closing remarks.

10 So with that, I would like to turn it over to
11 Dennis Orthmeyer with USDA to make some opening
12 statements.

13 MR. ORTHMEYER: Thank you, Lisa Marie. My
14 name is Dennis Orthmeyer, and I am the State Director
15 for Wildlife Service in California. I want to thank
16 you for joining today's public scoping webinar on the
17 California Wildlife Damage Management EIR and EIS.
18 Wildlife Services in California in coordination with
19 the California Department of Food and Agriculture
20 intends to prepare a joint NEPA environmental impact
21 statement and CEQA environmental impact report to
22 provide a robust and comprehensive environmental
23 analysis of current and proposed wildlife damage
24 management activities undertaken throughout California
25 when our assistance is needed.

1 Every day integrated wildlife damage
2 management activities helps citizens, organizations,
3 industries, and government agencies resolve conflict
4 with wildlife to safeguard human health and safety, and
5 to protect health and value to American agricultural
6 and natural resources as well as protect property.

7 As a non-regulatory agency, wildlife service
8 is an oriented program that embraces the public trust
9 doctrine and North American model for wildlife
10 conservation. We work to ensure that native wildlife
11 populations are conserved and conflicts are managed
12 through science based management approach.

13 This proposed wildlife damage management
14 program is critical to upholding our mission of
15 promoting prosperous agricultural helping rural
16 Americans thrive, and preserving our nation's natural
17 resources through conservation and healthy private
18 working lands.

19 Thank you for joining today's webinar. We are
20 looking forward to hearing your comments.

21 MS. ALLEY: Thank you, Dennis, and now we are
22 going to show a brief opening remarks that Dr. Jones
23 gave at the last scoping meeting two weeks ago. If you
24 just give us a moment, we are going to pull that video
25 up.

1 (Whereupon a video was played.)

2 Thank you, Lisa Marie. Hello, everyone. I am
3 Dr. Annette Jones with the California Department of
4 Food and Agriculture. As the state veterinarian and
5 director of animal health, and food safety services, I
6 serve as the state's veterinary authority on animal
7 health and food safety on behalf of the EIR/EIS.

8 Our mandate at CDFA is to promote and protect
9 the food production in California. This responsibility
10 encompasses the prevention of wildlife damage to
11 agriculture and livestock in various agricultural and
12 public infrastructures often in collaboration with
13 county agricultural commissioners and other State and
14 Federal agencies. We are proposing the Wildlife Damage
15 Management program to protect California's agriculture
16 from damage caused by wildlife, to protect human health
17 and safety, and to protect our natural resources.

18 Again, thank you for joining us tonight, and
19 your participation in this public scoping process. We
20 look forward to your input. I'll turn it back over to
21 you, Lisa Marie.

22 MS. ALLEY: That was a recording from
23 Dr. Jones from last week's -- two weeks ago public
24 scoping meeting. If you just give us a moment to get
25 the slides back up.

1 Now, we're going to go through some of the
2 purpose of tonight's meeting, the logistics, and some
3 ground rules that we've established.

4 So tonight's purpose of the meeting in the
5 scoping process is to inform you, the public, and
6 partner agencies, about the proposed project. We are
7 also going to be talking about the timeline, how you
8 can submit your comments, and have your voices heard in
9 the process. We will also be providing a time to do Q
10 and A, and to receive those comments as we advance the
11 program -- timeline, excuse me.

12 So our goal tonight is to have the question
13 and answer session begin around 6:00 p.m., then we will
14 turn it over to the public comment period. Our meeting
15 does go tonight until 8:30 p.m.

16 Now, let's talk about how you can participate
17 in tonight's conversation. If you have a question, or
18 you need something, you can use the raised hand
19 function on the Zoom webinar. I think by now we have
20 been doing a lot of these, so most people know where
21 that's located, but we wanted to provide you with a
22 screen shot. To ask questions this is a Q and A
23 feature that we will be utilizing later on. If we can
24 go to the next slide please.

25 Also, I do see we have a number of people

1 joining us by the phone tonight. If you do want to
2 make a comment during the comment period or ask a
3 question, we ask that you star nine.

4 So when it's your turn to ask a question or
5 provide public comment later on in the meeting, we will
6 have you on mute until we call on you, and then we will
7 un-mute you. We do ask everyone to keep themselves on
8 mute until you are called upon just to help with
9 background audio.

10 Finally, we wanted to talk about some of the
11 ground rules. Please be respectful. Let's not use
12 profanity and inappropriate language, and we do want to
13 caution people that if there is some disruptive
14 language or others, we will remove you from the
15 webinar.

16 Now, what I would like to do is turn it over
17 to Steve to talk about the details of the program and
18 the process.

19 MR. PETERSON: Thank you, Lisa Marie, I
20 appreciate that. With that, I'll go ahead and walk
21 through the program.

22 Obviously, there's a lot more detail that's
23 available to you on the project website, which is
24 Californiawdm.org. If you haven't been there already,
25 we strongly encourage you to visit it. A lot of the

1 foundational information and background documentation
2 is available there as well as ways to communicate with
3 us as we go through the process. So with that, I'll
4 take a walk through how we got to where we are this
5 evening.

6 In 2017, California Department of Food and
7 Agricultural or CDFA, and the U.S. Department of
8 Agriculture, USDA, entered into a memorandum of
9 understanding to facilitate the process that we are
10 going through. The MOU provides a framework that these
11 agencies work together on a statewide approach to
12 integrating Wildlife Damage Management activities in a
13 unified way.

14 It also identified the environmental review
15 process that we are currently undertaking as well as
16 supporting the overall goals of both the Federal
17 Government and the State Government, and the
18 cooperating agencies, and allowing the public to
19 participate in this process to provide comment and
20 direction.

21 The document, itself, will be a joint
22 environmental impact analysis document, and I'll get
23 into the nuts and bolts of that in a minute, but the
24 short version is that by having a joint document, there
25 will be a single set of discussions related to both

1 State and Federal environmental compliance related to
2 the National Environmental Policy Act, and the
3 California Environmental Quality Act, and we'll walk
4 through that process and what it might mean for your
5 consideration of the project.

6 Again, those are the two foundational pieces
7 of the process, and we are responding to both CEQA and
8 NEPA. Within these processes, CEQA and NEPA both
9 require that a lead agency be identified. And for
10 those purposes, CDFA and USDA are those agencies that
11 serve that function. So they are the clearing house
12 and ultimately the agency decision makers for those
13 processes.

14 Again, this is a process by which they'll be a
15 unified analysis that has as a unified project
16 description with different discrete pieces that we'll
17 go into in a moment.

18 CDFA is mandated to be the protector of
19 agriculture within California, and as part of that,
20 controlling animals that are dangerous or detrimental
21 to the agriculture industry of California is the key
22 element of their mission.

23 Also, there has been, and continues to be
24 activities by CDFA to employ hunters and trappers to
25 manage and eradicate those animals of concern. CDFA

1 works with counties in a unique system by which the
2 agricultural commissioners are working very closely
3 with the California Department of Food and
4 Agricultural, and with that, they have joint
5 responsibilities and shared functions that are led by
6 county agricultural commissioners within individual
7 counties.

8 Within the program that's proposed, CDFA will
9 primarily serve in an oversight support capacity, and
10 will focus on providing data and recommendations to
11 help with adaptive management as processes move forward
12 throughout the state.

13 Also CDFA has identified the need to continue
14 to have rapid response capability to respond to issues
15 of emergency or high risk settings or scenarios, such
16 as what's recently happening with nutria within the
17 Central Valley of California.

