The comment incorrectly states the Project Site's existing zoning as OS. In the City of Los Angeles, only publicly-owned land is classified as "OS". The comment is correct in citing the zoning as A1-IXL-RIO. The comment also indicates that that the zoning is intended to encourage community gardens, although this use is not mandated by the zoning or the General Plan land use designation and no applicant for a project on a privately-owned property within the A-1 zone is compelled to analyze or incorporate community gardening. Please refer to Response No. ORG 7A-6 and 7A-78, above regarding the Project Site's zoning and the purpose of the CUP. Also, please refer to Appendix J, Land Use Plans and Policies – Project Consistency Tables, Table LU-6, Consistency of the Project with Policies of the River Improvement Overlay District Ordinance Intended to Avoid or Mitigate an Environmental Effect, in the Draft EIR. Note that the RIO district does not impose a building height restriction and that the zoned building height on the Project Site applied to the original residential zone, to which the operator intended to revert to after a certain number or years (see Response No. ORG 7A-6, above). As discussed in Chapter II, *Project Description*, of the Draft EIR and in the evaluation included in Table LU-6, the Project would be in full compliance with the requirements of the RIO District Ordinance. Regarding the Los Angeles River Revitalization Plan (LARRMP), Table LU-6 states (as revised in Chapter 3 of this Final EIR): "By providing a park and open space use, pedestrian ~~trails~~ pathways, community use of recreational and athletic facilities when not in use by the School, and a ~~landscaped trail-link~~ pedestrian ramp to the Zev Greenway, the Project would support the goals to develop parks and open space, and to provide pedestrian ~~trails~~ pathways. The Project would support the goals of the LARRMP to revitalize the general environment of the Los Angeles River by providing improved natural habitat, improving existing water quality, as well as providing recreation and open space amenities in the RIO inner core." Note also that the policy under the Urban Agriculture Incentive Zone to encourage gardens or garden-related uses was not adopted to mitigate or avoid an environmental effect and, thus, was not evaluated in Section IV.J, *Land Use and Planning*, or in the tables in Appendix J of the Draft EIR. The Project would also help satisfy many of the recreational needs for the Project area as identified by RAP's 2009 Citywide Community Needs Assessment. The comment does not demonstrate that the Project would conflict with applicable land use policies.

## Comment No. ORG 7A-80

### 1. The DEIR Buries the Land Use Analysis in an Appendix.

Preliminarily, it must be noted that the DEIR fails to provide the requisite analysis of the Project's consistency with applicable land use plans in the DEIR itself. Instead, all tables containing the consistency analysis and any discussion of actual, applicable policies, is

contained in tables contained in the Appendix. For example, consistency with the 2020-2045 RTP/SCS is hidden in “Table LU-1, Consistency of the Project with Applicable Strategies of the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy Intended to Avoid or Mitigate and Environmental Effect, provided in Appendix J.” (DEIR p. IV.J-19.) The same occurs with each and every applicable land use plan (Table LU-2 [General Plan Framework Element], LU-3 [General Plan Open Space Element], LU-4 [General Plan Conservation Element], LU-5 [Sherman Oaks- Studio City-Toluca Lake-Cahuenga Pass Community Plan], LU-6 [Los Angeles River Improvement Overlay District Ordinance]); they are all buried in Appendix J.

### **Response No. ORG 7A-80**

The comment incorrectly asserts that the Draft EIR fails to provide the requisite analysis of the Project’s potential conflict with applicable land use plans by placing the detailed evaluation of land use plans in a Draft EIR appendix. The provision of land use evaluation tables in an appendix is standard practice and has been implemented for large project EIRs in the City in recent years. The appendix with the Land Use evaluation tables is identified in the Draft EIR’s Table of Contents and in the Introduction (first paragraph) in Section IV.J, *Land Use and Planning*, of the Draft EIR. In addition, the respective land use tables in Appendix J are referenced as to their location in Appendix J in the first paragraph of the summaries of each of the land use tables in Section IV.J, *Land Use*, of the Draft EIR. As with all supporting technical studies provided in the Draft EIR appendices, Appendix J was included in the Draft EIR circulated for public review. In Appendix J each table is specifically identified under a table header and number and the tables are not “buried” among other text or analyses not specifically part of the tables. The tables are not part of a larger or obtuse discussion that would distract from their content. The reason for locating the tables in an appendix is that tables are comprehensive and generally lengthy. When included in the Land Use section, the tables typically cause the body of the Land Use section to be overly long and hard to read or maneuver. Therefore, the tables are located within an appendix to improve their readability and to not cause distraction from the evaluation of Project-to-policy comparisons. Moreover, as pages IV.J-18 through IV.J-30 of the Draft EIR includes summaries of the discussion contained in Appendix J, and Appendix J contains the more comprehensive discussion, the Draft EIR does not fail to include the required analysis regarding conflicting with applicable land use plans, policies and regulation. The comment provides no facts to support the contention that this analysis is not adequate.

### **Comment No. ORG 7A-81**

“Burying information in an appendix has also been found to frustrate the legally required informational purposes of an EIR.” (Santa Clarita Organization for Planning the Environment v. County of Los Angeles (2003) 106 Cal.App.4th 715, 723.) Courts have held that a commenter should not be required to “ferret out” information in technical appendices of an EIR. (Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova (2005) 40 Cal.4th 412, 442.) While technical appendices exist for a

reason – thousands of pages of numeric inputs to traffic and air quality models in the body of the EIR would be distracting and useless to the public – the information contained in the land use appendices is neither technical nor distracting. Instead, the tables contain the analysis itself. It is insufficient to provide the 30,000-foot level summary in the DEIR, as here. With a summary this basic, any project would be considered broadly consistent with nearly any plan. The DEIR must be revised to include the actual analysis in the body of the EIR and recirculated to the public.

## Response No. ORG 7A-81

The assertion that Appendix J was “buried” is incorrect. Please refer to Response No. ORG 7A-80. As discussed therein, the location of the tables in an appendix is the standard practice for the City. Appendix J containing the land use tables is not comparable to lengthy or obtuse air quality models or numeric inputs for traffic but are more analogous to the background reports prepared for social sciences, such as cultural resources. In the case of the Appendix J, Land Use Evaluation Tables, the intention of the City is to shorten the Land Use and Planning section of the Draft EIR by summarizing the tables and to improve the readability of the section. The tables in Appendix J are also well identified and straight forward and easier to read than when buried in an overly long Land Use and Planning EIR section. Additionally, the cases cited by the comment are not applicable to the Draft EIR for this Project. In *Santa Clarita Organization for Planning the Environment v. County of Los Angeles* (2003) 106 Cal.App.4th 715, the court concluded that most of the information relied on to support its contention that the EIR contained all required analysis was in the administrative record, but was not attached to the EIR, and most of the remaining information was submitted by project opponents in response to the draft EIR and was scattered “here and there in EIR appendices”. Therefore, the court ruled that the EIR was defective because it “is not enough for the EIR simply to contain information submitted by the public and experts” and because water “is too important to receive such cursory treatment.” (Id. at page 723.) Similarly, in *Vineyard Area Citizens for Responsible Growth, Inc. v. City of Rancho Cordova* (2005) 40 Cal.4th 412, the court found that the EIR was inadequate because, among other reasons, the analysis of water supply failed to provide readers with an adequate description of long-term water sources and failed to formally incorporate by reference information from a prior EIR upon which the EIR relied for the analysis. Neither situation is relevant to the Project’s Draft EIR. The tables provided in Appendix J are identified in the introductory paragraph for in Section IV.J, *Land Use and Planning*, summarized in Section IV.J, and included in the Draft EIR, not in another document that is not appended to the Draft EIR. Moreover, the analysis is not spread out over various appendices but, as discussed above, located in Appendix J with clearly marked tables for each of the land use plans, policies and regulations analyzed therein. As such, the Draft EIR is not deficient and the need to relocate these tables and to recirculate the Draft EIR is not supported by the comment.

## Comment No. ORG 7A-82

### 2. The Project is Inconsistent with the General Plan.

The City's General Plan is the "constitution" for future development" located at the top of "the hierarchy of local government law regulating land use." (*DeVita v. County of Napa* (1995) 9 Cal.4th 763, 773.) For this reason, discussed above, inconsistencies with general plan goals to protect specific lands must be disclosed in an EIR. (*Friends of the Eel River v. Sonoma County Water Agency* (2003) 108 Cal.App.4th. 859, 881.) Here, the DEIR fails to disclose inconsistencies several General Plan policies, including, but not limited, to:

## Response No. ORG 7A-82

The comment introduces but does not provide information as to any conflicts of the Project with the General Plan. As shown in the Land Use tables in Appendix J and summarized in Section IV.J, *Land Use and Planning*, of the Draft EIR, the Project would not conflict with General Plan policies adopted to mitigate or avoid an environmental impact. Please refer to the evaluations in Appendix J of the Draft EIR for further discussion of the Project's consistency with applicable land uses policies and to Response No. ORG 7A-81 above and ORG 7A-83 through ORG 7A-88 below.

## Comment No. ORG 7A-83

### *Framework Element*

- The Studio City community has a demonstrated need for additional park space. The Department of Recreation and Parks' 2009 Citywide Community Needs Assessment identified small parks and walking and biking trails as the top priorities. The DEIR claims that the Project supports Framework Element policies concerning recreational opportunities and landscaped open space. The DEIR does not, however, identify the actual amount of time that the recreational facilities will be available to the public; the barriers introduced by the security and fencing; and the additional barriers to use of that recreational space posed by the reservation-only nature. Area residents will not be able to just walk over for a pickup basketball game or for a last-minute tennis game.

## Response No. ORG 7A-83

The comment asserts that the Framework Element analysis is deficient for failure of the Draft EIR to identify and discuss various factors listed in the comment. The comment is nearly correct in identifying RAP's 2009 Citywide Community Needs Assessment's highest priority recreational uses for the South San Fernando Valley. As discussed in the Needs Assessment, page 54, RAP's top four recreational priorities for the South San Fernando Valley are: (1) Walking and Biking Trails, (2) Small Neighborhood Parks, (3) Indoor Running/Walking Trails, and (4) Nature Trails. However, the comment is incorrect in its contention that the Draft EIR fails to identify the hours the recreational facilities would

be available to the public, any barriers created by the security, fencing and reservation requirements. As discussed in Chapter II, *Project Description*, page of II-35 (Table II-3, Public Use Days and Hours, of the Draft EIR), the Project's 0.75 mile of pedestrian paths and landscaped areas would be available seven days a week from 7:00 a.m. to 9:00 p.m. Other park-type features including the Project Site's putting green and the café/clubhouse would be available during the same days and timeframe as the walking pathways. The publicly accessible path, as well as the connector ramp to the Zev Greenway at Coldwater Canyon Avenue would accommodate pedestrian access to the Greenway. In addition, with the installation of native landscaping and restoration along the Zev Greenway with RIO-compliant plants and trees, the Project's 5.4 acres of publicly accessible open space would serve as a nature walking pathway (including bird watching and dog walking), another of the RAP's high priority recreational uses for the region. The 2009 Needs Assessment lists outdoor tennis courts as the No. 9 priority for the South San Fernando Valley. Also please refer to Topical Response No. 3 - Enforcement of Public Access, for further clarification of public use. The use of a "pre-approved" status and "reservations" is to smoothly accommodate those in the community who wish to use the School's facilities (including the gymnasium) and to ensure that the Project serves the community for which it is intended and to provide safety for individuals and families. Additionally, the comment contains no evidence to support the contention that the security, fencing or reservation requirements would provide a barrier to use of the Project's recreational facilities nor an impact on the environment.

### **Comment No. ORG 7A-84**

- The DEIR claims that the Project will reduce vehicle trips and VMT, in support of the Framework Element, by virtue of its location near transit, but the DEIR does not disclose the low number of Harvard-Westlake students and even lower number of Harvard-Westlake parents and sports fans who use this transit. Instead, the Project's trips will be additive as student athletes will continue to travel to and from school.

### **Response No. ORG 7A-84**

The comment asserts that the Draft EIR does not disclose the low number of Harvard-Westlake students and even lower number of Harvard-Westlake parents and sports fans who would use public transit. Because public transit exists in the area, some portion of the students, employees, and visitors may indeed use it to access the Project Site. However, the vehicle trip and conservative VMT analysis in the Draft EIR does not assume transit use, with the exception of School shuttles.. As stated on page IV.B-49 and IV.B-50 in Section IV.B, *Air Quality*, of the Draft EIR, "[a]s such, the Project would provide opportunities for the use of alternative modes of transportation, including convenient access to public transit and opportunities for walking and biking, thereby facilitating a reduction in VMT." The Project transportation analysis did not take a transit credit (reduction in VMTs) for using alternative modes of transportation (see Draft EIR Section IV.M.3.(b)(2), *VMT Analysis*). This approach is conservative for transportation analysis as it assumes that all users will arrive in private vehicles, shuttles, or school buses for the

visiting team. Because public transit is not factored into the VMT calculations, the Project's trips would not be additive to the trips evaluated in the Draft EIR.

### **Comment No. ORG 7A-85**

- The DEIR states that the Project would support General Plan Framework policies designed to protect the City's "natural resources from encroachment of urban development." (DEIR p. IV.J-21.) Yet, the Project will place 27 light poles of 40 to 70 feet in height in proximity to the Los Angeles River and all of the habitat the Project is ostensibly creating and protecting. On the contrary, the Project will likely frustrate these important policies.

### **Response No. ORG 7A-85**

The comment's assertion that the Project would frustrate the Objectives of the General Plan Framework is incorrect and not supported by fact. As discussed in Section IV.A, *Aesthetics: Light and Glare*, of the Draft EIR and in Topical Response No. 4 – Aesthetics, unlike existing conditions, the Project's lighting would not exceed RIO District standards for the RIO Inner Core or the Zev Greenway. In addition, activities at the playing fields and swimming pool (which would implement the type of field lights referenced by the comment) would end no later than 8:00 p.m. and activities at the tennis courts would end no later than 9:00 p.m. By comparison, the existing high intensity and unshielded lighting conditions at the Project Site continue to 10:00 p.m. at the tennis courts and 11:00 p.m. at the golf driving range. Figures 5 and 8 of the Lighting Report (Appendix B of the Draft EIR) also demonstrate that the extent and intensity of off-site illuminance would be reduced with Project implementation.

In addition, please refer to Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, and Topical Response No. 2 - Modifications to the Project Design which provides updates to the Project's light poles. As evaluated in Section IV.A, *Aesthetics*, of the Draft EIR, light and glare impacts would not exceed existing ambient light and glare levels in the off-site area or exceed RIO standards within the Project Site. The Project's lighting program has been revised to reduce the number of field and tennis court lights. The Supplemental Lighting Report Memorandum is attached as Appendix B to this Final EIR and, as further evaluated in Topical Response No. 4 – Aesthetics, the reduction in lighting would further reduce the Project's light and glare levels. Consistent with the analysis in Section IV.A. light and glare impacts would be less than significant.

Also, please refer to Appendix J, Table LU-2, Consistency of the Project with Applicable Goals, Objectives, and Policies of the General Plan Framework Element Intended to Avoid or Mitigate an Environmental Effect. In the comparison of the Project to the Open Space and Conservation Chapter, Objective 6.1, which is to "Protect the City's natural settings from the encroachment of urban development, allowing for the development, use, management, and maintenance of each component of the City's natural resources to contribute to the sustainability of the region," the comparison of the Project in Table LU-2, PDF pages 9 and 10 of 32 states: "No Conflict. The Project would be developed within

an existing 17.2-acre non-residential property adjacent to the Zev Greenway, which is part of the Los Angeles River Greenway. The Project would provide 5.4 acres of landscaped open space available for public use, including a pathway to the Zev Greenway. A tree and landscaping program would provide for the removal of 240 trees of the existing 421 inventoried on-and off-site. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees beyond existing conditions. The majority of removed trees (179 trees or 75 percent) are non-RIO District-compliant (121 invasive Mexican fan palms). Of the 240 trees to be removed, 31 trees (the majority of which are Mexican fan palms) are located off-site in the public right-of-way, and no trees would be removed within the Zev Greenway Area (off-site). All other invasive palms (i.e., the Mexican fan palm) would be removed and replaced at a 1:1 minimum ratio with RIO District-compliant trees, and all other removed non-native trees would be replaced at a minimum 2:1 ratio with RIO District-compliant trees. As such, the Project would contribute to the Los Angeles River setting and the sustainability of the region. Thus, the Project would not conflict with policies that protect the City's natural settings from the encroachment of urban development, allowing for the development, use, management, and maintenance of each component of the City's natural resources to contribute to the sustainability of the region." Therefore, the Project would not impede or conflict with the objectives of the General Plan Framework to protect the City's natural setting and natural resources.

### **Comment No. ORG 7A-86**

#### *Open Space Element*

- For similar reasons, the Project cannot be found compliant with the Open Space Element policies aimed at ensuring the preservation and conservation of sufficient open space to serve the recreational needs of the City. (DEIR p. IV.J-22.) While the existing site is technically private open space, access to the entire site has never been difficult. Under the Project, athletic facilities will be restricted to times when they are not in use by the school's many, many athletic teams, camps, or other programs. It is unclear whether the Project will actually increase public access to the site, and any conclusions that public access will increase are speculative, at best.
- Open Space Element policies aimed at protecting habitat and conserving wildlife will be frustrated by the Project's 27 light poles and night lighting, contrary to the DEIR's conclusions. (DEIR p. IV.J-22).

### **Response No. ORG 7A-86**

The comment asserts that the Project would conflict with the policies of the General Plan Open Space Element. Please refer to the Draft EIR Appendix J, Table LU-3, Consistency of the Project with Applicable Goals, Objectives, and Policies of the Open Space and Conservation Element Intended to Avoid or Mitigate an Environmental Effect, page J-12 (PDF page 14 of 32) regarding policies of the Open Space Element. In the comparison of the Project to the first goal of the Open Space Element, "to ensure the preservation and

conservation of sufficient open space to serve the recreational, environmental, health and safety needs of the City, the comparison of the Project states: “**No Conflict.**” The entire Project Site would be available for public use, including 5.4 acres of publicly accessible, landscaped open space on a property with no existing free public access. The provided open space would increase the City’s open space resources available for public use and contribute to the recreational, health, and safety needs of the City. Therefore, the Project would not conflict with policies to ensure the preservation and conservation of sufficient open space to serve the recreational, environmental, health and safety needs of the City.” As indicated therein, the Weddington Golf & Tennis facility is only accessible with a fee and during participation in these two specific activities (i.e., golf and tennis). The existing site does not provide all day free public access to walking paths, landscaped open space or direct access to the Zev Greenway. In addition, as discussed under Response No. ORG 7A-83, above, the Project would provide a greater variety of recreational uses than the existing site and these uses would be available to the community for the majority of each day. The claim in the comment that the discussion is “speculative at best” is incorrect since public access to the Project Site is intrinsic to the Project and would be part of the potential conditions of approval provided under the CUP. Also, please refer to Topical Response No. 3 - Enforcement of Public Access, regarding public use of the Project, including the calculation that public access hours would greatly exceed the School’s own uses, even under conservative assumptions. Regarding field lighting, see Topical Response No. 4 – Aesthetics. As discussed therein, the Project would reduce light and glare intensities at the Project Site. In addition, activities at the playing fields and pool would end no later than 8:00 p.m. and activities at the tennis courts would end no later than 9:00 p.m. By comparison, the existing high intensity lighting conditions at the Project Site continue to 10:00 p.m. for tennis uses and to 11:00 p.m. for the golf driving range. The Project would reduce ambient light and glare levels and duration of lighting and, as such, lighting would not adversely affect natural habitat and wildlife. With the improvement in night lighting and public access, the Project would not conflict with the policies of the Open Space Element. In addition, while the comment claims that the Project Site is “technically private property,” this assertion implies that the Project Site as identified in Chapter II, Figure II-3, *Existing Project Site*, may not be actually owned or partially leased by a private entity, the School. However, while the Project Site is legally, not just technically, private property, it is acknowledged that under existing conditions public use of existing golf and tennis facilities is allowed for a fee. The Property is owned by a private entity and has since at least the 1890s been private property whose use by the public since the 1950s has been allowed only upon permission of the private property owner and payment of a fee. (See the Historical Resources Technical Report included in Appendix E-1 of the Draft EIR.)

## **Comment No. ORG 7A-87**

### *Conservation Element*

- The Project will conflict with the overall purpose of the Conservation Element, which is to preserve, protect, restore, and enhance the natural plant and wildlife diversity,

habitats, and migratory bird corridors and linkages of the City. The Project will operate 27 sports field lighting poles of heights up to 70 feet, in close proximity to the Los Angeles River. Migratory and resident birds are highly sensitive to nighttime lighting, as are raptors and their prey. At 70 feet tall, these poles are much taller than those currently present on the site and present a greater risk of confusing migratory birds that follow the moon.

## **Response No. ORG 7A-87**

The comment asserts that the Project would conflict with the policies of the General Plan Conservation Element and movement of wildlife due to lighting. Please refer to the discussion of lighting in Response Nos. ORG 7A-32, ORG-7A-39 ORG 7A-85, and ORG 7A-92 regarding the impact of lighting on wildlife. Also please see Appendix J, Table LU-4, Consistency of the Project with Applicable Goals, Objectives, and Policies of the Conservation Element Intended to Avoid or Mitigate an Environmental Effect. In the comparison of the Project to the Conservation Element Section 12, Habitats, which states: “Preserve, protect, restore and enhance natural plant and wildlife diversity, habitats, corridors and linkages so as to enable the healthy propagation and survival of native species, especially those species that are endangered, sensitive, threatened or species of special concern,” the evaluation states that the Project’s 5.4 acres of publicly-accessible, landscaped open space would be located in a highly urbanized area and would replace existing invasive plant species and non-RIO District-compliant trees with native trees and understory native plantings that meet RIO standards. The analysis states that in doing so, the Project would expand and improve upon existing, limited foraging and wildlife habitat along the Zev Greenway. The Project would not interfere with special-status wildlife species or their movement. As such, it would meet a high standard with respect to protection of natural habitats, as well as enhance survival of native species. Also, please refer to comments and responses to the CDFW letter (Letter AG-1) provided in this Final EIR regarding impacts to the western yellow bat. Therefore, the Project would not conflict with policies that preserve, protect, restore and enhance natural plant and wildlife diversity, habitats, corridors and linkages and would not conflict with the policies of the Conservation Element.

## **Comment No. ORG 7A-88**

### *Sherman Oaks-Studio City-Toluca Lake-Cahuenga Pass Community Plan*

- The DEIR claims that the Project will support a Community Plan need for more neighborhood parks, but fails to acknowledge that the public availability of many of the facilities will be quite limited in practice. (Goals 4 and 5)

## **Response No. ORG 7A-88**

The comment asserts that the Project would conflict with the policies of the Sherman Oaks-Studio City-Toluca Lake-Cahuenga Pass Community Plan since public access would be “quite limited”. Please refer to Response No. ORG 7A-83, above, and Topical

Response No. 3 - Enforcement of Public Access. As discussed therein, public use of the Project as described in the Draft EIR would be enforceable under the approved CUP. Objectives of the Project include the following:

- Provide opportunities for shared use of a variety of types of recreational facilities and activities for the community.
- Create new publicly-accessible open space with a broad array of recreational facilities in a safe and secure environment for the surrounding community and the public to use similar to a City-owned park, while also providing a community room, café, and indoor and outdoor areas for public gatherings, performances, and occasional special events.
- Increase public access to and enhance the adjacent Los Angeles River and Zev Greenway through a network of publicly-accessible pathways, a new direct connection to the Zev Greenway, and a landscape plan that would restore native plant communities, create habitat for various species, and support the goals of the Los Angeles River Improvement Overlay District Ordinance, the Los Angeles River Revitalization Master Plan, and the Los Angeles River Master Plan Landscaping Guidelines and Plant Palettes.

The public would have full-time daily access to 5.4 acres of open space including a 0.75-mile landscaped pedestrian walking pathway through the Project Site to the Zev Greenway (where it connects via a ramp to the Greenway), full daily use of the putting green, and full access to the café/clubhouse. The Project would provide for public use of on-site recreational facilities when not in use by the School. As discussed in Chapter II, *Project Description*, page II-47 of the Draft EIR, most of the School's outdoor activities would occur in the late afternoons and would end between the hours of 4:45 p.m. to 7:45 p.m. with approximately 50 percent of school days containing no outdoor athletic activities after 5:30 p.m. The majority of the school day would be open for public use. Saturdays would be open a greater majority of the day and Sundays would be almost wholly open for public use. Out of the 7:00 a.m. to 8:00 p.m. maximum outdoor operating hours, public uses of the two fields could comprise up to ten hours as compared to School uses of three hours. Hours of public access to the pool are more limited, consisting of weekday access between 7:00 a.m. and 9:00 a.m., given the need to provide certified lifeguard supervision. In addition, the Project would offer a greater range of recreational uses than the existing golf and tennis uses, in conformance with the RAP's Citywide Community Needs Assessment for the South San Fernando Valley geographic area, which lists walking paths as the highest priority recreational use and gymnasium and swimming pool as high priority uses. The Project, with a three-quarter-mile, landscaped walking path, gymnasium, and swimming pool (though with access limits for lifeguarding), would more closely meet the RAP's identified recreation needs for the community compared to a tennis and golf club. Furthermore, the use of a "pre-approved" status and "reservations" for public use of recreational facilities is to smoothly accommodate those who wish to use the School's facilities (including the gymnasium), and to enhance safety for individuals and families. Specifically, the requirement that groups or organizations be pre-approved ensures that the group or organization is able to provide appropriate supervision of its

intended activities and participants and that the group or organization is familiar with and abides by the conditions of Project Site usage (including, but not limited to, preferred driving routes and the prohibition on parking in the neighborhood), and that the use of facilities can be managed in a way that best supports the aggregate, desired activity schedule of public groups and organizations across the Project Site (such as might be the case if a group or organization requires a certain number of continuing opportunities per week in order for the program to thrive). The claim in the comment that the public availability of many of the facilities will be quite limited in practice is not supported by the information regarding public use provided in the Draft EIR. Furthermore, as described in Chapter II, *Project Description*, of the Draft EIR, pages II-2 and II-33 through II-35, the Draft EIR is clear that, although the majority of the Project Site is private property (see Chapter II, Figure II-3, Existing Project Site), public access to the Project Site is an integral part of the Project as well as a major benefit to the community. This goes beyond any shared use arrangements provided by even public school facilities. Finally, the majority of the Project Site is private property and, therefore, public use is a benefit of the development of the Project Site for school uses rather than a substitute for the City's acquisition of park space.

## **Comment No. ORG 7A-89**

### **3. The Project is Inconsistent with the 2020-2045 RTP/SCS.**

The overarching purpose of the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy is to implement SB 375 by reducing vehicle miles traveled. However, the Project would likely *increase* vehicle miles traveled by moving sports practices, games, and other activities that currently occur on-campus to a new, off-campus location. Students will still have to travel to and from school, but they will now make an additional trip to and from the Project. Those miles increase, regardless of whether they occur on the school's proposed shuttle system or in private vehicles. And if they occur in single-occupancy vehicles, the RTP goal of reducing single-occupancy vehicle trips would not be met. These inconsistencies is not discussed in the DEIR. Instead, the DEIR discusses the location of nearby bus routes, which students are unlikely to use. (DEIR p. IV.J-19.)

## **Response No. ORG 7A-89**

The comment suggests that a project can only be found consistent with the RTP/SCS if it results in an outright reduction of VMT as compared to existing conditions. Such suggestion is incorrect. Rather, the RTP/SCS recognizes and supports growth and redevelopment within the City, and that insistence on VMT reduction with each and every development opportunity would be impractical and counter to progress within the City's urban landscape. Rather, the RTP/SCS encourages project proponents to implement VMT reduction strategies, when feasible, to reduce what would have otherwise been a more significant project-related VMT impact.

The comment asserts that the discussion of RTP/SCS policies to reduce VMT was not adequate in the Draft EIR. However, as evaluated in Table LU-1, Consistency of the Project with Applicable Goals, Objectives, and Policies of the 2020-2045 RTP/SCS Intended to Avoid or Mitigate an Environmental Effect, provided in Appendix J of the Draft EIR and summarized in Section IV.J, *Land Use and Planning*, of the Draft EIR, the Project would include provisions to specifically reduce VMT. The Project would provide shuttle bus service for students, employees, visitors, and spectators (the primary School users of the Project) and as discussed therein the Project would reduce the number of single occupancy vehicle trips. As described in Table LU-1, the Studio City location of the Project was selected to maintain a close distance between the Upper School campus and this off-site recreational use in order to reduce VMT between the Project Site and the Upper School campus (a driving distance of approximately 0.9 miles) In addition, as discussed in Table LU-1, the development of the Project would increase opportunities in the Studio City area and adjacent surrounding neighborhood for access to publicly-accessible open space and pedestrian pathways, the Zev Greenway, and the Los Angeles River by bicycle and walking, which would reduce the need for recreationists to travel by car to farther recreational sites. As discussed in Table LU-1, the Project would not conflict with strategies that encourage design and transportation options that reduce the reliance on and number of solo car trips and, thus, would not conflict with the objective of the RTP/SCS to reduce VMT. Because VMT is evaluated in the RTP/SCS table, the assertion regarding the lack of discussion is not supported.

Additionally, the comment incorrectly asserts that the Project would increase VMT, in part, because recreational activities currently occurring at the Upper School campus would be moved to the Project Site. As discussed in Topical Response No. 13 – Need for Project (Non-CEQA), the Project Site facilities would supplement, not replace, the School’s existing facilities. As described in more detail therein, the existing facilities are already space-constrained, impinging on student participation, limiting the formation of new sports programs (including those that would provide greater parity of opportunities between genders), capping the number of teams that can be supported within an existing sport, creating crowded and potentially unsafe practice conditions, reducing the possibility of intramural sports programs, and shifting athletic activities later into evening hour. See also Response No. 7A-22 above.

### **Comment No. ORG 7A-90**

The RTP/SCS further contains goals aimed at increasing amenities and connectivity within neighborhoods. The DEIR claims that the Project will increase connectivity with pathways and ADA access and that it will essentially serve as a public park, but this is not actually true. (DEIR p. IV-19.) Public access to athletic facilities will be restricted to times when they are not in school use for practices, games, summer programs, or camps, meaning that public access to the facilities will likely be restricted to weekdays before 3 p.m. – and, even then, if they are not also being used by the school for science or other outdoor activities. The excessive fencing and security will also serve to limit the public use of the site, it is likely to be both confusing and unwelcoming.

## Response No. ORG 7A-90

The comment contains several assertions regarding limited public access and use of the Project Site. Please refer to Response No. 7A-88, above, regarding the majority hours of the day when the Project's recreational facilities would be available to the public. Also specifically note that public access to the 5.4 acres of open space (including the 0.75-mile pathway, landscaping, shade, and seating), a new connection point to the Zev Greenway, the clubhouse, the café, and the putting green would be open to the public from 7:00 a.m. to 9:00 p.m. seven days a week. Landscaped walls and fencing would be used to define areas that would be available all day to the public and prevent conflation with athletic facilities when the latter are being used by the School. Security is provided to create a safe environment for neighborhood families and individuals using the public open space and the public and students using the Project's recreational facilities. Any academic uses of the Project Site by the School, which are fully disclosed in the Draft EIR as incidental to the Project's main objectives would not preclude public uses of the Project Site. Furthermore, the comment's assertion that fencing and security would "serve to limit the public use of the site" is speculative and incorrect.

## Comment No. ORG 7A-91

The DEIR further claims that the Project would not conflict with policies aimed at reducing electricity reliance because would have sustainability features (DEIR p. IV.J-19), but this conclusion ignores any comparison between the existing facility's energy use and that of the Project, which would have to power several sets of locker rooms, a large gymnasium, and a pool not currently onsite.

## Response No. ORG 7A-91

The comment appears to assert that the appropriate threshold via which the Project's use of electricity should be evaluated is whether it uses more or less electricity than the Project Site under existing conditions although the page cited in the comment refers to whether the Project would conflict with the 2020-2045 RTP/SCS. Nonetheless, such a threshold, like the similar contention by the commenter that projects should not increase VMT above existing uses (Comment No. ORG 7A-89), is not correct and is not the relevant threshold under CEQA. In other words, the discussions of conservation and sustainability are not included in an EIR to compare a development with an existing use (which could be a vacant site), but with the potential demand that would occur if energy-saving components were not implemented. As discussed in Chapter II, *Project Description*, pages 60 and 61 of the Draft EIR, the Project would provide sustainability features that would reduce the Project's energy demand. The Project would include 426 roof-top solar panels on the gymnasium building, energy from which would be stored and used to reduce reliance on electricity. Lighting throughout the Project Site would consist of energy-efficient LED fixtures. The Project would harvest natural light for the main spaces in the gymnasium building using skylights and daylighting systems that would coordinate the levels of artificial lighting. The Project would use high efficiency variable capacity air volume

heating, ventilation, and air conditioning (HVAC) systems. In addition, the Project would turn off lighting earlier than under existing conditions. Field and swimming pool lights would be turned off no later than 8:00 p.m. and tennis court lights would be turned off no later than 9:00 p.m. compared to 10:00 p.m. for tennis courts and 11:00 p.m. for the golf driving range under existing conditions. The statement in the Draft EIR that the Project would provide features that would reduce energy demand is supported by these sustainability efforts which also support the conclusions reached regarding the threshold question of whether the Project would conflict with the 2020-2045 RTP/SCS discussed in Section IV.J, *Land Use and Planning*, of the Draft EIR, and with the threshold question of whether the Project would result in potentially significant environmental impacts due to wasteful, inefficient and unnecessary consumption of energy resources as discussed in Section IV.E, *Energy*, of the Draft EIR. The claim that that the Project would not reduce energy reliance is not supported by fact.

### **Comment No. ORG 7A-92**

The DEIR's claims about the Project's support of migratory bird corridors fail to discuss the impacts of the 70-foot-tall stadium lights. (DEIR p. IV.J-19 and 20.) Thus, the Project likely conflicts with RTP policies concerning wildlife, as well.

### **Response No. ORG 7A-92**

The comment asserts that the Project's "likely" conflicts with RTP policies concerning wildlife, including migratory birds, presumably due to the field lighting or the height of the poles, are not analyzed in the Draft EIR. It is noted that under existing conditions the entire southern boundary of the Leased Property along the golf course holes (a horizontal distance of over 600 feet), contains a series of support poles and netting that reach heights up to 30 feet, with unknown impacts on wildlife and migratory birds. It is also noted that the "stadium lights" referenced by the comment would be lower than many of the wooden poles that support the existing golf driving range netting that reaches a height of approximately 90 feet, also with unknown impacts on wildlife and migratory birds. As discussed in Section IV.C, *Biological Resources*, of the Draft EIR, page IV.C-48, the Project's field lights and building lights would be shut off each night and the duration of lighting would be shorter every day of the year than existing conditions except for low-level lighting for security and wayfinding purposes or lighting to accent signage and landscaping elements. When migrating birds do pass through the Project Site, the field lights have no moving components or large walls (such as high-rise buildings) that would harm birds in flight, and no large expanses of netting that would obstruct or ensnare birds in flight. As such, the effects of the light poles were not evaluated since these narrow, unmoving structures were understood to be non-contributing (as are most power poles). As discussed on page IV.C-47 and IV.C-48, the Biological Study Area supports potential nesting, roosting, and foraging habitat for migratory birds and bats. Since the Biological Study Area primarily supports ornamental trees and turfgrass, as well as a thin strip of native California brittlebush scrub that was recently restored on the Zev Greenway, the quality of existing foraging habitat is low. Higher quality foraging habitat occurs in less

developed areas with larger expanses of open space. As analyzed in Section IV.C, *Biological Resources*, of the Draft EIR, Project landscaping would increase the quantity and quality of native habitat on the Project Site, and “would consist entirely of native tree and plant species that would provide foraging opportunities for bird species.” The Draft EIR also states: “The Project’s native landscaping would help to enhance the existing off-site native habitat, as well as the surrounding area, by expanding the habitat, creating a greater native seed source, and providing a larger buffer from non-native ornamental landscaping in the surrounding developed areas, which may benefit migrating wildlife by providing enhanced foraging opportunities.” The claim that lighting and light poles would adversely impact migratory bird corridors is not supported by fact.

### **Comment No. ORG 7A-93**

#### **4. The Project is Incompatible with the Los Angeles River Revitalization Master Plan and River Improvement Overlay District.**

The Project would be located in the inner core of the RIO District, a land use overlay implemented by the City in 2014 to ensure the consistency of land use development along the 32-mile corridor of the Los Angeles River with the Los Angeles River Revitalization Master Plan (LARRMP). The LARRMP’s goals are to contribute to the environmental and ecological health of the City’s watersheds; provide native habitat and support local species; establish a positive interface between the Los Angeles River and adjacent properties; promote pedestrian, bicycle and other multi-modal connections between the river and surrounding neighborhoods; provide an aesthetically pleasing environment; provide safe, convenient access to and along the river; promote river identity; and support the City’s stormwater ordinances and programs. (DEIR p. IV.J.11.).

### **Response No. ORG 7A-93**

The comment claims that the Project would be incompatible with the LARRMP and the RIO District. In this regard, please refer to Response No. ORG 7A-79, above, regarding Project consistency with the policies of the RIO District Ordinance. Also please see Table LU-6 provided in Appendix J of the Draft EIR, which compares the Project to the applicable policies of the RIO District and the LARRMP. As discussed in Response No. ORG 7A-79 and in Table LU-6, the Project would not conflict with the range of applicable policies of the RIO District. Regarding the LARRMP, the discussion states that (as revised in Chapter 3 of this Final EIR), “By providing a park and open space use, pedestrian ~~trails~~ pathways, community use of recreational and athletic facilities when not in use by the School, and a landscaped trail link pedestrian ramp to the Zev Greenway, the Project would support the goals to develop parks and open space, and to provide pedestrian ~~trails~~ pathways. The Project would support the goals of the LARRMP to revitalize the general environment of the Los Angeles River by providing improved natural habitat, improving existing water quality, as well as providing recreation and open space amenities in the RIO inner core.” The comment does not demonstrate that the Project would conflict with either the policies of the RIO District or the LARRMP.

## Comment No. ORG 7A-94

The Project may conceivably support some of the LARRMP's goals, but it would not further, and would instead frustrate, others. Regarding the goals of establishing a positive interface between the Los Angeles River and adjacent properties and of promoting connections between the river and neighborhoods, the Project would construct literal barriers in the form of 10- and 11-foot-tall fences. Existing chain link fences are six feet tall. While the Project would provide pedestrian gates to access the perimeter trail, which would ultimately connect to the river greenway, the proposed system does not welcome the public. The DEIR heavily emphasizes security, the number of security guards at any time, and the use of other security measures, making it unlikely that the typical river user, or neighborhood pedestrian, would understand that they were permitted, let alone welcomed, into an exclusive private school and the adjacent Los Angeles River. The security regime may also discourage users who, even if they understand they are allowed onto the site, may not understand how to use it, or who feel uncomfortable with the security presence or fencing. For example, the DEIR emphasizes the CCTV aspects of the Project. The safety goal may be compromised by the pedestrian trail, which will be squeezed between two, tall fences, potentially preventing escape in the event of criminal activity. It is also unclear how the Project, which would further privatize and heavily fence this river-adjacent "opportunity site," would promote river identity. The Project's sports field lighting will also likely harm local species, particularly birds that could be exposed to the 60 and 70-foot-tall stadium light poles while in flight (and, therefore, not protected by measures restricting the angles or property line lightspill).

## Response No. ORG 7A-94

The comment asserts that the Project's fencing and security would frustrate goals of the LARRMP to create a positive interface with the Los Angeles River or to welcome the public. Contrary to existing conditions in which almost the entire Project Site is surrounded by fencing and netting that varies in height from 6 to thirty feet, and to which only paying customers of the golf and tennis facilities have access, the Project's 0.75-mile public pathway, part of approximately 5.4 acres of open space that would be able free of charge to the public daily from 7:00 a.m. to 9:00 p.m., would be accessed via four gates along Valley Spring Lane and framed by landscaped fencing or berms. The landscaped pedestrian pathway would provide for public seating, extensive native landscaping, and shade areas that would be secure and welcoming to the public. The Project would install a pedestrian ramp to the Zev Greenway from Coldwater Canyon Avenue to further improve public access to the Zev Greenway. The comment exaggerates the Project's security features, such as CCTV and security personnel since such personnel would not be required throughout the Project Site nor would CCTV cameras be obtrusive. In addition, regarding lighting and wildlife, as stated in Section IV.C, *Biological Resources*, pages IV.C-46 through IV.C-48 of the Draft EIR, under the heading Wildlife Movement and Corridors (beginning on page IV.C-45), lighting levels along the property line nearest the Zev Greenway would be at or below 0.2 foot candle at the property line of the Project Site and 0.01 foot candle at fifteen feet past the property line. These

lighting levels would be consistent with RIO District lighting requirements which are intended to maintain the character of the River and protect wildlife. The incremental addition of lighting associated with the Project design would be consistent with the City regulations and would be concentrated primarily away from the Los Angeles River and, since the lighting fixtures are specifically designed with precise optics and integral shields to aid in controlling the light and preventing unwanted spill light, uplight, or glare. The light poles are stationary, narrow features, similar to the area's public utility poles. Because the light poles contain no moving parts, they are not a threat to birds in flight (refer to Response No. ORG 7A-92). The claims in the comment are primarily speculation and are not supported by the facts provided in the Draft EIR.

### **Comment No. ORG 7A-95**

The DEIR includes similar justifications for claiming consistency with the RIO District Ordinance requirements. The Project's sports field lighting and scoreboards should be an issue. At the Field A site near the River in the Project's southeastern portion, the Project would install a 25 foot by 8-foot LED and 6, 70-foot-tall light poles. (II-57, Fig. II-27.) Field B, nearer to the River in the western portion of the site, would have 7 light poles and the same score board, including on the west side of Field B, the side nearest the River. One of the lighting poles would abut the Zev Greenway. (II-57, Fig. II-27.) The DEIR addresses the Project's sports field lighting, but claims that it will comply with the ordinance because it will not exceed certain lightspill limits at the Project boundaries. This does not address the unique circumstances of very night lighting far above the ground surface. The sports field lighting has the potential to adversely impact bird species the RIO District is designed to conserve and protect. The Project cannot be found in compliance with the purposes of the RIO District.

### **Response No. ORG 7A-95**

The comment asserts that the field lights, because of their heights, and the sign boards have the potential to adversely impact bird species and that glare (visible light source) of the field lights would be directly visible from lower, off-site locations. In regard to impacts on birds in flight and the effects of lighting on wildlife species, please refer to Response Nos. ORG 7A-41, ORG 7A-92, and ORG 7A-94, above. The Project's lighting levels would be consistent with the RIO District Ordinance, which is designed to conserve and protect bird species. Further, as the lighting fixtures and signs contain no moving components (or large walls) that would be a threat to birds in flight, these would not impact bird species. As discussed in Chapter IV.A, *Aesthetics - Light and Glare*, and in Appendix B, Lighting Technical Report, of the Draft EIR and summarized in Topical Response No. 4 – Aesthetics, the new lighting system should generally produce substantially less candela, or glare (visible light source) than under existing conditions. "Luminance" is glare that emanates from a visible light source (not light spill). As discussed on page IV.A-5 of the Draft EIR, "direct glare (expressed in candela) is a glare resulting from high luminances or insufficiently shielded light sources that are in a field of view" (LAMC Section 93.0117(b)). The RIO District Ordinance (LAMC Section 13.17, F, Division 3)

establishes legal parameters related to luminance or glare (direct visibility of the light source) as follows:” (a) all site and building mounted lighting shall be designed such that it produces a maximum initial luminance value no greater than 0.20 horizontal and vertical foot candles at the site boundary, and no greater than 0.01 horizontal foot candles 15 feet beyond the site. No more than 5.0 percent of the total initial designed lumens shall be emitted at an angle of 90 degrees or higher from nadir (straight down); (b) all low pressure sodium, high pressure sodium, metal halide, fluorescent, quartz, incandescent greater than 60 watts, mercury vapor, and halogen fixtures shall be fully shielded in such a manner as to not exceed the limitation specified in LAMC Section 13.17.” As described on pages IV.A-13 through IV.A-19 of the Draft EIR, with the use of shielding and precision lighting, the Project light levels would be consistent with the City regulations, including RIO District lighting requirements. The off-site luminance under existing and future levels (glare) are summarized in Table IV.A-2, *Summary of Calculated Off-Site Luminance*, on page IV.A-20 of the Draft EIR. As described therein, the new lighting system would produce substantially less candela, or glare, than the existing lighting. Modeled candela per square meter calculations for one receptor (4202 Bellaire Avenue) would increase slightly as compared to existing conditions, although the increase is approximately equivalent to the brightness of a single candle flame in front of the property. Therefore, based on the information summarized above and discussed in Section IV.A, *Aesthetics (Light and Glare)*, of the Draft EIR, and the Lighting Report including in Appendix B of the Draft EIR, the field lights and sign boards would not adversely impact bird species and the visible light source of the field lights would not be directly visible from off-site locations above the low-level parameters established under the LAMC.

In addition, please refer to Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, and Topical Response No. 2 Modifications to the Project Design, which provides updates to the Project’s light poles. As evaluated in Section IV.A, *Aesthetics*, of the Draft EIR, light and glare impacts would not exceed existing ambient light and glare levels in the off-site area or exceed RIO standards within the Project Site. The Project’s lighting program has been revised to reduce the number of field and tennis court lights. The Supplemental Lighting Report Memorandum is attached as Appendix B to this Final EIR and, as further evaluated in Topical Response No. 4 – *Aesthetics*, the reduction in lighting would further reduce the Project’s light and glare levels. Consistent with the analysis in Section IV.A, light and glare impacts would be less than significant.

### **Comment No. ORG 7A-96**

Finally, the DEIR makes no attempt to discuss the Project’s implications for the Los Angeles River Master Plan Update, the draft of which has been publicly available for over one year. As the Project represents the redevelopment of an important river opportunity site and access point, its continued compliance with the Master Plan is imperative. This information must be included in a recirculated DEIR.

## Response No. ORG 7A-96

The comment asserts that the Draft EIR did not evaluate the Los Angeles River Master Plan Update. The Draft EIR is required to evaluate a Project's potential conflict with policies that are adopted to mitigate or avoid environmental effects. The Los Angeles River Master Plan Update was still in draft form and not adopted, and, thus, open to change until May 2022. This was several months after the Notice of Preparation on September 30, 2020 (ending on October 30, 2020) and the completion and circulation of the Draft EIR on March 10, 2022. There is no CEQA requirement that the evaluation of this plan be incorporated and the Draft EIR be recirculated with this additional information. However, regarding environmental effects related to the Los Angeles River, Project impacts affecting the River are addressed in detail in the responses to the CDFW letter (AG-4) in this Final EIR. Please refer to Response Nos. AG 4-1 to AG 4-36 for responses to CDFW's comments.

In addition, for informational purposes, the Master Plan is generally aimed at improving water quality, increasing wildlife habitat and biodiversity and creating equitable access to parks and trails along the Los Angeles River. The Master Plan is organized by a series of goals, actions, and methods related to: flood risk, parks and trails, ecosystems, river access, arts and culture, housing affordability, engagement and education, water supply and water quality. Among its specific goals are:

- creating 51 miles of connected open space along the entire LA River
- building support facilities (i.e., basic amenities, such as signage, benches, and water fountains) along the LA River
- completing the LA River Trail to create a continuous path along the entire river
- creating welcoming access points to the river and the LA River Trail
- improve water quality and contribute to the attainment of water quality requirements to protect public and environmental health.
- capture and treat stormwater and dry weather flows before they reach the river channel for groundwater recharge, direct use, water recycling, or release for downstream beneficial uses.
- increasing safe transportation routes to the river
- increasing habitat and ecosystem function along the river corridor and using it as a living laboratory
- increasing plant species biodiversity with a focus on California native plants
- creating a connected network of habitat patches and corridors to support wildlife

The Project would be substantially consistent with and support the goals related to the environment and health of the Los Angeles River. With regards to parks and trails goals, the Project would increase public access to and enhance the adjacent Los Angeles River and Zev Greenway through a network of publicly-accessible pathways, a new direct

connection to the Zev Greenway, and a landscape plan that would restore native plant communities, create habitat for various species, and support the goals of the Los Angeles RIO District Ordinance, the Los Angeles River Revitalization Master Plan, and the Los Angeles River Master Plan Landscaping Guidelines and Plant Palettes. Within the Project Site, support facilities would be provided along the Project's publicly accessible pedestrian pathways. See Topical Response No. 3 - Enforcement of Public Access, for additional details regarding the Project's public access features. See Response Nos. ORG 7A-87, ORG 7A-92 and ORG 7A-97 for additional discussion of the Project's less than significant impact to wildlife corridors.

With regard to water quality and water supply, the Project proposes to capture and treat stormwater runoff from the Project Site. Stormwater that currently flows untreated to the Los Angeles River from the Project Site would be treated before entering the Los Angeles River, resulting in improved water quality. Captured and treated stormwater would also be used for on-site irrigation to reduce water demand on LADWP water resources. Refer to Response Nos. AG 4-15 and AG 4-16 for additional details on the Project's capture and re-use system and impacts to flows within the River. As discussed therein, there would be no potentially significant impact on downstream wildlife habitat or beneficial uses resulting from the Project. The capture and reuse system has been reduced in size based on direction from the City for the Project to not provide treatment of stormwater from the off-site property area, but rather to capture, treat and reuse only on-site stormwater. This requirement has resulted in a revision to Project Design Feature WS-PDF-2 to remove reference to the 38.64-acre off-site drainage area, which is shown in Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR.

Overall, as discussed above, the Project would be substantially consistent with the applicable goals of the Los Angeles River Master Plan Update.

## **Comment No. ORG 7A-97**

### **5. The Project is Incompatible with Existing Height and Light Limitations.**

The DEIR explains that the Project seeks 27 light poles of up to 70 feet in height, up to 40 feet taller than the 30-foot height limit currently allowed on the property. (DEIR p. IV.J-28.) Similarly, the DEIR seeks to construct 10-foot and 11-foot-tall fences surrounding the Project, in lieu of the 6-foot and 8-foot-tall fences permitted by code. (Ibid.) The DEIR then lists other, unrelated approvals needed for the Project. It then concludes:

Based on the above, the Project would be consistent with applicable regulations or provisions of the LAMC applicable to the Project Site. Therefore, the Project would not result in significant environmental impacts related to inconsistency with the LAMC's land use regulations. As such, impacts with respect to the land use provisions of the LAMC would be less than significant.

## Response No. ORG 7A-97

The comment asserts that the Project is incompatible with existing height limitations and light limitations, that the Project would not be consistent with applicable regulations of the LAMC, and, by implication, that the findings of less than significant impacts for land use regulations was not correct. It is noted that the Project's lighting poles would be lower than many of the wooden poles that support the existing golf driving range netting that reaches a height of approximately 90 feet, and lighting impacts (offsite illuminance and luminance) would be less than current conditions. The discussion of the Project's requested permits and approvals is provided in Chapter II, *Project Description*, Subsection 6, *Requested Permits and Approvals*, pages II-62 and II-63, and in Section IV.J, *Land Use and Planning*, pages IV.J-28 and IV.J-29. The request for permits and approvals implies that the Project would not have "by right" zoning or other permission to develop the Project as discussed in the Project Description. Section IV.J of the Draft EIR explains that the Project's height exceptions are in conflict with the Project Site's zoning designation and that the permits and approvals would be required to bring the Project into conformance with the LAMC. Such requested changes are pursuant to provisions of the LAMC providing that the Project would meet certain potential conditions of approval. The request for the height exception (in lieu of the 30-foot height limit otherwise required by LAMC Section 12.21.1 A) for the field light poles is pursuant to LAMC Section 12.24 F. Regarding lighting regulations, Section IV.J, page IV.J-29 of the Draft EIR states: "Notably, environmental impacts associated with the proposed lighting have been analyzed in Section IV. A, *Aesthetics*, of this Draft EIR". As evaluated in Section IV.A, light and glare impacts would be less than significant. As evaluated in the Initial Study (Appendix A of the Draft EIR), all other operational aesthetic impacts would be less than significant. The findings of the Initial Study are further summarized in Topical Response No. 4 – Aesthetics. This conclusion in the Draft EIR that, with the granting of the height limitation exceptions, the Project would not be in conflict with the LAMC and that the exception to the height limitations would not result in adverse environmental impacts is, therefore, supported by the Draft EIR's analysis.

## Comment No. ORG 7A-98

(DEIR p. IV.J-29.) The DEIR draws no link between its wish list of unpermitted height increases and the conclusion that impacts will not be significant. The over-height light poles will pose risks to resident and migrating birds, and the over-height fences will impede community use of the allegedly publicly available facilities. These conflicts with the Los Angeles Municipal Code create significant environmental impacts. Either the Project must be revised to adhere to the existing height limits for light poles and fences, or the EIR must be revised to disclose this conflict with applicable law.

## Response No. ORG 7A-98

The comment again claims that the light poles would be a hazard to resident and migrating birds, that the Project's fencing would impede public access and that the height

exceptions will result in significant environmental effects. As described in Section IV.C, *Biological Resources*, pages IV.C-46 through IV.C-48 of the Draft EIR, under the heading Wildlife Movement and Corridors (beginning on page IC.C-47), lighting levels along the property line nearest the Zev Greenway would be at or below 0.2-foot candle at the property line of the Project Site and 0.01 foot candle at fifteen feet past the property line. These lighting levels would be consistent with RIO District lighting requirements which are intended to maintain the character of the River and to protect wildlife. The incremental addition of lighting associated with the Project design would be consistent with the City regulations and would be concentrated primarily away from the Los Angeles River since the lighting fixtures are specifically designed with precise optics and integral shields to aid in controlling the light and preventing unwanted spill light, uplight, or glare. The lighting would not adversely impact wildlife including bird species. The stationary light poles in themselves, as with most of the City's utility poles, would not adversely impact bird species. Regarding public access, the network of pathways for public use are accessible from four gates on Valley Spring Lane and from the Zev Greenway. Landscaped fencing is used to mark the 0.75 mile of landscaped pedestrian walking pathways and to prevent conflation with athletic facilities when the latter are being used by the School. The tallest fences are located primarily along the northern portion of the Project Site to reduce sound from the playing fields and tennis courts from impacting the residential neighborhood along Bellaire Avenue and Valley Spring Lane and do occur throughout the Project Site or along the public access pathway. The fencing along the pathway would demark the walking path and provide a defined zone for the installation of native shrubs along the pathway. The shrub-lined path would create an aesthetically welcoming environment. It is noted, however, that public access is not a CEQA criterion. The comment fails to factually demonstrate how the proposed height exceptions would result in undisclosed significant impacts or that recirculation of the Draft EIR would be required. See also, Response No. ORG 7A-92 regarding migratory birds and ORG 7A-94 regarding fencing.

## **Comment No. ORG 7A-99**

### **H. The DEIR Fails to Comply with CEQA's Requirements for Tribal Cultural Resources.**

CEQA includes specific requirements for consultations with Tribes and mitigation of potential impacts to Tribal Cultural Resources. The DEIR's treatment of Tribal Cultural Resources (TCRs) that could be found at the Project site fails to fully comply with CEQA's requirements for both.

CEQA requires the City to consult with Tribes traditionally and culturally associated with the Project site. Two Tribes requested that consultation from the City: the Fernandeño Tataviam Band of Mission Indians (FTBMI) and Gabrieleño Band of Mission Indians - Kizh Nation (Kizh Nation). (DEIR p. IV-N.7; App. N; Pub. Resources Code, § 21080.3.1.) Both Tribes informed the City of the high likelihood of the presence of Tribal Cultural Resources at the Project site. The Kizh Nation provided the City with detailed maps showing the Project site is located within the Village of Cahuenga and along a heavily

used trad [sic] route, informing the City that “human activity can be pronounced within the shared use areas due to the combined use by multiple villages and TCRs may be present in the soil layers from the thousands of years of human activity within that landscape.” (DEIR App. N.) The DEIR and its Appendix N fail to include usable copies of the maps and historic information provided by the Kitz Nation, only showing that it was an attachment to an email submitted to the City. (DEIR App. N.).

## Response No. ORG 7A-99

The comment claims that the Draft EIR fails to comply with CEQA requirements with respect to Tribal Cultural Resources. The CEQA Guidelines include the following threshold as presented in Section IV. IV.N, *Tribal Cultural Resources*, pages IV.N-10 and IV.N-11 of the Draft EIR:

“(a)Would the Project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:

- i) Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code section 5020.1 (k)?
- ii) A resource determined by the lead agency, **in its discretion and supported by substantial evidence**, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American tribe?” (Emphasis added.)

As discussed in Section IV.N and in Appendix N, Tribal Cultural Resources Report, in the Draft EIR, in addition to archival research, the City engaged in outreach to a range of Southern California tribes and received responses from the Fernandeano Tataviam Band of Mission Indians (FTBMI) and the Gabrieleño Band of Mission Indians – Kizh Nation (Kizh Nation). As documented by the City, the City met with the FTBMI and Kizh Nation several times in 2020 and 2021. Chairman Salas of the Kizh Nation provided documentation to the City described in the Draft EIR. As explained in Section IV.N, page IV.N-11 of the Draft EIR, mapping documents provided by Chairman Salas identified trade routes, trails, waterways, and the village of *Cahuenga*, which was historically located in the present Universal City, three miles to the east of the Project Site. Materials provided by both the FTBMI and the Kizh Nation indicate the Project Site and its vicinity were located along transportation routes that prehistoric and ethnographic period peoples would have used to travel between villages and resource areas. However, the materials did not identify the presence of known resources within the Project Site itself. Therefore,

as a result of the AB 52 consultation process, no known tribal cultural resources were identified within the Project Site. Maps and other resources provided to the City are contained in Appendix N of the Draft EIR. However, it is common practice to not include specific archaeological sites and resources in a public document, such as a Draft EIR for the purpose of protecting the location and integrity of archaeological sites. Although no mitigation measures are required for specific tribal cultural resources, the City has established a standard condition of approval to address inadvertent discovery of tribal resources. The standard condition of approval requires the immediate halt of construction activities in the vicinity of the discovery, coordination with appropriate Native American tribes and the City, and development and implementation of appropriate actions for treating the discovery (see Sections IV.D, *Cultural Resources*, page IV.D-36, and IV.N, *Tribal Cultural Resources*, pages IV.N-11 and IV.N-12 of the Draft EIR). The City's standard condition of approval would protect the inadvertent discovery of tribal cultural resources. The comment does not include any factual evidence to show how the Draft EIR does not meet the requirements of CEQA with respect to the evaluation of tribal cultural resources.

It is further noted that the School has recently (after publication of the Draft EIR) entered into a Memorandum of Understanding (MOU) with the FTBMI for the development and installation of educational monuments and panels at the Project Site highlighting the history and culture of Indigenous Peoples who lived at or near the Project Site and continue to use that site today; to work with Friends of the LA River to integrate modules into its evolving Project Site curriculum that highlight aspects of FTBMI history and culture; and to develop curriculum that highlights the history and cultural contributions of the Indigenous Peoples who lived, and continue to live, in the San Fernando Valley. Under the MOU, the School will provide financial and logistical resources to support these activities and the FTBMI will provide expertise to the School for the development of cultural and educational installations.

### **Comment No. ORG 7A-100**

Moreover, despite this clear information from the Kizh Nation and additional information provided by FTBMI, the DEIR downplays the potential for TCRs to be located on the Project site. Instead of using the information provided during consultation, the DEIR relies on the absence of previously discovered resources at the site to claim there would be no impacts to TCRs. (DEIR p. IV-N.11.) This is inadequate for a number of reasons. The overwhelming majority of this site has not previously been excavated in manner that would reveal such resources. The DEIR acknowledges the age of the site and Tribal representatives from two Tribes identified the high likelihood of resources occurring on site. The Project would excavate down 20 feet on large portions of the site, in areas without previous excavation. All of this establishes the potential for impacts to TCRs that require mitigation.

## Response No. ORG 7A-100

The comment asserts that the Draft EIR downplays the potential for Tribal Cultural Resources (TCRs) and that the age and location of the Project Site indicate a high likelihood for the discovery of TCRs. As discussed in the Draft EIR and Response to Comment ORG 7A-99, above, the maps provided by the FTBMI and the Kizh Nation do not identify any tribal cultural resources or sites within the Project Site. The conclusion of the consultation is that because of the absence of mapped information involving the Project Site and the location of the Project Site along a route between tribal cultural sites, impacts to tribal cultural resources were deemed to be less than significant. However, as discussed on page IV.N-12 of the Draft EIR, “should intact subsurface archaeological deposits be present within the Project Site, they would likely be found within the C-horizon beyond depths of 2-7 feet, which is the depth of fill material. Project-related ground disturbance would extend to depths of 21 feet, beyond the depths of fill and into the C-horizon where subsurface archaeological resources that could qualify as tribal cultural resources may be present.” It is further noted that any properties along the 51-mile Los Angeles River and the 18-mile Ventura Boulevard corridor have the potential to contain TCRs. To provide focus for the analysis of impacts, the Draft EIR does not speculate on the high potential for TCRs at a site and a vicinity in which no TCRs have been historically recovered. In addition, as discussed under Response No. ORG 7A-99, the City’s standard condition of approval would protect any inadvertently discovered TCRs at any excavation or demolition location within the Project Site. The comment does not provide sufficient facts to support the claim that Draft EIR downplays the likelihood for TCRs to exist within the Project Site.

## Comment No. ORG 7A-101

The City’s consultation with the Tribes had not been completed as required by CEQA. This consultation is required to continue until one of the following occurs:

- (1) The parties agree to measures to mitigate or avoid a significant effect, if a significant effect exists, on a tribal cultural resource.
- (2) A party, acting in good faith and after reasonable effort, concludes that mutual agreement cannot be reached.

## Response No. ORG 7A-101

The comment claims that City’s consultation with the Tribes had not been completed as required by CEQA. Several consultation meetings between the City and the Tribes occurred in 2020 and 2021, which are documented in Section IV.N, *Tribal Cultural Resources*, in the Draft EIR. In an email dated September 22, 2020, Jairo Avila, Tribal Historic and Cultural Preservation Officer for the FTBMI, responded to the City’s notification requesting formal AB 52 consultation. As part of the email, Mr. Avila requested Project excavation plans, as well as the Geotechnical Report and Cultural Resources Report prepared for the Project. AB 52 consultation meetings, via phone, with Mr. Avila

were held on October 28, 2020, August 12, 2021, and October 18, 2021. The City provided the Project-related materials to Mr. Avila including the Phase I Archaeological Resource Assessment Report, the Geotechnical Report, the Historic Resources Assessment Report, and the Paleontological Resources Report. In an email dated October 18, 2021, Mr. Avila stated that the provided materials were reviewed and concluded the Project has the potential to impact tribal cultural resources. Mr. Avila stated the Project Site is located adjacent to the Los Angeles River and the El Camino Real, which are both considered to be tribal cultural resources by the FTBMI. In a letter dated September 25, 2020, Andrew Salas, Chairman of the Kizh Nation, responded to the City's notification requesting formal AB 52 consultation. On November 25, 2020, the City and Chairman Salas held a consultation meeting via phone to discuss the Project. Following the meeting, in an email dated December 4, 2020, Chairman Salas provided a summary of the meeting as well as materials relevant to tribal cultural resources. These materials include historic maps, excerpts about potential locations of villages, other relevant ethnographic literature, and proposed mitigation measures. The documentation indicated trade routes, trails, waterways, and the village of Cahuenga. One of the documents provided by Chairman Salas indicates the ethnographic village of Cahuenga was located near present-day Universal City, approximately 3 miles east of the Project Site. Chairman Salas also provided Kizh Nation's recommended mitigation measures, which include retention of a Native American monitor/consultant, unanticipated discovery protocols for human burials and funerary objects, assessment protocols for discovered resources, procedures for assessing burials and associated soils, and treatment procedures for human remain recovery and re-burial. As a result of the City's AB 52 consultation efforts, no tribal cultural resources were identified within the Project Site or in the vicinity. However, based on the materials provided by Mr. Avila of the FTBMI, and Chairman Salas, of the Kizh Nation, both groups consider the Project Site sensitive for the presence of subsurface deposits potentially containing cultural items and human remains. Because no tribal cultural resources have been historically recovered nor are any known archaeological sites located in the immediate vicinity of the Project Site, and because the City determined that substantial evidence was not presented through the consultation process, the City concluded that no mitigation measures were required and, therefore, the measures recommended by the Tribes were not warranted. The City sent the Fernandeano Tataviam Band of Mission Indians and the Gabrieleño Band of Mission Indians – Kizh Nation letters on February 17, 2022 indicating the City's intent to close consultation at the publication of the Draft EIR. The letters identified the City's condition of approval to address tribal cultural resources should they be encountered during Project construction activities. The consultation process met the criterion set forth in AB 52 that the party (the City), acting in good faith and after reasonable effort concluded that mutual agreement could not be reached. The FTBMI and Kizh Nation did not comment further on the circulated Draft EIR. The claim that the City did not complete consultation in accordance with AB 52 is not supported by the facts.

## Comment No. ORG 7A-102

(Pub. Resources Code, § 21080.3.2.) Here, both Tribes presented specific mitigation measures that should be included to mitigate for the Project's likely impacts to TCRs. Specifically, FTBMI presented four measures necessary to ensure impacts to TCRs are properly mitigated:

- **FTBMI-TCR1:** In the event that Tribal Cultural Resources are discovered during Project activities, all work in the immediate vicinity of the find (within a 60-foot buffer) shall cease and a qualified archaeologist meeting Secretary of Interior standards shall assess the find. The Lead Agency or applicant shall contact the Fernandeano Tataviam Band of Mission Indians (FTBMI) to consult if any such find occurs.

## Response No. ORG 7A-102

The City had completed and sent out Close of Consultation Letters to both the FTBMI and Kizh Nation. The comment presents a mitigation measure based on the claim of "likely" impacts to TCRs. As discussed under Response No. ORG 7A-100, above, the City's conclusion that, in the absence of mapped information involving the Project Site, the location of the Project Site along a route between tribal cultural sites, and no history of TCRs on the Project Site or in the immediate vicinity, impacts to tribal cultural resources were deemed to be less than significant. It is noted that any properties along the 51-mile Los Angeles River and the 18-mile Ventura Boulevard corridor have the potential to contain TCRs. However, the Draft EIR does not speculate on the potential for TCRs at a site and in a vicinity in which no TCRs have been historically recovered. Moreover, the City has established a standard condition of approval which requires the immediate halt of construction activities in the vicinity of the discovery, coordination with appropriate Native American tribes and the City, and development and implementation of appropriate actions for treating the discovery (see Sections IV.D, *Cultural Resources*, page IV.D-35 and IV.N, *Tribal Cultural Resources*, pages IV.N-11 and IV.N-12 of the Draft EIR). There is no evidence to show that the presence of TCRs within the Project Site is "likely" or that mitigation measures are warranted. Refer also to Response No. ORG 7A-99 which discusses the Memorandum of Understanding (MOU) the School has entered into with the FTBMI, whereby the School would work with FTBMI in developing cultural and educational installations.

## Comment No. ORG 7A-103

- **FTBMI-TCR2:** Should the find be deemed significant, as defined by CEQA (as amended, 2015), the Project applicant shall retain a professional Native American monitor procured by the FTBMI to observe all remaining ground-disturbing activities including, but not limited to, excavating, digging, trenching, plowing, drilling, tunneling, quarrying, grading, leveling, clearing, driving posts, auguring, blasting, stripping topsoil or a similar activity, and archaeological work.

## Response No. ORG 7A-103

The comment presents a mitigation measure to require a Native American monitor to observe all ground disturbing activities should a find be deemed significant. The already-applicable standard condition of approval requires the immediate halt of construction activities in the vicinity of the discovery, coordination with appropriate Native American tribes and the City, and development and implementation of appropriate actions for treating the discovery. With regard to the discovery of human remains during construction of the Project, work in the immediate vicinity of the construction area would be halted, and the County Coroner, construction manager, and other entities would be notified per California Health and Safety Code Section 7050.5. In addition, disposition of the human remains and any associated grave goods would occur in accordance with PRC Section 5097.98 and CEQA Guidelines Section 15064.5(e), which requires that work stop near the find until a coroner can determine that no investigation into the cause of death is required and if the remains are Native American. Specifically, in accordance with CEQA Guidelines Section 15064.5(e), if the coroner determined the remains to be Native American, the coroner would contact the Native American Heritage Commission who would identify the person or persons it believes to be most likely descended from the deceased Native American. The most likely descendent may make recommendations regarding the treatment of the remains and any associated grave goods in accordance with PRC Section 5097.98. Since State regulations with respect to human remains protect Native American resources and since the City's standard condition of approval would require halting of all construction activity and consultation with tribal representatives, the comment does not demonstrate the need for the proposed mitigation measure.

## Comment No. ORG 7A-104

- **FTBMI-TCR3:** The Lead Agency and/or applicant shall, in good faith, consult with the FTBMI on the disposition and treatment of any Tribal Cultural Resource encountered during all ground disturbing activities.

## Response No. ORG 7A-104

The comment provides another proposed mitigation measure. As discussed in Response Nos. ORG 7A-99, ORG 7A-100 and ORG 7A-101, above, based on all the information provided in the archival research and presented by the tribes, the City has determined that the Project's impacts on TRCs would be less than significant. As such, no mitigation measures would be required. Moreover, the proposed mitigation measure is redundant with respect to the City's standard condition of approval, which would require coordination with appropriate Native American tribes in the event of a find, and State statues requiring consultation with the Native American Heritage Commission. The comment does not discuss the content of the Draft EIR and no further response is necessary. Nonetheless, refer also to Response No. ORG 7A-99 which discusses the Memorandum of Understanding (MOU) the School has entered into with the FTBMI, whereby the School will work with FTBMI in developing cultural and educational installations.

## Comment No. ORG 7A-105

- **FTBMI-TCR4:** Any and all archaeological/cultural documents created as a part of the project (isolate records, site records, survey reports, testing reports, and monitoring reports) shall be provided to the Fernandeño Tataviam Band of Mission Indians and interested Tribes consulting under AB52.

## Response No. ORG 7A-105

The comment provides another proposed mitigation measure. As discussed in Response Nos. ORG 7A-100 and ORG 7A-101, above, based on archival research and the information provided by the tribes, the City has made the determination that Project impacts to TCRs would be less than significant. As such, no mitigation measures would be required. Moreover, the Project would comply with the City's standard condition of approval, which would require the study and potential preservation of any inadvertently discovered resources, as well as transfer of resources to the connected Native American Group in accordance with state regulations.

