

# Summary Form for Electronic Document Submittal

Form F

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Title: Dinuba Water Well Project

Lead Agency: City of Dinuba

Contact Name: Ismael Hernandez, Public Works Director

Email: ihernandez@dinuba.ca.gov

Phone Number: 559-591-5924

Project Location: Dinuba, CA

Tulare

*City*

*County*

Project Description (Proposed actions, location, and/or consequences).

The proposed Project consists of installation of a test well to determine water production potential and running a series of samples for analysis of water quality that is suitable for Dinuba's water supply. If the test well proves feasible, a new permanent water well will be installed. The Project consists of the following:

1. Test Well – A test well has been installed to enable collection of information on subsurface geology, the water production potential, and vertical variations in water levels and groundwater quality at the site to a depth of 700 feet. Water samples were collected from approximately ten depths.
2. New Water Well – If the test well results show that the Project site is a viable location, the City will proceed with the design and installation of a new water well. The final design of the well (depth, production capacity) will be dependent on the test results.
3. Abandonment/Backfill of Existing Stormwater Basin – the proposed Project would be located at an existing stormwater basin. The basin is proposed to be abandoned and backfilled to accommodate the proposed water well. Under existing conditions, stormwater is collected in the basin and then routed into the adjacent Alta Irrigation District canal. Under the proposed Project, stormwater would be routed directly to the canal.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

BIO – 1 Protect burrowing owls (includes restrictions on timing of construction, preconstruction surveys, and other protective measures)

BIO - 2 Protect nesting birds (includes restrictions on timing of construction, preconstruction surveys, and other protective measures).

#### Cultural Resources

- In the event that archaeological remains are encountered at any time during development or ground-moving activities within the entire Project area, all work in the vicinity of the find should be halted until a qualified archaeologist can assess the discovery and take appropriate actions as necessary.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

Controversy known to the Lead Agency:

No known areas of controversy are known regarding this project. A public hearing will be held on October 27, 2020.

Provide a list of the responsible or trustee agencies for the project.
