Re: Citadel Project No. 1189.1002.0
Phase I Environmental Site Assessment Report – Clarification
Weddington Golf & Tennis Facility
4141 Whitsett Avenue
Los Angeles, California 91604

Dear Mr. Khalatian:

Citadel EHS (Citadel) prepared a Phase I Environmental Site Assessment (Phase I ESA) for the above-referenced Site in April 2020, revised October 13, 2020. In the report, Citadel identified the following environmental concerns:

- The former 500-gallon underground storage tank (UST) was considered a historical recognized environmental condition (HREC).
- Given the long-term occupancy as a golf course and the current usage and storage of pesticides at the Site, on-Site soil may contain pesticides, representing an environmental concern. Grading activities could result in exposure of construction workers to these chemicals.

Citadel recommended shallow soil testing for pesticides prior to grading and/or excavation activities at the Site and acquiring a No Further Action (NFA) letter for the former UST. Citadel also recommended the preparation of a Soil Management Plan (SMP) during grading and/or excavation activities in the area of the former UST to manage contaminated soil or subsurface features, if encountered. Citadel also recommended that the tenant follow best management practices, in conformance with all appropriate current regulations, in regards to potential use of regulated hazardous materials and/or waste generated during everyday operations.

Clarification

Harvard-Westlake School (Client) has requested clarification of the environmental concerns identified by Citadel. Citadel's review of documents provided by the Los Angeles Fire Department (LAFD) indicated that a 550-gallon gasoline UST for a private auto fueling station was installed at the Site in 1957. The UST was re-registered as a 500-gallon UST in 1988 due to a new City ordinance requiring registration for a Fire Permit to operate an UST in the City of Los Angeles. The UST was removed in 1995 under the supervision of LAFD. While a NFA letter was not located, laboratory results indicated that the soil samples collected at the bottom of the tank pit, the spoils pile, and under the dispenser did not exceed action levels. According to the drawings provided, the UST and dispenser were located just south of the tennis courts. Based on the current Site boundaries, the dispenser and

a portion of the UST were located on the adjoining LAFD station property. The former UST does not represent a significant environmental concern. However, a NFA letter regarding the UST removal should be acquired. ***Citadel recommends acquiring a NFA letter and the preparation of a SMP for use during grading and/or excavation activities in the area of the former UST to manage contaminated soil or subsurface features, if encountered.***

A review of historical sources showed that the Site was developed with a golf course with a clubhouse and golf shop by 1956. One of the structures at the Site was demolished by 1967, and a roof shelter, likely the driving range canopy, was built in 1967. The tennis shop and tennis courts were developed by 1974, including four courts located at the adjoining property southeast of the Site. By 1979, five additional tennis courts were developed at the Site. The current fire department station at the adjoining property southeast of the Site was constructed in 2006. Given the long-term occupancy as a golf course and the current usage and storage of pesticides at the Site, on-Site soil may contain pesticides, representing an environmental concern. Grading activities could result in exposure of construction workers to these chemicals. ***Citadel recommends shallow soil testing for pesticides prior to grading and/or excavation activities at the Site.***

If after your review, you have any questions or require additional information, please do not hesitate to telephone me at the Citadel Office in Glendale at (818) 246-2707.

Sincerely,
CITADEL EHS

Re: CITADEL Project No. 1189.1002.0
Phase I Environmental Site Assessment Report
Weddington Golf & Tennis Facility
4141 Whitsett Avenue
Los Angeles, California 91604

Dear Mr. Weil:

Enclosed please find Citadel EHS's Phase I Environmental Site Assessment Report for the above-referenced location.

The Phase I Environmental Site Assessment Report was conducted for Harvard-Westlake School, in accordance with Citadel's Proposal 1189.1002.P, dated March 24, 2020, and a mutually agreed upon scope of work.

If after your review, you have any questions or require additional information, please do not hesitate to telephone me at the Citadel Office in Glendale at (818) 246-2707.

Sincerely,
CITADEL EHS

Citadel EHS (Citadel) was contracted by Harvard-Westlake School (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the Weddington Golf & Tennis Facility located at

4141 Whitsett Avenue, in the neighborhood of Studio City, City of Los Angeles, Los Angeles County, California.

Current Site Conditions

According to the County of Los Angeles' Assessor's Parcel Maps, the Site is comprised of one parcel legally identified as Assessor's Parcel Number (APN) 2375-018-020 and an approximately 1.1-acre parcel that Harvard-Westlake School leases from the Los Angeles County. The Site, as discussed and analyzed in this report, includes both the 16.1 acres that Harvard-Westlake School owns and the 1.1 acres that Harvard-Westlake School leases from the County of Los Angeles, totaling 17.21 acres.

The Site consists of a nine-hole golf course with one clubhouse of approximately 2,444 square feet (SF) including a café; driving range with 24 stalls; 16 tennis courts with a tennis shop of approximately 500 SF; several sheds and gated areas for maintenance; surface parking areas; and associated landscaping. At the time of the Site reconnaissance, the Site was occupied by Weddington Golf & Tennis.

Stationary equipment at the Site include a pole-mounted transformer. In general, the Site appeared to be well maintained and the observed building/ground conditions were good. Minor dark stains, likely associated with fuel-related materials, were observed on the pavement and the wooden platform in the equipment corral; however, the stains appear to be a de minimis condition. Given the long-term occupancy as a golf course and the current usage and storage of pesticides at the Site, on-Site soil may contain pesticides, representing an environmental concern.

Site History

A review of historical sources showed that the Site was undeveloped as early as 1894 until at least 1928 with the development of two small structures, likely a residence, in the northeast corner of the Site. By 1930, the Site and the adjoining property southeast of the Site were occupied as a horse-riding academy with the academy offices located at the adjoining property. The two small structures were likely demolished prior to the development of the horse tracks. The Site was cleared of the horse tracks in 1947. The Site was then developed with a golf course with a clubhouse and golf shop by 1956. One of the structures at the Site was demolished by 1967, and a roof shelter, likely the driving range canopy, was built in 1967. The tennis shop and tennis courts were developed by 1974, including four courts located at the adjoining property southeast of the Site. By 1979, five additional tennis courts were developed at the Site. The current fire department station at the adjoining property southeast of the Site was constructed in 2006.

Previous Environmental Reports

Citadel performed a Phase I ESA in November 2017. At the time of the Site reconnaissance, the Site was occupied by the Weddington Golf & Tennis facility. Citadel identified a former underground storage tank (UST) as a historical recognized environmental condition (HREC). No evidence for designating the Site as a recognized environmental condition (REC) or controlled recognized environmental condition (CREC) from reviews of historical documents and Site conditions was found. Citadel recommended the following:

- Acquire an NFA letter for the UST removal;
- Follow best management practices, in conformance with all appropriate current regulations, in regards to potential use of regulated hazardous materials and/or waste generated during everyday operations;

- Ensure that the three empty 55-gallon drums observed during the Site reconnaissance are disposed of appropriately; and
- Perform a survey for ACBMs and LBP prior to renovation or demolition activities.

Environmental Databases

The Site was identified on the Facility Index System/Facility Registry System (FINDS), the Enforcement and Compliance History Information (ECHO), and the Hazardous Waste Tracking System (HWTS) databases. FINDS contains facility information and "pointers" to other sources that contain more detail; ECHO provides integrated compliance and enforcement information; and HWTS is the Department of Toxic Substances Control's (DTSC) data repository for hazardous waste identification and manifest information. The Site was identified on these databases due to it being a hazardous waste generator of universal waste and a chemical storage facility. The Site was also identified as a RCRA Non-Generator in June 2007. No violations were reported on these databases.

The Site was identified on the California Environmental Reporting System (CERS) database as a chemical storage facility and a hazardous waste generator. Hazardous waste generated include tank bottom waste in 1995; and waste and mixed oil in 2007, 2011, and 2015. Minor violations reported include the following:

- November 2015: failure to complete, implement, and electronically submit a business plan and elements of a business plan. The violations were returned to compliance in November 2018.
- October 2018: failure to complete, implement, and electronically submit a business plan and elements of a business plan. The violations were returned to compliance in November 2018.
- June 2019: failure to keep a copy of manifests for at least three years from the date the waste was accepted by the initial transporter. The violation was returned to compliance in June 2019.

The reported violations were generally associated with implementing and submitting a hazardous materials business plan. The violations were returned to compliance and do not represent an environmental concern. In addition, the appearance of the Site as a hazardous waste generator reflects proper disposal of waste such as used motor oil and does not represent a significant environmental concern.

The Site was identified on the historical UST databases, the current UST database as inactive, and the Los Angeles Hazardous Materials Listing as active. The historical listing for the UST was created in 1988 and was active in 1994. No further pertinent information was provided by Environmental Data Resources, Inc. (EDR); however, according to reviewed documents provided by the Los Angeles Fire Department (LAFD), a 500-gallon UST was removed from the Site in 1995, under the supervision of LAFD. Refer to the Regulatory Agency Section below for further discussion. Based on a lack of reported spills or leaks, these listings are not considered to represent a significant environmental concern.

Citadel reviewed information provided by EDR regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, historical releases of petroleum products from a leaking underground storage tank (LUST) occurred within 0.25-mile and upgradient of the Site. Tesoro Station/ARCO/Thrifty Oil Company, located at 12500 Ventura Boulevard, is listed as a LUST site. According to EDR, the property is approximately 633 feet south-southeast of the Site and the gasoline leak was discovered in January 1989 during tank closure and reported in July 1989. The case was completed and closed by the Los Angeles Regional Water Quality Control Board (LARWQCB) on July 2, 1998. An

additional gasoline leak impacting soil only was discovered and reported in June 2003 during maintenance activities. No further information was available for review. Based on the distance from the Site and that the Los Angeles River is situated in between acting as a hydraulic barrier, this property is not considered a significant environmental concern.

One property was identified within 0.125-mile and upgradient of the Site on the Historical Gas Station database. This property, located 594 feet south-southeast of the Site, is discussed above as a LUST site. While the distances from the Site provided by EDR differ, these listings have the same address. This property is not likely to have adversely affected the Site. Two properties were identified within 0.125-mile and upgradient of the Site on the Historical Dry Cleaners database. These properties, located 525 feet south and 549 feet west-southwest of the Site, are not likely to have adversely affected the Site based on the distance from the Site and that the Los Angeles River is situated in between acting as a hydraulic barrier.

Regulatory Agencies

The LAFD recently issued lists of active and inactive ASTs, USTs, and hazardous materials inventories (HMI) as of June 3, 2019. The Site was identified on active HMI and inactive UST HMI.

Citadel contacted the LAFD for information for further information. According to the documents reviewed, a 550-gallon gasoline UST for a private auto fueling station was installed at the Site in 1957. The UST was re-registered as a 500-gallon UST in 1988 due to a new City ordinance requiring registration for a Fire Permit to operate an UST in the City of Los Angeles. The UST was removed in 1995 under the supervision of LAFD. While a No Further Action (NFA) letter was not located, laboratory results indicated that the soil samples collected at the bottom of the tank pit, the spoils pile, and under the dispenser did not exceed action levels. According to the drawings provided, the UST and dispenser were located just south of the tennis courts. Based on the current Site boundaries, the dispenser and a portion of the UST were located on the adjoining LAFD station property. The former UST does not represent a significant environmental concern. However, a NFA letter regarding the UST removal should be acquired.

RECOGNIZED ENVIRONMENTAL CONDITIONS

According to American Society for Testing and Materials (ASTM) Standard of Practice E1527-13, recognized environmental conditions (REC) fall under three specific categories when evaluating a site or properties within the site vicinity. These categories are defined below.

A recognized environmental condition, or REC, means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

A controlled recognized environmental condition, or CREC, is a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

An historical recognized environmental condition, or HREC, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

According to ASTM E2600-15, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property (TP) caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Based on our review of these databases, reported release incidents that would represent RECs in connection with the Site or a source of a release that would be likely to contribute to a VEC were not identified. Based on these reviews, the following environmental concerns were identified:

- The former 500-gallon UST is considered a HREC. No evidence for designating the Site as a REC or CREC from reviews of historical documents and present Site conditions was found.
- Given the long-term occupancy as a golf course and the current usage and storage of pesticides at the Site, on-Site soil may contain pesticides, representing an environmental concern. Grading activities could result in exposure of construction workers to these chemicals.

NON-ASTM SCOPE CONSIDERATIONS

The current Site buildings were constructed prior to bans using asbestos-containing building materials (ACBMs), lead-based paint (LBP), and polychlorinated biphenyls (PCBs) in electrical equipment came into effect in 1989, 1978, and 1978, respectively. No testing is known to have been performed to evaluate for the presence of ACBMs, LBP, or PCBs at the Site.

The California Bureau of Mines and Geology and California Department of Public Health (CADPH) participated in the United States EPA's State Radon Survey, a Federal survey to measure levels of indoor radon in all states. Based on the results of this survey, CADPH predicted that approximately 0.5% of homes in Region 9 would have radon concentrations over the EPA action level of 4.0 picoCuries per liter (pCi/L).

The Federal EPA Radon Zone for Los Angeles County is Zone 2, which indicates an average indoor concentration greater than or equal to 2.0 pCi/L of air and less than or equal to 4.0 pCi/L. In a survey, 134 tests were performed within the 91604 zip code for the presence of radon. Of these, 20 tests were found to contain radon in excess of 4.0 pCi/L. Site-specific radon values were not available and were not a part of this ASTM Phase I ESA.

A potable well was not observed on-Site and the Site does not lie within a known or potential flood zone or wetlands.

1.0 INTRODUCTION

Citadel EHS (Citadel) was contracted by Harvard-Westlake School (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the Weddington Golf & Tennis Facility located at 4141 Whitsett Avenue, in the neighborhood of Studio City, City of Los Angeles, Los Angeles County, California.

1.1 PURPOSE

The purpose of the Phase I ESA was to review past and present land use practices and to evaluate the presence, or likely presence, of any hazardous substances or petroleum products that have been discharged into the property's structure, ground, groundwater, or surface water. This qualitative assessment was accomplished by review of current and readily available information regarding past and current land use for indications of the manufacture, generation, use, storage and/or disposal of hazardous substances at the Site. A Site visit was also conducted to observe existing Site conditions. This report provides the results of the Phase I ESA performed.

1.2 INVOLVED PARTIES

The involved party(s) in this study, to the best of our knowledge, is Harvard-Westlake School.

Citadel understands that this Phase I ESA is being requested in preparation of an Environmental Impact Report as specified by the California Environmental Quality Act. Citadel recognizes that this report is to be used exclusively by Harvard-Westlake School and its successors, lenders, and assigns. It is a report upon which Harvard-Westlake School and its successors, lenders, and assigns, can rely.

This assessment and report were prepared on behalf of and for the exclusive use of Harvard-Westlake School, their lenders and assigns (Client) solely for its use and reliance, subject to the terms and conditions agreed upon between Citadel and the Client.

1.3 SCOPE OF SERVICES

This Phase I ESA was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard of Practice E1527-13 and the standards of care and diligence normally practiced by recognized consulting firms in performing services of a similar nature.

The scope of services for this assessment consisted of the following:

- Performed a Site inspection to verify current Site conditions, and check for visible evidence of previously disposed and/or currently present hazardous waste, surface contamination, underground and above ground storage tanks (USTs/ASTs), suspect polychlorinated biphenyls (PCBs), and other potential environmental hazards.

- Conducted a visual survey of the adjacent properties and the immediate vicinity to determine if any nearby sites posed a significant environmental threat to the Site.

- Reviewed currently and readily available documents, including maps, aerial photographs, governmental databases of known hazardous waste sites and

underground tanks, other consultant reports (if any), fire insurance maps, and other accessible records.

- Δ Reviewed results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

- Δ Consulted with appropriate governmental agencies having jurisdiction relative to past history of the property, complaints or incidents in the immediate area, and permits that may have been issued.

- Δ Prepared a Phase I report, inclusive of our findings and recommendations, with applicable illustrations and documentation.

The scope of services outlined above is generally considered sufficient to properly assess the Site based on the data search, reasonably ascertainable documents, and Site inspection.

2.0 GENERAL SITE CHARACTERISTICS

2.1 LOCATION

The irregular-shaped Site is located approximately 50 feet north/northwest of the Los Angeles River. The Site is bounded by Valley Spring Lane to the north; Whitsett Avenue to the east; a fire department station to the southeast; the Los Angeles River to the south; and Bellaire Avenue to the west. The general Site vicinity is occupied by single- and multi-family residential properties with large commercial/retail properties south of the Los Angeles River.

According to the U.S. Geological Survey (USGS) Studio City Quadrangle (7.5 Minute Series), dated 2012, the Site is at an elevation of approximately 620 feet above mean sea level (AMSL) and appears to slope to the north-northeast. The Site is located at approximate coordinates of 34° 8' 44.74" North Latitude and 118° 24' 25.08" West Longitude.

A Site Location Map identified as Figure 1 is included in Appendix A.

2.2 SITE DESCRIPTION

According to the County of Los Angeles' Assessor's Parcel Maps, the Site is comprised of one parcel legally identified as Assessor's Parcel Number (APN) 2375-018-020 and an approximately 1.1-acre parcel that Harvard-Westlake School leases from the Los Angeles County. The Site, as discussed and analyzed in this report, includes both the 16.1 acres that Harvard-Westlake School owns and the 1.1 acres that Harvard-Westlake School leases from the County of Los Angeles, totaling 17.21 acres.

The Site consists of a nine-hole golf course with one clubhouse of approximately 2,444 square feet (SF) including a café; driving range with 24 stalls; 16 tennis courts with a tennis shop of approximately 500 SF; several sheds and gated areas for maintenance; surface parking areas; and associated landscaping. At the time of the Site reconnaissance, the Site was occupied by Weddington Golf & Tennis.

Stationary equipment at the Site include a pole-mounted transformer. In general, the Site appeared to be well maintained and the observed building/ground conditions were good. Minor dark stains, likely associated with fuel-related materials, were observed on the pavement and the wooden platform in the equipment corral; however, the stains appear to be a de minimis condition. Given the long-term occupancy as a golf course and the current usage and storage of pesticides at the Site, on-Site soil may contain pesticides, representing an environmental concern.

A Site Plan is included as Figure 2 in Appendix A. Select photographs of the Site and vicinity is included as Appendix B.

2.3 ADJACENT PROPERTIES

The immediately surrounding properties of the Site consist of the following:

Direction from Site	Address – Tenant/Use
North	4202 Bellaire Avenue – Single-family residence 4200 Teesdale Avenue – Single-family residence 4202 and 4203 Beeman Avenue – Single-family residences 4202 and 4203 Babock Avenue – Single-family residences 12501 Valley Spring Lane – Multi-family residence
East	4068, 4072, 4100, 4104, 4108, 4112, 4128, 4148, and 4152 Whitsett Avenue – Multi-family residences 4122 Whitsett Avenue – Single-family residence
South	4041 Whitsett Avenue (southeast) – Los Angeles Fire Department Station 78 12555 Ventura Boulevard (beyond the Los Angeles River) – Bed Bath & Beyond 12565 Ventura Boulevard (beyond the Los Angeles River) – Unoccupied 12601 Ventura Boulevard (beyond the Los Angeles River) – Carney's Restaurant 12605 Ventura Boulevard (beyond the Los Angeles River) – Staples 12655 Ventura Boulevard (beyond the Los Angeles River) – Jerry's Famous Deli, Pinz Bowling Center, Guy's North (catering/special events)
West	12706 Valley Spring Lane – Single-family residence 4155 Bellaire Avenue – Single-family residence

2.4 UTILITIES

Electrical service is supplied to the Site by the Los Angeles Department of Water and Power (LADWP). Gas service is supplied by the Gas Company of Los Angeles. General rubbish (non-hazardous) is removed from the Site on a regular basis by a contracted waste hauler.

3.0 ENVIRONMENTAL SETTING

3.1 PHYSICAL SITE CHARACTERISTICS

Based upon the National American Datum (NAD) of 1983, the Site is at an elevation of approximately 620 feet AMSL.

The Site is identified on the Geologic map of the Beverly Hills and Van Nuys (south half) quadrangles, Los Angeles County, California (Dibblee and Ehrenspeck, 1991) as being unconsolidated detrital surficial sediments (Qa). The sediment is described as alluvial gravel, sand, and silt-clay, derived mostly from Santa Monica Mountains and include gravel and sand of

stream channels. The United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) National Cooperative Soil Survey identifies the Site soils as Urban Land-Palmview-Tujunga complex. The Palmview soil is described as fine sandy loam and well drained. The Tujunga soil is described as sandy loam/loamy sand and somewhat excessively drained.

USGS Topographic Map	Van Nuys Quadrangle
Groundwater Basin	San Fernando Valley Groundwater Basin
Nearest Surface Water to Site	Los Angeles River, approximately 50 feet south/southwest of the Site
Gradient Direction (Source)	North-northeast (topographic maps)
Estimated Depth to Groundwater (Source)	Approximately 30 feet below ground surface (bgs), approximately 0.3 mile northwest of the Site (GeoTracker/Wayne Perry, 2020)
Nearest Wetland to Site (Source)	Los Angeles River, approximately 50 feet south/southwest of the Site (National Wetlands Inventory)
Nearest 100 or 500-year Flood Zone	None within 0.25-mile of the Site (Federal Emergency Management Agency)

4.0 SITE RECONNAISSANCE

Citadel representative Ms. Shirley Lee conducted the Phase I ESA reconnaissance on March 31, 2020. Ms. Lee was accompanied by Mr. Marcos Anguiano, the General Manager at the Site. The Site reconnaissance consisted of an inspection of the Site and a perimeter survey of the surrounding properties. Mr. Mark Drollinger reviewed this Phase I ESA. Findings from the Site inspection, research and perimeter survey are presented below.

4.1 SITE RECONNAISSANCE FINDINGS

Yes	No	Observation
	X	Aboveground Storage Tanks (ASTs) and Underground Storage Tanks (USTs)
X		Identified Hazardous Materials
X		Polychlorinated Biphenyls (PCBs) – Electric or Mechanical Equipment Likely to Contain Fluids
	X	Radioactive Man-Made Materials
X		Pits, Ponds, and Lagoons
	X	Septic Tanks and Cesspools
X		Wells, Cisterns, Sumps, and Drains
	X	Wastewater or Grease Interceptors
	X	Interior Stains or Corrosion
	X	Strong, Pungent, or Noxious Odors
	X	Pools of Liquid
X		Stained Soil or Pavement
	X	Stressed Vegetation
X		Other

The above-identified observed items are further discussed below.

IDENTIFIED HAZARDOUS MATERIALS

Hazardous Material (size/quantity)	Location	Secondary Containment	Staining/Leaks	SDS
Gasoline (two 55-gallon drum and four five-gallon cans)	Ventilated shed with flammable hazard sign	No, situated on a platform within a shed	None identified	No
Diesel (one 55-gallon drum)	Ventilated shed with flammable hazard sign	No, situated on a platform within a shed	None identified	No
Grease (one five-gallon container)	Ventilated shed with flammable hazard sign	No, situated on a platform within a shed	None identified	No
Motor oil (one 55-gallon drum)	Fenced maintenance corral	No, situated on a platform	None identified	No
Grease (one five-gallon container)	Fenced maintenance corral	No	None identified	No
Fungicides and fertilizers	Ventilated shed with a poison sign	No, situated within a shed	None identified	No
Paints (one-gallon containers)	Maintenance shed south of tennis courts	No, on shelves	None identified	No
Waste paint with sand mixture (one 55-gallon drum)	South of tennis courts	No	None identified	N/A
Used motor oil (one 55-gallon drum)	South of tennis courts	Yes	None identified	N/A

Routine janitorial and maintenance supplies were observed in containers sized for commercial use and properly stored with no signs of staining or leaking. A vehicle with a 100-gallon plastic tank was observed in the fenced maintenance corral. According to Mr. Anguiano, the plastic tank is used to contain pesticides mixed with water; and the final product is sprayed throughout the golf course. In additional, four compressed gas cylinders including helium and oxygen were observed. According to Mr. Anguiano, the gas cylinders were left by prior owner and are to be disposed. Two empty 55-gallon drums were observed south of the tennis courts. According to Mr. Anguiano, these drums were used as target practice.

Given the long-term occupancy as a golf course and the current usage and storage of pesticides at the Site, on-Site soil may contain pesticides, representing an environmental concern.

POLYCHLORINATED BIPHENYLS

Typical sources of polychlorinated biphenyls (PCBs) include electrical transformer cooling oils, fluorescent light fixture ballasts and hydraulic oil. In 1976, the U.S. EPA banned the manufacture and sale of PCB-containing transformers. Prior to this date, transformers were frequently filled with a dielectric fluid containing PCB-laden oil. By 1985, the US EPA required that commercial property owners with transformers containing more than 500 parts per million (ppm) PCBs must register the transformer with the local fire department, provide exterior labeling, and remove combustible materials within 16 feet (40 Code of Federal Regulations 761.30: "Fire Rule").

Component Type	Pad/Pole Mounted	Location	Owner	PCB Labels	Staining/Leaking
Transformer	Pole-mounted	Exterior near the southeast corner of Site	LADWP	No	None identified

In addition, PCBs were an ingredient added to a variety of building materials during manufacture, most notably but not limited to, caulking, putty, and glazing, particularly around windows, door frames, and building joints. Building materials containing PCBs were used in many buildings in the 1950s through the 1970s, and potentially before the 1950s. There are significant regulations regarding the removal of these materials during demolition and/or renovation, both from an environmental protection standpoint as well as an occupational health and safety standpoint. In addition, under the Toxic Substance Control Act (TSCA), building materials that contain PCBs above 50 ppm are considered an "unauthorized use" of PCBs, and removal can be compelled under TSCA. Based on the construction date for the Site building, building materials containing PCBs may have been used in the construction of the Site building. A survey for PCBs was not requested or conducted as part of this Phase I ESA.

PITS, PONDS, AND LAGOONS

A small area of approximately 24 SF surrounded by concrete blocks was observed near the clubhouse. According to Mr. Anguiano, an eight-foot pit was dug in that area approximately 15 years ago to contain runoff from the golf ball washer. The pit was not effective; therefore, a sump was installed as a permanent solution. The pit was reportedly to have been backfilled shortly after. The former pit is not expected to represent a significant environmental concern.

WELLS, CISTERNS, SUMPS, AND DRAINS

Evidence of a sump was observed near the clubhouse. According to Mr. Anguiano, the sump is approximately 200 gallons in size and is used to collect runoff from the golf ball washer. The water in the sump is pumped back to the surface to water the lawn. The sump is not expected to represent a significant environmental concern.

STAINED SOIL OR PAVEMENT

Minor dark stains, likely associated with fuel-related materials, were observed on the pavement and the wooden platform in the equipment corral. The stains appear to be a de minimis condition.

OTHER

A 55-gallon grease container was observed at the Site located southwest of the clubhouse. The grease is from the on-Site café and is reportedly collected monthly by JW Oil Disposal. The storage and handling of this material is not expected to represent a significant environmental concern.

4.2 NON-ASTM SERVICES

ASBESTOS CONTAINING MATERIALS

The EPA issued a final rule under Section 6 of Toxic Substances Control Act (TSCA) banning most asbestos-containing building materials (ACBMs) in 1989. The ban on ACBMs was vacated in 1991 allowing some building materials to continue to contain asbestos. The applicability of the EPA's National Emission Standards for Hazardous Air Pollutants (NESHAP, 40 CFR Chapter 61, Subpart M) apply to the owner or operator of a facility where an inspection for the presence of asbestos-containing materials (ACM), including Category I (asbestos containing packings, gaskets, resilient floor coverings and asphalt roofing products), and Category II (all remaining types of

non-friable asbestos containing material not included in Category I that when dry, cannot be crumbled, pulverized or reduced to powder by hand pressure), non-friable ACM must occur prior to the commencement of demolition or renovation activities.

Building materials, coatings, and/or finishes containing asbestos may be present in any structure regardless of the date of construction. In accordance with NESHAPS and local air pollution control district regulations, all suspect materials, finishes, and coatings that will be impacted by renovation or demolition regardless of the date of construction are required to be surveyed for the presence of asbestos by State-licensed asbestos consultants.

A survey for asbestos-containing materials was not requested or conducted as part of this Phase I ESA.

LEAD-BASED/LEAD-CONTAINING PAINTS

Lead-based paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has greater than or equal to one milligram per square centimeter (mg/cm^2) (5,000 microgram per gram (µg/g) or 5,000 parts per million (ppm)) of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm^2 to 2.0 mg/cm^2. In 2009, the US Consumer Product Safety Commission (16 Code of Federal Regulations CFR 1303) banned paint containing more than 0.009% (90 ppm) lead for residential use. Buildings built before 1978 are much more likely to have LBP; however, all commercial structures regardless of the date of construction likely contain lead-based or lead-containing glazings, varnishes, stains, coatings, paints, and primers. Such materials that will be impacted by renovation, repair, or demolition should be tested beforehand and the results disclosed to trades or staff that will be doing such work. All associated waste streams should be accurately characterized for proper disposal requirements.

A survey for lead containing materials was not requested or conducted as part of this Phase I ESA.

DRINKING WATER

The Site is supplied with municipal drinking water by the LADWP. An assessment of lead in drinking water was not requested or conducted as part of this Phase I ESA.

RADON

The California Bureau of Mines and Geology and California Department of Public Health (CADPH) participated in the United States EPA's State Radon Survey, a Federal survey to measure levels of indoor radon in all states. Based on the results of this survey, CADPH predicted that approximately 0.5% of homes in Region 9 would have radon concentrations over the EPA action level of 4.0 picoCuries per liter (pCi/L).

The Federal EPA Radon Zone for Los Angeles County is Zone 2, which indicates an average indoor concentration greater than or equal to 2.0 pCi/L of air and less than or equal to 4.0 pCi/L. In a survey, 134 tests were performed within the 91604 zip code for the presence of radon. Of these, 20 tests were found to contain radon in excess of 4.0 pCi/L. Site-specific radon values were not available and were not a part of this ASTM Phase I ESA.

METHANE

In March 2004, Ordinance Number 175790 was adopted into the Los Angeles Municipal Code (Section 91.106.4.1 and Division 71, Chapter IX) to establish citywide methane mitigation requirements, and included updated construction standards to control methane intrusion into buildings. This ordinance established defined geographic areas as Methane Zones and Methane Buffer Zones, which relate to specific assessment and mitigation requirements per area, and set forth a standard of assessment and mitigation in the planning stages of all new construction in these areas.

The Site is not located within the City of Los Angeles Methane or Methane Buffer Zones recognized by the Los Angeles Department of Building Services.

5.0 SITE HISTORY

The purpose of the records review is to obtain and review reasonably ascertainable/standard sources that will help identify recognized environmental conditions in connection with the property. Reasonably ascertainable records from standard sources is (1) information that is publicly available, (2) information that is obtainable from its source within reasonable time and cost constraints, and (3) information that is practically reviewable.

Reasonable time and cost means that the information will be provided by the source within 20 calendar days of receiving a written, telephone, or in-person request at no more than a nominal cost intended to cover the source's cost of retrieving and duplicating the information. Information that can only be reviewed by a visit to the source is reasonably ascertainable if the visit is permitted by the source within 20 days of request.

To investigate the history of the Site, Citadel reviewed select historic aerial photographs, building permits, city directories, and Sanborn Fire Insurance Maps provided by Environmental Data Resources Inc. (EDR). In addition, Citadel reviewed client-supplied information, and oil and gas maps, and Citadel interviewed selected individuals regarding historic Site use. Citadel's reviews of these reports and interviews are discussed below.

5.1 HISTORICAL AERIAL PHOTOGRAPHS

Historical aerial photographs of the Site and vicinity were obtained from EDR to ascertain historical land uses and to identify any evidence of hazardous material generation or storage. Below are brief descriptions of observations made from the aerial photographs of the Site and vicinity.

Dates(s)	Site Description	Surrounding Area Descriptions
1928	Relatively undeveloped with the exception of two small structures developed in the northeast corner of the Site	**North:** Valley Spring Lane; with Teesdale Avenue, Beeman Avenue, Babcock Avenue developed beyond; properties appear agricultural with several single-family residences **East:** Whitsett Avenue, with agricultural and several single-family residences beyond **South:** Undeveloped with the Los Angeles River further south; a small commercial structure appears developed at the adjoining property to the southeast **West:** Bellaire Avenue, with developed properties
1938	The small structures appear to have been demolished; a horse track appears developed at the Site	**North:** Additional single-family residences appear developed **East:** Additional single-family residences appear developed **South:** A road developed along the south Site boundary; several structures appear developed southeast of the Site, likely as offices/barns for the on-Site horse-track **West:** Relatively unchanged
1947	Undeveloped; lot appears to have been cleared	**North:** Additional single-family residences appear developed **East:** Additional single-family residences appear developed **South:** Structures southeast of the Site appear to have been demolished **West:** Single-family residences appear developed beyond Bellaire Avenue
1952	Relatively unchanged with the exception of dark vertical lines across the Site	**North:** Relatively unchanged **East:** Relatively unchanged **South:** The Los Angeles River appears channelized; a small structure, likely a single-family residence, appears developed at the adjoining property southeast of the Site **West:** Relative unchanged
1964	Site appears developed as a golf course with two structures in the northeast corner and surface parking area along the east boundary of the Site; two small structures, likely sheds, appear developed near the southwest corner of the Site.	**North:** Relatively unchanged **East:** Relatively unchanged **South:** The structure to the southeast appears to have been demolished **West:** Relatively unchanged
1967	One of the structures in the northeast corner of the Site appears demolished; an additional structure, likely the driving range canopy, appears developed south of the main structure. The remaining areas appear relatively unchanged	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged

Dates(s)	Site Description	Surrounding Area Descriptions
1977	Site appears developed with 11 tennis courts in the southeast portion of the Site and the small structures in the southwest corner of the Site appear demolished; the remaining areas appear relatively unchanged.	**North:** Relatively unchanged **East:** Relatively unchanged **South:** The adjoining property southeast of the Site appears as part of the golf course with the development of four tennis courts **West:** Relatively unchanged
1979, 1981	Relatively unchanged with the exception of five additional tennis courts	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged
1989, 1994, 2002, 2005	Relatively unchanged	**North:** Relatively unchanged **East:** Several of the single-family residences have been replaced by current multi-family residences **South:** Relatively unchanged **West:** Relatively unchanged
2009, 2010, and 2012	Relatively unchanged	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Property southeast of Site appears developed with the current fire department station **West:** Relatively unchanged

Copies of the Aerial Photographs provided by EDR can be found in Appendix C.