## Comment No. ORG 7A-106

(DEIR App. N.) The DEIR instead relies on a significantly watered-down version of these measures and condition of approval to mitigate impacts to TCRs. The vague condition relied upon by the DEIR is not identified as a mitigation measure, and is therefore not fully enforceable as required by CEQA. Additionally, its lack of specificity results in improperly deferred mitigation. Further, the City did not agree to the measures presented by FTBMI, nor did it conclude a mutual agreement cannot be reached. Thus, the City has failed to comply with Public Resources Code section 21080.3.2.

## Response No. ORG 7A-106

The comment asserts that the City's standard condition of approval is a "watered down" version of the mitigation measures provided by the commenter and that mitigation is improperly deferred. The existing Project Site and the vicinity around the Project Site have not shown any evidence of TCRs, such as identification of these locations on historic maps or a history of recovery of resources from these locations. The nearest identified historical village, which would have high potential for TCRs, is located three miles from the Project Site. The greatest indicator of TCRs at the Project Site is its location within the Los Angeles River corridor and near Ventura Boulevard. In this regard, the entire 51-mile Los Angeles River and 18-mile Ventura Boulevard corridor have the potential for the inadvertent discovery of TCRs. It would be unreasonable, and speculative, however, to call out every site within this entire geographic area as having a "likely" potential for TCRs and that any construction within this region would result in a significant impact to a TCR. Despite the absence of mapped evidence or other proof of TCRs at the Project Site, the Draft EIR concluded that the potential for TCRs exists at the Project Site. The City's standard condition of approval (a regulatory measure) would be implemented to avoid harm to any inadvertently discovered TCRs and impacts to TCRs at the Project Site were

determined to be less than significant. Under CEQA, in the absence of a determination of potential significance, no mitigation measures are warranted or permissible. Thus, the implementation of the City's regulation to address inadvertent discoveries would not constitute "deferred mitigation" as no mitigation is required. Additionally, the City's standard condition of approval is neither vague nor unenforceable. The comment does not provide substantial evidence to support such a contention.

### **Comment No. ORG 7A-107**

The vague condition of approval that the DEIR claims will be imposed on the Project at some point, but not as a mitigation measure in the DEIR, does not include all mitigation measures set forth by CEQA for TCRs.

- (1) Avoidance and preservation of the resources in place, including, but not limited to, planning and construction to avoid the resources and protect the cultural and natural context, or planning greenspace, parks, or other open space, to incorporate the resources with culturally appropriate protection and management criteria.
- (2) Treating the resource with culturally appropriate dignity taking into account the tribal cultural values and meaning of the resource, including, but not limited to, the following:
  - (A) Protecting the cultural character and integrity of the resource.
  - (B) Protecting the traditional use of the resource.
  - (C) Protecting the confidentiality of the resource.
- (3) Permanent conservation easements or other interests in real property, with culturally appropriate management criteria for the purposes of preserving or utilizing the resources or places.
- (4) Protecting the resource.

### **Response No. ORG 7A-107**

The comment claims that the City's standard condition of approval, a regulatory measure, would not meet the conditions placed on mitigation measures under CEQA for TCRs. Based on the absence of substantial evidence of TCRs at the Project Site (as shown in documentation provided to the City by the Tribes and the analysis contained in Section IV.N of the Draft EIR which included archival research), and implementation of the regulatory standard condition of approval, the City determined that impacts to TCRs would be less than significant. As such, no mitigation measures, such as those listed in the comment, would be required or permissible in the Draft EIR. However, in the case of an inadvertent discovery of TCRs, the City's standard condition of approval would halt all construction activities in the vicinity of the discovery, require the TCR would be evaluated by an expert, require coordination with appropriate Native American tribes and the City, and require development and implementation of appropriate actions for treating the discovery. This standard condition of approval includes all necessary steps to protect TCRs. The comment does not provide evidence that the City would be remiss

in protecting TCRs by implementing the standard condition of approval nor provide substantial evidence that the listed CEQA measures or the Tribe-suggested measures are required to reduce a potentially significant impact to a less-than-significant level.

### **Comment No. ORG 7A-108**

(Pub. Resources Code, § 21084.3.) The DEIR fails to contemplate preservation of discovered TCRs in place and revising construction plans to avoid these resources. It simply requires a brief halt in construction and to then develop appropriate actions. Having not contemplated how to treat the potential discovery of TCRs now will limit the options available for mitigation, resulting in post hoc rationalization that avoidance of areas that should be protected is infeasible.

### **Response No. ORG 7A-108**

The comment anticipates that the halting of construction would be brief and suggests that the Draft EIR should have contemplated preservation of any discovered TCRs. As discussed in Section IV.N, *Tribal Cultural Resources*, of the Draft EIR, neither the City's archival research nor the material presented by the Tribes include substantial evidence of TRCs on, or in the vicinity of, the Project Site. Therefore, no mitigation measures are required nor warranted. The comment does not provide substantial evidence that contradicts the City's good faith determination based on all the evidence before it. As such, the Draft EIR is not required to analyze a mitigation measure which would require TRCs to be maintained in place. Moreover, under the standard condition of approval, coordination with appropriate Native American tribes and the City, as well as the development and implementation of appropriate actions for treating the discovery would be required. The relative value and type of TCRs are highly variable and must be considered on a case-by-case basis and in consultation with the affected Native American Tribe. The standard condition of approval mandates a step to develop and implement appropriate actions for treating the discovery, which would be highly dependent on the tribal interests. The development and implementation of appropriate actions for treating the discovery could include avoidance and preservation, if necessary. Because this step is mandated and the character and value of a TCR is not known until its recovery, it would not be necessary to contemplate preservation of discovered TCRs in place or revising construction plans to avoid these resources until the value and importance of the discovery is determined through coordination with the interested Native American Tribe. The comment does not demonstrate with facts the need to implement the recommended measures prior to discovery.

## Comment No. ORG 7A-109

### I. The DEIR Fails to Disclose and Analyze New Significant Impacts Relating to Noise and Vibration.

#### 1. Effects of Noise Pollution on Health Are Extensive.

“[T]hrough CEQA, the public has a statutorily protected interest in quieter noise environments.” (*Berkeley Keep Jets Over the Bay Committee v. Board of Port Com'rs* (2001) 91 Cal.App.4th 1344, 1380.) **Despite this clear mandate to analyze noise impacts, the DEIR omits a discussion of the extensive health impacts of noise exposure**, as required by CEQA (*Cf. Sierra Club v. County of Fresno* (2018) 6 Cal.5th 502, 521).

## Response No. ORG 7A-109

The comment asserts that the Draft EIR does not disclose impacts related to noise and vibration or the effect of noise pollution on health. In this regard, page IV.K-4 of Section IV.K, *Noise*, of the Draft EIR discloses the effect of noise on human health including hearing loss, sleep disruption, and annoyance. The Draft EIR explains that the health effects of noise are largely subjective and influenced by a multitude of factors including the type of noise, the perceived importance of the noise, the appropriateness of the noise to the setting, the duration of the noise, the time of day and the type of activity during which the noise occurs, and individual noise sensitivity. The Draft EIR discloses that a “wide variation in individual thresholds of annoyance exists, and different tolerances to noise tend to develop based on an individual’s past experiences with noise. Thus, an important way of predicting a human reaction to a new noise environment is the way it compares to the existing environment to which one has adapted (i.e., comparison to the ambient noise environment). In general, the more a new noise level exceeds the previously existing ambient noise level, the less acceptable the new noise level will be judged by those hearing it. With regard to increases in A-weighted noise level, the following relationships generally occur:<sup>134</sup>

- Except in carefully controlled laboratory experiments, a change of 1 dBA in ambient noise levels cannot be perceived;
- Outside of the laboratory, a change of 3 dBA in ambient noise levels is considered to be a barely perceivable difference;
- A change of 5 dBA in ambient noise levels is considered to be a readily perceivable difference; and
- A change of 10 dBA in ambient noise levels is subjectively heard as doubling of the perceived loudness.” (Page IV.K-4 through IV.K-5)

<sup>134</sup> California Department of Transportation, Technical Noise Supplement to the Traffic Noise Analysis Protocol, Section 2.2.1, 2013.

The Draft EIR noise analysis acknowledges the health effects of noise on human health and establishes quantifiable guidelines for ensuring that noise does not affect sensitive receptors adversely. Furthermore, the comment does not provide any specific information that would show any deficiencies in the analyses in the Draft EIR.

### **Comment No. ORG 7A-110**

Excess noise pollution can cause hearing damage and loss. Loud noise, either experienced as a single event or continuously over time, can damage cells in the inner ear that detect sound and help transmit information on sound to the brain. ([https://www.cdc.gov/nceh/hearing\\_loss/how\\_does\\_loud\\_noise\\_cause\\_hearing\\_loss.html](https://www.cdc.gov/nceh/hearing_loss/how_does_loud_noise_cause_hearing_loss.html), incorporated by reference.) Damage to these receptor cells is permanent and cannot be repaired. (*Ibid.*) Such damage can make it difficult to hear, including causing difficulties in understanding speech. (*Ibid.*)

Sound level is measured in dBA.

(<https://www.nonoise.org/library/suter/suter.htm#physical>, incorporated by reference.) In 1974 the EPA recommended that the equivalent A-weighted sound level over 24 hours ( $L_{eq(24)}$ ) be no greater than 70 dBA to ensure an adequate margin of safety to prevent hearing loss and damage. (<https://nonoise.org/library/levels74/levels74.htm>, incorporated by reference.) To prevent interference with activities and annoyance, the EPA recommended a day-night average sound level no greater than 45 dBA for indoors and 55 dBA for outdoors.

Excess noise can also lead to cardiovascular impacts. Traffic noise “leads to a significant increase in coronary heart disease” as demonstrated by meta-analyses. (**Attachment M**, Hahad et al., *The Cardiovascular Effects of Noise* (2019) 116 *Deutsches Ärzteblatt International* 245, 246.) Cohort studies “identified a significant association between road traffic noise and the occurrence of myocardial infarctions,” i.e., heart attacks. (*Id.* at 247.)

The DEIR must relate these health impacts of excessive noise exposure to the Project’s significant noise impacts.

### **Response No. ORG 7A-110**

The comment states that excessive noise can cause hearing loss and other damage to health. In this regard, page IV.K-8 of the Draft EIR states that there are several plans, regulations, and programs that include policies, requirements, and guidelines regarding noise at the federal, state, regional, and local levels. In a 1974 study, the USEPA provided information to prevent hearing loss over a lifetime of exposure and indicated that the yearly average sound energy level (i.e.,  $L_{eq}$ ) should not exceed 70 dBA and also indicated that to prevent interference and annoyance, the day-night average sound level

(i.e., Ldn) should not exceed 55 dBA outdoors or 45 dBA indoors.<sup>135</sup> In 1982, noise control was largely passed to state and local governments.<sup>136</sup>

As described on p. IV.K-14 of the Draft EIR, the City's Noise Control Ordinance establishes exterior and interior noise standards to regulate operational intrusive noises within specific land use zones. The noise standards are summarized in Table IV.K-4 on page IV.K-15 of the Draft EIR. As shown therein, the exterior noise ordinance standards are 50 dBA Leq during daytime hours and 40 dBA Leq during nighttime hours at residential noise-sensitive receptors. According to the United States Department of Housing and Urban Development *Noise Guidebook*,<sup>137</sup> standard building construction results in an exterior-to-interior noise reduction of 20 dBA with windows closed. Thus, the exterior noise standards would have interior noise levels 20 dBA lower. The City's standards are not in conflict with the USEPA information above. The Draft EIR evaluates the Project with respect to the City's standards. Unless otherwise stated, noise levels in the Draft EIR are generally reported as exterior noise levels and do not include an exterior-to-interior noise reduction of 20 dBA with windows closed.

Further, as shown in Table IV.K-18 and Table IV.K-19, the Project's traffic noise levels would result in maximum noise level increase of 0.6 dBA which is below the threshold of 5 dBA over existing traffic noise levels. Per Caltrans' Technical Noise Supplement to the Traffic Noise Analysis Protocol, a noise level increase of 1 dBA or less cannot be perceived by the human ear.<sup>138</sup> Therefore, traffic noise levels would be less than significant and would not lead to cardiovascular impacts associated with increased traffic noise. The comment does not provide any factual information that challenges or refutes the information regarding health impacts provided in the Draft EIR.

## Comment No. ORG 7A-111

### 2. The DEIR Fails to Evaluate All Sensitive Receptor Locations.

The DEIR fails to evaluate all sensitive receptor locations. It notes the different land uses that the 2006 Los Angeles CEQA Thresholds Guide identifies as sensitive receptors, but does not identify some of the sensitive receptors near the Project Site. The Thresholds Guide defines noise sensitive as residences, transient lodgings, schools, libraries, churches, hospitals, nursing homes, auditoriums, concert halls, amphitheatres, playgrounds, and parks within 500 feet of a project site. (**Attachment N**, Excerpt Thresholds Guide p. I.1-3.) The most striking omission is the absence of a noise measurement point at the Fire Station. (DEIR, p. IV.K-21.) Because Los Angeles Fire

<sup>135</sup> USEPA, *Information on Levels of Environmental Noise Requisite to Protect Public Health and Welfare with an Adequate Margin of Safety*, March 1974.

<sup>136</sup> USEPA, EPA History: Noise and the Noise Control Act, last update July 15, 2021, <https://www.epa.gov/history/epa-history-noise-and-noise-control-act>, accessed February 2022.

<sup>137</sup> U.S. Department of Housing and Urban Development, *Noise Guidebook*, March 2009, p. 14.

<sup>138</sup> California Department of Transportation, Technical Noise Supplement to the Traffic Noise Analysis Protocol, Section 2.2.1, 2013.

Department (LAFD) staff will presumably be working, residing, and sleeping at that location, there must be a noise measurement point located there.

## Response No. ORG 7A-111

The comment asserts that the Draft EIR fails to evaluate all sensitive receptor locations. In this regard, refer to Topical Response No. 8 – Noise: Construction and Operation Impacts. As discussed in Topical Response No. 8, the Project’s construction and operation noise and vibration impacts were fully analyzed in Section IV.K, *Noise*, and Appendix J, *Noise and Vibration Technical Study*, of the Draft EIR. The Draft EIR’s noise analysis identified the area’s noise and vibration sensitive receptors, existing ambient noise levels, maximum construction noise and vibration levels and duration, and peak operation noise levels. Operation noise levels included noise levels associated with future on-site recreational activities and special events. Noise was estimated according to conservative assumptions to provide maximum impacts and to avoid underestimating impacts.

Some land uses are considered more sensitive to noise than others due to the types of activities typically involved at the receptor location and the effect that noise can have on those activities and the persons engaged in them. The 2006 L.A. CEQA Thresholds Guide states that “[n]oise sensitive uses include residences, transient lodgings, schools, libraries, churches, hospitals, nursing homes, auditoriums, concert halls, amphitheatres, playgrounds, and parks.”<sup>139</sup> The list of uses does not include fire stations.

Consistent with the definition of noise sensitive uses in the 2006 L.A. CEQA Thresholds Guide, eight off-site representative locations were selected as noise-sensitive receptors, which include Receptors R1 to R6 located within 500 feet of the Project Site, as well as Receptor R7 that is located beyond 500 feet from the Project Site and Receptor R8 located adjacent to the proposed Coldwater Canyon Avenue Riverwalk Path Ramp, as listed below

- R1: Single-family residential uses on west side of Bellaire Avenue.
- R2: Single-family residential uses at the corner of Bellaire Avenue and Valley Spring Lane.
- R3: Single-family residential uses at the corner of Teesdale Avenue and Valley Spring Lane.
- R4: Single-family residential uses at the corner of Babcock Avenue and Valley Spring Lane.
- R5: Multi-family residential uses at the corner of Babcock Avenue and Valley Spring Lane.
- R6: Multi-family residential uses on the east side of the Whitsett Avenue. Church use on the east side of Whitsett Avenue near the intersection with Valleyheart Drive and directly across the street from existing Los Angeles Fire Station No. 78.

<sup>139</sup> City of Los Angeles, 2006 L.A. CEQA Thresholds Guide, page I.1-3, 2006

- R7: Single-family residential uses on Sunswept Drive.
- R8: Multi-family residential uses north of the proposed Coldwater Canyon Avenue Riverwalk Path Ramp. This receptor location was only evaluated for potential impacts from construction related to the proposed off-site improvements at the Coldwater Canyon Avenue Riverwalk Path.

All other noise-sensitive land uses defined as noise sensitive uses by the City are located at greater distances from the Project Site or are not considered sensitive land uses and would experience lower noise levels from potential sources of noise on the Project Site due to distance loss.

As stated above, LAFD Fire Station 78 was not identified as a noise sensitive receptor, consistent with the City CEQA Threshold Guide. While it is acknowledged that firefighters could potentially sleep at the fire station on occasion, the same could be said for many other types of commercial or office uses which provide temporary employee sleeping areas. However, any such sleeping areas are not permanent places of residence, nor serve as the primary sleeping quarters for any employee or firefighter. Further, by their nature, fire stations produce high levels of noise from sirens and day-to-day equipment/vehicle operations, which could regularly disrupt sleep for firefighters. These reasons provide further support for fire stations not being included on the list of sensitive receptors in the City's CEQA Threshold Guide and within the Draft EIR.

Nonetheless, for informational purposes, the Project's acoustical consultant, Acoustical Engineering Services, Inc. (AES), performed a noise analysis to evaluate potential noise levels at the interior of the LAFD Fire Station 78, and specifically the sleeping quarters located approximately 85 feet east and 100 feet south of the Project Site. The City of Los Angeles Noise Ordinance/Regulations do not specify interior noise standards. Therefore, for purposes of this informational discussion, the interior noise standard from the Los Angeles County noise ordinance is referenced. Per the LA County Noise Control Ordinance (Section 12.08.400), the allowable interior noise level for residential land use (7:00 a.m. to 10: p.m.) is 45 dB. The results of the noise analysis are provided in the table below.

Description	Estimated Noise Levels, dBA (Leq)
Estimated construction noise levels at the exterior of the sleeping quarters building. Estimated noise levels include Project Mitigation Measure NOI-MM-1 (sound wall along the south side of the project construction area).	74.7
Estimated building noise reduction for sleeping quarters area (conservative assumption for building without windows)	35.0
Estimated construction noise levels inside the sleeping quarters	39.7
Interior Noise Standard, based on LA County noise ordinance (Section 12.08.400) for residential land use (7am to 10pm)	45.0

Based on the analysis, the estimated construction noise levels inside the sleeping quarters would be below the County's interior noise standard. Therefore, temporary firefighter sleep would not be significantly interrupted by Project construction activities. Because construction noise levels would be higher than operation noise levels, it can also be expected that temporary firefighter sleep would not be significantly interrupted by Project operational activities.

While the informational analysis above demonstrates noise levels within the LAFD Fire Station 78 sleeping quarters would be below the County's interior noise standard for residential uses, the comment nonetheless does not provide any factual information that challenges or refutes the information regarding sensitive receptor sites provided in the Draft EIR.

### **Comment No. ORG 7A-112**

Additionally, there should be a noise measurement point on the Zev Greenway, on the stretch between Bellaire Ave and Whitsett Ave. Because this stretch is part of a public greenway that abuts the Project Site, there should be a noise measurement taken somewhere along that stretch.

### **Response No. ORG 7A-112**

The comment asserts that the Draft EIR should have provided a noise measurement point on the Zev Greenway. As discussed in Chapter II, *Project Description*, of the Draft EIR, the Zev Greenway is an improved public trail along the northern edge of the Los Angeles River. The Zev Greenway is not a place of congregation, rather it is an alternative pathway connecting pedestrians and cyclists to other land uses and roadways. Individuals using the Zev Greenway would experience very short-term and temporary exposures to Project-related noise for durations measured in minutes and not hours while traveling through the area. The 2006 L.A. CEQA Thresholds Guide states that the period of exposure should be considered in the analysis of noise impacts.<sup>140</sup> The 2006 L.A. CEQA Thresholds Guide states that noise impacts are commonly evaluated using time-averaged noise levels,<sup>141</sup> and hourly averages and 24-hour day averages are typically used. Exposures on the order of minutes while traveling through the area on the Zev Greenway would not meet the definition of a time averaged exposure as described in the 2006 L.A. CEQA Thresholds Guide. Furthermore, the Zev Greenway is at a lower elevation than the Project Site and would experience lower noise levels than disclosed in the Draft EIR due to the barrier attenuation from the natural berm blocking the line-of-sight between the Zev Greenway and Project Site. Therefore, no additional analysis of the Zev Greenway is required.

<sup>140</sup> City of Los Angeles, 2006 L.A. CEQA Thresholds Guide, page I.1-1, 2006

<sup>141</sup> City of Los Angeles, 2006 L.A. CEQA Thresholds Guide, page I.1-2, 2006

## Comment No. ORG 7A-113

Further, there is a church across the street from the Project Site on Whitsett Ave, the 36th Church of Christ, Scientist. This should also be identified as a sensitive receptor and noise measurement location.

Finally, there is a recording studio located south of the Project site, Media City Sound, located at 12711 Ventura Blvd # 110, Studio City, CA 91604. Because of the sensitive nature of recording, this site should be considered a sensitive receptor for both noise and vibration impacts.

## Response No. ORG 7A-113

The comment asserts that the Draft EIR should have provided a noise measurement point for the 36<sup>th</sup> Church of Christ, Scientist, and Media City Sound. The 36<sup>th</sup> Church of Christ is located in the 16<sup>th</sup> Church of Christ, Scientist and is represented by R6 and is called out as a noise sensitive receptor (Church) on page IV.K-17 of the Draft EIR and Figure IV.K-3 of the Draft EIR. Per Response No. ORG 7A-111, above, the Media City Sound is located at a greater distance from the Project Site and would experience lower noise levels from potential sources of noise on the Project Site due to distance loss. Media Center Sound (12711 Ventura Boulevard) is located approximately 322 feet to the south of the Project Site at its nearest point, 700 feet to the south of Field B seating, and more than 1,000 feet to the west and southwest of Field A seating and the tennis courts, respectively. The enclosed gymnasium building would be located between Media City Sound and the higher noise generating uses (during operation) at Field A. Further, Media City Sound is not considered a noise-sensitive receptor per the 2006 Los Angeles CEQA Thresholds Guide and, therefore, is not analyzed as such. No additional analysis is required.

## Comment No. ORG 7A-114

### 3. The DEIR Must Evaluate Sleep Disturbance.

Excessive sound level can have a profound health impact by disturbing sleep. Sleep disturbance is considered “the most deleterious non-auditory effect of environmental noise exposure . . . because undisturbed sleep of a sufficient length is needed for daytime alertness and performance, quality of life, and health.” (**Attachment O**, Basner et al., *Auditory and Non-Auditory Effects of Noise on Health* (2014) 383 *Lancet* 1325, 1329.) Repeated sleep disturbance can change sleep structure, including “delayed sleep onset and early awakenings, reduced deep (slow-wave) and rapid eye movement sleep, and an increase in time spent awake and in superficial sleep stages.” (Id. at 1330.) The short-term effects of sleep disturbance include “impaired mood, subjectively and objectively increased daytime sleepiness, and impaired cognitive performance.” (Ibid.) Exposure to noise during sleep “may increase blood pressure, heart rate, and finger pulse amplitude as well as body movements.” (**Attachment P**, Stansfeld and Matheson, *Noise Pollution: Non-Auditory Effects on Health* (2003) 68 *Brit. Med. Bull.* 243, 244.) In 1974, the EPA observed that a nighttime

portion of a day-night average sound level of approximately 32 dB should protect against sleep interference. (**Attachment Q**, <https://nonoise.org/library/levels74/levels74.htm>, p. 28.).

## Response No. ORG 7A-114

The comment expresses the concern that excessive sound results in profound health impacts. The Draft EIR provides information to the public and decision-makers on the potential for the Project to result in sleep disturbance. Page IV.K-5 of the Draft EIR cites to the World Health Organization (WHO) Guidelines for Community Noise, which details the adverse health effects of high noise levels, including hearing impairment, speech intelligibility, sleep disturbance, physiological functions (e.g., hypertension and cardiovascular effects), mental illness, performance of cognitive tasks, social and behavioral effects (e.g., feelings of helplessness, aggressive behavior), and annoyance.<sup>142</sup> The USEPA Noise Effects Handbook states that “continuous or very frequent noise throughout the night, even as high as 95 dB (A-weighted), appears to cause little change in the average duration of sleep stages, since such stages are disturbed more by peaks that vary widely from the background ambient level than by high continuous levels alone.”<sup>143</sup> The USEPA Noise Effects Handbook also states that “the higher the noise level the greater the probability of a response” and that a study “found that there was a 5 percent probability, of subjects being awakened by peak levels of 40 dB (A-weighted level) and a 30 percent probability at 70 dB. If [electroencephalographic]<sup>144</sup> changes are also considered, these probabilities increase to 10 percent at 40 dB and 60 percent at 70 dB.”<sup>145</sup> The World Health Organization (WHO) Environmental Noise Guidelines for the European Region states that noise as well as non-acoustic factors such as temperature, humidity, and sleep disorders could also affect the quality of an individual’s sleep.<sup>146</sup> The WHO Environmental Noise Guidelines also conducted a meta-analysis of surveys for road, rail, and aircraft noise exposure and found a statistically meaningful association for the percent highly sleep disturbed for a 10 dBA increase.<sup>147</sup> As discussed on p. IV.K-5 of the Draft EIR, an increase of 10 dBA is perceived by the human ear as a doubling of the “loudness” and a 3 dBA increase is “barely perceivable.” As discussed in Section IV.K,

<sup>142</sup> World Health Organization Team, edited by Berglund, Birgitta; Lindvall, Thomas; Schwela, Dietrich H, Guidelines for Community Noise, 1999.

<sup>143</sup> U.S. Environmental Protection Agency, *Noise Effects Handbook*, 6. Sleep Disturbance, 1981, <http://www.nonoise.org/library/handbook/handbook.htm>, accessed May 2021.

<sup>144</sup> Electrical activity in the brain.

<sup>145</sup> U.S. Environmental Protection Agency, *Noise Effects Handbook*, 6. Sleep Disturbance, 1981, <http://www.nonoise.org/library/handbook/handbook.htm>, accessed May 2021.

<sup>146</sup> Basner, M., and S. McGuire, WHO Environmental Noise Guidelines for the European Region: A Systematic Review on Environmental Noise and Effects on Sleep, *International Journal of Environmental Research and Public Health*, 15(519), 2018, <https://pubmed.ncbi.nlm.nih.gov/29538344/>, accessed June 2021.

<sup>147</sup> Basner, M., and S. McGuire, WHO Environmental Noise Guidelines for the European Region: A Systematic Review on Environmental Noise and Effects on Sleep, *International Journal of Environmental Research and Public Health*, 15(519), 2018. <https://pubmed.ncbi.nlm.nih.gov/29538344/>, accessed June 2021.

*Noise*, of the Draft EIR, the Project's operation noise impacts would be below the City's noise thresholds. Further, as specified on pages II-34 and II-47 of the Draft EIR, the Project's regular outdoor athletic activities would be required to cease no later than 8:00 p.m. at both fields and the swimming pool and no later than 9:00 p.m. at the tennis courts. Based upon the School's 2018-2019 athletics calendar, approximately 50 percent of school days contained no outdoor athletic activities after 5:30 p.m.

Noise generating construction activity would terminate at 4:00 p.m. and no construction activities would occur during the nighttime in accordance with LAMC requirements. LAMC Section 41.40 prohibits construction activity before 7:00 and after 9:00 p.m. on Mondays through Fridays, before 8:00 a.m. and after 6:00 p.m. on Saturdays and National Holidays, or at any time on Sundays. As discussed in Section IV. K, *Noise*, of the Draft EIR, the Project's construction noise impacts were analyzed and disclosed in accordance with the City's noise thresholds of significance.

### **Comment No. ORG 7A-115**

Despite the potential for these harmful impacts, the DEIR fails to sufficiently analyze sleep disturbance and disclose the Project's risks of sleep disturbance to the public and decisionmakers. The DEIR is required to analyze and disclose "the nature and the magnitude" of the Project's potential impact on sleep disturbance and must connect the potential health impacts of sleep disturbance to the noise impacts from the Project. (*Friant Ranch*, supra, 6 Cal.5th 502, 519–21.) The Project will host sporting events that will run as late as 9:30 p.m., and with spectators filing out afterwards, may not clear out until much later. The Project is also adjacent to a Fire Station, where staff members may be sleeping at various hours throughout the day. The DEIR thus must evaluate whether the Project will impact sleep, as residential sensitive receptors about the perimeter of the Project. (DEIR, p. IV.K-18.) The DEIR provides no analysis of single event nighttime noise levels to evaluate these impacts. (*Berkeley Keep Jets*, supra, 91 Cal.App.4th 1344, 1372-82 [EIR that failed to study impacts of single event noise levels was inadequate].).

### **Response No. ORG 7A-115**

The comment states that the Draft EIR fails to adequately evaluate the Project's impacts on sleep disturbance and asserts that spectators leaving the Project may not clear out until much later than 9:30 p.m. In this regard, the Draft EIR clearly states that indoor sporting events would be required to end by 9:30 p.m. and outdoor sporting events by 8:00 p.m. (with the exception of public use of the tennis courts, which must end by 9:00 p.m.). It is also noted that the tennis courts currently stay open (and lit) to 10:00 p.m. and the driving range stays open and lit until 11:00 p.m. The assertion that sporting events may not clear out until much later is purely speculative. The Draft EIR adequately analyzed noise impacts from athletic activities.

See Topical Response No. 8 – Noise: Construction and Operation Impacts. As discussed in Topical Response No. 8, the Project's construction and operation noise and vibration impacts were fully analyzed in Section IV.K, *Noise*, and Appendix J, Noise and Vibration

Technical Study, of the Draft EIR. The Draft EIR's noise analysis identified the area's noise and vibration sensitive receptors, existing ambient noise levels, maximum construction noise and vibration levels and duration, and peak operation noise levels. Operation noise levels included noise levels associated with future on-site recreational activities and special events. Noise was estimated according to conservative assumptions to provide maximum impacts and to avoid underestimating impacts.

Operation noise impacts, including a conservative analysis of all athletic facilities being used simultaneously, would not exceed noise impact standards established by the City and would be less than significant.

Refer to Response No. 7A-111 above for a discussion of sleep disturbance at LAFD Fire Station 78. As discussed therein, temporary firefighter sleep would not be significantly interrupted by Project construction activities. Because construction noise levels would be higher than operation noise levels, it can also be expected that temporary firefighter sleep would not be significantly interrupted by Project operational activities. Nighttime construction is not included as part of the Project and would not cause sleep disturbance during nighttime hours.

The Project would have no effect on aircraft or airport-related noise, which was the subject of *Berkeley Keep Jets Over the Bay Committee v. Board of Port Commissioners of the City of Oakland* (2001) cited in the comment. Further, no single event nighttime noise was analyzed because athletic activities would not occur after 10:00 p.m. Note also that, with the exception of the tennis courts which would close at 9:00 p.m., the Project's outdoor activities would terminate at 8:00 p.m. and, thus, nighttime activities would not coincide with or overlap nighttime aircraft noise.

## Comment No. ORG 7A-116

### 4. The DEIR Fails to Disclose Conflicts with the Los Angeles Municipal Code Noise Regulations.

Section 111.00 of the LAMC states, “[i]t is hereby declared to be the policy of the City to prohibit unnecessary, excessive and annoying noises from all sources subject to its police power. At certain levels noises are detrimental to the health and welfare of the citizenry and in the public interests **shall be systematically proscribed.**” (Emphasis added.) Despite this strong policy, the Project will have significant impacts related to construction noise. If the City were to approve the Project without mitigating these noise impacts, the Project would certainly run counter to this policy.

## Response No. ORG 7A-116

The comment indicates that the Project's significant construction noise impacts would run counter to LAMC Section 111.00. Section 111.0 is the Declaration of Policy for Chapter XI, Noise Regulation, for the LAMC. The declaration of policy serves as a statement by which subsequent policies within the LAMC aim to accomplish. The comment is misleading because the subsequent section of Chapter XI of the LAMC details the

policies, regulations, and thresholds related to various noise sources. Specifically, Chapter XI, Article I, Section 111.02 provides procedures and criteria for the measurement of the sound level of “offending” noise sources. In accordance with the LAMC, a noise source that causes a noise level increase of 5 dBA over the existing average ambient noise level as measured at an adjacent property line creates a noise violation. The Draft EIR addressed noise impacts in Section IV.K, *Noise*, with supporting data provided in Appendix K, Noise Technical Report, of the Draft EIR. As analyzed therein, noise impacts were properly analyzed according to the relevant codes and regulations set forth under Chapter XI of the LAMC.

### **Comment No. ORG 7A-117**

Section 115.02, subdivision (a) of the Los Angeles Municipal Code (“LAMC”) precludes the installation, operation, and use of amplifying equipment within 500 feet of residential zones for commercial purposes at any time. The Project will have paid spectator events, a commercial purpose, with amplified sound, despite the fact that the surrounding land uses include residential zones. Thus, the Project likely conflicts with LAMC section 115.02, subdivision (a).

### **Response No. ORG 7A-117**

The comment states that the Project’s amplified sound would likely conflict with LAMC Section 115.02. Section 115.02 of the LAMC regulates commercial uses and does not apply to the expansion of school athletic facilities for school programming.

The LAMC section referenced in the comment, LAMC Section 115.02, states: “[i]t shall be unlawful for any person, other than personnel of law enforcement or governmental agencies, or permittees duly authorized to use the same pursuant to Sec. 103.111 of this Code, to install, use, or operate within the City a loudspeaker or sound amplifying equipment in a fixed or movable position or mounted upon any sound truck for the purpose of giving instructions, directions, talks, addresses, lectures, or transmitting music to any persons or assemblages of persons in or upon any public street, alley, sidewalk, park, or place, or other public property...” As Article 5 specifically addresses sound emanating from sources on public property and not private property, the cited code section is not applicable to the Project.

Nonetheless, Section 115.02 (b) states “the operation or use of sound amplifying equipment for noncommercial purposes in all residential zones and within 500 feet thereof, except when used for regularly scheduled operative functions by any school or for the unusual and customary purposes of any church, is prohibited between the hours of 4:30 p.m. and 9:00 a.m. of the following day.” Most of the Project’s special events would be related to school programming so they would be allowed under this statute. The gymnasium and athletic fields may host up to five special events per year for the public based on community interest. The Draft EIR never mentions inclusion of paid or commercial events, rather that Field A or the gymnasium may be used for “performances, lectures, or community meetings, with outdoor events on Field A including such

activities as “Movies in the Park,” local concerts, or other performances” (Draft EIR Chapter II, *Project Description*, page II-34). Therefore, since the special events anticipated at the Project Site do not constitute a commercial purpose or use, the Project does not conflict with Section 115.02 of the LAMC.

## **Comment No. ORG 7A-118**

### **5. The DEIR Fails to Implement All Feasible Mitigation for Construction Impacts.**

The DEIR is required to consider and adopt all feasible mitigation measures. (*King & Gardiner Farms, LLC v. County of Kern* (2020) 45 Cal.App.5th 814, 852, 866, 869.) The following mitigation measures must be considered:

- Locating or parking all stationary construction equipment as far from sensitive receptors as possible, and directing emitted noise away from sensitive receptors.
- Verifying that construction equipment has properly operating and maintained mufflers.
- Limiting operation hours to daytime hours on weekdays.
- Paving roads where truck traffic is anticipated with low noise asphalt.
- Replacing gas- and diesel-powered equipment (e.g., leafblowers) with electric equipment to reduce the noise impacts associated with operation of that equipment.

## **Response No. ORG 7A-118**

The comment claims that the Draft EIR fails to implement all feasible noise mitigation measures. In this regard, the Draft EIR has considered all feasible mitigation measures related to Project construction. Page IV.K-58 of Section IV.K, *Noise*, of the Draft EIR presents Mitigation Measures NOI-MM-1 through NOI-MM-3, which include noise barriers, locating equipment at greater distances from sensitive receptors when feasible, implementing noise shielding devices, and implementing muffling devices on all construction equipment. Further, the Project includes a PDF limiting construction to Monday through Friday between 7:00 a.m. and 6:00 p.m. and Saturdays between 8:00 a.m. and 6:00 p.m., which is within the allowable hours per LAMC Section 41.40.

The repaving of roads where truck traffic is anticipated with low noise asphalt is wholly unnecessary. The Draft EIR evaluates the impacts of off-site construction noise (including truck trips) to and from the Project Site. The Draft EIR found that construction-related trips would not generate noise levels in excess of 5 dBA over ambient noise levels pursuant to Section 112.02 of the LAMC (See Table IV.K-10). Therefore, mitigation is not required to reduce the noise level associated with truck trips.

The replacement of fossil-fueled construction equipment with electric equipment for construction is technically infeasible at this point in time. Battery-powered heavy-duty construction equipment is still largely in the research and development stage. Original equipment manufacturers (OEMs), like Volvo, do have electric alternatives on the market, but availability is low and the equipment is cost-prohibitive.<sup>148</sup> Many construction contractors may not be able to source or afford electric equipment for their job site. In addition, battery reliability and operation time could be an issue with electric equipment. Much of the Project's construction would require ongoing day-to-day use that would require batteries of 300 kWh or larger for a 20-ton piece of machinery.<sup>149</sup> The current limitations of battery technologies would mean equipment would need extremely large batteries to operate, with longer charging times, and at a large cost to construction contractors. Charging of batteries would also require an on-site electrical hook-up capable of handling the plug load of multiple large-scale batteries. For the reasons mentioned above, the inclusion of electric construction equipment was deemed infeasible for the Project and was not included as part of the mitigation measures. The comment does not demonstrate with fact that the Project does not implement all feasible mitigation measures.

## **Comment No. ORG 7A-119**

### **J. The DEIR Fails to Analyze And Disclose Significant Transportation and Traffic Impacts and Mitigation.**

#### **1. The DEIR Relies on Traffic-Related Project Design Features That Improperly Defer and Segment Analysis and Mitigation of Project Impacts.**

The DEIR relies on three Project Design Features ("PDFs") designed to reduce the Project's impact on traffic and circulation. As described above in Section III, this is improper because it compresses the analysis of Project impacts and mitigation, and fails to adequately assess and disclose the Project's impacts to traffic without imposition of the PDFs. (*Lotus, supra*, 223 Cal.App.4th 645, 655-657.)

## **Response No. ORG 7A-119**

The comment asserts that the Draft EIR impermissibly used PDFs to reduce the Project's traffic and circulation impacts but contains no facts to substantiate the contention that use of the PDFs resulted in failure to disclose or analyze any impacts. See Response No. ORG 1B-22 regarding use of PDFs and Response No. ORG 1B-23 regarding the inapplicability of the *Lotus* decision to the Project's Draft EIR. See also Topical Response No. 9 - Transportation and Parking During Construction and Operations,. As discussed

<sup>148</sup> OEM Off-Highway, Can a fully Electric Construction Site Become a Reality in the U.S.?, March 2022. Available: <https://www.oemoffhighway.com/engineering-manufacturing/article/22119310/can-a-fully-electric-construction-site-become-a-reality-in-the-us>.

<sup>149</sup> IDTechEx, Electric Vehicles in Construction 2022-2042, March 2022.

therein, “The City, through the LADOT TAG, continues to require that transportation assessments analyze various non-CEQA transportation topics, such as pedestrian, bicycle and transit access, intersection operations, project access, construction period traffic effects, and residential street cut-through effects.” As discussed in Topical Response No. 9, the Project’s construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR, which is primarily based on the *Transportation Assessment for the Harvard-Westlake River Park Project* prepared for the Project, included in Appendix M of the Draft EIR. In accordance with LADOT’s Transportation Assessment Guidelines (TAG) adopted in July 2019 (updated in July 2020), the CEQA-required analysis to be included within the Draft EIR section includes an assessment of whether the Project would result in: 1) potential conflicts with transportation-related plans, ordinances, or policies; 2) a substantial increase in VMT; or 3) increased hazards due to a geometric design feature or incompatible use. In addition, in accordance with Appendix G of the CEQA Guidelines, an assessment of whether the Project would result in inadequate emergency access is included. The comment contains no facts to support the contention that compliance with the TAG compressed CEQA required analysis of transportation related impacts. Moreover, as traffic (street congestion) is a non-CEQA issue, the comment fails to state any basis for the contention that the Draft EIR’s transportation analysis was inadequate.

### **Comment No. ORG 7A-120**

Further, CEQA requires analysis of “the whole of an action,” and prohibits evading comprehensive CEQA analysis by splitting projects into separate pieces. (*CEQA Guidelines § 15378; Bozung v. Local Agency Formation Com. (1975) 13 Cal.3d 263,283-84; Orinda Assn v. Board of Supervisors (1986) 182 Cal.App.3d 1145, 1171.*) Agencies are also prohibited from undertaking post-approval environmental review. (*Laurel Heights Improvement Assn. v. Regents of University of California (1988) 47 Cal.3d 376, 393-95.*)

### **Response No. ORG 7A-120**

The comment indicates that the Project Description does not include the “whole of an action” Please refer to Response No. ORG 7A-22, above. As discussed therein, the Project does not include any existing or future changes at the Upper School campus, including the reuse or change in existing recreational facilities at the Upper School campus. Please refer to Topical Response No. 13 – Need for Project (Non-CEQA), regarding the use of the Project Site to supplement, not replace, the existing facilities. The whole of the action for the Project is as described in Chapter II, *Project Description*, of the Draft EIR and the comment provides no facts to support the contention that it does not.

### **Comment No. ORG 7A-121**

The PDFs improperly defer analysis of the Project’s impacts with respect to construction impacts. The EIR contains a Project Design Feature, TRAF-PDF-1, which defers until after Project approval the preparation of a Construction Management Plan (“CMP”).

(DEIR, p. IV.M-26.) The CMP will include “street closure information, a detour plan, haul routes, and a staging plan,” and will “formalize how construction will be carried out and identify specific actions that **will be required to reduce effects on the surrounding community.**” (*Ibid*, emphasis added.) This analysis should be included in the EIR so that it can inform the public and decisionmakers whether and to what extent the measures of the CMP, such as street closures, haul routes, staging may create project impacts. Without providing this analysis, the EIR fails to disclose the Project’s true impacts with respect to construction. Further, the CMP improperly defers mitigation for the Project’s impacts, by deferring analysis of the “specific actions that will be required” to reduce the Project’s effects on the surrounding community. Deferred mitigation violates CEQA. (*Endangered Habitats League v County of Orange* (2005) 131 Cal. App. 4th 777, 793-94; CEQA Guidelines § 15126.4(a)(1)(B).) Deferral is permitted when a mitigation measure commits to specific performance standards, but no such standards are included here.

## Response No. ORG 7A-121

This comment asserts that Project Design Feature TRAF-PDF-1, the construction management plan, should have been detailed and analyzed as a mitigation measure and impermissibly defers mitigation. See Topical Response No. 9 - Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project’s construction transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, which was primarily based on the Transportation Assessment for the Harvard-Westlake River Park Project prepared for the Project, included in Appendix M of the Draft EIR. In accordance with the LADOT’s TAG adopted in July 2019 (updated in July 2020), the CEQA-required analysis to be included within the Draft EIR section includes an assessment of whether the Project would result in: 1) potential conflicts with transportation-related plans, ordinances, or policies; 2) a substantial increase in VMT; or 3) increased hazards due to a geometric design feature or incompatible use. In addition, in accordance with Appendix G of the CEQA Guidelines, an assessment of whether the Project would result in inadequate emergency access is included.

The TAG also requires assessment of “non-CEQA” transportation issues, which include: 1) pedestrian, bicycle, and transit access;<sup>150</sup> 2) project access, safety, and circulation; 3) construction traffic; and 4) residential street cut-through analysis. The analyses of these “non-CEQA” issues are included in the TA. However, since they are non-CEQA issues, they are not analyzed in the Draft EIR, unless they relate to the assessment of potential conflicts with transportation-related plans, ordinances, or policies mentioned above. In addition, an analysis of intersection levels of service (LOS) is included as appendices to the TA for informational purposes only and is similarly a non-CEQA issue.

<sup>150</sup> In addition to the non-CEQA pedestrian, bicycle, and transit access topics identified in the TAG, the Draft EIR considered any environmental impacts that the Project could have related to potential conflicts with a program, plan, ordinance or policy addressing transit, roadway, bicycle, and pedestrian facilities as required in the CEQA analysis of potential conflicts with relevant plans, regulations and policies.

Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation. Therefore, no mitigation measures are required for Project impacts related to transportation. Furthermore, it is standard City practice for a Construction Management Plan (CMP) to be prepared post-project approval. CMPs are typically prepared, reviewed and approved by the City close to the time construction activities start to account for the details of a project construction plan, schedule, existing conditions and other construction activities that may occur at the time of the start of construction. It would be speculative at this point of the Project to provide relevant details of the CMP such as street closure information or a detour plan based upon how construction will be carried out.

## **Comment No. ORG 7A-122**

### **2. The DEIR Fails to Adequately Assess Vehicle Miles Traveled (VMT).**

The DEIR fails to adequately assess Project vehicle miles traveled (VMT). Traffic engineer Tom Brohard, P.E., a highly qualified traffic consultant with over 50 years of experience, reviewed the DEIR's transportation analysis. Mr. Brohard noted several deficiencies in the DEIR's analysis of Project VMT. Those deficiencies are identified below, and in Attachment D. We request an adequate response to each of Mr. Brohard's comments in his letter which we have attached herewith.

## **Response No. ORG 7A-122**

The comment claims that the Draft EIR fails to adequately assess VMT, but does not raise any specific comments with regard to the Draft EIR traffic analysis or calculation of VMT. Refer to Response Nos. ORG 7A-181 through 7A-200 for specific comments raised in the referenced attachment.

## **Comment No. ORG 7A-123**

- Harvard-Westlake Trip Lengths - Trip lengths for shuttles and for private vehicles were assumed to be 1.5 miles. The measured distance along the recommended route on Coldwater Canyon Avenue, Moorpark Street, and Whitsett Avenue between the Upper Campus driveway and the passenger loading area on Valleyheart Drive is 1.7 miles. The 1.1-mile length of the return trip from the site back to the Upper Campus for shuttles via the Whitsett Avenue, Ventura Boulevard, and Coldwater Canyon Avenue route was incorrectly omitted from the VMT calculations.

## **Response No. ORG 7A-123**

The comment claims that return trips to the Upper School campus for shuttles were incorrectly omitted from the Draft EIR. In this regard, the Draft EIR evaluates a trip generation rate of 58 daily trips for the Harvard-Westlake shuttles, including 29 inbound and 29 outbound trips. If the inbound trips (29 trips) were to be multiplied by 1.7 miles for

an inbound shuttle VMT of 49 and the outbound trips (29 trips) were to be multiplied by 1.1 miles for an outbound shuttle VMT of 32, the total Harvard-Westlake shuttle VMT would be 81 VMT. This is less than the 87 VMT analyzed in the Draft EIR, meaning the analysis in the Draft EIR was conservative, and thus would not change the significance findings.

The trip generation for Harvard-Westlake private vehicles is only for inbound trips (43 trips) since the outbound trips were found to be the same as the existing outbound trip lengths for student vehicles leaving the Upper School campus to return home. If the inbound trips (43 trips) were to be multiplied by 1.1 miles for an inbound VMT of 47 VMT, it would be less than the 65 VMT analyzed in the Draft EIR. This would mean the analysis in the Draft EIR was conservative, and thus the separate discussion of outbound trips would not change the Draft EIR's significance findings.

### **Comment No. ORG 7A-124**

- Freshman Sports - The schedule of events identified three Freshman sports at the site (Girls Field Hockey, Boys Basketball, and Girls Volleyball). VMT lengths for these sports to the Project must be calculated from the Middle School Campus, not from the Upper School Campus.

### **Response No. ORG 7A-124**

Table IV.M-5 of the Draft EIR shows the net total daily VMT associated with the Project, which is the additional VMT that would be generated by the Project relative to existing operations. The Middle School students that would participate in sports at the Project Site are currently already bused from the Middle School to the Upper School campus for these sports, along with other Middle School students who use transportation to the Upper School campus at the end of the academic day (such as for after-school clubs and meeting up with the student's older sibling(s)). Therefore, these students would already be at the Upper School campus and, in terms of trip distribution, are included with the other Upper School students riding the shuttle to the Project Site (students from the Middle School are, except in very rare circumstances, not of legal driving age). Therefore, including the VMT associated with the travel of these students from the Upper School to the Project Site is conservative, since the busing between campuses is an existing condition that already occurs.

### **Comment No. ORG 7A-125**

- Weddington Golf & Tennis - According to Page 24 of the Transportation Assessment, data for one week in September 2019 was provided for tennis users at the existing facility to calculate the daily trip generation and that was then credited against the Proposed Project. This data was not included or disclosed in the Transportation Assessment Appendix for review by the public. There is no information provided as to how the data for tennis players relates to those using the clubhouse or to the golfers using the driving range or the 9-hole par three golf course. The average daily trip generation of 1,022 or 511 round trips requires

further study and evaluation to support the resulting net negative, offsetting credit of 2,098 daily VMT.

### **Response No. ORG 7A-125**

The comment alleges that the TA is inadequate because it is missing data needed to support the VMT analysis. The comment incorrectly asserts that the tennis data was used to calculate daily trip generation for the existing facility. Traffic counts collected on February 12, 2019, which was prior to the COVID-19 pandemic, were used to develop the trip generation for the existing use credit. The traffic counts were for the whole site and included both the tennis and golf uses.

The tennis players data from one week in September 2019 was used to develop trip distribution patterns, not trip generation as stated in the comment. The analysis was conducted during the COVID-19 pandemic, during which time it was not feasible to collect additional data for this purpose. However, historic trip distribution data (zip code data) was available from September 2019, before the COVID-19 pandemic, though only for tennis players and not for golfers. As the best trip distribution data available, it was used to represent both tennis players and golfers.

A list of tennis players' zip codes is provided in Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, Figure M-1, *Tennis Players Zip Code Survey*, of this Final EIR. Figure M-1, supports and clarifies the evaluation of visitor origins and trip distribution as described in Appendix M, Transportation Assessment, of the Draft EIR. The Transportation Assessment was reviewed and approved by the LADOT.

### **Comment No. ORG 7A-126**

- Attachment 3C in the Traffic Assessment indicates the existing trips at the site were counted on February 12, 2019. The table indicates that 1,022 daily trips will be removed when the current Weddington Golf & Tennis operation is closed. However, the clubhouse and the putting green will remain open and in use after the site is redeveloped with the Project. Trips and VMT associated with these two remaining uses must be added back into trip generation and VMT for the site. It is not reasonable to assume trips associated with Weddington Golf & Tennis will be identical during a week in September 2019 and on February 12, 2019.

### **Response No. ORG 7A-126**

The comment contends that the TA improperly calculated daily trips by excluding the trips associated with the clubhouse and putting green. The trips associated with the clubhouse and the putting green were included as part of the trip generation of the Project in the Draft EIR, using the trip generation rates from the Institute of Transportation Engineers, Trip Generation Manual, 10<sup>th</sup> Edition, for Recreational Community Center (LU 495). The existing trips are shown in Attachment 3C of the Transportation Assessment provided in Appendix M of the Draft EIR.

Regarding the use of data from different times in 2019, it is standard traffic engineering practice to use data collected during normal conditions (i.e., not during the summer when school is not in session, not when there is a big event nearby) to be considered representative of average conditions. The weeks in September 2019 and February 12, 2019 would both be considered typical conditions. Therefore, using empirical count data from February to quantify the existing VMT credit is acceptable.

### **Comment No. ORG 7A-127**

- Right Turn Only Restrictions – Trip distribution to and from the Proposed Project indicates that 85% of all trips will have a trip end to the north and only 15% of all trips will have a trip end to the south. Right turn only restrictions at the north driveway and Whitsett Street will force 85% of the traffic to travel out of their way to return to their origin north of the Project. In addition, if all Valleyheart Drive vehicles are forced to turn right only on Whitsett Street, then all vehicles leaving the parking structure will be forced to travel 0.1 miles to Ventura Boulevard and then back, adding 0.2 VMT to 85% of the trips leaving the Project.

### **Response No. ORG 7A-127**

The comment asserts that the right turn only restriction will increase the VMT. The trip lengths as part of the VMT analysis was conducted using the GIS network analyst tool. This tool measures trip lengths from centroids to centroids of each zone involved in the analysis, which is standard practice for such analyses. As suggested in the comment, 0.2 miles would be added to the trips heading north on Coldwater Canyon Avenue (and eventually to reach the US 101 ramps) or northwest via Coldwater Canyon Avenue by specifying the route as a right turn from the north driveway onto southbound Whitsett Avenue, a right turn from southbound Whitsett Avenue to westbound Ventura Boulevard, and a right turn from westbound Ventura Boulevard to northbound Coldwater Canyon Avenue. Similarly, 0.2 miles would be added to trips heading northeast via Laurel Canyon Avenue by specifying the route as a right turn from the north driveway onto southbound Whitsett Avenue, a left turn from southbound Whitsett Avenue to eastbound Ventura Boulevard, and a left turn from eastbound Ventura Boulevard to northbound Laurel Canyon Avenue. However, even if 0.2 miles were to be added to the trip lengths for 85% of private vehicle trips generated by Harvard-Westlake students and employees, spectators and visiting team, and event attendees, the resulting difference would be an increase of only 33 VMT from what is shown in Table IV.M-5.

Considering the modifications discussed above in Response No. ORG 7A-123, the net increase in total daily VMT would be only 9, or 0.2 percent, over the 3,932 shown in Table IV.M-5 in the Draft EIR. The Project would still result in a net decrease in daily VMT, and the conclusions of the Draft EIR would remain unchanged.

## Comment No. ORG 7A-128

Additionally, the Transportation Assessment omits analysis of the vehicle trips and VMT associated with the seven acres of the Project site reserved for tennis and golf facilities, a clubhouse and café open to the public. (DEIR, Appendix M, Transportation Assessment, p. 22; DEIR, p. II-33 to -34.) The Transportation Assessment justifies its omission by stating that LADOT exempts “community-serving” recreational facilities from VMT analysis, but does not cite the LADOT Guidelines. (DEIR Appendix M, Transportation Assessment, p. 22.) On the contrary, LADOT Guidelines state that “For school . . . uses that are large in scale and are expected to attract people from a broader area, impacts would need to be further evaluated. . . .” (**Attachment R-** Excerpt LADOT Transportation Assessment Guidelines, p. 2-8.).

## Response No. ORG 7A-128

The comment asserts that the TA improperly omits analysis of VMT associated with the tennis and golf facilities(it is presumed the commenter was referring to the seven acres of landscaped areas, walking paths, and the Project’s eight tennis courts, as the existing golf and tennis courts would be removed). The community use component of the Project was exempt from the VMT analysis based on direction from LADOT that community-serving recreational facilities are exempt from VMT analysis. This finding was included by LADOT in the LADOT Transportation Assessment Letter, dated June 11, 2021, available in Appendix M, Transportation Assessment, to the Draft EIR, where the letter states:

“Second, the community use component of the project would be classified as a community-serving recreational facility and is therefore exempt from the VMT analysis.”<sup>151</sup>

This is also memorialized in the Memorandum of Understanding (MOU) with LADOT, which is included in Appendix A to the Transportation Assessment in Appendix M to the Draft EIR.

The community use component of the Project Site was, however, analyzed for Project access, safety, and circulation in the TA.

## Comment No. ORG 7A-129

The DEIR must be recirculated with a corrected VMT analysis to address these deficiencies.

---

<sup>151</sup> Memorandum from Vicente Cordero, Department of Transportation, to Susan Jimenez, Department of City Planning, June 11, 2021, regarding Transportation Assessment for the Harvard-Westlake River Park Project, page 3.

## Response No. ORG 7A-129

The comment asserts that the VMT analysis is inadequate and must be recirculated. Please see the Response Nos. ORG 7A-122 through ORG 7A-128 above. The VMT analysis presented in Section IV.M, *Transportation*, page IV.M-41 of the Draft EIR was prepared in accordance with CEQA. Making the modifications to the trip lengths suggested in Response Nos. ORG 7A-122 and ORG 7A-127 above would result in a total Project VMT of 3,941 (an increase of only 9, or 0.2 percent, over the 3,932 shown in Table IV.M-5 in the Draft EIR) and an updated net total VMT of -2,089. The Project would still result in a net decrease in daily VMT, and the conclusions of the Draft EIR would remain unchanged. Because the Draft EIR adequately evaluates VMT in accordance with the LADOT Guidelines and the City's VMT Calculator, the VMT impacts are accurately disclosed and the recirculation of the Draft EIR is not warranted.

## Comment No. ORG 7A-130

### 3. The DEIR Fails to Analyze and Disclose the Project's Impacts to Emergency Access.

The DEIR fails to disclose the Project's impacts to emergency access. The two entrances to parking facilities on the Project Site are located north and south of the LAFD Fire Station 78. (DEIR pp. II-53, II-16.) The south entrance is located immediately west of the Fire Station, and this entrance will serve as the entry point for numerous types of vehicles: vehicles entering the at-grade parking lot, vehicles entering the below-grade parking garage, shuttles and buses, and rideshare vehicles. The south entrance will have a roundabout for vehicles to enter and exit, and a security kiosk to screen access to the roundabout and at-grade parking.

## Response No. ORG 7A-130

The comment asserts that the analysis of Project impacts on emergency access is inadequate. Impacts on emergency response, including effects on LAFD access, were fully evaluated in Section IV.M, *Transportation*, page IV.M-44 of the Draft EIR. The commenter is also referred to Topical Response No. 10 – Emergency Access, for a discussion of Project effects to operations at the LAFD Fire Station 78. As discussed therein, a flashing red warning light(s), activated by LAFD during the initial stages of response mobilization, will be installed on the southern exit driveway before vehicles reach Valleyheart Drive. The primary objective of the warning light is to assist the return of the fire trucks and other vehicles to the fire station via Valleyheart Drive and would reduce conflicts between vehicles leaving the Project Site and emergency vehicles leaving/coming back to the station and minimize eastbound queues by vehicles leaving the Project Site.

**Comment No. ORG 7A-131**

Besides traffic from cars entering and exiting the site, three shuttle buses to the Harvard-Westlake campus will operate every 5 to 10 minutes every weekday from 2:30 p.m. until activities end, and also on days when large events will occur on the site. (DEIR, p. II-55.) During the school year, activities will end no later than 9:30 p.m., and shuttles will ostensibly be running continuously until that time. (DEIR, p. II-47.) This will create excessive and consistent traffic of large vehicles in and out of the Project Site, every weekday afternoon or large event day, creating congestion around the fire station.

**Response No. ORG 7A-131**

The comment asserts that the analysis of Projects impacts associated with shuttles is inadequate. The comment contains no substantial evidence that supports the contention that traffic would be complicated by the Project's operation or that Project traffic would create hazardous or unsafe conditions.

The Harvard-Westlake shuttles were considered in the transportation analyses provided in: Section IV.M, *Transportation*, page IV.M-23; Table IV.M-5 on page IV.M-41 of the Draft EIR; and Appendix M, *Transportation Assessment for the Harvard-Westlake River Park Project*, of the Draft EIR, on PDF pages 41 and 42 of 217, Table 4, pages PDF pages 63 through 65 of 217, and Attachment 3 of Appendix A of the TA. Therefore, the conclusion was appropriately reached that the Project would have a less than significant impact related to traffic and as it relates to the School's shuttles and operation of LAFD Fire Station 78.

**Comment No. ORG 7A-132**

All of these project components will result in extensive traffic congestion in and around the fire station entrance, and would block emergency response vehicles from exiting and entering the station. As we stated in our scoping comments, this is the wrong project in the wrong area.

**Response No. ORG 7A-132**

The comment asserts that the analysis of Project impacts on emergency access is inadequate and expresses opposition to the Project. Impacts on emergency response were fully evaluated in Section IV.M of the Draft EIR. The commenter is referred to Topical Response No. 10 – Emergency Access, for a discussion of Project effects related to operations at the LAFD Fire Station 78. The comment, which expresses opposition to the Project, is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. ORG 7A-133**

The DEIR's conclusion that the Project will not have significant operational impacts to emergency access is unsupported. As detailed in Mr. Brohard's letter, extensive queueing at the Valleyheart Drive entrance will impede access at the Fire Station. (**Attachment D**, p. 5.) The DEIR states that the Project's lack of installed barriers will prevent impeding of emergency access at the Project site. (DEIR, p. IV.M- 45.) While the lack of installed barriers may prevent matters from becoming worse, this point does not address the serious congestion that will occur at the Valleyheart Drive entrance, particularly as vehicles pour into the entrance, stop at the security kiosk, and then route to the appropriate location (e.g., garage, parking lot, roundabout). Further, the DEIR paints an unrealistic picture of the ability of emergency vehicles to cut through the congested traffic at the Project Site. The DEIR states that "Drivers of emergency vehicles normally have a variety of options for avoiding traffic, such as using sirens to clear a path of travel or driving in the lanes of opposing traffic." (DEIR, p. IV.M-45.) These "options" cannot overcome the physical reality of introducing too many vehicles into too constrained of a space. Neither sirens nor driving in the lanes of opposing traffic will help if there is no place for displaced vehicles to go, and the DEIR fails to address this.

### **Response No. ORG 7A-133**

The comment asserts that the analysis of Project impacts on emergency access is inadequate. Impacts on emergency response were fully evaluated in Section IV.M, *Transportation*, page IV.M-45 of the Draft EIR. The commenter is further referred to Topical Response No. 10 – Emergency Access, for a discussion of the Project's effects on operations at the LAFD Fire Station 78.

### **Comment No. ORG 7A-134**

For similar reasons, the DEIR's reliance on Project Design Feature TRAF-PDF-2 would likely be ineffective. (DEIR, pp. IV.M-45, IV.M-26.) TRAF-PDF-2 consists of a warning light placed at the south entrance to warn vehicles exiting the Project Site onto Valleyheart Drive that an emergency vehicle is approaching or exiting the Fire Station. (DEIR, p. IV.M-26.) The warning light, however, must be activated by a remote-control button pressed by LAFD firefighters/first responders in the emergency vehicle. As identified by Mr. Brohard's letter, this PDF will not prevent traffic congestion from blocking emergency access. (**Attachment D**, p. 5.) This PDF also does not improve access to the Project Site of other, non-LAFD emergency vehicles. Finally, even if the PDF were theoretically effective, it is unrealistic and places an undue burden on City firefighters/first responders responding to an emergency situation for the benefit of a private school's recreational facility. Further, it is not clear whether such a PDF would be enforceable, as it places a requirement on the Fire Station, which is not involved with or part of this Project.

The DEIR bases its conclusion that the Project's construction will not have impacts to emergency access on the implementation of a Construction Management Plan ("CMP") as stated in Project Design Feature TRAF-PDF-1. As we have already pointed out, the

CMP cannot be used to show that the Project will not have significant impacts to emergency access, because it is an improperly deferred and undefined measure. Although the measure was intended to reduce the Project's impacts, it is not identified as a mitigation measure in the DEIR and thus it is unclear whether the PDF will be retained in the approved Project and enforceable.

### **Response No. ORG 7A-134**

The comment questions the efficacy of Project Design Feature TRAF-PDF-2. The primary objective of the warning light contained in Project Design Feature TRAF-PDF-2 is to assist the return of the fire trucks and other vehicles to the fire station via Valleyheart Drive (the fire station's egress point for fire trucks is located on Whitsett Avenue), as the vehicle turning radii for some of the vehicles are large and require the width of the entire Valleyheart Drive to maneuver. There are two LAFD driveways on the north side of Valleyheart Drive that may use this warning light – the eastern driveway is used for the departure and return of the smaller apparatus and the western driveway is used for the return of the larger fire trucks.

Project Design Feature TRAF-PDF-2 requires that Harvard-Westlake install the warning light and provide the remote controls to LAFD. While it does not require the emergency responders to use the remote controls, it provides that option to them if they observe impediments from vehicles exiting the Project Site and so choose to use it. If they choose not to use it, in the event of an emergency, smaller apparatus and other emergency vehicles departing from the eastern LAFD driveway on Valleyheart Drive would still be able to employ the traditional method of sirens and horns to alert other drivers of their presence, and would be able to drive around other vehicles on Valleyheart Drive as necessary, since the roadway width is sufficient for the smaller LAFD vehicles to maneuver. In regard to the return of larger fire trucks that need to swing wide on Valleyheart Drive to enter the western LAFD driveway, returning is not an emergency situation and, if the emergency responders choose to not activate the warning light, it is likely that they would simply have personnel hold traffic on Valleyheart Drive while the truck enters the driveway. Such a technique is commonly used at fire stations when, for example, returning apparatus needs to back into a fire station from a public street.

The comment also questions the efficacy of Project Design Feature TRAF-PDF-1, the Construction Management Plan. The PDF would be enforceable through its inclusion in the Mitigation Monitoring Program and would be in place as a required component of the Project prior to the issuance of building permits. As the Construction Management Plan would be under the monitoring authority of the Department of Building and Safety, it would be enforceable. Moreover, the PDF is not a deferred mitigation measure but a Project feature. This PDF clearly sets forth the minimum requirements for the CMP with additional details required to be based on the nature and timing of the specific construction activities and other projects in the vicinity of the Project Site which cannot be known at this time.

## **Comment No. ORG 7A-135**

### **4. The DEIR Fails to Evaluate Construction and Project Equipment Which May Cause Hazards.**

The DEIR states that the Project will have a less than significant impact in substantially increasing hazards due to geometric design features or incompatible uses. (DEIR, p. IV.M-43.) Yet Project construction will occur for approximately 2.5 years (DEIR, p. II-61), during which construction equipment will be present at the site, which may create hazards. There may also be specialized equipment for maintenance of the athletic facilities which may create hazards at the site. The DEIR must evaluate this. Instead, the Transportation Assessment merely states “The Project’s multimodal amenities and location of driveways would not substantially increase transportation hazards.” (DEIR, Appendix M at Appendix B.)

## **Response No. ORG 7A-135**

This comment incorrectly asserts that the use of construction equipment may create hazards due to geometric design features or incompatible uses. The use of construction equipment is not related to transportation impacts regarding geometric hazards due to a design feature (i.e., sharp curves or dangerous intersections.). No specialized equipment for maintenance of the athletic facilities have been identified that relate to transportation-related geometric hazards. The Project will prepare a CMP that will provide project-specific measures to ensure the safety of the public in and around the Project Site. Refer to Response No. ORG 7A-121 for a discussion of the CMP.

## **Comment No. ORG 7A-136**

### **5. The DEIR Fails to Analyze and Disclose Conflicts with the Mobility Plan.**

The DEIR fails to disclose conflicts with the following policies of the Mobility Plan:

- 1.3 – Safe Routes to Schools: This policy requires the prioritization the safety of school children on all streets regardless of highway classifications. As described above, the Project involves heavy traffic congestion surrounding a fire station, at a facility where students are expected to be traveling in and out of every weekday. The EIR must analyze the Project’s consistency with this policy.
- 1.6 – Multi-Modal Detour Facilities: This policy requires the design of detour facilities to provide safe passage for all modes of travel during times of construction. As the project is anticipated to be constructed over 2.5 years and the Project defers analysis and development of a CMP, the Project conflicts with this policy.
- 1.9 – Recreational Trail Safety: This policy requires balancing of user needs on the City’s public recreational trails. Because the Project is adjacent to the Zev Greenway, the EIR must analyze the Project’s conflict with this policy.

## Response No. ORG 7A-136

As discussed in Section IV.M, *Transportation*, page IV.M-43 of the Draft EIR, the Project is not located in a Safe Routes to School program area and, as such, Policy 1.3, Safe Routes to Schools is not applicable nor included in the evaluation of the Mobility Plan. However, the Project would not alter adjacent streets or the right-of-way in a manner that would preclude or conflict with pedestrian access, including safe routes to school. Regarding the effects of driveways on street traffic, as discussed on pages IV.M-34 and IV.M-35 in Section IV.M, *Transportation*, of the Draft EIR, the LADOT Manual of Policies and Procedures (MPP), Section 321, Driveway Design, includes driveway design standards to minimize adverse effects on street traffic. MPP Section 321 also recommends that two-way driveways for commercial/industrial/multi-family residential developments be no wider than 30 feet in width. The Project's north driveway is proposed to be 39 feet wide and the south driveway is proposed to be 33 feet wide. However, the Project would reduce the number of driveways on Whitsett Avenue from two to one (the south driveway is considered an extension of Valleyheart Drive, which is an existing street), which would be an overall benefit since there would be reduced potential driveway conflicts between vehicles and pedestrians. The north driveway would be wider than the recommended 30 feet to permit provision of a median island on the driveway configured to restrict turns into and out of the driveway to right-turns only, and to enhance safety by minimizing conflicts. Additionally, the south driveway is the extension of a public street, Valleyheart Drive, which is currently 33 feet wide. Therefore, while the Project would not be consistent with the 30-foot recommendation in MPP Section 321, the inconsistency would not result in increased circulation, pedestrian or vehicular conflicts, including conflicts with students traveling to/from school. Also, all Project final design points of ingress/egress would be subject to review and approval by LADOT to ensure pedestrian safety.

Further, there is no reason to believe that pedestrians who may use the public sidewalks along Whitsett Avenue or Valleyheart Drive or the crosswalk at the intersection of Whitsett Avenue and Valleyheart Drive would not obey standard protocols of moving out of the way of emergency vehicles, nor that motorists would not obey Vehicle Code Section 22500.

Safe pedestrian access along the Project area rights-of-way during construction would be ensured under Project Design Feature TRAF-PDF-1, Construction Management Plan (CMP). Under the CMP, any sidewalk closure would require approval by the City of Los Angeles and would be developed and implemented to safely route bicyclists and pedestrians around any such closures. As such, the Project would not conflict with the policy of the Mobility Plan to prioritize the safety of school children on all streets regardless of highway classifications or conditions.

With regard to Policy 1.6, the Project would implement a CMP, which will identify any detour routes/facilities, if needed, to provide safe passage for all modes of travel during times of construction. Refer to Response No. ORG 7A-121 for a discussion of the CMP.