18 Again, counties are authorized to work with
19 CDFA, but also they have the capability to work
20 directly with Wildlife Services California, the USDA
21 partner in this process, and that is an on-going set of
22 activities that has been going on along with the State
23 function for over 100 years.

24 Wildlife Services California currently
25 provides advice, prevention management, wildlife damage

1 management materials, degradation investigations, as
2 well as training methodology and technical assistance
3 in response to requests. The implementation of actual
4 wildlife damage management methods is also within their
5 suite of services and wildlife services serves a wide
6 variety of entities beyond county government such as
7 the public at large, private companies, other
8 governmental agencies, such as U.S. Fish and Wildlife
9 Service, other governmental bodies, and the Native
10 American Tribes within the State of California.

11 The program that's being considered within
12 this joint analysis to consider all counties within
13 California, even though there are some counties that do
14 not currently have a Wildlife Damage Management program
15 that is active, so while those counties may not
16 currently be active, they'll be considered as part of
17 the analysis on both direct impacts and cumulative
18 impacts.

19 This map shows the current status of
20 cooperative programs with the Federal Government,
21 Wildlife Services California. As you can see, there
22 are many counties that have independent programs that
23 they conduct on their own, and in collaboration with
24 other counties as well as coordination with the State
25 and the Federal Government. And as I mentioned a

1 moment ago, there are a number of counties that
2 currently do not have a program in place.

3 So with that, there are a number of functions
4 that would be taken forward by CDFA. Again, coming up
5 with statewide Wildlife Damage Management protocols,
6 understanding and coordinating information related to
7 countywide activities, again, rapid response, and also
8 the information processing adaptive management
9 function.

10 Program Education, and CEQA support are also
11 functions that this program is being brought forward by
12 CDFA to accomplish. USDA has some key functions that
13 have been listed here obviously resolving wildlife
14 conflicts, protecting people, pets, and livestock
15 beyond the mission of CDFA, and also protecting natural
16 resources, such as timber, and also making sure that
17 wildlife damage management is accomplished for a
18 variety of settings as well as providing education for
19 the public and other -- other functions.

20 It's important to note that the wild life
21 services function is really focused in a great degree
22 to local agricultural. As the graphic shows that
23 approximately 75 percent of the activities that
24 wildlife services conducts are responsive to small
25 farmers and ranchers. Wildlife services also has an

1 emergency function as does the CDFA, and in addition to
2 these functions, there are Federal Aviation
3 Administration and Department of Defense functions
4 related to aviation, and specifically to bird striking,
5 those issues.

6 As I mentioned a moment ago, U.S. Fish and
7 Wildlife service is actually a client of Wildlife
8 Services in activities to protect rare threatening
9 endangered species that are subject to degradation by
10 other species. Also making sure that monitoring and
11 controlling wildlife diseases is accomplished, and
12 there's a very strong food safety function related to
13 agricultural, and what that means to the protection of
14 food supplies, and other food stuffs.

15 In short, the objective of the EIR/EIS is to
16 analyze and guide the county ag commissioners and work
17 collaboratively between wildlife services and CDFA to
18 modify wildlife damage management activities to be
19 conducted in a manner to mitigate environmental impacts
20 to the greatest degree possible. Those are primary
21 goals of both NEPA and CEQA, and that would be the key
22 focus of this particular document.

23 Also, as I mentioned a moment ago, there is a
24 nexus and a linkage between the county led activities
25 or county level activities and the programatic document

1 that we preparing related to CEQA. So with that,
2 county governments could have the option to tier from
3 the program document that's being prepared to specify
4 management actions in a manner that is consistent with
5 what's being considered within this analysis.

6 Also, both CDFA, and Wildlife Services will
7 support the North American Wildlife Conservation, and
8 also as Dennis mentioned, acknowledge and show strong
9 support for the preservation of public press resources
10 throughout the State of California.

11 Again, the defined Wildlife Damage Management
12 response process has long been endorsed by CDFA and
13 Wildlife Services, and will be considered as a key part
14 of this analysis. That function is shown in this
15 graphic, which very simplistically identifies the
16 process by which decision making is conducted and
17 response is provided. So in essence, there is a
18 process that is undertaken in every occasion; that
19 methodology is very well defined, and that will be one
20 of the foundational pieces of the impact analysis.

21 The council on environmental quality stated
22 many years ago that alternatives are the heart of NEPA
23 and that also applies to CEQA. And so the range of
24 alternatives that is being considered at this juncture
25 is listed here looking at current operations,

1 alternatives or integrated damage management programs
2 being another alternative that'll be considered. Also,
3 looking at non lethal programs, and also a variety of
4 other things. But we strongly encourage folks that are
5 participating in this process to provide suggestions
6 and recommendations related to other alternatives that
7 should be considered as part of this impact assessment
8 process.

9 The suite of resources that will be addressed
10 are listed here. I am not going to read through them,
11 but this is the proposed range of the impact analysis
12 that will be conducted as part the impact analysis for
13 both CEQA and NEPA.

14 Again, these are very, very detailed analyses
15 specific to each topical area, each resource area, and
16 also within both CEQA and NEPA there are nuances that
17 require different things between the two different
18 functions. For CEQA, growth inducement, cumulative
19 impacts, and also a strong -- very strong statement
20 related alternatives is part of the CEQA guidelines,
21 and also under NEPA, a purpose and needs statement is
22 required as is public health and safety analysis.

23 So, again, within the impact, the analysis
24 described above, these issues will focus on impacts for
25 wildlife populations and habitats, effects on non

1 target animals and habitats including Federally and
2 State listed endangered species, other regulations and
3 laws and ecosystem processes.

4 Other considerations that will be addressed is
5 the humaneness and the methods used in these programs,
6 the effects, or the potential effects on Native
7 American culture and resources, and human, and human
8 pet issues.

9 Here's a graphic that's been presented in this
10 image, in the subsequent image, that shows a couple of
11 things. One is the parallel processes that we are
12 conducting. As you'll see on the website, there are
13 two documents that are shared there. One is the CEQA
14 notice preparation which was logged with the State
15 Clearing House on the 10th of September, and also the
16 Federal Notice of Intent to prepare an environmental
17 impact statement, which was published in the Federal
18 Register also on September 10th.

19 We're currently conducting scoping, and we're
20 preparing a draft document which will serve as both as
21 both the draft EIR and the draft EIS. At that point,
22 it will be filed with the State Clearing House for the
23 CEQA function, and EPA filing with the Federal
24 Register, and then we'll go through another public
25 outreach process by which we'll be soliciting your

1 comments and critiques related to that impact analysis,
2 and we'll looking to interested and responsible
3 agencies to provide those types of comments as well.

4 Within the process, after the end of the
5 document-review period, all comments received will be
6 put together in a compendium, will be assigned specific
7 responses, and those responses will be published as
8 part of the final document which will serve as both the
9 final EIR and EIS. Mechanically, what happens then, is
10 the Federal Register filing on the Federal side, and
11 then ultimately, on the State side, the agency
12 decision, the finding of fact, and statement of both
13 are at a consideration, if needed. Also, in
14 mitigation, margin program will be adopted, and on the
15 Federal side, the agency's decision and the rod or the
16 record of decision will be published.

17 The process that we are undertaking, as you
18 can see, we're currently conducting scoping, and that
19 will end in November, and then we're going to be
20 preparing the document proper. We look to release the
21 public draft document in February of 2020[sic]. So we
22 are going to be very busy in working through the impact
23 analyses for all the research areas that I mentioned a
24 few moments ago. And that's target date for taking.
25 Currently, we the projected this process will be

1 concluded in December of 2022, and that's the process
2 and the schedule that we working with at this juncture.