5.2 HISTORIC BUILDING PERMITS

EDR provides a listing of building permits for the Site and adjoining properties, if available. In addition, Citadel reviewed building permits with the City of Los Angeles Building Department. Permits reviewed indicate that the Site was formerly occupied as a riding academy as early as 1935 with the offices for the academy located at the adjoining property southeast of the Site. The Site was developed as a golf course with a clubhouse and golf shop by 1956. A roof shelter was built in 1967. The tennis shop and tennis courts were developed by 1974.

A copy of the EDR Building Permit Report is included as Appendix D.

5.3 HISTORICAL FIRE INSURANCE MAPS

Citadel requested that EDR review its collection of Sanborn Fire Insurance Maps for potential coverage of the Site and vicinity. Sanborn Map coverage was not available for the Site.

A copy of the EDR Sanborn Map Report is included as Appendix E.

5.4 CITY PARCEL PROFILE REPORT

Citadel reviewed the on-line parcel profile report from the City of Los Angeles interactive database, NavigateLA. Alias addresses identified for the Site include:

- 12506 West Valley Spring Lane
- 12600 West Valley Spring Lane

- 12630 West Valley Spring Lane
- 4047 North Whitsett Avenue
- 4155 North Whitsett Avenue

5.5 HISTORICAL CITY DIRECTORIES

City directories were researched by EDR in order to identify previous Site tenants and/or neighboring properties with a potential for hazardous materials generation and/or storage. EDR researched city directory listings from 1920 through 2014 (non-inclusive) and provided their search results to Citadel for review. The following table summarizes information provided by the city directory search.

Dates(s)	Occupant Listed
1930	Nishita
1930	Robert Cushman Riding Academy (4101 Whitsett)
1976	Studio City Golf Course Inc.
1980, 1981, 1985, 1986, 1990, 1991, 1995	Studio City Golf Course Inc., Studio City Golf & Tennis
2001	Studio City Golf Course Inc., Matt's Golf Café
2006, 2010	Studio City Golf Course Inc.
2014	Tennis Pro Zone

A copy of the EDR City Directory Abstract is included as Appendix F.

5.6 CLIENT-SUPPLIED ENVIRONMENTAL INFORMATION

Citadel reviewed the *Phase I Environmental Site Assessment Report, Weddington Golf & Tennis Facility, 4141 Whitsett Avenue, Studio City, California 91604,* prepared by Citadel Environmental Services, Inc., dated November 17, 2017.

Citadel performed a Phase I ESA in November 2017. At the time of the Site reconnaissance, the Site was occupied by the Weddington Golf & Tennis facility. The Site was identified on the historical underground storage tank (UST) databases. According to documents reviewed, a 500-gallon UST was removed from the Site in 1955 under the supervision of the Los Angeles Fire Department (LAFD). While a No Further Action (NFA) letter was not located, laboratory results indicated that the soil samples collected at the bottom of the tank pit, the spoils pile, and under the dispenser did not exceed action levels. The UST and dispenser were located just south of the tennis courts. Based on the Site boundaries, the dispenser and a portion of the UST were located on the adjoining LAFD station property. Citadel identified the former UST as a historical recognized environmental condition (HREC). No evidence for designating the Site as a recognized environmental condition (REC) or controlled recognized environmental condition (CREC) from reviews of historical documents and Site conditions was found. Citadel recommended the following:

- Acquire an NFA letter for the UST removal;
- Follow best management practices, in conformance with all appropriate current regulations, in regards to potential use of regulated hazardous materials and/or waste generated during everyday operations;

- Ensure that the three empty 55-gallon drums observed during the Site reconnaissance are disposed of appropriately; and
- Perform a survey for ACBMs and LBP prior to renovation or demolition activities.

A copy of the reviewed report can be found in Appendix G.

5.7 HISTORICAL TOPOGRAPHIC MAPS

Historical topographic maps were provided by EDR in order to identify natural features and changes in development over a long period of time. The topographic maps provides the user with a regional view of changes to the Site and vicinity that other historical databases such as aerial photographs may not provide. Below are brief descriptions of observations made from the topographic maps of the Site and vicinity.

Dates(s)	Site Description	Surrounding Area Descriptions
1894, 1896, 1898, 1900, 1902	Undeveloped land	**North:** Undeveloped land **East:** Undeveloped land **South:** Los Angeles River with undeveloped land beyond **West:** Undeveloped land
1920, 1921, 1924, 1926	Relatively unchanged	**North:** Relatively undeveloped with one small structure north of the Site **East:** Unimproved road in the location of Whitsett Avenue, with undeveloped land beyond **South:** Ventura Boulevard developed beyond the Los Angeles River **West:** Relatively unchanged
1953	Relatively unchanged	**North:** Valley Spring Lane with the current street system developed; shading indicative of urban development **East:** Shading indicative of urban development **South:** Los Angeles River appears channelized, with undeveloped land beyond **West:** Shading indicative of urban development
1966	The current golf clubhouse appears developed in the northeast corner of the Site	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Shading, beyond the Los Angeles River, indicative of urban development **West:** Relatively unchanged
2012	The Site is identified as Studio City Golf Course; no structures are shown on this map	No structures are shown on this map

Copies of the historical topographic maps provided by EDR are included as Appendix H.

5.8 HISTORIC OIL AND GAS MAPS

Citadel reviewed information available on-line through the California Department of Conservation's website. The Geological Energy Management Division (CalGEM) Online Mapping System (COMS) shows that there is an oil well approximately 1.8 miles northeast of the Site. The oil well is identified by API 03705314. According to COMS, the well operator for the well is listed as

Conoco Inc. and the status for the well is inactive and plugged. The well was drilled to a depth of 2,995 feet in April 1961 and was abandoned in January 1962.

5.9 INTERVIEWS

Citadel interviewed Mr. Marcos Anguiano, the General Manager, during the Site reconnaissance. Mr. Anguiano aware of any historic or current environmental concerns or hazards at the Site. Citadel also submitted a User Questionnaire to Harvard-Westlake School.

The completed User Questionnaire was not provided to Citadel at the time of this report. A copy of Citadel's User Questionnaire can be found in Appendix I.

5.10 ENVIRONMENTAL LIEN

Citadel contracted with EDR to perform an Environmental Lien Search for the Site. The Environmental Lien Search report reviewed did not identify any current environmental liens or other activity and use limitations (AUL) for the Site. A deed dated December 13, 2017, was included in the report. The deed granted the title from Weddington Golf & Tennis LLC to 4141 Whitsett LLC.

A copy of the environmental lien and AUL search can be found in Appendix J.

5.11 SUMMARY OF SITE HISTORY

A review of historical sources showed that the Site was undeveloped as early as 1894 until at least 1928 with the development of two small structures, likely a residence, in the northeast corner of the Site. By 1930, the Site and the adjoining property southeast of the Site were occupied as a horse-riding academy with the academy offices located at the adjoining property. The two small structures were likely demolished prior to the development of the horse tracks. The Site was cleared of the horse tracks in 1947. The Site was then developed with a golf course with a clubhouse and golf shop by 1956. One of the structures at the Site was demolished by 1967, and a roof shelter, likely the driving range canopy, was built in 1967. The tennis shop and tennis courts were developed by 1974, including four courts located at the adjoining property southeast of the Site. By 1979, five additional tennis courts were developed at the Site. The current fire department station at the adjoining property southeast of the Site was constructed in 2006.

Citadel performed a Phase I ESA in November 2017. At the time of the Site reconnaissance, the Site was occupied by the Weddington Golf & Tennis facility. Citadel identified a former UST as a HREC. No evidence for designating the Site as a REC or CREC from reviews of historical documents and Site conditions was found. Citadel recommended the following:

- Acquire an NFA letter for the UST removal;
- Follow best management practices, in conformance with all appropriate current regulations, in regards to potential use of regulated hazardous materials and/or waste generated during everyday operations;
- Ensure that the three empty 55-gallon drums observed during the Site reconnaissance are disposed of appropriately; and
- Perform a survey for ACBMs and LBP prior to renovation or demolition activities.

6.0 REGULATORY AGENCY REVIEW

6.1 DATABASE REVIEW

As part of the Phase I ESA, Citadel utilized EDR of Milford, Connecticut, as an information source for regulatory agency database records.

The following summary of the database information is divided into five columns. The first column identifies the environmental database researched; the second column indicates the distance from the Site that was used for the research; the third column indicates if the Site was identified in the specified database; the fourth column lists the number of listings identified on the database within the specified distance of the Site; and the fifth column indicates if the sites identified are potential environmental concerns to the Site.

Although locations of the orphan sites are frequently unknown, Citadel attempts to evaluate the potential adverse environmental impact that these facilities may have on the Site. This evaluation consists of reviewing street names in an effort to learn whether the street on which the Site is located lies within the search distance of the subject property, a drive-by view of surrounding properties during the Site visit, and evaluating the Site type and information provided by government agencies. The orphan sites included in the following table are those Citadel identified as potentially located within the identified search distance.

Database	Radius	Site Identified	No. of Listings Identified	Potential Environmental Concern to the Site
National Priorities List	1 mile	No	0	
RCRA Corrective Action Treatment/Storage/Disposal (TSD) Facilities (CORRACTS)	1 mile	No	0	
Delisted National Priorities List	1 mile	No	0	
CERCLIS Sites	½ mile	No	0	
CERCLIS No Further Remedial Action Planned (NFRAP) Sites	½ mile	No	0	
RCRA Non-Corrective Action TSD Facilities	½ mile	No	0	
State/Tribal Voluntary Cleanup Sites	½ mile	No	0	
State/Tribal Leaking Registered Storage Tank Sites	½ mile	No	17	No
State/Tribal Brownfield Sites/CERCLIS Equivalent	1 mile	No	2	No
Historic CORTESE List	½ mile	No	8	No
State/Tribal Solid Waste Landfill Sites/Facilities	½ mile	No	0	
Federal/State/Tribal Engineering Controls Registries	½ mile	No	0	
Federal/State/Tribal Institutional Controls Registries	½ mile	No	0	
RCRA Large Quantity Generators	¼ mile	No	0	

Database	Radius	Site Identified	No. of Listings Identified	Potential Environmental Concern to the Site
RCRA Small Quantity Generators	¼ mile	No	3	No
RCRA Non Generators	¼ mile	Yes	25	No, see discussion below
State/Tribal Registered Storage Tank Sites	¼ mile	Yes	5	No, see discussion below
HIST UST	¼ mile	No	2	No
CA FID UST	¼ mile	Yes	3	No, see discussion below
SWEEPS UST	¼ mile	Yes	1	No, see discussion below
Facility Index System (FINDS)	Site	Yes	1	No, see discussion below
HAZNET	Site	Yes	2	No, see discussion below
Orphan	N/A	No	3	No

A brief discussion of select facilities and their database listings are included following the table. The full report provided by EDR and reviewed by Citadel can be found in Appendix K.

Site Name	Weddington Golf & Tennis (Weddington)
Database(s)	FINDS, ECHO, UST, RCRA NonGen/NLR, CERS HAZ WASTE, CERS, HAZNET, HAZMAT, HWTS
Address	4141 North Whitsett Avenue
Distance/Direction	Target Property
Comments	The Site was identified on the Facility Index System/Facility Registry System (FINDS), the Enforcement and Compliance History Information (ECHO), and the Hazardous Waste Tracking System (HWTS) databases. FINDS contains facility information and "pointers" to other sources that contain more detail; ECHO provides integrated compliance and enforcement information; and HWTS is the Department of Toxic Substances Control's (DTSC) data repository for hazardous waste identification and manifest information. The Site was identified on these databases due to it being a hazardous waste generator of universal waste and a chemical storage facility. The Site was also identified as a RCRA Non-Generator in June 2007. No violations were reported on these databases. The Site was identified on the California Environmental Reporting System (CERS) database as a chemical storage facility and a hazardous waste generator. Hazardous waste generated include waste and mixed oil in 2007, 2011, and 2015. Minor violations reported include the following: - November 2015: failure to complete, implement, and electronically submit a business plan and elements of a business plan. The violations were returned to compliance in November 2018. - October 2018: failure to complete, implement, and electronically submit a business plan and elements of a business plan. The violations were returned to compliance in November 2018. - June 2019: failure to keep a copy of manifests for at least three years from the date the waste was accepted by the initial transporter. The violation was returned to compliance in June 2019.

	The reported violations were generally associated with implementing and submitting a hazardous materials business plan. The violations were returned to compliance and do not represent an environmental concern. In addition, the appearance of the Site as a hazardous waste generator reflects proper disposal of waste such as used motor oil and does not represent a significant environmental concern. The Site was also identified on the current UST database as inactive and on the Los Angeles Hazardous Materials Listing as active. No further pertinent information was provided by EDR; however, according to reviewed documents provided by the Los Angeles Fire Department (LAFD), a 500-gallon UST was removed from the Site in 1995, under the supervision of LAFD. Refer to Section 6.3 for further discussion. Based on a lack of reported spills or leaks, these listings are not considered to represent a significant environmental concern.

Site Name	Studio City Golf Course
Database(s)	HAZNET, HWTS, SWEEPS UST, CA FID UST
Address	4141 Whitsett Avenue
Distance/Direction	Target Property
Comments	The Site was identified on the HWTS likely due to it being a hazardous materials generator of tank bottom waste in 1995. No violations were reported. The Site was identified on the historical UST databases. The listing for the UST was created in 1988 and was active in 1994. No further pertinent information was provided by EDR; however, according to reviewed documents provided by the LAFD, a 500-gallon UST was removed from the Site in 1995, under the supervision of LAFD. Refer to Section 6.3 for further discussion. Based on a lack of reported spills or leaks, these listings are not considered to represent a significant environmental concern.

Maps showing the location of these facilities and additional information are provided in the Government Records Report in Appendix K.

6.2 VAPOR ENCROACHMENT CONDITION

According to ASTM E2600-15, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property (TP) caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Tier 1 screening begins with the default area of concern (AOC) defined by the approximate minimum search distances adjusted as appropriate for local conditions, and then determining if known or suspected contaminated properties with contaminants of concern (COCs) exist within the established AOC. The default AOC is one third of a mile around the TP for COCs and one-tenth of a mile for petroleum hydrocarbon COCs. The AOC is measured from the TP boundary to

a contaminated property with known or suspected COC contamination of soil or groundwater or both. The default AOC may be expanded or reduced by the environmental professional (adjusted AOC) using experience and professional judgment, based on factors like groundwater flow direction, subsurface characteristics, surficial features and man-made features.

If groundwater flow direction is known or can be inferred from the Phase I ESA investigation of the TP, the default AOC in the down-gradient direction may be reduced to the area within the critical distance of 100 feet. The AOC in the cross-gradient direction may also be reduced, depending upon the critical distance and the width of the COC-contaminated plume associated with a known or likely COC-contaminated property located in a cross-gradient direction from the TP. The critical distance is the lineal distance in any direction between the nearest edge of the contaminated plume and the nearest TP boundary, and is equal to 100 feet for COCs or 30 feet for dissolved petroleum hydrocarbon COCs.

For a COC-contaminated property identified in Tier 1 located down-gradient from the TP, it is not necessary to have information on migrating groundwater contaminated plume dimensions as the critical distance is measured from the nearest TP boundary to the source of contamination at the off-site down-gradient property. In this case, the AOC may be reduced to the area within the critical distance.

For a contaminated property identified in Tier 1 located crossgradient from the TP, the AOC will be the area within the critical distance plus one half of a reasonable estimation of the contaminated plume width (at the point nearest the closest TP boundary) that might be associated with the nearby known or suspected COC-contaminated property (that is, the COC-contaminated property where the groundwater contamination originated). The environmental professional's judgment and experience can be used to estimate the width of the COC-contaminated plume that might be associated with the nearby known or suspected COC-contaminated property. If it is not possible to estimate the contaminated plume width, then the AOC cannot be reduced in the cross-gradient direction.

Citadel reviewed information provided by EDR regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, historical releases of petroleum products from a leaking underground storage tank (LUST) occurred within 0.25-mile and upgradient of the Site. Tesoro Station/ARCO/Thrifty Oil Company, located at 12500 Ventura Boulevard, is listed as a LUST site. According to EDR, the property is approximately 633 feet south-southeast of the Site and the gasoline leak was discovered in January 1989 during tank closure and reported in July 1989. The case was completed and closed by the Los Angeles Regional Water Quality Control Board (LARWQCB) on July 2, 1998. An additional gasoline leak impacting soil only was discovered and reported in June 2003 during maintenance activities. No further information was available for review. Based on the distance from the Site and that the Los Angeles River is situated in between acting as a hydraulic barrier, this property is not considered a significant environmental concern.

EDR also provided the following listings on the Historical Gas Station and Dry Cleaners databases as within 0.125-mile and upgradient, 365 feet and cross-gradient, or 100 feet and downgradient of the Site.

Historical Gas Stations	
Site Name	Coggins HR
Address	12500 Ventura Boulevard

Historical Gas Stations	
Distance/Direction	594 feet south-southeast
Comments	According to EDR, the property was occupied as a gasoline service station in 1940 and between 2001 and 2014; and as an automotive repair shop between 1989 and 1993. The property is currently occupied as a gasoline station and mentioned above as a LUST site. While the distances from the Site provided by EDR differ, these listings have the same address. Based on the distance from the Site and regulatory case closure of a gasoline leak, this property is not likely to have adversely affected the Site.

Historical Dry Cleaners	
Site Name	Snowman Cleaners
Address	12546 Ventura Boulevard
Distance/Direction	525 feet south of the Site
Comments	According to EDR, the property was occupied as a dry cleaning plant by Morton's Quick Clean Center between 1969 and 1979; and Snowman Cleaners between 1982 and 2011. Snowman Cleaners was also identified on the Drycleaners database in 1990 as a power laundry. The listing was inactive by 2008. This property was also identified on the Emissions Inventory (EMI) database in 1987 and 1990 for releasing a total of two tons of organic hydrocarbon gases per year. According to the South Coast Air Quality Management District's (SCAQMD's) Facility Information Detail (FIND) database, this facility operated dry cleaning equipment containing tetrachloroethylene (PCE) with permits to operate issued in 1983 and 1999. While PCE was used at this facility, no spills, leaks, or violations was reported. The facility also likely occupied a small space of approximately 1,000 SF. Based on the distance from the Site and that the Los Angeles River is situated in between acting as a hydraulic barrier, this property is not likely to have adversely affected the Site.
Site Name	Daisy Fresh Cleaners
Address	12731 Ventura Boulevard
Distance/Direction	549 feet west-southwest of the Site
Comments	According to EDR, the property was occupied as a dry cleaning plant by Daisy Fresh Cleaners between 1985 and 2009. The facility was also identified as a RCRA Large Quantity Generator (LQG) in 1986 and a Small Quantity Generator (SQG) in 1996. No violations were reported. This property was also identified on the EMI database in 1987 and 1990 for releasing a total of one ton of organic hydrocarbon gases per year. According to the SCAQMD's FIND database, this facility operated dry cleaning equipment containing PCE with permits to operate issued in 1985, 1992, and 1993. While PCE was used at this facility, no spills, leaks, or violations was reported. Based on the distance from the Site and that the Los Angeles River is situated in between acting as a hydraulic barrier, this property is not likely to have adversely affected the Site.

Additional information on these properties can be reviewed in the vapor encroachment screen provided by EDR, which is included as Appendix L.

6.3 REGULATORY AGENCIES

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous materials use, storage, and/or unauthorized releases that may have impacted the Site.

BUILDING DEPARTMENT

Citadel contacted the City of Los Angeles Building Department for information regarding the Site in order to identify historical tenants and property use. Please see Section 5.2 for further discussion.

FIRE DEPARTMENT

The LAFD recently issued lists of active and inactive ASTs, USTs, and hazardous materials inventories (HMI) as of June 3, 2019. The Site was identified on active HMI and inactive UST HMI.

Citadel contacted the LAFD for information for further information. According to the documents reviewed, a 550-gallon gasoline UST for a private auto fueling station was installed at the Site in 1957. The UST was re-registered as a 500-gallon UST in 1988 due to a new City ordinance requiring registration for a Fire Permit to operate an UST in the City of Los Angeles. The UST was removed in 1995 under the supervision of LAFD. While a No Further Action (NFA) letter was not located, laboratory results indicated that the soil samples collected at the bottom of the tank pit, the spoils pile, and under the dispenser did not exceed action levels. According to the drawings provided, the UST and dispenser were located just south of the tennis courts. Based on the current Site boundaries, the dispenser and a portion of the UST were located on the adjoining LAFD station property. The former UST does not represent a significant environmental concern. However, a NFA letter regarding the UST removal should be acquired.

The LAFD also provided the following documents for review:

- LAFD, Hazardous Materials Business Plan (HMBP) Facility Inspection, dated November 13, 2015
  - Several items were identified as out of compliance including failure to adequately establish/implement a HMBP and failure to complete and electronically submit components of the HMBP
- LAFD, HMBP Facility Inspection, dated October 16, 2018
  - Several items were identified as out of compliance including failure to establish/implement a business plan and failure to complete and electronically submit components of the HMBP

The current storage of hazardous materials does not represent a significant environmental concern. A copy of the reviewed documents can be found in Appendix M.

AIR QUALITY MANAGEMENT DISTRICT

Citadel reviewed information available on-line through the South Coast Air Quality Management District's Facility Information Detail (FIND) database. The Site was not identified on the database.

REGIONAL WATER QUALITY CONTROL BOARD

The GeoTracker Database is the California State Water Resources Control Board's (SWRCB) Internet-accessible database system used by the SWRCB, regional boards, and local agencies to track and archive compliance data from authorized or unauthorized discharges of waste to land, or unauthorized releases of hazardous substances from underground storage tanks. According to GeoTracker, Thrifty Oil Company Station located at 12500 Ventura Boulevard, approximately 633 feet from the Site, is listed as the nearest LUST Cleanup Site. As discussed in above Section 6.2, based on the distance from the Site, this property is not considered a significant environmental concern.

CALIFORNIA ENVIRONMENTAL PROTECTION AGENCY

The California Environmental Protection Agency (CalEPA) Regulated Site Portal is a website that combines data about environmentally regulated sites and facilities in California into a single, searchable database and interactive map. The portal provides an overview of regulated activities across the spectrum of environmental programs. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials. According to the portal, the Site was identified on the CERS as a chemical storage facility and a hazardous waste generator. Numerous violations were identified in November 2015, October 2018, and June 2019, generally for failure to complete or electronically submit components of a HMBP. No release of a hazardous material was reported.

7.0 DATA GAPS

A data gap is a lack of or inability to obtain information despite good faith efforts to gather such information. A data failure is a failure to achieve the historical research objectives even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful.

The following data gaps have been identified during the course of this investigation:

- Additional governmental agencies that are not included in the Government Records report may maintain information regarding environmental conditions at the Site and nearby facilities.

With regard to these data gaps, Citadel believes that the most significant potential sources for on-site contamination have been identified during the current investigation.

8.0 FINDINGS

Citadel was contracted by Harvard-Westlake School (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the Weddington Golf & Tennis Facility located at 4141 Whitsett Avenue, in the neighborhood of Studio City, City of Los Angeles, Los Angeles County, California.

Current Site Conditions

According to the County of Los Angeles' Assessor's Parcel Maps, the Site is comprised of one parcel legally identified as APN 2375-018-020 and an approximately 1.1-acre parcel that Harvard-Westlake School leases from the Los Angeles County. The Site, as discussed and

analyzed in this report, includes both the 16.1 acres that Harvard-Westlake School owns and the 1.1 acres that Harvard-Westlake School leases from the County of Los Angeles, totaling 17.21 acres.

The Site consists of a nine-hole golf course with one clubhouse of approximately 2,444 SF including a café; driving range with 24 stalls; 16 tennis courts with a tennis shop of approximately 500 SF; several sheds and gated areas for maintenance; surface parking areas; and associated landscaping. At the time of the Site reconnaissance, the Site was occupied by Weddington Golf & Tennis.

Stationary equipment at the Site include a pole-mounted transformer. In general, the Site appeared to be well maintained and the observed building/ground conditions were good. Minor dark stains, likely associated with fuel-related materials, were observed on the pavement and the wooden platform in the equipment corral; however, the stains appear to be a de minimis condition. Given the long-term occupancy as a golf course and the current usage and storage of pesticides at the Site, on-Site soil may contain pesticides, representing an environmental concern.

Site History

A review of historical sources showed that the Site was undeveloped as early as 1894 until at least 1928 with the development of two small structures, likely a residence, in the northeast corner of the Site. By 1930, the Site and the adjoining property southeast of the Site were occupied as a horse-riding academy with the academy offices located at the adjoining property. The two small structures were likely demolished prior to the development of the horse tracks. The Site was cleared of the horse tracks in 1947. The Site was then developed with a golf course with a clubhouse and golf shop by 1956. One of the structures at the Site was demolished by 1967, and a roof shelter, likely the driving range canopy, was built in 1967. The tennis shop and tennis courts were developed by 1974, including four courts located at the adjoining property southeast of the Site. By 1979, five additional tennis courts were developed at the Site. The current fire department station at the adjoining property southeast of the Site was constructed in 2006.

Previous Environmental Reports

Citadel performed a Phase I ESA in November 2017. At the time of the Site reconnaissance, the Site was occupied by the Weddington Golf & Tennis facility. Citadel identified a former UST as a HREC. No evidence for designating the Site as a REC or CREC from reviews of historical documents and Site conditions was found. Citadel recommended the following:

- Acquire an NFA letter for the UST removal;
- Follow best management practices, in conformance with all appropriate current regulations, in regards to potential use of regulated hazardous materials and/or waste generated during everyday operations;
- Ensure that the three empty 55-gallon drums observed during the Site reconnaissance are disposed of appropriately; and
- Perform a survey for ACBMs and LBP prior to renovation or demolition activities.

Environmental Databases

The Site was identified on the FINDS, the ECHO, and the HWTS databases. FINDS contains facility information and "pointers" to other sources that contain more detail; ECHO provides integrated compliance and enforcement information; and HWTS is the DTSC's data repository for hazardous waste identification and manifest information. The Site was identified on these databases due to it being a hazardous waste generator of universal waste and a chemical storage facility. The Site was also identified as a RCRA Non-Generator in June 2007. No violations were reported on these databases.

The Site was identified on the CERS database as a chemical storage facility and a hazardous waste generator. Hazardous waste generated include tank bottom waste in 1995; and waste and mixed oil in 2007, 2011, and 2015. Minor violations reported include the following:

- November 2015: failure to complete, implement, and electronically submit a business plan and elements of a business plan. The violations were returned to compliance in November 2018.
- October 2018: failure to complete, implement, and electronically submit a business plan and elements of a business plan. The violations were returned to compliance in November 2018.
- June 2019: failure to keep a copy of manifests for at least three years from the date the waste was accepted by the initial transporter. The violation was returned to compliance in June 2019.

The reported violations were generally associated with implementing and submitting a hazardous materials business plan. The violations were returned to compliance and do not represent an environmental concern. In addition, the appearance of the Site as a hazardous waste generator reflects proper disposal of waste such as used motor oil and does not represent a significant environmental concern.

The Site was identified on the historical UST databases, the current UST database as inactive, and the Los Angeles Hazardous Materials Listing as active. The historical listing for the UST was created in 1988 and was active in 1994. No further pertinent information was provided by EDR; however, according to reviewed documents provided by the LAFD, a 500-gallon UST was removed from the Site in 1995, under the supervision of LAFD. Refer to the Regulatory Agency Section below for further discussion. Based on a lack of reported spills or leaks, these listings are not considered to represent a significant environmental concern.

Citadel reviewed information provided by EDR regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, historical releases of petroleum products from a LUST occurred within 0.25-mile and upgradient of the Site. Tesoro Station/ARCO/Thrifty Oil Company, located at 12500 Ventura Boulevard, is listed as a LUST site. According to EDR, the property is approximately 633 feet south-southeast of the Site and the gasoline leak was discovered in January 1989 during tank closure and reported in July 1989. The case was completed and closed by the LARWQCB on July 2, 1998. An additional gasoline leak impacting soil only was discovered and reported in June 2003 during maintenance activities. No further information was available for review. Based on the distance from the Site and that the Los Angeles River is situated in between acting as a hydraulic barrier, this property is not considered a significant environmental concern.

One property was identified within 0.125-mile and upgradient of the Site on the Historical Gas Station database. This property, located 594 feet south-southeast of the Site, is discussed above as a LUST site. While the distances from the Site provided by EDR differ, these listings have the same address. This property is not likely to have adversely affected the Site. Two properties were

identified within 0.125-mile and upgradient of the Site on the Historical Dry Cleaners database. These properties, located 525 feet south and 549 feet west-southwest of the Site, are not likely to have adversely affected the Site based on the distance from the Site and that the Los Angeles River is situated in between acting as a hydraulic barrier.

Regulatory Agencies

The LAFD recently issued lists of active and inactive ASTs, USTs, and HMI as of June 3, 2019. The Site was identified on active HMI and inactive UST HMI.

Citadel contacted the LAFD for information for further information. According to the documents reviewed, a 550-gallon gasoline UST for a private auto fueling station was installed at the Site in 1957. The UST was re-registered as a 500-gallon UST in 1988 due to a new City ordinance requiring registration for a Fire Permit to operate an UST in the City of Los Angeles. The UST was removed in 1995 under the supervision of LAFD. While a NFA letter was not located, laboratory results indicated that the soil samples collected at the bottom of the tank pit, the spoils pile, and under the dispenser did not exceed action levels. According to the drawings provided, the UST and dispenser were located just south of the tennis courts. Based on the current Site boundaries, the dispenser and a portion of the UST were located on the adjoining LAFD station property. The former UST does not represent a significant environmental concern. However, a NFA letter regarding the UST removal should be acquired.

9.0 CONCLUSIONS AND RECOMMENDATIONS

According to ASTM Standard of Practice E1527-13, recognized environmental conditions (REC) fall under three specific categories when evaluating a site or properties within the site vicinity. These categories are defined below.

A REC means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

A CREC, is a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

An HREC, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

According to ASTM E2600-10, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property caused

by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Based on our review of these databases, reported release incidents that would represent RECs in connection with the Site or a source of a release that would be likely to contribute to a VEC were not identified. Based on these reviews, the following environmental concerns were identified:

- The former 500-gallon UST is considered a HREC. No evidence for designating the Site as a REC or CREC from reviews of historical documents and present Site conditions was found.
- Given the long-term occupancy as a golf course and the current usage and storage of pesticides at the Site, on-Site soil may contain pesticides, representing an environmental concern. Grading activities could result in exposure of construction workers to these chemicals.

Citadel recommends shallow soil testing for pesticides prior to grading and/or excavation activities at the Site and acquiring an NFA letter for the former UST. Citadel also recommends the preparation of a Soil Management Plan (SMP) during grading and/or excavation activities in the area of the former UST to manage contaminated soil or subsurface features, if encountered. Citadel also recommends that the tenant follow best management practices, in conformance with all appropriate current regulations, in regards to potential use of regulated hazardous materials and/or waste generated during everyday operations.

The current Site building was constructed prior to bans using ACBMs, LBP, and PCBs in electrical equipment came into effect in 1989, 1978, and 1978, respectively. No testing is known to have been performed to evaluate for the presence of ACBMs, LBP, or PCBs at the Site.

Prior to renovation or demolition of building components, particularly roofing materials, Citadel recommends that the Client perform a survey for ACBMs and LBP prior to renovation or demolition activities. Such surveys should be performed to identify if ACBMs or LBP are present and to ensure proper handling and disposal and to allow for measures to protect both worker and building occupant safety during routine building maintenance, renovation or demolition.

10.0 LIMITATIONS

The information and opinions rendered in this report are exclusively for use by the Client. Citadel will not distribute this report without the Client's written consent, except as may be required by law or court order. The recommendations expressed in this report took into consideration the purpose and scope of this limited assignment. We accept responsibility for the competent performance of our duties in executing the assignment and preparing this report in accordance with the normal standards of our profession, but disclaim any responsibility for consequential damages resulting from inaccuracies in information provided by the Client, federal, state, county, or local regulatory agencies.

12.0 PROFESSIONAL CERTIFICATION

Citadel has completed a Phase I ESA of the Weddington Golf & Tennis Facility located at 4141 Whitsett Avenue, in the neighborhood of Studio City, City of Los Angeles, Los Angeles County, California. The Phase I ESA was performed at the Clients request in accordance with the American Society for Testing and Materials (ASTM) Standard of Practice E1527-2013 and the standards of care and diligence normally practiced by recognized consulting firms in performing services of a similar nature.

The independent conclusions represent our professional judgment based on information and data available to Citadel during the course of this project. Information regarding historical and present operations, conditions and test data provided by the Client or their representative, is assumed to be correct and complete. The conclusions presented by this Phase I ESA are based on information provided to Citadel and from observations and perceived conditions existing on the date of the site reconnaissance.

In expressing the opinions stated in this report, Citadel has exercised the degree of skill and care ordinarily exercised by a reasonable prudent environmental professional. Documentation provided by the Client, Client-designated representatives, interested third-parties, or from the public domain, and referenced in preparation of the Phase I ESA report, have been assimilated with the understanding that Citadel assumes no responsibility or liability for their accuracy.

I declare that to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined by the final All Appropriate Inquiry (AAI) Rule published in 40 CFR Part 312.10 (November 1, 2013). I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting described in this Phase I ESA. I have developed and performed the AAI in conformance with the standard and care of this Rule.

EXPERIENCE

With over **30 years** of experience in environmental engineering, compliance, permitting and management projects, Mr. Drollinger has a strong working knowledge of EPA, DTSC, AQMD/APCD, OSHA and DOT regulations; and with local agencies, fire departments and public works. Mr. Drollinger has provided environmental engineering, assessment and compliance, safety management, and engineering construction management services on numerous projects for the US Navy, Veterans Administration, US Department of Agriculture, Cal Trans, EPA and numerous private projects throughout the western United States. In addition, Mr. Drollinger has developed and implemented programs to train managers and staff in storm water and NPDES compliance, soil and groundwater sample collection and data interpretation, Hazcomm, IIPP, and safe-work practices such as identifying and handling hazardous materials, fall protection, confined space, traffic control, LO/TO and ergonomics; and has conducted environmental and permitting audits of facilities including health and safety assessments.