In addition, the comment contends that the Draft EIR is required to analyze Policy 1.9 of the Mobility Plan. As discussed in the Chapter II, *Project Description*, of the Draft EIR, the Project would provide safe public access on the pathway through the Project Site to the Zev Greenway and would provide an ADA-compliant pedestrian ramp to the Zev Greenway at Coldwater Canyon Avenue as requested by the Office of Council District 2. However, the safety of the Zev Greenway is a public safety issue to be addressed by the City and the LAPD. Because it is not the responsibility of the School to ensure public safety of the Zev Greenway, the Project would not conflict with policies related to the safety of public recreational trails.

### **Comment No. ORG 7A-137**

The DEIR also fails to disclose conflicts with the following Objectives of the Mobility Plan (p. 124):

- Decrease VMT per capita by 5% every five years, to 20% by 2035. As described above, the Project fails to accurately assess VMT.
- Meet a 9% per capita GHG reduction for 2020 and a 16% per capita reduction for 2035 (SCAG RTP). The Project will increase GHG emissions relative to existing conditions.).

### **Response No. ORG 7A-137**

The comment alleges that the Draft EIR is inadequate because it fails to disclose certain objectives of the Mobility Plan. However, the listed objectives from the Mobility Plan 2035 are goals for the City and are not directly applicable to the Project.

As noted in the Responses to Comment Nos. ORG 7A-122 through ORG 7A-129 above, the Draft EIR does not fail to accurately assess VMT.

### **Comment No. ORG 7A-138**

#### **6. Expert Analysis Reveals Further Deficiencies of the DEIR.**

As described above, traffic engineer Tom Brohard, P.E. reviewed the DEIR's transportation analysis and identified several deficiencies in that analysis. Those deficiencies are identified in **Attachment D**. We request an adequate response to each of Mr. Brohard's comments in his letter which we have attached herewith.

### **Response No. ORG 7A-138**

The comment introduces the traffic engineer's ensuing comments. No comments are made on the adequacy of the Draft EIR and no further response is necessary. Responses to the comments contained in Mr. Brohard's letter are included in Response Nos. ORG 7A-181 through ORG 7A-200, below.

## Comment No. ORG 7A-139

### K. The DEIR Fails to Adequately Disclose and Mitigate the Project's Adverse Recreational Impacts.

The existing uses on the Project site include heavily used golf and tennis facilities. The golf course is extremely busy; over 70,000 rounds are played each year, or about 200 rounds per day. It is a public golf course with diverse users and extremely low fees compared to other facilities throughout the City. (**Attachment S**, Weddington Golf: A Case Study In Cultural Relevance And Open Green Space.) “Weddington Golf ..only costs \$12 on weekdays, \$15 on weekends, and \$10 for seniors to play a round.” (Ibid.) The tennis courts are also extremely popular for use by teams, including the United States Tennis Association Team, leagues, and children’s programs. The courts have been home to the tennis teams from a number of high schools and are also home to one of the City’s largest tennis leagues, the Los Angeles Tennis Association.

## Response No. ORG 7A-139

The comment claims that the Draft EIR fails to adequately disclose and mitigate the Project’s adverse impacts on recreational resources. The comment, however, does not discuss the manner in which the Project would exceed the CEQA threshold, which is not the loss of resources, but whether the reduction in recreational uses would cause the deterioration of other recreational sites to the extent that other recreational facilities would need to be constructed or expanded, the construction activity of which would result in adverse construction impacts. Please refer to the CEQA threshold for parks and recreational facilities in Section IV.L.3, *Parks and Recreation*, page IV.L.3-19 of the Draft EIR. As evaluated in detail in Section IV.L.3, adequate public and private golf courses in the region could accommodate displaced golfers without resulting in the deterioration of such golf courses that would require the construction of new golf courses. Also, as discussed in Section IV.L.3, pages IV.L.3-24 through IV.L.3-26, and in Topical Response No. 11 – Recreation: Golf and Tennis Facilities, the Weddington Golf & Tennis site accommodates 100 weekday individuals and 150 individuals on each weekend day. In groups of two to four (standard practice for golf courses), this represents 25 to 50 rounds per weekday, and 38 to 50 rounds per weekend day (groups of four are encouraged on busier weekends at all golf courses). Because existing municipal golf courses have available capacity to accommodate the relocated golfers from the Project Site’s course (which generates a maximum of 38 to 50 rounds of golf per day) without exceeding the RAP’s service ratio of 250 rounds per day for municipal courses (the daily round capacity of the Los Feliz and Rancho Park Golf Courses), the relocation of golfers would not increase demand at a level that would foreseeably require the provision of new or reconstructed public golf courses.

With regard to tennis, Section IV.L.3, Table IV.L.3-6, *Projected Capacity of On-Site Tennis Courts*, page IV.L.3-25 of the Draft EIR illustrates the existing use of 16 courts and future use of 8 courts (including conservative assumptions for the School’s own use). As shown

in Table IV.L.3-6, the existing sixteen courts provide, on average, 96 sessions during a single weekday (480 sessions per week) and 78 sessions during a weekend day (156 sessions per week), for a total weekly average of 636 sessions. The weekly sessions total in Table IV.3-6 has been corrected in Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR, to reflect 636 weekly existing sessions. This session total only consists of public and teaching professional uses, and does not include School uses. The Project's eight future tennis courts would have the capacity to accommodate 88 public sessions per weekday (440 sessions per week) and 112 public sessions per weekend day (224 sessions per week), for a total weekly capacity of 664 sessions. The weekly sessions total in Table IV.3-6 has been corrected in Chapter 3 of this Final EIR, to reflect a capacity of 664 weekly sessions. The table reflects the School's use of all eight tennis courts on weekdays between 3:00 p.m. and 6:00 p.m., which is a conservative assumption since the School would not use all eight courts every weekday during the year, particularly during summer months and School breaks. Therefore, the Project would have adequate capacity to accommodate the same weekly number of tennis court sessions as the current Weddington Golf & Tennis facility. Although weekly capacity would be available, it is acknowledged that some tennis players would not be able to use the courts at their preferred times, and need to conduct their tennis activities at other times of the day or other days when there is ample court availability. However, inconveniences that are the result of personal preference are not a threshold of significance under CEQA. Further, players would have the option of relocating to other tennis facilities in the area listed and discussed in the Draft EIR that have adequate capacity (refer to page IV.L.3-25). The Project would be able to continue to host league matches as under existing conditions. Because the Project could offset the demand for off-site tennis facilities, the Project is not anticipated to increase demand for use of tennis courts to a level that would foreseeably result in substantial adverse physical impacts at off-site facilities or cause the need for new or physically-altered public tennis courts in order for the RAP to maintain adequate service ratios. As such, the Project would not exceed the CEQA threshold standard regarding golf and tennis facilities and the mitigation of impacts would not be required.

### **Comment No. ORG 7A-140**

The existing golf course and driving range at the Project site would be completely removed by the proposed Project. The loss of this recreational opportunity would cause a significant project impact that must be analyzed and feasible mitigation measures or alternatives adopted. The Project would also eliminate half of the existing tennis courts, and limits public use to times the courts are not being used by the School.

### **Response No. ORG 7A-140**

The comment claims that the loss of recreational opportunity would cause a significant impact. However, as discussed under Response No. ORG 7A-139 and in Section IV.L.3, page IV.L.3-19, "recreational opportunity" is not a CEQA issue. CEQA thresholds related to park and recreational facilities are as follows:

“In accordance with Appendix G of the CEQA Guidelines, a project would have a significant impact related to parks and recreation if it would:

- (a): *Result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which would cause significant environmental impacts, in order to maintain acceptable service ratios, or other performance objectives for parks;*
- (b): *Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated: or*
- (c): *Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.”*

As described in the Draft EIR, the implementation of reservations at municipal courses, as well as available capacity at other public and private (available to the public) courses, would ensure that the potential increase in use resulting from the displacement of current Weddington users would not exceed the capacity of these facilities. The capacity of the region’s golf facilities and the Project’s future tennis courts are also discussed in Response No. ORG 7A-139, above. While the loss of the on-site golf facilities and reduction in tennis facilities could pose an inconvenience for current users, the increased demand for use of other facilities is not expected to foreseeably result in the need for new or physically-altered public, nine-hole golf courses, or new public tennis courts (specifically because of the Project) in order for RAP to maintain adequate service ratios. As such, the Project would not exceed the threshold standard for recreational facilities and no mitigation measures would be necessary.

### **Comment No. ORG 7A-141**

While the DEIR relies on the Project including 5.4 acres of public space to absolve the Project of its impacts on recreational facilities, this is noncontiguous space, made up mainly of a walking path connecting the Project facilities that are intended mainly for Harvard-Westlake use. The Project does not include a true park with open space. At the same time, it privatizes the recreational facilities on this site for a significant portion of their operation and during times the public would be most likely to seek use of the facilities. This is contrary to the Sherman Oaks-Studio City-Toluca Lake-Cahuenga Community Plan Policy 4-1.1, which requires the City to “Preserve existing recreational facilities and park space.”

## Response No. ORG 7A-141

The comment asserts that the Project would “privatize” recreational facilities primarily for School use. The comment also states that the Project’s provision of open space is to “absolve” the Project of its impacts. Both of these assertions are incorrect. The Weddington Golf and Tennis facility was a private commercial enterprise from its inception in the 1950s to the sale of the property in 2017 and is now currently owned by the School. The School has continued to operate the facility for public use of existing recreational facilities and intends to continue operating proposed recreational facilities for public use. Furthermore, as discussed in Response Nos. ORG 7A-139 and ORG 7A-140, above, the Project has no need to “absolve” impacts related to recreational facilities since it would not result in significant impacts to recreational uses. Moreover, the statement that the public walking path through the Project Site is noncontiguous is incorrect. The path, which has four gated entrances along Valley Spring Lane, is continuous and separated from the recreational uses to prevent conflation between athletic users (including members of the public and by the School) and the public. The pathway, to which the public would have all day access, does not access individual recreational facilities. The public’s access to these uses, as well as to the putting green and clubhouse, would be through the main gate on Whitsett Avenue. Most of the School’s outdoor activity, including use of the athletic fields, would occur in the late afternoons and would end between the hours of 4:45 p.m. to 7:45 p.m., with approximately 50 percent of school days containing no outdoor athletic activities after 5:30 p.m. The pathway, which would circumnavigate the Project Site and cover a distance of approximately 0.75 miles, would allow dog walking, recreation, relaxation, and observation of the natural setting and biodiversity around the Project Site. The pathway would be available for public use every day of the week from 7:00 a.m. to 9:00 p.m. and would not be affected by other activities within the Project Site. The putting green, clubhouse, and café would also be available to the public every day from 7:00 a.m. to 9:00 p.m. In addition, during the majority of hours of the day (see Response No. ORG 7A-83, above), the Project’s tennis courts, swimming pool, playing fields, and gymnasium would be available for public use. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional information, including the finding that the Project Site and its athletic facilities would be available for public uses to a greater extent than the School’s own uses (except for the swimming pool, which would be subject to more limited hours). Furthermore, the Project would not conflict with the Community Plan Policy 4-1.1. In response to the contents of Policy 4-1.1, Table LU-5 contained in Appendix J of the Draft EIR states: “The Project would not require the removal or reduction of any existing public recreational or park space and, thus, would conserve the area’s recreational uses. While golf would no longer be an available form of recreation on the Project Site, eight tennis courts would be developed and would be supplemented with a wide variety of field and gym-based sports, alongside new opportunities for the public to enjoy free outdoor recreation and relaxation within 5.4 acres of open space around the Project’s athletic facilities.” The “Program” listed in the Community Plan for implementation of Policy 4-1.1 states “[t]he plan assists in preserving such facilities and park space by changing the existing zone as applicable to the Open Space Zone, which provides such protection.” The Project Site’s land use designation is Open Space, and will remain Open Space. Therefore, the

Project would not conflict with policies to preserve the existing recreational facilities and park space.” The comment does not support the claims of significant parks and recreational impacts or inconsistency with Community Plan Policy 4-1.1.

The over-arching misconception displayed in this comment and similar comments is that the Project Site is currently public property to which the public is allowed complete and unfettered use. The Project Site and the current on-site facilities are not public property and can only be used by the public with the permission of the private property owner and upon payment of fees. See Response to Comment No. 7A-86 above and Topical Response 13 – Need For Project (Non-CEQA). While the Project would provide for public access in a park-like setting where none currently exists, and permit the public to use the School’s recreational facilities when not in use by the School, there is no obligation for a private property owner to replace an existing private use with a public use. Moreover, the comment provides no evidence that the Project Site is currently a park or public recreational facility or that the School’s use of its property would cause a significant impact as defined by the CEQA thresholds of significance discussed above.

### **Comment No. ORG 7A-142**

#### **L. The Project Could Increase Mosquito Activity in Project Vicinity, Resulting in Potential Public Health Impacts That the DEIR Fails to Address.**

The Project site is located next to the Los Angeles River, an area that attracts mosquitoes. West Nile virus can be carried by mosquitoes and mosquitoes carrying this disease have previously been found in the Studio City area. (See, <https://ktla.com/news/local-news/studio-city-neighborhood-will-be-sprayed-due-to-high-west-nile-virus-numbers-elevated-mosquito-activity/>, incorporated by reference.) The DEIR fails to assess the Project’s potential to allow for increased mosquito activity in the area.

### **Response No. ORG 7A-142**

The comment claims that the Project would increase mosquito activity. Mosquito activity is not a CEQA issue and is appropriately not addressed in the Draft EIR. However, the comment is noted for the record and will be forwarded to the Project’s decision makers.

### **Comment No. ORG 7A-143**

As set forth in Section V.C.2, the Project could adversely impact bat populations that currently use the numerous trees located on the Project. Bats help control mosquito populations and thus reducing bat species at the site could lead to increased mosquito activity.

### **Response No. ORG 7A-143**

The comment contends that the Project would adversely impact bat populations that currently use the Project Site and that eat mosquitos. Section IV.C, *Biological Resources*, of the Draft EIR on page IV.C-47 through IV.C-48 analyzes impacts to bats and concludes that the Project would result in temporary disturbances to local wildlife movement within the Biological Study Area with the removal of landscape trees that may be used by birds and bats; however, those species adapted to urban areas would be expected to persist on-site following construction because a significant number of native replacement trees (a 36-percent increase as compared to existing conditions) would be planted on-site. Consequently, impacts to foraging habitat would be less than significant. As stated in Response No. ORG 7A-142 above, the mosquito control issue within the Los Angeles River is the responsibility of the local vector control and the Project would coordinate, contribute, and cooperate with the local vector control to address any future mosquito issues or apply recommendations to minimize mosquito breeding or attractants.

### **Comment No. ORG 7A-144**

Additionally, the Project site currently contains 42 Blue Gum Eucalyptus trees.

Eucalyptus trees are an effective mosquito repellent. (See <https://www.simplygreenlawncare.com/blog/outdoor-plants-trees-and-shrubs-to-repel-bugs-this-summer/>, incorporated by reference; <https://www.fast-growing-trees.com/pages/repel-mosquitoes-naturally-plants>, incorporated by reference.)

### **Response No. ORG 7A-144**

The comment contends that the Project would remove eucalyptus trees that are an effective mosquito repellent. Mosquito activity is not a CEQA issue and is appropriately not addressed in the Draft EIR. However, the comment is noted for the record and will be forwarded to the Project's decision makers.

### **Comment No. ORG 7A-145**

By decreasing the number of mosquito consumers on the Project site, while simultaneously eliminating a source of mosquito repellent, the Project could increase mosquito activity, resulting in potential health impacts from this disease vector. The impact should have been analyzed in the DEIR, but was not.

### **Response No. ORG 7A-145**

The comment reasserts that the Project would increase the mosquito population. Please see Response Nos. ORG 7A-143 and ORG 7A-144. As stated above, the mosquito control issue within the Los Angeles River is the responsibility of the local vector control and the Project would coordinate, contribute, and cooperate with the local vector control

to address any future mosquito issues or apply recommendations to minimize mosquito breeding or attractants.

## **Comment No. ORG 7A-146**

### **VI. The DEIR's Alternatives Analysis is Inadequate.**

#### **A. The DEIR Relies on Overly Narrow Project Objectives.**

The DEIR is also required to identify project objectives, are a “clearly written statement of Objectives will help the lead agency develop a reasonable range of alternatives to evaluate in the EIR and will aid the decision makers in preparing findings or a statement of overriding considerations, if necessary. The statement of Objectives should include the underlying purpose of the project and may discuss the project benefits.” (CEQA Guidelines § 15124.) The City must exercise its independent judgment on project Objectives, and must not uncritically accept the applicant’s Objectives. (Pub.Resources Code § 21082.1, subd. I(1); *Uphold Our Heritage v. Town of Woodside* (2007) 147 Cal.App.4<sup>th</sup> 587, 602-603; *Preservation Action Council v. City of San Jose* (2006) 141 Cal.App.4<sup>th</sup> 1336, 1352; *Save Round Valley Alliance v. County of Inyo* (2007) 157 Cal.App.4<sup>th</sup> 1437, 1460.)

## **Response No. ORG 7A-146**

The comment claims that the Draft EIR relies on overly narrow Project Objectives. In this regard, the Project’s Objectives, provided both in Chapter II, *Project Description*, and Chapter V, *Alternatives*, of the Draft EIR were reviewed and evaluated by the Planning Department prior to inclusion in the Draft EIR. The Project Objectives include the underlying purpose of the Project “to supplement the School’s athletic and recreational facilities, and provide Harvard-Westlake School a campus that can fulfill its educational mission and athletic principles now and in the future.” The comment provides citations to existing law on project objectives, but does not provide any information to support the statement that the Project Objectives are overly narrow.

## **Comment No. ORG 7A-147**

In addition, use of unduly narrow project Objectives violates CEQA (*In Re Bay Delta Coordinated Environmental Impact Report Proceedings* (2008) 43 Cal. 4<sup>th</sup> 1143, 1166 [“a lead agency may not give a project’s purpose an artificially narrow definition”].) Narrowly defining Objectives and using that to dismiss consideration of potential alternatives prejudicially prevents informed decision making and public participation. (*North Coast Rivers Alliance v. Kawamura* (2015) 243 Cal.App.4<sup>th</sup> 647, 668, 671.)

Here, the DEIR includes several broad project Objectives, such as:

- Provide opportunities for shared use of a variety of types of recreational facilities and activities for the community.

- Create new publicly accessible open space with a broad array of recreational facilities in a safe and secure environment for the surrounding community and the public to use similar to a City-owned park.
- Increase public access to and enhance the adjacent Los Angeles River and Zev Greenway through a network of publicly accessible pathways.
- Replacing non-native trees with native tree species
- Incorporates sustainable design

(DEIR p. V-2 to 3.) However, the DEIR also includes a number of overly narrow project Objectives that essentially eliminate anything other than the Project exactly as proposed. This violates CEQA.

### Response No. ORG 7A-147

The comment asserts that some of the Project Objectives are overly narrow thereby preventing consideration of other alternatives. The comment appears to contend that specific Project Objectives that provide public access are acceptable but the objective that fulfills the underlying Project purpose of “supplement[ing] the School’s athletic and recreational facilities, and provide Harvard-Westlake School a campus that can fulfill its educational mission and athletic principles now and in the future” (page II-13 of the Draft EIR), is not permissible. The cases cited by the comment do not support this contention. As stated in full in the cited case, *In Re Bay Delta Coordinated Environmental Impact Report Proceedings* (2008) 43 Cal. 4<sup>th</sup> 1143, 1166:

“Although a lead agency may not give a project’s purpose an artificially narrow definition, **a lead agency may structure its EIR alternative analysis around a reasonable definition of underlying purpose and need not study alternatives that cannot achieve that basic goal.** For example, if the purpose of the project is to build an oceanfront resort hotel (*Goleta, supra*, 52 Cal.3d at p. 561) or a waterfront aquarium (*Save San Francisco Bay Assn. v. San Francisco Bay Conservation etc. Com.* (1992) 10 Cal.App.4<sup>th</sup> 908, 924-925 [13 Cal.Rptr.2d 117]), a lead agency need not consider inland locations. (See also *Sequoyah Hills Homeowners Assn. v. City of Oakland* (1993) 23 Cal.App.4<sup>th</sup> 704, 715 [29 Cal.Rptr.2d 182] [lead agency need not consider lower density alternative that would defeat primary purpose of providing affordable housing].)” (emphasis added.)

### Comment No. ORG 7A-148

The underlying purpose of the Project is identified as the providing a supplement to Harvard-Westlake School’s athletic and recreational facilities. Several very specific project Objectives make clear that the only way to fulfill that overarching purpose is

through the Project as proposed. The recreational and athletic facilities are required to provide facilities for all of the following:

- Develop a state-of-the-art indoor and outdoor athletic and recreational facility to support the School’s existing athletic programs and co-curricular activities, including basketball, soccer, football, track and field, tennis, swim, water polo, volleyball, fencing, weight training, dance, yoga, physical fitness, and wrestling programs.

(DEIR p. V-2.) This overly narrow project objective requires the excessively dense development of the site that the community has repeatedly objected to and is the cause of many of the Project’s impacts. Only a project that provides every single facility at exactly the large size proposed for the Project could meet this objective. This improperly prevents consideration of alternatives and thus violates CEQA.

### **Response No. ORG 7A-148**

The comment contends that the specific Project Objective to develop an athletic and recreational facility to support the School’s range of athletic and co-curricular activities would be too dense and too narrow. Thus, the comment seeks to insert the commenter’s opinion about what athletic and recreational activities the School needs to provide. Substituting the judgment of scholastic professionals on their needs for their students is not authorized by CEQA, supported by case law, nor justified by any facts which demonstrate that the Draft EIR fails to include reasonable Project Objectives.

Additionally, the comment fails to provide facts to support the contention that Project Objective 1’s specific objective of developing a state-of-the-art indoor and outdoor athletic and recreational facility to support the School’s existing athletic programs and co-curricular activities, including basketball, soccer, football, track and field, tennis, swim, water polo, volleyball, fencing, weight training, dance, yoga, physical fitness, and wrestling programs, was the only basis for rejecting any alternatives. As explained on page V-4 of the Draft EIR, CEQA Guidelines Section 15126.6(a) states that the purpose of analyzing project alternatives is to identify alternatives that “...would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project...” As shown in the environmental analysis contained in Chapter IV, *Environmental Impact Analysis*, of the Draft EIR, the Project would not have significant long-term impacts due to Project operations that would require consideration of alternatives that would reduce such impacts. However, the Project would have significant and unavoidable noise impacts during the Project’s construction activities that cannot be fully mitigated through feasible noise control measures. Thus, the alternatives analyzed were selected in light of the significant and unavoidable temporary construction noise impact of the Project, the Project Objectives, the feasibility of the alternatives considered, and public input received during the scoping period. Alternatives that were rejected from further consideration are fully discussed on pages V-5 through V-8 of the Draft EIR, with an explanation of why they were rejected as required by CEQA Guidelines Section 15126.6(c). These alternatives were rejected for a variety of reasons with some

failing to meet Project Objectives 1 – 3 which cover the needed athletic and sports facilities, the opportunity for shared use, and the ability to use the Project Site for academic opportunities. No alternative was rejected only for failing to provide the opportunities for the athletic activities described in Project Objective 1. Additionally, the comment contains no facts to substantiate the contention that these were not appropriate Project Objectives for this Project.

### **Comment No. ORG 7A-149**

While a portion of the project objective to provide public use of the site similar to a City-owned park is proper to rely upon, the objective then goes on to specifically designate the design proposed by the Project as being part of the objective, stating that the Project must provide “a community room café, and indoor and outdoor areas for public gatherings, performances, and occasional special events.” (DEIR p. V-2.) The DEIR cannot use the project Objectives to dismiss the possibility for any other project alternative.

### **Response No. ORG 7A-149**

The comment asserts that Project Objective 4 is overly narrow because it specifies what public uses the Project strives to provide. The comment provides no facts to substantiate the contention that this Project Objective is too narrow or that it resulted in refusal to consider reasonable alternatives that would avoid or lessen the Project’s significant and unavoidable construction noise impacts. As such, no further response is necessary. See also Response No. ORG 7A-147 regarding Project Objectives.

### **Comment No. ORG 7A-150**

The DEIR also improperly identify measures that are required to mitigate the oversized Project’s impacts as being project Objectives. This is done through including as an objective the design proposed to address Project impacts:

- Promote compatibility with the surrounding neighborhood through a design that (1) includes mature trees and extensive landscaping along the northern edge of the Project Site; (2) reduces off-site noise effects through placement of recreational facilities internal to the Project Site, use of landscaped walls and berms, and use of canopy structures adjacent to pool and playfield areas; (3) limits light spillover and glare through use of field lights with light-emitting diode (LED) technology, timer controls, and shields that comply with LAMC and RIO requirements; (4) provides ample on-site parking and prohibits off-site parking; and (5) maximizes public safety through 24-hour, seven-day a week on-site security, monitored points of entry, and enforcement of a prohibition on off-site parking.

(DEIR p. V-3.) The level of specificity included in this objective is improper. Moreover, relying on a project objective to mitigation [sic] Project impacts fails to provide the required assessment of Project’s impacts, analysis of mitigation efficacy, and prevents the required full enforceability. (Section IV.) As such, it is in violation of CEQA.

## **Response No. ORG 7A-150**

This comment asserts that Project Objective 7 contains too much design specificity and discloses what the commenter contends should be a mitigation measure. The Project's operational impacts are fully analyzed in Chapter IV, *Environmental Impact Analysis*, of the Draft EIR. As demonstrated in the analysis, the Project would have no significant operational impacts, a conclusion reached without any reliance on Project Objectives. As such, no mitigation for operational impacts is required nor does Project Objective 7 purport to be a mitigation measure. Furthermore, Objective 7 is generalized in that it only expresses the intent to achieve compatibility with the adjacent residential community through basic design measures, such as dense landscaping, landscaped walls and berms, appropriate lighting, facilities internal to the Project Site, and adequate on-site parking. It does not set forth specific design measures that would limit the selection of a Project alternative. The comment does not contain any facts to substantiate a contention that Project Objective 7 is unreasonable, unlawful or resulted in rejection of any feasible alternative. As such, no further response is necessary.

## **Comment No. ORG 7A-151**

The project Objectives are further improperly narrow because they set forth that artificial grass is required. As discussed above, there are numerous adverse impacts associated with the use of artificial turf. Including this as a project objective improperly requires artificial turf be included in the project even if other natural turf would be less impactful.

## **Response No. ORG 7A-151**

The comment asserts that Project Objective No. 8, which includes among other sustainable and green building design features, the elimination of turf and use of artificial grass to reduce water demand and use of pesticides, is an unreasonably narrow Project Objective. As to the alleged adverse impacts of artificial turf, as explained on page V-7 of the Draft EIR, use of turf was evaluated and dismissed as not feasible because it would result in a much higher water demand than the Project, as well as requiring the use of fertilizers, pesticides, and herbicides, which could adversely impact the public and the environment. See also, Response Nos. ORG 7A-67 and 7A-76, above for further discussion on this issue. As to the contention that this portion of a Project Objective is too narrow, the comment provides no facts to substantiate the contention that the Project Objective is too narrow or that it resulted in refusal to consider reasonable alternatives that would avoid or lessen the Project's significant and unavoidable construction noise impacts. As such, no further response is necessary.

## Comment No. ORG 7A-152

### B. The DEIR Relies on Improperly Narrow Project Objectives to Eliminate Consideration of a Reasonable Range of Alternatives.

The City has a duty under CEQA to evaluate a reasonable range of alternatives to the environmentally damaging proposed Project. (*Laurel Heights I, supra*, 47 Cal.3d at 400.) As the California Supreme Court has stated:

Under CEQA, the public agency bears the burden of affirmatively demonstrating that . . . the agency’s approval of the proposed project followed meaningful consideration of alternatives and mitigation measures.

(*Mountain Lion Foundation v. Fish and Game Commission* (1997) 16 Cal.4<sup>th</sup> 105, 134, emphasis added; accord *Village Laguna of Laguna Beach v. Board of Supervisors* (1982) 134 Cal.App.3d 1022, 1035.) As the Court has said, while an EIR is “the heart of CEQA”, the “core of an EIR is the mitigation and alternatives sections.” (*Citizens of Goleta Valley v. Bd. Of Supervisors* (1990) 52 Cal.3d 553, 564.) Preparation of an adequate EIR with analysis of a reasonable range of alternatives is crucial to CEQA’s substantive mandate to “prevent significant avoidable damage to the environment” when alternatives or mitigation measures are feasible. (CEQA Guidelines § 15002(a)(3).)

## Response No. ORG 7A-152

The comment indicates that the Draft EIR does not evaluate a reasonable range of alternatives and claims the Project to be “environmentally damaging.” The range of Project Objectives were selected to address the Project’s significant and unavoidable impact caused by construction noise and vibration, which is the only factor that the selection of Project alternatives is required to address. As evaluated in detail in the Draft EIR, the Project would not result in other significant construction impacts or in any operational impacts that would exceed CEQA thresholds. The claim that the Project is “environmentally damaging” is based on conjecture in Comment Letter No. ORG 7A and not factual evidence. The implication that construction noise and vibration would not be the Project’s only significant and unavoidable impacts has been shown to be inaccurate in the responses above. Because the Project would not result in broad adverse environmental impacts, the need to evaluate a range of alternatives that do not specifically address construction noise and vibration would not be reasonable.

## Comment No. ORG 7A-153

Section 15126.6 of the CEQA Guidelines requires that an EIR “describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic Objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives . . . even if these alternatives would impede to some degree the attainment of the project Objectives, or would be more costly.” This discussion must

include “sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the proposed project,” and expressly must address “[t]he specific alternative of ‘no project,’” the purpose of which “is to allow decisionmakers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project.” Moreover, alternatives are not required to meet all project Objectives, and in reality it “is virtually a given that the alternatives to a project will not attain all of the project’s Objectives.” (*Watsonville Pilots Ass’n v. City of Watsonville* (2010) 183 Cal.App.4<sup>th</sup> 1059, 1087.)

### **Response No. ORG 7A-153**

The comment recites the law relating to analysis of reasonable alternatives in an EIR. The Project’s Alternatives would meet the underlying purpose of the Project to supplement the School’s athletic and recreational facilities and provide Harvard-Westlake School a campus that can fulfill its educational mission and athletic principles now and in the future. However, it is correct that the selected Alternatives do not meet all of the Project’s Objectives. This is illustrated in Chapter V, *Alternatives*, Table V-3, *Ability of Alternatives to Meet Project Objectives*, pages V-150 through V-153 of the Draft EIR. Note also that Alternatives were selected based on the ability of the Alternatives to reduce the Project’s significant and unavoidable construction noise and vibration impacts to a level that would be less than significant. No other impacts were demonstrated in the Draft EIR or in Comment Letter No. ORG 7A to be significant or unmitigated. As the comment only presents general statements of law, it does not provide facts to demonstrate an inadequacy in the Draft EIR.

### **Comment No. ORG 7A-154**

Unfortunately, the DEIR’s artificially narrow approach for describing the project Objectives discussed above, improperly served to ensure that the results of its alternatives analysis would be a foregone conclusion. “One of [an EIR’s] major functions ... is to ensure that *all reasonable alternatives* to proposed projects are thoroughly assessed by the responsible official.” (*Citizens of Goleta Valley v. Board of Supervisors* (1990) 52 Cal.3d 553, 565.) This DEIR fails to meet that function. When discussing alternatives rejected from consideration, the DEIR makes clear that only those alternatives that include every single athletic facility they have identified for the proposed Project would be considered, rejecting on reduced facilities or limits on use claiming these fail to meet basic project Objectives. (DEIR p. V-7 to V-8.)

Instead, the DEIR only includes a stacked deck consideration of all student athletic facilities included in the proposed Project with public access limitations and a no project alternative that would cease existing operations.

### **Response No. ORG 7A-154**

The comment reasserts that the Project Objectives are too narrow to permit an adequate analysis of Project alternatives. The comment does not demonstrate how the Project’s

Objectives are “artificially narrow” or how the evaluated Alternatives represent a “stacked deck.” The underlying purpose of the Project is to “supplement the School’s athletic and recreational facilities and provide Harvard-Westlake School a campus that can fulfill its educational mission and athletic principles now and in the future.” This objective could be met by a variety of athletic and recreational facilities. Many of the Project’s Objectives are intended to address land use obligations under the RIO District, such as the tree planting program with RIO-compliant tree species, a direct connection to the Zev Greenway, removal of invasive exotic and non-RIO compliant tree species, enhanced public access to the Los Angeles River, and sustainability. Other Project Objectives provide a range of recreational use associated with an indoor and outdoor recreational facility, provision of open space similar to a City-owned park, a variety of activities for the community, retention of mature trees along the Project Site’s periphery, maximizing public safety, and retaining the existing clubhouse, café, putting green, and golf ball-shaped light standards to convey their historic value. A variety of architectural designs, layout, and character of uses could accommodate these general Project Objectives.

It is understood that “artificially narrow” Project Objectives would be specific features, such as a certain style of roof or windows, specific landscape design, specified floor area, or similar details that narrow the options that would meet these parameters. The underlying purpose of the Project to supplement the School’s athletic and recreational facilities would be allowed as an appropriate Project Objective under CEQA. This objective does not prescribe specific features, such as building style or other design features, floor areas, or operating parameters that would narrow the selection of Project Alternatives.

Regardless, the Project would not result in substantial, operational environmental impacts to recreation, air quality, land use and planning, public services, utilities, transportation, hydrology, water quality, geology, noise, light and glare, or other areas of concern that would warrant the need for an Alternative that would eliminate any component of the Project’s underlying purpose. The position of the comment that the Project’s Objectives are artificially narrow is not justified by the evidence provided in Comment Letter No. ORG 7A.

### **Comment No. ORG 7A-155**

The DEIR establishes improper limits to reject consideration of an off-site alternative. Additionally, SCRA and SLAROS presented several alternatives in scoping comments that should have been evaluated but were not, including a Natural Park alternative and a true Reduced Density Alternative. Herein, we propose an additional alternative that would preserve the historic Weddington Golf Course, while enhancing stormwater facilities.

### **Response No. ORG 7A-155**

The comment asserts that the Draft EIR improperly rejected an off-site alternative and did not include alternatives proposed during the scoping comments, including the specific project that had previously been proposed by SCRA and its leadership (prior to the School’s purchase of the Property), who have also retained the commenter as their legal

representative. As explained in Chapter V, page V-5 of the Draft EIR, CEQA Guidelines Section 15126.6l states that the range of alternatives should be those that could feasibly accomplish most of the basic objectives of the Project and could avoid or substantially lessen one or more significant effects. As to the off-site alternative, page V-6 of the Draft EIR fully explains the reasons why an off-site location is not feasible including distance to the Upper School campus, topography, and the fact that even if a nearby suitable property could be purchased by the School, it would also be in a dense urban area which would also likely be near other residential uses and, thus, result in similar significant and unavoidable construction-related noise impacts as at the Project Site. The analysis of the Draft EIR adequately explains why the off-site alternative is not feasible and the comment does not provide any facts to substantiate the contention that the analysis is inadequate.

As for the proposed Natural Park alternative (discussed in more detail under Response Nos. ORG 7A-158 through ORG 7A-162, below), the Natural Park alternative which consists primarily of a man-made lake, passive open space, golf driving range, and retention of tennis courts, would not meet the requirements of CEQA Guidelines Section 15126.6 in that it would fail to achieve the basic underlying purpose of the Project for recreation and athletic use or most of the Project Objectives. The Natural Park alternative would also require substantial excavation for the lake and, thus, would not reduce the Project's significant and unavoidable construction noise impacts. Moreover, contrary to the contention in the comment, the Draft EIR did consider alternatives suggested at the scoping meeting, as shown on pages V-7 through V-8 of the Draft EIR. Alternative uses, alternative Project Site designs, and substantially reduced development intensity proposals were considered and rejected since they either failed to meet basic Project Objectives or created additional environmental impacts. Note that the only significant and unavoidable impacts that needed to be addressed by Project Alternatives are construction noise and vibration. Because the Project would not generate significant operational impacts, the rejected alternatives were not required to address operational impacts.

## **Comment No. ORG 7A-156**

### **1. The DEIR Failed to Consider Off-Site Alternatives.**

The DEIR should have but failed to consider alternative project locations. (CEQA Guidelines § 15126.6, subds. (a), (f)(2).) The DEIR improperly rejects consideration any alternative location based on a claim that every single item on Harvard- Westlake's wish list needs to be provided and provided at the same site, claiming: a property would need to be of sufficient size to accommodate two playing fields, tennis courts, a pool, all with respective bleachers, and a gymnasium that would provide for recreational practice and instruction, as well as allow for competitive meets with available spectator seating and adequate onsite parking to preclude off-site parking" (DEIR p. V-6.)

As set forth above, this rejection of any alternative site is based on reliance on improperly narrow project Objectives. (Section VI.A.) Additionally, the DEIR provides no reason that the sports facilities and fields need to all be located at the same site. Harvard-Westlake's

baseball and softball team currently and would continue to use separate facilities in Encino. There is no reason other teams could not also be located at differing sites.

### **Response No. ORG 7A-156**

The comment asserts that the Draft EIR failed to consider off-site alternatives. Disagreement with the Project Objectives, the School's determination of its needs, or the analysis contained in the Draft EIR does not constitute facts which substantiate the contention that the analysis was inadequate. See Response Nos. ORG 7A-147 and 7A-148 for the criteria by which Project alternatives are to be considered and Response No. ORG 7A-155 for further discussion of the off-site alternatives.

### **Comment No. ORG 7A-157**

#### **2. The DEIR Failed to Consider Reasonable Alternatives That Would Meet Many of the Project Objectives.**

Initially, the analysis contained within the DEIR must be revised pursuant to the comments set forth above to allow for an accurate comparison of the proposed Project and potential alternatives. Once impacts are correctly assessed as significant, the discussion of alternatives must "focus on alternatives to the Project or its location which are capable of avoiding or substantially lessening any significant effects of the Project, even if these alternatives would impede to some degree the attainment of project Objectives, or would be more costly." (CEQA Guidelines § 15126.6(b).)

### **Response No. ORG 7A-157**

The comment asserts that the Draft EIR must be revised to correctly assess significant impacts and to address additional alternatives. The comment does not define a reasonable alternative that would meet Project Objectives while reducing the Project's significant construction noise and vibration impacts and does not describe which of the Project's Objectives would be met by the "reasonable" alternative. The comment also makes the claim that the analysis contained within the DEIR must be revised pursuant to the Comment Letter No. ORG 7A comments, above, to allow for an accurate comparison of the Project and potential alternatives. Based on the responses above, Comment Letter No. ORG 7A does not provide enough evidence to substantiate the claim that impacts not identified in the Draft EIR would occur and that the Draft EIR needs to be rewritten. Because the claim that other significant impacts would occur is baseless, the request for another "reasonable" Alternative that would reduce the significant impacts of the Project is unwarranted and no further response to this comment is required.

## Comment No. ORG 7A-158

### a. The DEIR Failed to Assess the Proposed Los Angeles River Natural Park Alternative.

SCRA and SLAROS presented detailed information to the City regarding a Los Angeles River Natural Park Alternative for the Project site and requested this alternative be analyzed in the DEIR. (**Attachment T**, LA River Natural Park Analysis.) This alternative has been supported by SCRA, SLAROS, the Santa Monica Mountains Conservancy, the Chair of the California State Senate Committee on Natural Resources and Water and many others as a multi-use project for the site with many community and ecosystem benefits.

The Los Angeles River Natural Park Alternative concept was created using the following guiding principles:

- Emphasize, celebrate and protect the regional importance of the site
- Preserve and enhance connections and public access to the Los Angeles River
- Improve water quality by integrating natural treatment of urban runoff
- Provide for regional public access to the Los Angeles River and other river trails
- Emphasize pedestrian access and links to public transit
- Restore native habitat and preserve open space
- Preserve historic recreational uses
- Address regional and community needs and concerns
- Assist in meeting Los Angeles River and regional water quality improvement goals of the Santa Monica Mountains Conservancy and other conservation organizations
- Be consistent with the City of LA's Los Angeles River Revitalization Master Plan and the County of LA's Los Angeles River Master Plan

## Response No. ORG 7A-158

The comment appears to contend that the Los Angeles River Natural Park Alternative should have been included in the Project Alternatives analysis. The Los Angeles River Natural Park Alternative would not meet the Project's underlying purpose to supplement the School's athletic and recreational facilities and in the abandonment of the Project's underlying purpose, the Alternative is not warranted just to address the Project's significant construction noise and vibration impacts. As proposed, the Project would follow most of the guiding principles of the Los Angeles River Natural Park Alternative, including to celebrate the importance of the Project Site; enhance connections to the River; improve water quality by integrating natural treatment of urban runoff; provide public access to the River and regional trails; emphasize pedestrian access; restore native habitat; preserve the historic clubhouse, café, putting green and provide tennis use; assist in meeting Los

Angeles River and regional water quality standards; and be consistent with the Los Angeles River Revitalization Master Plan (see Table LU-6 in Appendix J of the Draft EIR). However, the Los Angeles River Natural Park Alternative precludes any development of the Project Site with recreational uses that would meet the Project's basic purpose and, further, would appear to contain the same sort of narrow project objective that the commenter contends exists for the Project. Moreover, such an alternative, if demanded by the City to replace the Project analyzed in the Draft EIR, would constitute a taking of private property. Nonetheless, because the Project would not result in the profusion of significant, adverse impacts claimed in Comment Letter No. ORG 7A, the selection of an Alternative that would preclude any development for Harvard-Westlake School, the property owner, is not reasonable or necessary. As such, there is no compelling reason, nor CEQA requirement, for the Draft EIR to evaluate the Los Angeles River Natural Park as a Project Alternative.

### **Comment No. ORG 7A-159**

The Los Angeles River Natural Park Alternative combines a multi-acre Los Angeles riverfront park along the regional L.A. River Greenway with native habitat designed for runoff catchment, filtration and treatment systems to improve water quality in the Los Angeles River and assist in achieving State regulatory requirements and water quality improvement goals for the Los Angeles River. It also provides trail, habitat and open space lands immediately adjacent to the Los Angeles River. The Project site is the only remaining undeveloped site along 22 miles of the Los Angeles River in the San Fernando Valley where these recreational, biological, and water quality goals can be attained. The Los Angeles River Natural Park Alternative would improve water quality in the River by creating and restoring native habitats and naturally capturing and cleaning polluted urban runoff from 200 acres of the surrounding urbanized area.

### **Response No. ORG 7A-159**

The comment reasserts the commenter's desire to use private property for a public park but does not present facts to establish that the Project's Alternative analysis is inadequate. Moreover, the Project would achieve similar objectives as the Los Angeles River Natural Park Alternative, including capture and filtration of surface runoff from the Project Site, restoration of native plant and tree species in compliance with the RIO District, and provision of public pathways, as well as a pedestrian ramp connecting to the Zev Greenway. The comment does not describe the participating agencies or how these improvements would be implemented. Furthermore, because the Project would not result in the profusion of significant, adverse impacts claimed in Comment Letter No. ORG 7A, the analysis and selection of an Alternative that would preclude any development for Harvard-Westlake School as the lawful property owner is not reasonable or necessary.

### **Comment No. ORG 7A-160**

This alternative would also retain the existing driving range, putting green and most of the tennis facilities, and would connect the Project site to the Los Angeles River Greenway

Trail with public walking trails, viewing terraces, and ADA-compliant access. This alternative would provide the full range of native habitats necessary to sustain species biodiversity of plants, birds and animals, including open water, marsh, riparian and upland habitats, which would be engineered to naturally remove sediment, trash, debris, fertilizers, heavy metals, suspended solids, bacteria, oil and grease and pesticides. The Los Angeles River Natural Park would also include walking trails, a visitor center, interpretive signage, shade structures and solar power generated on site to make the project “grid-neutral”. The Los Angeles River Natural Park Alternative was specifically designed to achieve the Objectives of the LARRMP.

## Response No. ORG 7A-160

The discussion of the Los Angeles River Natural Park Alternative is noted. As called out in the graphic included with Comment No. ORG 7A-160, there would be a reduction in tennis facilities and the golf course has been eliminated (both being points of contention that the commenter raised against the Project). This Alternative would retain the existing driving range, putting green and, as with the Project, would connect the Project Site to the Zev Greenway with public walking pathways, viewing terraces, and ADA-compliant access. However, the Project would not result in the profusion of significant, adverse impacts claimed in Comment Letter No. ORG 7A, and the analysis and selection of an Alternative that would preclude any development for Harvard-Westlake School as the lawful property owner is not reasonable or necessary.

**Comment No. ORG 7A-161**

SCRA and SLAROS also submitted comments detailing the feasibility of this alternative. (**Attachment U**, September 29, 2014 SCRA and SLAROS comments on the draft EIR for the Senior Living Center Project, incorporated by reference.) The technical feasibility studies regarding this alternative were conducted by Community Conservation Solutions, Mia Lehrer and Associates Landscape Architects, BlueGreen Consulting and Psomas Engineering. (**Attachment T**).

In addition to technical feasibility, this alternative is also be [sic] financially feasible. Significant bond, grant and other funding has become available in recent years to address Los Angeles County and State of California water quality and lack of adequate park space. Of particular interest for this Natural Park Alternative is Measure W funding, the Safe, Clean Water Program adopted and funded by an overwhelming majority of voters. (See <https://safecleanwaterla.org/scw-program-details/>, incorporated by reference).

**Response No. ORG 7A-161**

The comment does not contain facts which support a contention that the Project's selection of Alternatives was inadequate as it only relates to a feasibility study prepared for an alternative that would prohibit the School's use of the Project Site for School uses. Moreover, the feasibility analysis of the Los Angeles River Natural Park Alternative discussed in the comment predates the sale of the Project Site to Harvard-Westlake School. This indicates a potential lack of public or agency will, interest in, or funding of the Los Angeles River Natural Park or the potential infeasibility of certain features, such as the size of the watershed area for collected surface water. Furthermore, the Project would not result in the profusion of significant, adverse impacts claimed in Comment Letter No. ORG 7A, and the analysis and selection of an Alternative that would preclude any development for Harvard-Westlake School as the lawful property owner is not reasonable or necessary.

**Comment No. ORG 7A-162**

Further, this alternative would meet a number of project Objectives by provide a variety of recreational opportunities, providing opportunities for science labs and outdoor classes, creating publicly accessible open space, increasing public access to the Zev Greenway, restoring native plant communities and RIO-compliant tree species, promoting neighborhood compatibility, using sustainable and green design and preserving the historic clubhouse. This alternative should also be considered in conjunction with the alternative sites that allows other sites to provide additional athletic facilities.

**Response No. ORG 7A-162**

The comment reasserts the benefits of any alternative that would prohibit the use of the Project Site for School purposes but it presents no evidence that the Alternatives analysis in the Draft EIR is inadequate. Although the Los Angeles River Natural Park Alternative

would meet a number of Project Objectives related to passive recreational opportunities, open space, tennis, collection of surface runoff, and enhanced public access to the Zev Greenway, it would not meet the Project's underlying purpose to supplement the School's athletic and recreational facilities. Although this alternative would address the Project's significant construction noise and vibration impacts, analysis of the Los Angeles River Natural Park Alternative is not warranted because it would not meet the Project's underlying purpose.

### **Comment No. ORG 7A-163**

#### **b. The DEIR Should Have Evaluated a Natural Golf Course Alternative.**

The DEIR should have also considered a version of the Natural Park Alternative that includes a revised and sustainable 9-hole golf course. The existing Studio City Golf Course is popular with local residents and those throughout Los Angeles and has been for many years. (**Attachment V**, ASGA, Water and Golf, Case Studies in Water Stewardship.) In recent years, existing golf courses have successfully investigated the potential to significantly increase the sustainability of this land use. Since golf courses maintain sites as open space, they provide significant opportunities for groundwater infiltration and stormwater capture and reuse. (**Attachment V**.)

An alternative relying on similar design and principles to the Los Angeles River Natural Park Alternative, but that incorporates a golf course into the open space should also be considered. For the reasons set forth above regarding the feasibility of the Los Angeles River Natural Park Alternative, this alternative is also feasible.

### **Response No. ORG 7A-163**

The comment asserts that the Draft EIR should have considered an alternative that retains the golf course use of the Project Site. The selection of Alternatives for the Draft EIR was not based on the feasibility of Alternatives, which would cover an infinite range of uses, but Alternatives that would reduce the Project's significant environmental impacts to less-than-significant levels (see CEQA Guidelines, Section 15126.6, which states: "An EIR shall describe a range of reasonable alternatives to the Project, or the location, of the Project, which would feasibly attain most of the objectives of the project but would avoid or substantially lessen any of the significant effects of the project.") The significant impacts identified by the Draft EIR were construction noise and vibration. Therefore, the selection of Alternatives was based on the ability of Alternatives to substantially reduce the highest construction noise generators, which were excavation and grading activities. The selected Alternatives included those that eliminated excavation for subsurface parking and the underground one-million-gallon water collection and reuse system. With the exception of the No Project Alternative, the selected alternatives would meet most of the Project Objectives while incrementally reducing the Project's significant and unavoidable construction noise and vibration impacts. However, these impacts would not be reduced to less-than-significant levels since the Project Alternatives would include a similar amount of daily construction activity in the same proximity to sensitive receptors

(residential uses). The purpose of the selection is described in more detail in Chapter V, *Alternatives*, pages V-2 through V-5 of the Draft EIR.

In addition, the alternative proposed in the comment would not achieve the underlying purpose of the Project to supplement Harvard-Westlake's Athletic and Recreational program. Since the Project would not result in the profusion of significant, adverse impacts claimed in Comment Letter No. ORG 7A, the analysis and selection of an Alternative that would preclude any development for Harvard-Westlake School would not be reasonable or necessary.

## **Comment No. ORG 7A-164**

### **c. The DEIR Failed to Considered a Reduced School Use Intensity Alternative.**

As set forth in this comment letter, many of the Project's impacts result from the Harvard-Westlake's attempts to cram far too much building and too many uses on to this unique and sensitive site. SCRA and SLAROS provided scoping comments urging the City to include a "Reduced Intensity Alternative" that limits the amount of new development on the Project site for Harvard-Westlake athletic facilities and the intensity of uses to reduce the Project's traffic, noise, biological, aesthetic, cultural resource, hydrological and other impacts. The DEIR failed to include any such reduced development and intensity alternative. The failure to provide an analysis of such alternative violates the rule of reason that an EIR must present a reasonable range of alternatives, especially in light of the Project's significant adverse impacts

## **Response No. ORG 7A-164**

The comment claims that the Draft EIR failed to include a reduced density and intensity alternative to reduce the Project's significant adverse impact presumed in the comment. However, as described on pages V-7 and V-8 of the Draft EIR, the Draft EIR did consider reduced development intensity suggestions provided in comments to the Notice of Preparation and evaluated a Reduced Density Alternative (Alternative 3). This alternative, however, as with the other Project Alternatives except for the No Project Alternative, would not eliminate the Project's significant and unavoidable impacts during construction. The purpose of the selection of alternatives, as discussed under Response No. ORG 7A-163, is to reduce the Project's significant construction noise and vibration impacts to less than significant levels. As evaluated throughout the Draft EIR and supported in the responses to the claims put forth in Comment Letter No. ORG 7A, the Project would not result in significant operational impacts including significant impacts related the Project's scale of development. Because the Project would not result in significant environmental impacts presumed throughout Comment Letter No. ORG 7A and implied in Comment No. ORG 7A-164, the analysis of an additional Reduced Density alternative to address non-existent impacts would not be required or necessary.

## **Comment No. ORG 7A-165**

### **C. The Alternatives Included in the DEIR are Inadequate.**

#### **1. The No Project Alternative Relies on Unsupported Changes at the Project Site.**

The DEIR turns the alternatives analysis into a post-hoc rationalization for the proposed Project by purposefully designing alternatives with the intent they would be rejected. The DEIR starts by making improper assumptions to allow for rejection of the No Project Alternative. CEQA requires that an EIR evaluate a “no project” alternative. “The purpose of describing and analyzing a no project alternative is to allow decisionmakers to compare the impacts of approving the proposed project with the impacts of not approving the proposed project.” (CEQA Guidelines § 15126.6, subd. (e)(1).)

## **Response No. ORG 7A-165**

The comment contends that the alternatives analysis was inadequate and that the No Project Alternative is based on improper assumptions. The claim that alternatives were selected for the purpose of being rejected is not correct nor supported by substantial evidence in the comment. As for the description of the No Project Alternative, contrary to the commenter’s contention, the description is appropriate and permissible under CEQA to describe what would occur at the Project Site if there were no Project. As explained on page V-9 of the Draft EIR, the No Project Alternative analyzes the impacts of the Alternative if there were no construction on the Project Site. As explained therein, while the current use at the Project Site has been maintained by the School in a signal of goodwill to the community while the Project is being considered, the School is not a permanent golf course and tennis court operating business, and the current uses would neither be consistent with the School’s education mission nor financially feasible. Therefore, under the No Project Alternative, all operations at the Project Site as they currently exist would cease. If the No Project Alternative were selected, the Project Site would be closed until (and if) the School has made a determination regarding future use of the Project Site, which is owned by the School. If the School were, in reality, a business that operated golf courses and tennis courts, the Project could be compared to such use, but that is not reality for the reasons mentioned above. The analysis of the No Project Alternative, therefore, appropriately depicted what would actually occur if the No Project Alternative were selected, with the comparison of the Project and other alternatives against that reality. In the same vein, it is common practice for an EIR to depict the No Project Alternative as resulting in an entirely vacant site although existing tenants may occupy portions of an, otherwise, vacant property. As stated in CEQA Guidelines Section 15126.6(e)(3)(B): “... where the failure to proceed with the project will not result in preservation of existing environmental conditions, the analysis should identify the practical result of the project’s non-approval and not create and analyze a set of artificial assumptions that would be required to preserve the existing physical environment.”

Regarding the continuation of a commercial enterprise (as would be the case if current fee-based golf and tennis operations were to continue), Harvard Westlake’s Articles of Incorporation state: “[Harvard-Westlake School] is organized for charitable purposes...including the maintenance and operation of a school and institution of learning limited to less than collegiate grade, devoted to the education of boys and girls and young men and young women, with such branches and departments as may be necessary for the carrying out of said educational programs.” The Articles of Incorporation also state: “This corporation is not organized, not shall it be operated, for pecuniary gain or profit.” As the School is under no obligation to continue operating the golf and tennis facilities and the School has determined that it could neither financially continue such use nor maintain a use that would be inconsistent with the School’s mission, the practical result of the Project’s non-approval would be closing the facility and fencing the Project Site as described in the Draft EIR. Accordingly, since the School would not be maintaining the existing facilities after the current interim use, analysis of the No Project Alternative without maintaining the existing uses is appropriate and consistent with CEQA guidelines.

### **Comment No. ORG 7A-166**

While this no project alternative analysis is required to discuss the existing conditions, it must also assess “what would be reasonably expected to occur in the foreseeable future if the project were not approved, based on current plans and consistent with available infrastructure and community services.” (CEQA Guidelines § 15126.6, subd. 1(2).) The DEIR instead assesses a No Project alternative based on unsupported assumptions, stating: the DEIR “assumes that no new development would occur within the Project Site. The current Weddington Golf & Tennis facility would discontinue operation because the current use is not consistent with the School’s educational mission or financially sustainable for the School.” (DEIR p. V-9.) The DEIR assumes the entire site would be shuttered and unused. This disregards a number of relevant factors. First, the golf course, driving range and tennis courts are all currently heavily used. The DEIR provides no information to support a claim that they would not continue to be frequently used. The DEIR also fails to provide evidentiary support that operation of the Weddington Golf Course, which has operated for more than 60 years.

### **Response No. ORG 7A-166**

The comment asserts that there is no basis for concluding that the School would not continue the current uses if the Project is not approved. See Response No. ORG 7A-165 above. The comment provides no facts upon which to base its contention or its disagreement with a private property owner’s determination of what it will do with the Project Site. The purpose of describing and analyzing a No Project/No Build Alternative is to allow decision makers to compare the impacts of approving a proposed project with the impacts of not approving a proposed project. Although a No Project/No Build Alternative describes the existing conditions, which are also discussed in detail throughout the Draft EIR, under CEQA Guidelines Section 15126.6(e)3(b), as described above, “ the analysis should identify the practical result of the project’s non-approval” The

School has articulated a willingness since it purchased the Project in late 2017 to continue the former use until a decision is made for the Project, and no longer. The existing use would certainly cease operation at the time of a final decision, if not earlier. Furthermore, the existing use of the Project Site is evaluated throughout the Draft EIR in its comparison to the effects of the Project.

### **Comment No. ORG 7A-167**

Further, this fails to consider the reasonable expectation that the Project site would be sold or otherwise acquired by an entity other than Harvard-Westlake if it is not developed as a School athletic facility campus. Significant grant and other funding is available to acquire this site for use as a public park or for watershed protection and habitat due to it being one of the largest open space areas located along the Los Angeles River. Failure to consider these reasonable possibilities is a CEQA violation. (*Save the Hill Group v. City of Livermore* (2022) 76 Cal.App.5th 1092.)

### **Response No. ORG 7A-167**

The comment asserts that Draft EIR's analysis of the Alternative 1: No Project/No Build Alternative (Alternative 1) should have considered the potential for sale of the Project Site if it were not developed for School athletic facilities. Contrary to the assertion in the comment, the Draft EIR fully discussed Alternative 1 and appropriately determined that if the Project could not proceed, the School would close the golf course and all other on-site facilities. (Draft EIR, pages V-9 through V-41.) Unlike the situation in the case cited in the comment, the Project Site is not subject to receiving funding under any settlement agreement entered into by the City or the School. The School is under no obligation to sell the Project Site and has no plans to do so. CEQA does not require the EIR analysis to engage in speculation, even for a no project alternative, and it is without speculation that the School has made statements that the existing golf and tennis amenities are not consistent with its educational mission and would cease operations upon the City's rendering of its decision relative to the Project's entitlements application. Pursuant to CEQA Guidelines Section 15126.6(e)(3)(B), the no project alternative must discuss "predictable" actions by others if the project is rejected. As the School is under no obligation to sell the Project Site and has no obligation to put this private property to public use, Alternative 1 appropriately assumed that the Project Site would not be developed if the Project is rejected.

### **Comment No. ORG 7A-168**

#### **2. The Alternatives Contained in the DEIR Are Designed to Fail.**

The DEIR considers only limited alternatives, that are designed to increase impacts and fail to comply with legal requirements. This is inadequate under CEQA.

The DEIR includes three alternatives, all designed to eliminate legally required and fundamentally important aspects of the Project. All three alternatives eliminate inclusion

of the stormwater capture and reuse system. (DEIR p. V-4.) The DEIR fails to explain how these alternatives would otherwise include on-site stormwater retention and reuse as required the City's LID regulations.

### **Response No. ORG 7A-168**

The comment asserts that the Draft EIR only included limited alternatives designed to increase impacts and failed to explain why the Project's stormwater retention and reuse system would not be included in the alternatives. CEQA does not require a EIR to analyze any specific number of alternatives. Pursuant to CEQA Guidelines Section 15126.6(a), "[a]n EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range of potentially feasible alternatives that will foster informed decisionmaking and public participation. ... There is no ironclad rule governing the nature or the scope of the alternatives to be discussed other than the rule of reason. [citations omitted]" Chapter V, *Alternatives*, of the Draft EIR, provides a reasonable range of alternatives and explains the reasons for selecting those alternatives and rejecting others. The comment contains no facts to substantiate the contention that the range of alternatives analyzed were impermissibly limited.

As to the contention that the Draft EIR fails to explain the exclusion of the on-site stormwater cistern and fails to show compliance with the City's LID ordinance, the comment is incorrect. As explained on page V-4 of the Draft EIR, the alternatives analyzed were selected on the basis of whether they could avoid or substantially lessen the temporary construction noise impact of the Project and whether they could meet the Project's underlying purpose and most of the Project Objectives. Alternative 2: At Grade Parking Alternative (Alternative 2), would reduce the amount of excavation and soil exportation and shorten the construction time by eliminating the underground parking and the underground water cistern in an attempt to avoid or substantially lessen the construction noise impacts of the Project. As is fully explained on pages V-61 through V-62, reducing the excavation volume and use of heavy excavation equipment and number of overall haul trucks would reduce the Project's significant and unavoidable construction noise impact, (although it would not reduce the maximum daily construction noise levels or the cumulative construction noise impacts). Therefore, the Draft EIR does provide an explanation for elimination of the underground cistern. Further, contrary to the assertion that the analysis fails to discussion the LID requirements for this alternative, page V-60 of the Draft EIR, states that Alternative 2 would still be required to comply with the applicable LID regulations regarding capture and treatment of the stormwater originating the Project Site. However, the LID ordinance does not require construction of an underground cistern capable of capturing stormwater runoff as is proposed by the Project. Compliance with the LID ordinance, on the other hand, could be satisfied with flow-through planters or bioswales though such methods are acknowledged as secondary to capture and reuse systems. The underground stormwater capture and reuse system meets the Project's LID Ordinance requirements. All Project Alternatives would be subject to the requirements of the LID Ordinance, but could comply with these requirements using other capture and treatment methods.

Similarly, pages V-91 through V-92 of the Draft EIR adequately explain that Alternative 3: Reduced Density and Programming Alternative (Alternative 3) would comply with the applicable LID regulations to capture and treat stormwater originating from the Project Site. As further explained on page V-95, Alternative 3 would substantially reduce the excavation volumes and the use of heavy excavation equipment as well as the overall number of haul trucks by eliminating underground parking and the underground water cistern. Thus, the analysis of Alternative 3 both explains the reason for eliminating the underground cistern and provides for compliance with the LID regulations.

Finally, similar to the other two build alternatives, Alternative 4: No Public Use/No Public Events (Alternative 4) seeks to reduce the Project's temporary construction noise impacts by eliminating the underground water cistern, which would reduce the soil export and thereby reduce the total haul truck trips as well. (Draft EIR at page V-109.) As explained on page V-124, Alternative 4 would comply with the applicable LID regulations to capture and treat stormwater originating from the Project Site. Thus, similar to the other two build alternatives, the Draft EIR explains both the reason for eliminating the underground cistern and provides for compliance with the LID regulations.

For all the reasons summarized above, the Draft EIR contains an adequate analysis of Alternatives 2, 3 and 4, including the purpose for eliminating the underground water cistern and the requirement to comply with the LID ordinance. The comment does not contain facts to substantiate the contention that the analysis of these alternatives provides insufficient information to allow a meaningful evaluation, analysis, and comparison with the Project. As such, no further response is necessary.

### **Comment No. ORG 7A-169**

All three alternatives also eliminate the subterranean parking garage and instead use large portions of the Project site for surface parking. This turns large portions of one of the few remaining open space sites located adjacent to the Los Angeles River into a parking lot. (See DEIR p. V-74, Fig V-1.)

### **Response No. ORG 7A-169**

The comment states that all three alternatives eliminate the subterranean parking garage and instead uses large portions of the Project Site for surface parking, further eliminating open space adjacent to the Los Angeles River. Only the No Project Alternative and Alternatives 2 and 3 would eliminate the subterranean garage. Alternative 4 would retain the subterranean structure. Because the Project would result in significant and unavoidable noise impacts associated with the Project's grading and excavation phase of construction, the selection of Alternatives was based on Alternatives that could reduce this phase of construction and, respectively, reduce the Project's significant and unavoidable construction noise and vibration impacts. As discussed on pages V-127 through V-128 in Chapter V, *Alternatives*, of the Draft EIR, the elimination of excavation activities needed for the subterranean cistern under Alternative 4 would achieve a reduction in noise and vibration impacts since it would reduce the Project's overall

excavation volumes and the use of heavy excavation equipment, the duration of activity, as well as the overall number of haul trucks entering and leaving the Project Site. However, Alternative 4 would not reduce the maximum daily noise levels during peak construction and activity and would not reduce the significant and unavoidable construction and vibration impacts to a less-than-significant level. Since parking for visitors and larger events would be required under the Project's primary purpose, other configurations to accommodate parking were evaluated. The use of surface parking was analyzed in Alternatives 2 and 3 as an option (1) to determine if it were achievable, (2) to determine if it would reduce or eliminate the Project's significant and unavoidable Project-level and cumulative impacts, and (3) to determine if it would result in any secondary impacts that would not occur under the Project. The location of surface parking throughout the Project Site is less consistent with the Project's Objectives regarding the provision of open space and replacement trees. However, it would reduce the Project's significant construction noise and vibration impacts but not to less than significant levels and would not result in additional environmental impacts.

### **Comment No. ORG 7A-170**

In addition to the elimination of the stormwater recapture system and subterranean parking, Alternative 2 includes construction of one of the athletic fields elevated above at-grade parking, similar to a plan previously rejected on Harvard-Westlake's Coldwater Canyon Campus. This elevates and increase the impact of the noise and lighting associated with use of the athletic field on the surrounding residential community and the adjacent biological resources.

### **Response No. ORG 7A-170**

The comment contends that eliminating the stormwater recapture system and locating parking at grade in Alternative 2 would increase noise and lighting impacts associated with the elevated athletic field. Alternative 2 was designed to reduce the Project's significant construction noise and vibration impacts while achieving most of the Project's Objectives, by reducing the amount of excavation that would be needed for the stormwater capture and reuse system and subterranean parking. Contrary to the assertion in the comment that Alternative 2 would increase light impacts, the facts indicate that Alternative 2 would not exceed CEQA threshold light and glare levels as discussed on page V-43 in Chapter V, *Alternatives*, of the Draft EIR. As such, Alternative 2 light and glare would be similar to the Project's less-than-significant impacts.

### **Comment No. ORG 7A-171**

Alternative 3 would also include the above identified subsurface eliminations. It would retain both athletic fields, the massive gymnasium building and swimming pool, but would eliminate the tennis courts as well as approximately half of the public open space on the Project site.

## **Response No. ORG 7A-171**

The comment correctly depicts the character of Alternative 3. As with other alternatives, Alternative 3 would reduce the Project's significant construction noise and vibration impacts but would satisfy fewer of, and to a lesser degree, the Project Objectives. In addition, the construction of Alternative 3 would not reduce the Project's significant noise and vibration impacts to less-than-significant levels.

## **Comment No. ORG 7A-172**

Alternative 4 would eliminate all public access to the Project site, a clearly unacceptable alternative. It would also eliminate open space and walking paths, as well as the connection to the Zev Greenway.

## **Response No. ORG 7A-172**

The comment correctly depicts the character of Alternative 4. As with other alternatives, Alternative 4 would reduce but not eliminate the Project's significant construction noise and vibration impacts, as well as daily activity levels that could be associated with increased traffic, noise, lighting, VMT, and GHG emissions. As discussed in Topical No. 3 – Enforcement of Public Access, public uses of the privately-owned Project Site would be available for the majority of each day, exceeding even those uses by the School. An elimination of the public uses would therefore have the largest reduction on daily operational impacts. Alternative 4, however, would be less desirable in terms of Project Objectives. Specifically, Alternative 4 would not meet the Project's Objective to accommodate public access and use of the Project Site.

## **Comment No. ORG 7A-173**

All three of these alternatives fail to reduce any of the excessive density of school athletic facilities wedged onto the site by the Project and eliminate only legally required, impact reducing and public benefit aspects of the Project. Thus, they are all improperly designed to fail and provide a false choice between a bad project and worse versions of the same bad project.

## **Response No. ORG 7A-173**

The comment asserts that Alternatives 2, 3 and 4 eliminate legally required, impact reducing and public benefits of the Project. The comment fails to contain any facts to substantiate the contention that the Alternatives fail to comply with any legal requirements regarding reduction of Project impacts. As discussed in previous responses, CEQA only requires consideration of alternatives that avoid or substantially lessen any of the significant effects of the Project. (CEQA Guidelines Section 15126.6(a)). The Draft EIR fully and adequately analyzed the Project's potential impacts in Chapter IV, *Environmental Impact Analysis*, which concluded that the Project's only significant and unavoidable impacts would be temporary construction noise and vibration. The three build

alternatives all sought to lessen those impacts through reduction or elimination of the underground facilities to reduce the amount of excavation, heavy excavation equipment, and haul truck activities. The comment contains no facts to substantiate the contention that these alternatives were not a reasonable range of alternatives nor that they were inadequately analyzed. The comment instead reflects an opposition to the Project by characterizing the Project as containing excessively dense athletic facilities and being a bad project with equally bad alternatives. In fact, rather than being excessively dense or improper, the Project was designed to accommodate the School's need for supplemental athletic and recreational facilities and its desire to provide public access to recreational facilities and the adjacent Zev Greenway. As such, while the comment expresses opposition to the Project, it does not provide any substantial evidence to substantiate the claim that the alternatives are inadequate or impermissible and, thus, no further response is necessary. As a general comment of opposition, this comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. ORG 7A-174**

#### **D. CEQA's Substantive Mandate Requires Adoption of Feasible Alternatives and Mitigation Measures.**

Projects with significant environmental impacts *may not* be approved "if there are feasible alternatives or feasible mitigation measures available which would substantially lessen the significant environmental effects . . ." (Pub. Resources Code § 21002.) More specifically, CEQA states:

Pursuant to the policy stated in Sections 21002 and 21002.1, no public agency shall approve or carry out a project for which an environmental impact report has been certified which identifies one or more significant effects on the environment that would occur if the project is approved or carried out unless .

(a) . . . (3) Specific economic, legal, social, technological, or other considerations . . . make infeasible the mitigation measures or alternatives identified in the environmental impact report.

(Pub. Resources Code § 21081.) It is settled law that:

CEQA contains substantive provisions with which agencies must comply. The most important ... is the provision requiring agencies to deny approval of a project with significant adverse effects when feasible alternatives or feasible mitigation measures can substantially lessen such effects.

(*Sierra Club v. Gilroy City Council* (1990) 222 Cal.App.3d 30, 41, italics added.).

## Response No. ORG 7A-174

The comment recites the law regarding feasible alternative and mitigation measures but presents no facts to substantiate a claim that the Project analysis is not in compliance with CEQA. The significant, unavoidable environmental impacts identified in the Draft EIR are construction noise and vibration. As discussed in Section, IV.K, *Noise*, of the Draft EIR, the evaluation of construction noise included mitigation measures such as sound barriers along the four property boundaries, equipment mufflers, location of noise sources at least 100 feet from off-site receptors, the use of wave barriers to reduce vibration, and other mitigation. However, even with the implementation of all feasible mitigation measures, noise and vibration levels would exceed threshold standards. Because applicable, feasible mitigation would not reduce construction noise and vibration to less than significant levels, noise and vibration impacts were determined to be significant and unavoidable. As evaluated in the Draft EIR and presented in the Project's MMP, feasible mitigation measures were provided that would reduce potentially significant air quality, wildlife, natural habitat, biological resources policies, hazards and hazardous materials, water quality, water quality control plan, groundwater management, and operational wastewater management impacts to less than significant levels. The MMP is provided in Chapter 4 of this Final EIR.