3 With that, what I'd like to do, is give it
4 that back to Lisa Marie, and she can facilitate any
5 questions and answers along with our colleague,
6 Angelica Chu who is manning the chat box.

7 MS. ALLEY: Thank you, Steve. We are now
8 going to move into the question and answer portion of
9 tonight's meeting. Please note, public comments will
10 be received after this. Right now we're looking to
11 have -- ask anyone with a question about the process,
12 or the time line of things of that nature.

13 If you do have a question, you can put it into
14 the Q and A box. We have received a couple questions
15 so far that we were able to answer in that function.
16 Does anyone have a preface-related question at this
17 time?

18 All right. Hearing no questions, we are now
19 going to move into the public comment period. We are
20 asking that you limit your public comment to three
21 minutes at this time. We are asking if you would like
22 too please leave a public comment to raise your hand.
23 We will call on you in the order we receive them. We
24 are also going to have a timer going for those that are
25 on the phone. If you would like to leave a comment,

1 push star 9.

2 We also want to remind folks that there are
3 additional ways to make public comments on this process
4 via e-mail, via US Postal Mail, and through a voice a
5 mailbox we set up, which we'll go over all of those
6 things after the public comment period.

7 So actually, let's see, we did get -- so we
8 have one quick question, Steve, I want to get some
9 clarity on about when the draft EIR/EIS would be
10 released? Is it February of 2020, 2021, or 2022?

11 MR. PETERSON: I am sorry if I mumbled a bit,
12 it's 2022.

13 MS. ALLEY: So thank you for answering that.
14 So what we are going to do now is, I see one more
15 question in there. Let me get back to you, Sarah, on
16 that in just a moment. Why don't we start with the
17 comment portion of the meeting, and please forgive me
18 if I mispronounce your name. But we are going to start
19 with the a gentleman named John Buckley. John if you
20 could unmute yourself, and once you start speaking, we
21 will start that three-minute timer.

22 John, we do not hear you. I see that you are
23 off -- now, you are muted, John. Now you are unmuted,
24 but we still do not hear you. Why don't we move to the
25 next person to provide a comment, and John we'll come

1 back to you in a minute. We'll have our colleague,
2 Angelica, reach out to you via the computer to see if
3 we can figure out what's going on.

4 Next up, we are going to go to Lizzy Pennock.
5 Lizzy, if you could unmute yourself, please.

6 MS. PENNOCK: Hi, can you hear me?

7 MS. ALLEY: Yes, we can.

8 MS. PENNOCK: Hi, thank you. Hi, my name is
9 Lizzy Pennock, and I am an intern with the Western
10 Wildlife Nonprofit Wild Earth Guardian. Today I will
11 speak to the impacts of Wildlife Services lethal
12 management methods on special management areas
13 including wilderness and wilderness study areas.

14 The EIR/EIS must consider the impact of
15 conducting lethal wildlife damage management activities
16 on California's wildernesses, wilderness study areas,
17 and other protected areas. Wilderness areas must be
18 administered in a manner that will leave them
19 unimpaired for future use and enjoyment as wilderness,
20 and that would provide for the protection of these
21 areas and the preservation of their wilderness
22 character.

23 Wilderness is defined as an area where the
24 community of life is untrammelled by humans, and the
25 land retained its primeval character as -- in which to

1 protect it and manage so as to preserve its natural
2 condition. Agencies administering wilderness areas are
3 responsible for preserving the wilderness character of
4 the area.

5 The EIR/EIS must include an analysis of the
6 potential effects of predator control on wilderness.
7 It must disclose in detail environmental impacts
8 including but not limited to the effects of killing
9 carnivores to benefit ungulates, endangered species and
10 domestic livestock on the wilderness character. The
11 importance of predators in wilderness cannot be
12 overstated. Both the bureau of land management and the
13 forest service manuals recognize the importance of
14 predators and the importance of national processes in
15 determining wildlife population.

16 In considering alternatives, the EIR/EIS must
17 address how any predator control that alters the
18 natural and untrammled conditions of wilderness by
19 killing native predators is consistent with the
20 specific statutory mandates governing each of the many
21 wilderness areas in California.

22 Public services must disclose how its planned
23 actions and methods are consistent or not consistent
24 with the mandate to preserve natural, untrammled, and
25 undeveloped conditions imposed by the act, or any

1 additional mandates imposed by each wilderness'
2 establishing legislation.

3 To comply with governing law, all impacts from
4 wildlife services activities must be compared to the
5 baseline levels of disturbance present in each
6 wilderness study area when it was designated, and on
7 all of the relevant resources the wilderness study area
8 was designated to protect.

9 Further, the public must be informed about
10 activities which might be conducted in these areas that
11 the public may evaluate whether the proposed activities
12 are consistent with the specific legislative mandates
13 and management plans governing management of these
14 areas.

15 High specific analysis is required for
16 wildlife services to ensure compliance of guiding
17 legislation including, but not limited to NEPA, the
18 National Forest Management Act, The Federal Lands
19 Policy and Management Act, The Wilderness Act and
20 others. Public services California cannot proceed with
21 predator control activities -- with lethal predator
22 control activities in wilderness study areas without
23 this analysis because otherwise it will violate these
24 laws. Thank you, that's the end of my comments.

25 MS. ALLEY: Thank you so much, Lizzy.

1 Next up is Carol Blaney. Carol, if you could
2 unmute yourself. I see that you are still on mute.
3 There you go. Thank you, Carol.

4 MS. BLANEY: Thank you. My name is Carol
5 Blaney. I am a biologist, and a retired ranger
6 naturalist from the national park service in Yosemite.

7 The first thing I would like to say is ditto
8 to everything Lizzy Pennock just said.

9 And, second, I would like to say that I'd like
10 to reject the no action alternative, and wildlife
11 services current approach to managing wildlife in
12 California is not functional.

13 In 2018, wildlife services killed nearly
14 30,000 native California animals, including black
15 bears, bobcats, mountain lions, coyotes, eagles, and
16 hawks, and target and non target animals are both
17 killed by the lethal methods that are currently used.

18 From a biological prospective, all of these
19 animals are crucial to the survival and health of
20 California's native ecosystems and our economy as well.
21 This killing of wild animals with poisons both kill
22 target and non target animals, and also moves poison
23 around in the food chain. Traps kill target and non
24 target animals, and they also cause horrible pain and
25 suffering. One of the things that's been called into

1 question is the humanness of such methods, and I think
2 that that needs to be fully considered in every
3 decision for future planning.

4 Tuft carnivores are targets of these -- our
5 efforts, and we know now from decades of research that
6 targeting and removing tuft carnivores actually does
7 not work. Think of the studies in Yellowstone where
8 wolves are reintroduced and whole ecosystems changed
9 and become productive. Removing tuft carnivores
10 actually weakens ecosystems.

11 And the thrust of all my comments is that
12 future decisions and planning should be made with more
13 effective scientific methods in mind looking first at
14 non-lethal methods of all kinds and exhausting those.
15 Looking at examples of where non-lethal methods have
16 worked, and one example is the Yosemite management of
17 black bear population which initially was completely
18 lethal leaving hundreds of bear carcasses all over, and
19 now is a multi-disciplinary effort to include
20 education, public education, bear management
21 specifically, and those are the kinds of approaches
22 that actually work in the long run. Removal of a
23 single predator, or multiple predators might seem to
24 work intially as a quick fix that kills them, but in
25 the long run, the kind of management that needs to

1 happen, needs to be planned for, is multi-disciplinary
2 and proactive, not reactive by simple lethal methods.
3 And so I would like to suggest that limiting the use of
4 lethal methods, especially those that have hit
5 non-target animals hard and endangered and threatened
6 species hard is crucial, and those are the end of my
7 comments. Thank you so much.