ROLE

As Principal of Engineering and Environmental Sciences, Mr. Drollinger's primary responsibility includes developing and implementing health and safety protocols; safety training of management, staff and subcontractor personnel; establishing and managing budgets and personnel; negotiating with local, regional, state, and federal agencies; litigation support; and coordinating tasks with multi-discipline project teams.

Mr. Drollinger works closely with, and often develops protocols for conducting assessments related to Environmentally Regulated Materials Management (ERM), Industrial Hygiene (IH), and Occupational Safety and Training (OST) departments.

EDUCATION

Mr. Drollinger has a B.S. in Applied and Natural Sciences from the University of Alabama, and a M.Eng. in Advanced Safety Engineering and Management, University of Alabama, Birmingham.

Mr. Drollinger is also a certifying board member of the American Council of Accredited Certifications (formerly known as the American Indoor Air Quality Council), and is a member of the American Society of Safety Engineers, Board of Certified Safety Professionals, Institute of Hazardous Materials Management, Institute of Industrial Engineers and International Facilities Management Association.

EXPERIENCE

Ms. Lee has **12 years** of experience as an Environmental Specialist. Her responsibilities includes managing Phase I and Environmental Site Assessments, NPDES monitoring and permitting, environmental audits, hazardous materials inventory, and preparation of health and safety plans and hazardous materials business and contingency plans.

ROLE

As an Environmental Specialist, Ms. Lee provides on-site organization, direction, control, and coordination necessary for the successful implementation, execution, and completion of environmental and environmental compliance-related projects awarded to Citadel. She also assists the Principals of Engineering and Environmental Sciences in the completion of all assigned projects so that the client is satisfied with the finished work product and the working relationship. Her assignments include a combination of field-based activities in a number of varying environments and office-based activities.

EDUCATION

Ms. Lee holds a Bachelor of Arts in Environmental Analysis and Design from the University of California, Irvine; with a minor in Urban and Regional Planning. Ms. Lee also holds a 40-hour HAZWOPER General Site Worker Certification. She received her Environmental Management Certification from the University of California, Irvine, in 2014.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

PERMIT EXPIRATION/REFUNDS: This permit expires two years after the date of the permit issuance. This permit will also expire if no construction work is performed for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by LADBS (Sec. 22.12 & 22.13 LAMC). The permittee may be entitled to reimbursement of permit fees if the Department fails to conduct an inspection within 60 days of receiving a request for final inspection (HS 17951).

17. OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the following reason (Section 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

(✓) I, as the owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year from completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale).

OR

(✓) I, as the owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.)

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

(_) I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

(_) I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier:_____ Policy Number:_____

(_) I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. ASBESTOS REMOVAL DECLARATION / LEAD HAZARD WARNING

I certify that notification of asbestos removal is either not applicable or has been submitted to the AQMD or EPA as per section 19827.5 of the Health and Safety Code. Information is available at (909) 396-2336 and the notification form at www.aqmd.gov. Lead safe construction practices are required when doing repairs that disturb paint in pre-1978 buildings due to the presence of lead per section 6716 and 6717 of the Labor Code. Information is avaiable at Health Services for LA County at (800) 524-5323 or the State of California at (800) 597-5323 or www.dhs.ca.gov/childlead.

20. FINAL DECLARATION

I certify that I have read this application **INCLUDING THE ABOVE DECLARATIONS** and state that the above information **INCLUDING THE ABOVE DECLARATIONS** is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein, and it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

By signing below, I certify that:

(1) I accept all the declarations above namely the Owner-Builder Declaration, Workers' Compensation Declaration, Asbestos Removal Declaration / Lead Hazard Warning and Final Declaration; and
(2) This permit is being obtained with the consent of the legal owner of the property.

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

16. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date _____ Lic. Class _____ Lic. Number _____ Contractor _____ (Signature)

OWNER-BUILDER DECLARATION

17. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason

Date 10-26-84 Owner's Signature George McCalister

WORKERS' COMPENSATION DECLARATION

18. I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Worker's Compensation Insurance, or a certified copy thereof (Sec. 3800, Lab. C.).

Policy No. _____ Insurance Company _____

☐ Certified copy is hereby furnished.

☐ Certified copy is filed with the Los Angeles City Dept. of Bldg. & Safety.

Date _____ Applicant's Signature _____

Applicant's Mailing Address _____

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

19. I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

Date 10-26-84 Applicant's Signature George McCalister

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

20. I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name _____ Lender's Address _____

21. I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes.

I realize that this permit is an application for inspection, that it does not approve or authorize the work specified herein, that it does not authorize or permit any violation or failure to comply with any applicable law, that neither the city of Los Angeles nor any board, department, officer or employee thereof make any warranty or shall be responsible for the performance or results of any work described herein or the condition of the property or soil upon which such work is performed. (See Sec. 91.0202 LAMC)

CITY OF LOS ANGELES
DEPARTMENT OF BUILDING AND SAFETY
BUILDING DIVISION

Application for the Erection of a Building

OF

CLASS "D"

REVOCABLE PERMIT

To the Board of Building and Safety Commissioners of the City of Los Angeles:

Application is hereby made to the Board of Building and Safety Commissioners of the City of Los Angeles, through the office of the Superintendent of Building, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

To the Board of Building and Safety Commissioners of the City of Los Angeles:

Application is hereby made to the Board of Building and Safety Commissioners of the City of Los Angeles, through the office of the Superintendent of Building, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

EDR® Environmental Data Resources Inc

BUILD FAX® PROPERTY HISTORY

EXECUTIVE SUMMARY: SEARCH DOCUMENTATION

A search of building department records was conducted by Environmental Data Resources, Inc (EDR) on behalf of Citadel Environmental Services on Oct 31, 2017.

TARGET PROPERTY

4141 Whitsett Avenue
Studio City, CA 91604

SEARCH METHODS

EDR searches available lists for both the Target Property and Surrounding Properties.

RESEARCH SUMMARY

Building permits identified: **YES**

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

Client Name:

Citadel Environmental Services
1725 Victory Boulevard
Glendale, CA 91201
Contact: Shirley Lee

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Citadel Environmental Services were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

Certification # C4A2-4E7E-8C4F

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Re: CITADEL Project No. 1189.1001.0
Phase I Environmental Site Assessment Report
Weddington Golf & Tennis Facility
4141 Whitsett Avenue
Studio City, California 91604

Dear Mr. Weil:

Enclosed please find Citadel Environmental Services, Inc.'s Phase I Environmental Site Assessment Report for the above-referenced location.

The Phase I Environmental Site Assessment Report was conducted for Harvard-Westlake School, in accordance with Citadel's Proposal 1189.1001.P, dated October 16, 2017, and a mutually agreed upon scope of work.

If after your review, you have any questions or require additional information, please do not hesitate to telephone me at the Citadel Office in Glendale at (818) 246-2707.

Sincerely,
CITADEL ENVIRONMENTAL SERVICES, INC.

Mark Drollinger

EXECUTIVE SUMMARY

Project Summary

Client Name/User:	Harvard-Westlake School	**Property Visit Date:**	November 7, 2017
Client Contact:	David Weil	**Construction Date:**	1956 (clubhouse) and 1974 (tennis shop)
Phone Number:	(818) 457-6609	**No. Buildings/No. Units:**	Two
Email Address:	DWeil@hw.com	**No. of Stories:**	One-story
Property Name:	Weddington Golf & Tennis Facility	**Bldg. Square Footage:**	2,444 SF (clubhouse) and 500 SF (tennis shop)
Property Address:	4141 Whitsett Avenue	**Property Acreage:**	16.11 acres
Property City, State, Zip:	Studio City, California 91604	**Property Use:**	Golf course, tennis courts, and café
Property Identification:	2375-018-020	**Property History:**	Single-family residence, riding academy, golf course, tennis courts, and café
Other Improvements:	Golf course, driving range, tennis courts, surface parking areas, maintenance sheds and gated areas, and associated landscaping

Citadel Environmental Services, Inc. (Citadel) was contracted by Harvard-Westlake School (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the Weddington Golf & Tennis Facility located at 4141 Whitsett Avenue, in the City of Studio City, Los Angeles County, California; hereinafter referred to as the "Site."

The Site consists of a nine-hole golf course with one clubhouse of approximately 2,444 square feet (SF) including a café; driving range with 24 stalls; 16 tennis courts with a tennis shop of approximately 500 SF; several sheds and gated areas for maintenance; surface parking areas; and associated landscaping. At the time of the Site reconnaissance, the Site was occupied by the Weddington Golf & Tennis facility.

Stationary equipment at the Site include a pole-mounted transformer. In general, the Site appeared to be well maintained and the observed building/ground conditions were good. Three 55-gallon steel drums were observed in the maintenance area adjacent to the tennis courts. These drums appeared old and empty and were reportedly awaiting disposal. One of the drums appeared to have been punctured. While no leaks were observed in this area, minor staining of the concrete in the vicinity of the drums was observed.

A review of historical sources showed that the Site was undeveloped as early as 1894 until at least 1928 with the development of two small structures, likely a residence, in the northeast corner of the Site. By 1930, the Site and the adjoining property southeast of the Site was occupied as a horse-riding academy with the academy offices located at the adjoining property. The two small structures were likely demolished prior to the development of the horse tracks. The Site was cleared of the horse tracks in 1947. The Site was then developed with a golf course with a clubhouse and golf shop by 1956. One of the structures at the Site was demolished by 1967, and a roof shelter, likely the driving range canopy, was built in 1967. The tennis shop and tennis courts were developed by 1974, including four courts located at the adjoining property southeast of the Site. By 1979, five additional tennis courts were developed at the Site. The current Los Angeles Fire Department (LAFD) station at the adjoining property southeast of the Site was developed in 2006.

The Site was identified on the following environmental databases: FINDS, HAZNET, SWEEPS, and CA FID UST.

The Site was identified on the Facility Index System/Facility Registry System (FINDS) database, which contains facility information and "pointers" to other sources that contain more detail. The Site was identified on this database due to it being in the California Environmental Reporting System (CERS) as a Risk Management Plan (RMP) Reporter. Numerous violations were identified in November 2015, generally for failure to complete or electronically submit components of a Hazardous Materials Release Response Plan (HMRRP). No release of a hazardous material was reported. Based on a lack of reported spill or leaks, this listing is not considered to represent a significant environmental concern.

The Site was identified on the historical underground storage tank (UST) databases. The listing for the UST was created in 1988 and was active in 1994. No further pertinent information was provided by EDR. The Site was also identified on the HAZNET database for generating tank bottom waste in 1995; and waste and mixed oil in 2007, 2011, and 2015. No violations were reported. According to reviewed documents provided by the LAFD, a 500-gallon UST was removed from the Site in 1995 under LAFD supervision. While a No Further Action (NFA) letter was not located, laboratory results indicated that the soil samples collected at the bottom of the tank pit, the spoils pile, and under the dispenser did not exceed action levels. According to the drawings provided, the UST and dispenser were located just south of the tennis courts. Based on the current Site boundaries, the dispenser and a portion of the UST were located on the adjoining LAFD station property. The former UST does not represent a significant environmental concern. However, a NFA letter regarding the UST removal should be acquired.

Citadel reviewed information provided by Environmental Data Resources (EDR) regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, historical releases of petroleum products from a leaking underground storage

tank (LUST) occurred within 0.25-mile and upgradient of the Site. Tesoro Station/ARCO/Thrifty Oil Company, located at 12500 Ventura Boulevard, is listed as a LUST site. According to EDR, the property is approximately 634 feet south-southeast of the Site and the gasoline leak was discovered in January 1989 and reported in July 1989. The case was completed and closed by the Los Angeles Regional Water Quality Control Board (LARWQCB) on July 2, 1998.

One property were identified within 0.125-mile and upgradient of the Site on the Historical Gas Station database. This property, located 594 feet south-southeast of the Site, is not likely to have adversely affected the Site based on the distance from the Site. Two properties were identified within 0.125-mile and upgradient of the Site on the Historical Dry Cleaners database. These properties, located 528 feet south of the Site and 554 feet west-southwest of the Site, are not likely to have adversely affected the Site based on the distance from the Site and that the Los Angeles River is situated in between acting as a barrier.

RECOGNIZED ENVIRONMENTAL CONDITIONS

According to American Society for Testing and Materials (ASTM) Standard of Practice E1527-13, recognized environmental conditions (REC) fall under three specific categories when evaluating a site or properties within the site vicinity. These categories are defined below.

A recognized environmental condition, or REC, means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

A controlled recognized environmental condition, or CREC, is a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

An historical recognized environmental condition, or HREC, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

According to ASTM E2600-15, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property (TP) caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Based on our review of these databases, reported release incidents that would represent RECs in connection with the Site or a source of a release that would be likely to contribute to a VEC were

not identified. Based on these reviews, the former 500-gallon UST is considered a HREC. No evidence for designating the Site as a REC or CREC from reviews of historical documents and present Site conditions was found.

NON-ASTM SCOPE CONSIDERATIONS

The current Site building was constructed prior to bans using asbestos-containing building materials (ACBMs), lead-based paint (LBP), and polychlorinated biphenyls (PCBs) in electrical equipment came into effect in 1989, 1978, and 1978, respectively. No testing is known to have been performed to evaluate for the presence of ACBMs, LBP, or PCBs at the Site.

The California Bureau of Mines and Geology and California Department of Public Health (CADPH) participated in the United States EPA's State Radon Survey, a Federal survey to measure levels of indoor radon in all states. Based on the results of this survey, CADPH predicted that approximately 0.5% of homes in Region 9 would have radon concentrations over the EPA action level of 4.0 picoCuries per liter (pCi/L).

The Federal EPA Radon Zone for Los Angeles County is Zone 2, which indicates an average indoor concentration greater than or equal to 2.0 pCi/L of air and less than or equal to 4.0 pCi/L. In a survey, 134 tests were performed within the 91604 zip code for the presence of radon. Of these, 20 tests were found to contain radon in excess of 4.0 pCi/L. Site-specific radon values were not available and were not a part of this ASTM Phase I ESA.

A potable well was not observed on-Site and the Site does not lie within a known or potential flood zone or wetlands.

1.0 INTRODUCTION

Citadel Environmental Services, Inc. (Citadel) was contracted by Harvard-Westlake School (Client) to perform a Phase I Environmental Site Assessment (Phase I ESA) of the Weddington Golf & Tennis Facility located at 4141 Whitsett Avenue, in the City of Studio City, Los Angeles County, California; hereinafter referred to as the "Site."

1.1 PURPOSE

The purpose of the Phase I ESA was to review past and present land use practices and to evaluate the presence, or likely presence, of any hazardous substances or petroleum products that have been discharged into the property's structure, ground, groundwater, or surface water. This qualitative assessment was accomplished by review of current and readily available information regarding past and current land use for indications of the manufacture, generation, use, storage and/or disposal of hazardous substances at the Site. A Site visit was also conducted to observe existing Site conditions. This report provides the results of the Phase I ESA performed.

1.2 INVOLVED PARTIES

The involved party(s) in this study, to the best of our knowledge, is Harvard-Westlake School.

Citadel understands that this Phase I ESA is being requested in conjunction with due diligence activities by Harvard-Westlake School. Citadel recognizes that this report is to be used exclusively by Harvard-Westlake School and its successors, lenders, and assigns. It is a report upon which Harvard-Westlake School and its successors, lenders, and assigns, can rely.

This assessment and report were prepared on behalf of and for the exclusive use of Harvard-Westlake School, their lenders and assigns (Client) solely for its use and reliance, subject to the terms and conditions agreed upon between Citadel and the Client.

1.3 SCOPE OF SERVICES

This Phase I ESA was conducted in accordance with the American Society for Testing and Materials (ASTM) Standard of Practice E1527-13 and the standards of care and diligence normally practiced by recognized consulting firms in performing services of a similar nature.

The scope of services for this assessment consisted of the following:

- Performed a Site inspection to verify current Site conditions, and check for visible evidence of previously disposed and/or currently present hazardous waste, surface contamination, underground and above ground storage tanks (USTs/ASTs), suspect polychlorinated biphenyls (PCBs), and other potential environmental hazards.

- Conducted a visual survey of the adjacent properties and the immediate vicinity to determine if any nearby sites posed a significant environmental threat to the Site.

- Reviewed currently and readily available documents, including maps, aerial photographs, governmental databases of known hazardous waste sites and underground tanks, other consultant reports (if any), fire insurance maps, and other accessible records.

- Reviewed results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

- Consulted with appropriate governmental agencies having jurisdiction relative to past history of the property, complaints or incidents in the immediate area, and permits that may have been issued.

- Prepared a Phase I report, inclusive of our findings and recommendations, with applicable illustrations and documentation.

The scope of services outlined above is generally considered sufficient to properly assess the Site based on the data search, reasonably ascertainable documents, and Site inspection.

2.0 GENERAL SITE CHARACTERISTICS

2.1 LOCATION

The irregular-shaped Site is located approximately 50 feet north/northwest of the Los Angeles River. The Site is bounded by Valley Spring Lane to the north; Whitsett Avenue to the east; a fire department station to the southeast; the Los Angeles River to the south; and Bellaire Avenue to the west. The general Site vicinity is occupied by single- and multi-family residential properties with large commercial/retail properties south of the Los Angeles River.

According to the U.S. Geological Survey (USGS) Studio City Quadrangle (7.5 Minute Series), dated 2012, the Site is at an elevation of approximately 620 feet above mean sea level (AMSL) and appears to slope to the north-northeast. The Site is located at approximate coordinates of 34° 8' 44.74" North Latitude and 118° 24' 25.08" West Longitude.

A Site Location Map identified as Figure 1 is included in Appendix A.

2.2 SITE DESCRIPTION

According to the County of Los Angeles' Assessor's Parcel Maps, the Site is comprised of one parcel legally identified as Assessor's Parcel Number (APN) 2375-018-020. The Site encompasses approximately 16.1 acres of land.

The Site consists of a nine-hole golf course with one clubhouse of approximately 2,444 square feet (SF) including a café; driving range with 24 stalls; 16 tennis courts with a tennis shop of approximately 500 SF; several sheds and gated areas for maintenance; surface parking areas; and associated landscaping. At the time of the Site reconnaissance, the Site was occupied by Weddington Golf & Tennis.

Stationary equipment at the Site include a pole-mounted transformer. In general, the Site appeared to be well maintained and the observed building/ground conditions were good. Three 55-gallon steel drums were observed in the maintenance area adjacent to the tennis courts. These drums appeared old and were reportedly empty and awaiting disposal. One of the drums appeared punctured. While no leaks were observed in this area, minor staining of the concrete in the vicinity of the drums was observed.

A Site Plan is included as Figure 2 in Appendix A. Select photographs of the Site and vicinity is included as Appendix B.

2.3 ADJACENT PROPERTIES

The immediately surrounding properties of the Site consist of the following:

Direction from Site	Address – Tenant/Use
North	4202 Bellaire Avenue – Single-family residence 4200 Teesdale Avenue – Single-family residence 4202 and 4203 Beeman Avenue – Single-family residences 4202 and 4203 Babock Avenue – Single-family residences 12501 Valley Spring Lane – Multi-family residence
East	4068, 4072, 4100, 4104, 4108, 4112, 4128, 4148, and 4152 Whitsett Avenue – Multi-family residences 4122 Whitsett Avenue – Single-family residence
South	4041 Whitsett Avenue (southeast) – Los Angeles Fire Department Station 78 12555 Ventura Boulevard (beyond the Los Angeles River) – Bed Bath & Beyond 12565 Ventura Boulevard (beyond the Los Angeles River) – Aaron Brothers Art & Framing 12601 Ventura Boulevard (beyond the Los Angeles River) – Carney's Restaurant 12605 Ventura Boulevard (beyond the Los Angeles River) – Staples 12655 Ventura Boulevard (beyond the Los Angeles River) – Jerry's Famous Deli, Pinz Bowling Center, Guy's North (catering/special events)
West	12706 Valley Spring Lane – Single-family residence 4155 Bellaire Avenue – Single-family residence

2.4 UTILITIES

Electrical service is supplied to the Site by the Los Angeles Department of Water and Power (LADWP). Gas service is supplied by the Gas Company of Los Angeles. General rubbish (non-hazardous) is removed from the Site on a regular basis by a contracted waste hauler.

3.0 ENVIRONMENTAL SETTING

3.1 PHYSICAL SITE CHARACTERISTICS

Based upon the National American Datum (NAD) of 1983, the Site is at an elevation of approximately 620 feet AMSL.

The Site is identified on the Geologic map of the Beverly Hills and Van Nuys (south half) quadrangles, Los Angeles County, California (Dibblee and Ehrenspeck, 1991) as being unconsolidated detrital surficial sediments (Qa). The sediment is described as alluvial gravel, sand, and silt-clay, derived mostly from Santa Monica Mountains and include gravel and sand of stream channels. The United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS) National Cooperative Soil Survey identifies the Site soils as Urban Land-Palmview-Tujunga complex. The Palmview soil is described as fine sandy loam and well drained. The Tujunga soil is described as sandy loam/loamy sand and somewhat excessively drained.

USGS Topographic Map	Van Nuys Quadrangle
Groundwater Basin	San Fernando Valley Groundwater Basin, (No. 4-12)
Nearest Surface Water to Site	Los Angeles River, approximately 50 feet south/southwest of Site

Gradient Direction (Source)	North-northeast (topographic maps)
Estimated Depth to Groundwater (Source)	17 to 23 feet below ground surface (bgs), approximately 0.2 mile east-northeast of Site (GeoTracker)
Nearest Wetland to Site (Source)	Los Angeles River, approximately 50 feet south/southeast (National Wetlands Inventory)
Nearest 100 or 500-year Flood Zone	None within 0.25-mile of the Site (Federal Emergency Management Agency)

4.0 SITE RECONNAISSANCE

Citadel representative Ms. Shirley Lee conducted the Phase I ESA reconnaissance on November 7, 2017. Ms. Lee was accompanied by Mr. Matthew Becker, General Manager of the Weddington Golf and Tennis LLC. The Site reconnaissance consisted of an inspection of the Site and a perimeter survey of the surrounding properties. Mr. Mark Drollinger of Citadel served as the Project Manager and reviewed this Phase I ESA. Findings from the Site inspection, research and perimeter survey are presented below.

4.1 SITE RECONNAISSANCE FINDINGS

Yes	No	Observation
	X	Aboveground Storage Tanks (ASTs) and Underground Storage Tanks (USTs)
X		Identified Hazardous Materials
X		Polychlorinated Biphenyls (PCBs) – Electric or Mechanical Equipment Likely to Contain Fluids
	X	Radioactive Man-Made Materials
	X	Pits, Ponds, and Lagoons
	X	Septic Tanks and Cesspools
	X	Wells, Cisterns, Sumps, and Drains
	X	Wastewater or Grease Interceptors
	X	Interior Stains or Corrosion
	X	Strong, Pungent, or Noxious Odors
	X	Pools of Liquid
	X	Stained Soil or Pavement
	X	Stressed Vegetation
X		Other

The above-identified observed items are further discussed below.

IDENTIFIED HAZARDOUS MATERIALS

Hazardous Material (size/quantity)	Location	Secondary Containment	Staining/Leaks	SDS
Gasoline (two 55-gallon drum and five five-gallon containers)	Ventilated shed with flammable sign	No, situated on a platform within a shed	None identified	No
Diesel (one 55-gallon drum)	Ventilated shed with flammable sign	No, situated on a platform within a shed	None identified	No
Diesel engine oil (one 55-gallon drum)	Fenced gardening storage area	No, situated on a platform	None identified	No

Hazardous Material (size/quantity)	Location	Secondary Containment	Staining/Leaks	SDS
Fungicides and fertilizers	Ventilated shed with poison sign	No, situated within a shed	None identified	No

Routine janitorial and maintenance supplies were observed in containers sized for commercial use and properly stored with no signs of staining or leaking. Three 55-gallon steel drums were observed in the maintenance area adjacent to the tennis courts. These drums appeared old and empty and were reportedly awaiting disposal. One of the drums appeared to have been punctured. While no leaks were observed in this area, minor staining of the concrete in the vicinity of the drums was observed. The hazardous materials observed are not expected to represent a significant environmental concern.

POLYCHLORINATED BIPHENYLS

Typical sources of polychlorinated biphenyls (PCBs) include electrical transformer cooling oils, fluorescent light fixture ballasts and hydraulic oil. In 1976, the U.S. EPA banned the manufacture and sale of PCB-containing transformers. Prior to this date, transformers were frequently filled with a dielectric fluid containing PCB-laden oil. By 1985, the US EPA required that commercial property owners with transformers containing more than 500 parts per million (ppm) PCBs must register the transformer with the local fire department, provide exterior labeling, and remove combustible materials within 16 feet (40 Code of Federal Regulations 761.30: "Fire Rule").

Component Type	Pad/Pole Mounted	Location	Owner	PCB Labels	Staining/Leaking
Transformer	Pole-mounted	Exterior near the SE corner of Site	LADWP	No	None identified

OTHER

A grease container was observed at the Site located southwest of the clubhouse. The grease is from the on-Site café and is reportedly collected monthly by TMC Pumping Services. The storage and handling of this material is not expected to represent a significant environmental concern.

4.2 NON-ASTM SERVICES

ASBESTOS CONTAINING MATERIALS

The EPA issued a final rule under Section 6 of Toxic Substances Control Act (TSCA) banning most asbestos-containing building materials (ACBMs) in 1989. The ban on ACBMs was vacated in 1991 allowing some building materials to continue to contain asbestos. The applicability of the EPA's National Emission Standards for Hazardous Air Pollutants (NESHAP, 40 CFR Chapter 61, Subpart M) apply to the owner or operator of a facility where an inspection for the presence of asbestos-containing materials (ACM), including Category I (asbestos containing packings, gaskets, resilient floor coverings and asphalt roofing products), and Category II (all remaining types of non-friable asbestos containing material not included in Category I that when dry, cannot be crumbled, pulverized or reduced to powder by hand pressure), non-friable ACM must occur prior to the commencement of demolition or renovation activities.

Based on the construction date for the Site building, asbestos-containing building materials (ACBMs) were likely used in the construction of the Site building. A survey for ACBMs was not requested or conducted as part of this Phase I ESA.

LEAD-BASED PAINTS

Lead-based paint (LBP) is defined as any paint, varnish, stain, or other applied coating that has greater than or equal to one milligram per square centimeter (mg/cm^2) (5,000 microgram per gram (µg/g) or 5,000 parts per million (ppm)) of lead by federal guidelines; state and local definitions may differ from the federal definitions in amounts ranging from 0.5 mg/cm^2 to 2.0 mg/cm^2. The US Consumer Product Safety Commission (16 Code of Federal Regulations CFR 1303) banned paint containing more than 0.06% lead for residential use in 1978. Buildings built before 1978 are much more likely to have LBP.

Based on the construction date for the Site building, lead-based paints were likely used within the Site building. A survey for lead containing materials was not requested or conducted as part of this Phase I ESA.

DRINKING WATER

The Site is supplied with municipal drinking water by the LADWP. An assessment of lead in drinking water was not requested or conducted as part of this Phase I ESA.

RADON

The California Bureau of Mines and Geology and California Department of Public Health (CADPH) participated in the United States EPA's State Radon Survey, a Federal survey to measure levels of indoor radon in all states. Based on the results of this survey, CADPH predicted that approximately 0.5% of homes in Region 9 would have radon concentrations over the EPA action level of 4.0 picoCuries per liter (pCi/L).

The Federal EPA Radon Zone for Los Angeles County is Zone 2, which indicates an average indoor concentration greater than or equal to 2.0 pCi/L of air and less than or equal to 4.0 pCi/L. In a survey, 134 tests were performed within the 91604 zip code for the presence of radon. Of these, 20 tests were found to contain radon in excess of 4.0 pCi/L. Site-specific radon values were not available and were not a part of this ASTM Phase I ESA.

METHANE

In March 2004, Ordinance Number 175790 was adopted into the Los Angeles Municipal Code (Section 91.106.4.1 and Division 71, Chapter IX) to establish citywide methane mitigation requirements, and included updated construction standards to control methane intrusion into buildings. This ordinance established defined geographic areas as Methane Zones and Methane Buffer Zones, which relate to specific assessment and mitigation requirements per area, and set forth a standard of assessment and mitigation in the planning stages of all new construction in these areas.

The Site is not located within the City of Los Angeles Methane or Methane Buffer Zones recognized by the Los Angeles Department of Building Services.

5.0 SITE HISTORY

The purpose of the records review is to obtain and review reasonably ascertainable/standard sources that will help identify recognized environmental conditions in connection with the

property. Reasonably ascertainable records from standard sources is (1) information that is publicly available, (2) information that is obtainable from its source within reasonable time and cost constraints, and (3) information that is practically reviewable.

Reasonable time and cost means that the information will be provided by the source within 20 calendar days of receiving a written, telephone, or in-person request at no more than a nominal cost intended to cover the source's cost of retrieving and duplicating the information. Information that can only be reviewed by a visit to the source is reasonably ascertainable if the visit is permitted by the source within 20 days of request.

To investigate the history of the Site, Citadel reviewed select historic aerial photographs, building permits, city directories, and Sanborn Fire Insurance Maps provided by Environmental Data Resources Inc. (EDR). In addition, Citadel reviewed client-supplied information, and oil and gas maps, and Citadel interviewed selected individuals regarding historic Site use. Citadel's reviews of these reports and interviews are discussed below.

5.1 HISTORICAL AERIAL PHOTOGRAPHS

Historical aerial photographs of the Site and vicinity were obtained from EDR to ascertain historical land uses and to identify any evidence of hazardous material generation or storage. Below are brief descriptions of observations made from the aerial photographs of the Site and vicinity.

Dates(s)	Site Description	Surrounding Area Descriptions
1928	Relatively undeveloped with the exception of two small structures developed in the northeast corner of the Site	**North:** Valley Spring Lane; with Teesdale Avenue, Beeman Avenue, Babcock Avenue developed beyond; properties appear agricultural with several single-family residences **East:** Whitsett Avenue, with agricultural and several single-family residences beyond **South:** Undeveloped with the Los Angeles River further south; a small commercial structure appears developed at the adjoining property to the southeast **West:** Bellaire Avenue, with developed properties
1938	The small structures appear to have been demolished; a horse track appears developed at the Site	**North:** Additional single-family residences appear developed **East:** Additional single-family residences appear developed **South:** A road developed along the south Site boundary; several structures appear developed southeast of the Site, likely as offices/barns for the on-Site horse-track **West:** Relatively unchanged
1947	Undeveloped; lot appears to have been cleared	**North:** Additional single-family residences appear developed **East:** Additional single-family residences appear developed **South:** Structures southeast of the Site appear to have been demolished **West:** Single-family residences appear developed beyond Bellaire Avenue

Dates(s)	Site Description	Surrounding Area Descriptions
1952	Relatively unchanged with the exception of dark vertical lines across the Site	**North:** Relatively unchanged **East:** Relatively unchanged **South:** The Los Angeles River appears channelized; a small structure, likely a single-family residence, appears developed at the adjoining property southeast of the Site **West:** Relative unchanged
1964	Site appears developed as a golf course with two structures in the northeast corner and surface parking area along the east boundary of the Site; two small structures, likely sheds, appear developed near the southwest corner of the Site.	**North:** Relatively unchanged **East:** Relatively unchanged **South:** The structure to the southeast appears to have been demolished **West:** Relatively unchanged
1967	One of the structures in the northeast corner of the Site appears demolished; an additional structure, likely the driving range canopy, appears developed south of the main structure. The remaining areas appear relatively unchanged	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged
1977	Site appears developed with 11 tennis courts in the southeast portion of the Site and the small structures in the southwest corner of the Site appear demolished; the remaining areas appear relatively unchanged.	**North:** Relatively unchanged **East:** Relatively unchanged **South:** The adjoining property southeast of the Site appears as part of the golf course with the development of four tennis courts **West:** Relatively unchanged
1979, 1981	Relatively unchanged with the exception of five additional tennis courts	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Relatively unchanged **West:** Relatively unchanged
1989, 1994, 2002, 2005	Relatively unchanged	**North:** Relatively unchanged **East:** Several of the single-family residences have been replaced by current multi-family residences **South:** Relatively unchanged **West:** Relatively unchanged
2009, 2010, and 2012	Relatively unchanged	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Property southeast of Site appears developed with the current fire department station **West:** Relatively unchanged

Copies of the Aerial Photographs provided by EDR can be found in Appendix C.

5.2 HISTORIC BUILDING PERMITS

EDR provides a listing of building permits for the Site and adjoining properties, if available. In addition, Citadel reviewed building permits with the City of Los Angeles Building Department. Permits reviewed indicate that the Site was formerly occupied as a riding academy as early as 1935 with

the offices for the academy located at the adjoining property southeast of the Site. The Site was developed as a golf course with a clubhouse and golf shop by 1956. A roof shelter was built in 1967. The tennis shop and tennis courts were developed by 1974.

A copy of the EDR Building Permit Report is included as Appendix D.

5.3 HISTORICAL FIRE INSURANCE MAPS

Citadel requested that EDR review its collection of Sanborn Fire Insurance Maps for potential coverage of the Site and vicinity. Sanborn Map coverage was not available for the Site.

A copy of the EDR Sanborn Map Report is included as Appendix E.

5.4 CITY PARCEL PROFILE REPORT

Citadel reviewed the on-line parcel profile report from the City of Los Angeles interactive database, NavigateLA. Alias addresses identified for the Site include:

- 12506 West Valley Spring Lane
- 12600 West Valley Spring Lane
- 12630 West Valley Spring Lane
- 4047 North Whitsett Avenue
- 4155 North Whitsett Avenue

5.5 HISTORICAL CITY DIRECTORIES

City directories were researched by EDR in order to identify previous Site tenants and/or neighboring properties with a potential for hazardous materials generation and/or storage. EDR researched city directory listings from 1920 through 2014 (non-inclusive) and provided their search results to Citadel for review. The following table summarizes information provided by the city directory search.

Dates(s)	Occupant Listed
1930	Nishita
1930	Robert Cushman Riding Academy (4101 Whitsett)
1976	Studio City Golf Course Inc.
1980, 1981, 1985, 1986, 1990, 1991, 1995	Studio City Golf Course Inc., Studio City Golf & Tennis
2001	Studio City Golf Course Inc., Matt's Golf Café
2006, 2010	Studio City Golf Course Inc.
2014	Tennis Pro Zone

A copy of the EDR City Directory Abstract is included as Appendix F.