## Comment No. ORG 7A-175

“Feasible” is defined as “capable of being accomplished in a successful manner within a reasonable period of time, taking into account economic, environmental, social, and technological factors.” (Pub. Resources Code § 21061.1.) The definition *does not* require the agreement of the project applicant. “Each public agency shall mitigate or avoid the significant effects on the environment of projects that it carries out or approves whenever it is feasible to do so.” (*Lincoln Place Tenants Ass’n v. City of Los Angeles* (2005) 130 Cal.App.4<sup>th</sup> 1491, 1508, emphasis added.)

## Response No. ORG 7A-175

The comment recites the law regarding feasible mitigation measures but presents no facts to substantiate a claim that the Project analysis is not in compliance with CEQA. Please refer to Response No. ORG 7A-174 regarding the implementation of feasible mitigation measures and the MMP.

## Comment No. ORG 7A-176

The DEIR admits that that the Project would have significant construction noise impacts. Throughout this comment letter, we establish that the Project would have numerous other significant adverse impacts that the DEIR fails to disclose. The feasible alternatives identified in the preceding section would substantially lessen and/or eliminate significant adverse impacts resulting from the Project. Thus, under CEQA's substantive mandate, the City cannot approve the Project as proposed.

## Response No. ORG 7A-176

The comment claims that the Draft EIR “admits” to the significant construction noise impacts. The comment also claims that Comment Letter No. ORG 7A has established “numerous other significant adverse impacts that the Draft EIR failed to disclose.” However, as discussed throughout the responses to this comment letter, Comment No. ORG 7A does not provide supporting fact or substantiated evidence that the Project would result in additional environmental impacts not identified in the Draft EIR. Please refer to Response Nos. ORG 7A-1 through ORG 7A-175.

## Comment No. ORG 7A-177

### VII. Conclusion

For all of the reasons set forth herein, SCRA and SLAROS find the DEIR to be wholly inadequate. If this Project does move forward as proposed, which we urge the City not to allow, a revised DEIR must be recirculated to address the many failings.

Additionally, we ask that you inform us of any future Project notices pursuant to Public Resources Code section 21092.2 and applicable Municipal Code requirements. We further request that you retain all Project related documents including correspondence and email communications as required by CEQA. (*Golden Door Properties, LLC v. Superior Court of San Diego County* (2020) 52 Cal.App.5<sup>th</sup> 837 [agency “must retain writings”].)

Thank you for your consideration of these comments.

## Response No. ORG 7A-177

The commenter concludes that the Draft EIR is wholly inadequate, which has not been substantiated by facts or accurate analysis by the commenter and is deemed in this response to be substantially incorrect. Also, based on the responses to the comments above, the presumptions regarding the Draft EIR do not rise to the need for recirculation of the Draft EIR.

In response to the comment for further information, the commenters, the Studio City Residents Association, Save the River Open Space, and Chatten-Brown, Carstens & Minter are on the City’s mailing list and will be notified of any further Project actions.

Attachment C - American Lung Association State of the Air 2022 Excerpts

**Response No. ORG 7A-180**

Attachment C includes American Lung Association State of the Air 2022 Excerpts. These attachments are referenced in the above comments. However, as the attachment does not include comments on the Draft EIR, no further response is necessary. Refer to Appendix A of this Final EIR for a copy of this attachment.

**Comment No. ORG 7A-181****ATTACHMENT D – Brohard and Associates****SUBJECT: Review of the Draft EIR for the Harvard-Westlake River Park Project in the City of Los Angeles – Transportation Issues**

Dear Ms. Minter:

As requested, I, Tom Brohard, P.E., have reviewed the transportation portions of the March 2022 Draft Environmental Impact Report (Draft EIR) for the Harvard- Westlake River Park Project in the City of Los Angeles. The Proposed Project includes redevelopment of the Weddington Golf & Tennis Site including removal of the existing 9-hole par three golf course, driving range, and tennis facility while retaining the existing clubhouse and putting green. The proposed athletic and recreational facility for the Harvard-Westlake School is planned to include two athletic fields with bleacher seating, an 80,000 square foot two-story multi- purpose gymnasium, a 50-meter swimming pool with seating, eight tennis courts with seating, one level below grade parking structure with

503 vehicle parking spaces and 100 bicycle parking spaces, and a surface parking lot with 29 parking spaces.

In preparing these comments, I have reviewed various portions of the Draft EIR and Transportation Assessment (TA) including the following:

- Executive Summary
- Section I – Introduction
- Section 11 – Project Description
- Section IV.M – Transportation
- Appendix A-4 – NOP and Scoping Meeting Comments
- Appendix M -April 2021 Transportation Assessment Draft

### **Response No. ORG 7A-181**

The comment is a transmittal to Chatten-Brown, Carstens, and Minter by an independent consultant. The consultant prepared comments on the Project's TA and Section IV.M, *Transportation*, of the Draft EIR. The comment briefly summarizes the Project and lists the sections of the TA that were reviewed. It is noted that the prior 503-space subterranean garage has been reduced to 386 spaces and the 29-space surface parking lot has been reduced to 17 spaces. These changes are incorporated into Chapter 3 of this Final EIR. The comment does not discuss the adequacy of the Draft EIR and no further response is necessary.

### **Comment No. ORG 7A-182**

In summary, the Draft EIR and TA do not properly analyze or address the following critically important transportation items and issues:

- ❖ Inaccurate vehicle miles traveled (VMT) calculations including:
  - Underestimated Harvard-Westlake trip lengths to the Upper Campus
  - Understated Middle School Campus trip lengths for Freshman sports
  - Undocumented existing trip length credits for golfers
  - Increased trip lengths associated with the right turn only restrictions at the project access points at Whitsett Street.

### **Response No. ORG 7A-182**

The comment lists the areas in which the commenter believes the analysis was inadequate or incorrect but contains no facts to support the contentions. Please refer to Response Nos. ORG 7A-123, ORG 7A-124, ORG 7A-125, and ORG 7A-127, above which address comments regarding trip lengths, travel between the Middle School and Upper School campuses for Freshman sports, trip length credit for golfers and trip lengths associated with right turns.

**Comment No. ORG 7A-183**

- ❖ Failure to address and mitigate the significant queuing that will occur at the single lane parking structure exit to Whitsett Street where it will take more than one hour to empty the garage. With this major issue, timely evacuation of the parking structure during an emergency will not be possible.

**Response No. ORG 7A-183**

The comment asserts that queuing at the parking exit will create problems during an emergency but does not include facts to substantiate the contention. Please refer to Response No. ORG 7A-195 which addresses the issue of queuing at the exit driveways.

**Comment No. ORG 7A-184**

- ❖ The absence of northbound left turn vehicle storage from Whitsett Street to Valleyheart Drive to enter the parking structure, the surface parking area, and the drop-off/pick-up area.

**Response No. ORG 7A-184**

The comment notes the absence of a northbound left turn lane from Whitsett Street to Valleyheart Drive but does not address the adequacy of the Draft EIR. The traffic operations of the intersection of Whitsett Avenue and Valleyheart Drive were fully studied in Appendix M, Transportation Assessment, to the Draft EIR. As shown in Table 12B in the TA, the northbound left-turn queue on Whitsett Avenue is not expected to exceed 25 feet in the Non-Event scenario as well as the Special Event scenario.

**Comment No. ORG 7A-185**

- ❖ Inadequate passenger loading/unloading space in the cul-de-sac terminus of Valleyheart Drive, with resulting queues blocking fire apparatus departures from LAFD Station 78. The proposed mitigation, with a flashing red light which means stop and then proceed with caution, will not keep the area at the Station's driveways on Valleyheart Drive clear of queued exiting vehicles.

**Response No. ORG 7A-185**

The comment contends that the Project design includes inadequate passenger loading/unloading space and that the flashing right light will not keep the LAFD Fire Station 78 driveways clear. Appendix M, Transportation Assessment pages IV.M-62 and IV.M-63 of the Draft EIR provides an evaluation of the passenger loading at the on-site turnaround off of Valleyheart Drive. The turnaround at the western edge of Valleyheart Drive would be used exclusively for drop-off and pick-up activities (i.e., shuttles, transportation network company [TNC] vehicles, private vehicle pickups and drop-offs). The available storage capacity in the turnaround was found to be sufficient for the

estimated queuing on Special Event days, which is the worst-case, highest trip generating event anticipated at the Project Site. Since the storage capacity is sufficient to contain the vehicular queue at the turnaround, queue spillback from the turnaround onto Valleyheart Drive would not occur and thus would not interfere with LAFD Fire Station 78 operations on Valleyheart Drive.

The eastbound queues of exiting vehicles on Valleyheart Drive approaching Whitsett Avenue are shown in Table 12 of Appendix M, Transportation Assessment to the Draft EIR. The queues are estimated to be 25 feet for both non-event scenarios, as well as for the Special Event scenario with the corrective action of prohibiting left-turns out of Valleyheart Drive on Special Event Days. If LAFD vehicles need to exit and access Whitsett Avenue via Valleyheart Drive while outbound vehicles are queued on the eastbound approach, the LAFD vehicles could drive on the inbound (westbound) lane in the event of an emergency. Please see the Response to Comment No. ORG 7A-134 regarding exiting vehicles.

### **Comment No. ORG 7A-186**

- ❖ Entry procedures during major events will create excessive queuing that has not been analyzed, resulting in significant congestion for credential verification. It will take more than an hour to fill the parking structure.

### **Response No. ORG 7A-186**

The comment contends that the major event queuing was not analyzed. Please refer to Topical Response No. 9 – Transportation and Parking Impacts During Construction and Operation, for a discussion of mechanisms to manage traffic on event days.

### **Comment No. ORG 7A-187**

- ❖ Congestion both entering and exiting the parking structure will attract motorists to park in the adjacent residential areas during late arrivals and for quick departures after event conclusions.

### **Response No. ORG 7A-187**

The comment contends that congestion will result in parking at adjacent streets but provides no facts to substantiate either the contention that there will be congestion nor that the adjacent streets would be used for parking. Please refer to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of mechanisms to manage traffic and parking on event days.

### **Comment No. ORG 7A-188**

- ❖ Pedestrian access to the north side of the site at random points will not be deterred by 3' tall metal fencing and subsequent walking through immature landscaping.

## Response No. ORG 7A-188

The comment speculates that pedestrians would choose to walk through the Project's landscaping along Valley Spring Lane, which includes the addition of a substantial number of trees and thousands of understory species, and climb over 3-foot-tall metal fencing, rather than use one of the provided pathway entry points located in that same area. As discussed in Chapter II, *Project Description*, pages II-27 and II-28 of the Draft EIR, "dependent on changes in grade and the locations and heights of landscaped berms, the walls would vary in height between eight feet and 11 feet at different points on the Project Site, with an eight-foot wall at the north side of the tennis courts topped with a four-foot fence. Where walls are not provided, a connective metal fence varying in height between eight feet and 11 feet would surround the rest of the athletic facilities." As shown in Figure II-6, Harvard-Westlake School Athletic and Recreational Facilities Conceptual Site Plan, of the Draft EIR, there are four pedestrian access gates into the Project Site from Valley Spring Lane (the north edge of the Project Site). Three of the access gates would provide all-day access to the public walking path and the main entrance at Valley Spring Lane and Whitsett Boulevard would provide for public access to other recreational facilities. Note that mature trees along the periphery of the Project in proximity to the walking path would be largely retained (see Topical Response No. 5 – Biological Resources/Trees).

## Comment No. ORG 7A-189

- ❖ Accessible and convenient parking for construction workers must be established and maintained on site to preempt and discourage undesirable parking within adjacent residential areas.

## Response No. ORG 7A-189

The comment asserts that construction worker parking must be available for off-street parking but does not discuss the adequacy of the Draft EIR. As stated in Appendix M, Transportation Assessment to the Draft EIR, parking for construction workers would be provided on-site and would not be permitted on neighborhood streets. Project Design Feature TRAF-PDF-1 prohibits construction worker and equipment parking on residential streets.

## Comment No. ORG 7A-190

### Education and Experience

Since receiving a Bachelor of Science in Engineering from Duke University in Durham, North Carolina in 1969, I have gained over 50 years of professional engineering experience. I am licensed as a Professional Civil Engineer both in California and Hawaii and as a Professional Traffic Engineer in California. I formed Tom Brohard and Associates in 2000 and now serve as Consulting Transportation Engineer for the City of San Fernando.

I have considerable experience in traffic engineering and transportation planning. During my career in both the public and private sectors, I have reviewed numerous environmental documents and traffic studies for various projects in California and Hawaii.

### **Response No. ORG 7A-190**

The comment summarizes the independent consultant's background education and experience but does not discuss the adequacy of the Draft EIR. No further response is necessary.

### **Comment No. ORG 7A-191**

#### **Transportation Issues**

The following deficiencies were identified in my review of the documents associated with the Draft EIR and the TA for the Proposed Project:

- 1) VMT – Several components of the VMT (vehicle miles traveled) associated with the Project have been omitted or incorrectly calculated as follows:
  - a. Harvard-Westlake Trip Lengths – Trip lengths for shuttles and for private vehicles were assumed to be 1.5 miles. The measured distance along the recommended route on Coldwater Canyon Avenue, Moorpark Street, and Whitsett Avenue between the Upper Campus driveway and the passenger loading area on Valleyheart Drive is 1.7 miles. The 1.1-mile length of the return trip from the site back to the Upper Campus for shuttles via the Whitsett Avenue, Ventura Boulevard, and Coldwater Canyon Avenue route was incorrectly omitted from the VMT calculations.

### **Response No. ORG 7A-191**

The comment asserts that the VMT analysis and Transportation Assessment were deficient. Please refer to Response No. ORG 7A-123, which addresses the trip length for shuttles and private vehicles analysis.

### **Comment No. ORG 7A-192**

- b. Freshman Sports – The schedule of events identified three Freshman sports at the site (Girls Field Hockey, Boys Basketball, and Girls Volleyball). VMT lengths for these sports to the Project must be calculated from the Middle School Campus, not from the Upper School Campus.

### **Response No. ORG 7A-192**

The comment asserts that the VMT analysis is deficient for failure to include trips from the Middle School campus. Please refer to Response No. ORG 7A-124, which addresses the issue of trips from the Middle School campus.

### Comment No. ORG 7A-193

- c. Weddington Golf & Tennis – According to Page 24 of the Transportation Assessment, data for one week in September 2019 was provided for tennis users at the existing facility to calculate the daily trip generation and that was then credited against the Proposed Project. This data was not included or disclosed in the Transportation Assessment Appendix for review by the public.

There is no information provided as to how the data for tennis players relates to those using the clubhouse or to the golfers using the driving range or the 9-hole par three golf course. The average daily trip generation of 1,022 or 511 round trips requires further study and evaluation to support the resulting net negative, offsetting credit of 2,098 daily VMT.

Attachment 3C in the Traffic Assessment indicates the existing trips at the site were counted on February 12, 2019. The table indicates that 1,022 daily trips will be removed when the current Weddington Golf & Tennis operation is closed. However, the clubhouse and the putting green will remain open and in use after the site is redeveloped with the Project. Trips and VMT associated with these two remaining uses must be added back into trip generation and VMT for the site. It is not reasonable to assume trips associated with Weddington Golf & Tennis will be identical during a week in September 2019 and on February 12, 2019.

### Response No. ORG 7A-193

The comment contends that the VMT analysis was deficient due to the data used in the Transportation Assessment. Please refer to Response No. ORG 7A-125, which addresses the data source of the existing use credit, and to Response No. ORG 7A-126, which addresses the trips associated with the clubhouse and the putting green, as well as the use of February and September data from 2019.

### Comment No. ORG 7A-194

- d. Right Turn Only Restrictions - Trip distribution to and from the Proposed Project indicates that 85% of all trips will have a trip end to the north and only 15% of all trips will have a trip end to the south. Right turn only restrictions at the north driveway and Whitsett Street will force 85% of the traffic to travel out of their way to return to their origin north of the Project. In addition, if all Valleyheart Drive vehicles are forced to turn right only on Whitsett Street, then all vehicles leaving the parking structure will be forced to travel 0.1 miles to Ventura Boulevard and then back, adding 0.2 VMT to 85% of the trips leaving the Project.

## Response No. ORG 7A-194

The comment contends that the right turn only restrictions would impact the VMT analysis. Please refer to Response No. ORG 7A-127 which addresses the VMT analysis including the right turn only restrictions.

## Comment No. ORG 7A-195

2) Project Access - The parking structure will have two vehicle access driveways. The north driveway will have one lane inbound and one lane outbound, with both channelized into right turn only movements entering from and exiting to Whitsett Street. The south driveway accessing Valleyheart Drive will have one lane inbound only (no exiting traffic). The parking structure contains 503 vehicle parking spaces and 100 bicycle parking spaces and there is a 29-space surface parking lot accessed by Valleyheart Drive.

a. Whitsett Street Access - From calculations in the Traffic Study Appendix, the queue to exit the north driveway will be 11 cars and will extend 275' back into the parking structure. This queue goes beyond the security kiosk, blocking the main north-south aisle within the structure. Only one vehicle will be on level ground before entering Whitsett Street, causing delay as vehicles climb the ramp before reaching the level area, stopping, and then making a forced right angle turn onto Whitsett Street, taking motorists to Ventura Boulevard.

With only a single exit lane, it will take an hour or more to empty the parking structure (see enclosed Table 4 from *Entrance-Exit Design and Control for Major Parking Facilities*, Robert W. Crommelin, October 5, 1972).

Timely evacuation out of the parking structure during an emergency will not be possible with only a single exit lane.

## Response No. ORG 7A-195

The comment contends that the queuing would inhibit timely evacuation from the parking structure. It is noted that the prior 503-space subterranean garage has been reduced to 386 spaces and the 29-space surface parking lot has been reduced to 17 spaces. These changes are incorporated into Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR and further discussed in Topical No. 2 - Modifications to the Project Design. The Special Event scenario evaluated in Appendix M, Transportation Assessment, of the Draft EIR, is the worst case potential event, assuming 500 attendees with an average vehicle occupancy of 1.0 (meaning every attendee arrives and departs in their own single-occupant vehicle). While it may take an hour or more to clear the parking garage on such a Special Event scenario day, these special events would only occur a few times a year and would not be a regular occurrence. Also, vehicle queues exiting the garage are not a CEQA impact, as the City of the Los Angeles updated the TAG in 2019 to conform to the updated CEQA guidelines by the Governor's Office of

Planning and Research (OPR), which shifted evaluating transportation impacts away from automobile delay and level of service (LOS) and instead using VMT.

In the event of an emergency during the rare Special Event days, both driveways (north and south driveways) could be used to clear the garage in less time. The comment also assumes, but does not provide any supporting facts, that in the event of an emergency that Project visitors would choose to evacuate the Project Site in a private vehicle rather than by foot using the many other points of egress for pedestrians that are provided for just such a purpose, as required by Building Code.

### **Comment No. ORG 7A-196**

- b. Valleyheart Drive - The south driveway for the parking structure located on Valleyheart Drive provides a second entry but there will be no exiting vehicles from the structure to Valleyheart Drive. Whitsett Street has a posted speed limit of 40 MPH. Whitsett Street does not have a separately striped northbound left turn lane at Valleyheart Drive. This requires traffic arriving from the south to wait in the inside through lane while seeking an adequate gap in southbound traffic flow before turning left on Valleyheart Drive.

A passenger drop-off/pick-up area for shuttles and Uber/Lyft ride-share vehicles is proposed in the cul-de-sac terminus of Valleyheart Drive just west of Whitsett Street. The resulting 17A-vehicle length of this passenger loading zone has not been studied to determine if it is adequate to avoid excessive queuing or that it will be managed to avoid significant delay.

Vehicles leaving the 29-space surface parking lot will conflict with the adjacent passenger loading zone and together will cause significant queuing on Valleyheart Drive if motorists are allowed to turn left when entering Whitsett Street. This queuing will extend beyond LAFD Station 78 driveway used by small apparatus, blocking their exit from the fire station and blocking their access to Whitsett Street.

A flashing red light (requiring vehicles to stop and then proceed with caution) is recommended on Page 11-55 of the Draft EIR but that device will not keep the Valleyheart Drive roadway clear of vehicles and allow emergency vehicles to leave the fire station driveways. A "warning light" recommended on Page 63 of the Transportation Assessment would not "hold back vehicles exiting the Project turnaround onto Valleyheart Drive."

### **Response No. ORG 7A-196**

The comment contends that the design of the passenger drop-off/pick-up area and the south driveway for the parking structure will result in impacts not analyzed or not properly analyzed in the TA including queuing, adequate space for loading/unloading, and impacts on Fire Station 78. As discussed under Response No. ORG 7A-185, the available storage capacity in the turnaround was found to be sufficient for the estimated queuing on Special

Event days, which is the worst-case, highest trip generating event anticipated at the Project Site. The storage capacity is sufficient to contain the vehicular queue at the turnaround and eliminate queue spillback from the turnaround onto Valleyheart Drive.

The eastbound queues of exiting vehicles on Valleyheart Drive approaching Whitsett Avenue are shown in Table 12 of the Appendix M, Transportation Assessment to the Draft EIR. The queues are estimated to be 25 feet for both non-event scenarios, as well as for the Special Event scenario with the corrective action of prohibiting left-turns out of Valleyheart Drive on Special Event Days. If LAFD vehicles need to exit and access Whitsett Avenue via Valleyheart Drive while outbound vehicles are queued on the eastbound approach, the LAFD vehicles could drive on the inbound (westbound) lane in the event of an emergency.

Appendix M, Transportation Assessment of the Draft EIR studied the delay and queuing at the intersection of Whitsett Avenue and Valleyheart Drive, including the northbound left-turn movement and the eastbound turning movements (which would include vehicles leaving the 29-space surface parking lot, as well as the turnaround). As reported in Table 12A and 12B of the TA, the delay for the northbound left-turn would be 0.9 seconds per vehicle or less and the estimated queue would be 25 feet (1 vehicle) for the 3-4 p.m. peak hour, the 5-6 p.m. peak hour on non-event days, and the 5-6 p.m. peak hour on event days. The delay for the eastbound approach would be 20.7 seconds per vehicle and 25.5 seconds per vehicle for the 3-4 p.m. peak hour and the 5-6 p.m. peak hour, respectively, and the estimated queue would be 25 feet (1 vehicle) for both scenarios. For a Special Event scenario, the eastbound queue would be 389.9 seconds per vehicle and the estimated queue would be 150 feet (6 vehicles). However, with the corrective action of restricting left-turns out of Valleyheart Drive onto Whitsett Avenue during Special Events, the delay for the eastbound approach would decrease to 14.8 seconds and the estimated queue would decrease to 25 feet (1 vehicle).

The left-turn prohibition on Special Event Days would be included in an event *Parking and Traffic Management Plan*, as described in Topical Response No. 9 – Transportation and Parking Impacts During Construction and Operation. As discussed therein, Project Design Feature TRAF-PDF-3 has been modified to include a Parking and Transportation Management Plan that would be employed by Harvard-Westlake School for all athletic competitions or Special Events that are expected to draw more than 300 concurrent attendees. This update has been incorporated into Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, in this Final EIR.

The commenter is referred to Response to Comment No. ORG 7A-134 regarding the efficacy of the recommended warning light.

The flashing red warning light would be activated by a button to accommodate the movement of returning fire trucks or exit of other smaller emergency vehicles and would not be on all the time.

## Comment No. ORG 7A-197

- 3) Limited Entry During Significant Events - The Draft EIR proposes to provide entry passes into the parking structure for major events. This will require security personnel to verify the parking passes before allowing vehicles to enter the parking structure. Unauthorized vehicles will necessarily have to enter the structure and then U-turn back to Whitsett Street across and through the single lane exit. U-turns within the parking structure will create significant additional congestion and confusion. Others with proper credentials who try to enter the parking structure may not be able to do so during credential checking. Some motorists will observe the congestion and then seek parking elsewhere, or others will simply park elsewhere initially (such as the adjacent residential areas) to avoid the congestion and to provide for a quick getaway after their event concludes.

With required verification of parking passes, it will take an hour or more to load the parking structure (see enclosed Table 4 from *Entrance-Exit Design and Control for Major Parking Facilities*, Robert W. Crommelin, October 5, 1972).

## Response No. ORG 7A-197

The comment asserts that requiring parking passes will increase the time to load the parking structure. The commenter is referred to Topical Response No. 9 - Transportation and Parking During Construction and Operations, for a discussion of mechanisms to manage traffic and parking on event days.

Regarding the time to load the parking structure, it would take less time than suggested by the commenter as there are two entry driveways, not one, and the entry procedure would be faster than the data available in the 1972 table by Crommelin, as entry passes would be prominently displayed, clearly dated, and visually scanned by security or other School staff. Entering motorists without a parking pass can be managed by quickly directing them out of the entry queue to a nearby aisle in the parking garage where a second security guard would further check for credentials and, if necessary, direct the unauthorized vehicle to depart and watch to ensure that it does so.

## Comment No. ORG 7A-198

- 4) Pedestrian Access - Page 11-52 of the Draft EIR indicates that pedestrian access to the project at other than gated locations along Valley Spring Lane will be "prevented by a 3' tall metal fence and substantial, dense landscaping." It will take time for plantings to form a pedestrian barrier and the 3' tall metal fence will certainly not prevent pedestrian intrusions. Without a more substantial and an initial continuous barrier, motorists parking in the residential area to the north can gain access to the Project site by walking across Valley Spring Lane and entering over the 3' fence and through the immature landscaping.

Page 34 of the Transportation Assessment states, "All crosswalks at the intersections surrounding the Project Site are unmarked and uncontrolled. Given

the small number of pedestrians anticipated on any given crosswalk, the crosswalks are not anticipated to meet crosswalk warrants."

In direct contradiction and contrary to accepted traffic engineering practice, Page 75 of the Transportation Assessment states, "The Project is expected to generate an increase in pedestrian volumes in the vicinity... It is recommended that marked crosswalks be installed at the intersections of Whitsett Avenue & Valley Spring Lane, Whitsett Avenue & Valleyheart Drive, Babcock Avenue and Valley Spring Lane, Beeman Avenue & Valley Spring Lane, and Teesdale Avenue & Valley Spring Lane as part of the Project improvements."

## Response No. ORG 7A-198

The comment contends that the TA's analysis of pedestrian access and safety is inadequate. The comment misinterprets the discussion of the three-foot fence. Chapter II, *Project Description*, page II-27 of the Draft EIR states: "The three-foot-tall metal outer fence, complemented by additional landscaping, would be constructed around the entire perimeter of the Project Site." Chapter II, page II-52 of the Draft EIR states that, access to the interior of the Project Site and its recreational facilities would only be via the primary pedestrian entrance on Whitsett Avenue, south of the clubhouse. Attempted entry at points other than the designated pathways would be prevented by 3-foot-tall metal fencing and substantial, dense landscaping. The primary purpose of the perimeter fencing is to provide visual information as to the location of the Project's boundaries and to direct visitors to the gates which, with monitoring, would encourage the use of appropriate entrances into the Project Site. As stated on page II-27 of the Draft EIR:

"Fences and walls, along with other security measures, would protect visitors and allow the School to monitor and direct visitor ingress and egress to a limited number of points and in a manner that would also help prevent visitor parking in the community. For instance, security personnel would direct visitors to available on-site parking, while also monitoring 'walk-ins' who parked within the off-site neighborhood and are not confirmed to be residents living in the neighborhood or arriving via public transportation. Such walk-ins would be required to return to their vehicle and return to park within the Project Site."

Refer to Response No. 7A-188 regarding the likelihood that pedestrians would climb through significant landscaping and over a 3-foot fence in order to access the Project Site. Concerns regarding off-site parking are also discussed in Section IV.M, *Transportation*, of the Draft EIR, under Project Design Feature TRAF-PDF-3. See modified Project Design Feature TRAF-PDF-3 in Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR.

The statement on PDF pages 91 and 92 of 217 of Appendix M of the Draft EIR, *Transportation Assessment (TA)*, indicating that installation of marked crosswalks at five locations on Whitsett Avenue and Valleyheart Drive is recommended is incorrect. This

correction has been incorporated into Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, in this Final EIR.

In addition, as indicated in Topical Response No. 9 – Transportation and Parking During Construction and Operations, following circulation of the Draft EIR, the City installed a traffic signal at the intersection of Whitsett Avenue and Valley Spring Lane. The intersection of Whitsett Avenue and Valley Spring Lane was unsignalized at the time of publication of the Draft EIR. The addition of the traffic signal would allow for pedestrian and bicycle crossings from the surrounding areas to the Project Site through the intersection in marked crosswalks, thus, enhancing pedestrian safety in the Project Site area.

### **Comment No. ORG 7A-199**

- 5) Construction Worker Parking - Page 66 of the Transportation Assessment states, "During all phases of construction, employees are expected to park on the Project Site." Parking facilities must be made available for construction worker parking on-site at all times during construction. If parking cannot be provided on-site, then remote parking with continuous shuttle service must be provided so construction workers do not park within the adjacent residential areas.

### **Response No. ORG 7A-199**

The comment reasserts that construction worker parking must be provided. Please refer to Response No. ORG 7A-189 which addresses construction worker parking.

### **Comment No. ORG 7A-200**

In summary, the Draft EIR and the TA for the Harvard-Westlake River Park Project do not properly calculate VMT for the Proposed Project. Further, feasible mitigation for the Proposed Project is not developed or analyzed. As discussed throughout this letter, other deficiencies, errors, omissions, and inconsistencies must also be addressed before the City of Los Angeles considers the Proposed Project.

If you have questions regarding these comments, please call me at your convenience.

### **Response No. ORG 7A-200**

The comment summarizes the opinion of the independent consultant that VMT is not properly calculated; that feasible mitigation is not developed or analyzed; and states that deficiencies, errors, omissions, and inconsistencies in the TA and Section IV.M, *Transportation*, of the Draft EIR need to be addressed. However, based on the responses to the consultant's comments above, this position is not substantiated. No further response is necessary.

## **Letter B, May 11, 2022**

### **Comment No. ORG 7B-1**

Re: Supplemental Comments on Draft Environmental Impact Report for Harvard-Westlake River Park Project, ENV-2020-1512-EIR

On behalf of the Studio City Residents Association (SCRA) and Save LA River Open Space (SLAROS), attached please find the expert hydrological comments prepared by Martin Kammerer, Ph.D., with Martin Kammerer Consulting. These comments serve as a supplement to the comments SCRA and SLAROS previously submitting regarding the draft environmental impact report for the Harvard-Westlake River Park Project.

Thank you for your consideration of these comments.

### **Response No. ORG 7B-1**

The comment introduces an Attachment prepared by Martin Kammerer on behalf of SCRA and SLAROS. The purpose of the attachment is to supplement previously submitted comments on the Draft EIR regarding hydrology. The comment does not discuss the adequacy of the Draft EIR and no further response is necessary.

### **Attachment (Martin Kammerer)**

### **Comment No. ORG 7B-2**

Your firm has requested a review of the Draft EIR for the Harvard-Westlake River Park Project. It is my understanding that your clients, the Studio City Residents Association and Save LA River Open Space would like me to evaluate portions related to the development of open space, storm water hydrology, and general CEQA matters.

### **Response No. ORG 7B-2**

The comment acknowledges that a review of the Draft EIR regarding the development of open space, storm water hydrology and general CEQA matters was requested by Chatten-Brown, Carstens, and Minter on behalf of SCRA and SLAROS. The comment does not discuss the adequacy of the Draft EIR and no further response is necessary.

### **Comment No. ORG 7B-3**

My review indicates several errors and weaknesses in the analysis that I believe warrant further analysis or revisions:

1. The DEIR shows a map indicating groundwater to potentially surface at project grade and goes on to conclude that infiltration is infeasible entirely. LID regulation does, in fact, require actual groundwater data for that purpose. Geotechnical borings for this and neighboring sites indicate that measured groundwater depths are much greater than

the allowable minimum 5-10 feet below project structures. The observed depths to groundwater are supported by general hydrologic principals requiring that groundwater tables slope down to meet the water surface of the nearby river or stream. In the immediate vicinity of the river it must be assumed that the highest possible groundwater level would be met at the top of the existing concrete levee of the Los Angeles River channel which is substantially below project grade. The same was assumed in the EIR for the neighboring fire station. Therefore the map used in the analysis provides little credible evidence for actual groundwater levels and should not be used to determine that infiltration is infeasible.

### **Response No. ORG 7B-3**

The comment asserts that Draft EIR provides little credible evidence for groundwater levels. No groundwater studies in recent decades have shown groundwater to occur at grade. Groundwater levels are not the only determining factors that deemed infiltration as a BMP infeasible. The site's soils, perched water condition, and potential for liquefaction are the other determining factors. According to the geotechnical analysis, "(g)roundwater was encountered below the subject site at depths between 24 1/2 and 40 feet below grade. It is the opinion of this firm that this water is perched on top of the underlying clay soils and bedrock, which are relatively impervious layers. On-site filtration of stormwater would acute the existing perched water condition. In addition, the native alluvial site soils are prone to liquefaction when saturated. Based on these considerations, on-site stormwater infiltration is not recommended for the subject site." (*Geotechnical Engineer Investigation Proposed Academic and Athletic Development* dated July 2, 2019 and revised June 20, 2020, PDF page 63 of 299, contained in Appendix G-1 of the Draft EIR). In its approval letter dated December 8, 2020 (included in Appendix G of the Draft EIR), the LADBS has concurred with the findings of the Project's geotechnical study regarding perched groundwater and groundwater levels and the recommendation that infiltration at this site is not feasible. In addition, the Project's geotechnical study was peer-reviewed by Byer Geotechnical, Inc. August 17, 2022, who further concurred with the findings that infiltration at this site is not feasible. The Byer Geotechnical peer review of the Project's geotechnical study is provided in Appendix G of this Final EIR. Based on the determination that infiltration is not feasible based on the site conditions, tier two (Capture and Use) was considered for the Project.

### **Comment No. ORG 7B-4**

2. The DEIR goes on to claim that LID regulation preclude infiltration if there is potential liquefaction. That is also not true. LID regulation requires a 3-Step screening procedure and specifies under Step 2 that a geotechnical study may indicate under which conditions infiltration could be used despite potential liquefaction. The purpose of this regulation for screening is to make sure that developers use infiltration as a "priority requirement" and only use other methods if this cannot safely be accomplished. In this case, an assumption was made that groundwater levels are too high and that liquefaction would preclude infiltration entirely. Step 1 and 2 were omitted. The motivation is that

surface infiltration would require greater amounts of green space and would come at the expense of a greater development footprint.

## Response No. 7B-4

The comment asserts that the Draft EIR is incorrect in stating that LID regulations preclude infiltration if there is a potential for liquefaction. Table 4.1, Infiltration Feasibility Screening, in the City of Los Angeles Low Impact Development Best Management Practices Handbook is used to assist in the determinization of site feasibility for infiltration BMPs. Category 2 Screening points to geotechnical hazards, such as liquefaction, as a potential issue near the Project Site. In this case, the potential for liquefaction is present within the Project Site. Thus, the analysis considered Category 3. Category 3 Screening (Infeasible) states that if geotechnical hazards such as liquefaction, collapsible soils, or expansive soils exist within the project site, then infiltration BMPs are infeasible. At the bottom of each category, there are instructions to conduct a site-specific geotechnical investigation report and/or hydrologic analysis. According to the Project's geotechnical analysis, provided in Draft EIR Appendix G-1, PDF page 63 of 299: "(g)roundwater was encountered below the subject site at depths between 24.5 and 49.5 feet below grade. It is the opinion of this firm [the Project's geotechnical engineer] that this water is perched on top of the underlying clay soils and bedrock, which are relatively impervious layers. On-site filtration of stormwater would acute the existing perched water condition. In addition, the native alluvial site soils are prone to liquefaction when saturated. Based on these considerations, on-site stormwater infiltration is not feasible at the subject site." (*Geotechnical Engineer Investigation Proposed Academic and Athletic Development* by Geotechnologies, Inc. dated July 2, 2019, and revised June 20, 2020, PDF page 63 of 299). Based on the determination that infiltration is not feasible because of Project Site conditions, tier two (Capture and Use) was considered for the Project.

## Comment No. ORG 7B-5

3. Liquefaction does not generally preclude infiltration. Generally, building foundations are most affected by liquefaction during earthquake induces [sic] shaking. If liquefaction is potentially present, a geotechnical model is used to determine the degree of movement that may be present in consideration of the actual soil column and the degree and level of ground saturation. In the majority of cases these models are used to determine the size and type of footings that need to be used to make the structures safe. That is then taken as mitigation to make the project safe.

In this case, the model used very high levels of saturation (see #1) and adjusted the footings for the structures to make the project safe thereby mitigating for liquefaction. Effectively, the model with exaggerated levels of saturation has shown that the structures are safe to build, yet the DEIR still concludes that infiltration cannot be used at the site, seemingly suggesting that infiltration could add even more "unspecified" forms of hazard to the building.

## Response No. ORG 7B-5

The comment asserts that the potential for liquefaction does not preclude infiltration. The Project's geotechnical engineer agrees that the potential for liquefaction does not in all cases automatically preclude the feasibility for on-site stormwater infiltration. However, in the geotechnical engineering investigation, the liquefaction susceptibility of the on-site soils was listed as just one of the reasons why on-site stormwater infiltration throughout the Project Site is not considered more suitable than stormwater collection. The primary reason that on-site stormwater infiltration is not considered more suitable, is that the on-site geologic materials are composed primarily of clay, silt and bedrock, which are considered to be relatively impervious. See discussion on PDF page 63 of 299 of the Geotechnical Report in Appendix G of the Draft EIR.

Groundwater was encountered during the geotechnical investigation at depths ranging between 24.5 and 49.5 feet below the existing grade. Based on the wide variation in the depth to groundwater, it is the opinion of the Project's geotechnical engineer that the groundwater observed has been perched (trapped between dense materials) in relatively thin, confined layers of sandy materials. These sandy layers are confined by clay and bedrock. It is the opinion of the geotechnology engineer that allowing on-site stormwater to infiltrate above the observed groundwater level would create shallower perched layers and would not result in any groundwater benefit.

## Comment No. ORG 7B-6

4. The hydrologic analysis contains an error in the summation of the generated discharge in fourth column of Table 1 which should read 2.21 cfs instead of 1.4 cfs for the 85th percentile storm event.

## Response No. 7B-6

The comment points out a typographical error in the hydrologic analysis. Consistent with this comment, this typographical error has been corrected in Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR.

## Comment No. ORG 7B-7

5. Another issue is the fact that the 50-year storm discharge is used to show that the pre and post-runoff are identical and the impact on the hydrology of the site is less than significant. I cannot agree with that conclusion because I believe the design storm should be the 25-year event and that flow volume, rather than peak discharge, should be evaluated.

In storms of great intensity where the rainfall intensity becomes very large compared to the infiltration rate the relative difference between pre and post-development discharge peaks become smaller,-- and more favorable to the analysis. This is especially true, where only the peak discharge is reported and not the total volumes.

The differences in volumes are important when analyzing the environmental impact of storm water generation. Our analysis with the provided data indicate a 69% and 49% increase of flow volumes when comparing the pre and post-development flow volume of the 25-year event and the 85th percentile storm, respectively. This translates into significantly increased stormwater pollution going from pre to post-development discharge.

### **Response No. ORG 7B-7**

The comment asserts that the Draft EIR incorrectly concludes that post-development flow volume would be the same as under current conditions. As stated on page IV.I-26, in Section IV.I, *Hydrology and Water Quality*, of the Draft EIR, the Project Site's drainage collection, treatment, and conveyance are regulated by the City. Per the City's Special Order No. 007-1299, December 3, 1999, the City has adopted the County's Hydrology Manual as its basis of design for storm drainage facilities. The Hydrology Manual requires projects to have drainage facilities that meet the "Urban Flood" level of protection. The Urban Flood is runoff from a 25-year frequency design storm falling on a saturated watershed. A 25-year frequency design storm has a probability of 1/25 of being equaled or exceeded in any year. The 2006 L.A. CEQA Thresholds Guide, however, establishes the 50-year frequency design storm event as the threshold to analyze potential impacts on surface water hydrology as a result of development. To provide a more conservative analysis, the Draft EIR hydrology analysis assesses the larger storm event threshold (i.e., the 50-year storm event). This analysis was approved by the City for conservatively analyzing the Project's hydrology impacts.

With regard to water quality, the City's LID Ordinance requires the capture and management of the greater of an 85th percentile rain event or the first 0.75-inch of runoff flow during storm events defined in the City's LID BMPs, through one or more of the City's preferred LID improvements in priority order: on-site infiltration, capture and reuse, or biofiltration/biotreatment BMPs, to the maximum extent feasible. As analyzed in Section IV.I, *Hydrology and Water Quality*, of the Draft EIR, the Project's underground cistern system exceeds the City LID requirements. Operation of the Project would not result in discharges that violate any water quality standards or waste discharge requirements; rather, it would improve water quality compared to existing conditions. Therefore, impacts resulting from Project operation would be less than significant with respect to surface water quality and groundwater quality.

### **Comment No. ORG 7B-8**

6. The use of a cistern in capturing water for irrigation is commendable. However, the plans are unclear in terms of how the water from the school site gets into the cistern, how it is treated, and who will maintain the diversion from the street and pay for the removal of the pollutants out of the BMPs. The designers should clarify their commitment to capturing and treating street run-off in perpetuity. Without that commitment, the system, as designed, may not provide the mitigation required should the diversion from the street

be eliminated for other reasons. The designers should make sure that adequate cistern space is available at all times for the on-site runoff for multiple storms in succession, regardless of the external system.

### **Response No. 7B-8**

The comment asserts that more detail is required regarding the operation and maintenance of the cistern system. An ongoing maintenance program agreement to be implemented by Harvard-Westlake School for the stormwater capture and reuse system would be required by the Los Angeles Bureau of Engineering (LABOE) in accordance with LAMC Section 62.105 “B” Permit requirements. The maintenance program agreement will be coordinated with LABOE upon plan review. This maintenance program agreement would ensure the long-term operation of the Project’s water quality control design features.

Note that the capture and reuse system has been reduced in size based on direction from the City for the Project to not provide treatment of stormwater from the off-site drainage area, but rather to capture, treat and reuse only on-site stormwater. This has resulted in a revision to Project Design Feature WS-PDF-2 to remove reference to the 38.64-acre off-site drainage area, which is shown in Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR.

### **Comment No. ORG 7B-9**

7. A filtration BMP for pre-treatment is essential for the success of the project as siltation in the cistern will not be prevented through the proposed street BMP.

### **Response No. ORG 7B-9**

The comment asserts that pre-treatment is essential for the cistern. Hydro dynamic separators that achieve this purpose are already proposed as a pretreatment unit for the onsite stormwater. Refer to page IV.I-30 of the Draft EIR. Also, stated in Response No. 7B-8, off-site storm water collection and treatment is no longer part of the Project at directed by the City.

### **Comment No. ORG 7B-10**

8. Settlement of the cistern structure may become a problem and developing fractures may lead to leakage. There are no indications in the plans of how this may be prevented. There should be a plan about how stormwater treatment, irrigation, and dewatering would function despite potential permanent leakage.

### **Response No. 7B-10**

This comment speculates about future leakage of the Project’s system. The proposed cistern system would be designed to handle large amounts of water for Capture and Use

and, as with any water system, would be subject to maintenance activities to ensure its proper long-term operation, which would be required by a maintenance program agreement with LABOE (see Response No. ORG 7B-8).

### **Comment No. ORG 7B-11**

9. The DEIR seems to argue that they do not have to produce alternatives that do not meet project goals.

*V-6: “In order for the Project to satisfy the Project Objectives, a property would need to be of sufficient size to accommodate two playing fields, tennis courts, a pool, all with respective bleachers, and a gymnasium that would provide for recreational practice and instruction, as well as allow for competitive meets with available spectator seating and adequate onsite parking to preclude off-site parking.”*

*V-5: “According to the State CEQA Guidelines, the following factors may be used to eliminate alternatives from detailed consideration: the alternative’s failure to meet most of the basic Project Objectives, the alternative’s infeasibility, or the alternative’s inability to avoid significant environmental impacts, such as the Project’s significant and unavoidable construction noise impacts.”*

This information is simply incorrect. In fact, the discussion of alternatives must focus on alternatives to a project or its location that avoid or substantially lessen negative impacts, even if they impede project Objectives or are more costly (Public Resources Code Section 21002.1).

### **Response No. ORG 7B-11**

The comment disagrees with the statements in Section V, *Alternatives*, pages 5 and 6 of the Draft EIR regarding the analysis of alternatives. These statements, however, are supported by language contained in CEQA Guidelines Section 15126.6(a), which states: “An EIR shall describe a range of reasonable alternatives to the Project, or the location, of the Project, which would feasibly attain most of the objectives of the project but would avoid or substantially lessen any of the significant effects of the project and evaluate the comparative merits of the Alternatives.” The comment is correct in that the ability of the Alternative to avoid or substantially lessen any of the significant effects of the project is the primary objective in the selection of an Alternative. In fact, all of the Project Alternatives were selected for their ability to reduce the Project’s significant and unavoidable construction noise and vibration impacts. However, because of the proximity of sensitive receptors (residential uses) none of the alternatives involving construction could reduce significant and unavoidable noise and vibration impacts to less than significant levels. The statement of page V.5 with which the commenter disagrees is cited from CEQA Guidelines Section 15126.6(c), which states: “Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are: (i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts.” Because this language is contained in the current (2022) CEQA

Guidelines, the statement regarding factors in the selection of alternatives is correct. The statement on page V.6 is not a discussion related to CEQA but is a brief summary of the Project's underlying purpose related to supplemental athletic and recreational facilities. No further response is necessary.

### **Comment No. ORG 7B-12**

This DEIR does not seriously consider Alternatives. Project Objectives vary going through the DEIR. In parts of the DEIR, public access and a water cistern are named as project objective, yet they are eliminated in Alternative 4. Their Alternative 3, is deemed a "low density alternative", yet, with respect to cumulative impacts to hydrology and available green space, is factually "more dense" with a far greater percentage of pavement. They never considered using only one playing field and they have never discussed the fact that they have a playing field and a swimming arena at their current school location. What they have produced are alternatives that are less attractive than the proposed project and easier to eliminate.

### **Response No. ORG 7B-12**

The comment contends that the Draft EIR does not seriously consider the proposed Alternatives. However, this statement is not based on substantial evidence. The Project Alternatives are consistently compared to Project Objectives in Table V-3, *Ability of Alternatives to meet Project Objectives*, on pages V-150 through V-154. Alternative 3 is described in Chapter V as a "Reduced Density/Programming" not a "Low Density" Alternative. Under Alternative 3, the tennis courts would be eliminated and the hours of operation available for outdoor activity would be reduced. Alternative 3 would incorporate fewer recreational facilities than the Project and other Alternatives and would reduce end of day hours from 9:00 p.m. to 8:00 p.m., thus resulting in less energy demand, less human activity noise, and fewer light and glare impacts. During operation, impacts related to groundwater supplies and drainage patterns would be greater under Alternative 3 than under the Project because of the elimination of the Project's stormwater capture and reuse system. However, operation impacts would be similar to the other Alternatives that also eliminate this system. Refer to Response No. ORG 7A-169, above which addresses the reasons for eliminating the cistern in the Project Alternatives.

### **Comment No. ORG 7B-13**

Please let me know if you would like me to elaborate more on any of the topics I mentioned.

### **Response No. ORG 7B-13**

The statement is a standard closing to the consultant's report and does not comment on the adequacy of the Draft EIR. No further response is necessary.

## **Letter C, April 22, 2022**

Amy Minter  
 Sunjana Supekar  
 Chatten-Brown, Carstens & Minter  
 On behalf of the Studio City Residents Association and Save the River Open Space

### **Comment No. ORG 7C-1**

On behalf of Studio City Residents Association and Save LA River Open Space, we object to Harvard-Westlake's failure to provide the City with a complete application for its the proposed Harvard-Westlake River Park Project (the "Project") on what is now the site of Weddington Golf & Tennis. Master Land Use Application Instruction Sheet (CP-7810) requires an applicant to identify whether there will be any special events held at school facility, identify those events and the proposed frequency. Harvard-Westlake has wholly failed to include this required information, evasively stating instead:

**"j. Are there special events, e.g., fund-raising events, parent-teacher nights, graduation ceremonies or athletic events? How often are these proposed?"**

To be determined."

We urge the City to require Harvard-Westlake to submit a revised application that includes all required information before this proposed Project is further considered by the City. Since an accurate and complete application is required to define the scope of the Project for environmental review, all hearings and deadlines, including any comment periods on the draft environmental impact report for this Project should be continued and extended until a complete application has been submitted.

### **Response No. ORG 7C-1**

The comment contends that the Draft EIR is faulty because special events were shown as "to be determined" on the Project's Application. The Draft EIR clearly states that "up to 30 school-related special events per year" would be held on the Project Site. (Draft EIR at page II-50.) The City has the option to require conditions of approval that limit the annual occurrence of the School's special events, as well as public special events. The City also has the option to cap maximum attendance at special events for the School and the public, including concurrent public events with the School's use of the Project. Such potential conditions of approval would be consistent with the text included in Chapter II, *Project Description*, on page II-35 of the Draft EIR. Refer to Response No. ORG 1B-14 for additional details regarding special event activities at the Project Site.

It is noted that the events listed in the Draft EIR are based on a conservative scenario (see page II-48). Specific special events, as well as the specific number of special events, is not known since the parameters for such activities would only be understood after the establishment of any potential conditions of approval. However, the School would be

required to comply with decision-makers' approvals regarding the maximum number and scale of events discussed in Chapter II of the Draft EIR. See also Response Nos. ORG 1B-13 and ORG 1B-14 regarding the parameters of activities and events on the Project Site.

Furthermore, the discussion of the types of school athletic, recreational and special events and non-school use of the Project Site is clearly set forth in Chapter II, *Project Description*, of the Draft EIR. In addition, public special events (up to 5 per year) were discussed as early as the Project's Initial Study phase, as shown in the Initial Study, page 32, provided in Appendix A of the Draft EIR. The Project Description need only contain a general description and should not supply extensive detail beyond that needed for evaluation and review of the environmental impacts. (CEQA Guidelines Section 15124.) Therefore, the Draft EIR is not misleading in its presentation of proposed activities.

## Comment Letter No. ORG 8

Kyla Bennett, PhD, JD  
Director, Science Policy  
Public Employees for Environmental Responsibility (PEER)  
Received May 10, 2022

### Comment No. ORG 8-1

Please find attached PEER's comments on the Harvard-Westlake project.

### Response No. ORG 8-1

The comment directs the reader to attached comments on the Harvard-Westlake Project. The attached comments are addressed below in Response No. ORG 8-2 through Response No. ORG 8-15. The comment does not discuss the adequacy of the Draft EIR and no further response is necessary.

### Comment No. ORG 8-2

Thank you for the opportunity to comment on the Harvard-Westlake River Park Project Draft Environmental Impact Report (DEIR). The project involves the redevelopment of an approximately 16 acre site along the Los Angeles River for an athletic and recreational facility, and includes installation of an artificial turf field. Public Employees for Environmental Responsibility (PEER) is restricting its comments to adverse impacts associated with the proposed artificial turf field, particularly in regard to per- and polyfluoroalkyl substances (PFAS). Our specific comments are set forth below.

### Response No. ORG 8-2

This comment acknowledges the opportunity to comment on the Draft EIR and provides an abbreviated summary of the Project. This introductory comment also states that PEER's comments are limited to impacts associated with the proposed artificial turf. The comment does not address the adequacy of the Draft EIR and is noted for the record. The specific comments are addressed below in Response No. ORG 8-3 through Response No. ORG 8-15.

### Comment No. ORG 8-3

**What are PFAS?** PFAS are a large family of chemicals that number between 6,504<sup>1</sup> and 12,034<sup>2</sup> human-made chemicals that provide heat, stain, and water resistance. Yet, due to the strong carbon-fluorine bonds that occur in these molecules, PFAS do not easily break down in the environment and are called "forever chemicals." Well-studied PFAS are toxic to humans in concentrations as small as parts per quadrillion (ppq).<sup>3</sup> EPA's Office of Pollution Prevention and Toxics (OPPT) applies the following "working definition" when identifying PFAS: "a structure that contains the unit R-CF<sub>2</sub>-CF(R')(R''), where R, R', and R'' do not equal "H" and the carbon-carbon bond is saturated (note: branching,

heteroatoms, and cyclic structures are included).” However, the Organization for Economic Co-operation and Development (OECD) defines PFAS as “fluorinated substances that contain at least one fully fluorinated methyl or methylene carbon atom (without any H/Cl/Br/I atom attached to it).” Regardless of which definition is used, adverse health impacts of PFAS are undeniable.

Specifically, PFAS are associated with cancer and have been linked to growth, learning, and behavioral problems in infants and children; fertility and pregnancy problems, including pre-eclampsia; interference with natural human hormones; increased cholesterol; and immune system problems.<sup>6</sup> Epidemiological studies have found decreased antibody response to vaccines,<sup>7</sup> and associations between blood serum PFAS levels and both immune system hypersensitivity and autoimmune disorders like asthma and ulcerative colitis.<sup>8</sup> The negative immune system effects of PFAS are extremely concerning given the ongoing COVID-19 pandemic. Recently, the Centers for Disease Control and Prevention released a “Statement on Potential Intersection between PFAS Exposure and COVID-19,” which recognized the “evidence from human and animal studies that PFAS exposure may reduce antibody responses to vaccines . . . and may reduce infectious disease resistance.”<sup>9</sup>

Numerous studies have found toxicity in legacy PFAS, such as PFOS and PFOA. Yet, as scientists study newer replacement PFAS, they are finding similar adverse toxicological outcomes in the new PFAS they test.<sup>10</sup> A compilation of PFAS toxicity studies shows that virtually every PFAS examined is correlated with adverse health outcomes.<sup>11</sup>

### **Routes of exposure for PFAS include ingestion, inhalation, and dermal absorption.**

While ingestion of PFAS is the most common route of exposure, scientists are finding that inhalation and dermal absorption are important routes of exposure. Indeed, even the federal Agency for Toxic Substances and Disease Registry (ATSDR) states that people working with PFAS “may be exposed to PFAS by inhaling them, getting them on their skin, and swallowing them.”<sup>12</sup> Moreover, recent work shows that firefighters can be exposed to PFAS through “ingestion or inhalation, or direct contact with the skin and dermal absorption.”<sup>13</sup> Recent studies have shown that some PFAS can migrate from car seat fabric to sweat, showing a potential dermal exposure route.<sup>14</sup>

## Response No. ORG 8-3

The comment discusses the potential health risks and exposure pathways of PFAS but does not raise any issues as to the adequacy of the Draft EIR. PFAS are used to impart oil, water, stain, and soil repellency, chemical and thermal stability, and friction reduction in a range of products, including household consumer products such as carpets, clothing, furniture, outdoor equipment, cosmetic products, non-stick cookware, and food packaging. The comment also makes the assertion that PFAS in general create a health risk. This assertion over-generalizes the potential health risk of the Project. As stated in the Exponent memorandum provided as Appendix E.1 to this Final EIR,: “PFAS is a poorly-defined term that can encompass thousands of substances with widely different properties that influence their behavior in environmental and biological systems, and only certain PFAS are associated with regulatory limits supported by environmental and health risk assessments. Artificial turf utilizes low levels of fluoropolymer processing aids in the manufacturing of turf fibers, which are beneficial to the production and performance of the turf fibers. These fluoropolymer processing aids may be considered PFAS under some definitions of the term, but are often considered to be a distinct category of PFAS because of their large size and chemical inertness. These properties contribute to fluoropolymers’ long history of use in applications such as medical devices, in which biocompatibility is an important characteristic.”

The Project would replace the existing Project Site uses with new athletic and recreational facilities, including outdoor athletic fields utilizing artificial grass as a sustainable alternative

to turf grass, thereby reducing irrigation water demand and avoiding the use of pesticides associated with the turf grass. Section IV.H, *Hazards and Hazardous Materials*, and Appendix H-2, Artificial Turf Technical Memorandum, of the Draft EIR, included a detailed evaluation of potential health impacts related to use of artificial turf and compounds in artificial turf, including PFAS. Based on the analysis, the Draft EIR determined that health-related impacts would be less than significant. Refer to Section (2)(a) of Topical Response No. 7 - Artificial Turf and Effects on Localized Heat and Health for additional detail regarding the human health-related risks from PFAS in artificial turf, which the Draft EIR found to be less than significant based on a human health risk assessment (HHRAs) conducted on compounds in artificial turf, including PFAS.

Regarding the comment's assertion that a compilation of PFAS toxicity studies shows that virtually every PFAS examined is correlated with adverse health outcomes, the cited studies are not human health risk assessments. Furthermore, the studies primarily identified three PFAS that were of concern for public health risks, perfluorooctanoic acid (PFOA), perfluorooctanesulfonic acid (PFOS), and GenX.<sup>152</sup> A report from the USEPA states that "although certain PFAS, such as perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS), have been studied extensively, most PFAS lack data for robustly characterizing their potential toxicity".<sup>153</sup> Thus, not every PFAS has been tested for toxicity. As shown in the testing of numerous artificial turf samples, if PFAS show up during testing, the types of PFAS detected are not universally PFOA, PFOS, or GenX, and are most likely a fluoropolymer, which does not break down or leach and is not associated with the PFAS whose health risks have been studied extensively. Additionally, contrary to the commenter's assertion that virtually all studies show that PFAS have an adverse health effect, specific studies on the type of artificial turf which would be used by the Project show that the PFAS, if any, that would be contained in the artificial turf are below the levels that would result in adverse health consequences. Furthermore, the artificial turf proposed for the Project do not contain PFOS, PFOA, or GenX. As discussed in Topical Response No. 7 Section (2)(a)(iii)(e), the results of metals and PFAS testing performed for the Final EIR on FieldTurf artificial turf, the artificial turf proposed for the Project show that the levels that were detected are significantly lower than proposed regulatory limits for PFAS content in products, and lower than residential soil screening levels for any form of PFAS issued by the USEPA and currently proposed by the State of California. Moreover, see Final EIR Appendices E.1, E.2, and E.3, which provide the FieldTurf testing results and analyses.

---

<sup>152</sup> GenX is a trade name for a chemical that went into production around 2010 as an alternative to a perfluorooctanoic acid (also known as PFOA or C8) in the synthesis of polytetrafluoroethylene (PTFE) (i.e., Teflon). The USEPA regulates the following GenX chemicals, hexafluoropropylene oxide (HFPO) dimer acid and its ammonium salt.

<sup>153</sup> USEPA, 2021. National PFAS Testing Strategy: Identification of Candidate Per- and Poly-fluoroalkyl Substances (PFAS) for Testing, October. Available: <https://www.epa.gov/system/files/documents/2021-10/pfas-natl-test-strategy.pdf>. Accessed January 2023.

Additionally, refer to Response No. ORG-1B-75 and Response No. ORG 7A-76, which discuss PFAS, the pathways of exposure, and results from recent PFAS testing of artificial turfs that conclude that leaching and/or conversion to mobile perfluorinated alkyl acids is limited over the lifetime of an artificial turf and/or following accidental ingestion of artificial turf components and that these compounds pose a negligible human health risk from dermal, inhalation, and ingestion exposure.<sup>154 155</sup>

### Comment No. ORG 8-4

**There are per-and polyfluoroalkyl substances (PFAS) in artificial turf, and the DEIR does not address these impacts.** Although the narrative of the DEIR does not mention PFAS as a hazardous component of the artificial turf, Appendix H states that:

The artificial grass blades are formed through a molding and extrusion process, which uses per- and polyfluoroalkyl substances (PFAS). PFAS are not used in the artificial grass blades or base material themselves. Rather, PFAS are used during the extrusion process to avoid clogging of the extruding machines.<sup>15</sup>

<sup>15</sup> See DEIR, Appendix H, p. 2

### Response No. ORG 8-4

The comment asserts that the Draft EIR fails to address impacts of PFAS in artificial turf. As mentioned in Appendix H-2, page 2 (PDF page 1672 of 1691) of the Draft EIR and by the commenter, the artificial grass blades are formed through a molding and extrusion process which utilizes PFAS to avoid clogging of the extruding machines. The artificial turf itself does not contain PFAS. Thus, the Draft EIR did address this topic in Appendix H-2 which is part of the Draft EIR. Section IV.H, *Hazards and Hazardous Materials*, and Appendix H-2, Artificial Turf Technical Memorandum, of the Draft EIR, included a detailed evaluation of potential health impacts related to use of artificial turf. Based on the analysis, the Draft EIR determined that health-related impacts would be less than significant. Refer to Topical Response No. 7 Section (2)(a) for additional detail regarding the human health-related risks from PFAS in artificial turf, which the Draft EIR found to be less than significant based on HHRA's conducted on compounds in artificial turf, including PFAS. Topical Response No. 7 Section (2)(a)(iii)(e) discusses the results of metals and PFAS testing performed for the Final EIR on FieldTurf artificial turf, which show that the levels that were detected are significantly lower than proposed regulatory limits for PFAS content in products, and lower than residential soil screening levels for

any form of PFAS issued by the USEPA and proposed by the State of California. See also Final EIR Appendices E.1, E.2, and E.3 for the FieldTurf testing results and analysis. Additionally, see Response No. ORG 1B-75 and Response No. ORG 7A-76, which discuss PFAS, the pathways of exposure, and results from a recent HHRA on PFAS from artificial turf that suggest that artificial turf does not pose an imminent risk to users based on the level of PFAS and/or fluorine found in the artificial turf samples.

### Comment No. ORG 8-5

We believe that this statement is only partially true. While PFAS are added to the machines to assist in the extrusion process, PFAS are also used as, “a slip agent that is intentionally added to the molten hydrocarbons in order to make the plastic grass blades free of defects.”<sup>16</sup> In other words, PFAS *are* used in the base material itself. In fact, every sample of dozens of artificial turf, regardless of the manufacturer, show PFAS<sup>17</sup> in the grass blades, the backing, and sometimes the shock pad and the infill. Moreover, Synthetic Precipitation Leaching Procedures (SPLPs) show that these PFAS leach off the fields into surrounding waters.<sup>18,19</sup>

Therefore, the failure of the DEIR to discuss the impacts associated with PFAS in the artificial turf, their ability to leach into the groundwater and Los Angeles River, and potential impacts on the athletes using the fields, is a critical flaw which must be cured in the Final EIR.

### Response No. ORG 8-5

The comment asserts that the Draft EIR fails to address impacts of PFAS in artificial turf and that the content of every artificial turf includes PFAS which could leach off into the athletic fields and into the surrounding waters. As mentioned in Appendix H-2, page 2 (PDF page 1672 of 1691) of the Draft EIR, and by the commenter, the artificial grass blades are formed through a molding and extrusion process which utilizes PFAS to avoid clogging of the extruding machines. The artificial turf itself does not contain PFAS, as evidenced by multiple laboratory tests conducted on the turf product to be used by the Project.

Although the artificial turf itself does not contain PFAS, it is theoretically possible for PFAS to adhere to the blades during extraction. The Draft EIR did address this topic in Appendix H-2. See Topical Response No. 7 - Artificial Turf and Effects on Localized Heat and Health.

Regarding the comment that PFAS are “a slip agent that is intentionally added to the molten hydrocarbons in order to make the plastic grass blades free of defects”; the comment misquotes the presenter, Laura C. Green, Ph.D., D.A.B.T. (Dr. Green), at the Oak Bluffs Health Board zoom meeting.<sup>156</sup> The meeting was discussing the Horsley Witten Group report (Horsley Witten Report)<sup>157</sup> on a Martha’s Vineyard Commission report entitled Synthetic Turf Laboratory Testing and Analysis Summary Report Martha’s Vineyard Regional High School (MVRHS) prepared by Tetra Tech (Tetra Tech Report).<sup>158</sup> The Horsley Witten Report presented findings of total organic fluorine at an elevated level of approximately 117 parts per million (ppm) which indicated that unregulated PFAS may be present in the artificial turf and could leach into groundwater.<sup>159</sup> Dr. Green discussed the total organic fluorine presented in the Horsley Witten Report and stated “that plastic grass is just a hydrocarbon, typically either polyethylene or polypropylene, but in order to extrude plastic, whether you are making a plastic blade of grass or a plastic straw, if you just tried to extrude just the polyethylene or polypropylene you’d get defects. It’s like frying an egg in a stainless-steel pan without no slip agent, no spray of oil”.<sup>160</sup> Dr. Green also stated that the total organic fluorine reading is a result of the slip agent and that “every plastic product that needs to be extruded has to have a little bit of a slip agent that is a simple fluoro-copolymer”.<sup>161</sup> Therefore, Dr. Green is saying that without the slip agent, similar to the egg analogy, the blades of grass would not extrude properly and could have defects. Further, she says that PFAS is the non-water soluble fluoropolymer used as a slip agent that will not dissolve in water or contaminate groundwater.<sup>162</sup>

Additionally, Dr. Green goes on to say that “the fluoro-copolymer used in the extraction of artificial turf are similar to the fluoropolymers and fluoro-copolymers that are used

inside people and like all fluoropolymers they are completely inert and biocompatible.”<sup>163</sup> Dr. Green also states that “these fluoropolymers are inert plastic that will not leach and that these PFAS substances have been used since the 1960’s.”<sup>164</sup>

Regarding the commenter’s statement that every sample of dozens of artificial turf, regardless of the manufacturer, show PFAS, the commenter is referring to a presentation about PFAS in artificial turf given at a conference.<sup>165</sup> This presentation discusses that the researchers screened dozens of different new and used turfgrass samples for total fluorine, not PFAS. As stated in the presentation, fluorine comes from polymer processing aids, the slip agent referred to by Dr. Green during the Oak Bluffs zoom. Contrary to the comment, the presentation does not claim that the PFAS are used in the base material itself. In some instances, as is the case in the presentation, the detection of fluorine is cited as the sole basis for concluding that artificial turf fibers and backing materials contain PFAS.<sup>166</sup> However, fluorine is an element that may be present in many chemical forms and examples of numerous fluorine-containing substances have been well characterized to offer acceptable and beneficial attributes (for example, fluoride in toothpaste). Even if present as organic fluorine, not all fluorinated compounds will be considered “PFAS” according to different definitions. And within the group of compounds that may be considered “PFAS,” different compounds have different properties, all of which matter in the assessment of environmental risk from a product such as artificial turf.<sup>167</sup> At present, there appears to be only one study in the peer-reviewed literature that discusses the presence of PFAS in artificial turf systems. In that study, the authors conclude that the PFAS identified in artificial turf is polymeric organofluorine, stating “these results point toward polymeric organofluorine (e.g., fluoroelastomer, polytetrafluoroethylene, and polyvinylidene fluoride);” therefore, “[t]he combination of poor extractability and recalcitrance towards advance oxidation suggest that the fluorine in AT [artificial turf] does not pose an imminent risk to users.”<sup>168</sup> The authors further emphasize the differences between the detection of total fluorine content from the emission or extraction of

nonpolymeric PFAS from the artificial turf during its intended use, which is estimated to be an order of magnitude lower.<sup>169</sup>

Regarding the synthetic precipitation leaching procedure (SPLP) tests that were referenced by the commenter, the Tetra Tech Report states<sup>170</sup> that select PFAS compounds were detected in the SPLP analysis that were not detected in the total PFAS analysis. PFAS may be present in the synthetic turf components, but at concentrations below the method detection limits (MDLs) achieved by the laboratory.<sup>171</sup> The detection limits achieved by the laboratory were elevated because of the limited sample weight utilized during extraction and the dilutions required by the low-density sample matrix. The detection of PFAS compounds in the samples of the synthetic turf components via SPLP PFAS analysis but not via total PFAS analysis may suggest that these products contain PFAS compounds that were not extractable via the analytical method utilized for total PFAS analysis (isotope dilution method) but were extractable by the more rigorous SPLP extraction process. Therefore, the SPLP testing that was performed assessed the products in a manner that likely results in significantly more aggressive degradation (mechanical reduction of particle size and extraction via acidic solution) than the anticipated conditions during the life of the synthetic turf field.<sup>172</sup> The detection of perfluorobutanoic acid (PFBA) (a PFAS compound associated with non-stick and stain-resistant consumer products, food packaging, fire-fighting foam, and industrial processes) in the Brock Shock Pad (a shock absorbing pad in artificial turf, and the specific product discussed in the Tetra Tech Report) may be due to high bias in the analysis of this compound.<sup>173</sup> Additionally, the testing did not detect PFAS in any of the synthetic turf components at concentrations above the laboratory reporting limit or MDL.