8 MS. ALLEY: Thank you, Carol.

9 Next up, we are going to take Kate Spencer.
10 Kate, if you can take yourself off mute.

11 MS. SPENCER: Good evening. Can you hear me?

12 MS. ALLEY: Yes, we can, thank you.

13 MS. SPENCER: Good. Thank you for this
14 opportunity to comment. I am a whale watching captain
15 on Monterey Bay. I am a biologist, and I have worked
16 in wildlife rehab. So I would like to comment on
17 behalf of predators. I would like to ditto everything
18 that Lizzy Pennock and Carol Blaney just said, and
19 advocate for killing fewer animals, minimizing the use
20 of lethal methods that are excessively painful, and
21 those that kill non-target animals as well.

22 I operate one of several profitable whale
23 watching companies on Monterey Bay, so I am in wild
24 like tourism, and many of my best customers spend many
25 tens of thousands of dollars a year traveling to see

1 and photograph wildlife. So I'd like to suggest that
2 even though I realize it's not part of the mandate of
3 the this program, that you should consider that there
4 are other stakeholders and wildlife photography and
5 wildlife tourism are a big growing field, and a very
6 important part of California's economy.

7 I do applaud control of invasive species like
8 nutria, that's great. I want to support management
9 that preserves natural ecosystems and protects
10 agriculture from invasives, but healthy ecosystems rely
11 on healthy predator populations especially in wild
12 areas.

13 We also need to consider that habitat for wild
14 things is decreasing rapidly with the human wildland
15 interface eroding. We are seeing a lot of that with
16 the current fires, and eroding not only existing
17 habitat, but that is the fires and as well the human
18 encroachment are pressing animals into areas where they
19 can't just be in the wild places. So it's a humane
20 issue that animals that survive the fires may be
21 traveling into other areas, they may become nuisances
22 for agricultural, but we need to consider that when we
23 have this much wildland that has burned, animals need a
24 chance to survive until their proper habitat has
25 recovered, and they can move back into those areas.

1 And just remember that even people who live in cities
2 and never leave them want to know that there are lots
3 of wild animals out there and are very concerned about
4 the humane effects of the government killing animals on
5 their behalf; a lot of people do not actually want
6 that.

7 So I would encourage you to look at minimizing
8 the lethal methods, especially those that are the least
9 humane that kill other species, and require an
10 exhaustion of all non-lethal methods before there is
11 any use of lethal methods, and limit the use of lethal
12 methods to private lands, and I would request that
13 EIR/EIS must rely on the current science on the
14 ecological consequences of lethal predator control, and
15 effectiveness of non-lethal preventive methods, and
16 that they should both consider the issues of humaneness
17 when considering which methods to authorize. Thank you
18 very much, that's what I have to say.

19 MS. ALLEY: Thank you for your comments, Kate.

20 Next up, we're step going to go to Jennifer
21 Haig. Jennifer, if you can up unmute yourself, we will
22 go to you next. There you are, I hear you.

23 MS. HAIG: I'm using the temporarily unmated
24 feature because I never saw the mute. Okay.

25 Hello, my name is Jennifer Haig. I'm a

1 legislative affairs manager with the Animal Legal
2 Defense Fund which is headquartered in Cotati,
3 California and represents over 20,000 members in the
4 state.

5 My comments today are that the EIR/EIS should
6 address the risk to human and pet safety for any
7 methods that Wildlife Services proposes to use,
8 specifically abolishing lethal management practices.
9 Any lethal indiscriminate killing method creates the
10 potential for the wrong animal to be trapped, injured,
11 or killed including companion animals. Indiscriminate
12 methods such as M44s, for example, have killed 50 or
13 more family dogs throughout the U.S. between 1990 and
14 2017. While we know M44s mostly band in California
15 except on Federal tribal land, other indiscriminate
16 lethal methods have had similar effects. And the
17 indiscriminate nature of traps, for instance, proposes
18 grave danger to companion animals when traps are hidden
19 along wildlife trails that may be used by companion
20 animals.

21 In 2012, the Sacramento Bee reported that
22 Wildlife Services trapped, snared, and poisoned, had
23 accidentally killed more than 50,000 animals across the
24 country since 2000 including more than 1100 dogs, some
25 of whom were family pets. And according to a 2015

1 White Paper by the Humane Society of the United States,
2 when pets are harmed, it is typically because Wildlife
3 Services sets traps and M44s close to paths, roadways,
4 and property lines, and fails to notify nearby
5 residents and recreational users of public land.

6 In August 2011 in Gresham, Oregon, for
7 example, a seven-year old Border Collie was killed by a
8 Kona Bear trap set by a Wildlife Services at a lake in
9 a residential neighborhood. The trap was on
10 neighborhood common property less than 50 feet from the
11 family's fence, an area where the family's children
12 regularly played.

13 In FY 2012, 1476 unintended animals were
14 caught in foothold traps including four cats and a dog.
15 In the same year, 866 non-target animals were taken in
16 snares including 23 dogs and 4 cats. In addition to
17 pets inadvertently being caught in traps, humans may
18 also accidentally become prey to a trap themselves, or
19 be bitten by their pet when trying to free it from a
20 trap as an animal caught in the trap may be extremely
21 agitated. At the very least, they'll traumatized by
22 seeing their beloved pet suffer, if not die in front of
23 their eyes.

24 Given these examples, we ask that the safety
25 of unintended targets, such as pets and humans relative

1 to Wildlife Services' operations be considered in the
2 scoping of the EIR/EIS, thank you.

3 MS. ALLEY. Thank you, Jennifer.

4 Next up is Johanna Hamburger.

5 MS. HAMBURGER: Hi, Lisa Marie. Can you hear
6 me?

7 MS. ALLEY: Yes, I can, go ahead, thank you.

8 MS. HAMBURGER: Good evening. My name is
9 Johanna Hamburger. I'm the director and senior staff
10 attorney of the terrestrial wildlife program for the
11 Animal Welfare Institute. My comments this evening
12 will address the inhumanness of many of the methods
13 that Wildlife Services uses in California, and we are
14 most concerned about the use of foot and neck snares,
15 padded leg-hold traps, body crushing traps like Kona
16 bears, denning operations as well as aerial gunning,
17 and these five methods are particularly cruel, and also
18 pose a danger to people, companion animals, and
19 non-target species. Piece.

20 Regarding foot and neck-hold snares, Roshlets
21 in 2010 concluded that their use is never justified for
22 four primary reasons. The first reason is that snares
23 cause severe injuries, pain, suffering as well as
24 prolonged death in trapped animals. And, second, the
25 mortality and morbidity of animals caught in snares is

1 higher than for a lot of other traps. Third, animals
2 caught in snares are exposed to the elements of thirst,
3 hunger, and attacked by predators, and lastly snares
4 are inherently indiscriminate and commonly catch non-
5 target species including threatened and endangered
6 species.

7 Regarding padded jaw and leg-hold traps, many
8 trapped animals will violently struggle when retrained
9 which causes lacerations, strained and torn tendons,
10 and ligaments, extreme swelling, and broken bones, and
11 teeth. And in the summer heat, many animals cannot
12 survive for long without water, and in harsh winter
13 conditions, animals often lose a limb or freeze to
14 death after being caught, and for non-target animals
15 who are caught, studies routinely demonstrate that
16 those animals have increased morbidity and mortality
17 even after they're released. And for all of those
18 reasons, these types of traps have been condemned
19 inhumane by the National Animal Control Association of
20 the United States, The World Veterinary Association, as
21 well as the American Animal Hospital Association, and I
22 would recommend that if the traps are used, that a trap
23 monitor be employed with these types of devices.