5.6 CLIENT-SUPPLIED ENVIRONMENTAL INFORMATION

No prior reports or relevant documentation was provided to Citadel. No reports are included in Appendix G.

5.7 HISTORICAL TOPOGRAPHIC MAPS

Historical topographic maps were provided by EDR in order to identify natural features and changes in development over a long period of time. The topographic maps provides the user with a regional view of changes to the Site and vicinity that other historical databases such as aerial photographs may not provide. Below are brief descriptions of observations made from the topographic maps of the Site and vicinity.

Dates(s)	Site Description	Surrounding Area Descriptions
1894, 1896, 1898, 1900, 1902	Undeveloped land	**North:** Undeveloped land **East:** Undeveloped land **South:** Los Angeles River with undeveloped land beyond **West:** Undeveloped land
1920, 1921, 1924, 1926	Relatively unchanged	**North:** Relatively undeveloped with one small structure north of the Site **East:** Unimproved road in the location of Whitsett Avenue, with undeveloped land beyond **South:** Ventura Boulevard developed beyond the Los Angeles River **West:** Relatively unchanged
1953	Relatively unchanged	**North:** Valley Spring Lane with the current street system developed; shading indicative of urban development **East:** Shading indicative of urban development **South:** Los Angeles River appears channelized, with undeveloped land beyond **West:** Shading indicative of urban development
1966	The current golf clubhouse appears developed in the northeast corner of the Site	**North:** Relatively unchanged **East:** Relatively unchanged **South:** Shading, beyond the Los Angeles River, indicative of urban development **West:** Relatively unchanged
2012	The Site is identified as Studio City Golf Course; no structures are shown on this map	No structures are shown on this map

Copies of the historical topographic maps provided by EDR are included as Appendix H.

5.8 HISTORIC OIL AND GAS MAPS

Citadel reviewed information available on-line through the California Department of Conservation's website. The Division of Oil, Gas & Geothermal Resources (DOGGR) Online Mapping System (DOMS) shows that there is an oil well approximately 1.8 mile northeast of the Site. The oil well is identified by API 03705314. According to DOMS, the well operator for the well is listed as Conoco Inc. and the status for the well is inactive and plugged. The well was drilled to a depth of 2,995 feet in April 1961 and was abandoned in January 1962.

5.9 INTERVIEWS

Citadel interviewed Mr. Matthew Becker of Weddington Golf and Tennis LLC during the Site reconnaissance. Mr. Becker was not aware of any historic or current environmental concerns or

hazards at the Site. A User Questionnaire was submitted to Harvard-Westlake School and was completed by Mr. Becker. The completed User Questionnaire can be found in Appendix I.

5.10 ENVIRONMENTAL LIEN

Citadel contracted with EDR to perform an Environmental Lien Search for the Site. The Environmental Lien Search report reviewed did not identify any current environmental liens or other activity and use limitations (AUL) for the Site. Three grant deeds dated November 28, 2005, were included in the report. The deeds granted the title from Las Vegas Dunes, Inc. and Becker Trust LLC to Weddington Golf & Tennis, Inc.

A copy of the environmental lien and AUL search can be found in Appendix J.

5.11 SUMMARY OF SITE HISTORY

A review of historical sources showed that the Site was undeveloped as early as 1894 until at least 1928 with the development of two small structures, likely a residence, in the northeast corner of the Site. By 1930, the Site and the adjoining property southeast of the Site was occupied as a horse-riding academy with the academy offices located at the adjoining property. The two small structures were likely demolished prior to the development of the horse tracks. The Site was cleared of the horse tracks in 1947. The Site was then developed with a golf course with a clubhouse and golf shop by 1956. One of the structures at the Site was demolished by 1967, and a roof shelter, likely the driving range canopy, was built in 1967. The tennis shop and tennis courts were developed by 1974, including four courts located at the adjoining property southeast of the Site. By 1979, five additional tennis courts were developed at the Site. The current fire department station at the adjoining property southeast of the Site was developed in 2006.

6.0 REGULATORY AGENCY REVIEW

6.1 DATABASE REVIEW

As part of the Phase I ESA, Citadel utilized EDR of Milford, Connecticut, as an information source for regulatory agency database records.

The following summary of the database information is divided into five columns. The first column identifies the environmental database researched; the second column indicates the distance from the Site that was used for the research; the third column indicates if the Site was identified in the specified database; the fourth column lists the number of listings identified on the database within the specified distance of the Site; and the fifth column indicates if the sites identified are potential environmental concerns to the Site.

Although locations of the orphan sites are frequently unknown, Citadel attempts to evaluate the potential adverse environmental impact that these facilities may have on the Site. This evaluation consists of reviewing street names in an effort to learn whether the street on which the Site is located lies within the search distance of the subject property, a drive-by view of surrounding properties during the Site visit, and evaluating the Site type and information provided by government agencies. The orphan sites included in the following table are those Citadel identified as potentially located within the identified search distance.

Database	Radius	Site Identified	No. of Listings Identified	Potential Environmental Concern to the Site
National Priorities List	1 mile	No	0	
RCRA Corrective Action Treatment/Storage/Disposal (TSD) Facilities (CORRACTS)	1 mile	No	0	
Delisted National Priorities List	1 mile	No	0	
CERCLIS Sites	½ mile	No	0	
CERCLIS No Further Remedial Action Planned (NFRAP) Sites	½ mile	No	0	
RCRA Non-Corrective Action TSD Facilities	½ mile	No	0	
State/Tribal Voluntary Cleanup Sites	½ mile	No	0	
State/Tribal Leaking Registered Storage Tank Sites	½ mile	No	15	No
State/Tribal Brownfield Sites/CERCLIS Equivalent	1 mile	No	2	No
Historic CORTESE List	½ mile	No	8	No
State/Tribal Solid Waste Landfill Sites/Facilities	½ mile	No	0	
Federal/State/Tribal Engineering Controls Registries	½ mile	No	0	
Federal/State/Tribal Institutional Controls Registries	½ mile	No	0	
RCRA Large Quantity Generators	¼ mile	No	0	
RCRA Small Quantity Generators	¼ mile	No	3	No
RCRA Non Generators	¼ mile	No	0	
State/Tribal Registered Storage Tank Sites	¼ mile	No	2	No
HIST UST	¼ mile	No	4	No
CA FID UST	¼ mile	Yes	4	See discussion below
SWEEPS UST	¼ mile	Yes	2	See discussion below
Facility Index System (FINDS)	Site	Yes	1	See discussion below
HAZNET	Site	Yes	2	See discussion below
Orphan	N/A	No	1	No

A brief discussion of select facilities and their database listings are included following the table. The full report provided by EDR and reviewed by Citadel can be found in Appendix K.

Site Name	Weddington Golf & Tennis
Database(s)	FINDS
Address	4141 North Whitsett Avenue
Distance/Direction	Target Property
Comments	The Site was identified on the Facility Index System/Facility Registry System (FINDS) database, which contains facility information and "pointers" to other sources that contain more detail. The Site was identified on this database due to it being in the California Environmental Reporting System (CERS) as a Risk Management Plan (RMP) Reporter. Refer to Section 6.3 for further discussion. Based on a lack of reported spill or leaks, this listing is not considered to represent a significant environmental concern.

Site Name	Studio City Golf Course
Database(s)	HAZNET, SWEEPS UST, CA FID UST
Address	4141 Whitsett Avenue
Distance/Direction	Target Property
Comments	The Site was identified on the historical UST databases. The listing for the UST was created in 1988 and was active in 1994. No further pertinent information was provided by EDR. The Site was also identified on the HAZNET database for generating tank bottom waste in 1995; and waste and mixed oil in 2007, 2011, and 2015. No violations were reported. According to reviewed documents provided by the LAFD, a 500-gallon UST was removed from the Site in 1995 under LAFD supervision. Refer to Section 6.3 for further discussion.

Maps showing the location of these facilities and additional information are provided in the Government Records Report in Appendix K.

6.2 VAPOR ENCROACHMENT CONDITION

According to ASTM E2600-15, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property (TP) caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be ruled out. Tier 2 has two data collective components: non-invasive and invasive.

Tier 1 screening begins with the default area of concern (AOC) defined by the approximate minimum search distances adjusted as appropriate for local conditions, and then determining if known or suspected contaminated properties with contaminants of concern (COCs) exist within the established AOC. The default AOC is one third of a mile around the TP for COCs and one-tenth of a mile for petroleum hydrocarbon COCs. The AOC is measured from the TP boundary to a contaminated property with known or suspected COC contamination of soil or groundwater or both. The default AOC may be expanded or reduced by the environmental professional (adjusted AOC) using experience and professional judgment, based on factors like groundwater flow direction, subsurface characteristics, surficial features and man-made features.

If groundwater flow direction is known or can be inferred from the Phase I ESA investigation of the TP, the default AOC in the down-gradient direction may be reduced to the area within the critical distance of 100 feet. The AOC in the cross-gradient direction may also be reduced, depending upon the critical distance and the width of the COC-contaminated plume associated with a known or likely COC-contaminated property located in a cross-gradient direction from the TP. The critical distance is the lineal distance in any direction between the nearest edge of the contaminated plume and the nearest TP boundary, and is equal to 100 feet for COCs or 30 feet for dissolved petroleum hydrocarbon COCs.

For a COC-contaminated property identified in Tier 1 located down-gradient from the TP, it is not necessary to have information on migrating groundwater contaminated plume dimensions as the critical distance is measured from the nearest TP boundary to the source of contamination at the off-site down-gradient property. In this case, the AOC may be reduced to the area within the critical distance.

For a contaminated property identified in Tier 1 located crossgradient from the TP, the AOC will be the area within the critical distance plus one half of a reasonable estimation of the contaminated plume width (at the point nearest the closest TP boundary) that might be associated with the nearby known or suspected COC-contaminated property (that is, the COC-contaminated property where the groundwater contamination originated). The environmental professional's judgment and experience can be used to estimate the width of the COC-contaminated plume that might be associated with the nearby known or suspected COC-contaminated property. If it is not possible to estimate the contaminated plume width, then the AOC cannot be reduced in the cross-gradient direction.

Citadel reviewed information provided by EDR regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, historical releases of petroleum products from a leaking underground storage tank (LUST) occurred within 0.25-mile and upgradient of the Site. Tesoro Station/ARCO/Thrifty Oil Company, located at 12500 Ventura Boulevard, is listed as a LUST site. According to EDR, the property is approximately 634 feet south-southeast of the Site and the gasoline leak was discovered in January 1989 and reported in July 1989. The case was completed and closed by the Los Angeles Regional Water Quality Control Board (LARWQCB) on July 2, 1998.

EDR also provided the following listings on the Historical Gas Station and Dry Cleaners databases as within 0.125-mile of the Site.

Historical Gas Stations	
Site Name	Coggins HR
Address	12500 Ventura Boulevard
Distance/Direction	594 feet south-southeast
Comments	According to EDR, the property was occupied as a gasoline service station in 1940 and between 2001 and 2014; and as an automotive repair shop between 1989 and 1993. The property is currently occupied as a gasoline station and mentioned above as a LUST site. While the distances from the Site provided by EDR differ, these listings have the same address. Based on the distance from the Site and regulatory case closure of a gasoline leak, this property is not likely to have adversely affected the Site.

Historical Dry Cleaners	
Site Name	Snowman Cleaners
Address	12546 Ventura Boulevard
Distance/Direction	528 feet south of the Site
Comments	The property was occupied as a dry cleaning plant by Morton's Quick Clean Center between 1969 and 1979; and Snowman Cleaners between 1982 and 2011. Snowman Cleaners was also identified on the Drycleaners database in 1990 as a power laundry. The listing was inactive by 2008. This property was also identified on the Emissions Inventory (EMI) database in 1987 and 1990 for releasing a total of two tons of organic hydrocarbon gases per year. According to the South Coast Air Quality Management District's (SCAQMD's) Facility Information Detail (FIND) database, this facility operated dry cleaning equipment containing tetrachloroethylene (PCE) with permits to operate issued in 1983 and 1999. While PCE was used at this facility, no spills, leaks, or violations was reported. The facility also likely occupied a small space of approximately 1,000 SF. Based on the distance from the Site and that the Los Angeles River is situated in between acting as a barrier, this property is not likely to have adversely affected the Site.
Site Name	Daisy Fresh Cleaners
Address	12731 Ventura Boulevard
Distance/Direction	554 feet west-southwest of the Site
Comments	The property was occupied as a dry cleaning plant by Daisy Fresh Cleaners between 1985 and 2009. The facility was also identified as a RCRA Large Quantity Generator (LQG) in 1986 and a Small Quantity Generator (SQG) in 1996. No violations were reported. This property was also identified on the EMI database in 1987 and 1990 for releasing a total of one ton of organic hydrocarbon gases per year. According to the SCAQMD's FIND database, this facility operated dry cleaning equipment containing PCE with permits to operate issued in 1985, 1992, and 1993. While PCE was used at this facility, no spills, leaks, or violations was reported. Based on the distance from the Site and that the Los Angeles River is situated in between acting as a barrier, this property is not likely to have adversely affected the Site.

A copy of the vapor encroachment screen provided by EDR is included as Appendix L.

6.3 REGULATORY AGENCIES

Local and state agencies, such as environmental health departments, fire prevention bureaus, and building and planning departments are contacted to identify any current or previous reports of hazardous materials use, storage, and/or unauthorized releases that may have impacted the Site.

BUILDING DEPARTMENT

Citadel contacted the City of Los Angeles Building Department for information regarding the Site in order to identify historical tenants and property use. Please see Section 5.2 for further discussion.

FIRE DEPARTMENT

The City of LAFD has recently issued lists of active and inactive ASTs, USTs, and hazardous materials inventories (HMI) as of April 4, 2017. The Site was identified on active HMI list.

Citadel contacted the Los Angeles Fire Department for information for further information. According to the documents reviewed, a 550-gallon gasoline UST for private auto fueling station was installed at the Site in 1957. The UST was re-registered as a 500-gallon UST in 1988 due to a new City ordinance requiring registration for a Fire Permit to operate an UST in the City of Los Angeles. The UST was removed in 1995 under LAFD supervision. While a No Further Action (NFA) letter was not located, laboratory results indicated that the soil samples collected at the bottom of the tank pit, the spoils pile, and under the dispenser did not exceed action levels. According to the drawings provided, the UST and dispenser were located just south of the tennis courts. Based on the current Site boundaries, the dispenser and a portion of the UST were located on the adjoining LAFD station property. The former UST does not represent a significant environmental concern. However, a NFA letter regarding the UST removal should be acquired.

A copy of the reviewed documents can be found in Appendix M.

AIR QUALITY MANAGEMENT DISTRICT

Citadel reviewed information available on-line through the South Coast Air Quality Management District's Facility Information Detail (FIND) database. The Site was not identified on the database.

REGIONAL WATER QUALITY CONTROL BOARD

The GeoTracker Database is the California State Water Resources Control Board's (SWRCB) Internet-accessible database system used by the SWRCB, regional boards, and local agencies to track and archive compliance data from authorized or unauthorized discharges of waste to land, or unauthorized releases of hazardous substances from underground storage tanks. According to Geotracker, Thrifty Oil Company Station located at 12500 Ventura Boulevard, approximately 600 feet from the Site, is listed as the nearest LUST Cleanup Site. According to information provided by Geotracker, the case for a leak was discovered in January 1989. The case was completed and closed by the Los Angeles Regional Water Quality Control Board (LARWQCB) on July 2, 1998.

CALIFORNIA ENVIRONMENTAL PROTECTION AGENCY

The California Environmental Protection Agency (CalEPA) Regulated Site Portal is a website that combines data about environmentally regulated sites and facilities in California into a single, searchable database and interactive map. The portal provides an overview of regulated activities across the spectrum of environmental programs. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials. According to the portal, the Site was identified on the CERS as a chemical storage facility. Numerous violations were identified in November 2015, generally for failure to complete or electronically submit components of a Hazardous Materials Release Response Plan (HMRRP). No release of a hazardous material was reported.

7.0 DATA GAPS

A data gap is a lack of or inability to obtain information despite good faith efforts to gather such information. A data failure is a failure to achieve the historical research objectives even after reviewing the standard historical sources that are reasonably ascertainable and likely to be useful.

The following data gaps have been identified during the course of this investigation:

- Additional governmental agencies that are not included in the Government Records report may maintain information regarding environmental conditions at the Site and nearby facilities.

With regard to these data gaps, Citadel believes that the most significant potential sources for on-site contamination have been identified during the current investigation.

8.0 FINDINGS

Citadel was contracted by Harvard-Westlake School (Client) to perform a Phase I ESA of the Weddington Golf & Tennis Facility located at 4141 Whitsett Avenue, in the City of Studio City, Los Angeles County, California; hereinafter referred to as the "Site."

The Site consists of a nine-hole golf course with one clubhouse of approximately 2,444 SF including a café; driving range with 24 stalls; 16 tennis courts with a tennis shop of approximately 500 SF; several sheds and gated areas for maintenance; surface parking areas; and associated landscaping. At the time of the Site reconnaissance, the Site was occupied by Weddington Golf & Tennis.

Stationary equipment at the Site include a pole-mounted transformer. In general, the Site appeared to be well maintained and the observed building/ground conditions were good. Three 55-gallon steel drums were observed in the maintenance area adjacent to the tennis courts. These drums appeared old and were reportedly empty and awaiting disposal. One of the drums appeared punctured. While no leaks were observed in this area, minor staining of the concrete in the vicinity of the drums was observed.

A review of historical sources showed that the Site was undeveloped as early as 1894 until at least 1928 with the development of two small structures, likely a residence, in the northeast corner of the Site. By 1930, the Site and the adjoining property southeast of the Site was occupied as a horse-riding academy with the academy offices located at the adjoining property. The two small structures were likely demolished prior to the development of the horse tracks. The Site was cleared of the horse tracks in 1947. The Site was then developed with a golf course with a clubhouse and golf shop by 1956. One of the structures at the Site was demolished by 1967, and a roof shelter, likely the driving range canopy, was built in 1967. The tennis shop and tennis courts were developed by 1974, including four courts located at the adjoining property southeast of the Site. By 1979, five additional tennis courts were developed at the Site. The current Los Angeles Fire Department LAFD station at the adjoining property southeast of the Site was developed in 2006.

The Site was identified on the following environmental databases: FINDS, HAZNET, SWEEPS, and CA FID UST.

The Site was identified on the FINDS database, which contains facility information and "pointers" to other sources that contain more detail. The Site was identified on this database due to it being in the CERS as a RMP Reporter. Numerous violations were identified in November 2015, generally for failure to complete or electronically submit components of a HMRRP. No release of a hazardous material was reported. Based on a lack of reported spill or leaks, this listing is not considered to represent a significant environmental concern.

The Site was identified on the historical UST databases. The listing for the UST was created in 1988 and was active in 1994. No further pertinent information was provided by EDR. The Site was also identified on the HAZNET database for generating tank bottom waste in 1995; and waste and mixed oil in 2007, 2011, and 2015. No violations were reported. According to reviewed documents provided by the LAFD, a 500-gallon UST was removed from the Site in 1995 under LAFD supervision. While a NFA letter was not located, laboratory results indicated that the soil samples collected at the bottom of the tank pit, the spoils pile, and under the dispenser did not exceed action levels. According to the drawings provided, the UST and dispenser were located just south of the tennis courts. Based on the current Site boundaries, the dispenser and a portion of the UST were located on the adjoining LAFD station property. The former UST does not represent a significant environmental concern. However, a NFA letter regarding the UST removal should be acquired.

Citadel reviewed information provided by EDR regarding nearby properties to evaluate for potential on-Site vapor encroachment concerns from off-site sources. According to EDR, historical releases of petroleum products from a LUST occurred within 0.25-mile and upgradient of the Site. Tesoro Station/ARCO/Thrifty Oil Company, located at 12500 Ventura Boulevard, is listed as a LUST site. According to EDR, the property is approximately 634 feet south-southeast of the Site and the gasoline leak was discovered in January 1989 and reported in July 1989. The case was completed and closed by the LARWQCB on July 2, 1998.

One property were identified within 0.125-mile and upgradient of the Site on the Historical Gas Station database. This property, located 594 feet south-southeast of the Site, is not likely to have adversely affected the Site based on the distance from the Site. Two properties were identified within 0.125-mile and upgradient of the Site on the Historical Dry Cleaners database. These properties, located 528 feet south of the Site and 554 feet west-southwest of the Site, are not likely to have adversely affected the Site based on the distance from the Site and that the Los Angeles River is situated in between acting as a barrier.

9.0 CONCLUSIONS AND RECOMMENDATIONS

According to ASTM Standard of Practice E1527-13, recognized environmental conditions (REC) fall under three specific categories when evaluating a site or properties within the site vicinity. These categories are defined below.

A recognized environmental condition, or REC, means the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to any release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.

A controlled recognized environmental condition, or CREC, is a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria

established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

An historical recognized environmental condition, or HREC, is a past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).

According to ASTM E2600-10, the goal of conducting a vapor encroachment screening on a parcel of property is to identify a vapor encroachment condition (VEC), which is the presence or likely presence of chemicals of concern vapors in the subsurface of the target property caused by the release of vapors from contaminated soil or groundwater or both either on or near the target property as identified by Tier 1 or Tier 2 procedures. The purpose of Tier 1 is to conduct a screen using Phase I ESA-type information to determine if a VEC exists at the target property. If the Tier 1 screen cannot rule out the possibility of a VEC existing at the target property, then a Tier 2 screen can be conducted. Tier 2 applies numeric screening criteria to existing or newly collected soil, soil gas, and/or groundwater testing results to evaluate whether or not a VEC can be rules out. Tier 2 has two data collective components: non-invasive and invasive.

Based on our review of these databases, reported release incidents that would represent RECs in connection with the Site or a source of a release that would be likely to contribute to a VEC were not identified. Based on these reviews, the former 500-gallon UST is considered a HREC. No evidence for designating the Site as a REC or CREC from reviews of historical documents and present Site conditions was found. Citadel recommends acquiring an NFA letter for the UST removal.

Citadel recommends that the tenant follow best management practices, in conformance with all appropriate current regulations, in regards to potential use of regulated hazardous materials and/or waste generated during everyday operations. Ensure that the three empty 55-gallon drums are disposed of appropriately.

The current Site building was constructed prior to bans using asbestos-containing building materials (ACBMs), lead-based paint (LBP), and polychlorinated biphenyls (PCBs) in electrical equipment came into effect in 1989, 1978, and 1978, respectively. No testing is known to have been performed to evaluate for the presence of ACBMs, LBP, or PCBs at the Site.

Prior to renovation or demolition of building components, particularly roofing materials, Citadel recommends that the Client perform a survey for ACBMs and LBP prior to renovation or demolition activities. Such surveys should be performed to identify if ACBMs or LBP are present and to ensure proper handling and disposal and to allow for measures to protect both worker and building occupant safety during routine building maintenance, renovation or demolition.

10.0 LIMITATIONS

The information and opinions rendered in this report are exclusively for use by the Client. Citadel Environmental Services, Inc. will not distribute this report without the Client's written consent, except as may be required by law or court order. The recommendations expressed in this report took into consideration the purpose and scope of this limited assignment. We accept responsibility

for the competent performance of our duties in executing the assignment and preparing this report in accordance with the normal standards of our profession, but disclaim any responsibility for consequential damages resulting from inaccuracies in information provided by the Client, federal, state, county, or local regulatory agencies.

12.0 PROFESSIONAL CERTIFICATION

Citadel has completed a Phase I ESA of the Weddington Golf & Tennis Facility located at 4141 Whitsett Avenue, in the City of Studio City, Los Angeles County, California. The Phase I ESA was performed at the Clients request in accordance with the American Society for Testing and Materials (ASTM) Standard of Practice E1527-2013 and the standards of care and diligence normally practiced by recognized consulting firms in performing services of a similar nature.

The independent conclusions represent our professional judgment based on information and data available to Citadel during the course of this project. Information regarding historical and present operations, conditions and test data provided by the Client or their representative, is assumed to be correct and complete. The conclusions presented by this Phase I ESA are based on information provided to Citadel and from observations and perceived conditions existing on the date of the site reconnaissance.

In expressing the opinions stated in this report, Citadel has exercised the degree of skill and care ordinarily exercised by a reasonable prudent environmental professional. Documentation provided by the Client, Client-designated representatives, interested third-parties, or from the public domain, and referenced in preparation of the Phase I ESA report, have been assimilated with the understanding that Citadel assumes no responsibility or liability for their accuracy.

I declare that to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined by the final All Appropriate Inquiry (AAI) Rule published in 40 CFR Part 312.10 (November 1, 2013). I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting described in this Phase I ESA. I have developed and performed the AAI in conformance with the standard and care of this Rule.

EXPERIENCE

With over **30 years** of experience in environmental engineering, compliance, permitting and management projects, Mr. Drollinger has a strong working knowledge of EPA, DTSC, AQMD/APCD, OSHA and DOT regulations; and with local agencies, fire departments and public works. Mr. Drollinger has provided environmental engineering, assessment and compliance, safety management, and engineering construction management services on numerous projects for the US Navy, Veterans Administration, US Department of Agriculture, Cal Trans, EPA and numerous private projects throughout the western United States. In addition, Mr. Drollinger has developed and implemented programs to train managers and staff in storm water and NPDES compliance, soil and groundwater sample collection and data interpretation, Hazcomm, IIPP, and safe-work practices such as identifying and handling hazardous materials, fall protection, confined space, traffic control, LO/TO and ergonomics; and has conducted environmental and permitting audits of facilities including health and safety assessments.

ROLE

As Director of Environmental Geology & Engineering, Mr. Drollinger's primary responsibility includes developing and implementing health and safety protocols; safety training of management, staff and subcontractor personnel; establishing and managing budgets and personnel; negotiating with local, regional, state, and federal agencies; litigation support; and coordinating tasks with multi-discipline project teams.

Mr. Drollinger works closely with, and often develops protocols for conducting assessments related to Environmentally Regulated Materials Management (ERM), Industrial Hygiene (IH), and Occupational Safety and Training (OST) departments.

EDUCATION

Mr. Drollinger has a B.S. in Applied and Natural Sciences from the University of Alabama, and a M.Eng. in Advanced Safety Engineering and Management, University of Alabama, Birmingham.

Mr. Drollinger is also a certifying board member of the American Council of Accredited Certifications (formerly known as the American Indoor Air Quality Council), and is a member of the American Society of Safety Engineers, Board of Certified Safety Professionals, Institute of Hazardous Materials Management, Institute of Industrial Engineers and International Facilities Management Association.

Environmental Specialist, Environmental Geology and Engineering

EXPERIENCE

Ms. Lee has **ten years** of experience as an Environmental Specialist. Her responsibilities includes performing Phase I and Phase II Environmental Site Assessments, NPDES monitoring and permitting, groundwater monitoring, indoor air quality inspections, hazardous materials inventory, and preparation of health and safety plans and hazardous materials business and contingency plans.

ROLE

As an Environmental Specialist, Ms. Lee provides on-site organization, direction, control, and coordination necessary for the successful implementation, execution, and completion of environmental geology and environmental compliance-related projects awarded to Citadel. She also assists the Director of Environmental Geology and Engineering in the completion of all assigned projects so that the client is satisfied with the finished work product and the working relationship. Her assignments include a combination of field-based activities in a number of varying environments and office-based activities.

EDUCATION

Ms. Lee holds a Bachelor of Arts in Environmental Analysis and Design from the University of California, Irvine; with a minor in Urban and Regional Planning. Ms. Lee also holds a 40-hour HAZWOPER General Site Worker Certification. She has recently received her Environmental Management Certification from the University of California, Irvine.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

PERMIT EXPIRATION/REFUNDS: This permit expires two years after the date of the permit issuance. This permit will also expire if no construction work is performed for a continuous period of 180 days (Sec. 98.0602 LAMC). Claims for refund of fees paid must be filed within one year from the date of expiration for permits granted by LADBS (Sec. 22.12 & 22.13 LAMC). The permittee may be entitled to reimbursement of permit fees if the Department fails to conduct an inspection within 60 days of receiving a request for final inspection (HS 17951).

17. OWNER-BUILDER DECLARATION

I hereby affirm under penalty of perjury that I am exempt from the Contractors' State License Law for the following reason (Section 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he or she is licensed pursuant to the provisions of the Contractors License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he or she is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

(✓) I, as the owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or herself or through his or her own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year from completion, the owner-builder will have the burden of proving that he or she did not build or improve for the purpose of sale).

OR

(✓) I, as the owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business & Professions Code: The Contractors License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractors License Law.)

18. WORKERS' COMPENSATION DECLARATION

I hereby affirm, under penalty of perjury, one of the following declarations:

(__) I have and will maintain a certificate of consent to self insure for workers' compensation, as provided for by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued.

(__) I have and will maintain workers' compensation insurance, as required by Section 3700 of the Labor Code, for the performance of the work for which this permit is issued. My workers' compensation insurance carrier and policy number are:

Carrier:_____ Policy Number:_____

(__) I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the workers' compensation laws of California, and agree that if I should become subject to the workers' compensation provisions of Section 3700 of the Labor Code, I shall forthwith comply with those provisions.

WARNING: FAILURE TO SECURE WORKERS' COMPENSATION COVERAGE IS UNLAWFUL, AND SHALL SUBJECT AN EMPLOYER TO CRIMINAL PENALTIES AND CIVIL FINES UP TO ONE HUNDRED THOUSAND DOLLARS ($100,000), IN ADDITION TO THE COST OF COMPENSATION, DAMAGES AS PROVIDED FOR IN SECTION 3706 OF THE LABOR CODE, INTEREST, AND ATTORNEY'S FEES.

19. ASBESTOS REMOVAL DECLARATION / LEAD HAZARD WARNING

I certify that notification of asbestos removal is either not applicable or has been submitted to the AQMD or EPA as per section 19827.5 of the Health and Safety Code. Information is available at (909) 396-2336 and the notification form at www.aqmd.gov. Lead safe construction practices are required when doing repairs that disturb paint in pre-1978 buildings due to the presence of lead per section 6716 and 6717 of the Labor Code. Information is avaiable at Health Services for LA County at (800) 524-5323 or the State of California at (800) 597-5323 or www.dhs.ca.gov/childlead.

20. FINAL DECLARATION

I certify that I have read this application **INCLUDING THE ABOVE DECLARATIONS** and state that the above information **INCLUDING THE ABOVE DECLARATIONS** is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes. I realize that this permit is an application for inspection and that it does not approve or authorize the work specified herein, and it does not authorize or permit any violation or failure to comply with any applicable law. Furthermore, neither the City of Los Angeles nor any board, department officer, or employee thereof, make any warranty, nor shall be responsible for the performance or results of any work described herein, nor the condition of the property nor the soil upon which such work is performed. I further affirm under penalty of perjury, that the proposed work will not destroy or unreasonably interfere with any access or utility easement belonging to others and located on my property, but in the event such work does destroy or unreasonably interfere with such easement, a substitute easement(s) satisfactory to the holder(s) of the easement will be provided (Sec. 91.0106.4.3.4 LAMC).

By signing below, I certify that:

(1) I accept all the declarations above namely the Owner-Builder Declaration, Workers' Compensation Declaration, Asbestos Removal Declaration / Lead Hazard Warning and Final Declaration; and
(2) This permit is being obtained with the consent of the legal owner of the property.

DECLARATIONS AND CERTIFICATIONS

LICENSED CONTRACTORS DECLARATION

16. I hereby affirm that I am licensed under the provisions of Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code, and my license is in full force and effect.

Date _____ Lic. Class _____ Lic. Number _____ Contractor _____ (Signature)

OWNER-BUILDER DECLARATION

17. I hereby affirm that I am exempt from the Contractor's License Law for the following reason (Sec. 7031.5, Business and Professions Code: Any city or county which requires a permit to construct, alter, improve, demolish, or repair any structure, prior to its issuance, also requires the applicant for such permit to file a signed statement that he is licensed pursuant to the provisions of the Contractor's License Law (Chapter 9 (commencing with Section 7000) of Division 3 of the Business and Professions Code) or that he is exempt therefrom and the basis for the alleged exemption. Any violation of Section 7031.5 by any applicant for a permit subjects the applicant to a civil penalty of not more than five hundred dollars ($500).):

☐ I, as owner of the property, or my employees with wages as their sole compensation, will do the work, and the structure is not intended or offered for sale (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who does such work himself or through his own employees, provided that such improvements are not intended or offered for sale. If, however, the building or improvement is sold within one year of completion, the owner-builder will have the burden of proving that he did not build or improve for the purpose of sale.).

☐ I, as owner of the property, am exclusively contracting with licensed contractors to construct the project (Sec. 7044, Business and Professions Code: The Contractor's License Law does not apply to an owner of property who builds or improves thereon, and who contracts for such projects with a contractor(s) licensed pursuant to the Contractor's License Law.).

☐ I am exempt under Sec. _____, B. & P. C. for this reason.

Date 10-26-84 Owner's Signature George McCalister

WORKERS' COMPENSATION DECLARATION

18. I hereby affirm that I have a certificate of consent to self-insure, or a certificate of Worker's Compensation Insurance, or a certified copy thereof (Sec. 3800, Lab. C.).

Policy No. _____ Insurance Company _____

☐ Certified copy is hereby furnished.

☐ Certified copy is filed with the Los Angeles City Dept. of Bldg. & Safety.

Date _____ Applicant's Signature _____

Applicant's Mailing Address _____

CERTIFICATE OF EXEMPTION FROM WORKERS' COMPENSATION INSURANCE

19. I certify that in the performance of the work for which this permit is issued, I shall not employ any person in any manner so as to become subject to the Workers' Compensation Laws of California.

Date 10-26-84 Applicant's Signature George McCalister

NOTICE TO APPLICANT: If, after making this Certificate of Exemption, you should become subject to the Workers' Compensation provisions of the Labor Code, you must forthwith comply with such provisions or this permit shall be deemed revoked.

CONSTRUCTION LENDING AGENCY

20. I hereby affirm that there is a construction lending agency for the performance of the work for which this permit is issued (Sec. 3097, Civ. C.).

Lender's Name _____ Lender's Address _____

21. I certify that I have read this application and state that the above information is correct. I agree to comply with all city and county ordinances and state laws relating to building construction, and hereby authorize representatives of this city to enter upon the above-mentioned property for inspection purposes.