<sup>173</sup> Tetra Tech, 2021. Synthetic Turf and Laboratory Testing and Analysis Summary Report Martha Vineyard Regional High School Athletic Field Project, February 26. <https://files.cityofportsmouth.com/agendas/2021/citycouncil/cc101821-Attachment3.pdf>. Accessed December 2022

Results of the Tetra Tech Report state that PFAS materials are present in concentrations well below referenced risk-based standards or reportable quantities.<sup>174</sup> The Tetra Tech Report shows the six PFAS compounds, regulated by Massachusetts, (PFAS6)<sup>175</sup> were not detected in the total PFAS analysis performed on the selected synthetic turf components.<sup>176</sup> Therefore, no significant risks can be identified based on available data.<sup>177</sup> Additionally, based on the current regulatory standards for PFAS in Massachusetts, there are no significant risks associated with the discharge of PFAS from the synthetic turf field into groundwater.<sup>178</sup> Since no significant risks can be identified based on available data, low concentrations of PFAS compounds present little risk associated with human contact, based on the Massachusetts regulatory standards.<sup>179</sup>

As presented above, PFAS are used as a slip agent in the extrusion process and are not part of the artificial turf product. The presence of total fluorine can indicate PFAS is present, although not all fluorinated compounds will be considered “PFAS” according to different definitions. So even if total fluorine is present in artificial turf sampling, it does not necessarily indicate that PFAS is present, or if it is present, it may not be present in the amount of total fluorine reported. The SPLP analysis testing conducted in the Tetra Tech Report did not find PFAS detected in any of the synthetic turf components at concentrations above the laboratory reporting limit or MDL, which shows that PFAS do not leach out of artificial turf in an amount that would be harmful to groundwater or any receiving waters, such as the Los Angeles River. Furthermore, the SPLP testing that was performed assessed the products in a manner that likely results in significantly more

aggressive degradation (mechanical reduction of particle size and extraction via acidic solution) than the anticipated conditions during the life of the synthetic turf field.<sup>180</sup>

In response to comments received on the Draft EIR, the artificial turf proposed for use in the Project was sent out for PFAS and metals testing by Eurofins, a laboratory widely regarded as experienced in PFAS testing. None of the metals detected in the crumb rubber sample exceeded USEPA Regional Screening Levels (RSLs) or California Department of Toxic Substances Control (DTSC) modified RSLs for unrestricted residential use.<sup>181</sup> No listed molecular PFAS of concern were detected above the reporting limit in the pre-weathered sample.<sup>182</sup> The FieldTurf Core Vertex 2.5 fiber product was subjected to the TOP assay (i.e., analysis for one or more specific components) which uses both heat and an aggressive hydroxyl radical oxidation process to attempt to break down precursor compounds of PFAS into measurable perfluoroalkyl acids (PFAA). Perfluorobutanoic acid (PFBA) and Perfluoro-2-methoxypropionic acid (MTP) were detected in the post-TOP assay sample at concentrations just above their respective reporting limits.<sup>183</sup> However, PFBA was also detected in the method blank<sup>184</sup> and both PFBA and MTP were detected in the control sample<sup>185</sup> indicating contamination of the instrument or other interference that would overstate the detected concentration of PFBA in the tested artificial turf.<sup>186,187</sup> These analytical issues are unlikely to affect the validity of the results, although they likely resulted in overestimated post-TOP assay

concentrations of PFBA and MTP.<sup>188</sup> While there are no regulatory screening levels for the specific PFAS in the FieldTurf samples after oxidation, the levels that were detected are significantly lower than proposed regulatory limits for PFAS content in products, and lower than residential soil screening levels for any form of PFAS issued by USEPA and proposed by the State of California.<sup>189</sup> Therefore, PFAS compounds used to produce or that may be found in artificial turf or recycled rubber infill do not present a public health concern.<sup>190</sup> The results testing by Eurofins are provided in Appendix E.3 to this Final EIR. Appendices E.1 and E.2, to this Final EIR, are from other experienced scientific firms that analyzed the test results and offered their professional opinion on PFAS. These results are also summarized in Topical Response No. 7 Section (2)(a)(iii)(e). Therefore, the Draft EIR did not fail to discuss the impacts associated with PFAS in the artificial turf because PFAS is not included in artificial turf which would be used by the Project but rather is used in the extrusion process. As discussed above and confirmed by the PFAS testing results on the FieldTurf proposed for the Project, their ability to leach into the groundwater and Los Angeles River, and potential impacts on the athletes using the fields do not present a public health concern.

### Comment No. ORG 8-6

**Even minute amounts of PFAS are dangerous.** The U.S. Environmental Protection Agency (EPA) revised the risk assessments of three PFAS (PFOA, PFOS, and GenX) in November of 2021. The new risk assessments showed that there is basically no safe level of these compounds; specifically, they state that the Lifetime Health Advisory may be as low as 6 parts per quadrillion (ppq).<sup>20</sup> Indeed, California's Office of Environmental Health Hazard Assessment recommend a health protective limit of 7 ppq of PFOA and 1 ppt of PFOS.<sup>21</sup> Given that we are seeing PFAS at much higher levels than these leaching off artificial turf, it is incumbent on Harvard-Westlake proponents to assess the impacts to the ground water, surface water, and drinking water from the PFAS in these products.

<sup>20</sup> <https://www.huntonnickelreportblog.com/2021/11/icymi-epa-takes-a-big-science-step-towards-setting-a-drinking-water-standard-for-pfoa-and-pfos-and-the-implications-are-much-broader/>

<sup>21</sup> <https://oehha.ca.gov/media/downloads/cnrn/pfoapfosphgdraft061021.pdf>

### Response No. ORG 8-6

The comment reasserts that there is inadequate analysis of the Project's artificial turf and contends that any quantity of PFAS poses a risk to ground water, surface water and drinking water. As mentioned previously, PFAS is not contained in the product which

<sup>188</sup> David Teter Consulting, 2022. Testing of FieldTurf Cryogenic Crumb Rubber for Total CAM 17 Metals and FieldTurf Core Vertex 2.5 Fiber for Total PFAS Using the Total Oxidizable Precursor Assay, November 2022. Appendix E.3 to the Final EIR.

<sup>189</sup> Exponent, 2022. External Memorandum to Mike Harden, ESA, from Sarah Parker, Ph.D., Managing Scientist, Exponent, December 21. Appendix E.1 to the Final EIR.

<sup>190</sup> Gradient, 2022. Memorandum to Mike Harden, ESA, from Julie C. Lemay, M.P.H., Senior Environmental Health Scientist, Gradient, December 18. Appendix E.2 to the Final EIR.

would be used for the Project but is used in the extrusion process of the blades. As discussed in Appendix H-2, page 2 (PDF page 1672 of 1691) of the Draft EIR and by the commenter, the artificial grass blades are formed through a molding and extrusion process which utilizes PFAS to avoid clogging of the extruding machines. As stated in Appendix H-2, the artificial turf itself does not contain PFAS. Section IV.H, *Hazards and Hazardous Materials*, and Appendix H-2, Artificial Turf Technical Memorandum, of the Draft EIR, included a detailed evaluation of potential health impacts related to use of artificial turf. Based on the analysis, the Draft EIR determined that health-related impacts would be less than significant.

The USEPA has proposed designating certain specified PFAS, namely perfluorooctanoic acid (PFOA) and perfluorooctanesulfonic acid (PFOS), under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA), also known as Superfund.<sup>191</sup> The proposed designation of PFOA and PFOS as hazardous substances under CERCLA must undergo a formal public rulemaking process, which has not occurred. Nonetheless, it is not expected that the Project's use of artificial turf would be subject to the USEPA proposed designation under CERCLA, if promulgated, since the artificial turf itself would not contain PFAS and would not constitute a release or threatened releases of PFAS into the environment under CERCLA. The USEPA proposed the first-ever national drinking water standard for six PFAS in March 2023. The proposed rule would regulate PFOA and PFOS as individual contaminants at 4 ppt, and would regulate four other PFAS — perfluorononanoic acid (PFNA), perfluorohexane sulfonate (PFHxS), perfluorobutane sulfonic acid (PFBS), and GenX chemicals — as a mixture at a HI calculation to be defined in the proposed rule. However, the testing for PFAS in turf is measured against soil screening standards not drinking water standards. Additionally, the PFAS testing performed on the FieldTurf sample indicated that PFOA, PFOS, and GenX were not detected above the laboratory reporting limits for both pre-TOP assay and post-TOP assay testing results.<sup>192</sup> Thus, these three PFAS would not present a public health concern with respect to the Project's proposed use of artificial turf.

Refer to Topical Response No. 7 Section (2)(a)(iii)(e) for a discussion on the results of metals and PFAS testing performed for the Final EIR on FieldTurf artificial turf, which show that the levels that were detected are significantly lower than proposed regulatory limits for PFAS content in products, and lower than residential soil screening levels for any form of PFAS issued by the USEPA and currently proposed by the State of California. Moreover, see Final EIR Appendices E.1, E.2, and E.3 for the FieldTurf testing results and analyses. Refer to Topical Response No. 7 Section (2)(a) for additional detail regarding the human health-related risks from PFAS in artificial turf, which the Draft EIR found to be less than significant based on HHRA's conducted on compounds in artificial

<sup>191</sup> USEPA, EPA Proposes Designating Certain PFAS Chemicals as Hazardous Substances Under Superfund to Protect People's Health, <https://www.epa.gov/newsreleases/epa-proposes-designating-certain-pfas-chemicals-hazardous-substances-under-superfund>. Accessed August 30, 2022.

<sup>192</sup> David Teter Consulting, 2022. Testing of FieldTurf Cryogenic Crumb Rubber for Total CAM 17 Metals and FieldTurf Core Vertex 2.5 Fiber for Total PFAS Using the Total Oxidizable Precursor Assay, November 22. Appendix E.3 to the Final EIR.

turf, including PFAS. Additionally, see Response No. ORG1B-75 and Response No. ORG 7A-76, which discuss PFAS, the pathways of exposure, and the results from a recent HHRA on PFAS from artificial turf that provide substantial evidence that artificial turf does not pose an imminent risk to users based on the level of PFAS and/or fluorine found in the artificial turf samples. Also, see Response No. ORG 8-5, above, for a discussion of PFAS testing of the proposed artificial turf for the Project, the testing results, and the ability of PFAS to leach into surface water and groundwater. For all the reasons stated above, no substantial evidence exists that the specific artificial turf proposed for use by the Project would result in health risks or risks to ground, surface, or drinking water and, therefore, no additional analysis is required.

### Comment No. ORG 8-7

**The DEIR incorrectly claims artificial turf will save water.** The DEIR states that the “artificial grass ... [is] a sustainable alternative to turf grass and [will provide a] reduction in water demand.”<sup>22</sup> However, this is not necessarily true. A 2017 study in New Mexico concluded that, “in order to provide a cool, playable surface, irrigation amounts for artificial turf are **greater** than for natural warm-season turf” (emphasis added).<sup>23</sup> This study was confirmed in 2020 when researchers found that, “that the amount of water required to maintain [artificial turf] temperatures at levels comparable to irrigated [natural turf] over a 24-h period exceed the water requirements of Bermuda grass [natural turf] in the same environment.”<sup>24</sup> In fact, a member of the Synthetic Turf Council claims that irrigation systems for artificial turf must be “over- engineered” and that “a large amount of water has to be dumped evenly across the whole field— and quickly because players will want to play immediately. And the cooling effect only lasts about an hour, maybe less.”<sup>25</sup>

Therefore, the numerous statements in the DEIR that state that the artificial turf will reduce “irrigation water demand, which would reduce the Project’s GHG emissions associated with water conveyance and wastewater treatment” are not true. (See DEIR, p. IV.G-72) The Final EIR must look at recent scientific studies regarding the necessity of watering artificial turf to maintain cool enough temperatures to play.

<sup>22</sup> See, e.g., DEIR, p. IV.G-55

<sup>23</sup> <https://scisoc.confex.com/crops/2017am/webprogram/Handout/Paper106290/Ahmed%20Kanaan.pdf>

<sup>24</sup> Kanaan, A. et al., Water Requirements for Cooling Artificial Turf, J. Irrig. Drain Eng., 2020, 146( 10): 05020004

<sup>25</sup> <https://www.parksandrecbusiness.com/articles/2016/10/part-2-watering-synthetic-turf>

<sup>26</sup> DEIR, p. IV.G-72

### Response No. ORG 8-7

The comment asserts that the Draft EIR incorrectly claims that artificial turf will save water. The Project would replace the existing Project Site uses with new athletic and recreational facilities, including outdoor athletic fields utilizing artificial grass as a sustainable alternative to turf grass, thereby reducing irrigation water demand and avoiding the use of pesticides associated with the turf grass. The Project does not propose irrigation for the artificial fields.

Regarding the use of water to cool artificial turf<sup>193</sup>, the 2017 study referenced by the commenter states that it measured artificial turf containing black colored infill material and the measurements were taken in the desert southwestern part of the United States in New Mexico. It was also an experiment to measure the amount of water that would be needed to maintain surface temperatures of these infill fields at levels similar to natural turf grass areas. The Project is located in the City of Los Angeles where it is not as hot as the desert southwestern part of New Mexico and the artificial turf fields would not need to be irrigated to maintain cooler surface temperatures.

Regarding the Parks and Rec Business article<sup>194</sup> referenced by the commenter, the article states that in many cases irrigating synthetic fields is not entirely necessary. The Project does not include the installation of an irrigation system for the artificial turf fields. Therefore, water consumption for the Project's proposed artificial turf would be less than that for natural turf fields. The Draft EIR states that the artificial turf on Fields A and B would serve to reduce water demand compared to natural grass (page IV.O.1-24). As shown in Table IV.O.1-2, page IV.O.1-14, of Section IV.O.1 *Utilities and Service Systems – Water Supply*, of the Draft EIR, the existing landscape/golf course irrigation water demand is 31,063 gallons per day or 34.78 acre-feet per year. Total estimated landscaping water demand for the Project with artificial turf is shown in Table IV.O.1-8, page IV.O.1-29, of the Draft EIR, and is 9,051 gallons per day or 10.13 acre-feet per year, which is much less than the current landscape/golf course water demand. Therefore, the Draft EIR statement on page IV.G-72 that the artificial turf will reduce irrigation water demand over natural turf water demand, which would also reduce the Project's GHG emissions associated with water conveyance and wastewater treatment is accurate.

## Comment No. ORG 8-8

**The DEIR's analysis of GHG emissions is flawed.** Recent research shows that “the substitution of artificial grass for natural grass contributes to global warming.”<sup>27</sup> Additionally:

...artificial grass reaches significantly greater temperatures than those reached by natural grass under the same meteorological conditions... artificial grass creates an additional amount of energy absorbed by the atmosphere. With the number of nationwide artificial grass installations, a typical result yields an additional energy deposited into the atmosphere during moderately warm summer days of 10 to 20 gigawatts.<sup>28</sup>

<sup>193</sup> Kanaan, A et al., 2020. Water Requirements for Cooling Artificial Turf. Journal of Irrigation and Drainage Engineering/Volume 146 Issue 10 - October 2020. <https://ascelibrary.org/doi/abs/10.1061/%28ASCE%29IR.1943-4774.0001506>, Accessed August 29, 2022.

More recent research conducted this year states that artificial turf “can significantly increase ground surface temperatures and consequently increase ambient air temperatures near the ground as well as its surroundings.”<sup>29</sup> Indeed, the scientists conclude that, “[c]oncerning climate mitigation, replacing natural ground with heat-absorbent artificial turf may be counter-productive.”<sup>30</sup>

## Response No. ORG 8-8

The comment asserts that the analysis of GHG emissions in the Draft EIR is flawed because it does not account for the heat of an artificial turf field. Please see Topical Response No. 7 – Artificial Turf and Effects on Localized Heat and Health, which addresses the potential health-related and urban heat island effects due to the Project’s use of artificial turf fields. In addition, Section IV. G, *Greenhouse Gas Emissions*, of the Draft EIR, included an analysis of urban heat island effects from Project implementation. As analyzed therein, the Project’s artificial turf would not substantially contribute to an increase in the urban heat island effect for the area. Additionally, see Response No. ORG 1B-74 regarding the heat island effect.

Regarding the comment that artificial turf fields contribute to an increase in localized temperatures, which could contribute to a broader urban island effect, a study conducted by Milone & MacBroom, Inc., a privately-owned, multidisciplinary consulting firm, conducted a temperature evaluation study designed to determine the temperature rise of artificial turf materials under a number of environmental conditions.<sup>195</sup> As described in more detail in Appendix H-2 of the Draft EIR, the study concluded that while artificial turf fields, and specifically the artificial fibers used to simulate blades of grass, do exhibit higher surface temperatures when exposed to sunlight for prolonged periods of time (as compared to natural turf), rapid cooling was observed if the sunlight was interrupted or filtered by clouds, and would therefore not continue to release heat into the evening in the same manner as sidewalks, parking lots, streets, and roofing. Additionally, for artificial turf, the air temperatures above the surface decrease rapidly with increasing height.

## Comment No. ORG 8-9

The DEIR’s net Project emissions (Table IV.G-7) does not appear to take the additional water use needed to cool the fields into account. It is therefore clear that the DEIR did not

<sup>195</sup> Milone & MacBroom, Inc., Thermal Effects Associated with Crumb Rubber In-filled Synthetic Turf Athletic Fields, December 2008.

adequately examine recent research on this topic; alternatively, data were cherry-picked to give the authors the answer they sought. The Final EIR must include this more recent research and amend the calculation of net Project emissions.

### **Response No. ORG 8-9**

This comment states that the Draft EIR does not account for water use to cool the fields. The Project does not include the installation of an irrigation system for the Project's proposed artificial turf fields. See Response No. ORG 8-7, above, explaining why the Project's two fields using artificial turf would not be irrigated and, therefore, why the Draft EIR does not need to look into watering the artificial turf to keep it cool. Regarding the data in the Draft EIR being cherry-picked, the Draft EIR considered a wide array of articles which adequately considered all health and heat impacts of using artificial turf. Moreover, the articles referenced in the comment do not support the commenter's assertions regarding water usage for artificial turf, but instead refute the assertions as discussed in Response No. ORG 8-7, above. Therefore, the net Project GHG emissions in Table IV.G-7 do not need to be amended.

### **Comment No. ORG 8-10**

**The DEIR cherry-picks studies on the dangers of crumb rubber infill.** The DEIR relies heavily on old and biased scientific literature regarding the dangers of crumb rubber infill. For example, the DEIR repeatedly cites a 2018 "study" by Gradient, a consulting firm that works for industry, to demonstrate that crumb rubber infill does not pose a risk. Scientists have been aware for years that Gradient employees are not impartial. Indeed, Gradient has been outed for their bias:

Gradient belongs to a breed of scientific consulting firms that defends the products of its corporate clients beyond credulity, even exhaustively studied substances whose dangers are not in doubt, such as asbestos, lead and arsenic. Gradient's scientists rarely acknowledge that a chemical poses a serious public health risk. The Center for Public Integrity analyzed 149 scientific articles and letters published by the firm's most prolific principal scientists. Ninety-eight percent of the time, they found that the substance in question was harmless at levels to which people are typically exposed... "They truly are the epitome of rented white coats..."<sup>31</sup>

<sup>31</sup> <https://publicintegrity.org/environment/meet-the-rented-white-coats-who-defend-toxic-chemicals/>

### **Response No. ORG 8-10**

The comment asserts that the Draft EIR cherry picked studies on crumb rubber by choosing to discuss Gradient's study.

As discussed in Topical Response No. 7 and Appendix H-2 of the Draft EIR, there are numerous studies that looked at crumb rubber including:

- 2009 OEHHA Study – looked at crumb rubber for cancer risk;
- 2010 CalRecycle Study – examined crumb rubber for chronic and acute health risk;
- 2017 Gradient Study – examined crumb rubber for cancer and non-cancer risk;
- 2009 New York State Study – examined crumb rubber for cancer risk;
- 2010 Connecticut Study – assessed crumb rubber for cancer and non-cancer risk; and
- 2008 Bainbridge Island Evaluation – evaluated crumb rubber for health risks.

Additionally, the analysis in Appendices E.1 and E.2 of this Final EIR show that these experts also reviewed studies by Lauria, M. Z., Naim, A., Plassmann, M., Fäldt, J., Sühning, R., and Benskin, J. P., 2022; four studies by the Japanese National Institute of Health Sciences published in peer-reviewed literature (Kawakami et al., 2022; Nishi et al., 2022; Kubota et al., 2022; Sakai et al., 2022); ECHA, 2017; ANSES, 2018; RIVM, 2018; Peterson et al., 2018; Cheng, H., Hu, Y., Reinhard, M., 2014; Massey, R., Pollard, L., Jacobs, M., Onasch, J., and Harari, H., 2020; and EPA/ORD and CDC/ATSDR, 2029. Therefore, it is clear that the Gradient study was not the only study relied upon for the conclusion of less than significant impacts. Thus, the Draft EIR did not cherry pick the studies on crumb rubber nor solely rely on just the one study with which the commenter takes exception.

### **Comment No. ORG 8-11**

Moreover, *all* the studies cited in the DEIR were conducted before PFAS was discovered in artificial turf in 2019, and all the studies showing risk or harm were not included. The DEIR conveniently leaves out a 2022 peer-reviewed study that shows metals in crumb rubber are “above safe levels” and “accidental ingestion could lead to chronic effects and cancer risks”<sup>32</sup> that crumb rubber contains “harmful to human health PAHs in amounts exceeding the permissible limits”;<sup>33</sup> and that chemicals in crumb rubber kill salmon and other fish.<sup>34</sup> There are a plethora of other articles that come to similar conclusions, and it is not PEER’s job to bring all of those to the attention of the project proponents. Suffice it to say that it is clear that the literature search was insufficient and/or biased, and the Final EIR must include these additional research papers.

## Response No. ORG 8-11

The comment asserts that the Draft EIR fails to address impacts of PFAS in artificial turf by relying on outdated studies from before PFAS were discovered in artificial turf.

The comment states that the EIR must discuss additional available articles on PFAS and cites to three listed reports which were not in the Draft EIR analysis. The first report (Graça *et al.*)<sup>196</sup> cited by the commenter identified that some metals present in crumb rubber may be above safe European levels, primarily zinc and lead. The report went on to conclude that a multi-pathway human exposure study was also performed, and the risk assessment showed that non-carcinogenic and carcinogenic risks were above the acceptable values. The DEIR did not include the Graça *et al.* study, due to the authors' flawed calculations, which were contradicted elsewhere in the article and altered its conclusions. Graça *et al.* stated that "some metals present in crumb rubber may be above safe levels," and that "zinc accounted for 66%, on average, of the total metal concentrations in all samples."<sup>197</sup> However, the zinc concentrations in Graça *et al.* ranged from 2,989 to 5,246 mg/kg, well below USEPA's Regional Screening Level (RSL) for zinc of 23,000 mg/kg, which is designed to be health-protective for even daily residential exposures.<sup>198</sup> <sup>199</sup> Additionally, based on their flawed cancer risk calculations, Graça *et al.* erroneously concluded that "[c]rumb rubber accidental ingestion could lead to chronic effects and cancer risks."<sup>200</sup> Later in the same article, the authors contradict that conclusion, stating that "[r]egarding cancer risks from ingestion of crumb rubber, these are within the acceptable values for all receptors, being Pb and Cr the major contributors. The authors would like to apologize for any inconvenience caused."<sup>201</sup> <sup>202</sup> Based on these flaws, the Graça *et al.* study does not add to the body of evidence from past and

recent studies that found no evidence of a public health concern from exposure to chemicals in recycled crumb rubber infill.<sup>203</sup>

The second report cited by the commenter<sup>204</sup> stated that 80 percent of their samples came from tire recyclers and the other 20 percent from the surface of sports fields. Polycyclic aromatic hydrocarbons (PAHs) were found in 56 percent of the samples, 34 percent of which were supplied by the recyclers.<sup>205</sup> The granules supplied by the recyclers also had the highest values of PAHs. The lower values were obtained from granules collected from the sports fields. As detailed in the article, the PAH content in rubber granules depends on many factors; quality of recycled waste, duration of use of the granules on the pitch, frequency of replacement and type of material used. The report concluded that “[o]n the basis of the obtained test results, it was found that the rubber granules do not pose a threat to the natural environment due to the leaching of PAHs and elements.”<sup>206</sup>

The third article cited in the comment<sup>207 208</sup> relating to the coho salmon refers to a tire rubber antioxidant, quinone transformation product, from roadway runoff and stormwater affecting creeks of the U.S West Coast. The quinone transformation product was N-(1,3-dimethylbutyl)-N'-phenyl-p-phenylenediamine (6PPD). This article is specific to coho salmon and stormwater and does not relate to the Project as the measurements were taken from road runoff and immediate receiving waters that the road runoff goes into. Since these measurements were taken from actual tire wear and not crumb rubber samples, they cannot be assumed to be the same.

There are several other recent reports which support the conclusions reached in the Draft EIR. One is a recent study of plastic- and rubber-containing artificial turf fields in

Stockholm, Sweden,<sup>209</sup> where samples were subjected to total fluorine (TF), extractable organic fluorine (EOF) and target PFAS analysis. TF was observed in all 51 artificial turf samples,<sup>210</sup> while EOF and target PFAS occurred in less than 42 percent of all samples.<sup>211,212</sup> A subset of samples extracted with water confirmed the absence of fluoride. Moreover, additional analysis revealed negligible perfluoroalkyl acid (PFAA) formation.<sup>213</sup> Collectively, the results indicated the plastic- and rubber-containing artificial turf field materials have a combination of poor extractability and recalcitrance towards advanced oxidation suggesting that the fluorine in artificial turf does not pose an imminent risk to users.<sup>214</sup> Another risk assessment study<sup>215</sup> collected rubber granular samples from 100 Dutch synthetic fields, which were analyzed for 45 (all samples) or 79 (a subset) substances. A subset of samples was additionally analyzed for PAHs, phthalates, and metals into sweat and the gastrointestinal tract, and for evaporation of volatile substances into air. There was no concern for phthalates, benzothiazoles, bisphenol A and the metals cadmium, cobalt, and lead as their exposures were below the levels associated with adverse effects on health.<sup>216</sup> PAHs were the substance of highest concern, but they did not present an appreciable health risk with exposures resulting in *de minimis* cancer risks.<sup>217</sup> Thus, the risk assessment concluded that there was no elevated health risk from playing sports on synthetic turf pitches with recycled rubber granulate and there is no reason to advise people against playing sports on such pitches.<sup>218</sup>

Thus, as described above, even very recent studies show that recycled rubber granulate poses no elevated health risk to people playing on artificial turf. Therefore, the Draft EIR

presented the most reliable evidence available, which is supported by more recent studies, and a preponderance of the evidence makes clear that there is no elevated health risk from artificial turf fields.

### Comment No. ORG 8-12

**The DEIR does not comprehensively discuss the issue of microplastics.** Both the grass blades of the plastic turf and the crumb rubber infill migrate off the field and get into adjoining waters. Hundreds of pounds of microplastics shed off these fields each year, despite industry’s claims that they do not break.<sup>35</sup> In fact, research from Sweden indicates that microplastics coming off artificial turf fields is the second largest source of microplastics in the environment.<sup>36</sup> The Final EIR must discuss this issue, and include information regarding the PFAS and other toxic chemicals that will migrate with these microplastics.

<sup>35</sup> <https://www.youtube.com/watch?v=A8OLBfWmt7g&t=2s>

<sup>36</sup> <https://www.diva-portal.org/smash/get/diva2:1549783/FULLTEXT01.pdf>

### Response No. ORG 8-12

The comment asserts that the Draft EIR fails to address microplastics and the impacts of PFAS in artificial turf. Although the Draft EIR does not call out a discussion of microplastics, the Draft EIR does discuss the health effects of artificial turf consisting of polyethylene fibers that are shaped into small, green artificial grass blades and crumb rubber, which are the microplastics to which the commenter is referring. However, the comment does not present substantial evidence that the Project’s artificial turf would cause a health risk through migration of microplastics. The first YouTube video that the commenter refers to is Dr. Green discussing artificial turf crumb rubber. Dr. Green does state that the “crumb rubber is a microplastic”, but she also adds immediately after that, “and by the way it is safe for players, it is safe for players.” The second reference the commenter refers to is a 2016 report titled *Swedish sources and pathways for microplastics in the environment*. This report states that the “[m]ost important emissions for microplastics were found to be from road wear and abrasion of tyres.”<sup>219,220</sup> This report also mentions the rubber infill from artificial turf as the second largest source of microplastics, but lists many other sources as well, including wear from boat hulls, laundry, industrial production, protective and decorative coatings on buildings, wear from floating devices, and personal care products.<sup>221</sup> Additionally, this report says “[h]owever, it is not necessarily the sources with the largest microplastic emissions that contribute the

<sup>219</sup> Magnusson, Kiersten, *et al.*, 2017. Swedish sources and pathways for microplastics to the marine environment A review of existing data, March. Swedish sources and pathways for microplastics to the marine environment (diva-portal.org), Accessed December 2022.

<sup>220</sup> “Tyre” is the British English spelling of “tire”.

<sup>221</sup> Magnusson, Kiersten, *et al.*, 2017. Swedish sources and pathways for microplastics to the marine environment A review of existing data, March. Swedish sources and pathways for microplastics to the marine environment (diva-portal.org), Accessed December 2022.

most to the microplastic loads in the sea.”<sup>222</sup> In fact, the report has no data for the quantity of microplastics that reach the sea from tire wear, artificial turfs, and many other sources.<sup>223</sup> The report further states “[r]oad wear and tyres was pointed out . . . as the source where the largest amount of particles are emitted. Still, very little is known about whether these particles also make up a substantial part of marine microplastics.”<sup>224</sup> The same can be said for artificial turf, and the report authors indicate as a “knowledge gap” that “the study would be more complete with studies of actual spill of granulates.”<sup>225</sup> Since the report acknowledges incomplete data and lack of data concerning the amount of microplastics from artificial turf that are in the sea and its relative contribution compared to all sources of microplastics, the issue of artificial turf fields’ contribution to microplastics is unknown. Therefore, any analysis of the potential of microplastics which may migrate from the Project Site to the Los Angeles River would be speculative and, as such, not required by CEQA.

Regarding the comment that microplastics will lead to the migration of PFAS and other toxic chemicals, microplastics in the environment from artificial turf could potentially collect in storm water drains and get mixed with stormwater. The study cited by the commenter, *Swedish sources and pathways for microplastics to the marine environment*, discussed migration from plastic litter on beaches, which exposes plastics to fragmentation into smaller pieces due to abrasion, wave-action and turbulence, and that such weathering of plastic litter in the beach environment is a likely mechanism for generation of a majority of microplastics.<sup>226</sup> However, studies have yet to be conducted to quantify the movement of infill granules and artificial grass blades from artificial turf fields to the surrounding environment. Nonetheless, health effects from compounds in artificial turf fields have been conducted. Refer to Response No. ORG 1B-75 and Response No. ORG 7A-76, which discuss PFAS, the pathways of exposure, and results from a recent HHRA on PFAS from artificial turf that suggest that artificial turf does not pose a health risk to users based on the level of PFAS and/or fluorine found in the artificial turf samples. Also, see Response No. ORG 8-5, above, for a discussion of PFAS ability to leach into surface water and groundwater. Additionally, as outlined in Topical

<sup>225</sup> Magnusson, Kiersten, *et al.*, 2017. Swedish sources and pathways for microplastics to the marine environment A review of existing data, March, page 33. Swedish sources and pathways for microplastics to the marine environment (diva-portal.org), Accessed December 2022.

<sup>226</sup> Magnusson, Kiersten, *et al.*, 2017. Swedish sources and pathways for microplastics to the marine environment A review of existing data, March, page 33. Swedish sources and pathways for microplastics to the marine environment (diva-portal.org), Accessed December 2022.

Response 7 and the discussions in the responses listed above, the leaching of chemicals from crumb rubber or other microplastics associated with artificial turf is unlikely to cause health effects according to the studies, even from PFAS. Therefore, the Draft and Final EIR analyzed the issue of microplastics and included information regarding the health effects of PFAS and other toxic chemicals that are associated with microplastics.

### **Comment No. ORG 8-13**

**Artificial turf cannot currently be recycled.** The only section of the DEIR that discusses end of life issues for the artificial turf is in Section IV.H-45. Indeed, the DEIR concludes, “Compliance with applicable regulatory requirements would ensure that Project impacts related to disposal of artificial turf would be less than significant.” This is not true. The DEIR fails to mention that there are no recycling facilities in the United States, and old fields are being unceremoniously dumped all over the country.<sup>37</sup> The Final EIR must specifically disclose what will happen to the tons of PFAS-laden plastic at the end of the field’s life.

<sup>37</sup> <https://www.theatlantic.com/science/archive/2019/12/artificial-turf-fields-are-piling-no-recycling-fix/603874/>

### **Response No. ORG 8-13**

The comment claims that the Draft EIR does not provide evidence that recycling or safe disposal is possible. Refer to Topical Response No. 7 Section (2)(c) for a discussion on possible disposal and/or recycling options for the artificial turf. Additionally, refer to Response No. ORG 7A-36 for a discussion on artificial turf recycling and disposal.

### **Comment No. ORG 8-14**

**Conclusion.** It is somewhat ironic that the DEIR states that, “[t]he Project would install artificial turf fields designed to simulate the experience of practicing and playing on grass fields.”<sup>38</sup> Given the PFAS that leaches off artificial turf, the microplastics, the toxic chemicals associated with crumb rubber, the inability to recycle the fields at end of life, the contribution to climate change, and the intense water use, it seems logical that if Harvard-Westlake wants to “simulate the experience of practicing and playing on grass fields,” they should simply install grass fields.

<sup>38</sup> See DEIR, IV. H-28

### **Response No. ORG 8-14**

The comment summarizes the points addressed in the comment letter and suggests that the Project use grass rather than artificial turf to avoid the alleged problems created by use of artificial turf. Refer to Topical Response No. 7 Section (2)(a) for additional detail regarding the human health-related risks from PFAS in artificial turf, which the Draft EIR found to be less than significant based on HHRA’s conducted on compounds in artificial

turf, including PFAS. Refer to Topical Response No. 7 Section (2)(a)(iii)(e) for a discussion on the results of metals and PFAS testing performed for the Final EIR on FieldTurf artificial turf, which show that the levels that were detected are significantly lower than proposed regulatory limits for PFAS content in products, and lower than residential soil screening levels for any form of PFAS issued by the USEPA and currently proposed by the State of California. Moreover, see Final EIR Appendices E.1, E.2, and E.3 for the FieldTurf testing results and analyses. Additionally, see Response No. ORG 1B-75 and Response No. ORG 7A-76, which discuss PFAS, the pathways of exposure, and results from a recent HHRA on PFAS from artificial turf that suggest that artificial turf does not pose an imminent risk to users based on the level of PFAS and/or fluorine found in the artificial turf samples. Also, see Responses No. ORG 8-3, ORG 8-4, ORG 8-5, ORG 8-6, ORG 8-11, and ORG 8-12, above regarding the various issues summarized in this comment.

### **Comment No. ORG 8-15**

It appears that all artificial turf contains PFAS, including one of the most toxic (PFOA). Because we only discovered PFAS in artificial turf three years ago, there have been no studies investigating health impacts to athletes using the fields from these PFAS. This absence of evidence does not mean that it is safe for people to use the fields; it merely means it has not yet been studied. However, we do know that even minute quantities of PFAS are dangerous to human health; and we do know that the PFAS in the fields leaches off into groundwater, soils, and drinking water. The DEIR is deeply and fatally flawed given its failure to address the aforementioned issues, and in order to adequately assess impacts from the proposed project, the Final EIR must be significantly amended.

### **Response No. ORG 8-15**

The comment asserts that the Draft EIR is flawed because of its failure to address PFAS, and further asserts that all artificial turf contains PFAS (including PFOA). Refer to Topical Response No. 7 Section (2)(a) for additional detail regarding the human health-related risks from PFAS in artificial turf, which the Draft EIR found to be less than significant based on HHRA's conducted on compounds in artificial turf, including PFAS. Refer to Topical Response No. 7 Section (2)(a)(iii)(e) for a discussion on the results of metals and PFAS testing performed for the Final EIR on FieldTurf artificial turf, which show that the levels that were detected are significantly lower than proposed regulatory limits for PFAS content in products, and lower than residential soil screening levels for any form of PFAS issued by the USEPA and currently proposed by the State of California. Moreover, see Final EIR Appendices E.1, E.2, and E.3 for the FieldTurf testing results and analyses. Additionally, see Response No. ORG 1B-75 and Response No. ORG 7A-76, which discuss PFAS, the pathways of exposure, and results from a recent HHRA on PFAS from artificial turf that suggest that artificial turf does not pose an imminent risk to users based on the level of PFAS and/or fluorine found in the artificial turf samples. Also, see Responses Nos. ORG 8-3, ORG 8-4, ORG 8-5, ORG 8-6, ORG 8-11, and ORG 8-12, above regarding PFAS.

**Comment No. ORG 8-16**

Thank you for your consideration of these comments.

**Response No. ORG 8-16**

The comment closes the comment letter but does not address the adequacy of the evaluation provided in the Draft EIR. As such, no further response is necessary.

## Comment Letter No. ORG 9

Heidi MacKay  
President

Save Coldwater Canyon!

Received May 10, 2022 (via e-mail and duplicated in an attached letter)

### Comment No. ORG 9-1

Save Coldwater Canyon! Inc is a neighborhood group fighting to preserve and protect the scenic beauty, natural environment, health, safety and welfare of Coldwater Canyon and its neighboring communities. We are a California nonprofit public benefit corporation. We work to protect open space, natural habitat, wildlife, and wildlife corridors in the Santa Monica Mountains and actively support other community groups in these efforts.

### Response No. ORG 9-1

This comment introduces the commenter and provides additional information as to the mission of the organization. The comment, which is introductory, does not address the adequacy of the Draft EIR. As such no further response is necessary.

### Comment No. ORG 9-2

Some History: In 2017, HW succumbed to overwhelming community opposition and abandoned the egregious and dangerous Harvard-Westlake Parking Improvement Plan in Coldwater Canyon. However, just as the community took a well-earned breath of relief, we learned that the school had purchased Weddington Golf & Tennis, a Los Angeles Historical Cultural Landmark and green open space, beloved by Angelenos for generations. Councilman Krekorian assured our community that Harvard-Westlake had made a promise of ***“maintaining the tranquility of Weddington and preserving as much open space as possible.”***

The plan for the Harvard Westlake River Park [Campus] Project shatters these promises. If this out of character, out of scale Project is approved, there will never again be tranquility at Weddington.

### Response No. ORG 9-2

The comment expresses the commenter’s opinion regarding Harvard-Westlake’s former proposed parking structure at the Coldwater Canyon (Upper School) campus, which was proposed at a wholly different project site and is unrelated to the current Project. The comment further expresses a general opposition to the Project stating that it will be out of character and out of scale, and will destroy the tranquility of the area. However, the commenter does not provide any substantive facts or support for these concerns or opinions. Moreover, CEQA Guidelines Section 15131 states that economic and social effects of a project are not appropriate CEQA considerations unless they would lead to a

physical impact on the environment. . As this comment does not present any evidence with respect to the content and adequacy of the Draft EIR, no further response is necessary.

Nonetheless, see Topical Response No. 6 – Historic Resources, which addresses direct and indirect impacts on historical resources resulting from the Project. As discussed therein, the Project would retain the character-defining features as required under the Historic Cultural Monument (HCM) designation.

As also discussed in Section IV.D, *Cultural Resources*, of the Draft EIR, the use of the Project Site as proposed by the Project for athletic and recreational purposes is consistent with its historic use; the historic character of the Project Site overall would be retained; the identified character-defining features would be retained and rehabilitated; and the proposed new construction would not destroy historic materials, features, or spatial relationships that characterize the Project Site. Accordingly, the Project would not result in a substantial adverse change in the significance of a historical resource, the Project Site would retain sufficient historic integrity to remain eligible as an HCM, and the Project would not have a significant impact on the environment as defined by CEQA.

Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site. As discussed therein, the School would provide public access and shared use of recreational facilities on the Project Site as set forth in the Draft EIR.

### **Comment No. ORG 9-3**

**We oppose the proposed Harvard-Westlake River Park Project for the following reasons:**

**The Harvard-Westlake River Park Project would negatively transform Weddington Golf & Tennis** – 17 acres of heavily utilized, river-adjacent and tree-canopied, green open space – enjoyed by the public for nearly 70 years – into a gigantic and intrusive Sports Event Facility for Harvard-Westlake, a private high school. Harvard-Westlake would continue to occupy its 22-acre upper school campus facility in Studio City, located .6 miles from Weddington.

### **Response No. ORG 9-3**

The comment expresses opposition to the Project due to the transformation of the Weddington Golf & Tennis Project Site to a private “Sports Event Facility” for Harvard-Westlake School. The comment does not discuss the adequacy of the Draft EIR and, therefore, no further response is needed.

Nonetheless, for clarification of the private ownership and permitted public use of the Project Site, it is noted that the land that currently comprises Weddington Golf & Tennis has been privately owned since the late 1800s. The Project Site was first purchased by

the Weddington/Becker families and then sold to Harvard-Westlake in late 2017. Currently, no public access to the Project Site is supported, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners, is not generally considered a public facility open to the public as implied by the comment, and, unlike public property, may be closed at the property owner's discretion.

Additionally, the comment mischaracterizes the Project as development of a private sports event facility. See Topical Response No. 3 – Enforcement of Public Access. As discussed in Topical Response No. 3, public access to portions of the Project Site is an integral part of the Project and could result in the Project Site being used by the public more often than by the School. The commenter is also referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

### **Comment No. ORG 9-4**

**One look at the Plan for the Proposed facility leaves one asking, “where is the park?”**

With four “arenas” – two full-size artificial turf sports fields, one Olympic-size pool, and an 80,249-square foot gym, each with spectator bleachers and a total of 45 light poles (up to 80 feet in height), there is simply no room left for a park. As environmentalists and advocates of open space, we can recognize a “greenwashed” development proposal and do not believe a narrow track around a walled facility and interstitial bits of space between venues is an appropriate trade-off for what exists today. The adjacent Zev Yaroslavsky Los Angeles River Greenway would remain, but that is a public asset and should not be appropriated by reference.

### **Response No. ORG 9-4**

The comment expresses the commenter's opposition to the Project and generally implies that adequate open space would not be provided on the Project Site compared to what exists today. Opposition to the Project is noted. However, the commenter does not provide any substantive facts or support for these concerns or opinions. As this comment does not present any evidence with respect to the content and adequacy of the Draft EIR, no further response is necessary.

Nonetheless, the commenter is referred to Response Nos. ORG 9-2 and ORG 9-3 which address the existing private on-site uses and the Project's proposed publicly-accessible open space characteristics. Also, the Project does not “appropriate” the Zev Greenway, but would provide for public access through the Project Site to the Zev Greenway (which does not currently exist), and would install a RIO-compliant planting program at the Project and Zev Greenway interface for public enjoyment (see Figures IV.C-4 and IV.C-5 of the Draft EIR). Moreover, the Project would result in a 36 percent net increase in trees

compared to existing conditions, which would contribute to the Project Site's park-like setting.

### **Comment No. ORG 9-5**

**Impacts of the potential loss of the existing recreational, green open space would be broadly felt through the Los Angeles region.** The loss of 17 acres of River-adjacent, forested, green open space would eliminate recreational opportunities for thousands of Angelenos if replaced by the proposed Sports Event facility. Moreover, the opportunity to create an environmentally superior, public LA River recreational facility with aquifer recharging would be irrevocably lost. Living with the reality of the Climate Emergency, the loss of living green open space, biological diversity, and hundreds of mature trees is something we can ill afford.

### **Response No. ORG 9-5**

The comment states that the Project would cause the loss of 17 acres of forested, green open space and would eliminate recreational opportunities that would be broadly felt throughout the Los Angeles region. Opposition to the Project is noted. However, the commenter does not provide any substantive facts or support for these concerns or opinions. As this comment does not present any evidence with respect to the content and adequacy of the Draft EIR, no further response is necessary.

Nonetheless, the comment mischaracterizes the Project Site as consisting of "17 acres of River-adjacent, forested, green open space..." The Project Site includes a mix of various plant communities, developed areas (associated with the existing golf and tennis facilities), and disturbed areas, which also includes 421 trees located both on the Project Site and off-site in surrounding areas (e.g., within portions of the public right-of-way). **Table IV.C-1, *Plant Communities***, in Section IV. C, *Biological Resources*, of the Draft EIR, lists each of the plant communities observed, as well as the acreage, within the Biological Study Area (includes the Property and County Leased Property). Of the roughly 17-acres, nearly five acres are developed and/or disturbed areas, with roughly 12 acres being ornamental landscaped area.

Refer to Response No. ORG 9-3 for a discussion of the mischaracterization of the Project Site as a Sports Event Facility in the comment letter.

With regard to recreational opportunities, refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, of this Final EIR. As discussed therein, the Project would provide public use of tennis facilities at a capacity similar to existing conditions. See also Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access to the Project's available recreational facilities and amenities for public use. Topical Response No. 3 also includes the rationale and mechanism by which public groups may be pre-approved, and use of the Project Site, including tennis facility use. As discussed therein, the School would provide public access and shared use of recreational facilities on the Project Site as set forth in the Draft EIR.

Although removal of the existing golf course and reduction in tennis facilities would increase demand on off-site public tennis and golf facilities, the Project itself, would not increase demand for recreational facilities and parks since it does not propose residential uses that would generate a population increase. In addition, the Project would provide recreational facilities to the public that would off-set some of the replaced recreational facilities. Upon completion, the Project would have adequate capacity to accommodate the same number of weekly tennis court sessions as the current tennis facilities on the Project Site. In addition, are there numerous tennis facilities in the local vicinity with capacity to accommodate players from the Project Site during the week if they are unable to use the eight new onsite courts. Further, because existing municipal and private golf courses have available capacity to accommodate the relocated golfers from the Project Site, the Draft EIR concluded on page V.L.3-27 that the relocation of golfers would not increase the usage of other golf facilities to a level that would foreseeably require the provision of new or reconstructed golf courses. Therefore, the Draft EIR correctly determined that the Project would not cause the substantial or accelerated physical deterioration of public park and recreational facilities or require the construction or expansion of recreational facilities that could have an adverse physical effect on the environment.

With regard to biological diversity and impacts to trees, see Topical Response No. 5 – Biological Resources/Trees. The analysis of impacts to biological resources in the Draft EIR is based on the impact threshold questions provided in Appendix G of the CEQA Guidelines. The commenter is referred to Section IV.C, *Biological Resources*, of the Draft EIR, with supporting data provided in Appendix D, Biological Resources Technical Report, of the Draft EIR. As analyzed therein, biological resources impacts would be less than significant with mitigation, where applicable.

Also, as discussed in Chapter II, *Project Description*, on page II-8, and Section IV.J, *Land Use and Planning*, on pages IV.J-11 through IV.J-13 and IV.J-26 through IV.J-28 of the Draft EIR, the Project would comply with the requirements of the RIO District's "Inner Core," which would support the goals of the Los Angeles River Revitalization Master Plan (LARRMP) to restore the natural habitat and bio-diversity along the river. The RIO District Ordinance subjects the Project Site to specific development regulations related to landscaping, fencing, river access, and lighting. As stated above, the Project would remove many invasive tree and plant specimens, which would be replaced with RIO-compliant species, and provide direct access to the Zev Greenway from the Project Site where none currently exists.

With regard to groundwater recharge, while temporary dewatering could theoretically occur during construction activities (though Project Site borings indicate groundwater measurements below the depth of Project grading), long-term groundwater pumping/extraction would not occur with the Project. No groundwater extraction wells are proposed by the Project. As discussed in Sections IV.F, *Geology and Soils* on page IV.F-24, and the Preliminary Geotechnical Report (Geotechnical Engineering Investigation (PDF page 63 of 299 provided in Appendix G of the Draft EIR) the use of

groundwater recharge mechanisms is not feasible given the likelihood of water remaining perched above the underlying layer of bedrock. The Los Angeles Department of Building and Safety (LADBS) has concurred with the findings of the Project's geotechnical study regarding the perched groundwater, the groundwater levels, and the recommendation that infiltration at this site is not feasible. In addition, the Project's geotechnical study was peer-reviewed by Byer Geotechnical, Inc. on August 17, 2022, who further concurred with the findings that infiltration at this site is not feasible. The Byer peer review of the Project's geotechnical study is provided as Appendix G, Geotechnical Peer Review of the Groundwater Recharge, in this Final EIR. In addition, as discussed in Section IV.I, *Hydrology and Water Quality*, on pages IV.I-33 through IV.I-35 of the Draft EIR, the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the San Fernando Valley (SFV) Groundwater Basin, and groundwater recharge impacts would be less than significant. Therefore, contrary to the implication in the comment, implementation of the Project would not result in the loss of groundwater recharge.

The Project would implement a stormwater capture and treatment system in compliance with the City of Los Angeles LID Ordinance. The Project as analyzed in the Draft EIR proposed to capture 1 million gallons of stormwater runoff from the Project Site and a 39-acre residential neighborhood to the north of the Project site, as discussed on page II-61, as well as on pages IV.I-18 and IV.I-34 of the Draft EIR. Based on public and agency comments received on the Draft EIR, design modifications have been made to the Project as discussed in Topical Response No. 2 - Modifications to the Project Design. In addition, corrections to the Draft EIR with the Project design modifications are included in Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR. As part of the Project design modifications, the stormwater capture and reuse system would be reduced to approximately 350,000 gallons. The reduction in the size of the system is because the Project would no longer capture and treat stormwater from the 39-acre off-site area, but rather only capture and treat stormwater from the 17.2 acre Project Site. Thus, water from the 39-acre off-site area would flow into the Los Angeles River as it does currently under existing conditions.

On-site stormwater that currently flows untreated to the Los Angeles River from the Project Site would be treated before entering the Los Angeles River, resulting in improved water quality. Captured and treated stormwater would also be used for on-site irrigation to reduce water demand on LADWP water resources. Refer to Response Nos. AG 4-15 and AG 4-16 for additional details on the Project's capture and re-use system and impacts to flows within the River. As discussed therein, there would be no potentially significant impact on downstream wildlife habitat or beneficial uses resulting from the Project.

### **Comment No. ORG 9-6**

**Impacts on Residents in Studio City would be stunning.** The elimination of 246 trees, loss of wildlife and the excavation of **250,000 cubic yards of largely undisturbed soil**

would leave a 21-foot-deep pit – a barren wasteland in the heart of Studio City. Neighbors would immediately experience the urban heat island effect from the construction site, as well as years of exposure to dangerous dust, harmful GHGs, particulates and contaminants, along with constant noise and vibration during the 30-plus month construction period. Residents would be exposed to safety hazards, including dangerous traffic, 300-plus daily haul trucks on neighborhood streets included in the Vision Zero HIN (High-Injury Network). During operation, the Project would bring continued unacceptable levels of noise, light, air quality contaminants, and runoff from artificial turf that would introduce new PFAS, otherwise known as “forever chemicals,” to surrounding neighborhoods and the LA River. Traffic would remain congested and dangerous in all adjacent neighborhoods. The number of trips would be vastly increased, and traffic made dangerous for drivers, cyclists, and pedestrians, due to the unnecessary addition of 503 subterranean parking spaces, along with 29 surface parking spots. At a time when calls to transition away from our heavy reliance on cars are growing louder, the Project proposes a total of 532 parking spaces.

### **Response No. ORG 9-6**

The comment expresses a range of construction-related concerns regarding loss of trees, wildlife, heat island effects, health affects (particulates and contaminants), greenhouse gas (GHG) emissions, noise, vibrations, traffic, and traffic hazards on neighborhood streets. The comment also expresses a range of operational concerns regarding noise, light, air quality contaminants, runoff from artificial turf that would introduce new PFAS, traffic, traffic hazards, and excess parking. However, the commenter does not provide any substantive facts or support for these concerns or opinions.

Refer to Response No. ORG 9-5 regarding the loss of trees and biological resources. The comment indicates concern for heat island effects during construction without providing any substantive facts or support for this concern or opinion. Currently, the Project Site has extensive paving for surface parking, the 16 tennis courts, and the on-site structures. Generally, during construction, exposed soils would retain less heat and therefore produce less of a heat island effect when compared to solid, paved, or building surface areas, which continue to radiate heat well into the evening and are considered the primary contributor to urban heat islands. As such, it can be expected that heat island effects during construction would be negligible, if not reduced, when compared to existing conditions. Additionally, contrary to the assertion in the comment, construction would not cause a 21-foot barren wasteland in the heart of Studio City. Excavation for Project construction would be temporary as the excavated area would be covered with construction of the underground water reclamation cistern, parking and footings for Project parking structure and gymnasium building. Moreover, the excavated area would not be visible from the public right of way as the Project requires the installation of sound barriers during construction pursuant to Mitigation Measures NOI-MM-1 and NOI-MM-2 and the construction site would be secured with fencing as required by Project Design Feature POL-PDF-1, which would largely block views of the excavation from public view.

The Draft EIR addressed air quality impacts in Section IV.B, *Air Quality*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant. Refer to Response Nos. ORG 1B-77 through 1B-79 for a discussion of health risks associated with emissions from construction activities. As discussed therein, toxic air contaminant (TAC) emissions from construction activities would not expose sensitive receptors to substantial TAC concentrations.

With regard to noise, see Topical Response No. 8 – Noise: Construction and Operation Impacts. As discussed in Topical Response No. 8, the Project's potentially significant and unavoidable construction and less than significant operational noise and vibration impacts were fully analyzed in Section IV.K, *Noise*, and Appendix J, Noise and Vibration Technical Study, of the Draft EIR. The Draft EIR's noise analysis identified the area's noise and vibration sensitive receptors, existing ambient noise levels, maximum construction noise and vibration levels and duration, and peak operation noise levels. Operational noise levels included noise levels associated with future on-site recreational activities and special events. Noise was estimated according to conservative assumptions to provide maximum impacts and to avoid underestimating impacts. As analyzed in Section IV.K, *Noise*, of the Draft EIR, the Project's construction activities would result in the generation of temporary noise increases over ambient noise levels in the vicinity of the Project Site in excess of standards established by the City of Los Angeles and impacts would be potentially significant. While the Project would implement all feasible mitigation measures to reduce construction noise levels (Mitigation Measures NOI-MM-1 [sound barriers], NOI-MM-2 [construction equipment locations and screening] and NOI-MM-3 [construction equipment requirements and sound curtains]), during various phases of construction, even with the required mitigation measures, construction-related noise levels would exceed applicable noise impact thresholds at some of the nearby sensitive receptor locations. As such, construction noise impacts associated with on-site noise sources would be temporarily significant and unavoidable. Operational noise impacts, including a conservative analysis of all athletic facilities being used simultaneously (and including spectators), would not exceed noise impact standards established by the City of Los Angeles and would be less than significant.

Topical Response No. 8 also addresses noise impacts associated with the Project design modifications included in Topical Response No. 2 – Modifications to the Project Design. As discussed therein, the Project with design modifications would not substantially increase the severity of noise or vibration impacts evaluated in the Draft EIR and the noise/vibration impact conclusions in the Draft EIR would remain unchanged.

See Topical Response No. 4 – Aesthetics, regarding the impact of the Project's field lights and other outdoor lighting, as well as impacts related to scenic resources and visual character of surrounding land uses. Topical Response No. 4 also evaluates the changes in the Project's lighting program under the Project with design modifications (see Topical Response No. 2), which includes updates to the Project's lighting system. As discussed therein, the Project with design modifications to the lighting program would also reduce the existing ambient light and glare conditions. All light and glare levels under the Project

with design modifications would be below regulatory standards. Therefore, the Project with design modifications would not create a new source of substantial light or glare that would adversely affect day or nighttime views in the area. As such, the Project with the design modifications would not result in significant new or substantially increased environmental impacts as evaluated in the Draft EIR.

With regard to transportation/traffic impacts, see Topical Response No. 9 – Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project’s less-than-significant construction and operational transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, which was primarily based on the Transportation Assessment (TA) prepared for the Project, included in Appendix M of the Draft EIR. The TA was reviewed and approved by LADOT in June 2021. In accordance with LADOT’s Transportation Assessment Guidelines (TAG) adopted in July 2019 (updated in July 2020), the CEQA-required analysis to be included within the Draft EIR section includes an assessment of whether the Project would result in: 1) potential conflicts with transportation-related plans, ordinances, or policies; 2) a substantial increase in vehicle miles traveled (VMT); or 3) increased hazards due to a geometric design feature or incompatible use. In addition, in accordance with Appendix G of the CEQA Guidelines, an assessment of whether the Project would result in inadequate emergency access is included.

As evaluated in Section IV.M, *Transportation*, Table IV.M-4, page IV.40 of the Draft EIR, the Project would generate an estimated total daily VMT of 3,932. However, when taking into account the existing uses, which would be eliminated, the Project would generate an estimated net decrease of 2,098 daily VMT. As such the Project would not result in a substantial increase in VMT.

The TAG also requires assessment of “non-CEQA” transportation issues, which include: 1) pedestrian, bicycle, and transit access;<sup>227</sup> 2) project access, safety, and circulation; 3) construction traffic; and 4) residential street cut-through analysis. The analyses of these “non-CEQA” issues are included in the TA. However, since they are non-CEQA issues, they are not analyzed in the Draft EIR, unless they relate to the assessment of potential conflicts with transportation-related plans, ordinances, or policies mentioned above.

In addition, an analysis of intersection levels of service (LOS) is included as appendices to the TA for informational purposes only and is similarly a non-CEQA issue. Table 10 (PDF page 67 of 217 in Appendix M of the Draft EIR) of the TA included trip generation estimates for the Project as analyzed in the Draft EIR, which included a maximum of 550 total (50 inbound and 500 outbound) trips during the 5:00 to 6:00 P.M. peak hour under the Special Events Scenario. Table 11 (PDF pages 75 and 76 of 217 in Appendix M of

<sup>227</sup> In addition to the non-CEQA pedestrian, bicycle, and transit access topics identified in the TAG, the Draft EIR considered any environmental impacts that the Project could have related to potential conflicts with a program, plan, ordinance or policy addressing transit, roadway, bicycle, and pedestrian facilities as required in the CEQA analysis of potential conflicts with relevant plans, regulations and policies.

the Draft EIR) of the TA shows the levels of service (LOS) and vehicle queues for the study area intersections in 2025 (Project Opening Year) during non-events and Special Events. As shown in Table 11, per the City's criteria, no instances were found of the Project where its vehicle trips were projected to cause or substantially contribute to unacceptable queuing at nearby signalized intersections. As the Project with the design modifications (described in Topical Response No. 2 – Modifications to the Project Design) would reduce the outbound trips to 403 or below, there would be a proportionate reduction in Project trips during the 5:00 to 6:00 P.M. peak hour Special Event scenario in Year 2025. Thus, there would be a decrease in traffic and queuing compared to that analyzed in the TA. The resulting LOS would be similar to the Project as analyzed in the TA, there would be no unacceptable queuing at nearby signalized intersections.

Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation. As discussed in Section IV.M, *Transportation*, on page IV.M-26 of the Draft EIR, pursuant to Project Design Feature TRAF-PDF-1, a Construction Management Plan (CMP) would be implemented during construction. Under TRAF-PDF-1, adequate access would remain for land uses in proximity to the Project Site during Project construction and the Project contractors would be required to coordinate with the City Department of Building and Safety and emergency service providers, such as the LAFD to ensure that adequate access, including emergency access, is maintained to the Project Site and neighboring uses. Hauling and truck activity would be relegated to Whitsett Avenue adjacent to the Project Site, a four-lane arterial highway and would not need to enter neighborhood streets. Furthermore, the City Department of Building and Safety would issue permits, as applicable, and would review and approve the CMP, which would list the approved haul routes. Failure to follow the prescribe routes would result in fees/penalties. The claims of the commenter that truck traffic would use neighborhood streets is conjecture and is not correct.

Regarding hazards and local safety during operation, Section IV.M, *Transportation*, pages IV.M-41 through IV.M-43 of the Draft EIR, determined that the Project, overall, would not substantially increase hazards, pedestrian/vehicle or bicycle/vehicle conflicts, and would contribute to overall walkability and bike-ability around the Project Site through enhancements to the Project Site. The Project would not substantially increase geometric hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses. Impacts on local safety were determined to be less than significant.

Topical Response No. 9 also addresses transportation impacts associated with the Project design modifications included in Topical Response No. 2 – Modifications to the Project Design. As discussed therein, the Project with design modifications would not substantially increase the severity of transportation impacts evaluated in the Draft EIR and the transportation impact conclusions in the Draft EIR would remain unchanged.

In addition, as indicated in Topical Response No. 9 – Transportation and Parking During Construction and Operations, following circulation of the Draft EIR, the City installed a traffic signal at the intersection of Whitsett Avenue and Valley Spring Lane. The

intersection of Whitsett Avenue and Valley Spring Lane was unsignalized at the time of publication of the Draft EIR. The addition of the traffic signal would allow for pedestrian and bicycle crossings from the surrounding areas to the Project Site through the intersection in marked crosswalks, thus, enhancing pedestrian safety in the Project Site area.

With regard to impacts from artificial turf and PFAS, see Topical Response No. 7- Artificial Turf and Effects on Localized Heat and Health. Topical Response No. 7 addresses the potential health-related and urban heat island effects due to the Project's use of artificial turf fields.

The Project would replace the existing Project Site uses with new athletic and recreational facilities, including outdoor athletic fields utilizing artificial turf as a sustainable alternative to natural turf, thereby reducing irrigation water demand and avoiding the use of pesticides associated with the grass. Section IV.H, *Hazards and Hazardous Materials*, and Appendix H-2, Artificial Turf Technical Memorandum, of the Draft EIR, included a detailed evaluation of potential health impacts related to use of artificial turf. Based on the analysis, the Draft EIR determined that health-related impacts would be less than significant. Refer to Response No. ORG 8-5 regarding additional discussion of PFAS.

With regard to parking, as discussed on page II-56 in Chapter II, *Project Description*, of the Draft EIR, the Project as analyzed in the Draft EIR would provide 88 more parking spaces than required by the LAMC to accommodate the parking needs of students, employees, and visitors in order to ensure that they do not park in the surrounding community.

Note that modifications to the Project design would reduce the capacity of the underground parking structure from 503 spaces to 386 spaces and the capacity of the above grade parking lot from 29 spaces to 17 spaces for a total of 403 spaces. Thus, the Project with design modifications would provide two more parking spaces than required by the LAMC. See Topical Response No. 2 – Modifications to the Project Design, and Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR.

### **Comment No. ORG 9-7**

Wildlife, from insects to mammals, currently living on the property, would be lost, destroyed, or displaced. Opportunities for recreation would vanish. Health benefits attributable to exposure to natural green open space, including better physical and mental health, general well-being, and even increased longevity, would instantly disappear.

### **Response No. ORG 9-7**

The comment contends that wildlife would be lost, destroyed, or displaced; that opportunities for recreation would vanish, and that health benefits from exposure to natural green open space would instantly disappear. However, the commenter does not provide any substantive facts or support for these concerns or opinions. Please refer to Section IV.C, *Biological Resources*, of the Draft EIR, pages IV.C-32, IV.C-35, IV.C-36 through IV.C-42, and IV.C-45 through IV.C-49 regarding impacts on wildlife species. As

evaluated therein, with implementation of Mitigation Measure BIO-MM-1 and Project Design Feature BIO-PDF-1, the Project would not result in direct or indirect significant impacts on wildlife species.

Please refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for a discussion of continued use of on-site recreational facilities by public groups and the community, as well as the Project’s 0.75-mile landscaped pathway and putting green. As discussed therein, the public could continue to use the Project’s tennis facilities, would have daily (7:00 a.m. to 9:00 p.m., seven days a week) access to the walking path, and would be able to use other recreational facilities as an approved community group. The comment does not discuss the adequacy of the Draft EIR and does not provide any factual evidence to support such health claims. Therefore, no further response is necessary. Nonetheless, refer to pages II-28 through II-31 in Chapter II, *Project Description*, of the Draft EIR for a discussion of the increased public open space and extensive landscaping that are part of the Project.

### **Comment No. ORG 9-8**

**Impacts to Hillside Residents have been largely unconsidered in the DEIR. Residents living in the foothills of the Santa Monica Mountains**, just south of the Project, would experience intensified impacts in the categories of Aesthetics, Noise and Geology:

- **Esthetics** [sic] would be inescapably degraded, when viewed from above the Proposed Project. Views of forested green space would be replaced by artificial turf and brightly lit fields, all with bleachers.
- **Light and glare** from 45 light poles up to 80-feet high, many directed toward hillsides. Three large electronic billboards add to this light intrusion, which is detrimental to human health, disrupting circadian rhythms of residents.
- **Excessive light hurts wildlife**, interrupts connectivity and interferes with migration patterns of various species.
- **Impacts of sustained vibration** on hillside homes, especially on unstable north facing foothills of Santa Monica Mountains (Sunswept, Laurel Terrace, Rhodes, Vanetta, Viewcrest) have not been considered.
- **Noise, including amplified noise** from sports practices, games, and frequent special events with hundreds or thousands of spectators, would result in **exacerbated impacts** to hillside residents, due to noise effects in hillside terrain, including echo. The Public Address system and bleachers would be directed toward southern hillside residents. These neighbors already experience severe, debilitating noise from well-documented relocated flight paths from BUR and VNY airports, which was not considered in the DEIR as a cumulative noise impact. Health impacts from excessive noise are well- documented and include heart disease, stress/inflammation related diseases, including Alzheimer’s. **A**

**comprehensive Health Assessment, including these noise impacts, must be included in a revised and recirculated RDEIR.**

### **Response No. ORG 9-8**

The comment lists a variety of environmental concerns related to aesthetics, light and glare, wildlife, vibration, and amplified noise on hillside residents. However, the commenter does not provide any substantive facts or support for these concerns or opinions.

Hillside residents are separated from the Project Site by the channelized Los Angeles River and the high-glare Ventura Boulevard, and depending on the location, separated by the intervening hillsides. Refer to Topical Response No. 4 – Aesthetics, regarding aesthetics and lighting. As discussed therein, aesthetics impacts, including lighting, would be less than significant. Topical Response No. 4 also evaluates the changes in the Project’s lighting program under the Project with design modifications (see Topical Response No. 2), which includes updates to the Project’s lighting system. As discussed therein, the Project with design modifications to the lighting program would also reduce the existing ambient light and glare conditions. All light and glare levels under the Project with design modifications would be below regulatory standards. Therefore, the Project with design modifications would not create a new source of substantial light or glare that would adversely affect day or nighttime views in the area. As such, the Project with the design modifications would not result in significant new or substantially increased environmental impacts as evaluated in the Draft EIR.

Section IV.C, *Biological Resources*, pages IV.C-36, IV.C-39 and IV.C- 40 of the Draft EIR provided a detailed discussion of the impact of the Project’s light levels on wildlife. As evaluated therein, on-site light and glare levels would not adversely impact wildlife.

Vibration impacts were analyzed in Section IV.K, *Noise*, of the Draft EIR. As evaluated therein, vibration impacts were analyzed at the nearest vibration sensitive receptors, which included adjacent residential uses. Structural vibration impacts at the nearest vibration sensitive receptors were concluded to be less than significant. Human annoyance vibration impacts would be less than significant at the vibration sensitive receptors adjacent to the Project Site, but were found to be significant and unavoidable for construction activities at the residential uses immediately adjacent to off-site improvements at the Coldwater Canyon Avenue Riverwalk Path Ramp. As the construction vibration level would not adversely impact the nearest residential uses to the Project Site, there would be no significant vibration impacts to hillside residences to the south of the Los Angeles River, which are located further from the Project Site than the adjacent residential uses. In addition, as operational vibration impacts would be less than significant at the adjacent residential uses, it can be concluded that more distant residential uses in the hillsides would not be subject to significant vibration impacts because vibrations rapidly diminish with distance from the source.

With regard to noise impacts, see Topical Response No. 8 – Noise: Construction and Operation Impacts. As discussed in Topical Response No. 8, the Project’s construction and operation noise were fully analyzed in Section IV.K, *Noise*, and Appendix J, Noise and Vibration Technical Study, of the Draft EIR. The Draft EIR’s noise analysis identified the area’s noise and vibration sensitive receptors, existing ambient noise levels, maximum construction noise and vibration levels and duration, and peak operation noise levels. Receptor Location R7, which represents the single-family residential uses on Sunswep Drive, approximately 800 feet south of the Project Site, was included in the Draft EIR analysis. Receptor R7 is representative of the hillside residences further south of the Project Site. Operation noise levels included noise levels associated with future on-site recreational activities and special events. Noise was estimated according to conservative assumptions to provide maximum impacts and to avoid underestimating impacts. As analyzed in Section IV.K, *Noise*, of the Draft EIR, the Project’s construction activities would result in the generation of temporary noise increases over ambient noise levels in the vicinity of the Project Site in excess of standards established by the City of Los Angeles and impacts would be potentially significant. While the Project would implement all feasible mitigation measures to reduce construction noise levels (Mitigation Measures NOI-MM-1 [sound barriers], NOI-MM-2 [construction equipment locations and screening] and NOI-MM-3 [construction equipment requirements and sound curtains]), during various phases of construction construction-related noise levels would exceed applicable noise impact thresholds at some of the nearby sensitive receptor locations even with the required mitigation measures. As such, construction noise impacts associated with on-site noise sources would be temporarily significant and unavoidable. However, as explained in Section IV.K, Project-level noise from on-site construction equipment would be less than significant with implementation of Mitigation Measures NOI-MM-1, NOI-MM-2 and NOI-MM-3 at Receptor Location R7. Additionally, cumulative on-site construction equipment noise levels at Receptor Location R7 would only be significant and unavoidable in the event of concurrent construction activities at the Project and at Related Projects Nos. 2, 3 or 4 since those related projects are located approximately 150 feet to 400 feet from Receptor Location R7.

Operational noise levels, which conservatively included noise levels generated by the simultaneous use of all athletic facilities, would not exceed noise impact standards established by the City of Los Angeles at the noise sensitive receptors immediately adjacent to the Project Site, or at Receptor location R7, and impacts would be less than significant. As the Project’s operational noise levels would not adversely impact the nearest residential uses to the Project Site, nor at R7, there would be no significant noise impacts to hillside residences further south of R7. In addition, the nearest residential neighborhoods to the south of Ventura Boulevard are located over 800 feet from the Project’s noise source and, as such, unobstructed noise levels would be virtually imperceptible (3.0 dBA). It is correct that hillsides can generate an echo; however, an echo requires the presence of noise waves to reflect. With nearly imperceptible noise reaching this distance, significant echoes would not occur. As such, it is not necessary to identify additional hillside residences as potential noise-sensitive receptors that would be

impacted by the Project-related noise. Further, a recirculated Draft EIR with a comprehensive Health Assessment is not necessary or required.

With regard to background airport noise, as stated on page IV.K-69, of the Draft EIR, the nearest airport is the Hollywood Burbank Airport (BUR), located approximately 4.5 miles northeast of the Project Site. As per the CEQA Guidelines Appendix G thresholds, the Project Site is not located within two miles of a public airport or private airstrip and is not within the boundaries of an airport land use plan. Per the Appendix G threshold, the Project would not expose people residing or working in the Project Site area to excessive noise levels for a project within the vicinity of a public use airport or private airstrip. Furthermore, ambient noise measurements were taken as part of the noise analysis in the Draft EIR. The aircraft noise from relocated flight paths from BUR and Van Nuys Airport (VNY) were included in the existing conditions noise measurements. Thus, the existing airports' jet noise was included as part of the ambient noise in the Project vicinity. Intermittent aircraft noise is common throughout the City; however, such temporary noise instances would not materially change the noise impact analysis as aircraft noise is already included within the existing baseline conditions. Furthermore, the Project would not exacerbate any existing noise issues that the community may have with airport noise; therefore, no additional analysis of the existing noise sources is required by CEQA .

Topical Response No. 8 also addresses noise impacts associated with the Project design modifications included in Topical Response No. 2 – Modifications to the Project Design. As discussed therein, the Project with design modifications would not substantially increase the severity of noise or vibration impacts evaluated in the Draft EIR and the noise/vibration impact conclusions in the Draft EIR would remain unchanged.