24 Denning is another inhumane practice sometimes
25 used by Wildlife Services in California, and this

1 method often causes the death of entire animal families
2 including young. There's also a significant risk for
3 non target animals to be killed in those operations.

4 And, lastly, regarding aerial gunning, this
5 method is inherently inhuman for several reasons.

6 First, this method causes extreme stress due to noise
7 from the aircraft, and from gunfire which can harm the
8 hearing of multiple species. Second, this method
9 forces animals to expend critical energy reserves to
10 escape which may effect survival and reproduction.
11 Third, target animals often are not killed by the first
12 shot which prolongs suffering, and can allow maimed
13 animals to escape. And, lastly, there's a significant
14 likelihood the dependant young will be orphaned because
15 these operations often coincide with pre-coyote birth
16 injuries. We therefore ask that you consider
17 alternatives that eliminate these five methods from
18 guild operations. Thanks very much for providing this
19 opportunity to comment.

20 MS. ALLEY: Thank you so much, Johanna.

21 Next up is John Buckley. John, you were
22 there, there you are. So John, I see that you are
23 talking in the microphone but we're not hearing
24 anything.

25 Eric, he is unmuted, correct?

1 MR. WILLIAMS: Correct.

2 MS. ALLEY: There, John, we hear you.

3 MR. BUCKLEY: Okay, thank, you. Real quickly,
4 it sounds like there's an echo here, I'm not sure why,
5 but I share that is a -- in fact, if you guys are
6 having the echo, I will stop, because it's not going to
7 be productive. Are you also hearing the echo.

8 MS. ALLEY: We are hearing the echo, John. Do
9 you also have your -- are you dialed in as well?

10 MR. BUCKLEY: No, I am only using the
11 computer, and there's no reason to there to be echo,
12 since I do lots of Zoom calls, but I will send the
13 comments in writing, thank you.

14 MS. ALLEY: Thank you, John.

15 Next up, we have Manda Current.

16 MS. CURRENT: Okay, I'm unmuted.

17 MS. ALLEY: Yes, we hear you.

18 MS. CURRENT: Okay, great, great. I
19 appreciate all you that people have made and their
20 understanding of the issues around the harm that's
21 being done with the management of predators and
22 trapping of animals. My background more is an
23 educator, and I have worked in film education and river
24 health and world recovery. And I wanted to just bring
25 the children that I work with into the story. It's

1 probably been over 800 students that I have worked with
2 in Southern California, and Northern California, and
3 then maybe another 200 in New Mexico, and they are very
4 upset about what's going on with predators, and how
5 they are being treated, and they have a really firm
6 understanding about the importance of them and keystone
7 issues on the environment and climate change, and they
8 don't really see that being paid attention to, and they
9 are smart enough to understand that good science is not
10 being followed.

11 So I would like to see a change in the culture
12 of what's going on in the management system, let alone
13 the very harmful means for treating some of the animals
14 and then the kind of innocent bystanders -- the
15 bystanders that are killed in the process. Thanks for
16 letting me share.

17 MS. ALLEY: Thank you so much, Manda. Does
18 anyone else have a comment that they would like to make
19 during this public comment period? If you do, we ask
20 that you raise your hand, and we'll come to you in the
21 order that they're raise.

22 We also have a question that came in from
23 Sarah Hayes that we think is more appropriate as a
24 comment. So, Sarah, is if you would like to raise your
25 hand and put that on the record as a formal comment, we

1 would advise you, and invite you to do so, and if you
2 are on the phone and you would like to provide a
3 comment, you can push star nine.

4 MS. HAYES: No, I'm -- I'm on my computer.

5 MS. ALLEY: Hi Sarah, would you like to
6 provide a comment?

7 MS. HAYES: Yes.

8 MS. ALLEY: Go ahead.

9 MS. HAYES: I'm extremely concerned with the
10 current administration's attempts to weaken the effect
11 of NEPA, and I am having problems understanding how
12 that is going to work in terms of protecting wildlife
13 and wild -- wilderness areas, and I guess that's pretty
14 much it. I am real just concerned about the -- well,
15 the current person in office is attempting to get rid
16 of NEPA, and I want -- and as I said, I'd like to know
17 how this is going to fit into the final report, and I
18 guess that's it.

19 MS. ALLEY: All right, Sarah, thank you for
20 your comment.

21 Anyone else have a comment at this time? If
22 they do, please raise your hand.

23 All right. Seeing none, I would like to move
24 to the next slide. I would like remind the folks
25 participating tonight that the comment period is open

1 until November 10th. You can still provide comments
2 through the postal mail, through e-mail, or the on our
3 voicemail that we've set up. All of this information
4 is also available on the program's website. And with
5 that, I am going to turn it over to Steve for some
6 closing remarks and our next steps.

7 MR. PETERSON: Thank you, Lisa Marie, I
8 appreciate that, and thank you, everyone, for your
9 comments. We really appreciate them, and we are going
10 to be taking them down and taking them forward as we
11 start the impact assessment process proper.

12 As Lisa Marie mentioned, we have a variety of
13 way that you can continue to reach out to us initially
14 in the scoping period which ends on November the 10th,
15 and we strongly encourage you to do that.

16 Also, we hope that you'll register with the
17 project website, Californiawdm.org, so that we can keep
18 you abreast of our progress, and also to identify the
19 future opportunities to participate.

20 After the end of the scoping period, the next
21 significant opportunity will be at the time of the
22 release of the draft -- the draft joint EIR/EIS
23 document.

24 For tonight's purposes, we will be staying
25 with the phone open for the next two hours if there's

1 anyone else that want's to speak or there are
2 additional comments that folks want to make. We did
3 advertise this as a 5:30 to 8:30 meeting, so we are
4 going to provide folks with an opportunity to speak if
5 they weren't able to get on initially.

6 So the core elements of the project team will
7 be available, and this webinar will be continuing for
8 the next two hours. So with that, that concludes our
9 presentation. And with that, we really appreciate your
10 participation, and look forward to working with you to
11 take this process forward.

12 (The part of the meeting concluded at the hour of 6:25
13 p.m.)

REPORTER'S CERTIFICATION

I, FLORENCE A. COLBY, a Certified Shorthand Reporter, DO HEREBY CERTIFY:

That the foregoing witness was by me duly sworn; that the deposition was then taken before me at the time and place herein set forth; that the testimony and proceedings were reported stenographically by me and later be transcribed into typewritten form under my direction; that the foregoing is a true record of the testimony and taken at that time.

I further certify that I am neither counsel for, not in any way related to any party to said action, nor in any way interested in the result or outcome thereof.

IN WITNESS WHEREOF, I have subscribed my name on November 23, 2020.

Florence A. Colby

FLORENCE A. COLBY, CSR #12433

Subject: Fwd: dont hire aphis wildlife killing services - all they do is kill kill kill for money - mercenary and dangerous they are public commetn on federal register

we cannot allow agribusiness profiteers to wipe out every wildlife and bird in this contrybut that is in fact their aim. at every conference ag profiteers have, they continually call for killing of wildlife. every species they want killed. there is not a species they like. aphis kills several millino wildlife species every single year. no 1931 law shoudl be used in 2020 in america. this america in 2020 is not the 1931 america.they killed last year, 3500 ducks, 37,000 doves.