I realize that this permit is an application for inspection, that it does not approve or authorize the work specified herein, that it does not authorize or permit any violation or failure to comply with any applicable law, that neither the city of Los Angeles nor any board, department, officer or employee thereof make any warranty or shall be responsible for the performance or results of any work described herein or the condition of the property or soil upon which such work is performed. (See Sec. 91.0202 LAMC)

CITY OF LOS ANGELES
DEPARTMENT OF BUILDING AND SAFETY
BUILDING DIVISION

Application for the Erection of a Building

OF

CLASS "D"

REVOCABLE PERMIT

To the Board of Building and Safety Commissioners of the City of Los Angeles:

Application is hereby made to the Board of Building and Safety Commissioners of the City of Los Angeles, through the office of the Superintendent of Building, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

Lot No. 214

Tract 10000

Location of Building 4101 Whitsett Ave

BUILDING DIVISION

Application for the Erection of Frame Buildings

CLASS "D"

To the Board of Building and Safety Commissioners of the City of Los Angeles:

Application is hereby made to the Board of Building and Safety Commissioners of the City of Los Angeles, through the office of the Superintendent of Building, for a building permit in accordance with the description and for the purpose hereinafter set forth. This application is made subject to the following conditions, which are hereby agreed to by the undersigned applicant and which shall be deemed conditions entering into the exercise of the permit:

First: That the permit does not grant any right or privilege to erect any building or other structure therein described, or any portion thereof, upon any street, alley, or other public place or portion thereof.

Second: That the permit does not grant any right or privilege to use any building or other structure therein described, or any portion thereof, for any purpose that is, or may hereafter be prohibited by ordinance of the City of Los Angeles.

Third: That the granting of the permit does not affect or prejudice any claim of title to, or right of possession in, the property described in such permit.

EDR BUILDING PERMIT REPORT

About This Report

The EDR Building Permit Report provides a practical and efficient method to search building department records for indications of environmental conditions. Generated via a search of municipal building permit records gathered from more than 1,600 cities nationwide, this report will assist you in meeting the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Building permit data can be used to identify current and/or former operations and structures/features of environmental concern. The data can provide information on a target property and adjoining properties such as the presence of underground storage tanks, pump islands, sumps, drywells, etc., as well as information regarding water, sewer, natural gas, electrical connection dates, and current/former septic tanks.

ASTM and EPA Requirements

ASTM E 1527-13 lists building department records as a "standard historical source," as detailed in § 8.3.4.7: "Building Department Records - The term building department records means those records of the local government in which the property is located indicating permission of the local government to construct, alter, or demolish improvements on the property." ASTM also states that "Uses in the area surrounding the property shall be identified in the report, but this task is required only to the extent that this information is revealed in the course of researching the property itself."

EPA's Standards and Practices for All Appropriate Inquires (AAI) states: "§312.24: Reviews of historical sources of information. (a) Historical documents and records must be reviewed for the purposes of achieving the objectives and performance factors of §312.20(e) and (f). Historical documents and records may include, but are not limited to, aerial photographs, fire insurance maps, building department records, chain of title documents, and land use records."

Methodology

EDR has developed the EDR Building Permit Report through our partnership with BuildFax, the nation's largest repository of building department records. BuildFax collects, updates, and manages building department records from local municipal governments. The database now includes 30 million permits, on more than 10 million properties across 1,600 cities in the United States.

The EDR Building Permit Report comprises local municipal building permit records, gathered directly from local jurisdictions, including both target property and adjoining properties. Years of coverage vary by municipality. Data reported includes (where available): date of permit, permit type, permit number, status, valuation, contractor company, contractor name, and description.

Incoming permit data is checked at seven stages in a regimented quality control process, from initial data source interview, to data preparation, through final auditing. To ensure the building department is accurate, each of the seven quality control stages contains, on average, 15 additional quality checks, resulting in a process of approximately 105 quality control "touch points."

For more information about the EDR Building Permit Report, please contact your EDR Account Executive at (800) 352-0050.

GLOSSARY

General Building Department concepts

- **ICC:** The International Code Council. The governing body for the building/development codes used by all jurisdictions who've adopted the ICC guidelines. MOST of the US has done this. Canada, Mexico, and other countries use ICC codes books and guides as well. There are a few states who have added guidelines to the ICC codes to better fit their needs. For example, California has added seismic retrofit requirements for most commercial structures.
- **Building Department (Permitting Authority, Building Codes, Inspections Department, Building and Inspections):** This is the department in a jurisdiction where an owner or contractor goes to obtain permits and inspections for building, tearing down, remodeling, adding to, re-roofing, moving or otherwise making changes to any structure, Residential or Commercial.
- **Jurisdiction:** This is the geographic area representing the properties over which a Permitting Authority has responsibility.
- **GC:** General Contractor. Usually the primary contractor hired for any Residential or Commercial construction work.
- **Sub:** Subordinate contracting companies or subcontractors. Usually a "trades" contractor working for the GC. These contractors generally have an area of expertise in which they are licensed like Plumbing, Electrical, Heating and Air systems, Gas Systems, Pools etc. (called "trades").
- **Journeymen:** Sub contractors who have their own personal licenses in one or more trades and work for different contracting companies, wherever they are needed or there is work.
- **HVAC (Mechanical, Heating & Air companies):** HVAC = Heating, Ventilation, and Air Conditioning.
- **ELEC (Electrical, TempPole, TPole, TPower, Temporary Power, Panel, AMP Change, Power Release):** Electrical permits can be pulled for many reasons. The most common reason is to increase the AMPs of power in an electrical power panel. This requires a permit in almost every jurisdiction. Other commons reason for Electrical permits is to insert a temporary power pole at a new construction site. Construction requires electricity, and in a new development, power has yet to be run to the lot. The temporary power pole is usually the very first permit pulled for new development. The power is released to the home owner when construction is complete and this sometimes takes the form of a Power Release permit or inspection.
- **"Pull" a permit:** To obtain and pay for a building permit.
- **CBO:** Chief Building Official
- **Planning Department:** The department in the development process where the building /structural plans are reviewed for their completeness and compliance with building codes
- **Zoning Department:** The department in the development process where the site plans are reviewed for their compliance with the regulations associated with the zoning district in which they are situated.
- **Zoning District:** A pre-determined geographic boundary within a jurisdiction where certain types of structures are permitted / prohibited. Examples are Residential structure, Commercial/Retail structures, Industrial/Manufacturing structures etc. Each zoning district has regulations associated with it like the sizes of the lots, the density of the structures on the lots, the number of parking spaces required for certain types of structures on the lots etc.
- **PIN (TMS, GIS ID, Parcel#):** Property Identification Number and Tax Map System number.
- **State Card (Business license):** A license card issued to a contractor to conduct business.
- **Building Inspector (Inspector):** The inspector is a building department employee that inspects building construction for compliance to codes.
- **C.O.:** Certificate of Occupancy. This is the end of the construction process and designates that the owners now have permission to occupy a structure after its building is complete. Sometimes also referred to as a Certificate of Compliance.

GLOSSARY

Permit Content Definitions

- Permit Number: The alphanumerical designation assigned to a permit for tracking within the building department system. Sometimes the permit number gives clues to its role, e.g. a "PL" prefix may designate a plumbing permit.
- Description: A field on the permit form that allows the building department to give a brief description of the work being done. More often than not, this is the most important field for EP's to find clues to the prior use(s) of the property.
- Permit Type: Generally a brief designation of the type of job being done. For example BLDG-RES, BLDG-COM, ELEC, MECH etc.

Sample Building Permit Data

Date: Nov 09, 2000
Permit Type: Bldg -
New Permit Number: 101000000405
Status: Valuation: $1,000,000.00
Contractor Company: OWNER-BUILDER
Contractor Name:

Description: New one store retail (SAV-ON) with drive-thru pharmacy. Certificate of Occupancy.

Client Name:

Citadel Environmental Services
1725 Victory Boulevard
Glendale, CA 91201
Contact: Shirley Lee

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Citadel Environmental Services were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Certified Sanborn Results:

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1920 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR Historical Topo Map Report

10/30/17

Site Name:

Weddington Golf & Tennis Fac
4141 Whitsett Avenue
Studio City, CA 91604
EDR Inquiry # 5091907.4

Client Name:

Citadel Environmental Services
1725 Victory Boulevard
Glendale, CA 91201
Contact: Shirley Lee

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Citadel Environmental Services were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# NA
Project: 1189.1001.0

Coordinates:

Latitude:	34.145763 34° 8' 45" North
Longitude:	-118.406968 -118° 24' 25" West
UTM Zone:	Zone 11 North
UTM X Meters:	370287.04
UTM Y Meters:	3779212.13
Elevation:	620.06' above sea level

Maps Provided:

TITLE & JUDICIAL RECORDS

Per ASTM E 1527-13 Section 6.2, the User is required to provide and/or report to the environmental professional any title and/or judicial records so identified for the subject property.

Please provide any information on title and/or judicial records:

ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

Per ASTM E 1527-13 the User is required to provide and/or report to the environmental professional any environmental liens or AULs so identified for the subject property. The environmental professional per the ASTM practice is not responsible to undertake a review of information to identify environmental liens or AULs.

Please provide any information on environmental liens or activity and use limitations (AULs):

SPECIALIZED OR ACTUAL KNOWLEDGE OF USER

Per the ASTM standard, it is the User's responsibility to communicate to the environmental professional any information that is material to recognized environmental conditions in connection with the subject property based on such specialized knowledge, actual knowledge, experience, or commonly known and reasonably ascertainable information within the local community.

Please provide any information of the following items:

ASTM Scope Item	Property Contact Aware of them (Y/N)	Comment
USTs	**No**	**N/A**
ASTs	**No**	**N/A**
PCB Electrical Equipment	**No**	**N/A**
Hydraulic Equipment	**No**	**N/A**
Chemicals, Hazardous Materials, and Raw Materials Storage and Usage	**Fertilizer Fungicide**	**Gasoline**
Waste Generation, Storage and Disposal	**No**	**N/A**
Wells, Sumps, Pits, and Floor Drains	**Floor Drains**	**N/A**
Stormwater Runoff and Surface Water	**No**	**N/A**
Lagoons, Septic Systems, Wastewater Treatment, and Separators	**No**	**N/A**
Stressed Vegetation, Staining and Odors	**No**	**N/A**
Surficial Disturbances	**No**	**N/A**
On-Property Dry Cleaners	**No**	**N/A**
	No	**N/A**

NON-ASTM Scope Item	Property Contact Aware of them (Y/N)	Comment
Asbestos Containing Materials	**U/K**	**N/A**
Radon	**No**	**N/A**
Lead-Based Paint	**U/K**	**N/A**
Lead in Drinking Water	**U/K**	**N/A**
Potable Well	**No**	**N/A**
Potential Wetlands	**No**	**N/A**
Air Emissions	**No**	**N/A**
Mold/Water Intrusion	**No**	**N/A**

Please refer to "Helpful Documents" section below to provide any relevant reports associated with the above items.

VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

(For Property Owner) Per the ASTM standard, in a transaction involving the purchase of a parcel of commercial real estate, the user shall consider the relationship of the purchase price of the property to the fair market value of the property if the property was not affected by hazardous substances or petroleum products. The User should try to identify an explanation for a significantly lower price which does not reasonably reflect fair market value if the property was not contaminated, and make a written record of such explanation. The ASTM standard does not require that a real estate appraisal be obtained in order to ascertain fair market value of the property.

PROCEEDINGS INVOLVING THE PROPERTY

Per the ASTM standard, prior to the site visit, the User (if different from the property owner), Key site manager (if any is identified), and property owner shall be asked whether they know of (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property; (2) any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

- **Do you know of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, or from the property? Y / (N)**
  If yes, please explain:
- **Do you know of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products? Y / (N)**
  If yes, please explain:

HELPFUL DOCUMENTS

Per the ASTM Standard, Prior to the property visit, the Property owner, key site manager (if any is identified), and User (if different from the property owner) shall be asked if they know whether any of the documents below exist and if so, whether copies can and will be provided within reasonable time and cost constraints:

	User		Key Site Manager		Property Owner

EDR Environmental Lien and AUL Search

The EDR Environmental Lien Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 07/31/2017 has revealed that there are

2 ENVIROSTOR sites within approximately 1 mile of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

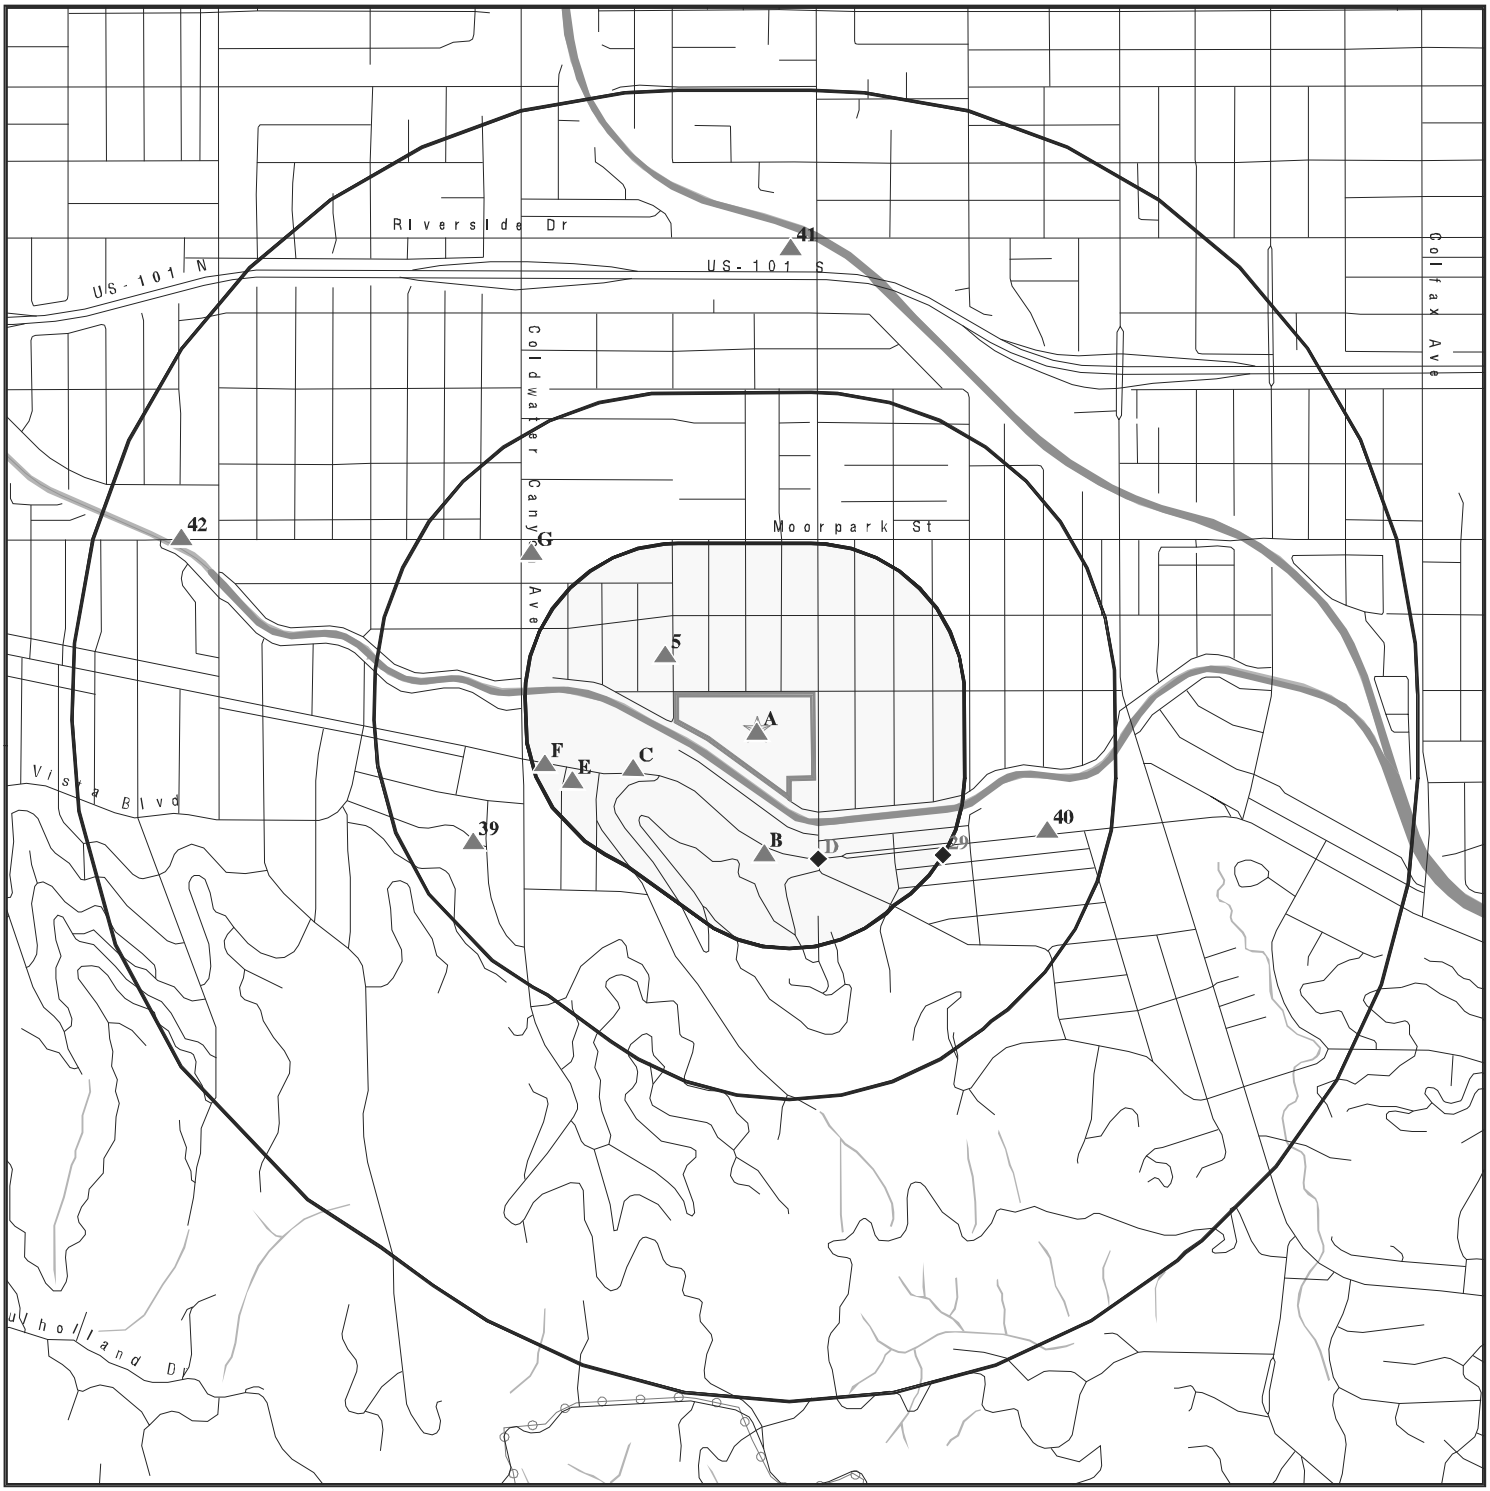
Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
SNOWMAN CLEANERS	12546 VENTURA	S 0 - 1/8 (0.100 mi.)	B6	11
DAISY FRESH CLEANERS	12731 VENTURA BLVD	WSW 0 - 1/8 (0.105 mi.)	C9	15

EXECUTIVE SUMMARY

Due to poor or inadequate address information, the following sites were not mapped. Count: 1 records.

Site Name	Database(s)
PLAZA DE ESCABAR - JOY'S DRY CLEAN	SLIC

OVERVIEW MAP - 5091907.2S



- Target Property
- Sites at elevations higher than or equal to the target property
- Sites at elevations lower than the target property
- Manufactured Gas Plants
- National Priority List Sites
- Dept. Defense Sites
- Indian Reservations BIA
- Power transmission lines
- 100-year flood zone
- 500-year flood zone
- National Wetland Inventory
- State Wetlands
- Upgradient Area
- Areas of Concern

FINDS:

Registry ID: 110002733436

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002840659

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110002810922

Environmental Interest/Information System
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 05/30/2017

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 05/30/2017

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 07/11/2017

Data Release Frequency: Quarterly

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 07/13/2017

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historic Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/30/2013
Date Data Arrived at EDR: 08/19/2013

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

WEDDINGTON GOLF & TENNIS FACILITY
4141 WHITSETT AVENUE
STUDIO CITY, CA 91604

TARGET PROPERTY COORDINATES

Latitude (North):	34.145763 - 34° 8' 44.75''
Longitude (West):	118.406968 - 118° 24' 25.08''
Universal Tranverse Mercator:	Zone 11
UTM X (Meters):	370284.1
UTM Y (Meters):	3779017.2
Elevation:	620 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	5630789 VAN NUYS, CA
Version Date:	2012

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

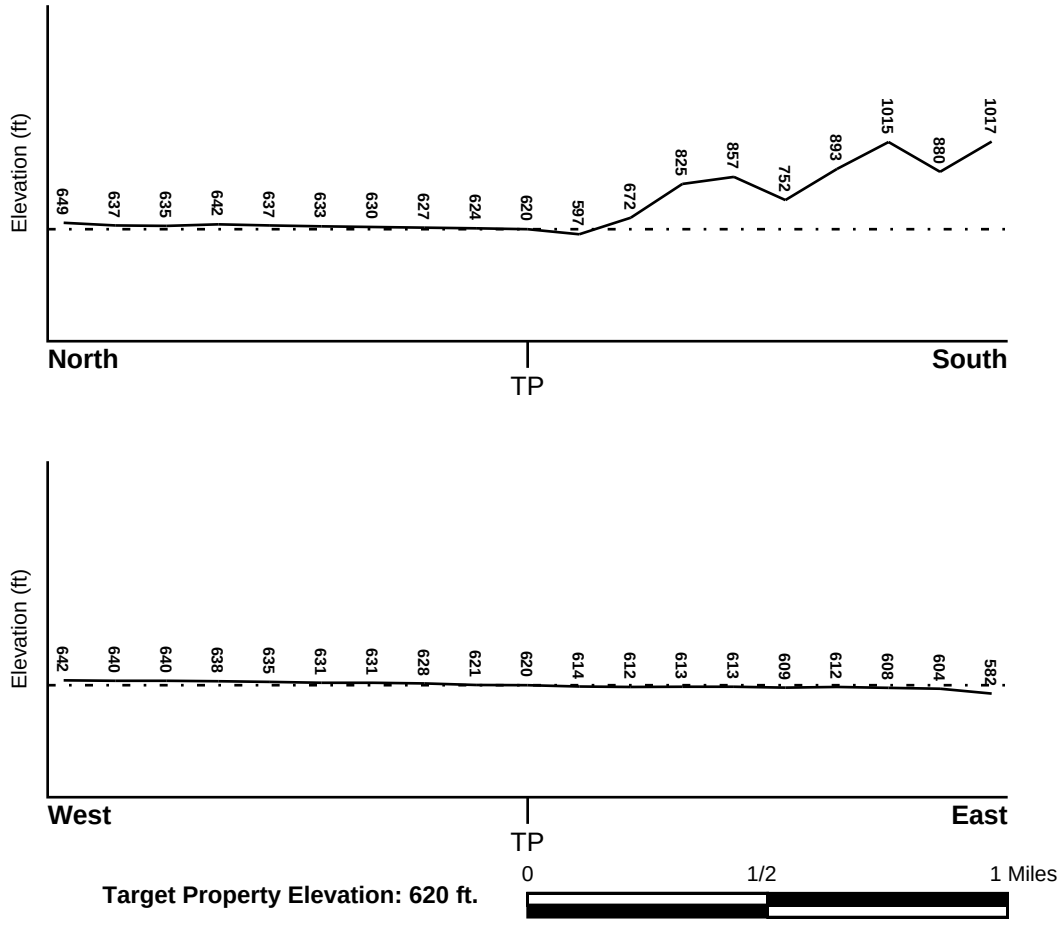
TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNE

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES



Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
06037C1320F	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
Not Reported	

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
VAN NUYS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

ROCK STRATIGRAPHIC UNIT

Era:	Cenozoic
System:	Tertiary
Series:	Miocene
Code:	Tm *(decoded above as Era, System & Series)*

GEOLOGIC AGE IDENTIFICATION

Category: Stratified Sequence

Geologic Age and Rock Stratigraphic Unit Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - a digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Not reported

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 10 inches

Depth to Bedrock Max: > 10 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
	Boundary			Classification			
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil	Permeability Rate (in/hr)	Soil Reaction (pH)
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

OTHER SOIL TYPES IN AREA

Based on Soil Conservation Service STATSGO data, the following additional subordinant soil types may appear within the general area of target property.

Soil Surface Textures:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Surficial Soil Types:
loam
clay
silt loam
loamy sand
sandy loam
fine sand
clay loam
gravelly - sandy loam
coarse sand
gravelly - sand
sand

Shallow Soil Types:
fine sandy loam
gravelly - loam
sand
silty clay

Deeper Soil Types:
stratified
clay loam
silty clay loam
gravelly - sandy loam
coarse sand
sand
weathered bedrock
very fine sandy loam

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetland Inventory
Source: Department of Fish & Game
Telephone: 916-445-0411

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Water Well Database
Source: Department of Water Resources
Telephone: 916-651-9648

California Drinking Water Quality Database
Source: Department of Public Health
Telephone: 916-324-2319
The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

OTHER STATE DATABASE INFORMATION

California Oil and Gas Well Locations
Source: Department of Conservation
Telephone: 916-323-1779
Oil and Gas well locations in the state.

RADON

State Database: CA Radon
Source: Department of Health Services
Telephone: 916-324-2208
Radon Database for California

Area Radon Information
Source: USGS
Telephone: 703-356-4020
The National Radon Database has been developed by the U.S. Environmental Protection Agency (USEPA) and is a compilation of the EPA/State Residential Radon Survey and the National Residential Radon Survey. The study covers the years 1986 - 1992. Where necessary data has been supplemented by information collected at private sources such as universities and research institutions.

EPA Radon Zones
Source: EPA
Telephone: 703-356-4020
Sections 307 & 309 of IRAA directed EPA to list and identify areas of U.S. with the potential for elevated indoor radon levels.

FINDS: Other Ascertainable Records

Registry ID:	110002811743

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

TANK DESCRIPTION	TANK SIZE	TANK NUMBER	TANK CONTENTS	RESULTS OF TANK INSPECTION
UST Steel	500 gallon	4469	gasoline	LEL 0% @ 15cm

The tank(s) described above has/have been inspected and found to be gas free based on readings obtained with an MSA type 2A Explosivity Meter (LEL of zero percent). A visual inspection has been made of the interior of the tank(s) and no visible contamination has been observed except as noted below.

EXCEPTION: None

THE AMERICAN BOARD OF INDUSTRIAL HYGIENE • INCORPORATED • CERT. NO. 1973 1433 • PENNSYLVANIA 1960 • STUART E. SALOT, Ph.D.

The tank(s) described above is/are approved for removal and transportation.

LOCAL AGENCY USE ONLY

COUNTY #	JURISDICTION #	FACILITY #
19	030	4619

LOCATION CODE - *OPTIONAL*	CENSUS TRACT # - *OPTIONAL*	SUPVISOR - DISTRICT CODE - *OPTIONAL*

THIS FORM MUST BE ACCOMPANIED BY AT LEAST (1) OR MORE PERMIT APPLICATION - FORM B, UNLESS THIS IS A CHANGE OF SITE INFORMATION ONLY.

OWNER MUST FILE THIS FORM WITH THE LOCAL AGENCY IMPLEMENTING THE UNDERGROUND STORAGE TANK REGULATIONS

INSTRUCTIONS FOR COMPLETING FORM "A"

GENERAL INSTRUCTIONS:

SECTION 2711 OF TITLE 23, CHAPTER 16, CALIFORNIA CODE OF REGULATIONS AND SECTIONS 25286, 25287, AND 25289 OF CHAPTER 6.7, DIVISION 20, CALIFORNIA HEALTH AND SAFETY CODE REQUIRE OWNERS TO APPLY FOR AN UST OPERATING PERMIT

1. One FORM "A" shall be completed for all NEW PERMIT CHANGES or any FACILITY/SITE INFORMATION CHANGES.
2. SUBMIT ONLY ONE (1) FORM "A" for a Facility/Site, regardless of the number of tanks located at the site.
3. This form should be completed by either the PERMIT APPLICANT or the LOCAL AGENCY UNDERGROUND TANK INSPECTOR.
4. Please type or print clearly all requested information.
5. Use a hard point writing instrument, you are making 3 copies.
6. Tank owner must submit a facility plot plan to the local agency as part of the application showing the location of the USTs with respect to buildings and landmarks [Section 2711 (a)(8), CCR].
7. Tank owner must submit documentation showing compliance with state financial responsibility requirements to the local agency as part of the application for petroleum USTs [Section 2711 (a)(11), CCR].

TOP OF FORM: "MARK ONLY ONE ITEM"

Mark an (X) in the box next to the item that best describes the reason the form is being completed.

I. FACILITY/SITE INFORMATION & ADDRESS (MUST BE COMPLETED)

1. Record name and address (physical location) of the underground tank(s).
   NOTE: Address MUST have a valid physical location including city, state, and zip code.
   P.O. BOX NUMBERS ARE NOT ACCEPTABLE.
   Include nearest cross street and name of the operator.
2. Phone number must have an area code. If the night number is the same, write "SAME" in proper location.
3. Check the appropriate box for TYPE OF BUSINESS OWNERSHIP (ex. CORPORATION, INDIVIDUAL, etc.)
4. Check the appropriate box for TYPE OF BUSINESS.
5. If Facility/Site is located within an Indian reservation or other Indian trust lands, check the box marked "YES".
6. Indicate the NUMBER of TANKS at this SITE.
7. Record the E.P.A. ID # or write "NONE" in the space provided.

II. PROPERTY OWNER INFORMATION & ADDRESS (MUST BE COMPLETED)

Complete all items in this section, unless all items are the same as SECTION I; If the same, write "SAME AS SITE" across this section. Be sure to check PROPERTY OWNERSHIP TYPE box.

III. TANK OWNER INFORMATION & ADDRESS (MUST BE COMPLETED)

Complete all items in this section, unless all items are the same as SECTION 1, If the same, write "SAME AS SITE" across this section. Be sure to check TANK OWNERS TYPE box.

IV. BOARD OF EQUALIZATION UST STORAGE FEE ACCOUNT NUMBER (MUST BE COMPLETED. SEE ARTICLE 5, CHAPTER 6.75, DIVISION 20, CALIFORNIA HEALTH AND SAFETY CODE.)

Enter your Board of Equalization (BOE) UST storage fee account number which is required before your permit application can be processed. Registration with the BOE will ensure that you will receive a quarterly storage fee return in reporting the $0.006 (6mills) per gallon fee due on the number of gallons placed in your USTs. The BOE will code persons exempt from paying the storage fee so returns will not be sent. If you do not have an account number with the BOE or if you have any questions regarding the fee or exemptions, please call the BOE at 916 322 9669 or write to the BOE at the following address: Board of Equalization, Fuel Taxes Division, P.O. Box 942879, Sacramento, CA 95279 0001.

V. PETROLEUM UST FINANCIAL RESPONSIBILITY (MUST BE COMPLETED FOR PETROLEUM USTs ONLY, SEE SECTIONS 2711 (a)(8) OF TITLE 23, CHAPTER 16, CALIFORNIA CODE OF REGULATIONS.)

Identify the method(s) used by the owner and/or operator, in meeting the Federal and State financial responsibility requirements. USTs owned by any Federal or State agency as well as non-petroleum USTs are exempt from this requirement.

VI. LEGAL NOTIFICATION AND BILLING ADDRESS

Check ONE BOX for the address that will be used for BOTH LEGAL AND BILLING NOTIFICATIONS.
TANK OWNER OR AUTHORIZED REPRESENTATIVE MUST SIGN AND DATE THE FORM AS INDICATED. [SEE SECTIONS 2711 (a)(13) OF TITLE 23 CHAPTER 16, CALIFORNIA CODE OF REGULATIONS.]

INSTRUCTION FOR THE LOCAL AGENCIES

The county an jurisdiction numbers are predetermined and can be obtained by calling the State Board (916) 227-4303. The facility number may be assigned by the local agency; however, this number must be numerical and cannot contain any alphabetical characters. If the local agency prefers the State Board to assign the facility number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THIS APPLICATION CANNOT BE PROCESSED IF THE BOE ACCOUNT NUMBER IS NOT FILLED IN. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS. THE LOCAL AGENCY SHOULD RETAIN THE ORIGINALS AND FORWARD THE YELLOW COPIES TO THE FOLLOWING ADDRESS. THE PINK COPY SHOULD BE RETAINED BY THE TANK OWNER.

These plans have been checked. Corrections of the following circled items are necessary for compliance with Title 19 and the Los Angeles Fire Code. Make all corrections circled below on each set of plans.

A. FIRE PROTECTION EQUIPMENT:

1. Provide a portable fire extinguisher with a rating of not less than 2-A, within seventy-five (75) feet travel distance to the entrance of each apartment and accessory area.
2. Provide a portable fire extinguisher with a rating of not less than 2-A, within seventy-five (75) feet travel distance of all portions of the building on each floor.
3. Provide a portable fire extinguisher with a rating of not less than 4 BC for kitchen(s)..... electrical equipment room(s)....., other GOLF CART GARAGE.
4. Provide fire extinguishers as required by the Fire Department Field Inspector.
5. Provide an approved fire warning system. Submit complete fire warning system plans in triplicate to the Electrical Division, Department of Building and Safety, one to be designated as Fire Department Copy.
6. Provide approved fire protection. Article 38, Title 19. Standpipes ..... Sprinklers .....

B. EXITS:

1. Provide an approved smoke tower continuous from the ..... floor to ground floor.
2. Provide approved panic hardware on all required exits. Note: Not required on main and obvious means of egress if approved sign is posted stating "These doors to remain unlocked during business hours:" Only one such exit may be so posted.
3. Dead bolts or similar devices are prohibited on exit doors.