### **Comment No. ORG 9-9**

**The omission of a Comprehensive Health Risk Assessment, on its own, demonstrates the need for a Revised and Recirculated DEIR (RDEIR).** Applicant must produce a Comprehensive Health Risk Assessment, to include Cumulative Health Risks. The HRA (Health Risk Assessment) must include all categories, including air quality, noise, light and sleep disturbance; reduced access to public safety – fire and police; unsafe traffic conditions and congestion that cannot be mitigated, and others as applicable. Any Project that proposes to remove 17 acres of green space and tree canopy to excavate and haul 250,000 cubic yards of earth will certainly have health impacts on the residential neighborhoods that surround it. The construction and operations of a MultiSport Day and Night Events Center will create further new and unforeseen impacts to health, transforming the health of the entire community.

### **Response No. ORG 9-9**

The comment claims that a Comprehensive Health Risk Assessment is necessary based on the Project's proposed construction and excavation activities, as well as Project operations. However, the commenter does not provide any substantive facts or support for these concerns or opinions. Furthermore, the statement that the Project is a MultiSport

Day and Night Events Center is inconsistent with information provided in the Draft EIR. Historical and existing tennis and golf uses terminate at 10:00 p.m. and 11:00 p.m., respectively. As described in Chapter II, *Project Description*, Table II-3 (Public Use and Hours), page II-34 of the Draft EIR, the Project's field activity would terminate at 8:00 p.m. and tennis and gymnasium activities would end at 9:00 p.m. These ending times are earlier than existing and historical uses. As this comment does not present any evidence with respect to the content and adequacy of the Draft EIR, no further response is necessary.

Nonetheless, regarding the commenter's concerns about air quality/health risk, noise, lighting and traffic impacts, refer to Response No. ORG 9-6.

In addition, the Draft EIR addressed impacts to public services, including police and fire services, in Section IV.L.1, *Public Services – Fire Protection* and Section IV.L.2, *Public Services – Police Protection*, with supporting data provided in Appendix L, Public Service Provider Correspondence, of the Draft EIR. As analyzed therein, impacts to fire and police public services would be less than significant.

With regard to health risk, in addition to the construction related HRA information provided in Responses No. ORG 1B-77 through 1B-79, Section IV.H, *Hazards and Hazardous Materials*, of the Draft EIR, evaluated potential impacts to the environment and the public from hazards/hazardous materials. Mitigation Measure HAZ-MM-1, which requires a Soils Management Plan (SMP), would ensure short-term construction activities, as well as long-term operation of the Project, does not result in the exposure of hazardous materials to construction workers, the environment or the public from contaminated soils or soil vapors potentially underlying the Project Site. Mitigation Measure HAZ-MM-2, which requires a Health and Safety Plan (HASP), would further protect construction workers from exposure to hazardous materials and conditions. With implementation of Mitigation Measures HAZ-MM-1 and HAZ-MM-2, potentially significant impacts to the public or the environment from the release of hazardous materials released during constructed-related upset and/or accident conditions would be reduced to a less-than-significant level.

## **Comment No. ORG 9-10**

**Alternatives presented in the DEIR are insufficient and do not represent an earnest attempt** to weigh the concerns of the community with the desires of the Applicant, Harvard-Westlake. There is no Alternative that removes any one of the four “arenas” – 2 fields, 1 pool, and 1 gym. There is no Alternative that eliminates or meaningfully reduces the number of parking spaces on-site. If the Applicant was serious about presenting Alternatives that would represent compromise and a better outcome for the community, the Applicant would have submitted at least one Alternative with no events, no spectators or outdoor bleachers, a reduced-size gym, just one field, no pool, no underground parking, no lights, no amplified noise, and enough public, green, open space (40% of the property, half of it contiguous), to warrant the label of “Park.” The Project has exploded

far beyond the initial concept into an oversized, intrusive public nuisance that will destroy the quality of life for far too many for the benefit of only a privileged few.

### **Response No. ORG 9-10**

The comment claims that the Alternatives presented in the DEIR are insufficient and do not represent an earnest attempt to weigh the concerns of the community with the desires of the School.

Regarding alternatives, which are required under the CEQA Guidelines, the CEQA Guidelines Section 15126.6.6(a) state: “An EIR shall describe a range of reasonable alternatives to the Project, or the location of the Project, which would feasibly attain most of the objectives of the project but would avoid or substantially lessen any of the significant effects of the project and evaluate the comparative merits of the alternatives.” Under the Project, the only significant and unavoidable impacts not feasibly reduced to a less-than-significant level were construction-related noise and vibration impacts resulting primarily from the Project’s grading and excavation activities. Thus, the primary goal for the selection of alternatives to the Project was to reduce these construction-related significant and unavoidable impacts. A feasible way to reduce these impacts was to reduce the need for excavation required for the subterranean parking structure and the stormwater capture and filtration system. As contemplated, the alternatives would each reduce construction noise and vibration impacts when compared to the Project. The alternatives would meet the primary purpose of an alternative to avoid or substantially lessen any of the significant effects of the project. Furthermore, CEQA Guidelines Section 15126.6 (c), states: “Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are: (i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts.” The alternatives were selected because they met or partially met most (but not all) of the basic objectives of the Project. Because the Project would not result in multiple environmental impacts that would need to be addressed through a specific change of use or additional modifications of Project components to generally meet the Project Objectives, there were no required reasons to evaluate more extreme diversions from the Project in the alternatives analysis.

For additional discussion of the Project’s adequacy of alternatives in the Draft EIR, refer to Response Nos. ORG 1B-105, ORG 1B-106 and ORG 7A-146 to ORG 7A-176.

### **Comment No. ORG 9-11**

**Removing events would eliminate the most damaging features** of the Project. Without events, meaning **use as practice facility only**, as was the intent of the earlier Parking Improvement Project, there can be no justification of necessity for:

- **Underground parking or surface parking of no more than 100. It should be noted that LAMC requirements for parking are based on the number of fixed seats, thus removal of outdoor fixed bleachers and bleacher seating in the gym**

**would argue against allowing any more than a minimal number of parking spaces. Perhaps parking spaces were the incentive for great number of bleacher seats. [Note existing Public Parking Structure, Lot 690 at 12225 Ventura Blvd., with 393 parking spaces, an easy 5-minute walk from the Project, is available to the public.]**

- Extraordinary volume of 250,000 cubic yards of grading
- Prolonged exposure to undisturbed soils on Haul Route impacting Transportation, Air Quality, Noise, Green House Gases, and Human Health
- Extended construction schedule (overlapping phases of at least 30 month)
- Night use and lighting
- Bleachers
- Public Address System and amplified sound, lessening operational noise impacts
- Electronic scoreboards
- Note that water recapture takes up a very small part of the Project planned excavated area and could be accomplished without subterranean parking in all Alternatives.
- Alternatives should provide a much wider, green buffer along the entire perimeter, to protect neighborhoods, including eastern and southern hillside residential neighborhoods.

## **Response No. ORG 9-11**

The comment claims that removing events would eliminate the “most damaging features of the Project.” However, the commenter does not provide any substantive facts or support for these concerns or opinions.

Furthermore, removing interscholastic games and events would not be consistent with the purpose and need for the Project. The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale for its proposed facilities.

The Weddington Golf & Tennis parcel was purchased by Harvard-Westlake School in December 2017, and the School has continued to operate it primarily for private golf and tennis uses, open to the public. However, the current Weddington Golf and Tennis operations are not consistent with the School’s educational mission or financially sustainable. The underlying purpose of the Project is to supplement the School’s athletic and recreational facilities, and to provide Harvard-Westlake School a campus that can fulfill its educational mission and athletic principles now and in the future. The Project Objectives, included in Chapter II, *Project Description*, pages II-13 and II-14 of the Draft EIR, list the Project’s Objectives which support the underlying purpose of the Project, including the provision of public access.

Regarding the commenter's concerns about air quality/health risk, noise, lighting and traffic impacts, refer to Response No. ORG 9-6.

With regard to parking, refer to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of how on-site and off-site parking restrictions would be enforced. Also, the commenter is referred to Response Nos. ORG 1B-90 and 1B-92 to 1B-93, which further discusses the required parking for the Project Site.

Refer to Response No. ORG 9-10 for a discussion of the alternatives selected for evaluation in the Draft EIR. The Project Alternatives were selected because they would reduce the Project's volume of excavated materials, number of haul trips, and duration of construction activity and would potentially reduce the Project's significant and unavoidable construction noise and vibration impacts identified in the Draft EIR. As evaluated in the Draft EIR, other impacts related to parking, transportation, air quality, noise, GHGs, human health, lighting, bleachers (outdoor noise), amplified noise, and electronic scoreboards were either determined to be less than significant or reduced to less than significant levels through mitigation. Because hillside neighborhoods to the east and south would not be adversely impacted by operational air emissions, operational noise, light and glare, or aesthetically impacted, the evaluation of an alternative with a wider "green buffer" to protect neighborhoods, including eastern and southern hillside residential neighborhoods, would not serve the purpose of reducing an adverse environmental impact.

### **Comment No. ORG 9-12**

**In consideration of the Conditional Use Permit (CUP)**, the Permit must be made Comprehensive of all three of the School's Campuses – the middle school campus in Holmby Hills, upper school campus in Studio City, and the proposed "River Park" campus in Studio City – to prevent constant shifting of operations and overuse, including events and parking. The operations of all Harvard-Westlake facilities would be undeniably linked and must be required to conform to the Comprehensive CUP. If this project is approved in any form, the school must be required to deliver a Master Plan to the City within 1 year and agree to a Moratorium on Growth for 25 years from the date of approval of this project.

Furthermore, any approval of this project should not assume agreement with usages suggested, assumed or outlined in this DEIR. The Conditional Use Permit must require detailed usages for **all three facilities/campuses** and must include detailed Transportation Demand Management (TDM) Plans for each school, covering daily use, weekend use, night use, and Event use.

### **Response No. ORG 9-12**

The comment states that the CUP should include the Upper School and Middle School campuses, as well as the Project Site, to avoid a "constant" shifting of operations and overuse. This comment does not address the adequacy of the Draft EIR and, as such,

no further response is necessary. The issues raised in this comment are similar to those included in Comment No. ORG 1C-58. Refer to Response No. ORG 1C-58, which addresses these concerns.

### **Comment No. ORG 9-13**

**STORY POLES:** We request that Harvard-Westlake be required to hire a professional company to install Story Poles on the Project Site. These poles should describe the dimensions of the gym, all 45 light poles, the 3 scoreboards, pool, pool canopy, Field A, Field B, all bleachers, perimeter walls, and any other structures over 500 square feet. Story poles should also indicate clearly the "public elements" of the perimeter path and interior spaces. The poles must be required to stay in place for at least 30 days, once completed.

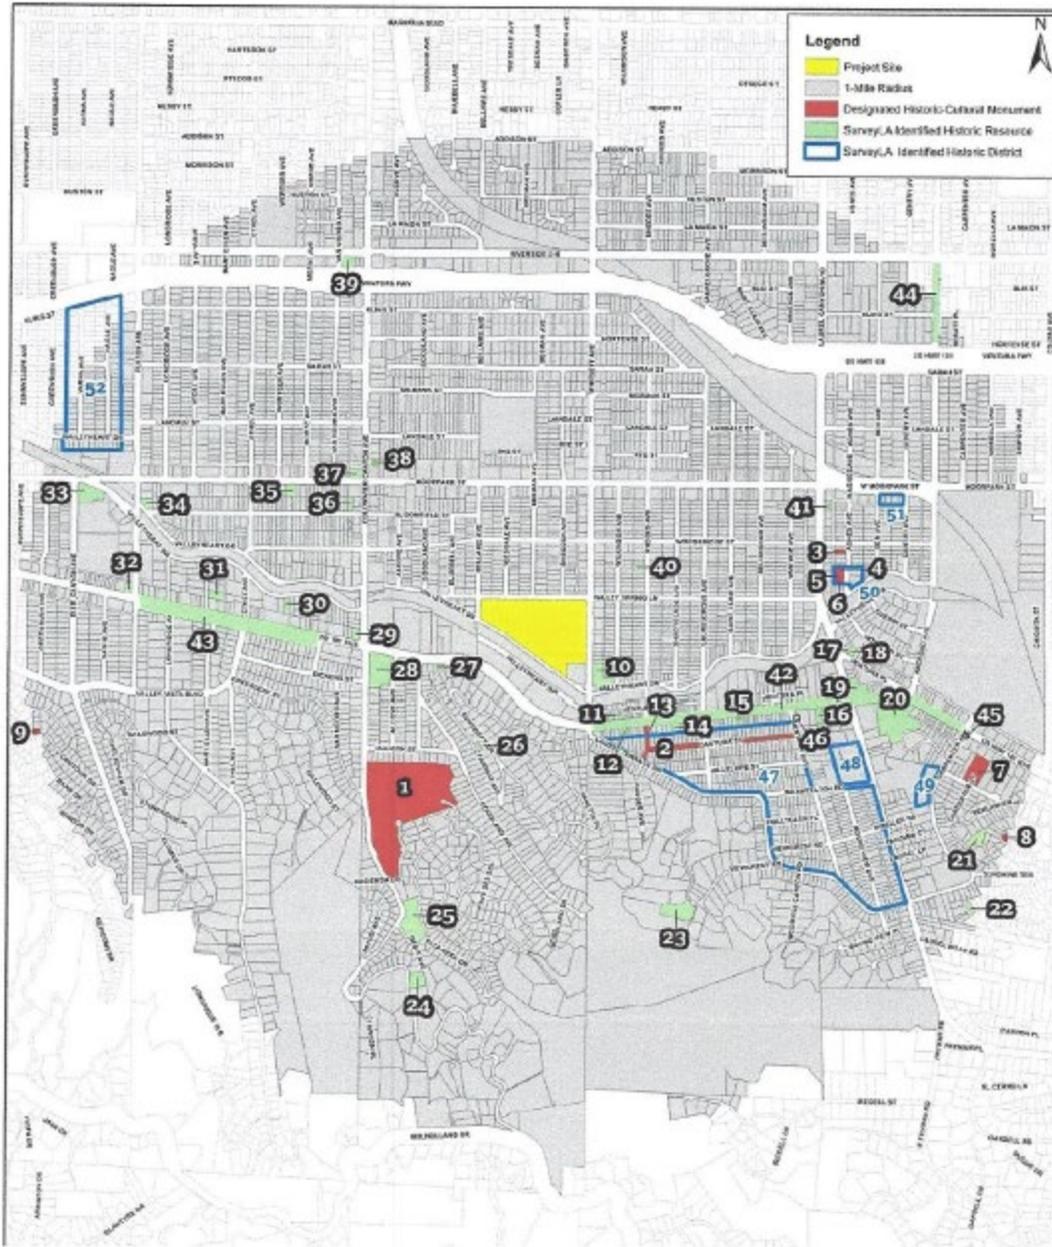

### **Response No. ORG 9-13**

The comment requests that the School hire a professional company to install "story poles" prior to construction. The proposed "story poles" could be requested at the discretion of the Project's decision makers but are not a part of the Project evaluated in the Draft EIR, nor are they required by or related to any impacts evaluated in the Draft EIR. The comment does not raise any issues with respect to the content and adequacy of the Draft EIR. As such, no further response is necessary.

### **Comment No. ORG 9-14**

**STUDY AREA:** We request an increase in the size of the Project Study Area. The size of the Project Study Area is inadequate and appears to be measured as a radius of .5 miles from an unmarked center point within this extremely large 17-acre project. This area cannot possibly capture the wide range of severe impacts. This metric disadvantages communities to the east and south of the Project, including hillside residences that receive intensified impacts from light and noise, as well as destruction of views, an esthetic concern. City of Los Angeles has allowed for project study areas of 1 mile, which would be more appropriate for a job of this unprecedented scale, and one that involves an astronomical 250,000 cubic yards of grading. Increasing the Project Study Area would more accurately capture the impacts of grading and hauling along heavily populated streets, as it would include the haul route between the Project and the 101. By confining study to such a tiny area of impact, the environmental review also **fails to capture a great number of sensitive receptors, including elderly and children**, in several nearby neighborhoods, including the Silver Triangle and Sunswept neighborhoods east of Whitsett. Studio City neighborhoods have a very high rate of respiratory disease, which is well documented. Attached is a the HCM map showing a 1-mile radius, page 65 of *Historical Resources Technical Report*. This should be the area of study for **all DEIR categories**, including air quality, transportation.

**FIGURE 3. MAP OF HISTORICAL RESOURCES WITHIN ONE-MILE RADIUS OF PROJECT SITE**

**LEASES & LOANOUTS:** We request clarification of opportunities for financial gain by Harvard-Westlake. Will the School be permitted to accept compensation of any kind for lease, loanout, or usage of this “public-private” facility, either by direct compensation, reimbursement or other quid pro

PROPOSED STUDY AREA FOR ALL CATEGORIES OF DEIR below:

## Response No. ORG 9-14

This comment raises concerns regarding the “study area” similar to those included in Comment No. ORG 1C-45. As discussed in Response No. ORG 1C-45, cumulative study areas are defined based on an analysis of the geographical scope relevant to each particular environmental issue. The Project’s related project’s list is determined by the City of Los Angeles according to procedures set forth in the LADOT TAG. According to TAG, the Draft EIR Study Area for major projects in the City is based on a one-half mile radius of the Project Site plus one-quarter mile from the farthest outlying intersection, which is defined by the LADOT as Coldwater Canyon Avenue at Ventura Boulevard.

## Comment No. ORG 9-15

**LEASES & LOANOUTS: We request clarification of opportunities for financial gain by Harvard-Westlake.** Will the School be permitted to accept compensation of any kind for lease, loanout, or usage of this “public-private” facility, either by direct compensation, reimbursement or other quid pro quo? Further, we request that such compensation be forbidden and that the Applicant, Harvard-Westlake, be required to guarantee that they will not be compensated for usage by the public, or any other party.

Furthermore, increased negative impacts surrounding neighborhoods from such increased uses must be considered and balanced with benefit to the Applicant.

## Response No. ORG 9-15

The comment requests clarification of opportunities for financial gain by Harvard-Westlake. This comment does not address the adequacy of the Draft EIR and, as such, no further response is necessary. However, as stated in CEQA Section 15131, economic or social issues are not topics for EIR consideration unless they lead to a physical change in the environment.

The Project would be further limited to potential conditions of approval based on the Description of the Project provided in Chapter II, *Project Description*, of the Draft EIR. Since there is no intention to expand use of the Project in ways not described in the Project Description or evaluated in the Draft EIR, there is no purpose to evaluate impacts related to such speculative uses.

The commenter is also referred to Responses No. ORG 1B-14 and ORG 1B-17 for further discussion of public use of the Project facilities.

## Comment No. ORG 9-16

**SAFETY: We request consideration of ALL Safety Impacts included In Aperture Expert Report,** submitted by Save Weddington, including public safety, emergency services, traffic safety, pedestrian and transit user safety, High Injury Network, and neighborhood protections from a wide range of human health hazards that would be

introduced by the Project. How would the Applicant propose to eliminate the possibility of students and visitors running across busy Whitsett or Ventura Blvd? The danger will be even worse after dark and multiplied at events, when there will be hundreds or thousands of people entering and exiting the facility. Most visitors will be unfamiliar with the neighborhood. Even students will not always patiently wait and will instead, dash into traffic, in the dark. This risk to students was noted in the 2016 Wexco Safety report for the earlier Parking Improvement Project. There have been many vehicle and pedestrian accidents and some pedestrian fatalities crossing both of these streets. Pedestrian safety is one extremely important reason to ELIMINATE events and night use.

We also support all safety concerns regarding human health: Air Quality, Green House Gases, Noise, Cumulative Noise with consideration required for Jet Noise, and Light Intrusion.

### **Response No. ORG 9-16**

The comment requests consideration of all safety impacts included in the Aperture Expert Report. Refer to Responses to Comment Nos. ORG 1B-171 through 1B-195, which provide responses to the comments prepared by Aperture.

In addition, the comment speculates that people will park off-site and illegally cross into streets resulting in pedestrian safety issues, particularly after dark and either use a street intersection or jaywalk to enter or exit the Project Site. This speculation does not raise any issues with respect to the content or adequacy of the Draft EIR. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of how on-site and off-site parking restrictions would be enforced.

The commenter's concerns about pedestrian safety are noted, given that Project-generated vehicle activity will increase with implementation of the Project and that increases in pedestrian crossings would occur as residents of the neighborhood to the east utilize the community and recreational spaces in the Project. There is no specific threshold regarding when an increase in pedestrian volumes at a location with a very limited history of pedestrian collisions would be significant. Additionally, given the lack of a history of pedestrian-related collisions, the fact that the City of Los Angeles has not identified Whitsett Avenue or Valley Spring Lane as part of its high injury network, the very low volume of existing pedestrian crossings, and that the number of residential users of the Project Site would be relatively low at any given time, the increase, appropriately, was not identified as a potentially significant impact.

In addition, as indicated in Topical Response No. 9 – Transportation and Parking During Construction and Operations, following circulation of the Draft EIR, the City installed a traffic signal at the intersection of Whitsett Avenue and Valley Spring Lane. The intersection of Whitsett Avenue and Valley Spring Lane was unsignalized at the time of publication of the Draft EIR. The addition of the traffic signal would allow for pedestrian and bicycle crossings from the surrounding areas to the Project Site through the

intersection in marked crosswalks, thus, enhancing pedestrian safety in the Project Site area.

For discussion of other concerns regarding human health, air quality, GHGs, noise, cumulative noise and light intrusion, refer to Response Nos. ORG 9-6, ORG 9-8, and ORG 9-9. With regard to cumulative noise impacts for jet noise, as stated on page IV.K-69, of the Draft EIR, the nearest airport is the Hollywood Burbank Airport (BUR), located approximately 4.5 miles northeast of the Project Site. Per the CEQA Guidelines Appendix G thresholds, the Project Site is not located within two miles of a public airport or private airstrip and is not within the boundaries of an airport land use plan. Per the Appendix G threshold, the Project would not expose people residing or working in the Project Site area to excessive noise levels for a project within the vicinity of a public use airport or private airstrip. Furthermore, ambient noise measurements were taken as part of the noise analysis in the Draft EIR. The aircraft noise from relocated flight paths from BUR and Van Nuys Airport (VNY) were included in the existing conditions noise measurements. Thus, the existing airports' jet noise was included as part of the ambient noise in the Project vicinity. Intermittent aircraft noise is common throughout the City; however, such temporary noise instances would not materially change the cumulative noise impact analysis as aircraft noise is already included within the existing baseline conditions. Furthermore, the Project would not exacerbate any existing noise issues that the community may have with airport noise; therefore, no additional analysis of the existing noise sources is required by CEQA.

### **Comment No. ORG 9-17**

Furthermore, the Study Area for Safety Impacts and all Impacts from the Project, must be expanded to one mile. **PLEASE note that residents at and south of Ventura Blvd. are living in the VHFHSZ (Very High Fire Hazard Severity Zone) and are at extreme risk of fire. Any loss of fire-fighting capability to these residents could result in catastrophic wildfire that would spread rapidly through the Santa Monica Mountains.**

### **Response No. ORG 9-17**

The comment requests that the study area for safety impacts and all impacts from the Project to be expanded to one mile and provides concerns regarding fire-fighting capabilities during wildfires. The comment does not provide any facts substantiating the need for or purpose of expanding the study area to one mile with respect to the analyses provided in the Draft EIR. Furthermore, as discussed in Response No. ORG 9-14, it is unclear which study area the comment is referring to since there are multiple study areas analyzed in the Draft EIR. Also, the comment is not specific as to the "safety" impacts referenced in the Draft EIR. However, the Project's Initial Study, included in Appendix A of the Draft EIR, evaluated wildfire impacts on pages 104 to 106. As analyzed therein, the Project would not exacerbate wildfire risks within the Santa Monica Mountains VHFHSZ in part because: the Project Site is not located adjacent to, and would not cause an

impediment along, a City-designated emergency evacuation route; the Project would not impair implementation of the City of Los Angeles emergency response plan; construction traffic would be managed through a Construction Management Plan (which is included in Project Design Feature TRA-PDF-1); no wildlands are present on the Project Site, nor immediately adjacent to the Project Site; the Project Site is not located within a hillside area.

Although the Very High Fire Hazard Severity Zone (VHFHSZ) mapping includes the Santa Monica Mountains and reaches to the south edge of the Los Angeles River, the Project Site is not located within the designated VHFHSZ.<sup>228</sup> This mostly applies to areas south of the river and primarily contiguous to the hillside area. However, the Ventura Boulevard corridor and a narrow edge along the north side of the Los Angeles River between approximately Fulton Avenue and Laurel Canyon Drive (including the Project Site) are designated as Fire Buffer Zones. Because the Project Site is not within the designated wildland area, the Project would not expose people or structures to a significant risk involving wildland fires. However, it is noted that wildland fires can reach into urban areas. The Project would comply with Fire Code requirements. As also discussed in Section IV.M, *Transportation*, of this Draft EIR, pursuant to Project Design Feature TRAF-PDF-1, the Project would implement a Construction Management Plan that would include measures to ensure emergency access to the Project Site and adjacent properties. Project Design Feature TRAF-PDF-1 would minimize impacts to vehicular and other forms of circulation during construction. The discussion of fire safety in Section IV.L.1, *Fire Protection Services*, pages IV.L.1-22 through IV.L.1-24 states that the compliance with applicable Los Angeles Building Code and Fire Code requirements would be demonstrated as part of LAFD's fire/life safety plan review and LAFD's fire/life safety inspection for new construction projects, as required under LAMC Section 57.118, prior to the issuance of a building permit. With such compliance with code requirements and LAFD review of the Project's building plans, the Project would not be at an inordinate risk of fire.

Also, since the Project Site is not located within the VHFHSZ, enlarging the Study Area would not change the findings of the Draft EIR. For instance, the Draft EIR evaluates emergency access at the LAFD Fire Station 78, which is adjacent to the Project Site. Any potential obstruction of emergency access at LAFD Fire Station 78 would affect the broader area, including the ability to respond to fire hazards within the nearby VHFHSZ. Emergency access at LAFD Fire Station 78 is evaluated in Section IV.L.1, *Fire Protection*, pages IV.L.1-19 through IV.L.1-21 and IV.L.1-24 through IV.L.1-26, and Section IV.M, *Transportation*, pages IV.M- 44 and IV.M-45 of the Draft EIR and in Topical Response No. 9 – Transportation and Parking During Construction and Operations, in this Final EIR. As discussed therein, with the implementation of the proposed project design features (PDFs), including TRAF-PDF-1 and TRAF-PDF-2, the Project would not exceed CEQA

---

<sup>228</sup> LAFD website, Fire Zone Map, <https://www.lafd.org/fire-prevention/brush/fire-zone/fire-zone-map>, accessed February 2, 2023.

threshold standards or result in a significant emergency access impact. This would not change if the VHFHSZ was further evaluated.

## Comment No. ORG 9-18

**NOISE IMPACTS: We request correction of the ERROR of omission of “JET NOISE from relocated Burbank Airport flight paths” from Cumulative Noise Impacts.** These impacts are well documented, the subject of public controversy, and have resulted in two City of Los Angeles lawsuits. Noise impacts are concentrated in southern Studio City, primarily over and south of the project area. CEQA requires an EIR to include consideration of such cumulative impacts to which the project would contribute, and the importance of that contribution in the context of the cumulative impact. Therefore, please provide thorough examination of Aircraft Noise and health impacts from noise, as part of the requirement to study noise cumulative impacts. **(See Citation below)**

**CITATION NOISE:** Noise as a Public Health Hazard, American Public Health Association, Policy Number 202115, October 26, 2021. <https://apha.org/Policies-and-Advocacy/Public-Health-Policy-Statements/Policy-Database/2022/01/07/Noise-as-a-Public-Health-Hazard>

### Abstract

Noise is unwanted and/or harmful sound, first recognized as a public health hazard in 1968. The Noise Control Act of 1972 declared that “it is the policy of the United States to promote an environment for all Americans free from noise that jeopardizes their health or welfare.” The promise of that legislation remains unfulfilled 50 years later. Human exposure to harmful noise levels is widespread. Major sources include transportation, military aircraft and combat operations, noisy recreational vehicles, industrial machinery, recreational and leisure activities, outdoor power equipment, consumer products, and, possibly, wind turbines. Loud noise causes hearing loss and tinnitus and can contribute to non-auditory health problems. **Chronic noise, even at low levels, can cause annoyance, sleep disruption, and stress that contribute to cardiovascular disease, cerebrovascular disease, metabolic disturbances, exacerbation of psychological disorders, and premature mortality. Noise interferes with cognition and learning, contributes to behavior problems, and reduces achievement and productivity. The health of more than 100 million Americans is at risk, with children among the most vulnerable.** Noise-related costs range in the hundreds of billions of dollars per year. Yet, the United States has no federal standards for non-occupational noise exposure. Federal standards for occupational noise exposure from the 1970s address only hearing loss as an adverse health effect and do not apply to all workers (e.g., those in agriculture and construction). Calls for action have gone largely unheeded. This policy calls for national noise standards, enforcement, education, outreach, and action on noise as a public health hazard. They are long overdue

## Response No. ORG 9-18

The comment requests that jet noise from the Hollywood Burbank Airport be considered in the evaluation of cumulative noise impacts. Refer to Response No. ORG 9-16 for a discussion of aircraft noise. As discussed therein, the noise analysis included evaluation of the Project's contribution of ambient noise to determine if the Project's noise would exceed the thresholds of significance. Ambient noise measurements were taken as part of the noise analysis in the Draft EIR in 2020 and after. Aircraft noise from relocated flight paths from BUR and VNY airports were included in the existing conditions noise measurements. Thus, the existing airport's jet noise was included as part of the ambient noise in the Project vicinity. The Project does not exacerbate any existing noise issues that the community may have with airport noise and, therefore, no analysis of the existing noise sources is required by CEQA.

## Comment No. ORG 9-19

Furthermore, the Project's **Noise Study methodology** of measuring two 15-minute increments of noise, to represent day and night levels, at such short distances from the multiple sources of noise within the Project, is woefully inadequate to measure baseline existing noise. In addition, impacts of significant **noise effects** such as echo and sustain in surrounding hillside neighborhoods, is omitted, and ignored. **The Study Area is too small and must be expanded to a minimum of 1 mile from noise sources.**

## Response No. ORG 9-19

The comment states that the Project's Noise Study methodology of measuring two 15-minute increments of noise, to represent day and night levels, at such short distances from the multiple sources of noise within the Project is inadequate. The ambient noise measurements at all measurement locations meet or exceed the City of Los Angeles' requirements for ambient noise as established in LAMC Sections 111.01(a) and 111.03. LAMC Section 111.01 states, "Ambient Noise" is the composite of noise from all sources near and far in a given environment, exclusive of occasional and transient intrusive noise sources and of the particular noise source or sources to be measured. Ambient noise shall be averaged over a period of at least 15 minutes at a location and time of day comparable to that during which the measurement is taken of the particular noise source being measured." Thus, the measured environmental noise levels at receptors R1 through R8 correctly represent the ambient noise levels in the vicinity of the Project Site.

In addition, refer to Response No. ORG 9-8 regarding noise echo in the surrounding hillside areas. Refer to Response Nos. ORG 9-14 and ORG 9-17 for a discussion of the adequacy of Draft EIR's study area.

## Comment No. ORG 9-20

### BIOLOGICAL IMPACTS

The Project would create an extreme event in the ecological and biological life of Studio City. We would like to include by reference all comments on biological impacts included in the comment from Save Weddington. The project threatens survival of special-status western yellow bat and creates a vast hole in the tree canopy that cannot be reproduced for at least 3 decades. Sudden urban heat island effect, glare and contamination of water resources from artificial turf would bring new and severe hazards to our community and to the greater Los Angeles community, via the LA River. Changes and impacts to the public asset, Zev Yaroslavsky Greenbelt and to leased County land must also be closely examined. Details of County lease contracts must be revealed.

### Response No. ORG 9-20

The comment references the comments on biological resources in the Save Weddington letter. Other issues raised in the comment pertain to impacts to western yellow bat, trees, urban heat island effect, artificial turf and the Zev Yaroslavsky “Greenbelt” and to leased County land. However, the commenter does not provide any substantive facts or support for these concerns or opinions.

Responses to comments prepared by the Channel Law Group for Save Weddington are provided in Responses No. ORG 1B-1 to 1B-197. The commenter is specifically referred to Response Nos. ORG 1B-24, 1B-25, and 1B-42 to 1B-52 for responses addressing biological resources impacts. Impacts to western yellow bat are addressed in Response Nos. ORG 1B-45 to ORG 1B-48, ORG and 1B-141 and 1B-142. In addition, further discussion of impacts to the western yellow bat, can be found in Response Nos. ORG 10-3 to 10-9. Also, responses to comments provided by Kim Tashman, President of Save Weddington, are provided in Responses Nos. ORG 1C-1 to ORG 1C-77.

For a discussion of impacts related to trees and tree canopy, refer to Responses No. ORG 6A-1 and ORG 6B-5.

Refer to Response to Comment No. 7 – Artificial Turf and Effects on Localized Heat and Health for a discussion of impacts related to artificial turf.

The comment also states that changes and impacts to public assets, i.e., the Zev Greenway and to leased County land, must also be closely examined and that details of County lease contracts must be revealed. With regard to biological resources impacts, all areas within the Zev Greenway and leased County land were included in the Biological Study Area evaluated in Section IV.C, *Biological Resources*, of the Draft EIR. Refer to Figure IV.C-1, Plan Communities, in the Section IV.C of the Draft EIR for an illustration of the Biological Study Area. Accordingly, the Draft EIR’s analysis of biological impacts did evaluate impacts within the Zev Greenway and to leased County land. The Draft’s EIR’s evaluation of biological resources is based on the thresholds included in Appendix G of

the CEQA Guidelines, as well as those applicable plans, policies, ordinances, and regulations protecting, as applicable, biological resources. The provisions of the County lease contract would not affect the Draft EIR's analysis of impacts to biological resources beyond that included in the Draft EIR.

### **Comment No. ORG 9-21**

#### **We request the correction of Transportation errors and consideration of Transportation omissions:**

- No measured intersection traffic counts included, and baseline counts calculated by reaching back to 2017.
- Grading export miscalculation due to swelling of undisturbed soil, underestimated by up to 25% and will thus increase number of export vehicles by 25%.
- Does not incorporate changes since Sportsman's Landing and other developments.
- Does not incorporate substantive street, signal, and traffic calming improvements that would be necessitated by trips/traffic generated by construction and operations of the Project.
- Inadequate protections for neighborhoods surrounding the project. No mention of southern neighborhoods, Sunswept and Silver Triangle, or of Laurel Terrace Drive, which is not an extension of Whitsett but rather, a narrow Hillside Connector Street, impacted by the congested Ventura Blvd & Whitsett intersection.

### **Response No. ORG 9-21**

This comment expresses that various transportation-related errors and omissions need to be corrected. First, the comment states no measured intersections were included as part of the transportation analysis. This comment is incorrect. Count data was included in Appendix F of the TA, which is included as Appendix M in the Draft EIR. Refer to Response No. ORG 5-3 for additional discussion of the traffic count data included in the TA.

With regard to swelling of soils, refer to Response No. ORG 1B-6. As described in Response No. ORG 1B-6 regarding bulking of soils, a conservative bulking factor of 20 percent was assumed in order to arrive at the 250,000 estimated cubic yards of grading (in excess of the more typical 15 percent bulking factor). Therefore, even with bulking, the export trips would be within the estimated number for Project construction activities.

Also, as discussed in Topical Response No. 2 – Modifications to the Project Design, updates to the Project would reduce the parking capacity of the underground structure from 503 spaces to 386 spaces. With this reduction, the amount of grading would be reduced from 250,000 cubic yards to 197,000 cubic yards, a reduction of approximately 53,000 cubic yards. This reduction in grading would reduce the duration of grading from

approximately 7 months to 5.5 months, and reduce the number of grading haul truck trips from 35,714 trips to 28,142 trips. See Topical Response No. 2 and Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, which provides these Project updates.

The analysis of transportation-related impacts was included in Section IV.M, *Transportation*, of the Draft EIR. The section assessed potential Project impacts based on the TA prepared by Fehr & Peers, dated April 2020 and included as Appendix M of the Draft EIR. The TA was prepared in accordance with LADOT's TAG adopted in July 2019 (updated in July 2020). The TA was approved by LADOT on June 10, 2021, with an updated approval on June 11, 2021.

In accordance with the TAG and consistent with the Department of City Planning CEQA Transportation Thresholds (adopted July 30, 2019), the TA includes an analysis of intersection levels of service (LOS), which is a non-CEQA issue. "Non-CEQA" issues are not required to be included in the Draft EIR, but are included in the TA (Appendix M of the Draft EIR) for informational purposes only. Refer to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for additional information on CEQA and non-CEQA issues that are included in the TA and Draft EIR Section IV.M, *Transportation*.

With regard to the LOS traffic analysis, traffic from all related projects, including Sportsmen's Lodge, which are listed in Chapter III, *Environmental Setting*, of the Draft EIR, was accounted for in the traffic analysis.<sup>229</sup> The Sportsmen's Lodge shopping center with gym and retail uses was recently constructed but is not yet fully operational (Related Project No. 1). The Sportsmen's Lodge apartments and restaurant/retail uses are not yet constructed and is in the entitlement phase (Related Project No. 5). Based on the proposed uses of the related projects, the TA calculated trips from these projects and included them in the future (2025) Project buildout traffic analyses using LADOT-required assumptions about future traffic growth. In addition, an ambient growth factor of 0.6 percent per year was applied to adjust the baseline year (2020) traffic volumes to reflect the effects of regional growth and development. This adjustment was applied to the baseline year (2020) traffic volume data to reflect the effect of ambient growth by the year 2025. This methodology is consistent with standard practices and TAG methodology for transportation assessments in the City of Los Angeles, which was approved by LADOT. Furthermore, the methodology to analyze cumulative transportation impacts was consistent with the applicable requirements of CEQA Guidelines Section 15130 in determining cumulative impacts. Refer to Topical Response No. 12 – Related Projects: Adequacy of Cumulative Mobile Source Noise and Traffic Analyses, for additional detail regarding the Project's cumulative traffic impacts.

The comment states that the transportation analysis does not incorporate substantive street, signal, and traffic calming improvements that would be necessitated by trips/traffic

---

<sup>229</sup> The list of related projects was provided by LADOT.

generated by construction and operations of the Project. With regard to construction and operational traffic, refer to Response No. ORG 9-6. As discussed therein, the Project's TA was prepared in accordance with the LADOT's TAG, and the TA was reviewed and approved by LADOT.

With regard to protections of neighborhood streets, during construction of the Project, as discussed in Response No. ORG 9-6, a CMP would be prepared, which would include measures to ensure that adequate access would remain for land uses in proximity to the Project Site during project construction. Project contractors would also coordinate with City departments (e.g., the Department of Building and Safety and the Department of Building and Safety) and emergency service providers, such as the LAFD, to ensure that adequate access, including emergency access, is maintained to the Project Site and neighboring uses. Also, the non-CEQA portion of the TA included a Residential Street Cut-Through Analysis on PDF pages 88 to 90 of 217 in Appendix M of the Draft EIR. As analyzed therein, the analyzed neighborhood street segments are not projected to be subject to an excessive burden on any of the street segments in neither the Non-Event Scenario nor the Special Event Scenario. The list of potentially impacted street segments analyzed were reviewed and approved by LADOT. In addition, the list intersections selected as part of the non-CEQA traffic analysis considers those intersections affected by Project traffic. Refer to Section 4.2 of the TA on PDF pages 56 to 76 of 217 for a discussion of intersections selected for analysis in the TA and impacts to intersections in the local Project vicinity. As shown in Tables 11A and 11B, PDF pages 75 and 76 of 217 of the TA, per the LADOT's TAG criteria, the Project would not cause or substantially contribute to unacceptable queuing at nearby signalized intersections, including the intersection of Ventura Boulevard and Whitsett Avenue. Laurel Terrace Drive, Sunswept Drive, and Silver Terrace are all located in residential areas to the south of Ventura Boulevard. The heaviest Project traffic would occur along main arterials between the Upper School campus and the Project Site. As discussed in Section IV.M, *Transportation*, of the Draft EIR, the primary impacted streets would be Whitsett Avenue, Ventura Boulevard, Moorpark Street, and Coldwater Canyon Avenue. These streets, which would support commuting traffic, would accommodate the bulk of Project traffic. Since Laurel Terrace Drive, Sunswept Drive, and Silver Terrace do not provide direct access between the Upper School campus on Coldwater Canyon and the entrance to and exit from the Project Site at Whitsett Street, or between the Project Site and Laurel Canyon Boulevard, or between the Project Site and any primary destinations, these streets were not included in the analysis of the Project's transportation impacts.

## **Comment No. ORG 9-22**

### **PLANNING AND ENTITLEMENTS**

**The project violates** the Los Angeles General Plan, the Open Space element of the General Plan, the Sherman Oaks Studio City Toluca Lake Cahuenga Pass Community plan, and the RIO Specific Plan.

**CUP criteria. SEC. 12.24. CONDITIONAL USE PERMITS AND OTHER SIMILAR QUASI-JUDICIAL APPROVALS.**

***Findings for Approval. (Amended by Ord. No. 182,095, Eff. 5/7/12.) A decision-maker shall not grant a conditional use or other approval specified in Subsections U., V., W., or X. of this Section without finding:***

1. *that the project will enhance the built environment in the surrounding neighborhood or will perform a function or provide a service that is essential or beneficial to the community, city, or region;*

The project will degrade the community on multiple criteria including esthetics, including light, glare, and views; air quality during construction and operations; loss of open space; loss of urban tree canopy; loss of irreplaceable biological resources including wildlife, natural habitat; increase in greenhouse gases, and introduction of serious public health risks health risks including heart disease, cancer, diabetes, asthma and brain injury/dementia from massive increase in noise and air pollution contaminants; introduces health impacts from excessive and constant lighting that will disrupt sleep patterns and cause inflammatory disease; PFCS contamination of water; traffic safety issues that cannot be mitigated without a massive reduction in scope and use that removes the option of events, lights, amplified noise, and spectators.

2. *that the project's location, size, height, operations and other significant features will be compatible with and will not adversely affect or further degrade adjacent properties, the surrounding neighborhood, or the public health, welfare, and safety; and*

The massive and extraordinary scale of this project in the midst of quiet, residential neighborhoods will destroy the character of the community and divide it, creating a giant Harvard-Westlake occupied island that overwhelms and excludes the neighboring community. The overwhelming demand on public resources, including public safety resources, police and fire, will damage our community. The Very High Fire Hazard Risk Zone begins on the south side for Ventura Blvd. and needs instantaneous access to fire services. The Project puts the public at risk.

3. *that the project substantially conforms with the purpose, intent and provisions of the General Plan, the applicable community plan, and any applicable specific plan.*

The Project does not conform to the General or Community Plan and in fact, divides the Community, in both a physical and socioeconomic sense. Open space is irreparably lost.

**Response No. ORG 9-22**

The comment suggests that the Project would not meet the required findings for approval of the CUP and, as such, the comment does not address the adequacy of the Draft EIR. Therefore, no further response is necessary. Nonetheless, regarding the commenter's Finding 1, the comment contains no substantial evidence to support its contentions and

conflicts with the evaluations and conclusions of the Draft EIR with respect to the listed issues. The Draft EIR concluded after detailed analysis that impacts related to light, glare (view impacts were concluded to be less than significant in the Initial Study); air quality during construction and operation; open space; tree replacement; biological resources; natural habitat; greenhouse gases, health risks (as discussed in Sections IV.B, *Air Quality*, and IV. *Hazards and Hazardous Materials*, of the Draft EIR), operational noise; water quality; and transportation would not exceed CEQA thresholds and impacts would be less than significant or would be mitigated to less-than-significant levels. In addition, regarding disrupted sleep patterns from lighting, the Project would utilize advanced, shielded LED lighting technology that would be turned off earlier than the existing high-glare lighting on the Project Site. As discussed in Topical Response No. 4 – Aesthetics, because of improvements in lighting technology, precision placement and angulation of source lights, as well as precise site planning, with the exception of a light level increase equivalent to a single candle flame at one location, the Project's lighting program would reduce the Project Site's existing ambient light and glare conditions as compared to existing conditions.

Topical Response No. 4 also discusses the reduction in the Project's lighting program under the Project's design modifications (See Topical Response No. 2 – Modifications to the Project Design). All light and glare levels would be below regulatory standards for both the Project and the Project with design modifications. Therefore, the Project would not create a new source of substantial light or glare that would adversely affect sleeping patterns.

Regarding the commenter's Finding 2, the comment conflicts with the findings of the Draft EIR and does not substantiate the claim that the Project would degrade the community with respect to location, size, height, operations and other significant features or that the Project would not be compatible with and would degrade adjacent properties, the surrounding neighborhood, or the public health, welfare, and safety.

The comment speculates that the playing fields, swimming pool, tennis courts, and gymnasium within the 17-acre Project Site are too massive for the scale of the surrounding residential neighborhood, and that the Project would destroy the character of the community, divide it, and exclude it (contrary to the objectives of the Project as cited in the Project Description) are speculative and do not contain any facts which contradict the findings of the Draft EIR. Refer to Topical Response No. 4 – Aesthetics, which discusses the aesthetics impacts of the Project. The statement that the Project would overwhelm public resources is not supported by substantial evidence and is contrary to the findings of the Draft EIR (See Section IV.L, Public Services, of the Draft EIR). The claim that the Project would imperil the Very High Fire Hazard Severity Zone to the south of Ventura Boulevard due to obstruction of Fire Station 78 or traffic is similarly devoid of supporting evidence, contrary to the conclusions of the Draft EIR, and not supported by fact or analysis. Refer to Response No. ORG 9-17 for a discussion of impacts related to wildland fires, as well as impacts to the referenced Very High Fire Hazard Severity Zone.

Regarding the Commenter's Finding 3, the claim that the Project does not conform to the General or Community Plan is not supported by substantial evidence and is inconsistent with the Draft EIR's land use evaluation, as detailed in Tables LU-1 through LU-6 contained in Appendix J and summarized in Section IV.J of the Draft EIR. Regarding the statement that open space would be irreparably lost, it is noted the Weddington Golf & Tennis facility provided fee-only use of its golf and tennis facilities to the public, while the Project would provide public access to approximately seven acres (304,920 square feet) of walking paths, wooded areas, and tennis courts. The Project would also provide direct public access through the Project Site to the Zev Greenway (direct access from the Project Site does not currently exist), landscape improvements along the Zev Greenway, and access to the River Overlook. In addition, access to the putting green, café, and clubhouse would be provided to the public for no charge and would be available from 7:00 a.m. to 9:00 p.m., seven days a week. Visitors would check in at the clubhouse for tennis court reservations, to use the putting green, or to purchase a snack or meal at the café. The Project would also allow public use of its active recreational facilities during periods of the day when facilities are not already in use by the School (Monday through Saturday) and all day on Sundays. In essence, with open space, landscaped pathways and other amenities, the Project would increase public access to the Project Site compared to existing conditions. The conclusions of the comment that the Project would not meet the required findings for the CUP are not substantiated by facts.

### **Comment No. ORG 9-23**

**Our conclusion, much to the community's disadvantage, Harvard-Westlake School is again asking for too much – to remove a resource that provides opportunities to over 50,000 Angelenos each year, for the benefit of a small population of students. References to extremely limited and strictly discretionary “public use” or “community use,” within the perimeter walls, as proposed by the Applicant, do not outweigh the innumerable and severe negative impacts of the proposed Project. The uncalculated damage to Studio City neighborhoods that would be forced to bear the impacts of destruction, construction, operational use, and overuse, including loan outs and leases, coupled with the loss of recreational opportunities and natural resources to the entire region, which has relied on Weddington Golf & Tennis for decades, lead to the conclusion that **this project is indefensibly destructive and disruptive and must now be rejected.****

### **Response No. ORG 9-23**

The comment provides general opposition to the Project with references to the loss of recreational resources and natural resources. Responses to the concerns expressed in the comment have been included in Response Nos. ORG 9-1 to ORG 9-22. The opposition to the Project is noted. However, the commenter does not provide any substantive facts or support for these concerns or opinions. As this comment does not present any evidence with respect to the content and adequacy of the Draft EIR, no further response is necessary.

## **Comment Letter No. ORG 10**

SoCal Bat Working Group  
Received May 10, 2022

### **Comment No. ORG 10-1**

Please see attached a letter prepared by members of the SoCal Bat Working Group with comments on the Harvard Westlake River Park DEIR.

Thank you in advance for considering our comments during the public comment period.

### **Response No. ORG 10-1**

The comment directs the reader to the attached letter prepared by SoCal Bat Working Group and expresses appreciation for the consideration of comments. The comment does not discuss the adequacy of the Draft EIR and, as such, no further response is necessary.

### **Comment No. ORG 10-2**

This letter was prepared by the SoCal Bat Working Group, an organization comprising bat biologists/ecologists, licensed wildlife rehabilitators, and members of the public who are interested in bat ecology and conservation in Southern California (including Los Angeles County). Our group has the following comments with regard to how potential impacts to bats are discussed in the Draft Environmental Impact Report (DEIR) for the proposed Harvard-Westlake River Park Project (project):

### **Response No. ORG 10-2**

The comment introduces the purpose and participants of the SoCal Bat Working Group and its interest in the Harvard-Westlake River Park Project and associated Draft EIR. This introductory comment is noted. The comment does not discuss the adequacy of the Draft EIR and, as such, no further response is necessary.

### **Comment No. ORG 10-3**

- 1) No focused surveys for bats were performed during the preparation of this environmental document. Without performing focused surveys, it is not possible to know what bat species are present, how these bats are using the site, or the approximate number of bats using the site, and therefore what potential impacts to bats may occur from the project. Due the high level of roost site fidelity by bats (particularly for maternity/nursery sites), coupled with the logistics and level of planning necessary to design appropriate mitigation and minimization measures for bat roosts, focused surveys for bats are best performed during the environmental review phase of a proposed project. This approach is consistent with guidelines developed by the California Bat Working Group (please see

<https://www.calbatwg.org/resources/>). In addition, the DEIR mentions that the adjacent Los Angeles River may provide suitable foraging habitat for bats but completely fails to mention that the proposed project site itself may provide foraging habitat for bats, particularly given its undeveloped nature relative to the surrounding heavily urbanized area. Bats roosting in trees at the north end of the site may also travel through the proposed project site to access the Los Angeles River. At a minimum, a biologist experienced in conducting bat habitat assessments and acoustic surveys should have performed these surveys at the project site to obtain basic information about potential bat use for impacts analysis.

### **Response No. ORG 10-3**

The comment states that the on-site bat population was not adequately surveyed in the preparation of the Draft EIR. As a special status species, the Western yellow bat was evaluated in greater detail in the Draft EIR in accordance with CEQA thresholds. The Western yellow bat is typically found in desert regions of southwestern United States and their roosting habitat is often within the “skirt” of dead fronds of native or non-native palm trees. It is noted that the majority of the Mexican fan palms occurring within the Project Site have had their skirt of dead fronds removed during routine maintenance, limiting the potential for roosting of western yellow bat on the Project Site. A surveyor with bat expertise conducted a wildlife survey in November 2016. As discussed in Section IV.C of the Draft EIR, the western yellow bat was not detected at that time. Similarly, no western yellow bat was observed during the more recent ESA wildlife surveys undertaken for the current Project, which was general in nature (i.e., for the purpose of broadly examining and inventorying onsite plant and animal species, including bats) and not focused exclusively on the potential existence of bats. There is only one California Natural Diversity Database (CNDDDB) occurrence record of this bat species within the vicinity of the Project Site, which was recorded in 1984 approximately 8.5 miles to the east in a developed area of Glendale. Closer in proximity to the Glendale record, bat surveys were conducted between April and November 2008 in Griffith Park, and the results of the surveys found no individual of western yellow bat to be present.<sup>230</sup> During operation, as stated above, while the Project would remove invasive Mexican fan palms, the Project’s native landscaping would help to enhance the existing off-site native habitat, as well as the surrounding area, by expanding the habitat, creating a greater native seed source, and providing a larger buffer from non-native ornamental landscaping in the surrounding developed areas, which may benefit special-status bat species by providing enhanced foraging opportunities (Draft EIR page IV.C-35).

It is acknowledged that the loss of suitable roosting habitat is a threat to the western yellow bat species. As indicated above, that threat is primarily in desert areas within the species’ largest recorded distribution and the Project Site is at the far periphery of the recorded range for the species. While the non-native Mexican fan palm trees provide potential roosting habitat, there is yet to be a confirmed observation of the species in

---

<sup>230</sup> Remington, S. and D.S. Cooper. 2009. Bat Survey of Griffith Park, Los Angeles, California, Draft Report. February 20, 2009.

close proximity to the Project Site. With the existing routine maintenance of the onsite palm trees and the removal of dead palm fronds, the potential for western yellow roosting habitat to occur is reduced. As such, the quality of the potential habitat currently onsite is marginal and is not considered to be able to support a substantial population of this species. In addition, not all palm trees would be eliminated in the Project area as clusters of the palm trees exist on the south side of the Los Angeles River and along Ventura Boulevard.

Based on the Draft EIR analysis included in Section IV.C, *Biological Resources*, the Draft EIR adequately analyzed impacts to the western yellow bat. Nonetheless, because there is some potential for western yellow bat to occur, even if unlikely, Mitigation Measure BIO-MM-1 has been included to address impacts if a roosting colony were to be detected or observed. Nonetheless, this comment is noted for the record.

Refer also to Response No. AG 4-30 for additional requirements recommended by CDFW that have been added to Mitigation Measure BIO-MM-1 on pages IV.C-42 to IV.C-43 of the Draft EIR. These additions have been made per coordination with CDFW to include additional requirements if a qualified bat specialist determines that special-status bats are present, or that bats are absent but trees to be removed may provide suitable bat roosting habitat. This update has been incorporated into Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, in this Final EIR.

#### **Comment No. ORG 10-4**

- 2) Only one species-status bat species, the western yellow bat (*Lasiurus xanthinus*), was mentioned as having potential to occur within the project site. The rationale given for this potential occurrence seems to be a California Natural Diversity Database (CNDDDB) record; however, all species occurrences shown in the CNDDDB are opportunistic records of presence and should not be interpreted as records of absence to prepare species lists for sites. Rather, an assessment of the habitat present combined with knowledge of species' ranges should be used to determine what bat species may occur within a given area. For example, the use of palm trees as bat roosts has been documented in at least seven bat species (in addition to western yellow bat) that occur in Southern California. We see no evidence that any other special-status bat species with potential to occur within the site were considered in the DEIR analysis. In addition, bat maternity roosts of all species are native wildlife nursery sites and potential impacts to these should be addressed as such under the California Environmental Quality Act (CEQA). We also do not see any evidence that the potential presence of bat maternity roosts of other species were considered in the DEIR analysis.

#### **Response No. ORG 10-4**

The comment states that the CNDDDB provides opportunistic records that are not comprehensive, and an assessment of the habitat and knowledge of species' ranges should be used to determine what bat species may occur. The comment also states that

no other special-status bat species (besides western yellow bat) were considered in the DEIR analysis. The comment states that bat maternity roosts of all species are native wildlife nursery sites and potential impacts to these should be addressed.

As stated on page IV.C-13 in Section IV.C, *Biological Resources*, of the Draft EIR, “a literature review was conducted, which included a review of the CDFW CNDDDB and the California Native Plant Society (CNPS) Online Inventory of Rare and Endangered Plants (see Appendix D of this Draft EIR, Biological Resources Documentation). Both of the databases are sensitive resource databases for special-status species known to occur in the vicinity of the Biological Study Area.” Appendix D is comprised of the Biological Resources Technical Report prepared by ESA. The Biological Resources Technical Report describes the literature review conducted (on page 15), which includes multiple sources, such as “species data provided by the United States Fish and Wildlife Service (USFWS) (USFWS 2020a), CNDDDB,” and “Western Working Bat Group (2017)”.

The Biological Resources Technical Report contains a table of special-status wildlife species analyzed (Appendix D, Special-Status Wildlife Species), including six special-status bat species, one of which is the western yellow bat. The table also includes an analysis of each species’ potential to occur based on preferred habitat, species ranges, and occurrence data compiled from the literature review. Since western yellow bat was the only special-status bat species that has a moderate potential to roost or forage on-site (and all other five special-status bat species are not expected to occur due to lack of suitable roosting and foraging habitat on-site), only western yellow bat was discussed in detail in Section IV.C, *Biological Resources*, of the Draft EIR.

As stated on page IV.C-48 under the heading *Migratory Species and Native Wildlife Nursery Sites* in Section IV.C, *Biological Resources*, of the Draft EIR, bat roosts are analyzed and Mitigation Measure BIO-MM-1 is prescribed to reduce direct impacts to roosting bat species to a less-than-significant level.

### **Comment No. ORG 10-5**

- 3) Potential impacts to bats from an increase in artificial light at night (ALAN) from the proposed project do not appear to be adequately addressed in the DEIR. It is our understanding that the existing condition of the site includes darkness in the interior portion of the golf course, and that this condition exists because the golf course closes shortly after dusk. In addition, tall trees throughout the site serve as effective barriers to light trespass into the site interior from lights that do remain on later into the evening. Multiple studies indicate that ongoing night lighting in particular can be very disruptive to foraging and roosting behaviors. Various studies (e.g., Boldogh et al. 2007; Rydell et al. 2017; Voigt et al. 2018) have concluded that because bright artificial lighting at or near roost sites has significant negative effects on bats, including the potential for reduced survivorship in a maternity colony, the addition of lighting near roosts should be evaluated and actions taken to minimize potential adverse effects. While some species may opportunistically forage around streetlights, some bat species avoid them entirely,

and recent research has indicated that even species that forage around streetlights are negatively affected by increases in ALAN near roost sites or along commuting corridors between roost sites and foraging areas (Seewagen and Adams 2021; Voigt et al. 2018). Consequently, increases and/or changes in light use at the project site has potential to negatively affect bat roost sites or movement corridors, and this potential should be addressed in the DEIR.

### **Response No. ORG 10-5**

The comment states that an increase in ALAN from the Project are not adequately addressed in the Draft EIR, that increases and/or changes in light use at the Project Site has potential to negatively affect bat roost sites or movement corridors, and that this potential should be addressed in the Draft EIR. Potential lighting effects on bats are analyzed on page IV.C-48 under the heading *Migratory Species and Native Wildlife Nursery Sites* in Section IV.C, *Biological Resources*, of the Draft EIR. As evaluated in Final EIR Appendices B.1, Supplemental Lighting Report Memorandum, and B-1 Supplemental Lighting Report Appendices, the Project with design modifications would reduce the total number of outdoor light poles from 39 to 22 poles. Although some of the poles would be taller than the original design, the reduction in total lighting would generally reduce overall ambient light levels (see Topical Response No. 4 - Aesthetics). Note also that that under the Project, the field lights would be turned off at 8:00 p.m. and tennis court lights would be turned off at 9:00 p.m. Under existing conditions, tennis court lights, which generate higher glare and illuminance levels than under the Project's total lighting program are turned off at 10:00 p.m. and existing driving range lights are turned off at 11:00 p.m. Although portions of the Biological Study Area would have an increase in lighting during hours of outdoor athletic activities that would be focused on fields and tennis courts, these areas do not contain vegetation or have suitable habitat for nesting bird and roosting bat species, and such lighting would be precisely-controlled and result in substantially less off-site illumination and glare as compared to existing conditions. Additional lighting, particularly given the tightly controlled and focused nature of the Project's lighting, also has the potential to attract more insects on which bat species forage, which could be a benefit. Outside of the field lighting, other areas of the Biological Study Area would have lighting conditions similar to or less than the existing condition, field lights and building lights would be shut off each night, and the duration of lighting would be shorter every day of the year than existing conditions except for low-level lighting for security and wayfinding purposes or lighting to accent signage and landscaping elements. If present on-site, the roosting bat species are already adapted to living in an urbanized setting with the existing night floodlighting on-site, as well as from the adjacent residential and commercial areas and traffic along roads. Thus, indirect impacts from lighting during Project operation would not diminish long-term survival of nesting birds or roosting bat species and, therefore, would not be significant.

### **Comment No. ORG 10-6**

- 4) BIO-MM-1 states that tree removal during the period outside the bat maternity season would avoid potential impacts to special-status bat species. This is false.

While tree removal during that period will avoid impacts to bat maternity colonies (including maternity-roosting special-status species), it does not eliminate potential impacts to special-status bat species because these species can roost year-round in palm trees in Southern California. Bats are occasionally injured during palm tree trimming or felling, and some records of special-status bat species in Southern California come from bats injured or killed during these activities. As the measure is currently written, surveys would only be performed at trees if they are removed during the bat maternity season. This measure does not specify how the proposed project will avoid mortality or injury of special-status bats that may roost in the trees if the trees are removed during the period outside of the maternity season.

### **Response No. ORG 10-6**

The comment states that Mitigation Measure BIO-MM-1 is incorrect in stating that tree removal during the period outside the bat maternity season would avoid potential impacts to special-status bat species as it does not eliminate potential impacts to special-status bat species that can roost year-round in palm trees in Southern California. Refer to Response No. AG 4-30 for additional requirements recommended by the CDFW that have been added to Mitigation Measure BIO-MM-1 on pages IV.C-41 to IV.C-42 of the Draft EIR. CDFW is the wildlife agency responsible for classifying western yellow bat as a species of special concern, and Mitigation Measure BIO-MM-1 was revised in coordination with CDFW based on their recommended language to include additional requirements (i.e., pushing trees using heavy machinery prior to tree removal, allowing a period of at least 24 hours for special-status bats to escape the construction area) if a qualified bat specialist determines that special-status bats are present, or that bats are absent but trees to be removed may provide suitable bat roosting habitat at any time of year. This update has been incorporated into Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR.

### **Comment No. ORG 10-7**

- 5) Measure BIO-MM-1 describes establishing buffers if active roost sites are found during preconstruction surveys, and specifies that “suitable buffers could include netting, canvas, or similar materials.” The use of netting is inappropriate near bat roosts because it presents an entanglement hazard for bats as well as for other wildlife (e.g., birds).

### **Response No. ORG 10-7**

The comment states that the use of netting is inappropriate near bat roosts because it presents an entanglement hazard for bats as well as for other wildlife (e.g., birds). Mitigation Measure BIO-MM-1 on pages IV.C-41 to IV.C-42 of the Draft EIR has been revised to remove the statement “Suitable buffers could include netting, canvas, or similar materials as recommended by the biologist.” The removal of the use of netting, canvas, or similar materials to establish a buffer around a bat maternity roost is consistent with current mitigation techniques for bat protection, as the comment contends. This update

has been incorporated into Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR.

### **Comment No. ORG 10-8**

- 6) The only measure addressing potential impacts to bats described in the DEIR (BIO-MM-1) describes take avoidance strategies, but not mitigation. We also do not see any discussion of the effects from net loss of roosting habitat, nor do we see any discussion of potential mitigation for loss of roosting habitat, should bat roosts be present and subsequently removed as part of the proposed project. Because no focused surveys were done, the extent of bat use of the site is currently unknown; therefore, the extent of potential bat roosting and potential habitat loss also unknown.

### **Response No. ORG 10-8**

The comment states that the Draft EIR does not discuss the effects from loss of roosting habitat or potential mitigation for loss of roosting habitat. Refer to Response No. ORG 1B-45. It is acknowledged that the loss of suitable roosting habitat is a threat to bats, including the western yellow bat (a special status species). That threat is primarily in desert areas within the species' largest recorded distribution and the Project Site is at the far periphery of the recorded range for the species. While the non-native Mexican fan palm trees provide potential roosting habitat, there is yet to be a confirmed observation of these species in close proximity to the Project Site. With the existing routine maintenance of the onsite palm trees and the removal of dead palm fronds, the potential for bat roosting habitat, including western yellow bat, to occur is reduced. As such, the quality of the potential habitat onsite is marginal and is not considered to be able to support a substantial population of this species. In addition, not all palm trees would be eliminated in the Project area as clusters of the palm trees exist on the south side of the Los Angeles River and along Ventura Boulevard.

Refer also to Response No. AG 4-30 for additional requirements recommended by CDFW that have been added to Mitigation Measure BIO-MM-1 on pages IV.C-41 to IV.C-42 of the Draft EIR. Mitigation Measure BIO-MM-1 was revised in coordination with CDFW based on their recommended language to include additional requirements (i.e., "Mitigation may include avoidance through postponing or temporarily halting construction until maternal roost use is completed, use of construction buffers of no less than 100-feet, or the installation of bat boxes in proximity to detected maternal roosts"). This update has been incorporated into Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, in this Final EIR.

### **Comment No. ORG 10-9**

- 7) Measures for tree removal include nighttime surveys performed using "sonic bat detectors (e.g., Anabat or Sonobat [sic])" to determine whether bats are present prior to tree removal. There are a few issues with this approach. First, "SonoBat"

is a software program for analyzing bat echolocation call data, and is not a type of bat detector. Second, in order to have a reasonable expectation of actually knowing whether bats are roosting in the trees, any surveys should include a component in which the trees are watched for emerging bats for at least an hour after sunset using night vision goggles. Otherwise, it is not possible to know whether bat activity recorded on a bat detector is associated with a roost or foraging/passing through the areas. Given the large number of trees proposed for removal, how does the project proponent anticipate adequately surveying the trees to confirm absence of bats before those trees are removed?

## Response No. ORG 10-9

The comment clarifies that SonoBat is not a type of bat detector but is a software program for analyzing bat echolocation call data. The comment also states that any surveys should include a component in which the trees are watched for emerging bats for at least an hour after sunset using night vision goggles to determine whether bat activity recorded on a bat detector is associated with a roost or foraging/passing through the areas. The comment questions how the Project proponent anticipates adequately surveying the large number of trees to confirm absence of bats before those trees are removed.

Refer to Response No. AG 4-30 for additional requirements recommended by CDFW that have been added to Mitigation Measure BIO-MM-1 on pages IV.C-41 to IV.C-42 of the Draft EIR. Mitigation Measure BIO-MM-1 was revised in coordination with CDFW based on their recommended language to include additional requirements (i.e., pushing trees using heavy machinery prior to tree removal, allowing a period of at least 24 hours for special-status bats to escape the construction area) if a qualified bat specialist determines that special-status bats are present, or that bats are absent but trees to be removed may provide suitable bat roosting habitat at any time of year. This update has been incorporated into Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, in this Final EIR.

Based on the comment's recommended changes, Mitigation Measure BIO-MM-1 is modified below.

BIO-MM-1: Due to the presence of potentially suitable roosting habitat (ornamental trees) for special-status bat species (i.e., western yellow bat), Harvard-Westlake School shall demonstrate and guarantee to the satisfaction of the Los Angeles Department of City Planning that either of the following has been or shall be accomplished:

1. Tree removal activities shall be scheduled outside of the maternity roosting season (October 1 through February 28) to avoid potential impacts to special-status bat species during breeding season.
2. Any construction or palm tree removal activities that occur during the maternity roosting season for special-status bat species (March 1 through September 30) shall require a qualified biologist experienced with bat roost biology to conduct

- a pre-construction (or pre-tree removal) survey, using sonic bat detectors (e.g., Anabat or Sonobat) and night vision goggles for an emergence survey (for at least one-hour after sunset) to determine whether special status bat species are roosting within trees that would be removed. A qualified biologist is a biologist with specialized bat experience including the familiarity with bat roost biology (i.e., a professional biologist with a minimum of two years of bat survey experience, inclusive of acoustic survey experience). The surveys shall be conducted at dusk and after nightfall by a biologist. If an active roost site is located during the pre-construction survey, the roost shall be avoided and Project activities shall be conducted as recommended by the biologist to avoid the area, which may include temporary postponement or provision of a suitable buffer established around the roost until roosting activities cease. ~~Suitable buffers could include netting, canvas, or similar materials as recommended by the biologist.~~ A report shall be submitted to the City with the results of the pre-construction or tree removal survey and any needed maternity roost avoidance actions, prior to any Project-related ground-disturbing activities or vegetation removal at or near locations of roosting habitat for bats. If special-status bats are detected during the survey, a qualified bat specialist shall prepare species specific mitigation measures to reduce or avoid impacts to each special-status species detected. Mitigation may include avoidance through postponing or temporarily halting construction until maternal roost use is completed, use of construction buffers of no less than 100-feet, or the installation of bat boxes in proximity to detected maternal roosts. Avoidance measures shall be based on site-specific factors to prevent roost disturbances; including but not limited to numbers and locations of bats, proposed construction activities, height and distance of bat roosts from proposed construction activities, the presence of visual and/or acoustic barriers between the roost and proposed activities, and the pre-existing level of human activities (e.g., ambient noise, potential movement, etc.) to which the bats may already tolerate.
3. If special-status bats are not detected, but the bat specialist nonetheless determines that roosting bats may be present at any time of year and could roost in trees at a given location, tree removal activities shall be initiated by pushing trees using heavy machinery prior to using a chainsaw to remove the tree. In order to provide the optimum warning to any roosting special-status bats that may be present, trees shall be pushed lightly two or three times, with an approximately 30-second pause between each nudge/push to allow bats to become active. A period of at least 24 hours shall elapse between such operations to allow special-status bats to escape the construction area.

## Comment No. ORG 10-10

- 8) The concept of habitat connectivity is not adequately addressed in the DEIR. The authors argue that the study area is not a movement corridor as it “does not support habitat that connects two or more habitat patches that would otherwise be fragmented or isolated from one another”. This presents a view of wildlife corridors focused on physically joined areas, rather than ecologically joined areas, that has

been out of date for decades (Bennett, 1999). Connectivity needs to be considered in terms of the habitat features that enable movement (including dispersal) of the plants and animals that inhabit an area, including those that fly. This has not been done.

### **Response No. ORG 10-10**

The comment states that habitat connectivity and wildlife corridors are not adequately addressed in the Draft EIR. This issue is addressed in Response No. ORG 1C-43, which states that the Project Site is not identified as a regionally important dispersal or seasonal migration corridor. The rationale for characterizing the Biological Study Area as having limited potential live-in and marginal movement habitat for species on a local scale is the lack of native food sources, non-native ornamental trees, and the fact that the area is subject to frequent human disturbance due to operation of the golf course and tennis facilities. Refer also to Response No. ORG 10-3, that mentions additional human disturbance due to existing routine maintenance of the onsite palm trees and the removal of dead palm fronds, thus limiting the potential for roosting.