8000 crwoss. 7000deer. 69,000 coyotes. 408,00 cowbirds, 11,000 cormorants; 500 cardinals, 515,000 blackbirds, 400 badgers, 400 bears, 23,000 beavers, 66,000 pigeons, 5500 skunks, 21,000 sparrows, 1 million starlings, 10,000 ravens, 6000 egrets, 1600 finches, 350 foxes, 18,000 prairie dogs, 25,000 geese, 203,000 grackles, 41,000 gulls.also it is important that the lawsuit thatthe center for biological diversity won needs to be observed by aphis in this attempt to get money for more killing of wildlife in california.

i am totalhly against this federal agency working at all anywhere in america. this commetn is for teh public record. plese receipt.

DEPARTMENT OF AGRICULTURE
Animal and Plant Health Inspection Service

[Docket No. APHIS-2020-0081]

Joint Environmental Impact Report and Environmental Impact Statement for Wildlife Damage Management in California

AGENCY: Animal and Plant Health Inspection Service, Agriculture (USDA).

ACTION: Notice of intent to prepare an environmental impact statement and proposed scope of study.

SUMMARY: We are advising the public that the Animal and Plant Health Inspection Service, working in coordination with the California Department of Food and Agriculture, intends to prepare a joint environmental impact report (EIR) and environmental impact statement (EIS) analyzing alternatives for wildlife damage management in California in accordance with the California Environmental Quality Act and the National Environmental Policy Act. This notice proposes issues and alternatives for consideration in the joint EIR/EIS and requests public comments to further delineate the scope of the alternatives, environmental issues, and other issues of public concern to be considered in the EIR/EIS.

DATES: Two virtual public scoping meetings will be held on October 13, 2020, 5:30 p.m. to 8:30 p.m. PST, and October 27, 2020, 5:30 p.m. to 8:30 p.m. PST. We will consider all comments that we receive on or before November 10, 2020.

ADDRESSES: You may submit comments by any of the following methods:

California Wildlife Damage Management EIR/EIS web page: Go to www.CaliforniaWDM.org.

Electronic Mail: Send electronic mail (email) to comments@CaliforniaWDM.org.

At the virtual scoping meetings on October 13 and 27, 2020. Details for participation can be found at www.CaliforniaWDM.org.

Postal Mail/Commercial Delivery: Send your comment to California Wildlife Damage Management EIR/EIS, ATTN: Scoping Comments, 2121 Broadway, P.O. Box 188797, Sacramento, CA 95818.

Supporting documents and any comments received on this topic may be viewed at www.CaliforniaWDM.org.

FOR FURTHER INFORMATION CONTACT: Mr. Dennis Orthmeyer, USDA-APHIS-Wildlife Services, 3419-A Arden Way, Sacramento, CA 95825; (916) 979-2675; Dennis.L.Orthmeyer@usda.gov. Further information is also available on the California Wildlife Damage Management EIR/EIS web page (see ADDRESSES above).

SUPPLEMENTARY INFORMATION:

Background

California wildlife provides many positive ecological, cultural, economic, and aesthetic benefits. However, some wildlife species are involved in conflicts with humans, including damaging agricultural resources and property, preying upon or harassing livestock, damaging infrastructure, and threatening human health and safety. In certain instances, wildlife species may impede efforts by wildlife management agencies to protect and enhance natural resources. Wildlife may also prey upon populations of threatened or endangered species or damage habitat restoration efforts.

The Animal and Plant Health Inspection Service (APHIS) Wildlife Services' California office (WS-California) provides Federal leadership and expertise in managing wildlife conflicts in California to allow people and wildlife to coexist. WS-California currently uses an integrated approach to recommend and apply a range of legally available nonlethal and lethal techniques for reducing wildlife damage and conflicts. WS-California works to resolve bird and mammal conflicts with agriculture, infrastructure, property, airport operations, and threatened and endangered species protection. WS-California also works to reduce conflicts with wildlife that threaten human health and safety.

WS-California currently provides advice on wildlife damage prevention and management, information on sources of wildlife damage

management materials, depredation investigations, training on the use of damage management methods, and technical assistance. WS-California also assists with implementation of wildlife damage management methods. WS-California receives requests for assistance from the public, private entities, other agencies and governmental bodies, and Native American Tribes.

WS-California's wildlife damage management activities are authorized and coordinated pursuant to Federal law (the Acts of March 2, 1931 (7 U.S.C. 8351-8352), as amended, and December 22, 1987 (7 U.S.C. 8353)), as well as memoranda of understanding and agreements with various Federal, State, Tribal, and local agencies and other governmental bodies. WS-California conducts its actions in accordance with applicable Federal, State, local, and Tribal laws, regulations, species management plans, and land management plans.

WS-California has entered into a memorandum of understanding (MOU) with the California Department of Food and Agriculture (CDFA) to develop a joint environmental review of both agencies' roles in wildlife damage management in California.

Proposed Action

WS-California and CDFA are cooperating as joint lead agencies to prepare an environmental impact report and environmental impact statement (EIR/EIS) evaluating alternatives for both agencies' involvement in managing wildlife damage and conflict in California. WS-California will serve as the lead agency for the EIS portion of the joint analysis. CDFA will serve as the lead agency for the EIR portion of the joint analysis. This EIR/EIS is being developed in accordance with the California Environmental Quality Act (California Public Resources Code 21000 et seq., CEQA) and the National Environmental Policy Act (42 U.S.C. 4321 et seq., NEPA). In the EIS portion of the combined report, WS-California intends to evaluate the environmental impacts of managing wildlife damage and threats to agricultural resources, property, natural resources, and human health and safety.

The scope of the analysis will include WS-California's cooperative activities with Federal and State agencies, California counties, Tribes, and local municipalities managing human-wildlife conflicts caused by birds and mammals. Cooperative activities may include:

- Reducing damage to agricultural resources;
- Reducing damage to infrastructure and property;
- Reducing wildlife strike hazards at airports;
- Managing damage by invasive species;
- Reducing threats to human health and safety associated with wildlife; and
- Protecting threatened and endangered species.

Once completed, the EIR/EIS will replace all of WS-California's district level environmental assessments on wildlife damage management in California.

Scoping

This notice opens a public scoping period for the EIR/EIS. Please review the information in this notice and the supplemental information, which may

[[Page 55815]]

be viewed on the California Wildlife Damage Management EIR/EIS web page (see ADDRESSES above). Copies of supplemental information may be requested from WS-California (see FOR FURTHER INFORMATION CONTACT above). You can also register online to receive notices regarding this project at: <https://public.govdelivery.com/accounts/USDAAPHIS/subscriber/new>.

WS-California is particularly interested in receiving comments regarding biological, cultural, or ecological issues that the analysis should address (see Environmental Issues for Consideration in the EIR/EIS Analysis below). We also encourage comments that assist us in further delineating the scope of alternatives, environmental impacts, and other issues of public concern. To promote informed decision-making, we especially encourage commenters to submit any scientific data, studies, or research that you feel is relevant to the analysis. Comments may be submitted electronically or by mail (see instructions in ADDRESSES above) on or before November 10, 2020.

To facilitate public and agency involvement in the EIR/EIS process, we will hold two public meetings during the scoping period on October 13 and October 27, 2020 (see DATES above). Due to current local and

State orders concerning COVID-19, the meetings will be virtual in format. The scoping meetings will solicit input from the public and interested public agencies regarding the scope of environmental impacts to be addressed in the draft EIR/EIS.

Further information concerning the scoping process, including links to attend the virtual scoping meetings, can be obtained through the California Wildlife Damage Management EIR/EIS web page (see ADDRESSES above), or by contacting WS-California (see FOR FURTHER INFORMATION CONTACT above).

Alternatives

The EIS will consider a range of reasonable alternatives:

An alternative that continues WS-California's current wildlife damage and conflict management activities (the no action alternative);

Alternatives with restrictions on integrated wildlife damage management to reduce environmental impacts (e.g., no use of toxicants);

Alternatives that require varying levels of nonlethal wildlife damage management; and

No WS-California involvement alternative.