C. SEPARATION/WALLS:

1. Provide approved Class "C" fire separation between kitchen and assembly area.
2. Corridor walls ..... and ceiling shall be minimum 1 hr. construction with openings protected by fire doors ..... hollow metal doors or 1¾" solid core wood doors ..... set in metal frames, fixed wire glass windows .....Windows shall have U.L. approved ¼ in. wire glass set in steel frames with maximum light sizes of 1200 sq. in. .....
3. All openings within 10 ft. vertically and 20 ft. horizontally of exits shall be protected by approved fixed Class "E" or "F" assemblies or Class "D" fire doors.

D. INTERIOR FINISHES:

1. Interior wall and ceiling finish materials for (assembly) (classroom) areas shall not exceed an end point flame spread rating of 76 - 225.
2. Interior wall and ceiling finish materials for exit corridors shall not exceed an end point flame spread rating of .....
3. Suspended ceilings shall be constructed of materials having flame spread ratings of 15 or less. Section 57.22.03 L.A.M.C.
4. Show that the installation of ceiling and wall finishes will meet the requirements of Article 42, Title 19, C.A.C.

E. SIGNS:

1. No exit signs are required ..... Need exit signs —.....

F. PLANS:

1. Submit one (1) each: Seating Plan ..... Floor Plan ..... Plot Plan ..... to Fire Department for Approval and File.

G. ROOF:

1. Television antennas to be located 7 ft. above the roof or shall be located in a manner approved by the Fire Department Field Inspector.

H. SPECIAL HAZARDS:

1. Provide area for combustible rubbish storage.
2. Flammable liquid not stored in a special room shall be stored in approved flammable liquid storage cabinets.
3. FILL OUT HAZ MAT'S FORMS

LIST HAZARDOUS MATERIAL	AMT. IN USE	AMT. IN STORAGE	FLASH PT.

HAZARDOUS MATERIAL DEFINITIONS (brief)

AIR REACTIVE MATERIAL — Any material which will ignite spontaneously in contact with air.

COMBUSTIBLE MATERIALS — Liquids with a flash point of 150° F. or above and other materials which ignite and actively support combustion when exposed to an environmental temperature of 1500° F. for a period of not less than 5 minutes.

COMBUSTIBLE CORROSIVE MATERIAL — Solids, liquids or gases which can damage living tissue or cause fire.

EXPLOSIVE MATERIAL — Any compound which is classed as an A, B, or C Explosive.

FLAMMABLE LIQUIDS AND MATERIALS — Gases, liquefied gases, liquids, dusts, fibers, or other materials which are flammable. (57.02 or 91. 1005 of the L.A.M.C.)

OXIDIZING MATERIALS — Any element or compound which yields oxygen or reacts when subjected to water, heat or fire conditions.

TOXIC MATERIALS — Gases, liquids or solids which may create a hazard to life by ingestion, inhalation, etc., under fire conditions.

UNSTABLE MATERIALS — Those materials which react from heat, shock, friction, contamination, etc., and which are capable of violent decomposition or auto reaction, but which are not designed primarily as an explosive.

WATER REACTIVE MATERIAL — React violently or dangerously upon exposure to water or moisture.

OTHER MATERIALS — Indicate any materials of which you are in doubt as to proper classification.

NOTICE OF NONCOMPLIANCE

TO: All Owners of Underground Tanks and Atmospheric Tank Systems

In January 1988, a new City ordinance passed requiring a Fire Permit to use or operate underground tank or atmospheric tank systems in the City of Los Angeles. On May 1, 1988, the City Clerk mailed you a Fire Permit application. As of September 21, 1988, the City Clerk has not received your Fire Permit application and remittance. Therefore, you are delinquent with your 1988 fee and in violation of L.A.M.C. 57.31.03 and 57.04.12.

To avoid enforcement by the Fire Department, complete the enclosed Fire Permit application and return it with a check for the correct fee payable to Elias Martinez, City Clerk, in the self-addressed returned envelope no later than **OCTOBER 18, 1988.**

Mail to: City Clerk, Tax and Permit Division
P.O. Box 30626
Los Angeles, CA 90030-0626

Failure to comply with this notice will result in legal action being taken against you. This legal action can result in the discontinued use of your underground tank or atmospheric tank system. In addition, a Fire Department inspection will be made of your facility and if you are not in compliance with the Requirements For Existing Underground Tanks, L.A.M.C. 57.31.35, you will be cited for this violation.

To operate your underground tank or atmospheric tank system in 1989, you must renew your Fire Permit. During November 1988, you will receive your 1989 Fire Permit renewal notice from the City Clerk.

If you have any questions or need additional information, please contact the Los Angeles City Fire Department, Underground Tank Unit, Monday through Friday, 9:00 a.m. to 3:00 p.m., at (213) 485-7543.

Thank you for your cooperation.

1 TANK ON SYSTEM

C. G. Drummond
Fire Marshal

5-23-88

INFORMATION

WHAT IS AN UNDERGROUND STORAGE TANK? Any atmospheric tank which is partially or completely below the surface of the ground and is used to store or process a hazardous substance including any connected piping or appurtenances.

IS IT NECESSARY TO COMPLETE THE ENCLOSED FIRE PERMIT APPLICATION IF MY BUSINESS HAS A FIRE PERMIT OR OTHER TYPE OF PERMITS OR CERTIFICATES ISSUED BY THE FIRE DEPARTMENT? Yes, the Fire Permit for underground tank or atmospheric tank systems is in addition to any other fire permits or certificates you may possess.

WHAT ARE THE NEW UNDERGROUND TANK LAWS? Los Angeles Municipal Code Sections 57.31.01 through 57.31.54.

WHO IS RESPONSIBLE FOR COMPLIANCE WITH THE LAW? The owners of underground tanks.

HOW OFTEN ARE THE FIRE PERMIT FEES PAID? Your New Fire Permit fee for underground tank and atmospheric tank systems is due no later than **OCTOBER 18, 1988.** This permit fee includes the City administrative fee and a State surcharge. Thereafter, the City Clerk will mail you a Fire Permit renewal notice each year. If you do not renew your Fire Permit, you may not operate your underground tanks. The renewal fee for each of the following four years will only be the City administrative fee. The State surcharge is only collected when you initially apply for the Underground Tank Fire Permit and at the State's option every fifth year thereafter.

FURTHER QUESTIONS? Telephone the Los Angeles City Fire Department, Underground Tank Unit, at (213) 485-7543.

INSTRUCTIONS

1. Complete Section 1 of the Fire Permit application.
2. To complete Section 2 of the application (Calculating Fee):
   a. Enter the number of underground tanks that are located at the business address in the two spaces provided.
   b. Multiply the Fire Permit fee, $67, times the number of underground tanks and subtotal in the space provided.
   c. Multiply the State Surcharge, $56, times the number of underground tanks and subtotal in the space provided.
   d. Remit the sum of the two subtotals to the City Clerk for your Fire Permit to operate underground tanks.
3. After completing Sections 1 and 2, return the application with your check, payable to Elias Martinez, City Clerk, in the enclosed self-addressed envelope.
4. The application and permit fee must be return no later than **OCTOBER 18, 1988.**
5. For questions regarding this application, contact the Los Angeles City Fire Department, Underground Tank Unit at (213) 485-7543.

1725 Victory Boulevard
Glendale, CA 91201
Contact: Shirley Lee

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Citadel Environmental Services were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

Search Results:

P.O.# NA
Project: 1189.1001.0

User Questionnaire

Completed User Questionnaire Not Provided

DATE SENT: _____ DATE DUE: _____

HOW SENT (Circle): Fax / Email FAX / EMAIL: _____

User Questionnaire	
Client	
Contact Name	
Contact Title	
Phone/Fax/Email	
Completed by?	
Response Date	
Form of Response	
Current Use of the Property	
Reason for Performing Phase I	

Please include the name of the Companies who provide your utilities, so we can contact each agency:

Utilities	
Electricity	
Natural Gas	
Sewage	
Sanitary Sewerage	
Solid Waste Removal	
Fuel Oil	
Steam	

Please include the Name and Company of Each of the following individuals:

User	Name	Company
Key Site Manager		
Current Property Owner		
Current Property Owner Representative		
Occupants		
Major Occupants		
Current Operator Name		
Past Property Owner(s)		
Past Property Owner Representative(s)		
Other Past Property Owner(s)		
Past Operator Name(s)		
Past Occupant(s)		
Past Major Occupant(s)		
Broker(s)		
Property Manager		
Building Engineer		
Other		

TITLE & JUDICIAL RECORDS

Per ASTM E 1527-13 Section 6.2, the User is required to provide and/or report to the environmental professional any title and/or judicial records so identified for the subject property.

Please provide any information on title and/or judicial records:

ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS

Per ASTM E 1527-13 the User is required to provide and/or report to the environmental professional any environmental liens or AULs so identified for the subject property. The environmental professional per the ASTM practice is not responsible to undertake a review of information to identify environmental liens or AULs.

Please provide any information on environmental liens or activity and use limitations (AULs):

SPECIALIZED OR ACTUAL KNOWLEDGE OF USER

Per the ASTM standard, it is the User's responsibility to communicate to the environmental professional any information that is material to recognized environmental conditions in connection with the subject property based on such specialized knowledge, actual knowledge, experience, or commonly known and reasonably ascertainable information within the local community.

Please provide any information of the following items:

ASTM Scope Item	Property Contact Aware of them (Y/N)	Comment
USTs		
ASTs		
PCB Electrical Equipment		
Hydraulic Equipment		
Chemicals, Hazardous Materials, and Raw Materials Storage and Usage		
Waste Generation, Storage and Disposal		
Wells, Sumps, Pits, and Floor Drains		
Stormwater Runoff and Surface Water		
Lagoons, Septic Systems, Wastewater Treatment, and Separators		
Stressed Vegetation, Staining and Odors		
Surficial Disturbances		
On-Property Dry Cleaners		

NON-ASTM Scope Item	Property Contact Aware of them (Y/N)	Comment
Asbestos Containing Materials		
Radon		
Lead-Based Paint		
Lead in Drinking Water		
Potable Well		
Potential Wetlands		
Air Emissions		
Mold/Water Intrusion		

Please refer to "Helpful Documents" section below to provide any relevant reports associated with the above items.

VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES

(For Property Owner) Per the ASTM standard, in a transaction involving the purchase of a parcel of commercial real estate, the user shall consider the relationship of the purchase price of the property to the fair market value of the property if the property was not affected by hazardous substances or petroleum products. The User should try to identify an explanation for a significantly lower price which does not reasonably reflect fair market value if the property was not contaminated, and make a written record of such explanation. The ASTM standard does not require that a real estate appraisal be obtained in order to ascertain fair market value of the property.

PROCEEDINGS INVOLVING THE PROPERTY

Per the ASTM standard, prior to the site visit, the User (if different from the property owner), Key site manager (if any is identified), and property owner shall be asked whether they know of (1) any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property; (2) any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products.

- **Do you know of any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, or from the property? Y / N**
  If yes, please explain:

- **Do you know of any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products? Y / N**
  If yes, please explain:

HELPFUL DOCUMENTS

Per the ASTM Standard, Prior to the property visit, the Property owner, key site manager (if any is identified), and User (if different from the property owner) shall be asked if they know whether any of the documents below exist and if so, whether copies can and will be provided within reasonable time and cost constraints:

	User		Key Site Manager		Property Owner

EDR Environmental Lien and AUL Search

The EDR Environmental Lien and AUL Search Report provides results from a search of available current land title records for environmental cleanup liens and other activity and use limitations, such as engineering controls and institutional controls.

A network of professional, trained researchers, following established procedures, uses client supplied address information to:

- search for parcel information and/or legal description;
- search for ownership information;
- research official land title documents recorded at jurisdictional agencies such as recorders' offices, registries of deeds, county clerks' offices, etc.;
- access a copy of the deed;
- search for environmental encumbering instrument(s) associated with the deed;
- provide a copy of any environmental encumbrance(s) based upon a review of key words in the instrument(s) (title, parties involved, and description); and
- provide a copy of the deed or cite documents reviewed.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

EXECUTIVE SUMMARY

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 3 RCRA-SQG sites within approximately 0.25 miles of the target property.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/28/2019 has revealed that there are 2 ENVIROSTOR sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

LUST: Leaking Underground Storage Tank (LUST) Sites included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the LUST list, as provided by EDR, has revealed that there are 15 LUST sites within approximately 0.5 miles of the target property.

CPS-SLIC: Cleanup Program Sites (CPS; also known as Site Cleanups [SC] and formerly known as Spills, Leaks, Investigations, and Cleanups [SLIC] sites) included in GeoTracker. GeoTracker is the Water Boards data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater.

A review of the CPS-SLIC list, as provided by EDR, has revealed that there are 2 CPS-SLIC sites

within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the State Water Resources Control Board's Hazardous Substance Storage Container Database.

A review of the UST list, as provided by EDR, has revealed that there are 4 UST sites within approximately 0.25 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/16/2019 has revealed that there are 24 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.125 miles of the target property.

EXECUTIVE SUMMARY

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

COGGINS H R	12500 VENTURA BLVD	SSE 0 - 1/8 (0.112 mi.)	F31	108

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there are 2 EDR Hist Cleaner sites within approximately 0.125 miles of the target property.

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS Description: Hazardous Waste Generator

Violations:
Site ID: 11523
Site Name: Bed, Bath and Beyond #25

BED BATH & BEYOND #25 (Continued) **S113799307**

Violation Date:	09-07-2018
Citation:	HSC 6.5 25123.3(h) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)
Violation Description:	Failure to determine the status of any hazardous waste if a signed copy of the manifest isnG t received within 35 days of the date the waste was accepted by the initial transporter and/or to submit an Exception Report to DTSC if a signed copy of the manifest isnG t received within 60 days of the date the waste was accepted by the initial transporter.
Violation Notes:	Returned to compliance on 09/10/2018. OBSERVATION: The generator failed to determine the status of a uniform hazardous waste manifested shipment within 35 days from the date the waste was shipped. Final signed copy of manifest #001778562PSC dated 2/23/18 was not available. CORRECTIVE ACTION: Submit documentation to this division demonstrating that the generator has determined the status of the hazardous waste manifest noted above.

FINDS:

Registry ID:	110002733436
Facility URL:	http://ofmpub.epa.gov/enviro/fii_query_detail.disp_program_facility?p_registry_id=110002733436

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Violation Date: 08-09-2018
Citation: 23 CCR 16 2712 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712
Violation Description: Failure to comply with any of the applicable requirements of the permit issued for the operation of the UST system.
Violation Notes: Returned to compliance on 09/06/2018. OBSERVATION: Owner/Operator did not comply with all operating permit requirements. CORRECTIVE ACTION: Comply with all operating permit requirements. Submit verification.
Violation Division: Los Angeles City Fire Department
Violation Program: UST
Violation Source: CERS

Site ID: 160353
Site Name: TESORO (ARCO) 63236
Violation Date: 08-21-2019
Citation: HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description: "Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes: OBSERVATION: Owner/Operator failed to meet one or more of the following spill container requirements: install or maintain spill container which is liquid-tight, has a minimum capacity of five gallons, has a functional drain valve or other method for the removal of liquid from the spill container, and is resistant to galvanic corrosion; did not perform tightness test at installation, every 12 months thereafter, or within 30 days after a repair; did not have tested using manufacturer’s guidelines, industry codes, engineering standards, or method approved by PE, or was not tested by a certified UST service technician; or failed to maintain testing records for 36 months. Both the 87 & 91 Spill buckets do not hold 5 gallons. CORRECTIVE ACTION: Apply for permit to install or repair both the 87 & 91 spill buckets to meet all of the listed requirements, have tightness tested using approved method, by certified UST service technician, and submit documentation to verfiy compliance. Citation:	23 CCR 16 2712(b)(1)(G) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712(b)(1)(G)
Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or

CJS ARCO INC (Continued) **S113120530**

triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.

Violation Notes: OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Overfill Testing was to be performed before 10/13/18, and was tested on 4/9/19. However, technician notes state "Removed ball floats from 87, 91 STP T housings need to come back and remove from fills vapor has offsets." CORRECTIVE ACTION: Maintain overfill prevention system to comply with the deficiencies noted above. Submit verification.

Violation Date: 08-09-2018
Citation: 23 CCR 16 2632(c)(2)(B), 2634(d)(1)(a), 2636(f)(1) - California Code of Regulations, Title 23, Chapter 16, Section(s) 2632(c)(2)(B), 2634(d)(1)(a), 2636(f)(1)
Violation Description: Failure of the leak detection equipment to have an audible and visual alarm as required.
Violation Notes: Returned to compliance on 08/09/2018. OBSERVATION: The 87 fill sump sensor failed to activate an audible and visual alarm when tested to ensure continuous monitoring of the tank system. All monitoring equipment shall be maintained to activate an audible and visual alarm or stop the flow of product at the dispenser when it detects a leak. The sensor was replaced and retested during the inspection. CORRECTIVE ACTION: Corrected during inspection with like for like permit # SRCREYQTF. Pay for like for like permit fee.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: Yes
Treater, storer or disposer of HW: Yes
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Violation Status: No violations found

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Description: Failure to retain for at least three years a legible copy of each manifest or bill of lading which identifies spent lead-acid storage batteries shipped to a person who stores the batteries or who uses, reuses, recycles or reclaims the batteries or their components.
Violation Notes: Returned to compliance on 09/13/2018. OBSERVATION: Uniform Hazardous Waste Manifests for the waste combustible liquid from the dry cleaning equipment was not available at the time of inspection. CORRECTIVE ACTION: Locate a copy of all manifests for the waste combustible liquid aliphatic hydrocarbon over the last year and submit copies to the CUPA. You may send the manifest by fax to (323) 890-4051, but keep copies of the manifests accessible for you to retrieve so that you can provide them to the inspector of the Fire Department for review during inspections.

Citation: 19 CCR 6.95 25508(a)(1) - California Code of Regulations, Title 19, Chapter 6.95, Section(s) 25508(a)(1)
Violation Description: Failure to complete and electronically submit the Business Activities Page and/or Business Owner Operator Identification Page.
Violation Notes: Returned to compliance on 10/26/2018.
Violation Division: Los Angeles City Fire Department
Violation Program: HMRRP
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 08-10-2018
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Kate Khan, Manager
Eval Division: Los Angeles County Fire Department
Eval Program: HW
Eval Source: CERS

Eval General Type: Compliance Evaluation Inspection
Eval Date: 10-18-2018
Violations Found: Yes
Eval Type: Routine done by local agency
Eval Notes: Consent to enter, inspect and take photographs was given by: Kyong Han, Manager The Business Activities, Owner/Operator Identification, Hazardous Materials Inventory, Site Map, Emergency Response/Contingency Plan and Employee Training Plan sections were reviewed in CERS and field verified. Review and correct any violations indicated previously in this report, on or before the COMPLY BY date associated with each violation. NOTE: The LAMC, Sections (L.A.M.C. SECTION 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA **** Annual submission of a Hazardous Materials Business Plan into CERS is required between January 1 and March 1 of every year. Please remember that any change in inventory of greater than 100 percent will require new submission within 30 days of that change. As a reminder, you must all the [Truncated]

Site ID: 146336
CERS ID: 10160107
CERS Description: Chemical Storage Facilities

Violations:
Site ID: 146336
Site Name: Ralphs Grocery #701
Violation Date: 09-08-2018
Citation: HSC 6.5 25123.3(h) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)
Violation Description: Failure to determine the status of any hazardous waste if a signed copy of the manifest isnG t received within 35 days of the date the waste was accepted by the initial transporter and/or to submit an Exception Report to DTSC if a signed copy of the manifest isnG t received within 60 days of the date the waste was accepted by the initial transporter.
Violation Notes: Returned to compliance on 09/10/2018. OBSERVATION: The generator failed to determine the status of uniform hazardous waste manifested shipments within 35 days from the date the wastes were shipped. Final signed copies of manifest #018585459JJK dated 5/30/18, #017602638JJK dated 3/12/18, #017243443JJK dated 12/19/17, #017602542JJK dated 9/19/17 and #016030997JJK dated 3/29/17 were not available. CORRECTIVE ACTION: Submit documentation to this division demonstrating that the generator has determined the status of the hazardous waste manifest noted above.
Violation Division: Los Angeles County Fire Department
Violation Program: HW
Violation Source: CERS

Evaluation:
Eval General Type: Compliance Evaluation Inspection
Eval Date: 04-13-2017
Violations Found: No
Eval Type: Routine done by local agency
Eval Notes: Inspection Report Consent to enter, inspect and take photographs was given by: Documents uploaded to CERS were reviewed and field verified. The following is a list items that need to be corrected: 1. (G Document submittal by facility is accurate and no further action is necessaryG or add compliance issues) 2. 3. NOTE: The LAMC, Sections (L.A.M.C. SECTIONS 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires business that store, uses or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA. To receive a Consolidated Permit you must satisfy the following requirement: **** Annual submission of a hazardous materials business plan to CERS by March 1 of every year. Please remember that any change in inventory of greater than 100 percent will require new submission within 30 days of that change. For

Environmental Interest/Information System:
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for

JOY CLEANERS (Continued) **1000472852**

generators, transporters, and treatment, storage, and disposal facilities.
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 01/30/2020

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 12/16/2019

Federal RCRA generators list

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-SQG: RCRA - Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

Date of Government Version: 12/16/2019

RCRA-VSQG: RCRA - Very Small Quantity Generators (Formerly Conditionally Exempt Small Quantity Generators)

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Very small quantity generators (VSQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

State- and tribal - equivalent CERCLIS

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifes sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

RCRA NonGen / NLR: RCRA - Non Generators / No Longer Regulated

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

Data Release Frequency: Varies

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

WASTEWATER PITS: Oil Wastewater Pits Listing
Water officials discovered that oil producers have been dumping chemical-laden wastewater into hundreds of unlined pits that are operating without proper permits. Inspections completed by the Central Valley Regional Water Quality Control Board revealed the existence of previously unidentified waste sites. The water boards review found that more than one-third of the region's active disposal pits are operating without permission.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 01/30/2020

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERS HAZ WASTE: Local Lists of Hazardous waste / Contaminated Sites

Name:	BED, BATH AND BEYOND #25
Address:	12555 VENTURA BLVD
City,State,Zip:	STUDIO CITY, CA 91604
Site ID:	11523
CERS ID:	10167163
CERS Description:	Hazardous Waste Generator

Violations:

Site ID:	11523
Site Name:	Bed, Bath and Beyond #25
Violation Date:	09-07-2018
Citation:	HSC 6.5 25123.3(h) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)

BED BATH & BEYOND #25, 12555 VENTURA BLVD, STUDIO CITY, CA 916042413 (Continued)

Violation Description:	Failure to determine the status of any hazardous waste if a signed copy of the manifest isnG t received within 35 days of the date the waste was accepted by the initial transporter and/or to submit an Exception Report to DTSC if a signed copy of the manifest isnG t received within 60 days of the date the waste was accepted by the initial transporter.
Violation Notes:	Returned to compliance on 09/10/2018. OBSERVATION: The generator failed to determine the status of a uniform hazardous waste manifested shipment within 35 days from the date the waste was shipped. Final signed copy of manifest #001778562PSC dated 2/23/18 was not available. CORRECTIVE ACTION: Submit documentation to this division demonstrating that the generator has determined the status of the hazardous waste manifest noted above.

HAZNET: Other Ascertainable Records

Name:	SNOWMAN CLEANERS
Address:	12546 VENTURA BLVD
Address 2:	Not Reported
City,State,Zip:	STUDIO CITY, CA 916042412
Contact:	SAEED SARSHAD OWNER
Telephone:	8187628991
Mailing Name:	Not Reported
Mailing Address:	12546 VENTURA BLVD
Year:	2007
Gepaid:	CAL000033503
TSD EPA ID:	CAT000613893
CA Waste Code:	741 - Liquids with halogenated organic compounds >= 1,000 Mg./L
Disposal Method:	H141 - Storage, Bulking, And/Or Transfer Off Site--No Treatment/Reovery (H010-H129) Or (H131-H135)
Tons:	0.03
Year:	2004
Gepaid:	CAL000033503
TSD EPA ID:	NVR000076158
CA Waste Code:	-
Disposal Method:	-
Tons:	Not Reported
Year:	2004
Gepaid:	CAL000033503
TSD EPA ID:	NVR000076158
CA Waste Code:	134 - Aqueous solution with total organic residues less than 10 percent
Disposal Method:	-
Tons:	Not Reported
Year:	2004
Gepaid:	CAL000033503
TSD EPA ID:	NVR000076158
CA Waste Code:	211 - Halogenated solvents (chloroforms, methyl chloride, perchloroethylene, etc)
Disposal Method:	-
Tons:	0.1251
Year:	2002
Gepaid:	CAL000033503
TSD EPA ID:	CAD008302903
CA Waste Code:	211 - Halogenated solvents (chloroforms, methyl chloride, perchloroethylene, etc)
Disposal Method:	-

SNOWMAN CLEANERS, 12546 VENTURA BLVD, STUDIO CITY, CA 916042412 (Continued)

Tons:	Not Reported
Year:	2002
Gepaid:	CAL000033503
TSD EPA ID:	CAD008302903
CA Waste Code:	211 - Halogenated solvents (chloroforms, methyl chloride, perchloroethylene, etc)
Disposal Method:	R01 - Recycler
Tons:	0.06672
Year:	2001
Gepaid:	CAL000033503
TSD EPA ID:	CAD008302903
CA Waste Code:	211 - Halogenated solvents (chloroforms, methyl chloride, perchloroethylene, etc)
Disposal Method:	R01 - Recycler
Tons:	0.0667
Year:	2001
Gepaid:	CAL000033503
TSD EPA ID:	CAD008302903
CA Waste Code:	134 - Aqueous solution with total organic residues less than 10 percent
Disposal Method:	-
Tons:	0
Year:	2001
Gepaid:	CAL000033503
TSD EPA ID:	CAD008302903
CA Waste Code:	211 - Halogenated solvents (chloroforms, methyl chloride, perchloroethylene, etc)
Disposal Method:	-
Tons:	0
Year:	2000
Gepaid:	CAL000033503
TSD EPA ID:	CAD981397417
CA Waste Code:	211 - Halogenated solvents (chloroforms, methyl chloride, perchloroethylene, etc)
Disposal Method:	-
Tons:	0.2524

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Violation Date:	08-09-2018
Citation:	23 CCR 16 2712 - California Code of Regulations, Title 23, Chapter 16, Section(s) 2712
Violation Description:	Failure to comply with any of the applicable requirements of the permit issued for the operation of the UST system.
Violation Notes:	Returned to compliance on 09/06/2018. OBSERVATION: Owner/Operator did not comply with all operating permit requirements. CORRECTIVE ACTION: Comply with all operating permit requirements. Submit verification.
Violation Division:	Los Angeles City Fire Department
Violation Program:	UST
Violation Source:	CERS
Site ID:	160353
Site Name:	TESORO (ARCO) 63236
Violation Date:	08-21-2019
Citation:	HSC 6.7 25284.2 - California Health and Safety Code, Chapter 6.7, Section(s) 25284.2
Violation Description:	"Failure to meet one or more of the following requirements: Install or maintain a liquid-tight spill container. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill container. Be resistant to galvanic corrosion. Perform a tightness test at installation, every 12 months thereafter, or within 30 days after a repair to the spill container. Tested using applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Tested by a certified UST service technician. Maintain records of spill containment testing for 36 months. "
Violation Notes:	OBSERVATION: Owner/Operator failed to meet one or more of the following spill container requirements: install or maintain spill container which is liquid-tight, has a minimum capacity of five gallons, has a functional drain valve or other method for the removal of liquid from the spill container, and is resistant to galvanic corrosion; did not perform tightness test at installation, every 12 months thereafter, or within 30 days after a repair; did not have tested using manufacturer's guidelines, industry codes, engineering standards, or method approved by PE, or was not tested by a certified UST service technician; or failed to maintain testing records for 36 months. Both the 87 & 91 Spill buckets do not hold 5 gallons. CORRECTIVE ACTION: Apply for permit to install or repair both the 87 & 91 spill buckets to meet all of the listed requirements, have tightness tested using approved method, by certified UST service technician, and submit documentation to verfiy compliance. CJS ARCO INC, 12500 VENTURA BLVD, STUDIO CITY, CA 916042412 (Continued)

Violation Description:	Failure to comply with one or more of the following overfill prevention equipment requirements: Alert the transfer operator when the tank is 90 percent full by restricting the flow into the tank or triggering an audible and visual alarm; or Restrict delivery of flow to the tank at least 30 minutes before the tank overfills, provided the restriction occurs when the tank is filled to no more than 95 percent of capacity; and activate an audible alarm at least five minutes before the tank overfills; or Provide positive shut-off of flow to the tank when the tank is filled to no more than 95 percent of capacity; or Provide positive shut-off of flow to the tank so that none of the fittings located on the top of the tank are exposed to product due to overfilling. Install/retrofit overfill prevention equipment that does not use flow restrictors on vent piping to meet overfill prevention equipment requirements when the overfill prevention equipment is installed, repaired, or replaced on and after October 1,- 2018. For USTs installed before October 1, 2018, perform an inspection by October 13, 2018 and every 36 months thereafter. For USTs installed on and after October- 1,- 2018, perform an inspection at installation and every 36 months thereafter. Inspected within 30 days after a repair to the overfill prevention equipment. Inspected using an applicable manufacturer guidelines, industry codes, engineering standards, or a method approved by a professional engineer. Inspected by a certified UST service technician. Maintain records of overfill prevention equipment inspection for 36 months.
Violation Notes:	OBSERVATION: Owner/Operator failed to meet one or more of the requirements applicable to overfill prevention equipment. Overfill Testing was to be performed before 10/13/18, and was tested on 4/9/19. However, technician notes state "Removed ball floats from 87, 91 STP T housings need to come back and remove from fills vapor has offsets." CORRECTIVE ACTION: Maintain overfill prevention system to comply with the deficiencies noted above. Submit verification.

LOCATION CODE - *OPTIONAL*	CENSUS TRACT # - *OPTIONAL*	SUPVISOR - DISTRICT CODE - *OPTIONAL*

THIS FORM MUST BE ACCOMPANIED BY AT LEAST (1) OR MORE PERMIT APPLICATION - FORM B, UNLESS THIS IS A CHANGE OF SITE INFORMATION ONLY.

OWNER MUST FILE THIS FORM WITH THE LOCAL AGENCY IMPLEMENTING THE UNDERGROUND STORAGE TANK REGULATIONS

INSTRUCTIONS FOR COMPLETING FORM "A"

GENERAL INSTRUCTIONS:

SECTION 2711 OF TITLE 23, CHAPTER 16, CALIFORNIA CODE OF REGULATIONS AND SECTIONS 25286, 25287, AND 25289 OF CHAPTER 6.7, DIVISION 20, CALIFORNIA HEALTH AND SAFETY CODE REQUIRE OWNERS TO APPLY FOR AN UST OPERATING PERMIT

1. One FORM "A" shall be completed for all NEW PERMIT CHANGES or any FACILITY/SITE INFORMATION CHANGES.
2. SUBMIT ONLY ONE (1) FORM "A" for a Facility/Site, regardless of the number of tanks located at the site.
3. This form should be completed by either the PERMIT APPLICANT or the LOCAL AGENCY UNDERGROUND TANK INSPECTOR.
4. Please type or print clearly all requested information.
5. Use a hard point writing instrument, you are making 3 copies.
6. Tank owner must submit a facility plot plan to the local agency as part of the application showing the location of the USTs with respect to buildings and landmarks [Section 2711 (a)(8), CCR].
7. Tank owner must submit documentation showing compliance with state financial responsibility requirements to the local agency as part of the application for petroleum USTs [Section 2711 (a)(11), CCR].

TOP OF FORM: "MARK ONLY ONE ITEM"

Mark an (X) in the box next to the item that best describes the reason the form is being completed.

I. FACILITY/SITE INFORMATION & ADDRESS (MUST BE COMPLETED)

1. Record name and address (physical location) of the underground tank(s).
   NOTE: Address MUST have a valid physical location including city, state, and zip code.
   P.O. BOX NUMBERS ARE NOT ACCEPTABLE.
   Include nearest cross street and name of the operator.
2. Phone number must have an area code. If the night number is the same, write "SAME" in proper location.
3. Check the appropriate box for TYPE OF BUSINESS OWNERSHIP (ex. CORPORATION, INDIVIDUAL, etc.)
4. Check the appropriate box for TYPE OF BUSINESS.
5. If Facility/Site is located within an Indian reservation or other Indian trust lands, check the box marked "YES".
6. Indicate the NUMBER of TANKS at this SITE.
7. Record the E.P.A. ID # or write "NONE" in the space provided.

II. PROPERTY OWNER INFORMATION & ADDRESS (MUST BE COMPLETED)

Complete all items in this section, unless all items are the same as SECTION I; If the same, write "SAME AS SITE" across this section. Be sure to check PROPERTY OWNERSHIP TYPE box.

III. TANK OWNER INFORMATION & ADDRESS (MUST BE COMPLETED)

Complete all items in this section, unless all items are the same as SECTION 1, If the same, write "SAME AS SITE" across this section. Be sure to check TANK OWNERS TYPE box.

IV. BOARD OF EQUALIZATION UST STORAGE FEE ACCOUNT NUMBER (MUST BE COMPLETED. SEE ARTICLE 5, CHAPTER 6.75, DIVISION 20, CALIFORNIA HEALTH AND SAFETY CODE.)

Enter your Board of Equalization (BOE) UST storage fee account number which is required before your permit application can be processed. Registration with the BOE will ensure that you will receive a quarterly storage fee return in reporting the $0.006 (6mills) per gallon fee due on the number of gallons placed in your USTs. The BOE will code persons exempt from paying the storage fee so returns will not be sent. If you do not have an account number with the BOE or if you have any questions regarding the fee or exemptions, please call the BOE at 916 322-9669 or write to the BOE at the following address: Board of Equalization, Fuel Taxes Division, P.O. Box 942879, Sacramento, CA 94279-0001.

V. PETROLEUM UST FINANCIAL RESPONSIBILITY (MUST BE COMPLETED FOR PETROLEUM USTs ONLY, SEE SECTIONS 2711 (d)(8) OF TITLE 23, CHAPTER 16, CALIFORNIA CODE OF REGULATIONS.)

Identify the method(s) used by the owner and/or operator, in meeting the Federal and State financial responsibility requirements. USTs owned by any Federal or State agency as well as non-petroleum USTs are exempt from this requirement.