### **Comment No. ORG 10-11**

- 9) The value of the study area as a wildlife corridor is further dismissed on the basis that: “the Biological Study Area supports limited resources for wildlife habitat and foraging due to the surrounding existing development; automobile traffic on adjacent roadways; a lack of nuts, berries, and other native food sources that results from the current mix of non-native, ornamental trees; and because the Biological Study Area is subjected to frequent human disturbance due to operation of the golf course and tennis courts.” This, again, is an outdated concept, given science is showing us that megacities like Los Angeles, where a high level of human disturbance is a fact of life, can still be biodiversity hotspots. Furthermore, non-native species, including the majority of Los Angeles’ incredibly diverse urban forest (200 tree species), can provide year-round resources for a variety of native animals (Shaffer, 2018).

### **Response No. ORG 10-11**

The comment states that the value of the study area as a wildlife corridor is dismissed, and megacities like Los Angeles can be biodiversity hotspots and provide year-round resources for a variety of native animals. The comment is correct in stating that biodiversity and native wildlife can persist in urbanized settings; however, that does not necessarily make such an area a wildlife corridor. As stated on page IV.C-45 under the heading of *Wildlife Movement and Corridors* of the Draft EIR, the adjacent Los Angeles River likely supports some regional wildlife movement. Even though it is channelized, lacks vegetation, and is surrounded by chain-linked fencing, there is also native vegetation planted along the southwestern-facing slope north of the channel that is part of a half-mile stretch of native habitat restored along the Zev Greenway and a row of mature western sycamore and ornamental trees planted along the top of the southern

bank of the Los Angeles River. For a more in-depth discussion of the *Wildlife Movement and Corridors* analysis, see Appendix D of Draft EIR, Biological Resources Documentation, which includes the Biological Resources Technical Report prepared by ESA that describes the rationale for characterizing the Biological Study Area as having limited potential live-in and marginal movement habitat for species on a local scale (page 28). Also, although there are limited habitat areas within the surrounding densely developed area except for the native habitat restored along the Zev Greenway and mature western sycamore and ornamental trees planted along the top of the southern bank of the Los Angeles River, the Biological Resources Technical Report acknowledges that given its immediate adjacency to the Los Angeles River and because it contains a portion of the Zev Greenway, the Biological Study Area could serve as patch habitat<sup>231</sup> along the river and provide some habitat value to urban-adapted wildlife species.

### **Comment No. ORG 10-12**

We appreciate your consideration of all of the above comments for the DEIR.

### **Response No. ORG 10-12**

The comment expresses the commenter's appreciation for consideration of the comment and does not address the adequacy of the Draft EIR. As such, no further response is necessary.

---

<sup>231</sup> A habitat patch is an area that can be used by a species for breeding or obtaining other resources.

## **Comment Letter No. ORG 11**

Lisa Karajian  
Studio City Neighborhood Council Board Member  
Studio City Neighborhood Council  
Received May 10, 2022

### **Comment No. ORG 11-1**

Hope you're well.

Wanted to make sure that Harvard Westlake has a plan set in place in removing the animals that reside at Weddington Golf to sanctuaries. These animals must not be overlooked as they have been living there for many years.

### **Response No. ORG 11-1**

The comment expresses concern and an interest in ensuring that wildlife from the Project Site would be relocated to sanctuary locations. The comment does not discuss the adequacy of the Draft EIR and, therefore, no further response is needed.

Nonetheless, for the purpose of the Draft EIR, the CEQA Guidelines are concerned with whether a project would have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS. As evaluated in the Section IV.C, *Biological Resources*, pages IV.C-32 through IV.C-35 and IV.C-39 through IV.C-42, of the Draft EIR, with implementation of mitigation, the Project would not result in a significant impact on sensitive wildlife species. Please also refer to the Draft EIR Section IV.C, pages IV.C-13 and IV.C-14, regarding existing biological conditions; pages IV.C-20 through IV.C-23 regarding existing wildlife movement corridors; and page IV.C-27 regarding special status species and migratory birds and raptors.

### **Comment No. ORG 11-2**

Also, community benefits is key. It should be suggested that they pay for the installation of a street light at Valley Spring Lane and Whitsett.

### **Response No. ORG 11-2**

This comment states that the Harvard-Westlake School should pay for the installation of a street light at Valley Spring Lane and Whitsett Avenue. The need for new street lights at Valley Spring Lane and Whitsett Avenue would be determined by the Los Angeles Bureau of Street Lighting and/or Department of Building and Safety during the plan check and permitting process. The School will be required, as a condition to the issuance of a building permit, to pay any fees, as applicable, if the Bureau of Street Lights or Department of Building and Safety determines that new streets lights are necessary. The

comment does not discuss the adequacy of the Draft EIR and, therefore, no further response is necessary.

**Comment No. ORG 11-3**

HW should also consider opening the pool for public community use.

Thank you so much.

**Response No. ORG 11-3**

The comment requests the pool be open for community use. As discussed in Chapter II, *Project Description*, Table II-3, *Public Use and Hours*, on page II-34 of the Draft EIR, the swimming pool would be open to approved public swim programs. The comment does not discuss the adequacy of the Draft EIR and, therefore, no further response is necessary.

## Comment Letter No. ORG 12

Melanie Winter  
Director  
The River Project  
Received May 10, 2022

### Comment No. ORG 12-1

Regarding the proposed Harvard-Westlake River Park Project, The River Project has the following concerns with flood risk, increased runoff, heat island, groundwater pumping, liquefaction, and redundancy of the proposed stormwater component.

### Response No. ORG 12-1

The comment introduces several concerns with the Harvard-Westlake River Park Project. The comment does not discuss the adequacy of the Draft EIR and, therefore, no further response is needed. The listed concerns are addressed in Response Nos. ORG 12-2 through ORG 12-7 below.

### Comment No. ORG 12-2

**Flood risk:** The project site is part of the historic and natural floodplain of the Los Angeles River. While the subject property is not located within a FEMA-identified flood hazard zone, the existing FEMA maps are decades old and do not reflect current—much less future—flood risk. Maps provided by Flood Factor assign areas of the property a Severe risk rating (7/10), with an 87% likelihood of experiencing floodwaters of 6 inches at least once in the next 30 years. This rating assumes no overtopping of the channel walls, and notes the risk may substantially increase in the event of the channel being overtopped or breached in the course of a highly likely extreme precipitation event. Development in such properties is as ill-advised as development in high fire risk zones. Moreover, preserving or reclaiming natural floodplain lands not only helps attenuate downstream flood risk, it also helps reduce temperatures, supports habitat and biodiversity, and facilitates groundwater recharge for local water supply.

### Response No. ORG 12-2

The comment states that the Project Site is subject to flood hazard not reflected in current FEMA flood maps. The Draft EIR addressed hydrology and water quality impacts in Section IV.I, *Hydrology and Water Quality*, with supporting data provided in Appendix I, Hydrology and Water Quality Report, of the Draft EIR. As analyzed therein, hydrology and water quality impacts would be less than significant. For purposes of analyzing impacts under CEQA, page IV.I-24 of the Draft EIR sets forth the thresholds of significance with regard to hydrology and water quality impacts. Thresholds (c) and (d) address flooding. The thresholds do not preclude development in flood prone areas, but address whether a Project would increase runoff that could cause flooding, impede or

redirect flood flows or, risk release of pollutants in flood zones. As discussed in Section IV.I of the Draft EIR, the Project would result in less than significant impacts in these regards. Therefore, despite stating that the Flood Factor website, a private non-profit website, identifies the Project Site with a certain risk rating, the commenter does not provide substantial evidence that contradicts the CEQA analysis included in Section IV.I of the Draft EIR. That is, whether or not this organization believes that the Project Site has a significant flood risk does not constitute evidence that the Project would increase runoff that would cause flooding, impede or redirect flood flows, or risk release of pollutants in flood zone.

### **Comment No. ORG 12-3**

**Increased runoff & Heat island:** Transforming ~60% of the site from pervious and living open space to structures and other impervious elements will significantly alter the existing drainage patterns and substantially increase site runoff.

### **Response No. ORG 12-3**

The comment assert that transforming approximately 60 percent of the Project Site from pervious and living open space to structures and other impervious elements will significantly alter the existing drainage patterns and substantially increase site runoff. The comment does not provide substantiated facts to support the claims of increased runoff.

The Draft EIR addressed hydrology and water quality impacts in Section IV.I, *Hydrology and Water Quality*, with supporting data provided in Appendix I, Hydrology and Water Quality Report, of the Draft EIR. As analyzed therein, hydrology and water quality impacts would be less than significant. This comment does not take into account the City of Los Angeles LID requirements discussed in Section IV.I, *Hydrology and Water Quality*, pages IV.34 and IV.35 of the Draft EIR. As discussed therein, the existing Project Site has 30 percent impermeability which would increase to 59 percent upon Project buildout. However, the Project as analyzed in the Draft EIR would capture, treat, and store up to 1 million gallons of stormwater at a time from the developed portions of the Project Site through the stormwater LID capture and reuse cistern system. With regard to the Project's capture and reuse system as analyzed in the Draft EIR, the 1-million gallon system as evaluated would capture and treat water from the Project Site as well as from a 39-acre off-site area to the north of the Project Site. As discussed in Topical Response No. 2 – Modifications to the Project Design, the Project's 1-million-gallon stormwater capture and reuse system was reduced in size (down to approximately 350,000 gallons pending final design) and scale so as to capture and treat stormwater only from within the Project Site, and not from the 39-acre area to the north. The Project would still similarly comply with all applicable water quality regulations as analyzed in the Draft EIR (see section IV.I, Hydrology and Water Quality, of the Draft EIR). All hydrology and water quality impacts from the Project would continue to be less than significant without the need for mitigation. Refer to Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, which

includes updates to the EIR to reflect the removal of the off-site water collection from the Project's capture and reuse system with the Project design modifications.

This Project's capture and reuse system would use the captured and treated stormwater up to the cistern capacity for irrigation on the Project Site (refer to Project Design Feature WS-PDF-2: Capture and Reuse System, in Section IV.O.1, *Utilities and Service Systems - Water Supply*, page IV.O.1-24 of the Draft EIR). During heavy or sustained rain events when the cistern storage tanks are at capacity, treated water would bypass the storage cisterns and discharge to the Los Angeles River. As stated on page IV.I-38 of the Draft EIR, during the 50-year frequency design storm event peak flow rate, the peak flow rate of stormwater runoff from the Project Site would incrementally change from 60.93 cubic feet per second (cfs) to 60.94 cfs (a 0.01 cfs or a 0.01 percent increase). This incremental change would not alter the existing drainage patterns or increase site runoff.

### **Comment No. ORG 12-4**

Further, the construction of these structures, the removal of existing mature trees, and the installation of the proposed synthetic turf will significantly increase temperatures on site and within the surrounding neighborhood, negatively impacting public health.

### **Response No. ORG 12-4**

The comment states that construction of the Project facilities, the removal of trees and installation of synthetic turf will increase temperatures on the site and within the surrounding neighborhood, which would impact public health. The comment does not provide any evidence to support the assertion. Section IV. G, *Greenhouse Gas Emissions*, of the Draft EIR, included an analysis of urban heat island effects from Project implementation. As discussed in Chapter IV.G, page IV.G-73 of the Draft EIR, the Project Site is located in an already developed urban area with an asphalt roadway grid, and nearby commercial parking lots and commercial and residential buildings, which are general urban features that can potentially contribute to the urban heat island effect. However, as shown in Figure IV.G-2 of the Draft EIR, the urban area in which the Project Site is located is rated with the lowest Urban Heat Island (UHII) score of 0 to 10 degree-hours per day (Celsius scale) – equivalent to an average temperature difference between rural and urban in that area of approximately 0 to 0.75°F. Thus, the Project's structures or impermeable surfaces would not substantially contribute to an increase in the urban heat island effect for the area given that the totality of the urbanized development in the area already yields the lowest UHII score.

The Project would replace the existing Project Site uses with new athletic and recreational facilities, including outdoor athletic fields utilizing artificial grass as a sustainable alternative to turf grass, thereby reducing irrigation water demand and avoiding the use of pesticides associated with the turf grass. Section IV.H, *Hazards and Hazardous Materials*, and Appendix H-2, *Artificial Turf Technical Memorandum*, of the Draft EIR, included a detailed evaluation of potential health impacts related to use of artificial turf. Based on the

analysis, the Draft EIR determined that health-related impacts would be less than significant.

Please also see Topical Response – No. 7 - Artificial Turf and Effects on Localized Heat and Health. Topical Response No. 7 addresses the potential health-related and urban heat island effects due to the Project's use of artificial turf fields.

For a discussion of impacts related to trees, see Topical Response No. 5 – Biological Resources/Trees. Also, refer to Response Nos. ORG 6A-1 and ORG 6B-2, which discuss how the Project would result in an increased tree canopy after nearly 10 years and long-term carbon sequestration increases compared to existing conditions, which support the fact that the Project would not result in increased temperatures on the Project Site and within the surrounding neighborhood, that could impact public health.

### **Comment No. 12-5**

**Groundwater pumping:** The project proposes to excavate most of the eastern third of the project site to depths of up to 21 feet. California Water Board data from December 2005 indicate show the depths to groundwater at the two closest wells—12456 Ventura Blvd. & 12500 Ventura Blvd. —at 21 ft. and 21.46 ft respectively. While the current depth to groundwater may be below the proposed grading required to construct the parking structure and water storage tank, groundwater depths in the vicinity of the project site can raise by several feet as the result of a single large storm event. Furthermore, the region is strongly committed to an aggressive program of groundwater recharge to secure water supply for the City. We can expect to see groundwater levels rise continually over the coming decades. This will logically result in continuous groundwater pumping to protect the parking structure and water tank. As pumped groundwater must be beneficially repurposed on site, it is unclear whether or not the entirety of these daily volumes could be put to beneficial reuse.

### **Response No. 12-5**

The comment maintains that the Project would result in continuous groundwater pumping and impact groundwater recharge. The comment further states groundwater levels will rise continually over the coming decades. However, the comment does not provide substantiated facts to support this claim of higher future groundwater levels. While temporary dewatering could theoretically occur during construction activities (though Project Site borings indicate groundwater measurements below the depth of Project grading), long-term groundwater pumping/extraction would not occur with the Project. No groundwater extraction wells are proposed by the Project. Since groundwater pumping would not occur, a discussion of beneficial reuse is not necessary.

In addition, As discussed in Sections IV.F, *Geology and Soils*, page IV.F-24, and the Preliminary Geotechnical Report (PDF page 63 of 299 provided in Appendix G of the Draft EIR) the use of groundwater recharge mechanisms is not feasible given the likelihood of water remaining perched above the underlying layer of bedrock. The LADBS has

concluded with the findings of the Project's geotechnical study regarding perched groundwater and groundwater levels and the recommendation that infiltration at this site is not feasible. In addition, the Project's geotechnical study was peer-reviewed by Byer Geotechnical, Inc. on August 17, 2022, who further concurred with the findings that infiltration at this site is not feasible. The Byer Geotechnical peer review of the Project's geotechnical study is provided as Appendix G of this Final EIR. In addition, as discussed in Section IV.I, *Hydrology and Water Quality*, pages IV.I-33 through IV.I-35 of the Draft EIR, the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the SFV Groundwater Basin, and groundwater recharge impacts would be less than significant.

### **Comment No. 12-6**

**Liquefaction:** The project proposes to construct an underground parking structure within the proximate bounds of a liquefaction zone which may render it unsafe in the highly likely event of tectonic activity.

### **Response No. 12-6**

The Draft EIR addressed geology and soils impacts in Section IV.F, *Geology and Soils*, with supporting data provided in Appendix G, Geotechnical and Paleontological Resources Documentation, of the Draft EIR. As analyzed therein, geology and soils impacts, including liquefaction hazards, would be less than significant. Refer to Response No. ORG 1B-195 for additional discussion of potential liquefaction impacts.

### **Comment No. 12-7**

**Stormwater capture component:** The neighborhood stormwater capture project is proposed as an amenity to address offsite neighborhood flooding and pollutant runoff, and as necessary to providing water supply for site irrigation. This component appears to be a remnant of an earlier proposal designed to suit the requirements of a specific state bond measure. With respect to the neighborhood issues, there are numerous less expensive and material-intensive alternatives available to address localized flooding and runoff. Such alternative approaches would not require extensive grading and would result in substantially lower construction impacts to the surrounding community. With respect to repurposing the captured and treated stormwater for on-site irrigation, it is unclear how stormwater runoff from this small subdrainage area could be a reliable or consistent source of supply for the proposed project. Our region is facing extended drought periods punctuated by extreme storm events. During long drought periods, rainfall would not produce sufficient runoff to provide irrigation supplies or for ongoing maintenance of the proposed artificial turf. Further, it is unclear how decisions might be made over whether to use the stored runoff or to beneficially use the pumped groundwater. The system is over-engineered and unnecessary.

## Response No. 12-7

The comment states that the Project's repurposing of the captured and treated stormwater for on-site irrigation is over-engineered and unnecessary and that it would not be reliable during dry periods. The comment also maintains that numerous less expensive and material-intensive alternatives to address localized flooding and runoff are available. The comment, however, does not cite the nature of the alternatives that would collect and reuse stormwater runoff from the surrounding neighborhood. In addition, the comment cites extended drought conditions but does not explain how the on-going maintenance of the existing Project Site's turf grass and higher water demand plant and tree species would be more beneficial. The Project's stormwater capture and reuse system is specific to the needs of the Project and the intent of the Project to reduce overall water demand. The purpose of the stormwater capture and reuse system is to provide a reliable longer-term supply balancing wet and dry weather conditions and would not be limited to the collection of stormwater flows during a rainfall event. While that would certainly be a collection source, the Project would comply with the City of Los Angeles LID Ordinance which would result in the capture and reuse of general water sources on the Project Site, including water that is applied for Project Site landscaping during dry weather conditions. The replacement of the existing golf course's grass turf and existing invasive or exotic plant and tree species with native plants and trees would result in a lower water demand than existing conditions. Also, the Project's stormwater capture and reuse system would reduce water demand from LADWP consistent with numerous local and state policies and ordinances pertaining to water conservation, especially during drought conditions. Furthermore, stormwater that is not captured, stored and re-used on the Project Site would be discharged after treatment to the Los Angeles River, resulting in improved water quality conditions with the river.

As discussed in Response No. ORG 12-3, as part of the Project design modifications included in this Final EIR, the stormwater capture and reuse system would be reduced to approximately 350,000 gallons. The reduction in the size of the system is because the Project would no longer capture and treat stormwater from the 39-acre off-site area, but rather only capture and treat stormwater from the 17.2 acre Project Site.

Overall, because of the beneficial effects of the stormwater capture and reuse system in reducing water demand and improving water quality in the Los Angeles River, the system is not considered to be "over-engineered or unnecessary."

## **Comment Letter No. ORG 13**

Eliot Cohen  
President  
Homeowners of Encino  
Received May 3, 2022

### **Comment No. ORG 13-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. ORG 13-1**

The comment expresses opposition to the Project and states that the Draft EIR's analysis is inadequate to address the Project's most serious impacts, but provides no substantial evidence regarding the adequacy of the Draft EIR. These comments are similar to those included in Form Letter No. 3. Refer to Responses Nos. Form 3-1 to Form 3-5.

## Comment Letter No. ORG 14A

Joanne D'Antonio

LA Community Forest Advisory Committee (CFAC) Representative

LA CFAC

Received May 9, 2022

### Comment No. ORG 14A-1

Please note that the comment period for this draft EIR, even at two months, was short to get through both document analysis and go through the process of neighborhood council committee agenda/vote to full board agenda/vote for most neighborhood councils.

The individual comments I am making in this email are informed by my having spent the last 8 years studying and understanding the tree and tree canopy environmental issues in the City of Los Angeles. I serve on the Community Forest Advisory Committee (at the Board of Public Works); I am the Founder and Chair of the Neighborhood Council Sustainability Alliance Trees Committee (since 2016) which has over 100 members from throughout the city of Los Angeles. I am the Sustainability Representative for the Greater Valley Glen neighborhood council. I also served on the Working Group for First Step Developing an Urban Forest Management Plan for the City of Los Angeles "the Dudek Report": [https://www.cityplants.org/wp-content/uploads/2018/12/10939\\_LA-City-Plants\\_FirstStep\\_Report\\_FINAL\\_rev12-7-18.pdf](https://www.cityplants.org/wp-content/uploads/2018/12/10939_LA-City-Plants_FirstStep_Report_FINAL_rev12-7-18.pdf)

I have observed truly great concern for the preservation of our City's trees by our stakeholders. Our challenge in the City of Los Angeles is holding on to the existing tree canopy provided by large mature trees, 90% of which are on private property (Dudek Report p. 10). Our canopy is diminishing as the state is requiring the building of housing under SB9 and SB10. And there is very little municipal code to preserve private property trees, though there are council file motions that have passed awaiting report back to protect non-native significant trees. These are CF 03-1459-S3 and CF 20-0720. I have been participating in these report backs, and soon municipal code will be created for the retention of such important trees.

### Response No. ORG 14A-1

The comment introduces the background of the commenter and expresses concern regarding the preservation of mature trees throughout the City of Los Angeles. The comment does not discuss the content or adequacy of the Draft EIR and no further response is necessary.

### Comment No. ORG 14A-2

My specific comments are below. The text from the Harvard Westlake River Park Project Draft EIR is cited in italics, and my comments follow without italics:

## Response No. ORG 14A-2

The comment introduces the formatting used for the comments on the Draft EIR. The comment does not discuss the adequacy of the Draft EIR and, therefore, no further response is needed.

## Comment No. ORG 14A-3

*2. Reasons Why the Project is Being Proposed, Notwithstanding Significant Unavoidable Impacts p. 5/12*

*(1) the Project would convert a former private golf and tennis club to provide access to landscaped open space, trails, and recreational opportunities to the public and the School in an area with a shortage of neighborhood parks;*

**Comment:** The existing golf course, though privately-owned, is not private insofar as it is and has always been open to anyone for walk-in use. It is in fact utilized by the public, and it provides very inexpensive recreation in a park-like green setting. Yes, the San Fernando Valley is quite park poor, and this large open space is of value to the quality of life. Anyone can come in and enjoy it.

## Response No. ORG 14A-3

The comment states that the Weddington Golf & Tennis use is not private since it is available for walk-in use. The comment fails to state that the Weddington Golf & Tennis uses are limited to golf and tennis, that it was a commercial enterprise since its opening in the 1950s to its sale in 2017, and that the golf and tennis uses are available for a fee. The comment does not discuss the content or adequacy of the Draft EIR and no further response is necessary.

## Comment No. ORG 14A-4

Substituting a much more narrow walkway with slow-growing saplings along on a paved river does not have the same feel as the current open space setting that is home to what Assemblyman Adrin Nazarian described to me as some of the oldest trees in the San Fernando Valley: valuable tall trees that date back over a hundred years to when this site was the Weddington Estate. These trees were vetted as Historic Cultural Monuments by the HCM commission . . . even though former City Councilman for this District for whatever reasons did not support the HCM designation and pushed the City Council to support his amendment to eliminate the trees and golf area from the designation received by the clubhouse and golf ball stanchions.

## Response No. ORG 14A-4

The comment states that the Project would substitute the Project Site's mature trees and open space with slow growing saplings and a narrower pathway. The Project would not

alter the Zev Greenway to a more narrow trail along the river. Although the Project would provide an ADA-compliant pedestrian ramp between the Project Site and the Zev Greenway, this ramp would not change the character or dimensions of the Zev Greenway. The statement regarding “slow growing saplings” is not consistent with the replacement trees illustrated in Section IV.C, *Biological Resources*, Figure IV.C-5, *Tree Planting Plan*, of the Draft EIR or with the 2:1 replacement ratio or the saving of mature street trees and trees along the Zev Greenway interface described in Section IV.C and in Topical Response No. 5 - Biological Resources/Trees, in this Final EIR. The majority of replacement trees would be 48-inch boxed, which already have several years of growth to enhance maturity rates and street replacement trees would be fast growing velvet ash trees.

In addition, see Topical Response No. 6 – Historic Resources, which addresses direct and indirect impacts on historical resources resulting from the Project. In 2021, the Project Site was designated by the City of Los Angeles as a Historic-Cultural Monument (HCM) under the name Studio City Golf and Tennis Club. As discussed in Topical Response No. 6, existing, on-site trees were not identified as character-defining features of the HCM.

### **Comment No. ORG 14A-5**

The City Open Space Element has not been updated since the era of Richard Nixon. The San Fernando Valley has been losing its open space, which is important for the wellbeing of the community, and this is important open space that should not be filled with huge heat-attracting elements like a football stadium with lifeless heat-attracting artificial turf, that hardly fulfills the definition of open space according to the EPA’s definition: “Open space is any open piece of land that is **undeveloped (has no buildings** or other built structures) and is accessible to the public. Open space can include:

Green space (land that is partly or completely covered with grass, trees, shrubs, or other vegetation). Green space includes parks, community gardens, and cemeteries.

- Schoolyards
- Playgrounds
- Public seating areas
- Public plazas
- Vacant lots

Open space provides recreational areas for residents and helps to enhance the beauty and environmental quality of neighborhoods. But with this broad range of recreational sites comes an equally broad range of environmental issues. Just as in any other land uses, the way parks are managed can have good or bad environmental impacts, from pesticide runoff, siltation from overused hiking and logging trails, and destruction of habitat. Lack of community and public access to safe open and green space is a critical

area of concern for urban residents” ([https://www3.epa.gov/region1/eco/uep/open\\_space.html](https://www3.epa.gov/region1/eco/uep/open_space.html))

### **Response No. ORG 14A-5**

The comment states that the City’s Open Space Element has not been updated since the Richard Nixon era and that the San Fernando Valley has been losing open space. The Project’s open space and recreational features are consistent with the City of Los Angeles Department of Recreation and Park’s current Citywide Community Needs Assessment for the South San Fernando Valley geographic area and would provide expanded open space and recreational opportunities for the public when compared to existing conditions. The comment, however, does not address the content or adequacy of the Draft EIR and no further response is necessary.

### **Comment No. ORG 14A-6**

Ten San Fernando Valley neighborhood councils voted to support this golf course as a designated Historic Cultural Monument because its loss would be the disappearance of a longstanding community amenity. Disadvantaged kids learn to play golf here and then play on teams at schools like North Hollywood High School. Knowledge of golf helps youth become upwardly mobile later in life when knowing how to play will get them included in circles they might not otherwise easily enter. If the owners do not want to run the facility, it should be purchased by the city and operated as a public park. Funds could be raised to do this -- just as the land near the Hollywood sign was purchased and turned into parkland. The community needs amenities that are open throughout daylight hours, and the Harvard Westlake sports complex would be limited in its public use since the school would have priority for usage times.

### **Response No. ORG 14A-6**

The comment maintains that the golf course has historical importance and that it serves the purpose of providing golf training to disadvantaged youth. Refer to Topical Response No. 6 – Historic Resources, regarding the retention of the Project Site’s character-defining historic features required under the HCM. As noted therein, character-defining features do not include the golf course.

Refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, regarding the continued use of the Project for public recreational activities and the availability of off-site public golf courses. The Project would provide use of on-site recreational facilities by approved community groups and would not preclude the use of the Project for disadvantaged youth and similar organizations. The daytime and evening use of the Project is outlined in Chapter II, *Project Description*, Table II-3, Public Use Days and Hours, page II-34 of the Draft EIR.

## Comment No. ORG 14A-7

The riverside walkway would not be a haven for birds as they would be frightened by the lighting and crowds at the football stadium. Birds don't like to fly over lighted areas. Yet the new oak trees would attract the birds, so the result would be a harmful situation for birds trying to get sustenance from the oaks and scared away when crowds arrive.

## Response No. ORG 14A-7

The comment claims that birds will be adversely impacted by the Project's lighting and crowds at the football stadium (assumed to be the athletic fields, as the Project does not include a football stadium). However, the commenter does not provide any substantive facts or support for these concerns or opinions.

Section IV.C, *Biological Resources*, of the Draft EIR, evaluates impacts to biological resources. The thresholds of significance to determine if impacts to biological resources would occur are shown on pages IV.C-28 and IV.C-29 of the Draft EIR. As shown therein, CEQA requires an analysis of impacts to any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS (Threshold (a)). No sensitive bird species are known to inhabit the Project Site. Under Threshold (d), a project would result in a significant impact if it interferes substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites. This analysis is included on pages IV.C-45 to IV.C-49 of the Draft EIR. Since the Biological Study Area primarily supports ornamental trees and turfgrass, as well as a thin strip of native California brittlebush scrub that was recently restored, the quality of foraging habitat is low. Higher quality foraging habitat occurs in less developed areas with larger expanses of open space. The loss of a limited and isolated area of low quality foraging habitat as a result of the Project would not be expected to impact the foraging of any species. The Project's native landscaping would help to enhance the existing off-site native habitat, as well as the surrounding area, by expanding the habitat, which may benefit wildlife by providing enhanced foraging opportunities; however, this would be for urban adapted species (e.g., that are already tolerant of human activity, lighting, noise associated with urban areas) that are likely to inhabit a limited patch of habitat within a developed area. This includes bird species trying to get sustenance from the oaks. The analysis concluded that Project impacts would be less than significant.

As stated on page IV.C-48, in Section IV.C, *Biological Resources*, under the heading Migratory Species and Native Wildlife Nursery Sites, of the Draft EIR, although portions of the Biological Study Area would have an increase in lighting during hours of outdoor athletic activities that would be focused on fields and tennis courts, these areas do not contain vegetation or have suitable habitat for nesting bird species, and such lighting would be precisely-controlled and result in substantially less off-site illumination and glare as compared to existing conditions. Outside of the field lighting, other areas of the Biological

Study Area would have lighting conditions similar to or less than the existing condition, and field lights and building lights would be shut off each night and the duration of lighting would be shorter every day of the year than existing conditions except for low-level lighting for security and wayfinding purposes or lighting to accent signage and landscaping elements. If present on-site, bird species are already adapted to living in an urbanized setting with the existing night floodlighting on-site, as well as from the adjacent residential and commercial areas and traffic along roads. Thus, indirect impacts to birds from lighting during Project operation would not be significant.

### **Comment No. ORG 14A-8**

*2. Reasons Why the Project is Being Proposed, Notwithstanding Significant Unavoidable Impacts p. VI-5*

*(5) the Project would install a 1-million-gallon stormwater capture and reuse system that would help conserve the City's potable water supply and improve water quality received by the Los Angeles River from VI. Other CEQA Considerations Harvard-Westlake River Park Project City of Los Angeles Draft Environmental Impact Report March 2022 VI-6 the Project Site and a 39-acre, off-site drainage area consisting of single- and multi-family residential uses to the north of the Project Site*

#### **Comment:**

Mature trees provide hydrology as delineated by the forest service: [https://www.fs.fed.us/nrs/pubs/jrnl/2020/nrs\\_2020\\_coville\\_001.pdf](https://www.fs.fed.us/nrs/pubs/jrnl/2020/nrs_2020_coville_001.pdf) Robert Coville, Ted Endreny, and David J. Nowak In fact, as they point out in this white paper, if the new sports artificial turf facility did not install stormwater capture, the result would be flooding, or at best runoff into the river to the ocean. This is the result from the removal of this large number of trees and greenway that absorb rainwater as groundwater. So there really is no benefit to the stormwater capture, just the removal of mature trees that not only already produce hydrology, but according to this paper, also remove air pollution and produce shade.

### **Response No. ORG 14A-8**

The comment claims that the Project's stormwater capture and reuse system would provide no benefit, but presents no facts or credible evidence to justify this claim. Based on comments received by the City, the Project's 1-million gallon stormwater treatment system as analyzed in the Draft EIR has been reduced in capacity to approximately 350,000 gallons to only capture and treat stormwater originating from the Project Site. It will no longer capture water from the 39-acre off site area to the north. See Topical Response No. 2 - Modifications to the Project Design, and corrections to the Draft EIR with the Project design modifications in Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR, for further details of the modified stormwater treatment system.

Under existing conditions, stormwater discharges from the Project Site flows untreated to an inlet(s) that directs water into the Los Angeles River. Because there is no existing treatment system in place at the Project Site, upon Project buildout, fewer contaminants would be transported into the Los Angeles River, which flows to the Pacific Ocean. Since there are currently no existing on-site best management practices (BMPs), stormwater runoff during post-Project conditions would result in improved surface water quality.

Also, as discussed in Section IV.O.1, *Utilities and Service Systems - Water Supply*, of the Draft EIR, per Project Design Feature WS-PDF-2, stormwater and other urban runoff would be captured and treated, where the treated water would be used for on-site irrigation in compliance with the City's LID Ordinance. The Project's stormwater capture and reuse system would reduce water demand from LADWP consistent with numerous local and state policies and ordinances pertaining to water conservation, especially during drought conditions. As the stormwater water capture and reuse system would improve the water quality of stormwater runoff into the Los Angeles River and reduce water demand on LADWP water supplies, the system provides clear environmental benefits.

Furthermore, in addition to replacing many of the exotic or invasive tree species with lower water-demand native species, the Project would retain the majority of mature trees along the edges of the Project Site and the Zev Greenway. The Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 inventoried on- and off-site trees (four of which are deemed dead and, therefore, excluded from mitigation requirements), and plant 393 RIO-compliant trees, resulting in a net increase of 153 trees beyond existing conditions (or a 36 percent increase). Refer to Topical Response No. 5 - Biological Resources/Trees, for additional details on the Project's tree replacement program.

### **Comment No. ORG 14A-9**

*p. VI-6 reduce water demand and the use of pesticides by eliminating ornamental turfgrass in favor of artificial grass*

#### **Comment:**

**“Artificial turf has a negative impact on invertebrates as it cuts off the supply of nutrients into the ground below, effectively creating a desert devoid of worms, centipedes and all the other soil dwellers.”** We are making a deadzone with artificial turf. The existing golf course is habitat for wildlife and can be converted to be irrigated with non-potable water similar to the Griffith Park golf course. This wildlife will die during construction because it will have no open natural space to re-locate to.

### **Response No. ORG 14A-9**

This comment states that wildlife will die during construction and use of the artificial turf fields. The comment does not discuss the content or adequacy of the Draft EIR and, therefore, no further response is necessary.

Nonetheless, as discussed in Section IV.C, *Biological Resources*, of the Draft EIR, CEQA requires an analysis of impacts to any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS (Threshold (a)). As evaluated in the Section IV.C, pages IV.C-32 through IV.C-35 and IV.C.39 through IV.C.42, of the Draft EIR, with implementation of mitigation, the Project would not result in a significant impact on sensitive wildlife species. Common wildlife (i.e., squirrels, rabbits, skunks, worms, centipedes, etc.) that may inhabit at the Project Site are generally adapted to urban environments and would typically temporarily move/relocate to nearby areas, as is common for construction projects in urban areas. Note also that the artificial turf is permeable and would continue to allow moisture into the underlying soil that would support below ground dwelling organisms. With the presence of moisture, the artificial turf athletic fields would not create a “dead zone.” It is possible that some common wildlife species would perish during the construction and operation. However, impacts to common and non-indigenous wildlife species do not meet the significance threshold defined above, as they do not constitute candidate, sensitive, or special-status wildlife species.

### **Comment No. ORG 14A-10**

This EIR assumes pesticides are necessary at the golf course, but the City of Los Angeles does not allow pesticide weedkiller and still manages a successful golf course at Griffith Park.

### **Response No. ORG 14A-10**

The comment states that the Draft EIR incorrectly assumes the advantage of artificial turf as it relates to the disuse of pesticides. Pesticides have been used historically at the Weddington Golf & Tennis facility. Not only is the disuse of pesticides a benefit of artificial turf, but the use of artificial turf would further reduce water demand compared to existing conditions (golf course grass). The reference to no pesticide use at the Griffith Park does not reflect the historical use of pesticides at the Project Site and is not relevant to the Draft EIR analysis.

### **Comment No. ORG 14A-11**

p. VI -6

*The Project would promote compatibility with the surrounding neighborhood through a design that includes mature trees and extensive landscaping along the northern edge of the Project Site; reduces off-site noise effects through placement of recreational facilities internal to the Project Site; installs landscaped walls and berms, and use of canopy structures.*

**Comment:**

The surrounding residential neighborhood does not want the impact of construction – the noise and traffic that will continue once the project is operational. Walls and berms just create heat, and landscape has a harder time surviving in the Valley when it is next to hardscape.

**Response No. ORG 14A-11**

The comment states that the construction of the Project and the Project's operational noise and traffic are unwanted by the surrounding community. The comment does not discuss the adequacy of the Draft EIR and, therefore, no further response to address this comment is needed. Nonetheless, the commenter is referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, for additional discussion of the Project's significant and unavoidable construction noise impacts and less-than-significant operational noise impacts. Also, with regard to transportation/traffic impacts, see Topical Response No. 9 – Transportation and Parking During Construction and Operations. As noted therein, the Project would not result in any significant transportation impacts associated with VMT, transportation plans and policies, hazards, or emergency access or result in non-CEQA required intersection service level (traffic) impacts.

The comment also maintains that walls and berms just create heat, and landscape has a harder time surviving in the Valley when it is next to hardscape. The comment does not provide substantiated facts or evidence to support this claim. The comment also does not acknowledge that the Draft EIR project description states that walls and berms would be landscaped (see page II-28 of the Draft EIR) and, as such, would be less heat generating compared to non-landscaped walls/berms. Regardless, the comment also overestimates the use of hardscape within the Project Site to the extent that it would interfere with the vigor and health of proposed landscaping. It is common for landscaping to be near hardscape, as this occurs under existing conditions on the Project Site and throughout the Project vicinity. Regardless, the comment does not discuss the adequacy or content of the Draft EIR and no further response is necessary.

**Comment No. ORG 14A-12**

*p. VI-7*

*The No Project/No Build Alternative would avoid the Project's significant and unavoidable construction noise impact, but would result in a dormant site and not achieve any of the Project Objectives, including public access.*

**Comment:**

This is not a dormant site as long it continues to operate as a community golf and tennis facility. The current owners have done nothing to promote and attract clientele, yet it is the preferred usage of the community. There are already public swimming pools at Valley

College and Van Nuys/Sherman Oaks Recreational Center, and the usage time for the public at Harvard Westlake would be limited hours, likely not at the time people desire since the school has first rights to it. Not sure what the public would do with the football stadium except pay money to Harvard Westlake to hold high school football games. Do we need such a big complex to have a rock climbing wall for the community? Harvard Westlake already has swimming pools, a football field, and parking on its campuses. That should satisfy their need without overbuilding away from their campus.

## **Response No. ORG 14A-12**

The comment claims that the Project Site would not be a dormant site under the No Project/No Build Alternative and expresses the commenter's opinions on the use of the Project Site. Please refer to Topical Response No. 13 - Need for Project (Non-CEQA), for additional discussion of the School's purpose for the Project. Additionally, as the owner of the property, the School has the right to request a use of its choice and has chosen to develop its private property with public use facilities. The comment does not discuss the content or adequacy of the Draft EIR and no further response is necessary.

## **Comment No. ORG 14A-13**

*pp VI-7,8*

*The Project would necessarily consume limited, slowly renewable and non-renewable resources. This consumption would occur during the construction phase of the Project and would continue throughout its operational lifetime. Project development would require a commitment of resources that would include: (1) building materials, (2) fuel and operational materials/resources, and (3) the transportation of goods and people to and from the Project Site. Project construction would require the consumption of resources that are nonreplenishable or may renew so slowly as to be considered non-renewable. These resources would include the following construction supplies: certain types of lumber and other forest products; aggregate materials used in concrete and asphalt such as sand, VI. Other CEQA Considerations Harvard-Westlake River Park Project City of Los Angeles Draft Environmental Impact Report March 2022 VI-8 gravel and stone; metals such as steel, copper, and lead; petrochemical construction materials such as plastics; and water. Furthermore, nonrenewable fossil fuels such as gasoline and oil would also be consumed in the use of construction vehicles and equipment, as well as the transportation of goods and people to and from the Project Site.*

### **Comment:**

The world is having a building sand shortage because as this article explains desert sand is not usable for building, only beach sand. <https://www.bbc.com/future/article/20191108-why-the-world-is-running-out-of-sand>

Sand is needed for building cement, and we should reserve it for needed housing, not discretionary building. We cannot sacrifice beaches and allow oceans to rise so kids can

have an extra football stadium and swimming pool. We as citizens of the world have to live within our means, environmentally.

### **Response No. ORG 14A-13**

The comment claims a shortage of sand and that available beach sand should be reserved for housing, not discretionary building. The comment does not provide facts or substantial evidence to dismiss the need or value of the Project or show the environmental consequences of the use of sand in Project construction. Further, the comment does not discuss the adequacy of the Draft EIR and, therefore, no further response is necessary.

### **Comment No. ORG 14A-14**

*p. VI-8*

*At the same time, as a result of the School's mandatory student and employee shuttle bus program, and use of shuttle buses for large gatherings that would potentially exceed on-site parking, the Project would reduce reliance on private automobiles, vehicle miles traveled, and the consumption of non-renewable resources when considered in a larger context. Most notably, the Project would reduce the vehicle miles generated by the existing golf and tennis club and, thus, reduce the related consumption of renewable resources, among other goals.*

#### **Comment:**

Soon all future vehicles sold in California will be electric and the City is on its way to 100% renewable energy, private cars will have not the same sort of impact in coming years. Plus the patronage at the golf and tennis facility will be far fewer than the number of people that attend a sporting event.

### **Response No. ORG 14A-14**

The comment states that the City of Los Angeles will have 100 percent renewable energy and that private cars will not have the same sort of impact in the upcoming years. While the City of Los Angeles is shifting to renewable energy sources and cars are becoming less gasoline based, and more electric, the comment does not provide facts or substantial evidence to support the assertion that the City of Los Angeles will soon be 100 percent renewable energy nor facts that address the adequacy of the Draft EIR analysis. Therefore, no further response is needed.

### **Comment No. ORG 14A-15**

*pp. VI-10, 11*

*b) Biological Resources Mitigation Measures BIO-MM-1 through BIO-MM-3 require the restoration or protection of sensitive plant and animal species and habitat, including nesting birds, the western yellow bat, and City-protected and non-protected significant*

*trees and shrubs. These VI. Other CEQA Considerations Harvard-Westlake River Park Project City of Los Angeles Draft Environmental Impact Report March 2022 VI-11 mitigation measures would reduce impacts on species to a level of less than significant. Because these requirements would apply only to plant and animal habitat and trees within the Project Site, within the public street right-of-way adjacent to the Project Site, or adjacent to the Zev Greenway, the implementation of these mitigation measures would not result in secondary environmental effects at neighboring residential properties or within the broader community.*

**Comment:**

Construction will scare the existing wildlife and it will not have anywhere to go during construction. Tall trees attract raptors and these larger birds do not nest in the smaller trees. Two other nearby construction projects at the Sportsman's Lodge and the Sunkist Building have removed hundreds of very tall trees. This project adds a nail to the coffin of these species for this area. Three billion birds have been lost in North America between 1970 and 2019, much of it due to habitat loss ([https://www. Nationalgeographic.com /animals/article/three-billion-birds-lost-north-america](https://www.Nationalgeographic.com/animals/article/three-billion-birds-lost-north-america)). This project would make a new contribution.

**Response No. ORG 14A-15**

The comment claims that construction will scare the existing wildlife and wildlife will not have anywhere to go during construction. Refer to Response No. ORG 14A-9 for a discussion of impacts to wildlife during construction.

In addition, impacts to wildlife movement and corridors and nesting birds are analyzed on pages IV.C-45 to IV.C-49 of the Draft EIR. As discussed therein, any on-site species affected by construction are already adapted to urban environments from the development, disturbances, and human activities currently existing on-site and in the vicinity of the Biological Study Area. On-site species have mobility and would have access to forage in open space areas adjacent to the Los Angeles River or nearby neighborhoods with abundant trees. Although implementation of the Project would result in temporary disturbances associated with construction to local wildlife movement within the Biological Study Area, such as the daily foraging of resident wildlife on-site, those species adapted to urban areas would be expected to persist on-site following construction. Higher quality foraging habitat occurs in less developed areas with larger expanses of open space to which some highly mobile species would have access. The loss of a limited and isolated area of low-quality foraging habitat as a result of the Project would not be expected to impact the foraging of any species. It should also be noted that Project landscaping would consist entirely of native tree and plant species that would provide greater foraging opportunities for animal species after construction. For raptors, 181 mature trees would be retained. Although indirect impacts to nesting birds and roosting bats during construction and tree removal may result in behavioral changes and could cause unsuccessful breeding opportunities, construction activities would be temporary and

intermittent. In addition, Project Design Feature BIO-PDF-1 (see page IV.C-30 and IV.C-31 of the Draft EIR) would provide protection for nesting birds and the implementation of Mitigation Measure BIO-MM-1 would address potential impacts to western yellow bat roosting habitat. As discussed in Section IV.C, *Biological Resources*, of the Draft EIR, with the implementation of the project design feature and mitigation measure, impacts to on-site wildlife during construction would not be significant.

### **Comment No. ORG 14A-16**

In conclusion, this project is not what the community needs but what a privileged private school wants to impose. They are trying to mitigate by planting trees at the river in a plan questioned by horticultural environmental planting experts and LA Audubon board members. Does purchasing land, not even adjacent to one's existing facility, allow whatever development they choose?

### **Response No. ORG 14A-16**

The comment claims that the Project is trying to mitigate the effect of the Project by planting trees at the Los Angeles River. The comment does not discuss the adequacy of the Draft EIR and, therefore, no further response is necessary. Nonetheless, the proposed tree planting program is not a mitigation measure but an implementation of enforceable LAMC and RIO District Ordinance requirements. As the property owner, the School is entitled to request the use of the Project Site for a needed expansion of its own athletic and recreational uses within the parameters set by the LAMC. Refer to Topical Response No. 13, Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

### **Comment No. ORG 14A-17**

This is a residential community that saw the golf and tennis as more of a playground with welcome open space. They did not envision a monster facility that draws heat, traffic and noise, plus removed the existing trees and vegetation that were cleaning the air, providing wildlife habitat and mitigating heat island effect. Even after the trauma of building, what the community will be left with is far worse than what was sacrificed. A successful realtor once told me that people want to come home to peace and quiet. Would you want a big walled sports complex built next to you, or would you prefer to have trees growing in a relatively quiet golf course with a few tennis courts that you knew were there when you moved to the neighborhood? This draft EIR misses a lot of import issues. Let's do the right thing for the environment and not approve this unnecessary detrimental project.

### **Response No. ORG 14A-17**

The comment provided general opposition to the Project, citing impacts regarding traffic noise, heat island effects, and loss of trees. The commenter's opposition to the project is noted. The environmental issues regarding trees and the heat island effects are addressed in Topical Response No. 5 – Biological Resources/Trees, and the issues

regarding traffic and noise are addressed in Topical Response No. 8 – Noise: Construction and Operation Impacts, and Topical Response No. 9 – Transportation and Parking During Construction and Operations. As described in these topical responses, the Project would not result in significant heat island or operational traffic and noise impacts. Because the comment does not raise any specific comments on the adequacy or content of the Draft EIR, no further responses is necessary.

## **Comment Letter No. ORG 14B**

Shelley Billik  
Chair  
LA Community Forest Advisory Committee (CFAC)  
Received May 10, 2022

### **Comment No. ORG 14B-1**

We strongly oppose Harvard-Westlake School's planned project and destruction of Weddington Golf & Tennis, which would include the destruction of hundreds of trees. In these times when climate change is already promising more frequent and intense heat waves coupled with a state of extreme drought, it is more critical than ever to be protecting, better caring for, and growing our existing urban tree canopy - for our health and our very existence.

### **Response No. ORG 14B-1**

The comment expresses opposition to the Project based on the removal of trees. The comment does not discuss the adequacy of the Draft EIR and, therefore, no further response is needed. However, see Topical Response No.5 – Biological Resources/Trees, for a discussion of impacts to on-site trees. Also, refer to Response Nos. ORG 6A-1 and ORG 6B-2, which discuss how the Project would result in an increased tree canopy after nearly 10 years and long-term carbon sequestration increases compared to existing conditions, which support the fact that the Project would not result in increased temperatures on the site and within the surrounding neighborhood.

### **Comment No. ORG 14B-2**

Any promise of planting new trees paints a picture of small saplings that take decades to grow, require a lot more irrigation and maintenance, and are not guaranteed to survive. We don't have 20-30 years to wait until we "replace" the shade, clean air and carbon sequestration. And where does the wildlife go in the meantime??

### **Response No. ORG 14B-2**

The comment raises concerns over the time the replacement trees will take to mature, and related air quality and carbon sequestration effects as well as impacts to wildlife. For a discussion of the Project's tree replacement program refer to refer to Topical Response No. 5 – Biological Resources/Trees. See Response No. 14B-1 which discusses the Project's tree canopy and carbon sequestration benefits. Also, refer to Section IV.C, *Biological Resources*, of the Draft EIR for the analysis of the Project's impacts on wildlife. As described therein, the implementation of Mitigation Measure BIO-MM-1 and Project Design Feature BIO-PDF-1 (as provided in Chapter 4, *Mitigation Monitoring Program*, of this Final EIR) would reduce impacts to wildlife or prevent adverse impacts on wildlife.

### **Comment No. ORG 14B-3**

Building 12-foot walls, installing artificial turf and towering light poles guarantees that all the ecosystem services currently provided by this historical, cultural, and environmental haven, will be gone forever.

### **Response No. ORG 14B-3**

The comment states that the Project's walls, artificial turf, and light poles would cause the permanent loss in the property's ecosystem. The commenter is not clear as to what specific issues would be impacted pertaining to "ecosystem services". The comment does not discuss the adequacy or content of the Draft EIR and no further response is necessary.

Nonetheless, the commenter is referred to Section IV.C, *Biological Resources*, of the Draft EIR, with supporting data provided in Appendix D, Biological Resources Technical Report, of the Draft EIR. As analyzed therein, biological resources impacts from the whole of the Project, including its use of walls, artificial turf and its proposed lighting program, would be less than significant with mitigation, where applicable.

Note that modifications to the Project design would update the Project's lighting program. See Topical Response No. 2 – Modifications to the Project Design, and Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, for a detailed discussion and analysis of these Project design modifications. As evaluated in Final EIR Appendices B.1, Supplemental Lighting Report Memorandum, and B-1 Supplemental Lighting Report Appendices, the Project with design modifications would reduce the total number of outdoor light poles from 39 to 22 poles. Although some of the poles would be taller than the original design, the reduction in total lighting would generally reduce overall ambient light levels (see Topical Response No. 4 - Aesthetics). Note also that under the Project, the field lights would be turned off at 8:00 p.m. and tennis court lights would be turned off at 9:00 p.m. Under existing conditions, tennis court lights, which generate higher glare and illuminance levels than under the Project's total lighting program are turned off at 10:00 p.m. and existing driving range lights are turned off at 11:00 p.m.

### **Comment No. ORG 14B-4**

This project hinges on the granting of a Conditional Use Permit (CUP) and since the proposed plan does not satisfy the necessary conditions, a CUP should absolutely NOT be granted.

### **Response No. Form 14-B4**

The statement that the Project does not satisfy "necessary conditions" to grant a CUP is not founded in substantiated facts cited and represents the opinion of the commenter. Also, please note that most public and private schools in the City of Los Angeles operate under a CUP in accordance with LAMC Sec. 12.24.T.3(b), which allows school uses in residential and agricultural zones. The comment, however, is primarily a request for

project disapproval. The comment does not discuss the adequacy or content of the Draft EIR and no further response is necessary.

### **Comment No. ORG 14B-5**

It's shocking that Harvard-Westlake would consider spending \$100 million on a sports complex for a privileged few, when hundreds of thousands of students citywide are lacking the most basic tools needed to succeed. Therefore, we urge Harvard-Westlake to move its proposed complex to a more cost-effective alternative site, like the nearby Los Angeles Valley College, which the School has previously used for its tennis operations – even recently refurbishing the College's tennis courts. With this good neighbor gesture, Harvard-Westlake would not destroy a beloved community asset, but rather, provide for the community and service a much wider area by improving facilities at Los Angeles Valley College.

We join more than 14,000 community members who have signed a petition supporting the preservation of the 16-acre Weddington property in its entirety. These individuals are counting on you to deny approval of the CUP and certification of the DEIR.

Thank you for your time and consideration of this most important matter.

### **Response No. ORG 14B-5**

The comment requests Harvard-Westlake to develop the Project on alternative site locations, such as nearby Los Angeles Valley College. The comment does not raise any issues with respect to the content and adequacy of the Draft EIR nor present any facts to establish that the use of an alternative site is feasible, would meet most of the Project's objectives, or would avoid the Project's significant and unavoidable temporary construction impacts. As such, no further response is necessary.

Nonetheless, refer to Response No. Form 4-6 regarding the comment's mischaracterization of the nature of the Project as a "sports complex" intended only for Harvard-Westlake students.

The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

The commenter is also referred to Subsection 4, Alternatives Considered and Rejected, on pages V-5 to V-7, in Section V, *Alternatives*, of the Draft EIR. This subsection includes an evaluation of alternative project site locations that were considered and rejected for additional study in the Draft EIR's evaluation of Project alternatives. As analyzed therein, no feasible off-site locations were identified that would allow significant effects of the Project to be avoided or substantially lessened. For additional discussion of the Project's adequacy of alternatives in the Draft EIR, refer to Response Nos. ORG 1B-105, ORG 1B-106 and ORG 7A-146 to ORG 7A-176.

## **Comment Letter No. ORG 14C**

Katherine Pakradouni  
Council District 4 Representative  
Community Forest Advisory Committee  
Received May 5, 2022

### **Comment No. ORG 14C-1**

I'm the CD4 representative on the Community Forestry Advisory Board and I am writing in opposition to Harvard Westlake's plans to demolish Weddington Golf and Tennis.

This project will be detrimental to the quality of life of the many Angelenos who enjoy it and reside near it. This area is a gem for being an inexpensive, open-to-the-public recreation area, a quality that will be lost if the project moves forward.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The reduction of open space and destruction of old heritage trees in the area will worsen our climate crisis and is the exact opposite of the pressing environmental needs of this city.

Please deny permission to build this project.

### **Response No. ORG 14C-1**

This comment provides similar comments presented in Form Letter 3. Please refer to Response Nos. FORM 3-1 to 3-4.

## **Comment Letter No. ORG 15**

Eric Dodson  
President  
Los Angeles Tennis Association  
Received May 7, 2022

### **Comment No. ORG 15-1**

Please accept and review the attached letter from the LOS ANGELES TENNIS ASSOCIATION as our organization's official position on the above listed report.

This matter is very near and dear to our collective hearts, and extremely vital to the future of our organization; when you have time to respond, we would love to hear from you.

### **Response No. ORG 15-1**

The comment introduces an attached letter but does not comment on the adequacy of the Draft EIR. As such, no further response is necessary.

### **Comment No. ORG 15-2**

My name is Eric Dodson. I am the current President of the Los Angeles Tennis Association and I, myself, have been a member of this amazing and necessary organization since 1994. We are the locally organized club of LGBTQ+ and LGBTQ+ friendly tennis players who live in and around the greater metropolitan Los Angeles area. Our organization has been in existence since 1978. As of today, we have 358 members registered for 2022, a number that renews and grows each year as our yearlong roster of seasonal activities take place. I anticipate we will be well above 450 members and climbing by the Summer.

### **Response No. ORG 15-2**

The comment introduces the Los Angeles Tennis Association with a description of its membership. The comment does not discuss the adequacy or content of the Draft EIR and, therefore, no further response is necessary.

### **Comment No. ORG 15-3**

Last year at this time we were 225 members. I attribute the burgeoning of our membership in 2022 to the Covid-19 LA County shutdown of all sports activities for most of 2020 and 2021, which included literal padlocks put on county-wide tennis facilities private and public. Tennis was one of the first sports whereupon the restrictions got lifted slowly in Spring of 2021. From that benchmark forward, what we've witnessed is former non-tennis folks recognizing that tennis is one of the safest sports around when it comes to preventing the spread of a virus, and so the greater LA community suddenly "discovered" the sport like I have never seen before. Initially it was our established members coming

back and looking for our tennis leagues and tournaments they have become accustomed to, but then we saw this large influx of new members by Summer's end 2021. At that time, me and my fellow Board Directors scrambled like crazy to bring organized tennis up to the level of the newfound demand for it. We were half successful, thanks to the Burbank Tennis Center and the Weddington Golf & Tennis Center. Our biggest stumbling block in this endeavor was--and still is--finding available courts. LATA has been around a long time, we have relationships with many tennis facilities in LA (including the City court system), but there are only a handful that can accommodate our need for more than 4 courts per day at an event for our tennis leagues and tournament play. Throughout the year LATA organizes 4 to 6 leagues on different days and evenings of every week (at different sites including Weddington depending on their ability to accommodate our numbers), ranging from 16 to 48 players in each league; tournament play is on top of that.

### **Response No. ORG 15-3**

The comment contains background information on the LATA and discusses its challenges finding available tennis courts to meet its needs. The comment does not discuss the adequacy or content of the Draft EIR and, therefore, no further response is necessary.

### **Comment No. ORG 15-4**

LATA just hosted in April a National "Open" Tournament (we have this event every year and have had this event since the '80s utilizing Weddington Golf & Tennis); "open" in this case means open to players worldwide. So this year's tournament drew more than 230 LGBTQ+ participants (up from the expected 150) coming from cities such as San Diego, Vancouver, Houston, Dallas, Washington D.C, New York, London, Dublin, Sydney, etc. We were able to host this wonderful event, because Studio City has a beautiful (and historic) tennis facility to accommodate half of it. The out-of-town guests are always amused by--and readily identify our cool LA tournament by--the signature Weddington mid-century modern golf ball light posts. (I remember those giant golf balls from when I was 14 being taught to play golf there in 1975 by my grandfather.) We would not have been able to have the tournament this year if Weddington were not available to us.

### **Response No. ORG 15-4**

The comment contains background information on the LATA and discusses its tournament held at Weddington this past year. The comment does not discuss the adequacy or content of the Draft EIR and, therefore, no further response is necessary.

### **Comment No. ORG 15-5**

One more relevant anecdote from my past year: around September-October every year a collection of Pacific Coast cities organize four different levels (meaning four events) of a fun yet very meaningful LGBTQ+ friendly competition that pits the likes of teams from San Francisco, Portland, Seattle, Vancouver, San Diego and Los Angeles to play against each other for bragging rights and the year's trophy. LATA was in rotation to host two of

the four events in 2021. I went on my search for courts; mind you this is five months prior to September. My first go-to sites for such events are Burbank Tennis Center and Weddington, not just because these two sites can provide the 8 courts per day we would need, but because these facilities have the best layout for team and fan viewing. Burbank was booked (LATA has had to scratch and claw for our piece of the LA court allotment with tennis pros, USTA, and other tennis organizations who are also seeing the incredible uptick in tennis popularity); even Burbank's high school courts were booked. Weddington was also booked solid for the same reason. I scrambled, negotiating with Glendale, Beverly Hills (La Cienega), Arroyo Seco, even trying to parcel the events into separate locations with LA City. Nothing available. I finally had to rely on El Dorado Park in Long Beach. Our two "LA hosted" events were exported to Long Beach, which is not the end of the world, but because of the inconvenience and the lack of accessibility to all the uniqueness that LA city offers guests, this will result in less interest the next time we host, if any interest at all.

### **Response No. ORG 15-5**

The comment contains background information on the LATA and discusses its challenges finding available tennis courts to meet their needs. The comment does not discuss the adequacy or content of the Draft EIR and, therefore, no further response is necessary.

### **Comment No. ORG 15-6**

Ms. Henry, these are the major problems our long running community service organization sees with the Harvard Westlake proposal as described in the recent DEIR:

1) The stated reduction from 16 to 8 of publicly-available tennis courts. As a ground zero participant, LATA recognizes that there is a larger community of tennis organizers and teaching pros in the LA area beyond our membership that share the Weddington courts. It is my understanding that nearly 100,000 Angelinos of all backgrounds and from across the San Fernando Valley and City of Los Angeles use the site each year. Common sense from our own recent significant rise in new member tennis players indicates that that number will have increased by year-end 2022. If the proposed development is approved for the primary benefit of say ~900+ Harvard-Westlake School students, there is no comparison to the loss of court hours to the tens of thousands of community members who are making use of them now, some of whom (like our organization) have been relying on them since the 70s. From a larger community standpoint, LATA does not believe this transference of benefit is in the best interest of community sports organizations, the general public and even the neighboring residents; it quite frankly doesn't make good planning sense.

### **Response No. ORG 15-6**

The comment maintains that with the reduction from sixteen courts to eight courts, the Project would not be in the best interest of community sports organizations, the general public or even the neighboring residents.

Refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, which addresses tennis activities on the Project Site. As discussed therein, the Project would have adequate capacity to accommodate the same weekly number of tennis court sessions as the current Weddington Golf & Tennis facility.

In addition, use of the tennis courts would be by reservation when they are not in use by the School. The reservation system would ensure no conflicts with the School's use and would ensure the availability of the tennis courts to the public. Furthermore, the School has indicated that it would continue, as it does at present, to make blocks of eight courts available for league or tournament play. It is noted that the existing facilities are not used to their capacity throughout much of the week. Because the Project's tennis courts would not be a commercial enterprise through which the School receives its financial support, the School has the option to book the entire eight courts to a public organization, such as LATA.

### **Comment No. ORG 15-7**

2) Although the DEIR lists alternate "tennis courts in the East San Fernando Valley available to the public," the average number of courts at those facilities is 4.4. As stated above, organizations like ours provide larger, unique, socially-formatted tennis opportunities for our LGBTQ+ members who benefit and need that kind of community bond, who have sought us out for these larger activities, which also provide-most importantly-that safe haven our community relies on. I have demonstrated above that 4 courts per event does not work for our tournaments and for the larger scale leagues we produce. We use the LA City facilities as best we can for pretty much all of our events that can fit into their limited court availabilities (severely reduced by teaching pro concessions and a minimum of courts blocked to organizations for single reservation seekers). But for our moderately grander tennis competitions, events LATA has been organizing regularly for over 40 years now in LA, we rely on the 8-court-block facilities of which there are only three remaining in our commutable area that will let us reserve, Weddington is one of the three (and with the other two-just like with Weddington-we have to fight to get those court hours with so many other organizers).

### **Response No. ORG 15-7**

The comment states that the LATA organization needs an 8-court-block facility to conduct its tournaments and that there are insufficient other facilities that would accommodate their needs. These concerns appear to be related to the specific needs of LATA and do not address the adequacy of the Draft EIR. Nonetheless, the Draft EIR does analyze the availability of other tennis courts and the Project's impact on recreational facilities. Moreover, as discussed in Response No. ORG 15-6, upon Project completion, LATA would have access the tennis courts by using the reservation system, including the ability to book all eight courts.

### **Comment No. ORG 15-8**

3) The DEIR claims the proposed high school sports complex would be able to continue to host league matches "as under existing conditions". Simple common sense says that is misleading and in practice is not possible. A reduction from 16 to 8 courts available to the public means that organizations would never be able to book an 8-court-block for an event. Historical precedent has shown that facilities would never allow reservation of their entire inventory to one organization on a given day or weekend. The 16 courts that Weddington has now allows for an 8-court booking with room to spare for the city residents, teaching pros, and the like.

### **Response No. ORG 15-8**

The comment speculates that organizations have not in the past and would not under the Project, be able to book all eight of the Project's tennis courts. As discussed in Topical Response No. 11 - Recreation: Golf and Tennis Facilities, the eight new courts, would be able to accommodate the same number of weekly tennis sessions as under existing conditions. See also Response No. ORG 15-6, which indicates that block reservations for all eight courts would continue to be available through the use of the reservation system. The comment does not discuss the adequacy or content of the Draft EIR and, therefore, no further response is necessary.

### **Comment No. ORG 15-9**

4) Finally, in the DEIR, there are multiple disclaimers and pre-conditions for use of the proposed project's "facilities" for the non-Harvard Westlake users, more specifically there is wording regarding access to facilities that says "when not in use by School" and "for pre-approved organizations." These limitations are in stark contrast to the publicly available amenities at Weddington Golf & Tennis which have always been open to all community members without restrictions of any kind at any time. Beyond the hoops we believe we will have to jump through to secure the use of their courts, this leads us to believe that Harvard Westlake is truly not open to the use of these facilities to outside organizations, and would use each and every tiny disclaimer as a reason to deny access, or deny a court booking. This, furthermore, alerts us to the insincerity behind their stated intentions: that they want to preserve the community's access to a well-utilized, thriving, beneficial and vital sporting complex which--by the way--we have had and have used for half a century now.

### **Response No. ORG 15-9**

The comment speculates that the requirements for use of the tennis courts would make it difficult for the commenter's organization to use the facilities and states that there are currently no restrictions on their use of the tennis courts. This assertion does not present any facts to support a contention that the Draft EIR's analysis of Project impacts to recreational facilities is inadequate; therefore, no further response is necessary. Nonetheless, see Response No. ORG 15-8 which indicates that the Project would have

adequate capacity to accommodate the current weekly number of tennis court sessions as the existing Weddington Golf & Tennis facility. In addition, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access, the rationale and mechanism by which public groups may be pre-approved, and use of the Project Site, including tennis facility use, and a discussion of the School's commitments to public access and shared use of recreational facilities as set forth in the Draft EIR.

### **Comment No. ORG 15-10**

Ms. Henry, the bottom line is there are just not enough tennis facilities in LA (facilities uniquely set up for the larger scale tennis designs of a massive multi-cultural metropolis which has impeccable tennis weather like LA) for all the newfound tennis enthusiasm going on (which is here to stay), for us to lose the accessibility to this reliable and iconic (especially to us) site that is the Weddington Golf & Tennis Center. Right now as it is our League Director has to cut our leagues back in numbers because we cannot accommodate everyone who signs up, and that is with Weddington still at our disposal. I don't know what we will do without it. Honestly, we have wait lists for leagues longer than our acceptance lists. LATA (and many of the other non-LGBTQ+ organizations with court needs) will lose the ability to host tournaments in the LA area, and ultimately anywhere, without Weddington's courts.

On behalf of our entire membership, please, Please, PLEASE do what you can to keep at least the tennis sector of the Weddington Golf & Tennis Center "as is" and accessible "as is" to our community.

Thanks for listening.

### **Response No. ORG 15-10**

The comment expresses opposition to the Project and requests that the tennis courts remain as is and accessible to the LATA community. The comment does not discuss the adequacy or content of the Draft EIR, as such, no further response is necessary.

However, the comment that future use of the Project Site by LATA would be severely curtailed under the Project is not demonstrated by fact and is counter to the findings in Section IV.L.3, *Public Services - Parks and Recreation*, of the Draft EIR. Refer to Responses No. ORG 15-6 to ORG 15-9 above for a discussion of the Project's proposed tennis facilities, which demonstrates that the Project would accommodate existing tennis demand through its proposed tennis facilities and reservation system.

## **Comment Letter No. ORG 16**

Kenji Thielstrom  
Area League Coordinator – San Fernando Valley  
United States Tennis Association, Southern California  
Received May 9, 2022 (attached letter dated May 8, 2022)

### **Comment No. ORG 16-1**

Please find attached my concerns regarding the Harvard-Westlake River Park Project.  
Thank you!

### **Response No. ORG 16-1**

The comment introduces an attached letter but does not comment on the adequacy of the Draft EIR. As such, no further response is necessary.

### **Comment No. ORG 16-2**

We respect the fact that Harvard-Westlake has purchased and now owns the Weddington Golf & Tennis property in Studio City, and that they intend to convert it into a recreational and athletic facility for use by both Harvard-Westlake and the public.

We are not opposed to this idea, however we are alarmingly concerned about two significant aspects of their plan:

1. The 50% reduction in the number of tennis courts (from 16 to 8).
2. The FAQ statement that the courts will only be available to the public "when they are not in use by Harvard-Westlake."

### **Response No. ORG 16-2**

The comment introduces two concerns, the reduction in tennis courts and the caveat that public use would be restricted to when the facilities are not in use by Harvard-Westlake. Regarding the reduction in the number of courts, please refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, which states that the Project would have adequate capacity to accommodate the same number of weekly tennis court sessions as the existing Weddington Golf & Tennis facility. See also Response No. ORG 15-6, which indicates the Project's reservation system would also accommodate use of the tennis courts when they are not in use by the School. This includes concurrent use with the School when any courts are free, similar to existing conditions.

### **Comment No. ORG 16-3**

While we understand the need to prioritize use by Harvard-Westlake, the even further restriction of public access due to the 50% reduction of courts will strike a debilitating blow to the San Fernando Valley tennis community.

For a bit of perspective, it should be noted that the Weddington Tennis Center is the only major public tennis facility in the core San Fernando Valley area (within the 4-mile radius west to the 405 and east to the I-5) that includes the communities of Sherman Oaks, Van Nuys, Studio City, North Hollywood, West Burbank, and Toluca Lake.

Weddington is the central tennis hub for this core area, where the public can reserve courts for a nominal fee, where tennis pros conduct lessons, and where the USTA (U.S. Tennis Association) uses it as their home court for 7 teams currently active in league play.

### **Response No. ORG 16-3**

The comment expresses the concern that the reduction in courts would strike a debilitating blow to the San Fernando Valley tennis community. Since the comment does not discuss the adequacy or content of the Draft EIR, no further response is necessary. Nonetheless, refer to Response No. ORG 16-2, which discusses how the tennis courts will continue to accommodate public use and demand.

### **Comment No. ORG 16-4**

Harvard-Westlake's testimonial that "Tennis will still be open to the public in the manner that it is now" disingenuously ignores the severe consequences of what will actually result, specifically:

- Far less public access due to the 50% reduction in the number of courts, and restricted hours for use of the courts.
- Elimination of the facility as an option for tennis pros to teach, because priority will be given to individual players for the limited number of courts.
- Elimination of the facility as a home court for USTA teams, who require 3 to 5 courts at a time for their league matches, which is probably too big of an "ask" considering there would only be 8 total courts.

### **Response No. ORG 16-4**

The comment expresses concern that the 50 percent reduction in courts would restrict tennis use, that the option as a facility for tennis pros to teach would be reduced, and that the facility could not function as a home court for USTA teams. Since the comment does not discuss the adequacy or content of the Draft EIR, no further response is necessary. Nonetheless, refer to Response No. ORG 16-2, which discusses how the tennis courts will continue to accommodate public use and demand.

### **Comment No. ORG 16-5**

Harvard-Westlake's Environmental Impact Report (Table IV.L.3-4) suggests there are plenty of other courts in the area to accommodate the spillover from displaced Weddington players, pros and leagues; but closer scrutiny reveals the following:

They cite 16 options, which include high schools, recreation centers, and parks. However 14 of those 16 facilities are very small, with only 2-5 courts, and our own site visits have revealed these courts to be either already operating at full capacity, or inconveniently distant, or simply in poor condition and uninviting.