Additional alternatives may be identified through the public scoping process.

Environmental Issues for Consideration in the EIR/EIS Analysis

The primary purpose of the EIR/EIS is to analyze and disclose environmental impacts of wildlife damage management activities conducted throughout the State of California by WS-California, CDFA, and California counties. WS-California, CDFA, and the cooperating agencies have identified the following preliminary issues that will drive the analysis of the alternatives in the EIS. The public is encouraged to submit comments on these or other issues that should be considered:

Impacts on wildlife populations;

Effects on nontarget animal populations including species federally listed under the Endangered Species Act (61 U.S.C. 1531 et seq.);

Impacts on ecosystem processes (e.g., trophic cascades);

Impacts on Special Management Areas, including Wilderness and Wilderness Study Areas;

Humaneness of methods;

Impacts of the alternatives on Native American culture and resource uses; and

Risks and benefits to human and pet safety.

More information on CEQA-specific issues considered in the EIR portion of the analysis can be found in CDFA's Notice of Preparation available on the California Wildlife Damage Management EIR/EIS web page (see ADDRESSES above). After the comment period closes, WS-California and CDFA will review and consider all comments received during the comment period any other relevant information when developing the draft EIR/EIS. Upon completion of the draft EIS/EIR, a document announcing its availability and an opportunity to comment will be published in the Federal Register.

Done in Washington, DC, this 24th day of August 2020.

Mark Davidson,

Administrator, Animal and Plant Health Inspection Service.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I implore you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Rick Mick

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Alexander Vollmer

Subject: Promote Coexistence With Wildlife
Date: Friday, October 9, 2020 6:27:57 AM

Dear Wildlife Services - California,

As a biologist I have been involved in the conservation of endangered wildlife species. Research and on-the-ground control efforts of predators show that the removal of "problematic" animals often leads to an increase in the number of target species in a given area. A "vacuum" is created in a territory and it is quickly filled again. Since it is often ineffective and ethically questionable, lethal removal of native wildlife species should always be a measure of last resort.

For this reason, I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Alison Stolpa

Dear Wildlife Services - California,

While I am glad you are FINALLY realizing that you are harming OUR environment when you murder OUR wildlife; I am concerned that you don't see the big picture. Ranchers and their livestock do NOT belong on public land and they and you have NO right to murder My Wildlife. We are in an Extinction Crisis and murdering them exacerbates it! You need to learn about tropic cascades and understand that all life is interdependent. Coexistence is the only way we can live together and I appreciate you learning about how WE can make that happen. I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Dear Wildlife Services - California,

What the hell is going on in this department???

You are supposed to help protect wild animals, not kill and terrorize them.

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Andres Echeverria

Dear Wildlife Services - California,

We should be protecting the remaining biodiversity of our land not further decimating our ecosystem, particularly when we are facing an anthropocene climate shift and mass extinction event. Our survival relies on that of our wildlife, who also have a right to exist and be free of suffering. Stop harming our animal allies. Their relevance to the health of the land is immense.

Stop catering to the interests of Big Ag, which continuously fails to pursue a progressive path and do what is best for its own industry and the people of this country. Expend your resources and efforts getting them to follow the Regenerative Agriculture movement that is underway in this country, which can give them a better and more productive way of conducting their business. Continuing to encroach on already beleaguered wildlife is not the way forward.

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Ann Allen

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

YOU are trusted with a very important and honorable job, service. We look to you to save what we can not do without you...save our animals, save our animals who live in the wild. Save the wild.

Please, please stop this barbaric snare and poison killing of our beautiful animals. PLease PLease find more intelligent and ways appropriate to this century.

We are BEGGING YOU not to kill the animals in this barbaric manner.
You can help.

Thank you

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Autumn Skye Rath

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Barbara Judson

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals. There is the potential for less lethal methods being overall a more cost effective and ecologically sound approach. Removing target species doesn't always lead to a reduction in negative interactions as it creates a vacuum that is just filled by larger litter sizes or infiltration of surrounding populations and exploration of adolescents which can exacerbate conflicts. Humans should play the responsible role of adjusting our expectations and management techniques rather than taking a kill all comers approach to wildlife conflict management.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Beverly Lehr

Date: Friday, October 9, 2020 12:32:36 PM

Dear Wildlife Services - California,

I am happy to learn that Wildlife Services is preparing a long-overdue environmental impact statement to investigate the many evils of its "wildlife damage management" program. I implore you to exercise this chance to modernize the program so that coexistence with wildlife is a priority whenever encounters with ranchers and others arise.

According to the Center for Biological Diversity, an organization that I greatly admire and support, non-lethal techniques like fencing and scare tactics, including loud noises, ribbons attached to fences, and flashing lights, have proven effective at preventing conflicts between livestock and wildlife. Guard dogs have been used for centuries because they are effective also.

As you are aware, too frequently these reasonable methods are not even attempted before killing mountain lions, bears, wolves and coyotes and other native animals. Wildlife Services' archaic and ineffective program of killing wildlife on behalf of ranchers needs to be replaced with one that requires ranchers themselves to bear most of the responsibility for protecting their herds through the use of non-lethal methods like the ones mentioned above. Research and common sense concludes that wildlife has intrinsic ecological value and are worthy of humane treatment.

Thank you for your attention to this critical issue.

Sincerely,
Bob Tintle

Dear Wildlife Services - California,

Cattle/sheep owners are killer people. It is their livelihood. So they have no problem killing wildlife. Why should they dominate our public land decisions. We have lost 2/3rds of our wildlife which is essential for our balance of nature and it is essential to the soul of mankind. It is time to work on alternative ways of managing wildlife rather than using barbaric killing methods.

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise. The insane number of animals slaughtered by Wildlife Services makes it clear you are NOT servicing wildlife. My disgust with your killjoy actions is immense, especially considering my taxes pay for these killings that I completely oppose.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these practical and humane methods aren't even tried before killing coyotes and other native animals. Cattle and sheep are not native to their environments, are invasive, and are detrimental to the ecology of the areas where they graze.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Brian Wolf

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
C Emerson

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals. There is no reason to murder wildlife. We are destroying their homes.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Carol Brady

Dear Wildlife Services - California,

As a scientist and concerned citizen who lives near forest wildlife, I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program on native animal populations. In California alone this program killed more than 21,000 native animals in 2019, including mountain lions, coyotes, foxes and bears. Because of the indiscriminate nature of its methods, many nontarget animals also suffer and die. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals with cruel methods such as snares and poisons, some of which endanger humans who live in the vicinity in which they're used.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Carol Vallejo

Dear Wildlife Services - California,

Our native animals deserve to live and it is cruel to poison and trap them. Lands should be set aside for them. We have enough trouble with gun owners wanting to shoot just about anything. That is a sick habit. I can understand needing food, but not just killing to kill.

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise. One of the great joys in my life is seeing wildlife. We should prioritize these valuable natural resources over an outdated industry. They "belong" to everyone. They should not be destroyed to protect a private industry.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment. Wildlife are treasures which can also bring tourist dollars, and more aligned with our future sustainable economy.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Caryn Cowin
Bakersfield, CA 93308

Dear Wildlife Services - California,

I am writing this to request that the methods to reduce wildlife conflicts with humans and livestock be made nonlethal. We must preserve and respect the wildlife that we have.