VI. LEGAL NOTIFICATION AND BILLING ADDRESS

Check ONE BOX for the address that will be used for BOTH LEGAL AND BILLING NOTIFICATIONS.
TANK OWNER OR AUTHORIZED REPRESENTATIVE MUST SIGN AND DATE THE FORM AS INDICATED. [SEE SECTIONS 2711 (a)(13) OF TITLE 23 CHAPTER 16, CALIFORNIA CODE OF REGULATIONS.]

INSTRUCTION FOR THE LOCAL AGENCIES

The county an jurisdiction numbers are predetermined and can be obtained by calling the State Board (916) 227-4303. The facility number may be assigned by the local agency; however, this number must be numerical and cannot contain any alphabetical characters. If the local agency prefers the State Board to assign the facility number, please leave it blank.

IT IS THE RESPONSIBILITY OF THE LOCAL AGENCY THAT INSPECTS THE FACILITY TO VERIFY THE ACCURACY OF THE INFORMATION. THIS APPLICATION CANNOT BE PROCESSED IF THE BOE ACCOUNT NUMBER IS NOT FILLED IN. THE LOCAL AGENCY IS RESPONSIBLE FOR THE COMPLETION OF THE "LOCAL AGENCY USE ONLY" INFORMATION BOX AND FOR FORWARDING ONE FORM "A" AND ASSOCIATED FORM "B"(s) TO THE FOLLOWING ADDRESS. THE LOCAL AGENCY SHOULD RETAIN THE ORIGINALS AND FORWARD THE YELLOW COPIES TO THE FOLLOWING ADDRESS. THE PINK COPY SHOULD BE RETAINED BY THE TANK OWNER.

These plans have been checked. Corrections of the following circled items are necessary for compliance with Title 19 and the Los Angeles Fire Code. Make all corrections circled below on each set of plans.

A. FIRE PROTECTION EQUIPMENT:

1. Provide a portable fire extinguisher with a rating of not less than 2-A, within seventy-five (75) feet travel distance to the entrance of each apartment and accessory area.
2. Provide a portable fire extinguisher with a rating of not less than 2-A, within seventy-five (75) feet travel distance of all portions of the building on each floor.
3. Provide a portable fire extinguisher with a rating of not less than 4 BC for kitchen(s)..... electrical equipment room(s)....., other GOLF CART GARAGE.
4. Provide fire extinguishers as required by the Fire Department Field Inspector.
5. Provide an approved fire warning system. Submit complete fire warning system plans in triplicate to the Electrical Division, Department of Building and Safety, one to be designated as Fire Department Copy.
6. Provide approved fire protection. Article 38, Title 19. Standpipes ..... Sprinklers .....

B. EXITS:

1. Provide an approved smoke tower continuous from the ..... floor to ground floor.
2. Provide approved panic hardware on all required exits. Note: Not required on main and obvious means of egress if approved sign is posted stating "These doors to remain unlocked during business hours." Only one such exit may be so posted.
3. Dead bolts or similar devices are prohibited on exit doors.

C. SEPARATION/WALLS:

1. Provide approved Class "C" fire separation between kitchen and assembly area.
2. Corridor walls ..... and ceiling shall be minimum 1 hr. construction with openings protected by fire doors ..... hollow metal doors or 1¾" solid core wood doors ..... set in metal frames, fixed wire glass windows ..... Windows shall have U.L. approved ¼ in. wire glass set in steel frames with maximum light sizes of 1200 sq. in. .....
3. All openings within 10 ft. vertically and 20 ft. horizontally of exits shall be protected by approved fixed Class "E" or "F" assemblies or Class "D" fire doors.

D. INTERIOR FINISHES:

1. Interior wall and ceiling finish materials for (assembly) (classroom) areas shall not exceed an end point flame spread rating of 76 - 225.
2. Interior wall and ceiling finish materials for exit corridors shall not exceed an end point flame spread rating of .....
3. Suspended ceilings shall be constructed of materials having flame spread ratings of 15 or less. Section 57.22.03 L.A.M.C.
4. Show that the installation of ceiling and wall finishes will meet the requirements of Article 42, Title 19, C.A.C.

E. SIGNS:

1. No exit signs are required ..... Need exit signs ✓.....

F. PLANS:

1. Submit one (1) each: Seating Plan ..... Floor Plan ..... Plot Plan ..... to Fire Department for Approval and File.

G. ROOF:

1. Television antennas to be located 7 ft. above the roof or shall be located in a manner approved by the Fire Department Field Inspector.

H. SPECIAL HAZARDS:

1. Provide area for combustible rubbish storage.
2. Flammable liquid not stored in a special room shall be stored in approved flammable liquid storage cabinets.
3. FILL OUT HAZ MAT'S FORMS

LIST HAZARDOUS MATERIAL	AMT. IN USE	AMT. IN STORAGE	FLASH PT.

HAZARDOUS MATERIAL DEFINITIONS (brief)

AIR REACTIVE MATERIAL — Any material which will ignite spontaneously in contact with air.

COMBUSTIBLE MATERIALS — Liquids with a flash point of 150° F. or above and other materials which ignite and actively support combustion when exposed to an environmental temperature of 1500° F. for a period of not less than 5 minutes.

COMBUSTIBLE CORROSIVE MATERIAL — Solids, liquids or gases which can damage living tissue or cause fire.

EXPLOSIVE MATERIAL — Any compound which is classed as an A, B, or C Explosive.

FLAMMABLE LIQUIDS AND MATERIALS — Gases, liquefied gases, liquids, dusts, fibers, or other materials which are flammable. (57.02 or 91. 1005 of the L.A.M.C.)

OXIDIZING MATERIALS — Any element or compound which yields oxygen or reacts when subjected to water, heat or fire conditions.

TOXIC MATERIALS — Gases, liquids or solids which may create a hazard to life by ingestion, inhalation, etc., under fire conditions.

UNSTABLE MATERIALS — Those materials which react from heat, shock, friction, contamination, etc., and which are capable of violent decomposition or auto reaction, but which are not designed primarily as an explosive.

WATER REACTIVE MATERIAL — React violently or dangerously upon exposure to water or moisture.

OTHER MATERIALS — Indicate any materials of which you are in doubt as to proper classification.

NOTICE OF NONCOMPLIANCE

TO: All Owners of Underground Tanks and Atmospheric Tank Systems

In January 1988, a new City ordinance passed requiring a Fire Permit to use or operate underground tank or atmospheric tank systems in the City of Los Angeles. On May 1, 1988, the City Clerk mailed you a Fire Permit application. As of September 21, 1988, the City Clerk has not received your Fire Permit application and remittance. Therefore, you are delinquent with your 1988 fee and in violation of L.A.M.C. 57.31.03 and 57.04.12.

To avoid enforcement by the Fire Department, complete the enclosed Fire Permit application and return it with a check for the correct fee payable to Elias Martinez, City Clerk, in the self-addressed returned envelope no later than **OCTOBER 18, 1988.**

Mail to: City Clerk, Tax and Permit Division
P.O. Box 30626
Los Angeles, CA 90030-0626

Failure to comply with this notice will result in legal action being taken against you. This legal action can result in the discontinued use of your underground tank or atmospheric tank system. In addition, a Fire Department inspection will be made of your facility and if you are not in compliance with the Requirements For Existing Underground Tanks, L.A.M.C. 57.31.35, you will be cited for this violation.

To operate your underground tank or atmospheric tank system in 1989, you must renew your Fire Permit. During November 1988, you will receive your 1989 Fire Permit renewal notice from the City Clerk.

If you have any questions or need additional information, please contact the Los Angeles City Fire Department, Underground Tank Unit, Monday through Friday, 9:00 a.m. to 3:00 p.m., at (213) 485-7543.

Thank you for your cooperation.

1925

INFORMATION

WHAT IS AN UNDERGROUND STORAGE TANK? Any atmospheric tank which is partially or completely below the surface of the ground and is used to store or process a hazardous substance including any connected piping or appurtenances.

IS IT NECESSARY TO COMPLETE THE ENCLOSED FIRE PERMIT APPLICATION IF MY BUSINESS HAS A FIRE PERMIT OR OTHER TYPE OF PERMITS OR CERTIFICATES ISSUED BY THE FIRE DEPARTMENT? Yes, the Fire Permit for underground tank or atmospheric tank systems is in addition to any other fire permits or certificates you may possess.

WHAT ARE THE NEW UNDERGROUND TANK LAWS? Los Angeles Municipal Code Sections 57.31.01 through 57.31.54.

WHO IS RESPONSIBLE FOR COMPLIANCE WITH THE LAW? The owners of underground tanks.

HOW OFTEN ARE THE FIRE PERMIT FEES PAID? Your New Fire Permit fee for underground tank and atmospheric tank systems is due no later than **OCTOBER 18, 1988.** This permit fee includes the City administrative fee and a State surcharge. Thereafter, the City Clerk will mail you a Fire Permit renewal notice each year. If you do not renew your Fire Permit, you may not operate your underground tanks. The renewal fee for each of the following four years will only be the City administrative fee. The State surcharge is only collected when you initially apply for the Underground Tank Fire Permit and at the State's option every fifth year thereafter.

FURTHER QUESTIONS? Telephone the Los Angeles City Fire Department, Underground Tank Unit, at (213) 485-7543.

INSTRUCTIONS

1. Complete Section 1 of the Fire Permit application.

2. To complete Section 2 of the application (Calculating Fee):

   a. Enter the number of underground tanks that are located at the business address in the two spaces provided.

   b. Multiply the Fire Permit fee, $67, times the number of underground tanks and subtotal in the space provided.

   c. Multiply the State Surcharge, $56, times the number of underground tanks and subtotal in the space provided.

   d. Remit the sum of the two subtotals to the City Clerk for your Fire Permit to operate underground tanks.

3. After completing Sections 1 and 2, return the application with your check, payable to Elias Martinez, City Clerk, in the enclosed self-addressed envelope.

4. The application and permit fee must be return no later than **OCTOBER 18, 1988.**

5. For questions regarding this application, contact the Los Angeles City Fire Department, Underground Tank Unit at (213) 485-7543.

Agricultural Handlers

18 Agricultural handler exemption requirements are met when not submitting an emergency response plan — CLASS II

☐ NVO ■ OUT ☐ NA ☐ UD ☐ COS ☐ RPT

COMPLY BY: ~~12/13/2015~~

Violation Description:

Failure to meet one or more of the
following ro comply with the agricultural handler exemption of electronically submitting an emergency response plan and procedures:
(1) The agricultural handler annually submits the inventory of
information required by Section 25505 to the statewide information
management system.
(2) Each building in which hazardous materials subject to this
article are stored is posted with signs, in accordance with
regulations that the office shall adopt, that provide notice of the
storage of any of the following:
(A) Pesticides.
(B) Petroleum fuels and oil.
(C) Types of fertilizers.
(3) The agricultural handler provides the training programs
specified in paragraph (4) of subdivision (a) of Section 25505.

Remote Unstaffed Facility

20 Remote unstaffed facility exemption requirements are met when not submitting a business plan

☐ NVO ■ OUT ☐ NA ☐ UD ☐ COS ☐ RPT

CLASS II

COMPLY BY: ~~12/13/2015~~

Violation Description:

Failure to meet one or more of the
following to comply with the remote unstffed facility exemption of electronically submitting a business plan:
(1) The types and quantities of materials onsite are limited to
one or more of the following:
(A) One thousand standard cubic feet of compressed inert gases
(asphyxiation and pressure hazards only).
(B) Five hundred gallons of combustible liquid used as a fuel
source.
(C) Two hundred gallons of corrosive liquids used as electrolytes
in closed containers.
(D) Five hundred gallons of lubricating and hydraulic fluids.
(E) One thousand two hundred gallons of flammable gas used as a
fuel source.
(F) Any quantity of mineral oil contained within electrical
equipment, such as transformers, bushings, electrical switches, and
voltage regulators, if the spill prevention control and
countermeasure plan has been prepared for quantities that meet or
exceed 1,320 gallons.
(2) The facility is secured and not accessible to the public.
(3) Warning signs are posted and maintained for hazardous
materials pursuant to the California Fire Code.
(4) A one-time notification and inventory are provided to the
unified program agency along with a processing fee in lieu of the
existing fee. The fee shall not exceed the actual cost of processing
the notification and inventory, including a verification inspection,
if necessary.
(5) If the information contained in the initial notification or
inventory changes and the time period of the change is longer than 30
days, the notification or inventory shall be resubmitted within 30
days to the unified program agency to reflect the change, along with
a processing fee, in lieu of the existing fee, that does not exceed
the actual cost of processing the amended notification or inventory,
including a verification inspection, if necessary.
HSC 6.95 25505, 25506, 25507, 25508(a)(1)

Overall Inspection Comments

This report shall serve as a “NOTICE TO COMPLY” for Minor Violations, and a “NOTICE OF VIOLATION” for Major violations. Formal enforcement and/or penalty assessment may be initiated for any violations noted, and for those not corrected in a timely manner. You are, hereby, ordered by the Fire Chief to correct the above noted violations **WITHIN 30 DAYS, OR FORTHWITH IF INDICATED IN THE CORRECTION SUMMARIES PROVIDED.**

Overall Inspection Comments

Consent to enter, inspect and take photographs was given by: Launne Davis

The Business Activities, Owner/Operator Identification, Hazardous Materials Inventory, Site Map, Emergency Response/Contingency Plan and Employee Training Plan sections were reviewed in CERS and field verified. Review and correct any violations indicated previously in this report, on or before the COMPLY BY date associated with each violation.

NOTE:
The LAMC, Sections (L.A.M.C. SECTION 57.105.1.4; 57.120.3; 57.121.2 and 57.121.2.1.) requires businesses that store, use or handle hazardous materials in the City of Los Angeles to obtain a Consolidated Permit from the Los Angeles Fire Department CUPA
**** Annual submission of a Hazardous Materials Business Plan into CERS is required between January 1 and March 1 of every year.
Please remember that any change in inventory of greater than 100 percent will require new submission within 30 days of that change.
As a reminder, you must complete all the required sections in CERS. This includes the owner/operator and business activities section, inventory and site map section, and the contingency plan and employee training section. The CERS site has a very detailed help

technical memorandum

date October 6, 2021

to Kimberly Henry, City Planner, Los Angeles City Planning

Cc

from Alan Sako, Director or Air Quality, Climate and Acoustics Analyst, ESA

subject Summary of Artificial Turf Studies on Human Health

Proposed Harvard-Westlake River Park Project Artificial Turf

Harvard-Westlake School (Applicant or School) is proposing to repurpose a site currently occupied by a private nine-hole, 27-par golf course and tennis facility, for use as an athletic and recreational facility for its students, employees and the general public (Project). The area proposed for the Project consists of a 16.1-acre (701,428 square foot) parcel, owned by the School (the Property) and located at 4141 Whitsett Avenue, and a 1.1-acre (47,916 square foot) parcel the School leases from Los Angeles County (Leased Property) (portion of Assessor Parcel Number [APN] 2375-018-903), which collectively comprise the 17.2-acre (749,344 square foot) project site (Project Site).

Under existing conditions, in order to maintain an appropriate, manicured playing field for golf, the Project Site has limited understory landscaping and ornamental vegetation, non-diverse and non-native trees (whose primary function is to delineate one golf hole from another) and resource-intensive turf grass. The Project would replace the existing uses with new athletic and recreational facilities, including outdoor athletic fields utilizing artificial grass as a sustainable alternative to turf grass, thereby reducing irrigation water demand and avoiding the use of pesticides associated with the current golf course. According to the United States Environmental Protection Agency (USEPA), "health effects of pesticides depend on the type of pesticide. Some, such as the organophosphates and carbamates, affect the nervous system. Others may irritate the skin or eyes. Some pesticides may be carcinogens. Others may affect the hormone or endocrine system in the body."[1] However, the USEPA also states that "people are likely to be exposed to only very small amounts of a pesticides – too small to pose a risk" and that "[b]efore approving a pesticide, EPA sets limits on how the pesticide may be used, how often it may be used, what protective clothing or equipment must be used, and so on. These limits are designed to protect human health and the

1 USEPA, Human Health Issues Related to Pesticides, https://www.epa.gov/pesticide-science-and-assessing-pesticide-risks/human-health-issues-related-pesticides, last updated on March 7, 2017. Accessed January 14, 2021.

environment."[2] According to the USEPA, pesticides also "have the potential to contaminate drinking water supplies… and can make their way into ground water or surface water systems that feed drinking water supplies."[3] The USEPA states that "[w]hether these contaminants pose a health risk depends on how toxic the pesticides are, how much is in the water, and how much exposure occurs on a daily basis."[4] Thus, existing adverse health effects to users of the existing site facilities from pesticides currently used at the Project Site may be small but would be dependent on a number of factors including the type of pesticides used, frequency, method and quantity of application, and user exposure.

The following provides a discussion of the composition of artificial turf, which includes an overview of the components of artificial turf and the compounds of potential concern regarding human health. An overview of the general concepts in evaluating human health risk is provided, followed by a discussion of several research studies that assessed the potential risks of exposure to compounds of potential concern from artificial turf material. The information disclosed herein provides available facts and evidence from which the Environmental Impact Report (EIR) for the Project may rely on to evaluate the potential for the Project's artificial turf to create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials.

Composition of Artificial Turf

Artificial turf fields are designed to simulate the experience of practicing and playing on grass fields, and have been installed in thousands of locations in the United States and around the world for uses ranging from casual recreation to professional sports. The artificial turf to be installed with the Project would be supplied by FieldTurf or a similar company that produces turf of similar composition and quality and would consist of four components: fiber, infill, backing, and underlayment. The fiber would consist of polyethylene and would be grass-like in appearance. The polyethylene fibers are shaped into small, green artificial grass blades attached to a backing to imitate a playing field. The infill, which would be used to provide stability, would be comprised of approximately 30 percent by weight of tire-derived styrene butadiene rubber (SBR) and approximately 70 percent by weight of sand. The fiber and infill would be supported by a backing made up of a combination of permeable woven and unwoven polypropylene fabrics that provide strength and vertical drainage. Underlayment would consist of a drainage tile or an aggregate rock base.

The artificial grass blades are formed through a molding and extrusion process, which uses per- and polyfluoroalkyl substances (PFAS). PFAS are not used in the artificial grass blades or base material themselves. Rather, PFAS are used during the extrusion process to avoid clogging of the extruding machines. PFAS refers to a group of manmade compounds containing carbon-fluorine bonds. Within the PFAS group, the State Office of Environmental Health Hazard Assessment (OEHHA) has identified perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS) as compounds known to have a risk of causing cancer or reproductive toxicity.[5] According to the State Water Resources Control Board (SWRCB), PFOS and PFOA have been extensively produced and studied in the United States and have been used in consumer products such as carpets,

4 USEPA, Drinking Water and Pesticides, https://www.epa.gov/safepestcontrol/drinking-water-and-pesticides, last updated on June 19, 2017. Accessed January 14, 2021.

5 OEHHA, Safe Drinking Water and Toxic Enforcement Act of 1986, Chemicals Known to the State to Cause Cancer or Reproductive Toxicity, January 3, 2020.

clothing, fabrics for furniture, paper packaging for food, and other materials (e.g., cookware) designed to be waterproof, stain-resistant or non-stick. In addition, they have been used in fire-retarding foam and various industrial processes.[6] Exposure to PFOS and PFOA can occur through ingestion of food and water and contact with food packaging, consumer products, and house dust.[7]

The infill SBR, also referred to as "recycled tire crumb rubber" (or "crumb rubber"), is commonly manufactured from recycled tires. The crumb rubber (mixed with sand) is added for ballast, support for the artificial grass blades, and as cushioning for field users. The SBR infill material used on these fields is produced from automobile and truck tires, which are cleaned, separated from other non-rubber components of the tires, and reprocessed to create "crumb"-sized material, with approximate diameters ranging from 1 to 6 millimeters (mm).[8] According to a USEPA study, tires are manufactured with a range of materials, including rubber and elastomers; reinforcement filler material; curatives including vulcanizing agents, activators and accelerators; antioxidants and antiozonants; inhibitors and retarders; extender oils and softeners; phenolic resins, plasticizers; metal wire; polyester or nylon fabrics; and bonding agents.[9] Compounds of potential concern range from polycyclic aromatic hydrocarbons (PAHs) in carbon black to zinc oxide, which is used as a vulcanizing agent and may contain trace amounts of lead and cadmium. The predominant metals include zinc, resulting from zinc oxide used as an activator in the tire vulcanization process; iron and manganese from the steel belts and beads used in the tires; barium, which is used to catalyze the synthesis of polybutadiene rubber; lead, which was formerly used as an activator of the vulcanization process; and chromium, which is used in steel production. Modern day production of SBR material from tires typically includes a step to remove 99 percent of the steel belting and bead material, which results in lower levels of lead, iron, manganese, and chromium in the SBR material relative to earlier products.[10]

If there are potential hazards from exposure to crumb rubber, as analyzed below, such hazards might occur from inhalation, ingestion, or contact with crumb rubber particulates. Particulate matter is a class of air pollutants that consists of solid (including metals) and liquid airborne particles in an extremely small size range. Ambient air quality standards have been adopted at the federal (National Ambient Air Quality Standards [NAAQS]) and State (California Ambient Air Quality Standards [CAAQS]) level for particulate matter measured in two size ranges: respirable particulate matter (PM10), for particulate matter less than 10 microns in diameter, and fine particulate matter (PM2.5), for particulate matter less than 2.5 microns in diameter. Fine particulates small enough to be inhaled into the deepest parts of the human lung can potentially cause adverse health effects. High levels of particulates have also been known to exacerbate chronic respiratory ailments, such as bronchitis and asthma, and have been associated with increased emergency room visits and hospital admissions.

As noted above, carbon black is a component of the SBR material, composed of nanoparticles that are much smaller than PM10 and PM2.5 (nanoparticles vary in size from 1 to 100 nanometers, with a billion nanometers forming a meter). Carbon black is used primarily as a reinforcing agent for rubber, utilized largely in the

7 SWRCB, Perfluorooctanoic acid (PFOA) and Perfluorooctanesulfonic acid (PFOS), October 2020, https://www.waterboards.ca.gov/drinking_water/certlic/drinkingwater/PFOA_PFOS.html. Accessed November 16, 2020.

8 Lim, Ly, & Walker, Randi, An assessment of chemical leaching, releases to air and temperature at crumb-rubber infilled synthetic turf fields. New York State Department of Environmental Conservation (NYDEC), 2009.

9 USEPA, Synthetic Turf Field Recycled Tire Crumb Rubber Research Under the Federal Research Action Plan, Final Report Part 1– Tire Crumb Rubber Characterization Volume 1, EPA/600/R-19/051.1, July 2019.

10 CalRecycle/OEHHA, Evaluation of Health Effects of Recycled Waste Tires in Playground and Track Products, January 2007.

manufacturing of automotive tires (it is also used as a colorant in inks, paints, plastics, and paper).[11] OEHHA has identified carbon black as a compound known to have a risk of causing cancer or reproductive toxicity.[12] OEHHA notes that exposure to carbon black does not occur when it remains bound within a product matrix, such as within rubber, ink, or paint.[13]

Crumb rubber may also emit trace to low levels of volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) (including PAHs and phthalates) into the air, depending on outdoor air temperatures.[14] PAHs and phthalates refers groups of compounds, some of which have been identified by OEHHA as compounds known to have a risk of causing cancer or reproductive toxicity, such as chrysene, naphthalene, and di(2-ethylhexyl)phthalate (DEHP).[15]

The sand portion of the infill would contain crystalline silica. Crystalline silica is a common mineral found in many naturally occurring materials such as sand, concrete, stone and mortar. Crystalline silica is also used to make products such as glass, pottery, ceramics, bricks, concrete and artificial stone. OEHHA has identified crystalline silica as a compound known to have a risk of causing cancer, chronic obstructive pulmonary disease, kidney disease, and silicosis, which is an incurable lung disease.[16,17] According to the United States Department of Labor, "being near sand or other silica-containing materials is not hazardous. The hazard exists when specific activities create respirable dust that is released into the air"[18] that then could be inhaled. The potential hazards related to crystalline silica are also discussed below.

According to the USEPA, concerns have also been raised about the potential for exposure to microbial pathogens at artificial turf fields. A potential hazard could result from exposure to microbiological pathogens, such as methicillin-resistant *Staphylococcus aureus* (MRSA),[19] which if valid could lead to difficulty in treating infections.

In 2008, the California Attorney General's office and the Center for Environmental Health initiated legal action against two synthetic turf companies under California Proposition 65. The action called for turf manufacturers to reformulate their products to eliminate the lead risk to children. In 2010, the Attorney General and the turf companies reached a final settlement on the lawsuits, and the settlements limit the lead content of any synthetic turf product to be installed in California to 50 milligrams per kilogram (mg/kg) or less, equivalent to 50 parts per million (ppm) or less.[20] The limit is below the California Department of Public Health lead abatement

certification program standards that defines “lead-contaminated soil” as soil in children's play areas that contains lead equal to or in excess of 400 ppm[21] and below the Department of Toxic Substances Control (DTSC) screening level for residential soil of 80 ppm.[22] The settlement follows settlements with another synthetic turf manufacturer from the previous year and are the nation’s first enforceable standards applicable to lead in synthetic turf.[23]

Concepts of Human Health Risk Evaluation

A human health risk evaluation is used to assess whether exposure to chemicals would pose a health risk to humans. The evaluation includes several components, including data evaluation to characterize the chemicals present and their concentrations; an exposure assessment to evaluate what receptors could be exposed to the chemicals and through which pathways (i.e., inhalation, ingestion, dermal contact); and a risk characterization. The risk characterization includes the assessment of non-carcinogenic (non-cancer) and carcinogenic (cancer) risks to potential on-site receptors on the artificial turf fields.

Potential exposure pathways for the chemicals present on or in the artificial turf and crumb rubber include breathing (i.e., inhalation exposure), skin contact with the material (i.e., dermal exposure), and/or ingestion of the material (i.e., ingestion exposure).

Carcinogenic compounds are not considered to have dose levels below which there are no risks. Any exposure, therefore, will have some associated risk. Incremental health risks associated with exposure to carcinogenic compounds is defined in terms of the probability of developing cancer as a result of exposure to a chemical at a given concentration. To address potential additive effects, the estimated cancer risks for each chemical and exposure route are summed to estimate the total excess cancer risk for the exposed individual.

The Hazard Quotient is used to evaluate potential non-cancer health risks for each chemical. To address potential additive non-cancer effects, the individual Hazard Quotient for each chemical and exposure route is summed to calculate a Hazard Index. The Hazard Index is calculated by dividing the maximum modeled concentration of a compound at the maximum impacted sensitive receptor by the Reference Exposure Level (REL). The REL is the concentration at or below which no adverse non-cancer health effects are known or expected to occur for that compound. Therefore, a Hazard Index of less than 1.0 means that the maximum impacted sensitive receptor would be exposed to concentrations at a level in which adverse non-cancer health effects would not be known or expected to occur.

Health-based screening levels established by the regulatory agencies can also be used to provide a conservative estimate of exposure risks. These levels are established by governmental agencies using conservative exposure assumptions and cancer risk and non-cancer Hazard Index information discussed above.

Artificial Turf Studies on Human Health

The following discussion provides a summary of scientific studies including from government agencies and studies that utilize government agency analysis methodologies on artificial turf regarding potential effects on human health.

2007 Integrated Waste Management Board Study

In 2007, the California Integrated Waste Management Board (now known as the California Department of Resources Recycling and Recovery or CalRecycle) published a report prepared under contract by the state's Office of Environmental Health Hazard Assessment (OEHHA) assessing potential risks to children using outdoor playground and track surfaces constructed from recycled waste tires.[24] The report, titled *Evaluation of Health Effects of Recycled Waste Tires in Playground and Track Products*, evaluated health risk associated with children's potential exposure to chemicals in the play surfaces via (1) ingestion of the loose rubber tire shreds using existing literature and through a gastric digestion simulation experiment[25] conducted as part of the study, (2) ingestion as a result of hand-to-surface contact followed by hand to mouth exposure, and (3) skin sensitization as a result of dermal contact. This study did not consider the inhalation route in estimating exposure because the playgrounds that were the subjects of this study were outdoors and it was considered that any SVOCs and VOCs from the rubber surfaces or fine particles becoming resuspended would enter the atmosphere and quickly disperse, precluding the inhalation of significant amounts. The following summarizes the risk associated with each exposure pathway:

- **Ingestion of loose tire shreds based on review of existing literature.** Based on review of 46 studies of chemicals released from tire shreds in laboratory settings and field studies, 49 chemicals were identified. The study used the highest concentration of each chemical identified to evaluate non-cancer and cancer health risks to a typical 3-year-old child resulting from the one-time ingestion of 10 grams of tire shreds. This is considered a conservative analysis since it uses maximum chemical concentrations across all 46 studies, even though concentrations vary significantly across the studies for any given chemical. For non-cancer risks, the study found that only exposure to zinc exceeded its health-based risk screening level. The hazard index based on all chemicals identified except zinc is 1.8, while that involving zinc is 6.9. However, OEHHA concluded that it is unlikely that exposure would produce adverse health effects because symptoms related to zinc ingestion develop over a period of weeks when zinc is ingested daily. In addition, the ingested dose of zinc would be less than the Recommended Dietary Allowance of 3 milligrams per day (mg/day) and the Tolerable Upper Intake Level of 7 mg/day for a 3-year-old child. At most, some gastrointestinal distress may be expected as a result of ingestion of such levels of zinc. Further, the amount of zinc leaching from ingested rubber could be substantially less than what was used in the calculations based on the gastric digestion simulation, described below. OEHHA concluded that since the hazard index based on all chemicals except zinc is close to 1, the first tier screening level assessment does not indicate that ingestion of 10 grams of tire shreds would represent a serious non-cancer health risk. Seven of the chemicals identified in the tire shreds would contribute to cancer risks, and the increased cancer risk to children less than 2 years in age, resulting from ingestion of 10 grams of tire shreds, would be 1.2 in 10 million, which is less than the *de minimis* level of 1 in 1,000,000. Due to slower respiratory rates and increased body weight of older children and adults, the increased cancer risk would be lower to those populations as compared to children less than 2 years in age.

[24] CalRecycle/OEHHA, Evaluation of Health Effects of Recycled Waste Tires in Playground and Track Products, January 2007.

[25] The gastric digestion experiment used three samples of shredded tire rubber obtained from three recyclers; two located in California and one in Ohio. Tire rubber were added to each of three glass flasks and a fourth control flask received no rubber. A 200 mls solution was added to each flask to simulate the environment of the human stomach.

- **Ingestion of loose tire shreds based on gastric digestion simulation.** A gastric digestion simulation experiment conducted by OEHHA detected 22 chemicals released from tire shreds after they were incubated for 21 hours at 37 degrees Celsius (C) (98.6 degrees Fahrenheit [F]) in a solution mimicking the gastric environment. Similar to the above assessment, the study used the concentration of each chemical detected to evaluate non-cancer and cancer risks to a typical 3-year-old child resulting from the one-time ingestion of 10 grams of tire shreds. For non-cancer risks, the study found that none of the chemical concentrations exceeded the health-based screening level. The hazard index for the mixture was 2.2, and OEHHA concluded that since the hazard index is close to one and risk assessment has conservatism built into the process, the first-tier screening level assessment does not indicate that ingestion of 10 grams of tire shreds would represent a serious non-cancer health risk, suggesting a low risk of non-cancer acute health effects. Five of the chemicals detected in the extract would contribute to cancer risks, and the cancer risk resulting from ingestion of 10 grams of tire shreds would be 3.7 in 100 million, which is considerably less than the *de minimis* level of 1 in 1,000,000.

- **Ingestion through hand-to-surface-to-mouth activity.** To evaluate health risks associated with ingestion of chemicals picked up on the hands and subsequently ingested, OEHHA performed wipe sampling of three in-use playground surfaces containing recycled tire rubber. Of the chemicals analyzed, only zinc and four polycyclic aromatic hydrocarbons (PAHs) (chrysene, fluoranthene, phenanthrene, and pyrene) were identified at levels that were at least three times background levels (i.e., ambient air conditions), and all concentrations were below chronic screening values, suggesting a low risk of adverse non-cancer health effects. Only one of the PAHs (chrysene) is a potential carcinogen. Assuming that youths, age 1 to 12, would use the playgrounds, the increased cancer risk resulting from chrysene would be 2.9 in a million. While this increased cancer risk level is slightly higher than the *de minimis* level of 1 in 1,000,000, OEHHA concluded that there was not a public health concern because this small magnitude of increased risk is at the low end of the acceptable range of 1 in 1,000,000 to 100 in 1,000,000.

- **Skin sensitization to surfaces made of recycled tire.** Natural rubber contains latex, a proven skin sensitizer. OEHHA contracted with a laboratory to perform skin sensitization testing of tire-derived surfacing, and found that these surfaces would not cause skin sensitization in children, nor would they be expected to elicit skin reactions in children already sensitized to latex.

In addition, the OEHHA study reviewed soil and air quality data obtained after a fire in a playground surface made of chipped tires at the Yulupa Elementary School in Sonoma County. Although soil sampling showed detectable levels of metals, VOCs, PAHs, dioxins, and furans, the concentrations were at or below background levels, indicating a low risk to the environment. The air above the burn site was judged by USEPA to pose no health risks to cleanup workers, and the soil/rubber mixture removed from the site was judged to be a nonhazardous waste suitable for disposal in a designated Class III disposal facility.

2009 Office of Environmental Health Hazard Assessment Study

In 2009, OEHHA published a report assessing the health effects associated with chemicals measured in the air above artificial turf fields.[26] The report, titled *Chemicals and particulates in the air above the new generation of artificial turf playing fields, and artificial turf as a risk factor for infection by methicillin-resistant staphylococcus aureus (MRSA), Literature review and data gap identification,* discussed the results of five studies that measured chemical and/or particulate concentrations above artificial turf fields and three studies that analyzed gaseous emissions from tire-derived crumb rubber in a laboratory setting. The study included a human health risk

[26] OEHHA, Chemicals and particulates in the air above the new generation of artificial turf playing fields, and artificial turf as a risk factor for infection by methicillin-resistant *Staphylococcus aureus* (MRSA), Literature review and data gap identification, July 2009.

evaluation to assess the increased lifetime cancer risk and risk of developmental/reproductive toxicity resulting from inhalation of VOCs and PAHs by soccer players, ages 5 to 55 years, playing on artificial turf with tire-derived infill.

The most complete data set was from a study of indoor stadiums conducted in 2006. Using the highest concentrations detected, OEHHA calculated the increased lifetime cancer risk from inhalation for the eight potential carcinogens identified in that study. The risk evaluation concluded that five of the eight chemicals were associated with an increased cancer risk above the *de minimis* level of 1 in 1,000,000: benzene, formaldehyde, naphthalene, nitro methane, and styrene. The increased cancer risk associated with these compounds ranged from 1.6 in 1,000,000 for formaldehyde to 8.7 in 1,000,000 for nitromethane which is at the low end of the acceptable range of 1 in 1,000,000 to 100 in 1,000,000. The risk evaluation also states that two of the chemicals identified in the 2006 Norway study are known to cause developmental/reproductive toxicity: benzene and toluene. However, the chemical intake of these compounds via field air was well below the maximum allowable dose level for each chemical.

The measured chemical concentrations of the 2006 study may be higher than would occur outdoors because the samples were obtained from indoor fields where air dispersion would not be as great. Indeed, as analyzed in the 2019 USEPA study, described below, indoor concentrations of SVOCs ranged from 1.5 to 10 times higher than outdoor measurements.[27] Further, the height of the sampling was not documented, and no background samples were collected to demonstrate whether the observed chemical concentrations resulted from the artificial turf, or could be representative of background conditions. Regardless, the OEHHA study concluded that further studies of the chemicals present above artificial turf fields is warranted to fill the data gaps.

2010 California Department of Resources Recycling and Recovery Study

In 2010, the California Department of Resources Recycling and Recovery (CalRecycle) published a report assessing the human health risks posed by VOCs and particulates in the air above outdoor artificial turf fields containing recycled crumb rubber infill. The report documenting this study is titled *Safety Study of Artificial Turf* Containing *Crumb Rubber Infill Made from Recycled Tires: Measurements of Chemicals and Particulates in the Air, Bacteria in the Turf, and Skin Abrasions Caused by Contact with the Surface*.[28] The report was produced under contract by OEHHA.

For the evaluation of VOCs, OEHHA conducted air sampling at a height of four feet above four artificial turf athletic fields in California's Central Valley, as well as at nearby grass turf fields for comparison purposes. Locations in California's Central Valley were chosen based on the probability that summer daytime temperatures would exceed the target temperature for air sampling of 90 degrees Fahrenheit (F). The fields were sampled on multiple summer days, at times ranging from the cool early morning to the heat of the day in the afternoon. The age of the artificial turf fields sampled ranged from eight months to five years at the time of sampling. Sampling for VOCs above the outdoor artificial turf fields identified few VOCs, and none were consistently identified in all of the eight air samples collected per field. Further, none of the concentrations were consistent between the four

28 CalRecycle/OEHHA, Safety Study of Artificial Turf Containing Crumb Rubber Infill Made from Recycled Tires: Measurements of Chemicals and Particulates in the Air, Bacteria in the Turf, and Skin Abrasions Caused by Contact with the Surface, October 2010.

fields sampled. However, comparison of the sampling results for the artificial turf to the results for the grass turf suggests that seven VOCs originated from the artificial turf, including 2-propanol, cyclohexane, toluene, m,p,o-xylenes, isopropylbenzene, 4-ethyltoluene, and 1,2,4-trimethylbenzene.[29] A human health risk evaluation was conducted for these seven VOCs, and concluded that all exposures were below non-cancer, health-based screening levels. None of the seven VOCs are known to have a risk of causing cancer, and therefore cancer risks were not evaluated. Although artificial turf field temperatures increased by 34 to 55 degrees F over the course of the day, there was no correlation between the surface temperature and the VOCs detected above the artificial turf fields.

For the evaluation of particulates, permission was obtained from three San Francisco Bay Area cities to perform air sampling at city fields during soccer games or practices. All three fields consisted of new generation artificial turf containing crumb rubber infill made from recycled tires. Fields #1, #2 and #3 were 26, 8 and 3 months old, respectively, at the time of air sampling. Each artificial turf field contained a marked soccer field. The air was sampled above the three artificial turf fields for 3 hours during active field use (soccer practice); and for comparison purposes, ambient air was sampled upwind of each field during a consecutive 3-hour period. Air sampling was performed at a height of four feet above the ground to approximate the breathing height of children. Each field and upwind location were sampled on two consecutive days, yielding two field samples and two upwind samples per field. PM2.5 concentrations and associated metals concentrations were determined for each sample. For two of the fields, the weight of PM2.5 was less than detection limits and for the third field, the weight of PM2.5 was similar in the sample from above the field and from upwind of the field. Samples from two fields that were analyzed for elements contained sodium, calcium, potassium, chlorine, and sulfur, and the concentrations were similar in the samples collected from above the field and upwind of the field. Other elements, including heavy metals, were not detected in any of the air samples. On the basis of these results, the study found there is no public health concern related to particulate matter or heavy metals associated with particulate matter at the artificial fields.

Although the risk evaluation did not identify health risks associated with VOC and particulates above the artificial turf fields, the risk evaluation did not consider certain variables that could affect the generation of VOCs and particulates at artificial fields, including field age, method of processing the tire rubber, and the source of the tire stocks.

2017 Gradient Study

A research study was published in 2017 in Environmental Research, a peer-reviewed environmental science and health journal. The study, titled *Comprehensive multipathway risk assessment of chemicals associated with recycled ("crumb") rubber in synthetic turf fields*,[30] conducted a comprehensive review of the literature to identify studies containing information about the concentrations of chemicals in recycled rubber or air sampling data to be used in the study's risk assessment. The study focused on data collected from North American rubber

[29] The criteria that suggest a VOC could result from synthetic turf include: 1) detection in at least two of the eight air samples collected from above a synthetic turf field, and 2) detection at a higher average concentration above that synthetic turf field compared with a nearby natural turf field.

[30] Michael K. Peterson, Julie C. Lemay, Sara Pacheco Shubin, Robyn L. Prueitt, Comprehensive multipathway risk assessment of chemicals associated with recycled ("crumb") rubber in synthetic turf fields, Environmental Research, Volume 160, 2018, Pages 256-268, ISSN 0013-9351.

recyclers or synthetic turf fields and studies that evaluated either the chemical composition of recycled rubber, potential air emissions from recycled rubber, or the bioaccessibility of chemicals from recycled rubber.

The data included were representative of different environmental conditions present during the use of synthetic turf fields. The data used in the risk evaluation included recycled rubber composition data from both virgin and aged synthetic turf fields, as well as indoor and outdoor fields, and air samples collected at indoor and outdoor fields. The list below summarizes the numbers of studies and samples that were compiled for the study:

- Number of Studies with Data: 37 recycled rubber composition studies; 7 outdoor air studies; 2 indoor air studies.
- Number of Samples: 130 from the recycled rubber composition studies; 76 from the outdoor air studies; 17 from the indoor air studies.
- Number of Chemicals Evaluated: 139 from the recycled rubber composition studies; 213 from the outdoor air studies; 172 from the indoor air studies.

The study used the compiled data and conducted a screening-level analysis to identify the chemicals of potential concern (COPCs) for the risk assessment. The study compared the maximum detected concentrations of chemicals found in recycled rubber and air samples (the 95 percent upper confidence limit on the mean [UCLM] or the maximum detected concentration in the dataset) against USEPA's risk-based Regional Screening Levels (RSLs) for residential soil (in the absence of any recycled-rubber-specific screening criteria) and air. The USEPA RSL screening guidelines[31] indicate that a target hazard quotient (HQ) of 0.1 should be used for multiple chemical risk evaluations; therefore, the study used the USEPA RSLs for which non-cancer hazards are calculated with a target HQ of 0.1. For cancer risks, the study used the RSLs that were calculated with a target risk of 1 in 1,000,000 in accordance with the USEPA RSL screening guidelines. The USEPA RSLs are risk-based values derived from equations, exposure parameters and factors that represent Reasonable Maximum Exposure (RME) conditions for long-term/chronic exposures.[32] RME conditions are conservative for screening for recreational exposure scenarios because the exposure frequency and duration for soccer players and spectators (the receptors of concern in the study's risk assessment) are lower than those for typical residential exposures. USEPA's RSLs are designed to address chronic effects. However, because acute effects generally occur at higher exposures levels, the study considered RSLs to be protective of acute effects as well. Analytes with maximum concentrations above the selected risk-based screening criteria were retained as COPCs for the risk evaluation.

The study evaluated several exposure scenarios to account for the variety of people (i.e., receptors) that might interact with recycled rubber via artificial turf and represent RME conditions. The receptors associated with outdoor scenarios included: youth outdoor soccer player (ages six to 18 years); adult spectator; and child spectator. The exposure pathways for the youth soccer player and child spectator included incidental ingestion, dermal contact, and inhalation. The exposure pathway for the adult spectator included inhalation.

---

32 USEPA, Regional Screening Levels (RSLs) - User's Guide, Section 3. Using the SL Tables, May 2020, https://www.epa.gov/risk/regional-screening-levels-rsls-users-guide. Accessed November 17, 2020.

In order to provide context for the risk assessment, the study evaluated the same exposure scenarios described above using 95th percentile background levels of chemicals found in natural soil, noting that many of the chemicals often found in recycled rubber (e.g., heavy metals, PAHs) are also found in natural soil. The study obtained soil metal concentrations from the U.S. Geological Survey. PAH data were obtained by averaging the 95th percentile values from a variety of studies (refer to the study for a list of the sources used). The PAH data was obtained from urban, suburban, and rural locations in multiple states and were averaged to obtain the values used in the risk assessment. The study notes that the natural soil field risk assessment was prepared to provide context for the recycled rubber results and does not represent a site-specific assessment of risks or hazards associated with any specific natural soil field. Soil concentrations of chemicals vary widely from location to location, and the evaluation only considered a subset of chemicals actually found in soil. Pesticides, fertilizers, inorganic constituents other than metals (e.g., nitrates), and numerous other chemicals are not included in the natural soil evaluation.

The study quantified risks separately for carcinogens with mutagenic modes of action, to account for potentially increased susceptibility to mutagenic carcinogens during early life based on USEPA guidance.[33] Exposure frequency and duration for outdoor spectators and soccer players was based on the use of artificial turf fields for four days per week throughout the spring, fall, and summer (eight months in a year) for a soccer match or practice. The study obtained toxicity factors from a hierarchy of sources. The primary source of toxicity factors was USEPA's Integrated Risk Information System (IRIS), with additional toxicity values obtained from USEPA's Provisional Peer-Reviewed Toxicity Values (PPRTVs), followed by tertiary sources such as the Health Effects Assessment Summary Tables (HEAST), the Agency for Toxic Substances and Disease Registry (ATSDR), or the California Environmental Protection Agency (CalEPA). The toxicity factors used are consistent with those used in the USEPA RSL.

The results of the analysis in the study found that for recycled rubber fields, the cancer risks for all modeled receptors were below the USEPA *de minimis* risk of 1 in 1,000,000. The highest identified excess cancer risks were for the child spectator scenario, at 0.9 in 1,000,000. The study found that in most cases, the chemicals that contributed the most to the calculated cancer risks are as expected given the composition of recycled rubber – generally PAHs (e.g., benzo[a]pyrene), arsenic, and organic compounds that have previously been associated with recycled rubber (e.g., 1,3-pentadiene, formaldehyde). The study found that non-cancer target-organ-specific Hazard Indices for all modeled receptors were also below USEPA's acceptable hazard guidelines (e.g., Hazard Index < 1). As with the cancer risks, the chemicals contributing substantially to the non-cancer hazards were mostly as expected: metals such as thallium and cobalt, as well as 4-t-octylphenol, an organic chemical used in the manufacture of rubber products.

The results of the natural soil field analysis were similar to the results of the recycled rubber field analysis with metals and PAHs contributing the most to the incidental ingestion and dermal contact risks and hazards, and VOCs contributing the most to inhalation pathway hazards and risks.

The cancer risk results for the natural soil field analysis indicate that, for each scenario (excluding the adult spectator), cancer risks associated with exposure to natural soil fields were consistent with (but higher than) those from exposure to recycled rubber fields. Similarly, the non-cancer hazard results for the recycled rubber exposure

[33] USEPA, Supplemental guidance for assessing susceptibility from early-life exposure to carcinogens (final), Risk Assessment Forum, EPA-630/R-03/003F, March 2005.

scenarios were consistent with (but generally lower than) those from exposure to natural soil fields. The study explained that while the finding that estimated cancer risks are higher for natural soil than recycled rubber may seem counterintuitive, analysis of the 95th percentile natural background levels of several carcinogens in soil were noted to be either higher (e.g., arsenic) or similar (e.g., PAHs) to the 95% UCLM levels found in recycled rubber and that the relative risks should be interpreted with caution since the 95th percentile and the 95% UCLM are not the same statistic. The study further stated that "considering the low bioaccessibility of these chemicals from rubber, it is not surprising that the risks from exposure to these chemicals in soil are higher than those from rubber."[34] The study went on to clarify the following:

> *The cancer risks we calculated for the natural soil field exposure scenarios analysis were sometimes significantly higher than those from recycled rubber. This result is not intended to imply that playing on grass fields or playgrounds on natural soil would result in actual risk to receptors. We performed this analysis primarily to illustrate that employing US EPA's conservative standard risk assessment practices to assess surfaces that are considered to be "safe" or "natural" by most people can result in risk values that are higher than expected. Evaluating the results of the natural soil and recycled rubber risk assessments using the RME assumptions side-by-side provides context for the risks calculated for exposure to recycled rubber. The relevant interpretation is that both types of surfaces fall within acceptable risk and hazard guidelines and should not be considered to pose a public health issue.*[35]

In summary, the study concluded that the multipathway risk assessment for recycled rubber in synthetic turf fields found that cancer risks and non-cancer hazards were within the acceptable limits set by USEPA, even assuming RME conditions, and that the bio-accessibility of COPCs may actually be higher in natural soil fields. The study determined that the results are consistent with a number of preliminary or less-comprehensive studies of recycled rubber in synthetic turf fields performed by a variety of regulatory agencies in the US, as well as studies of synthetic turf fields performed in the Netherlands and by the European Chemicals Agency (ECHA). The study acknowledges that while there are limitations and uncertainties in the risk assessment, they are likely compensated for by the use of exposure assumptions that are intended to provide conservative cancer risk and non-cancer hazard results. The study concluded that the multipathway risk assessment demonstrates that the use of synthetic turf fields containing recycled rubber infill would not result in unacceptable risks or hazards to adults or children under USEPA's risk assessment guidelines.

2019 U.S. Environmental Protection Agency Study

The Centers for Disease Control and Prevention/Agency for Toxic Substances and Disease Registry (CDC/ATSDR) and the USEPA, in collaboration with the Consumer Product Safety Commission (CPSC), has conducted a multi-agency research effort to characterize the constituents in crumb rubber. The study, released in July 2019, collected tire crumb rubber infill material from 40 artificial turf fields located across the United States from both indoor and outdoor fields.[36] Laboratory analyses were conducted to measure the physical, chemical and

34 Michael K. Peterson, Julie C. Lemay, Sara Pacheco Shubin, Robyn L. Prueitt, Comprehensive multipathway risk assessment of chemicals associated with recycled ("crumb") rubber in synthetic turf fields, Environmental Research, Volume 160, 2018, Page 264, ISSN 0013-9351.

35 Michael K. Peterson, Julie C. Lemay, Sara Pacheco Shubin, Robyn L. Prueitt, Comprehensive multipathway risk assessment of chemicals associated with recycled ("crumb") rubber in synthetic turf fields, Environmental Research, Volume 160, 2018, Page 264, ISSN 0013-9351.

36 USEPA, Synthetic Turf Field Recycled Tire Crumb Rubber Research Under the Federal Research Action Plan, Final Report Part 1– Tire Crumb Rubber Characterization Volume 1, EPA/600/R-19/051.1, July 2019.

microbiological characteristics of the tire crumb rubber material. Results of these analyses provided information about the number and types of chemicals associated with recycled tire crumb rubber, the amount of chemicals released into the air and into simulated biological fluids, and the range and variability of these parameters. The analyses found a range of metals, SVOCs, VOCs and bacteria in and on tire crumb rubber infill material. The bacteria finding was anticipated, as bacteria are present in soil and on surfaces in indoor environments. The analysis found higher concentrations of total bacteria in outdoor fields relative to indoor fields, but a gene commonly associated with the human skin microbiome (i.e., Staphylococcus aureus) was detected more often in indoor fields than outdoor fields.[37] With respect to artificial turf and natural turf, the USEPA cites to a study in which researchers found 2 of 30 samples (7%) collected from synthetic turf were positive for a species of Staphylococcus compared to 6 of 12 samples (50%) collected from natural turf and concluded that the current generation of synthetic turf containing crumb rubber infill harbors fewer bacteria than natural turf.[38]

In conducting the analysis, the study recognized that the presence of a substance does not directly equate with human exposure. While there are many chemicals associated with recycled tire crumb rubber, the laboratory experiments suggest that the amount of chemicals available for exposure through release into the air and simulated biological fluids is relatively low. Air emissions tests were performed at both 25 degrees C (77 degrees F) and 60 degrees C (140 degrees F), temperatures chosen to represent moderate and high-end field temperature conditions, respectively. For most VOC and SVOC target chemicals, based on air chamber tests of the material, air emissions were low at 25 degrees C and in many cases, not measurable above the detection limit or above background levels. At 60 degrees C, higher emissions were measured for some, but not all, VOCs and SVOCs. Overall, methylisobutyl ketone and benzothiazole had the highest emission factors among the target analytes in this study.

The multi-agency collaboration conducted bioaccessibility tests of 19 metals on the tire crumb rubber samples using three types of simulated biological fluids (gastric fluid, saliva and sweat plus sebum). The study states that "only small fractions of metals were released into simulated biological fluids. For all metals, the mean bioaccessibility values averaged about 3% in gastric fluid and less than 1% in saliva and sweat plus sebum."[39] Furthermore, the study stated that "these results fill important knowledge gaps about potential bioavailability of chemicals associated with recycled tire crumb rubber. Based on these results, a default to 100 percent bioaccessibility should not be used when assessing potential exposures to most metals in tire crumb rubber."[40] In other words, the results of the study indicate that it should not be assumed that ingestion of crumb rubber would lead to exposure to all of the metals present in the crumb rubber.

These findings support the premise that while many chemicals are present in the recycled tire crumb rubber, as one might expect and as also regularly occur in many household products, exposure may be limited based on what is released into air or biological fluids. Results from this tire crumb rubber characterization research also suggest that concentrations of many organic chemicals found in tire crumb rubber infill material vary with artificial turf field age and type (i.e., indoor versus outdoor). In general, concentrations of many organic

chemicals appeared to decrease with increasing field age. These results suggest that vaporization, weathering and/or other removal mechanisms may lead to lower concentrations of many organic chemicals over time, particularly for outdoor fields. Levels of many organic chemicals also tended to be higher for indoor fields compared to outdoor fields, suggesting that exposures may be greater at indoor artificial turf fields.

New York State Studies

The New York State Department of Environmental Conservation conducted a series of studies to assess potential impacts from crumb rubber infill material in synthetic turf fields, including the potential for release of pollutants into the air. The studies included laboratory analysis of crumb rubber material, and sampling of air at two turf fields in New York City. The New York State Department of Health assessed the air quality monitoring survey data for public health effects. The report, released in 2009, is titled *An Assessment of Chemical Leaching, Releases to Air and Temperature at Crumb-Rubber Infilled Synthetic Turf Fields*.[41]

Laboratory analysis for the presence of VOCs and SVOCs caused by off-gassing of crumb rubber samples proved difficult to conduct quantitatively but did provide information regarding additional chemicals to be analyzed in the ambient-air field investigation. Air sampling at the two turf fields during active play detected low concentrations of chemicals anticipated to be found based on previous sampling; however, most of these chemicals were also detected in the upwind, ambient air and could not conclusively be associated with emissions from the turf field. Regarding particulate matter, data from this study did not indicate a meaningful difference between upwind and downwind measurements.

Even though the chemical concentrations above the field were similar to upwind concentrations, the ambient-air sampling results were used to evaluate the public health risks of volatile air contaminants and particulate matter. Potential non-cancer risks from target chemicals were below a hazard quotient of 1 for all chemicals and generally well below a value of 1 (i.e., did not exceed the reference concentrations used to evaluate non-cancer health risks). Potential cancer risks exceeded the target of 1 in 1,000,000 for four chemicals: benzene and three forms of pentadiene. However, the estimated risks of the on-field samples were similar to those for the upwind, background samples and could not be attributed to turf emissions. One analyte not detected in upwind samples, 2-methyl-1,3-butadiene, was reported in one of the eight downwind samples at a concentration exceeding the 1-in-1,000,000 cancer risk value. The New York State Department of Health concluded that because there was no consistent pattern in the measurements of the chemicals at either field and exposures would not be continuous, there was not a public health concern regarding cancer effects.

Connecticut Studies

In 2010, five Connecticut agencies under a joint agreement completed a study of synthetic turf fields to assess health and environmental risks from off-gassing and leaching of chemicals in crumb rubber materials. The components of the study included the following:

- Measurement of air concentrations of approximately 200 chemicals at 5 fields during active play,[42]

[41] Lim, Ly, & Walker, Randi, An assessment of chemical leaching, releases to air and temperature at crumb-rubber infilled synthetic turf fields. New York State Department of Environmental Conservation (NYDEC), 2009.

[42] University of Connecticut Health Center, Artificial Turf Field Investigation in Connecticut, Final Report, July 27, 2010.

- Performance of a human health risk assessment based on measured air concentrations,[43]
- Measurements of off-gassing and leaching of chemicals under defined laboratory conditions,[44]
- Measurements of leaching of metals in stormwater runoff from turf fields,[45] and
- Peer review by an expert panel.[46]

Ambient air sampling was performed at four outdoor turf fields, one indoor turf field, and at upwind background locations near each field in July 2009. In addition, bulk samples of crumb rubber from each field were collected. The samples were analyzed for VOCs, SVOCs, rubber-related chemicals (e.g., benzothiazole), and PM10. To identify which chemicals were attributable to the turf rather than background sources of air pollution, results were screened to include only those chemicals identified in the crumb rubber samples and those with concentrations two times greater than the background samples (VOCs and SVOCs were present in all background samples). Based on these criteria, four VOCs were identified as associated with turf emissions. Elevated PM10 concentrations were not identified. VOC concentrations varied among the fields. The air concentration of methyl isobutyl ketone (35.98 micrograms per cubic meter of air [$\mu g/m^3$]) was the highest VOC detected in samples collected on the turf, followed by acetone (23.71 $\mu g/m^3$), toluene (2.3 $\mu g/m^3$), and ethylbenzene (1.04 $\mu g/m^3$). Of the five targeted SVOCs in air, benzothiazole and butylated hydroxytoluene (BHT) were the only chemicals detected above background. Most concentrations of benzothiazole and BHT were an order of magnitude lower among the outdoor turf fields (ranging from less than 80 to 130 nanograms per cubic meter of air [ng/m^3]) than the indoor turf field, where benzothiazole concentrations up to 14,000 ng/m^3 were detected.

The Connecticut Department of Public Health reviewed the air sampling data to identify chemicals coming from the turf field and included a wider range of chemicals for its study. It analyzed those constituents found to be 25 percent higher on the field than upwind (a more stringent threshold than the original standard of two times greater), for a total of 27 chemicals. The health risk assessment analyzed exposure scenarios for children ages six to 18 and for adults under indoor and outdoor field types. The assessment assumed exposure to turf fields three hours per day, four days per week, for eight months per year at the maximum concentrations detected in the field air sampling results. Toxicity values were taken from national databases or derived by staff. The study concluded that the cancer risks were only slightly above USEPA *de minimis* levels of 1 in 1,000,000 for all scenarios evaluated, including children playing at the indoor facility, the scenario with the highest exposure. The calculated risks were reported to be within typical risk levels from ambient pollution sources and below target risks associated with many air toxics regulatory programs. Chronic non-cancer risks were not elevated above a hazard index of 1; for acute risk, the hazard index was close to 1 for children playing at the indoor field. The main contributor to this hazard index was benzothiazole, a rubber-related SVOC, which creates uncertainty regarding the potential for benzothiazole and other volatile irritants to create an irritation response in sensitive individuals playing indoors. The study concluded that outdoor and indoor synthetic turf fields are not associated with

elevated health risks, but recommended that adequate ventilation be provided at indoor field facilities to prevent accumulation of VOCs and SVOCs in indoor air.

Bainbridge Island Evaluation

A 2008 evaluation conducted on behalf of the Bainbridge Island Metro Parks and Recreation District and the Bainbridge Island School District in Washington State used available scientific literature to provide an assessment of potential human health risks associated with use of synthetic turf containing tire crumb.[47] The risk assessment used the highest concentrations of chemicals identified in tire crumb material to assess potential risks to children, age eight to 10, and teenagers, age 11 to 18 years. For both age groups, the assessment addressed health risks via dermal contact with tire crumb leachate, inhalation of VOCs, and ingestion of whole tire particles as a result of three hours of play per day for 261 days per year (year-round play). None of the estimated cancer risks exceeded *de minimis* excess cancer risk of 1 in 1,000,000, and the combined non-cancer hazard index for each chemical was a maximum of 0.05, far below a Hazard Index of 1.

Artificial Turf and Silica Sand

According to the U.S. Department of Labor, crystalline silica is a common mineral found in many naturally occurring materials and can be found in sand, concrete, stone and mortar as well as finished products such as glass, pottery, ceramics, bricks, concrete and artificial stone.[48] The most common form of crystalline silica is quartz,[49] which is found in common beach sand. Inhalation of very small crystalline silica particles potentially increase the risk of developing silica-related diseases, including: silicosis, an incurable lung disease that can lead to disability and death; lung cancer; chronic obstructive pulmonary disease (COPD); and kidney disease.[50] The hazard potentially exists when specific activities create respirable crystalline silica dust that is released into the air and is associated with very small particles at least 100 times smaller than ordinary sand you might find on beaches and playgrounds.[51] Activities that may potentially create the hazardous conditions are associated with cutting, sawing, grinding, drilling, and crushing stone, rock, concrete, brick, block, and mortar. Potential worker exposures to respirable crystalline silica dust are associated with activities such as abrasive blasting with sand; sawing brick or concrete; sanding or drilling into concrete walls; grinding mortar; manufacturing brick, concrete blocks, stone countertops, or ceramic products; and cutting or crushing stone. Industrial sand used in certain operations, such as foundry work and hydraulic fracturing (fracking), is also a potential source of respirable crystalline silica exposure.[52]

An air monitoring study was conducted by FieldTurf International, Inc., *Air Monitoring Report, Quartz Silica* (2001),[53] to measure for respirable quartz silica at a multipurpose artificial turf playing field located at La Jolla High School in La Jolla, California. During the monitoring period, several high school physical education

53 FieldTurf International, Inc., Air Monitoring Report, Quartz Silica, La Jolla High School, La Jolla, California, March 20, 2001.

activities were taking place on the field as well as a school lacrosse game. The air samples were collected and analyzed following appropriate methods: U.S. Department of Health and Human Services, National Institute for Occupational Safety and Health (NIOSH) Method 0600 (gravimetric) and Method 7602 (infrared spectrophotometry). The laboratory analysis of the air samples collected did not detect quartz silica.

According to the United States Department of Labor, "being near sand or other silica-containing materials is not hazardous. The hazard exists when specific activities create respirable dust that is released into the air."[54] As stated above, activities such as abrasive blasting with sand; sawing brick or concrete; sanding or drilling into concrete walls; grinding mortar; manufacturing brick, concrete blocks, or ceramic products; and cutting or crushing stone are associated with the potential generation of respirable crystalline silica dust. These activities are not associated with artificial turf fields or physical education and sports activities that would occur on artificial turf fields. This is supported by an air monitoring and laboratory analysis that did not detect respirable quartz silica during physical education and sports activities on an artificial turf field, as described above.

Artificial Turf and *Staphylococcus aureus* Studies

A study was conducted by The Pennsylvania State University, titled *A Survey for the Presence of Staphylococcus aureus in the Infill Media of Synthetic Turf*.[55] *Staphylococcus aureus* is a bacterium that is a common inhabitant of human skin and can cause various types of skin or soft tissue infections. The objective of this survey was to sample the total microbial population of several infilled artificial turf systems and determine if *Staphylococcus aureus* was present. Infill material was sampled from twenty fields. Fiber samples were also collected. In addition, other surfaces from public areas and from an athletic training facility and natural turfgrass rootzones were also sampled. Each sample was analyzed for total organism populations and for the presence *Staphylococcus aureus*. There were generally lower numbers of total microbes present in the infill or fibers of the synthetic turf systems tested compared to natural turfgrass rootzones and *Staphylococcus aureus* was not found on any of the playing surfaces.

Another study was conducted by The Pennsylvania State University, titled *Human health issues on synthetic turf in the USA*.[56] A survey of 20 infilled artificial turf fields was conducted to determine microbial population and presence of *Staphylococcus aureus* bacteria. Surfaces other than athletic playing surfaces were tested for the presence of microbes and *Staphylococcus aureus*. *Staphylococcus aureus* colonies were not found to be present on any field; however, *Staphylococcus aureus* colonies were found on other tested surfaces that athletes commonly come into contact with, including blocking pads, used towels, and weight equipment. Based on the findings of the survey, the study determined that concern that infilled synthetic turf harbors and provides a breeding ground for *Staphylococcus aureus* is unwarranted within the context of this study.

Artificial Turf Studies on Heat

A study conducted by Milone & MacBroom, Inc., a privately-owned, multidisciplinary consulting firm, conducted a temperature evaluation study designed to determine the temperature rise of artificial turf materials under a number of environmental conditions.[57] Two fields within Connecticut were selected for this study. Both fields were constructed by FieldTurf in 2007. One field, identified as Field F, is located in the northern portion of the state, while Field G is located in the southern portion of the state. Selection of the fields was based upon the ability to obtain permission to perform the testing and was not based upon manufacturer or geographic location. Temperature monitoring occurred on June 10 and July 11, 2008, at Field F and on June 17, 2008, at Field G. During the testing procedure, the air temperature was monitored at two elevations directly over the artificial playing surface and at a location adjacent to the artificial surface but within an area of natural grass. Air temperatures were measured at two feet and five feet above the ground surface during the June 10 and June 17, 2008, monitoring events. The methodology was adjusted for the July 11, 2008, event, at which time the temperatures were measured at one foot and five feet above the ground surface. This adjustment was made so that an additional analysis could be conducted on the potential cooling effect due to the evaporation of water from the artificial "grass" fibers. Also measured during the testing were the temperatures of the crumb rubber and the surface temperature of the polyethylene and polypropylene blended fibers. Additional measurements were made of the soil at various depths in the area of the natural grass and the surface temperature of the natural grass itself. The results of the study indicate that solar heating of the materials used in the construction of artificial turf playing surfaces does occur and is most pronounced in the polyethylene and polypropylene fibers used to replicate natural grass. Maximum temperatures of approximately 156 degrees F on the surface of the artificial grass fibers were noted when the fields were exposed to direct sunlight for a prolonged period of time. The corresponding ambient temperature was 102 degrees F and the air temperature at 2 feet and 5 feet above the artificial turf surface was 103 and 101 degrees F, respectively. The crumb rubber temperature at 1-inch depth was 111.5 degrees F. As a comparison, the temperatures at the natural turf location at this same time was 99 degrees F on the surface of the natural grass, 101 and 102 degrees F at 2 feet and 5 feet above the surface, respectively, and 86 degrees F at 1-inch depth. Rapid cooling of the fibers was noted if the sunlight was interrupted or filtered by clouds. Significant cooling was also noted if water was applied to the synthetic fibers in quantities as low as one ounce per square foot. The elevated temperatures noted for the fibers generally resulted in an air temperature increase of less than five degrees even during periods of calm to low winds. For the artificial turf, the air temperatures above the surface decrease rapidly with increasing height.

The New York State Department of Health report, *An Assessment of Chemical Leaching, Releases to Air and Temperature at Crumb-Rubber Infilled Synthetic Turf Fields*,[58] conducted a temperature survey to gain a better understanding of the surface temperature of artificial turf fields and the potential for field users to suffer from heat-related illness. For the two artificial turf fields in this study (Thomas Jefferson Field and John Mullaly Field), the center and a shaded edge area were selected for measurements and both areas were comprised of green-colored synthetic grass. An additional center location was selected for one field consisting of white artificial turf. Field measurements were conducted in August (11 days) and September (6 days). The results of the temperature survey show higher surface temperatures for artificial turf fields as compared to the measurements obtained on nearby grass and sand surfaces. Surface temperatures for the Thomas Jefferson Field, grass and sand

57 Milone & MacBroom, Inc., Thermal Effects Associated with Crumb Rubber In-filled Synthetic Turf Athletic Fields, December 2008.

58 Lim, Ly, & Walker, Randi, An assessment of chemical leaching, releases to air and temperature at crumb-rubber infilled synthetic turf fields. New York State Department of Environmental Conservation (NYDEC), 2009.

had approximate median temperatures of 132, 87, and 86 degrees F, respectively and geometric mean temperatures of 126, 87, and 88 degrees F. The average synthetic turf surface was 42 degrees F higher than the grass surface temperature and 40 degrees F higher than the sand surface temperature. Surface temperatures for the John Mullaly Field grass and sand had approximate median temperatures of 119, 80, and 90 degrees F, respectively and geometric mean temperatures of 114, 80, and 89 degrees F. The average synthetic turf surface was 26 degrees F higher than the grass surface temperature and 35 degrees F higher than the sand surface temperature. The temperature survey found little difference for the indicators of heat stress between the synthetic turf, grass, and sand surfaces, on any given day. Nonetheless, a small difference in the heat stress indicators could result in a different guidance for the different surface types. Although little difference between indicators of heat stress measurements was found, the synthetic turf surface temperatures were much higher and prolonged contact with the hotter surfaces may have the potential to create discomfort, cause thermal injury and contribute to heat-related illnesses. The report recommended that awareness of the potential for heat illness and how to recognize and prevent heat illness should be raised among users and managers of athletic fields, athletic staff, coaches and parents.

The study conducted by The Pennsylvania State University, titled *Human health issues on synthetic turf in the USA*[59] looked at methods to reduce surface temperatures including irrigation, covering the surface with a tarpaulin (i.e., tarp), and amending infill with calcined clay. According to the study, many of the regimes tested were initially successful in lowering the surface temperature to that of natural turf grass; however, these low temperatures could not be maintained for periods of time equal to the length of standard sporting events.