I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

For 22 years I owned a ranch in a rural part of Solano County. During that time I feel privileged to have seen, bobcats, mountain lions, racoons, foxes, coyotes, deer, pheasant, quail and assorted smaller animals. A few times I did lose livestock to wild animals, but mostly by using guardian llamas and dogs I was able to keep my livestock safe and enjoy the native animals. We must share the planet to keep everything in balance.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Celia Stauty

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Chereale Cormack

Dear Wildlife Services - California,

There is some hope, given that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. Please use this opportunity to reform the program by prioritizing coexistence with wildlife when conflicts arise. Snares, traps and poisons are indiscriminate killers.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between domestic animals and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals, as well as birds and even companion animals.

I urge you to replace Wildlife Services' outdated program with one that relies on contemporary, proven nonlethal measures and recognizes the ecological value of wildlife in tandem with their inherent right to live free and protected. Respect for life and humane interaction with America's wildlife should and can be the lodestar for an innovative, successful program.

Sincerely,
Cheryl Mendoza

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Chris Van hook

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment. Raising animals for food should be phased out; it is cruel, unnecessary and outdated. There is a plant-based version of every food item and ingredient. There's no reason why animals should be being killed, neither "livestock" for food nor wildlife for "livestock". Get rid of animal agriculture, not wildlife. THAT is the solution.

Dear Wildlife Services - California,

PLEASE RECONSIDER KILING WILD ANIMALS--these creatures do NO DAMAGE, only commercial interests feel compromised. There is already too much cruelty on our planet! And we have no right to kill creatures just because we want to or we think they negatively impact monetary interests. Diversity of life is what is important. Otherwise we create a desert in what should be a variety of life created by God.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Christine Swenning

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Claudia Leung

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Constance Spenger

Dear Wildlife Services - California,

I'm glad that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. It is about time.

All that I ask is that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise. Killing native animals is not acceptable.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals. The killing should stop.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Dana Thompson

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Dave Webster

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
david thomforde

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Debbie Yousef

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals. I personally raise an ancient heirloom wool breed of sheep and live in coyote, mountain lion, bear, and roaming dogs country. My guardian dogs work very well. There is NO NEED TO THIS INDISCRIMINATE AND HORRIFIC KILLING SPREE. Your actions are badly affecting the health of our ecosystems. You should know better as your job is to PROTECT OUR LANDS. DO THAT.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Thank you.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Deedee SAAVEDRA

I have been writing to you for years to protest the egregious cruelty and barbarity of your program. Your "animal services" include maiming and torture as well as "collateral damage" to non targeted creatures. That the US Government should be slaughtering living creatures at the behest of big corporations attests to the corruption of our government. I sincerely hope you pay heed to Center for Biological Diversity and at the very least begin to use non lethal method to ward off unwanted animal.

Thank you for trying to improve.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Dianne Fritsche

My brother runs a sheep ranch in NE Oregon where his five maremmara guard dogs keep his 200+ ewes safe on 45 acres of land. He and his dogs keep the sheep safe Without the need to shoot or poison wildlife. This is a good model for our government agencies to follow to support both businesses and the environment.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Donna Bennett

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Douglas Hammer
Oakland, CA 94610

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

This has been a long, ongoing issue and time these practices end.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Elisa De Girolami

Dear Wildlife Services - California,

We desperately need to save our environment, and that includes all the non-human creatures that share it with us -- without them, CA would become a wasteland. Insects fertilize our crops and regenerate the soil, as do animals and birds with their bodies. A healthy ecosystem keeps all this in balance -- humans tend to fixate on a single need, destroying that balance and then trying to "fix" it with chemicals and slaughter, both of which cause more harm. Please stop killing our wildlife!

Several experiments have proven that allowing wolves back into an ecosystem can actually help farmers, and one of those studies was done in CA. This is the direction all states should pursue. I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise. Don't be the blood-thirsty killers who think that's "macho" -- it's just stupid. Follow the science.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Elizabeth Ullman

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

People have been using these methods for thousands of years. We don't have to destroy a portion of the ecological web just to make things easy. It is bad in the long run for the future. Less predators also means more vermin, deer and others prey type animals that will grow in number. These non lethal ways help spare that, keep the environment in check and are much cheaper than the alternative.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Eric Bergman

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Etta Robin

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Frances Alet

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Gail Giacomini

Dear Wildlife Services - California,

I am very upset that the U.S. Department of Agriculture's notorious and misleadingly named "Wildlife Services" program continues to kill native animals across the country at the behest of big agriculture. In California the program killed more than 21,000 ecologically necessary native animals last year, including mountain lions, coyotes, foxes and bears. Because of the indiscriminate nature of its methods, many nontarget animals also suffer and die.

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Dear Wildlife Services - California,

Recent reports show the efficacy of non-lethal methods to prevent predation on domestic animals.

ARTICLE Artificial eyespots on cattle reduce predation by large carnivores Cameron Radford^{1,2}, John Weldon McNutt², Tracey Rogers³, Ben Maslen⁴& Neil Jordan^{1,2,5}
Eyespots evolved independently in many taxa as anti-predator signals. There remains debate regarding whether eyespots function as diversion targets, predator mimics, conspicuous startling signals, deceptive detection, or a combination. Although eye patterns and gaze modify human behaviour, anti-predator eyespots do not occur naturally in contemporary mammals. Here we show that eyespots painted on cattle rumps were associated with reduced attacks by ambush carnivores (lions and leopards). Cattle painted with eyespots were significantly more likely to survive than were cross-marked and unmarked cattle, despite all treatment groups being similarly exposed to predation risk. While higher survival of eyespot-painted cattle supports the detection hypothesis, increased survival of cross-marked cattle suggests an effect of novel and conspicuous marks more generally. To our knowledge, this is the first time eyespots have been shown to deter large mammalian predators. Applying artificial marks to high-value livestock may therefore represent a cost-effective tool to reduce livestock predation.

Taxpayer's money used to kill wildlife might be better spent by paying for painting lessons for farmers.

However, I am relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Gaye Macy

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Gerald Orcholski

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Gloria DeSalvo

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Gregory Karpf

Dear Wildlife Services - California,

Our family is begging you to implement non lethal methods to address wildlife and agriculture issues. The murdering of innocent animals is not any kind of answer...They have a right to live, The wild is their home as much of ours.

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment. Our family begs you to

Dear Wildlife Services - California,

When considering the eradication of wildlife, remember that they have much the same needs and desires that you have, that the planet belongs to them as much as to you, that they suffer just as you would if caught in a trap or poisoned.

To lose wildlife means the planet is poorer and its balance upset. The next to go would be us.

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Helen Cooluris

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

These top predators are actually needed to keep the ecosystem intact. The herbivores they consume can strip streambanks of vegetation. That impacts the young fish numbers and so on.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Holly Harris

Dear Wildlife Services - California,

Wildlife may not exist because of global warming and the incursion of humans on every inch of earth. If wildlife doesn't exist, neither will mankind because of the terrible rupture in the fabric of Nature. There is a balance in Nature that Man keeps upsetting and killing wildlife is stupid! They have enough to contend with and need no help dying.

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Dear Wildlife Services - California,

I'm relieved that Wildlife Services is finally preparing an environmental impact statement to analyze the many harms of its "wildlife damage management" program. I ask that you use this opportunity to reform the program to prioritize coexistence with wildlife when conflicts arise.

Nonlethal methods such as guard dogs, fencing and scare tactics — including flashing lights, loud noises and ribbons attached to fences — have proven effective at preventing conflicts between livestock and wildlife. Yet too often these common-sense methods aren't even tried before killing coyotes and other native animals.

I urge you to replace Wildlife Services' outdated program with one that relies on nonlethal measures and recognizes the ecological value of wildlife and the need for humane treatment.

Sincerely,
Ivan Rhudick