The Van Nuys / Sherman Oaks Tennis Center has 8 courts, but it is also constantly booked and abundantly used by local private schools; and the Balboa Tennis Center in Encino (with 16 courts) is also heavily used, and indeed is already the home court for 10 of our USTA league teams, not to mention being west of the 405 and therefore not a nearby “neighborhood” hub for those accustomed to the convenience of the Weddington courts.

Other large public tennis facilities in the Valley that are NOT cited in the Environmental Impact Report include the Warner Tennis Center, but that is quite distant in Woodland Hills; and then there’s the Burbank Tennis Center, but that’s a bit distant too – east of the I-5 – and is also already at capacity with little room for additional spillover from Weddington refugees.

On top of all this, we have seen an explosion of interest in tennis since the Covid pandemic (tennis is one sport where you stand at a distance from your opponent), further exacerbating our need for MORE courts, not less.

### **Response No. ORG 16-5**

The comment states that many of the referenced tennis facilities in the Draft EIR Table IV.L.3-4 are either already operating at full capacity, inconveniently distant, or in poor condition and uninviting. The list of facilities in Table IV.3-4 is provided to describe the tennis facilities in the San Fernando Valley with public access. The commenter’s experiences and sentiments of the various court facilities are noted. However, the comment does not provide any substantive facts or evidence that affect the analysis or conclusions in the Draft EIR. Refer to Response No. ORG 16-2 which discusses how the Project would meet the weekly demand experienced in recent years for the existing sixteen tennis courts.

### **Comment No. ORG 16-6**

In conclusion, we ask only that the number of tennis courts NOT be reduced from 16 to 8, and that they find a way to modify their plans to accommodate this need. One suggestion... do they really need two soccer fields, when their football field at their home campus on Coldwater Canyon is also marked off as a soccer field, giving them 3 total soccer fields?

### **Response No. ORG 16-6**

The comment expresses opposition to the Project’s reduction in tennis courts, requests that the 16 existing tennis courts remain, and questions the need for two soccer fields on

the Project Site (as well as a third field at the Upper School campus). The comment does not discuss the adequacy or content of the Draft EIR and, as such, no further response is necessary.

Nonetheless, the fields would be versatile and would accommodate a range of field sports, including field hockey, lacrosse, soccer, other field activities and, at Field B, which includes a running track, the field would accommodate track and field sports. These sports are not specifically seasonal and the fields would include simultaneous use associated with games, practices and intramural events.

As also discussed in Topical Response No. 11 - Recreation: Golf and Tennis Facilities, the existing public demand for tennis is 638 sessions per week. As evaluated in detail in Topical Response No. 11, the Project with eight tennis courts would be able to provide 664 tennis sessions per week to accommodate the same number of existing sessions. In addition, the commenter is also referred to Topical Response No. 13 – Need for Project, for a discussion of the rationale as to why the School is proposing the Project.

## **Comment Letter No. ORG 17**

Craig Kessler  
Director of Public Affairs  
Southern California Golf Association  
Received May 9, 2022

### **Comment No. ORG 17-1**

Attached please find a set of comments that the Southern California Golf Association (SCGA) is filing re (DEIR) ENV- 2020-1512-EIR Harvard Westlake Riverpark Project. If you could simply confirm that you have received and included them in the file accompanying the DEIR, it would be much appreciated.

### **Response No. ORG 17-1**

The comment introduces the SCGA's comments on the Draft EIR. The comment does not discuss the adequacy of the Draft EIR and, therefore, no further response is necessary.

### **Comment No. ORG 17-2**

#### **Identity of Commenter:**

The Southern California Golf Association (SCGA) is a 123-year-old non-charitable nonprofit corporation incorporated under the laws of the State of California to provide certain public benefits to 446 golf courses, 1,250 member clubs and 187,000 individual members. While the Association's offices are in the Studio City neighborhood of Los Angeles, the SCGA is very much a region-wide organization. The following comments are submitted on behalf of the entire organization.

### **Response No. ORG 17-2**

The comment introduces the SCGA and provides a brief description of the organization. The comment introduces the SCGA's comments on the Draft EIR on behalf of the SCGA organization but does not discuss the adequacy of the Draft EIR. As such, no further response is necessary.

### **Comment No. ORG 17-3**

#### **Section IV.L.3 – Public Services/ Parks and Recreation**

(DEIR) ENV-2020-1512-EIR Harvard Westlake Riverpark Project provides an inaccurate and inadequate project description, as well as an inaccurate and incomplete picture of the potential environmental impacts of the proposed project as it relates to "public services/parks and recreation." The DEIR requires augmentation by credible 3<sup>rd</sup> party expertise capable of accurately assessing the environmental impacts thereof and recirculated.

## Response No. ORG 17-3

The comment states that the Project description and impacts analysis related to parks and recreational facilities in the Draft EIR are inadequate and that 3<sup>rd</sup> party review and recirculation of the Draft EIR are required. Contrary to the comment, 3<sup>rd</sup> party review is not required by CEQA. The City of Los Angeles Planning Department worked with qualified environmental professionals on the City's approved consultant list to prepare the Draft EIR. The Draft EIR was prepared in accordance with applicable CEQA and City requirements. The Draft EIR provides a very detailed Project description in Chapter II, *Project Description*, as well as a detailed analysis of potential impacts to parks and recreational facilities in Section IV.L.3, *Public Services – Parks and Recreation*. Since the comment does not provide any substantive facts to support the claim that the Project description and impact analysis are inadequate, no further response is warranted. Moreover, recirculation of the Draft EIR is not necessary.

Nonetheless, see Topical Response No. 11 - Recreation: Golf and Tennis Facilities. As discussed in Topical Response No. 11, the displacement of golfers is fully evaluated in Section IV.L.3, *Parks and Recreation*, of the Draft EIR. Section IV.L.3 evaluated the effects of the removal of the golf course with respect to secondary impacts on off-site, existing public parks and recreational facilities and the availability of other off-site recreational facilities for users. The CEQA Thresholds related to parks and recreational facilities are provided in Section IV.L.3, *Parks and Recreation*, page IV.L.3-19 of the Draft EIR. The claim in the comment that the Draft EIR does not meet the requirements of CEQA because the evaluation is inaccurate and incomplete is unfounded.

## Comment No. ORG 17-4

The National Golf Foundation (NGF) reports that more rounds of golf were played in 2021 than any other year in American history – a particularly impressive statistic given that there were fewer golf courses in 2021 than in 2000. Nationwide, the strongest growth since 2019 was seen among youth (+22%), African Americans (+18%), women (+11%) and Latinos (+9%). In California, which also reported more rounds of golf in 2021 than in any previous year, the increases in youth and African American participation were roughly the same, while the number of women and Latinos significantly higher.

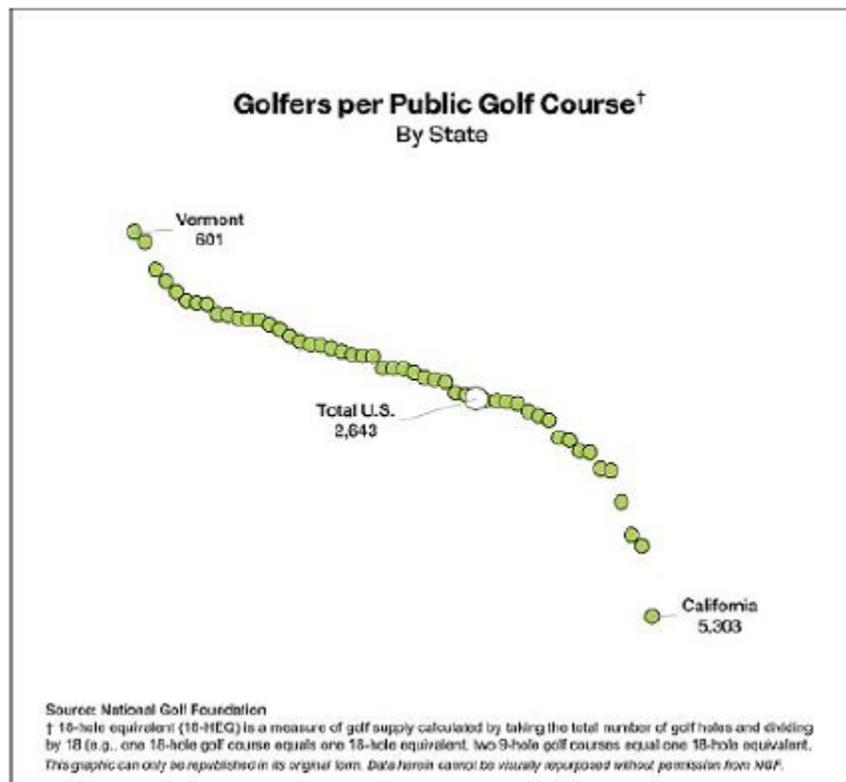

3.2 million people took up the sport for the first time in 2020 and 2021, the most ever over a 2-year period, and those numbers have only increased in 2022, an indicator that contrary to the conclusion suggested in the Draft EIR that the restoration of other outdoor recreational activities post COVID would lead to these participation numbers dropping. They have not dropped in response to competition from all other outdoor recreational activities; they have gone up even more and show every sign of continuing upward, as evidenced by the reality that Los Angeles' Recreation and Park's 13-facility golf Internet reservation system sells out in less than one minute each and every day. The system is fully booked 9 days in advance year-round.

## Response No. ORG 17-4

The comment provides various data regarding increasing golfing demand in the nation and in California in recent years. Further the commenter claims that the Department of Recreation and Park's (RAP's) internet reservation system is fully booked 9 days in advance year around. The comment primarily establishes that the demand for golf is high in the U.S and in the City of Los Angeles. However, the comment also states that the Draft EIR suggests that the restoration of other outdoor recreational activities post COVID would lead to golf participation numbers dropping. This comment is incorrect. The Draft EIR does not make this conclusion and does not state that future golf participation numbers would be dropping.

## Comment No. ORG 17-5

Despite the large number of courses in California, the state is woefully undersupplied when taking into consideration the state's huge population, ranking at the bottom in per capita public golf supply. (See NGF Graphic below.) The state would need 533 more public golf courses for it to pull even with the national golfers-per-public-golf-course average. California would need to add a public golf course a day for the next year and a half just to reach the U.S. 'average' level of public golf supply. In a state dead last in terms of golf hole per golfer, Los Angeles is dead last in that metric in the state.

**Response No. ORG 17-5**

The comment states that the State is last in terms of golf holes per golfer. The comment does not discuss the adequacy of the Draft EIR and, therefore, no further response is necessary.

**Comment No. ORG 17-6**

The National Golf Foundation has identified the Los Angeles Basin as the most golf starved region of the United States. Given that Studio City Golf & Tennis is the ONLY publicly available golf facility and ONLY publicly available golf practice facility (driving range) between Griffith Park and the Sepulveda Basin, a region of high and dense population, the loss of both (golf and driving range) in favor of a facility containing zero golf, not to mention zero other PUBLICLY available recreational functions, cannot be characterized as anything other than the loss of recreational functionality incapable of mitigation or absorption by remnant facilities. The remnant facilities, all many miles from Studio City Golf & Tennis, are already overflowing with users, and there is no public land available in the 8 miles between Griffith Park and the Sepulveda Basin where a private entity or the city's Recreation and Park Department could construct either a 9-hole 3-par golf course replacement or even so much as a driving range the size of the current one at Studio City Golf & Tennis.

**Response No. ORG 17-6**

The comment contends that there are insufficient golf courses in the City of Los Angeles, that there is inadequate golf capacity at existing City facilities, that there is no public land available for the City of Los Angeles to build additional facilities in the Project area, and that the Project would include no publicly available recreational functions. The comment provides no evidence that addresses the adequacy of the Draft EIR and makes unsupported and incorrect assertions. As discussed in the previous responses, CEQA is concerned with the physical effects to the environment that result from a project causing the need for new or expanded facilities or accelerating the deterioration of an existing facility. The comment appears to focus on a general social issue of a need for additional golf courses and not on the impacts of the Project or the adequacy of the Draft EIR. Such issues are not CEQA issues pursuant to CEQA Guidelines Section 15131. Moreover, the commenter's assertion that a need exists for new golf courses in the City of Los Angeles is not supported by the RAP's statement of availability of tee times at existing public 9-hole golf courses. As stated in the Draft EIR, available space at existing public (as supplemented by private courses, such as Van Nuys) are available to accommodate displaced users of Weddington Golf and Tennis. The commenter does not provide any evidence from the RAP or other sources that contradicts this finding. As such, new facilities are not needed and the alleged lack of public land available for new golf courses is not a relevant CEQA issue for analysis in this Project's EIR. Refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for discussion of current availability of golf facilities.

Additionally, contrary to the assertion in the comment that the Project would provide zero publicly available recreational functions, as described in Chapter II, *Project Description*, of the Draft EIR and outlined on Table II-3, Public Use Days and Hours, page II-34 of the Draft EIR, the Project would provide daily public use of the putting green (a golf use), the tennis courts, the gymnasium courts, and the athletic fields, and weekday public use of the swimming pool. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitments to public access and shared use of recreational facilities as set forth in the Draft EIR.

### **Comment No. ORG 17-7**

The drafters of the Draft EIR cherry picked a few unrelated statistics, made a few phone calls, and cited some E-mails in support of a conclusion about a “less than significant impact” re loss of golf play/practice functionality in the most golf starved region of the United States – a conclusion that anyone with the slightest knowledge of the golf market in Los Angeles finds laughable. The drafters could have and should have engaged credible 3rd party expertise like the National Golf Foundation or one of many golf consulting firms governments routinely use in drafting RFP’s and strategic plans. Instead, they chose to employ the shoddiest of methodologies to come to what can only be charitably called a pre-determined conclusion. Terms like “insufficient” or “inadequate” hardly suffice to describe the analysis of the mid-San Fernando Valley golf market/community they produced.

### **Response No. ORG 17-7**

The comment states that the Draft EIR “cherry picked” a few unrelated statistics to determine the availability of tee times at the region’s par three golf courses. However, the commenter does not provide any substantive facts or evidence to support these concerns or opinions. Thus, no further response is necessary. Also, please note the loss of golf plan/practice functionality is not a CEQA threshold that requires evaluation in the Draft EIR.

Nonetheless, as an example of the information provided in the Draft EIR, a review of the available tee times for the Van Nuys golf course shows available tee times throughout the day all day, every day over that following week (see page IV.L.3-26 of the Draft EIR). Several prior discussions with the Van Nuys Golf Course during the preparation of the Draft EIR and the more recent review of tee times indicated the availability of this golf course on the same day as the request. In the Draft EIR evaluation, the availability of the Van Nuys Golf Course was not factored into the demand for public recreational facilities. However, the availability of this facility would both relieve demand on public facilities and demonstrate the availability of a three par golf course within the local area. The ongoing availability of tee times at the Van Nuys Golf Course supports the information provided by the RAP and included in the Draft EIR as representative of existing conditions. As discussed in the Draft EIR, page IV.L.3-22, according to RAP, existing public courses in

the region were not at full capacity. The information was provided during Covid 19, during which the RAP indicated that demand was higher than during non-Covid periods. The commenter has not provided evidence from RAP that contradicts this conclusion.

The comment also maintains a 3<sup>rd</sup> party reviewer should have been involved in the Draft EIR preparation. Refer to Response No. ORG 17-3 for a discussion of the City's preparation of the Draft EIR, which indicates the Draft EIR was prepared in accordance with applicable CEQA and City requirements.

### **Comment No. ORG 17-8**

(DEIR) ENV-2020-1512-EIR Harvard Westlake Riverpark Project provides an inaccurate and inadequate project description, as well as an inaccurate and incomplete picture of the potential environmental impacts of the proposed project as it relates to “public services/parks and recreation.” The DEIR requires augmentation by credible 3<sup>rd</sup> party expertise capable of accurately assessing the environmental impacts thereof and recirculated.

### **Response No. ORG 17-8**

This comment reiterates the assertions made in Comment No. ORG 17-3. Refer to Response No. ORG 17-3. The comment also states that the Project description is inaccurate and inadequate but provides no facts to support a contention of any deficiency in the Project description. As such, no further response is necessary.

## **Comment Letter No. ORG 18**

Charley Mims  
President

The Federation of Hillside and Canyon Associations, Inc.  
Received May 10, 2022

### **Comment No. ORG 18-1**

Attached is the letter from the Hillside Federation opposing the Harvard-Westlake River Park Project. Please see that it is added to the file. Thank you very much.

### **Response No. ORG 18-1**

The comment introduces the attached letter but does not discuss the adequacy of the Draft EIR. Therefore, no further response is necessary.

### **Comment No. ORG 18-2**

The Federation of Hillside and Canyon Associations, Inc., founded in 1952, represents 46 homeowner and resident associations with approximately 250,000 constituents spanning the Santa Monica Mountains, including the Studio City Residents Association. The Federation's mission is to protect the property and the quality of life of the residents of the Santa Monica Mountains and other hillside areas of Los Angeles and its environs, and to encourage and promote those policies and programs which will best preserve the natural topography and wildlife and of the mountains and hillside for the benefit of all the people of Los Angeles.

### **Response No. ORG 18-2**

The comment describes the membership and purpose of the Federation of Hillside and Canyon Associations, Inc. The comment does not discuss the adequacy of the Draft EIR. Therefore, no further response is necessary.

### **Comment No. ORG 18-3**

The Federation voted to oppose the proposed Harvard-Westlake River Park Project at its April 19, 2022 meeting for the following reasons:

**The Harvard-Westlake River Park Project would transform Weddington Golf & Tennis** – 17 acres of heavily utilized, river-adjacent and heavily canopied, open space – enjoyed by the public for nearly 70 years – into a gigantic and intrusive Sports Event Facility for Harvard-Westlake, a private high school. Harvard-Westlake would continue to occupy their 22-acre campus facility in Studio City, located 0.6 miles away from the project site.

### **Response No. ORG 18-3**

The comment expresses opposition to the Project due to the transformation of the publicly used Weddington Golf & Tennis Project Site to a private “Sports Event Facility” for Harvard-Westlake School. The comment does not discuss the adequacy of the Draft EIR and, therefore, no further response is needed. However, this comment is the same as Comment No. ORG 9-3. Refer to Response No. ORG 9-3 which addresses this comment.

### **Comment No. ORG 18-4**

**One look at the plan for the proposed facility leaves one asking, “Where is the park?”**

With four “arenas” – two full size sports fields, one Olympic-size pool, and an 80,249-square foot gym, each with spectator bleachers and 45, up to 80-foot-tall field lights, there is simply no room left for a park. As environmentalists and advocates of open space, we do not believe a narrow track around a walled facility and interstitial bits of space between venues is an appropriate trade-off for the public recreational facility that exists today. The adjacent Zev Yaroslavsky Los Angeles River Greenway would remain, but that is a public asset and should not be appropriated by reference.

### **Response No. ORG 18-4**

The comment expresses the commenter’s opposition to the Project and generally implies that adequate open space would not be provided on the Project Site compared to what exists today. Opposition to the Project is noted. However, the commenter does not provide any substantive facts or support for these concerns or opinions. As this comment does not present any evidence with respect to the content and adequacy of the Draft EIR, no further response is necessary. However, this comment is generally the same as Comment No. ORG 9-4. Refer to Response No. ORG 9-4 which addresses this comment.

### **Comment No. ORG 18-5**

**Impacts of the potential loss of the existing recreational, green space would be broadly felt throughout the Valley.** The loss of 17 acres of river-adjacent, forested, open space would eliminate recreational opportunities for thousands if replaced by this private sports event facility. The opportunity to create an environmentally superior, public LA River recreational facility with aquifer recharging would be irrevocably lost. Living with the reality of climate change emergency, destruction of living green space and hundreds of mature trees is something we can ill afford.

### **Response No. ORG 18-5**

The comment states that the Project would cause the loss of 17 acres of forested, green open space and would eliminate recreational opportunities that would be broadly felt throughout the Los Angeles region. Opposition to the Project is noted. However, the

commenter does not provide any substantive facts or support for these concerns or opinions. As this comment does not present any evidence with respect to the content and adequacy of the Draft EIR, no further response is warranted. However, this comment is generally the same as Comment No. ORG 9-5. Refer to Response No. ORG 9-5 which addresses this comment.

### **Comment No. ORG 18-6**

**Impacts on residents in Los Angeles would be stunning.** The loss of Weddington Golf and Tennis impacts not only the residents of Studio City but residents throughout the city who lack access to green open space.

### **Response No. ORG 18-6**

The comment states that the impacts on residents would be stunning for those who lack access to green open space. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, no further response is necessary..

### **Comment No. ORG 18-7**

Local residents established Save LA River Open Space which developed a plan over ten years ago that would have created the LA River Natural River Park to capture stormwater and clean contaminated run-off from city streets. It would have truly been a park for all and complemented the LA River Revitalization plan.

### **Response No. ORG 18-7**

The comment describes the LA River Natural River Park, which was designed to capture stormwater and clean contaminated runoff from City streets. Because the comment does not raise any specific comments on the adequacy or content of the Draft EIR, no further responses is necessary.

### **Comment No. ORG 18-8**

The elimination of trees and wildlife and the excavation of 250,000 cubic yards of soil would leave a 21- foot-deep pit – a barren wasteland in the heart of Studio City. Neighbors would immediately experience a heat island effect from the construction site, as well as years of exposure to dangerous dust, harmful GHGs, particulates and contaminants, along with constant noise and vibration during the 30-plus month construction period.

### **Response No. ORG 18-8**

The comment expresses a range of construction-related concerns regarding heat island effects, health affects (particulates and contaminants), GHGs, and noise. However, the commenter does not provide any substantive facts or support for these concerns or opinions. This comment is raised within Comment No. ORG 9-6. Refer to Response No. ORG 9-6 which addresses this comment.

**Comment No. ORG 18-9**

Residents would be exposed to safety hazards, including dangerous traffic, 300-plus daily haul trucks on neighborhood streets included in the Vision Zero HIN (high incidence network).

**Response No. ORG 18-9**

This comment raises traffic safety concerns during Project construction activities. However, the commenter does not provide any substantive facts or support for these concerns or opinions. This comment is raised within Comment No. ORG 9-6. Refer to Response No. ORG 9-6 which addresses this comment.

**Comment No. ORG 18-10**

During operation, the Project would bring continued unacceptable levels of noise, light, air quality contaminants, and runoff from artificial turf that would introduce new “forever chemicals,” PFAS, to surrounding neighborhoods and the River. Traffic would remain congested and dangerous in all adjacent neighborhoods.

**Response No. ORG 18-10**

The comment maintains that the Project would result in continued unacceptable levels of noise, light and air quality emissions, PFAS runoff and contamination, and traffic in all adjacent neighborhoods. However, the commenter does not provide any substantive facts or support for these concerns or opinions. This comment is raised within Comment No. ORG 9-6. Refer to Response No. ORG 9-6 which addresses this comment.

**Comment No. ORG 18-11**

Vehicle trips would be vastly increased and traffic made dangerous for drivers, cyclists, and pedestrians, due to the unnecessary addition of 503 subterranean parking spaces, along with 29 surface parking spots.

**Response No. ORG 18-11**

The comment states that the Project would vastly increase traffic causing dangerous traffic conditions for drivers, cyclists, and pedestrians. However, the commenter does not provide any substantive facts or support for these concerns or opinions. This comment is raised within Comment No. ORG 9-6. Refer to Response No. ORG 9-6 which addresses this comment.

**Comment No. ORG 18-12**

Wildlife, from insects to mammals, currently living on the property, would be lost, destroyed, or displaced. Friends of Griffith Park’s Raptor Study has identified a Cooper’s hawk at Weddington.

## Response No. ORG 18-12

The comment claims that wildlife currently living on the property would be lost, destroyed, or displaced. The comment also states that a Cooper's hawk was identified at the Project Site. Page IV.C-27 in Section IV. C, *Biological Resources*, of the Draft EIR, acknowledges that a Cooper's hawk was observed in the off-site portion of the Biological Study Area along Zev Greenway. As such, this bird species was accounted for in the analysis of impacts to biological resources Refer to Section IV.C, pages IV.C-32, IV.C-35, IV.C-36 through IV.C-42, and IV.C-45 through IV.C-49 regarding impacts on wildlife species. As evaluated therein, with implementation of Mitigation Measure BIO-MM-1 and Project Design Feature BIO-PDF-1, as provided in Chapter 4, *Mitigation Monitoring Program*, of this Final EIR, the Project would not result in direct or indirect significant impacts on wildlife species.

## Comment No. ORG 18-13

Opportunities for recreation would vanish. Health benefits attributable to exposure to natural green space, including better physical and mental health, general well-being, and even increased longevity, would instantly disappear.

## Response No. ORG 18-13

The comment claims that opportunities for recreation would vanish and that health benefits from exposure to natural green open space would instantly disappear. The Project, however, would provide recreational amenities for use by the community. These include a 0.75-mile landscaped pathway that would lead through the Project Site to the Zev Greenway and would be available for public use seven days a week from 7:00 a.m. to 9:00 p.m. The Project would also provide public access to the new tennis courts, the putting green, and the rehabilitated clubhouse/café. The Project would also allow approved community groups to use the Project's fields, swimming pool, and gymnasium. Also, note that the Project Site is not currently, nor in the past, a natural green space open for free, public use. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, no further response is necessary.

## Comment No. ORG 18-14

**Impacts to hillside residents living in the foothills of the Santa Monica Mountains**, just south of the Project, would experience special impacts including Aesthetics and Noise: Aesthetics would be degraded. Views of forested green space would be replaced by artificial turf and brightly lit fields, all with bleachers, and glare from 45 light poles up to 80-feet high, many directed toward hillsides. This light intrusion is detrimental to hillside wildlife, disrupts connectivity and interferes with migration patterns.

## Response No. ORG 18-14

The comment lists a variety of environmental concerns related to aesthetics, light and glare, wildlife, and amplified noise on hillside residents. However, the commenter does not provide any substantive facts or support for these concerns or opinions. However, this similar comment is raised within Comment No. ORG 9-8. Refer to Response No. ORG 9-8 which addresses this comment.

## Comment No. ORG 18-15

Noise from practice and frequent events and noise effects such as echo, exacerbate impacts to hillside residents. The public address system would be directed to the south, toward hillsides. These neighbors are already experiencing debilitating noise from well-documented relocated flight paths from BUR and VNY airports, which was not considered in DEIR as a cumulative noise impact. Health impacts from excessive noise are well-documented and include heart disease, and all stress/inflammation related disease, including Alzheimer's. A comprehensive Health Assessment, including these noise impacts, must be included in a revised and recirculated RDEIR.

## Response No. ORG 18-15

The comment claims that noise from practice and events [which would not be frequent] and noise effects such as echo, would exacerbate impacts to hillside residents. The comment also states that aircraft noise was not considered as a cumulative impact in the Draft EIR and that a comprehensive health risk assessment should be included in a revised and recirculated Draft EIR. However, the commenter does not provide any substantive facts or support for these concerns or opinions. This similar comment is raised within Comment No. ORG 9-8. Refer to Response No. ORG 9-8 which addresses this comment.

## Comment No. ORG 18-16

**Alternatives presented in the DEIR are insufficient** and do not represent an earnest attempt to weigh the concerns of the community with the desires of Applicant, Harvard-Westlake. There is no Alternative that removes any one of the four "arenas" – two fields, pool, and gym. There is no Alternative that eliminates or meaningfully reduces parking. The Project has exploded far beyond the initial concept into an oversized, disruptive public nuisance that will destroy quality of life for far too many.

## Response No. ORG 18-16

The comment claims that the Alternatives presented in the DEIR are insufficient and do not represent an earnest attempt to weigh the concerns of the community with the desires of the School. This similar comment is raised within Comment No. ORG 9-10. Refer to Response No. ORG 9-10 which addresses this comment. As discussed therein, the Draft EIR provided an adequate assessment of Alternatives to the Project.

### **Comment No. ORG 18-17**

The Conditional Use Permit, it must be made comprehensive to include both campuses – Coldwater Canyon and the Harvard-Westlake River Park, to prevent constant shifting of operations. The operations of both facilities would be undeniably linked. If this project is approved the School must deliver a master plan to the City and agree to a moratorium on growth for 20 years.

### **Response No. ORG 18-17**

The comment states that the CUP should include the Upper School and Lower School campuses, as well as the Project Site, to avoid a “constant” shifting of operations and overuse. This comment does not address the adequacy of the Draft EIR and, therefore, no further response is warranted. Nonetheless, refer to Response No. ORG 9-12 which discusses the CUP required for the Project and reasons why a master plan is not needed for the Project.

### **Comment No. ORG 18-18**

Alternatives 2, 3, and 4 all would eliminate the stormwater capture and reuse system. Stormwater capture and reuse is the only environmentally friendly aspect of the Applicant’s entire proposal. To consider eliminating it is unconscionable and flies in the face of the reality of shrinking water supplies for California. We need to capture every drop of water we can.

### **Response No. ORG 18-18**

The comment expresses opposition to the alternatives analyzed in the Draft EIR that would eliminate the stormwater capture and reuse system because of its sustainability benefits. Refer to Response No. 9-10 for a discussion on the rationale behind the alternatives selections.

Further, although intended for the Project, the stormwater capture and reuse system is not the only environmentally beneficial component of the Project’s alternatives. The alternatives would include sustainability features that are largely similar to the features proposed for the Project, which are discussed in Chapter II, *Project Description*, Subsection g, *Sustainability Features*, of the Draft EIR. These include: (i) the RIO-compliant native California trees with less water demand; (ii) the installation of 426 rooftop solar panels on the gymnasium building, energy from which would be stored and used to reduce reliance on electricity; (iii) free electric vehicle charging stations; (iv) use of energy-efficient LED fixtures; (v) harvesting of natural light for the main spaces in the gymnasium building using large expanses of glass and skylights; (vi) daylighting systems to coordinate the levels of artificial lighting; (vii) use of high efficiency variable capacity air volume heating, ventilation, and air conditioning (HVAC); and (viii) use of artificial grass to reduce water demand and avoid the use of pesticides. The alternatives would also comply with the LID Ordinance and implement the required system for stormwater management.

### **Comment No. ORG 18-19**

Given the lack of reasonable alternatives proposed by the Applicant, the only option that is environmentally superior is Alternative 1 - No Project. However the Applicant adds that “The current Weddington Golf and Tennis facility would discontinue operation.” That is simply mean spirited. It demonstrates the Applicant’s lack of concern for the community. The loss of natural resources to the entire region who have relied on Weddington for decades, leads to the conclusion that this project as proposed is indefensibly disruptive and must be rejected.

### **Response No. ORG 18-19**

The comment states that the closure of operation under the No Project Alternative would be mean spirited and demonstrates the Applicant’s lack of concern for the community. Based on the criteria of the CEQA Guidelines in the selection of alternatives (see Response to Comment No. ORG 18-16, above), this comment and prior comments do not provide any evidence supporting the contention that the selections of alternatives evaluated in the Draft EIR are not “reasonable.” Also, the closure would be inevitable given that the School is not in the business of operating a golf and tennis enterprise and has maintained the facility since its purchase as a signal of goodwill while the Project was under consideration. This comment and prior comments also do not provide any facts or substantial evidence regarding the adequacy of the Draft EIR that show a “loss of natural resources to the entire region.” In fact, the RIO-compliant tree planting program, improved and less obtrusive lighting program, reduction in VMT and other features of the Project would support environmental interests and improve existing environmental conditions at the Project Site. The link between the assertion that the School is “mean spirited” and that, thus, the Project is indefensibly disruptive and must be rejected is highly subjective and is not supported by the merits of the Project or the evaluation in the Draft EIR.

### **Comment No. ORG 18-20**

The Hillside Federation strongly urges the Department of City Planning to reject outright the Harvard- Westlake River Park Project as currently proposed.

### **Response No. ORG 18-20**

The comment expresses opposition to the Project. The comment does not address the adequacy or content of the Draft EIR and, therefore, no further response is necessary.

## Comment Letter No. ORG 19

Darin Spillman  
Planning & Land Use Chair  
Encino Neighborhood Council  
Received May 10, 2022

### Comment No. ORG 19-1

I strongly oppose Harvard-Westlake School's planned destruction of Weddington Golf & Tennis. The proposed conversion of the Weddington Golf & Tennis property into a private high school sports complex is concerning for a number of reasons.

1. With LA's green open space disappearing, Harvard-Westlake plans to service a privileged, select few by replacing 16 irreplaceable acres with artificial turf and concrete buildings, as well as by exerting their influence to secure variances to Weddington Golf & Tennis' A1 Agricultural Open Space zone allowances from the City.
2. By destroying the property's significant existing urban tree canopy along the LA River and replacing it with 12-foot walls, artificial turf, saplings, and towering light poles, the end result allows practices, games, and special events that will generate increased noise and traffic, which does not conform to the surrounding community.
3. Weddington Golf & Tennis is often referred to as "the gem of Studio City" and considered a local landmark for nearly 70 years. The LA Cultural Heritage Commission (CHC) supported Historic-Cultural Monument (HCM) designation for the ENTIRE 16-acre Weddington Golf & Tennis subject property. For that reason, we strongly support the mysterious, last-minute revisions be reversed and the designation restored to the CHC's original recommendation: preserving the subject property, which encompasses the golf course, driving range, and a majority of the site's green open space and tree canopy.
4. Millions of Angelenos from all over the City and San Fernando Valley have experienced Weddington Golf & Tennis since its opening in 1956. It is incumbent upon the City to protect precious affordable public spaces from developers and special interests, like Harvard-Westlake, who only serve a privileged few.
5. Traffic and congestion continue to grow at an alarming rate in LA. If allowed to proceed, Harvard-Westlake will spend the next four to five years building a massive \$100 million dollar sports complex for its students, while the rest of the community grapples with the plan's significant impact on our roads, traffic, and commutes to work and school.

This project hinges on the granting of a Conditional Use Permit (CUP) and since the proposed plan does not satisfy the necessary conditions, a CUP should absolutely NOT be granted.

It's shocking that Harvard-Westlake would consider spending \$100 million on a sports complex for a privileged few, when hundreds of thousands of students citywide are lacking the most basic tools needed to succeed. Therefore, we urge Harvard-Westlake to move its proposed complex to a more cost-effective alternative site, like the nearby Los Angeles Valley College, which the School has previously used for its tennis operations – even recently refurbishing the College's tennis courts. With this good neighbor gesture, Harvard-Westlake would not destroy a beloved community asset, but rather, provide for the community and service a much wider area by improving facilities at Los Angeles Valley College. Finally, please note that more than 14,000 community members have signed a petition supporting the preservation of the 16-acre Weddington property in its entirety. These individuals are counting on you to subscribe to a higher standard, support the public's interests, stand firm against Harvard-Westlake's lobbyists and moneyed special interests, and deny approval of the CUP and certification of the DEIR.

Thank you for your time and consideration of this most important matter.

### **Response No. ORG 19-1**

The comment expresses opposition to the Project and list a series of reasons why the Project should not be approved. However, these comments are the same as included in Form Letter No. 4. Refer to Responses No. Form 4-1 to Form 4-9.

## **Comment Letter No. FORM 1 – Request for 90-Day Extension of EIR Review**

Louis Sanford (Received March 10, 2022)  
Adele Slaughter (Received March 14, 2022)  
Jamie York (Received March 15, 2022)

*Per Section 15132(d) of the CEQA Guidelines, a Final EIR shall include, "The Responses of the Lead Agency to significant environmental points raised in the review and consultation process." Therefore, responses to comments, by the Lead Agency, in the Final EIR are not required to respond to non-significant environmental points/comments or other non-environmental related comments on the Project. Consistent with the CEQA Guidelines, the following form letter responses to Comment Letter No. FORM-1 address the relevant significant environmental points raised by the above listed commenters (192 total), which primarily regard a request for an extension of the Draft EIR review period. The comments listed below are representative of the issues and comments provided by the commenters, with the recognition that variations in presentation and/or other non-significant environmental points exist within the individual comment letters. To the extent that these comment letters contain comments that do not address the content or adequacy of the Draft EIR, no further response is necessary. Nonetheless, all comment letters are provided to the City decision-makers for their review and consideration as part of the Project review process. Copies of the original individual letters are included in Appendix A of this Final EIR.*

### **Comment No. FORM 1-1**

I am writing to request that the public comment period for DEIR case number ENV-2020-1512-EIR for Weddington Golf and Tennis be extended from 45 days to 90 days with the end date being June 9th, 2022.

This report was compiled over two years and encompasses over 6,000 pages. It is unfair and unrealistic to expect your constituents and community at large to not only read this DEIR but then research and find the experts needed to create a comprehensive reply for Public Comment in a mere 45 days.

- In addition, our neighborhood councils require at least a 30 day notice to agendaize for different committees.
- The current public notice period March 10th to April 25th includes both the Easter and Passover holidays.
- The NOCA states, " The Dept. of City Planning recognizes the unprecedented nature of COVID-19 " as an impediment to the usual methods of gathering and disseminating information to our community.

We respectfully ask you to use your authority to have the Public Comment period extended until JUNE 9, 2022. We also are requesting an in-person hearing after the comment period closes.

### **Response No. FORM 1-1**

The comment states that additional time for review of the Draft EIR is necessary due to the length of the Draft EIR, time needed for neighborhood councils to agendaize discussion of the Project for different committees, holiday time, and special circumstances pertaining to COVID-19. The comment requests that the City extend the Project's 47-day public review period to 90 days. CEQA Guidelines Section 15105(a) states: "The public review period for a draft EIR shall not be less than 30 days nor should it be longer than 60 days except under unusual circumstances. When a draft EIR is submitted to the State Clearinghouse for review by state agencies, the public review period shall not be less than 45 days, unless a shorter period, not less than 30 days, is approved by the State Clearinghouse." The City extended the review period to 62 days from March 10, 2022 to May 10, 2022. The extended public review period exceeded the minimum required timeframe, even with inclusion of the listed holidays by the commenter. The City determined that public review conditions did not rise to an "unusual circumstance" in providing for access to the Draft EIR. The length of the Project's EIR does not constitute an unusual circumstance and while the City understands the time needed by neighborhood councils to formulate agendas will vary by neighborhood council, this timing is not a determining factor as to the length of a Draft EIR public review period. For additional details regarding the City's determination to extend the Draft EIR comment period to 62 days, the commenter is referred to Topical Response No. 1 – Public Participation and Review, which includes a discussion of CEQA public participation requirements and steps undertaken by the City to facilitate public participation in association with the Draft EIR.

Also, the City prefers for hearings to be held in person, however, all future meetings will be held consistent with applicable City and State guidelines and regulations at the time of the hearings, including those related to COVID-19.

### **Comment No. FORM 1-2**

Please grant a 90-day extension to the public comment period to respond to the Harvard-Westlake River Park Project ENV-2020-1512-EIR.

The community needs at least 90 days to read through the lengthy Draft Environmental Impact Report (DEIR). If this project is approved, it will have significant, unmitigatable impacts on our community. On this basis alone, the City could grant extra time for community members to comment and make their voices heard.

Additionally, the extenuating circumstances are extraordinary. Not only are we still facing the impacts of COVID-19, but we are also in the middle of tax season. For these reasons, our community needs additional time to read and respond to a project that, if approved, will have lasting impacts on our future and future generations.

It has taken the applicant and City Planning almost 2 years to gather this data; we think 90 days is a reasonable extension request. Please allow the community time to offer a cogent, informed, and intelligent response to the ENV- 2020-1512-EIR.

### **Response No. FORM 1-2**

The comment states that additional time for review of the Draft EIR is required due to the length of the Draft EIR, because the Project would result in significant, unmitigated impacts, COVID-19 special circumstances, and timing of the tax season. See Response No. FORM 1-1 above and Topical Response No. 1 – Public Participation and Review, which address the Project’s Draft EIR circulation period. In addition, it is acknowledged that the Project would result in significant and unavoidable construction-related noise and vibration impacts only. Based upon the analyses contained in the Draft EIR, which were compiled conservatively and according to applicable thresholds and accepted methodologies, the Project would not result in any other significant environmental impacts following the implementation of Project Design Features and Mitigation Measures. However, the identification of construction noise and vibration as significant and unavoidable impacts does not warrant additional review time. It is common for significant and unavoidable impacts to be disclosed within a project’s Draft EIR. Also, the comment states that additional time for review would be required because the Draft EIR was released during tax season. The time of year including tax season does not constitute an unusual circumstance as defined by CEQA and is not identified in the CEQA Guidelines as cause for an extension of the Draft EIR public review period.

*Per Section 15132(d) of the CEQA Guidelines, a Final EIR shall include, "The Responses of the Lead Agency to significant environmental points raised in the review and consultation process." Therefore, responses to comments, by the Lead Agency, in the Final EIR are not required to respond to non-significant environmental points/comments or other non-environmental related comments on the Project. The 57 commenters included as part of the Form-2 response provide general support for the Project, and do not raise issues with respect to the content and adequacy of the Draft EIR. The comment listed below is representative of the support comments provided by the commenters, with the recognition that variations in presentation and/or other non-significant environmental points exist within the individual comment letters. To the extent that these comment letters contain other comments that do not address the content or adequacy of the Draft EIR, no further response is necessary. Nonetheless, all comment letters are provided to the City decision-makers for their review and consideration as part of the Project review process. Copies of the individual letters are included in Appendix A of this Final EIR.*

## **Comment No. FORM 2-1**

I live at [cited address] in the Fourth Council District and I strongly support the Harvard-Westlake River Park. I urge you to support this project because it is good for the school, good for the environment, and good for the Studio City community. The River Park will

preserve urban open space and provide more recreational options than already available onsite. I think it will be a wonderful place for community members to spend time together in the fresh air. Thank you so much for your help.

### **Response No. FORM 2-1**

The comment expresses support for the Project. This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

*Per Section 15132(d) of the CEQA Guidelines, a Final EIR shall include, “The Responses of the Lead Agency to significant environmental points raised in the review and consultation process.” Therefore, responses to comments, by the Lead Agency, in the Final EIR are not required to respond to non-significant environmental points/comments or other non-environmental related comments on the Project. Consistent with the CEQA Guidelines, the following form letter responses to Comment Letter No. FORM-3 address the relevant significant environmental points raised by the above listed commenters (749 total), which primarily provide opposition to the Project. The comments listed below are representative of the issues and comments provided by the commenters, with the recognition that variations in presentation and/or other non-significant environmental*

*points exist within the individual comment letters. To the extent that these comment letters contain other comments that do not address the content or adequacy of the Draft EIR, no further response is necessary. Nonetheless, all comment letters are provided to the City decision-makers for their review and consideration as part of the Project review process. Copies of the original individual letters are included in Appendix A of this Final EIR.*

### **Comment No. FORM 3-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

### **Response to Comment No. Form 3-1**

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. Form 3-2**

Trees are beneficial to our area for so many reasons and I do not want to see the trees on this property killed for a development project that will detract from and not enhance the beauty of Studio City.

### **Response No. Form 3-2**

See Topical Response No.5 – Biological Resources/Trees, for a discussion of impacts to on-site trees. As discussed in Topical Response No. 5, the Project's tree removal and replanting program was fully analyzed in the Draft EIR's Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). The Project's landscaping program is consistent with the Los Angeles River Master Plan Landscaping Guidelines and Plant Palettes, and consists entirely of native trees that would require significantly less water as compared to the ornamental or invasive species that currently exist on the Project Site.

The majority of street trees would remain and removed street trees would be replaced at a 2:1 ratio. The existing mature trees along the Zev Greenway, Bellaire Avenue, and Whitsett Avenue would remain. The majority of mature street trees along Valley Spring Lane would also remain, except for two smaller sections along the street front (see Section IV.C, *Biological Resources*, Figure IV.C-4, *Tree Removal Plan*, of the Draft EIR). The Project would result in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree Planting Plan*, of the Draft EIR) and an overall

increase in trees of 36 percent. The majority of trees would be provided in 48-inch containers to balance the desire for an immediate, attractive aesthetic with long-term growth potential and health of the trees and replacement trees on Valley Spring Lane in the two sections discussed above, would be planted to include fast growing Velvet Ash to contribute to the dense canopy of street trees. Existing RIO-compliant trees along the Zev Greenway would remain, while non-RIO-compliant trees (such as fan palms) would be removed from the Property, and a RIO-compliant planting program would be implemented along the Project and Zev Greenway interface (see Figures IV.C-4 and IV.C-5 of the Draft EIR), thereby adding to the visual landscape and providing increased habitat and foraging opportunities for wildlife.<sup>1</sup>

As discussed in Section IV.C, *Biological Resources*, of the Draft EIR, and Topical Response No. 5, the Project with mitigation would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance, and impacts would be less than significant.

Furthermore, as discussed in Topical Response No. 5, the loss of trees would not be considered a significant aesthetic impact under the CEQA Guidelines since the Project Site is located in an urbanized area and the Project would not conflict with applicable zoning and other regulations governing scenic quality. As such, aesthetic impacts in this regard would be less than significant.

### **Comment No. Form 3-3**

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

### **Response No. Form 3-3**

This comment expresses the commenter's opinion that the Project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

While the commenter does not provide any substantive facts or support for these concerns or opinions, the Draft EIR considered and analyzed the evidence regarding potential environmental impacts of the Project. Additionally, economic and social effects of a project are not treated as significant effects on the environment under CEQA unless they would lead to a physical impact on the environment. See CEQA Guidelines Section 15131.

With regard to public access of recreational facilities, see Topical Response No. 3 – Enforcement of Public Access. As discussed in Topical Response No. 3, public access to the Project Site is an integral part of the Project and would result in the Project Site

---

<sup>1</sup> The "RIO" designation indicates a River Improvement Overlay (RIO) District<sup>1</sup> related to the Project's location in proximity to the Los Angeles River.

being regularly accessible by the public. The Project has been designed to include approximately seven acres (304,920 square feet) of the Project Site for open space for public use and tennis recreation, daily from 7:00 a.m. to 9:00 p.m. Public use of the tennis courts and other athletic facilities would be by reservation and would be available for public use when they are not in use by the School. An extensively planted, three-quarter mile long pedestrian pathway would be created to circumnavigate the perimeter of the Project Site, including adding a connection to the Zev Greenway via an Americans with Disability Act (ADA)-compliant pedestrian ramp. The Project's gymnasium would include a ground-level community room available for public use by organizations through a reservation system. In addition, to facilitate public uses of the Project Site, the Project preserves the existing clubhouse structure and café to function as a visitor center, where members of the public would check in for tennis court reservations, use of the putting green, and for other information. The putting green would also be preserved for public use. Additionally, the public would have access to Field A or the gymnasium for various indoor activities, such as performances, lectures, or community meetings, with outdoor events on Field A including such activities as "Movies in the Park," local concerts, or other public community events (collectively referred to as Public Special Events in the Draft EIR). Public Special Events would be scheduled so they do not occur concurrently with School events or School athletics uses. Refer to Topical Response No. 3 for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

In addition, please see Topical Response No. 11 - Recreation: Golf and Tennis Facilities, which indicates the Project Site's golf course users can be accommodated at other golf facilities without exceeding their capacity. Also, tennis players can be accommodated at the Project Site after construction with the use of the eight (8) courts which are a part of the Project. Furthermore, the proximity of the Project Site to the surrounding residential neighborhood and the offering of recreational opportunities and park uses that do not currently exist in the area would reduce demand on other local park facilities (excluding public tennis and golf facilities).

Also, see Topical Response No. 4 – Aesthetics, regarding the impact of the Project's field lights and other outdoor lighting, as well as impacts relating to scenic resources and visual character of surrounding land uses. As discussed in Topical Response No. 4, the Project's light and glare impacts were fully analyzed in the Draft EIR's Section IV.A, *Aesthetics*, which were based on the Lighting Technical Study contained in Appendix B of the Draft EIR. As discussed therein, the Project would not exceed CEQA threshold standards at any of the nearby residential uses nor would it exceed lighting standards of the Los Angeles River Improvement Overlay (RIO) District Ordinance pertinent to locations near the Los Angeles River. Moreover, the Project's lighting system would generally represent an improvement for surrounding residential uses, with less offsite glare and spillover, than existing conditions. The analysis in Section IV.A, *Aesthetics*, of the Draft EIR, concluded that the Project's light and glare impacts would be less than significant. Impacts related to views, scenic resources and visual character were

evaluated in the Initial Study (Appendix A of the Draft EIR) and also determined to be less than significant.

As discussed in Topical Response No. 2 – Modifications to the Project Design, and Topical Response No. 4, design modifications, including a change in the Project's field lighting program, would be implemented for the Project based on public comments. Although light and glare impacts under the Project would be less than significant, lighting impacts would be further reduced at some receptor locations with the design modifications and a reduction in the number of light poles. The modified lighting program and effects of the design modifications are evaluated in detail in Appendix B.1, Supplemental Lighting Report Memorandum, and in Appendix B.2, Supplemental Lighting Report Appendix, of this Final EIR. As discussed therein the lighting program would be modified as follows:

- The Project's three 70-foot field lights on the west sideline of Field A and three 70-foot-tall light poles on the east sideline of Field A (a total of six field lights at Field A) would be changed under the Project with design modifications to a total of four 80-foot-tall light poles on the east and west sidelines of the field (two on each sideline).
- The Project's three 80-foot-tall field lights on the north side of Field B, one 60-foot-tall field light on the east side of Field B, two 60-foot-tall field lights on the south side of Field B, and one 70-foot-tall field light on the south side of Field B (a total of seven field lights at Field B) would be changed under the Project design modifications to two 80-foot-tall field lights on the north side of Field B, and two 80-foot-tall field lights on the south side of Field B (for a total of four field lights at Field B). The 60-foot-tall light pole on the east side of Field B and 70-foot-tall field light on the south side of Field B would be eliminated under the Project with design modifications.
- The Project's 14 light poles located at the swimming pool with varying heights between 21 feet and 60 feet would be changed under the Project's design modifications to four 55-foot-tall lights.<sup>2</sup>
- The Project's twelve 40-foot-tall court lights located on all four sides of the tennis courts would be changed under the Project's design modifications to a total ten court light poles at 40-feet-tall.<sup>3</sup>

The changes in field lights are illustrated in revised Figure II-27, *Light and Signage Plan for the Project*, in Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR. The total change in the number of light poles would be reduced from 39 poles under the Project to 22 poles under the Project with design modifications (a reduction of 17 poles). As discussed in Topical Response No. 4, the modified sports

<sup>2</sup> Two of the four poles in the pool area (i.e., the two poles on the eastern side of the pool) will have luminaires mounted such that they serve both the pool area and the adjacent tennis courts.

<sup>3</sup> The reduction of two poles at the tennis courts was accomplished by relocating those luminaires to nearby poles at the eastern side of the swimming pool.

lighting system continues to be an improvement over existing conditions which produce higher levels of off-site glare at adjacent residences and along the Zev Greenway given the imprecise optics and shallow orientation of the existing driving range and tennis court lights.

Thus, while not a CEQA environmental impact issue, the Project would enhance the quality of life of the community by, without limitation, increasing public recreational uses, reducing light impacts from the existing facilities, increasing the landscaping available for enjoyment of the community, and increasing the public's access to the Zev Greenway.

This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration. Please see below for additional discussion related to this comment.

### **Comment No. Form 3-4**

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

### **Response No. Form 3-4**

This comment expresses the commenter's opinion that the Project's technical studies do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. Also, the comment states that the Project's mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans. This is assumed to refer to the alternatives presented in Chapter 5, *Alternatives*, of the Draft EIR. The commenter does not provide any substantive facts or support for these concerns or opinions. While the Draft EIR technical studies were paid for by Harvard-Westlake, the Project Applicant, this is standard practice for all development projects in the City that require the preparation of an environmental impact report. The Draft EIR was prepared under the City's supervision, authority, and input and is the City's document, as the Lead Agency. The City, using its independent judgment, reviewed all technical studies associated with the Draft EIR, prepared by licensed and highly qualified experts in their respective fields of work, and determined they met the requirements of CEQA, as applicable.

Regarding alternatives, which are required under the CEQA Guidelines, the CEQA Guidelines Section 15126.6.6(a) state: "An EIR shall describe a range of reasonable alternatives to the Project, or the location of the Project, which would feasibly attain most of the objectives of the project but would avoid or substantially lessen any of the significant effects of the project and evaluate the comparative merits of the Alternatives." Under the Project, the only significant and unavoidable impacts not feasibly reduced to a less-than-significant level were construction-related noise and vibration impacts resulting primarily

from the Project's grading and excavation activities. Thus, a primary goal for the selection of alternatives to the Project was to reduce these construction-related significant and unavoidable impacts. A feasible way to reduce these impacts was to reduce the need for excavation required for the subterranean parking structure. As contemplated, the alternatives would each reduce construction noise and vibration impacts when compared to the Project. The alternatives would meet the primary purpose of an Alternative to avoid or substantially lessen any of the significant effects of the project. Furthermore, CEQA Guidelines Section 15126.6 (c), states: "Among the factors that may be used to eliminate alternatives from detailed consideration in an EIR are: (i) failure to meet most of the basic project objectives, (ii) infeasibility, or (iii) inability to avoid significant environmental impacts." The alternatives were selected because they met or partially met most (but not all) of the basic objectives of the Project. Because the Project will not result in multiple environmental impacts that would need to be addressed through a specific change of use or additional modifications of Project components to generally meet the Project Objectives, there were no required reasons to evaluate more extreme diversions from the Project in the alternatives analysis.

For additional discussion of the Project's adequacy of alternatives in the Draft EIR, refer to Response Nos. ORG 1B-105, ORG 1B-106 and ORG 7A-146 to ORG 7A-176.

### **Comment No. Form 3-5**

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annually and deny permission to build this project.

### **Response No. Form 3-5**

This comment states that the property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit." The comment requests the local councilmember to deny permission to build this project.

It is common for development projects undergoing CEQA review as part of a Draft EIR to include various entitlement requests. Such requests are subject to review and approval by the City's decision-makers as part of any project review process. Also, the Agricultural zone is not limited to "open space" or "agricultural" uses. It is noted that LAMC Section 12.24 T.3(b) explicitly permits schools and school-related facilities within an agricultural (A) zone and in all residential (R) zones under a conditional use permit (CUP). Most private schools in the City operate under a CUP (public schools are not subject to the City's zoning code). Therefore, the Project's application for a CUP to operate its athletic and recreational facilities is not an unusual circumstance that indicates a conflict with the Project Site's existing zoning or the City's Zoning Code.

This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

*Per Section 15132(d) of the CEQA Guidelines, a Final EIR shall include, "The Responses of the Lead Agency to significant environmental points raised in the review and consultation process." Therefore, responses to comments, by the Lead Agency, in the Final EIR are not required to respond to non-significant environmental points/comments or other non-environmental related comments on the Project. Consistent with the CEQA Guidelines, the following form letter responses to Comment Letter No. FORM-4 address the relevant significant environmental points raised by the above listed commenters (268 total), which primarily provide opposition to the Project. The comments listed below are representative of the issues and comments provided by the commenters, with the recognition that variations in presentation and/or other non-significant environmental points exist within the individual comment letters. To the extent that these i comment letters contain other comments that do not address the content or adequacy of the Draft EIR, no further response is necessary. Nonetheless, all comment letters are provided to the City decision-makers for their review and consideration as part of the Project review process. Copies of the original individual letters are included in Appendix A of this Final EIR.*

### **Comment No. FORM 4-1**

I strongly oppose Harvard-Westlake School's planned destruction of Weddington Golf & Tennis. The proposed conversion of the Weddington Golf & Tennis property into a private high school sports complex is concerning for a number of reasons.

### **Response to Comment No. Form 4-1**

The comment in opposition to the removal of Harvard-Westlake's existing golf and tennis facilities and conversion of the property to a recreational and athletic facility for the School and available for public use is noted. This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. Form 4-2**

1. With LA's green open space disappearing, Harvard-Westlake plans to service a privileged, select few by replacing 16 irreplaceable acres with artificial turf and concrete buildings, as well as by exerting their influence to secure variances to Weddington Golf & Tennis' A1 Agricultural Open Space zone allowances from the City.

## Response No. Form 4-2

This comment expresses the commenter's opinion that the Project Site will be replaced with artificial turf and concrete buildings, and that Project variances will be secured by the influence of Harvard-Westlake.

The Project as expressed in the comment does not reflect the Project characteristics as included in Chapter II, *Project Description*, of the Draft EIR. The commenter is referred to Chapter II of the Draft EIR for a detailed description of the Project's proposed recreational facilities, tree planting and landscaping program (representing a 36% increase in the number of trees), and publicly-accessible open space areas (which would comprise more than five acres of the Project Site). Also, the Project would retain the existing original, on-site Weddington Golf & Tennis clubhouse, including its café, the putting green to the northeast of the clubhouse, the six existing golf ball-shaped light standards and poles, and the low brick retaining wall along the northeastern edge of the Property. Please also refer to Topical Response No. 2 – Modifications to the Project Design, for a discussion of modifications to the Project design relating to seating, lighting, building design (swimming pool area and gymnasium), parking, grading, stormwater capture and reuse system, and water features that were made to the Project in response to comments received on the Draft EIR. The proposed Project design modifications are intended to address public comments and generally have the effect of reducing environmental less-than-significant and significant and unavoidable impacts as analyzed in the Draft EIR and would not result in higher activity, new impacts, or substantial increases in the severity of impacts evaluated in the Draft EIR.

The comment also makes unfounded claims regarding the Project's requested permitting process. School uses are permitted in the A1 (Agricultural) zone under LAMC Sec. 12.24.T.3(b) through a Conditional Use Permit (CUP). Most private schools in the City operate under a CUP (public schools are not subject to the City's zoning code).

This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment No. Form 4-3

2. By destroying the property's significant existing urban tree canopy along the LA River and replacing it with 12-foot walls, artificial turf, saplings, and towering light poles, the end result allows practices, games, and special events that will generate increased noise and traffic, which does not conform to the surrounding community.

## Response No. Form 4-3

This comment expresses the commenter's opinion that the Project will destroy the Project Site's tree canopy and replace it with 12-foot walls, artificial turf, saplings, and towering light poles, with the end result allowing practices, games, and special events to generate

increased noise and traffic, which does not conform to the surrounding community. While the commenter does not provide any substantive facts or support for these concerns or opinions, the Draft EIR considered and analyzed the evidence regarding potential environmental impacts of the Project.

Refer to Topical Response No. 5 – Biological Resource/Trees, for a discussion of impacts to trees. As discussed in Topical Response No. 5, the Project's tree removal and replanting program was fully analyzed in the Draft EIR's Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). The Draft EIR also describes that the majority of existing, onsite trees are fan palms that the City has identified as not to be planted along the Los Angeles River.

The majority of street trees would remain and any removed street trees would be replaced at a 2:1 ratio. The existing mature trees along the Zev Greenway, Bellaire Avenue, and Whitsett Avenue would remain. The majority of mature street trees along Valley Spring Lane would also remain, except for two smaller sections along the street front (see Section IV.C, *Biological Resources*, Figure IV.C-4, *Tree Removal Plan*, of the Draft EIR). The Project would result in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree Planting Plan*, of the Draft EIR), with an overall increase in trees of 36 percent. The majority of trees would be provided in 48-inch containers to balance the desire for an immediate, attractive aesthetic with long-term growth potential and health of the trees and replacement trees on Valley Spring Lane in the two sections discussed above, would be planted to include fast growing Velvet Ash to contribute to the dense canopy of street trees. Existing RIO-compliant trees along the Zev Greenway would remain, non-RIO-compliant trees (such as fan palms) would be removed from the Property, and a RIO-compliant planting program would be implemented along the Project and Zev Greenway interface (see Figures IV.C-4 and IV.C-5 of the Draft EIR), thereby adding to the visual landscape and providing increased habitat and foraging opportunities for wildlife.<sup>4</sup>

A supplemental analysis of the Project's tree canopy is provided within Appendix C, Carbon Sequestration and Tree Canopy Study, of this Final EIR. All existing trees were included in the calculation of canopy coverage in order to appropriately characterize current conditions on the Project Site. Similarly, existing trees that would be preserved by the Project were included in the calculation of the Project's canopy coverage. As discussed in detail in Appendix C, pages 3 through 5 of the study, approximately 20 percent of the Project Site is currently covered by tree canopy. Absent development of the Project, that level will not significantly increase further given the relative maturity of

---

<sup>4</sup> The "RIO" designation indicates a River Improvement Overlay (RIO) District<sup>4</sup> related to the Project's location in proximity to the Los Angeles River.

existing trees. The Project's canopy coverage will reach a similar level between Years five and 10 of operation (Year 5 the canopy coverage would be approximately 15 percent, Year 10 the canopy cover would be approximately 28 percent) (see Figure 10, Year 5 Canopy Coverage of Project Trees, and Figure 11, Year 10 Canopy Coverage of Project Trees, in the Carbon Sequestration and Tree Canopy Study).

Given the diverse range of species in the Project's tree replacement program and their respective growth rates, tree maturation points vary from 10 to 50 years, with a weighted average of 25 years. At Year 25 of Project operation (following construction), 53 percent of the Project Site would be under canopy coverage, or approximately 2.5 times more coverage than existing conditions (see Figure 12, Year 25 Canopy Coverage of Project Trees, of the Carbon Sequestration and Tree Canopy Study). The Project's favorable points of comparison are largely the result of the biological characteristics of the existing tree mix. Notably, the prevalence of Mexican fan palms on the Project Site, which are comprised of fibrous strands, lack branches and extensive leaf systems, and provide nominal canopy coverage. Refer to the Carbon Sequestration and Tree Canopy Study in Appendix C of this Final EIR for additional details on the methodologies and modeling conducted to determine the Project's projected future tree canopy coverage on the Project Site.

As discussed in Section IV.C, *Biological Resources*, of the Draft EIR, and Topical Response No. 5, the Project with mitigation would not conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance, and impacts would be less than significant.

Furthermore, as discussed in Topical Response No. 5, the loss of trees would not be considered a significant aesthetic impact under the CEQA Guidelines since the Project Site is located in an urbanized area and the Project would not conflict with applicable zoning and other regulations governing scenic quality. As such, aesthetic impacts in this regard would be less than significant.

Also, see Topical Response No. 4 – Aesthetics, regarding the impact of the Project's field lights and other outdoor lighting, as well as impacts relating to scenic resources and visual character of surrounding land uses. As discussed in Topical Response No. 4, the Project's light and glare impacts were fully analyzed in the Draft EIR's Section IV.A, *Aesthetics*, which were based on the Lighting Technical Study contained in Appendix B of the Draft EIR. As discussed therein, the Project would not exceed CEQA threshold standards at any of the nearby residential uses nor would it exceed lighting standards of the Los Angeles River Improvement Overlay (RIO) District Ordinance pertinent to locations near the Los Angeles River. Moreover, the Project's lighting system would generally represent an improvement for surrounding residential uses, with less off-site glare and spillover, than existing conditions. The analysis in Section IV.A. *Aesthetics*, of the Draft EIR, concluded that the Project's light and glare impacts would be less than significant. Impacts related to views, scenic resources and visual character were

evaluated in the Initial Study (Appendix A of the Draft EIR) and also determined to be less than significant.

As discussed in Topical Response No. 2 – Modifications to the Project Design, and Topical Response No. 4, design modifications, including a change in the Project's field lighting program, would be implemented for the Project based on public comments. Although light and glare impacts under the Project would be less than significant, lighting impacts would be further reduced at some receptor locations with the design modifications and a reduction in the number of light poles. The modified lighting program and effects of the design modifications are evaluated in detail in Appendix B.1, Supplemental Lighting Report Memorandum, and in Appendix B.2, Supplemental Lighting Report Appendix, of this Final EIR. As discussed therein the lighting program would be modified as follows:

- The Project's three 70-foot field lights on the west sideline of Field A and three 70-foot-tall light poles on the east sideline of Field A (a total of six field lights at Field A) would be changed under the Project with design modifications to a total of four 80-foot-tall light poles on the east and west sidelines of the field (two on each sideline).
- The Project's three 80-foot-tall field lights on the north side of Field B, one 60-foot-tall field light on the east side of Field B, two 60-foot-tall field lights on the south side of Field B, and one 70-foot-tall field light on the south side of Field B (a total of seven field lights at Field B) would be changed under the Project design modifications to two 80-foot-tall field lights on the north side of Field B, and two 80-foot-tall field lights on the south side of Field B (for a total of four field lights at Field B). The 60-foot-tall light pole on the east side of Field B and 70-foot-tall field light on the south side of Field B would be eliminated under the Project with design modifications.
- The Project's 14 light poles located at the swimming pool with varying heights between 21 feet and 60 feet would be changed under the Project's design modifications to four 55-foot-tall lights.<sup>5</sup>
- The Project's twelve 40-foot-tall court lights located on all four sides of the tennis courts would be changed under the Project's design modifications to a total ten court light poles at 40-feet-tall.<sup>6</sup>

The changes in field lights are illustrated in revised Figure II-27, *Light and Signage Plan for the Project*, in Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR. The total change in the number of light poles would be reduced from 39 poles under the Project to 22 poles under the Project with design modifications (a reduction of 17 poles). As discussed in Topical Response No. 4, the modified sports

<sup>5</sup> Two of the four poles in the pool area (i.e., the two poles on the eastern side of the pool) will have luminaires mounted such that they serve both the pool area and the adjacent tennis courts.

<sup>6</sup> The reduction of two poles at the tennis courts was accomplished by relocating those luminaires to nearby poles at the eastern side of the swimming pool.

lighting system continues to be an improvement over existing conditions which produce higher levels of off-site glare at adjacent residences and along the Zev Greenway given the imprecise optics and shallow orientation of the existing driving range and tennis court lights.

Regarding walls, as discussed in Chapter II, *Project Description*, pages II-27 and II-28 of the Draft EIR, the public use area would be separated from the athletic facilities by interior walls and fencing that would direct pedestrian access to the athletic facilities through the main entrance located along Whitsett Avenue. The walls would also serve as a sound attenuation feature and a screen/buffer between the athletic facilities and the surrounding neighborhood. Walls would vary in height between eight feet and 11 feet at different points. None of the higher wall sections would be constructed near the Los Angeles River. Walls include a maximum 10-foot-height wall section along Whitsett Avenue (adjacent to Field A) and a maximum 11-foot-height wall section along Valley Spring Lane (adjacent to the Project's tennis courts and consistent with common tennis court design, including the tennis courts that currently exist on the Project Site), and Bellaire Avenue. Perimeter walls are designed to have variation in scale, opacity, and material to ensure they are attractive and located at appropriate points to allow views into the Project Site interior. The walls would be designed and constructed of an organic stacked stone material and heavily landscaped. Vegetation growing on and around the fences and walls would help mask the built elements, complement the trees that would be maintained and planted on-site.

With regard to noise, see Topical Response No. 8 – Noise: Construction and Operation Impacts. As discussed in Topical Response No. 8, the Project's construction and operation noise and vibration impacts were fully analyzed in Section IV.K, *Noise*, and Appendix J, *Noise and Vibration Technical Study*, of the Draft EIR. The Draft EIR's noise analysis identified the area's noise and vibration sensitive receptors, existing ambient noise levels, maximum construction noise and vibration levels and duration, and peak operation noise levels. Operation noise levels included noise levels associated with future on-site recreational activities and special events. Noise was estimated according to conservative assumptions to provide maximum impacts and to avoid underestimating impacts. As analyzed in Section IV.K, *Noise*, of the Draft EIR, the Project's construction activities would result in the generation of temporary noise increases over ambient noise levels in the vicinity of the Project Site in excess of standards established by the City and impacts would be potentially significant. While the Project would implement all feasible mitigation measures to reduce construction noise levels [Mitigation Measures NOI-MM-1 (sound barriers), NOI-MM-2 (construction equipment locations and screening) and NOI-MM-3 (construction equipment requirements and sound curtains)], during various phases of construction, even with the required mitigation measures, construction-related noise levels would exceed applicable noise impact thresholds. As such, construction noise impacts associated with on-site noise sources would be temporarily significant and unavoidable.

As discussed in Topical Response No. 2 – Modifications to the Project Design, the subterranean parking structure would be reduced from 503 spaces to 386 spaces. This modification would result in a reduction of 53,000 cubic yards of excavation materials, which would reduce the overall amount of excavation from 250,000 cubic yards to 197,000 cubic yards. The reduction in excavation under the Project with design modifications would reduce the number of haul truck trips from 35,714 trips to 28,142 trips, a reduction of 7,572 truck trips (each trip is one way [an inbound trip is one trip and an outbound trip is one trip]). With the modification, the excavation and hauling (dirt export) would be reduced from seven months to 5.5 months. Although noise impacts during construction-related excavation activities would still be significant and unavoidable, the modification would reduce the duration of excavation activities. See Topical Response No. 2 and Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, which provides these Project updates.

Operation noise impacts, including a conservative analysis of all athletic facilities being used simultaneously (and including spectators), would not exceed noise impact standards established by the City and would be less than significant. With the Project design modifications as discussed in Topical Response No. 2, the overall composite operational noise levels from all on-site activities at the adjacent noise sensitive receptors would be similar as analyzed in the Draft EIR. Thus, no new significant noise impact would occur and operational noise impacts would be substantially similar to those evaluated in the Draft EIR. Refer to Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of the noise levels resulting from the Project with design modifications.

With regard to transportation/traffic impacts, see Topical Response No. 9 Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, which was primarily based on the *Transportation Assessment for the Harvard-Westlake River Park Project (TA)*<sup>7</sup> prepared for the Project, included in Appendix M of the Draft EIR. In accordance with the Los Angeles Department of Transportation's (LADOT's) Transportation Assessment Guidelines (TAG) adopted in July 2019 (updated in July 2020), the CEQA-required analysis to be included within the Draft EIR section includes an assessment of whether the Project would result in: 1) potential conflicts with transportation-related plans, ordinances, or policies; 2) a substantial increase in vehicle miles traveled (VMT); or 3) increased hazards due to a geometric design feature or incompatible use. In addition, in accordance with Appendix G of the CEQA Guidelines, an assessment of whether the Project would result in inadequate emergency access is included.

---

<sup>7</sup> Fehr & Peers, Transportation Assessment – Harvard-Westlake River Park Project for Assessor Parcel Numbers 2375-018-020 and portion of APN 2375-018-903 Los Angeles River Parcel 276,4141 Whitsett Avenue, Studio City, CA 91604, April 2021.

The TAG also requires assessment of “non-CEQA” transportation issues, which include: 1) pedestrian, bicycle, and transit access;<sup>8</sup> 2) project access, safety, and circulation; 3) construction traffic; and 4) residential street cut-through analysis. The analyses of these “non-CEQA” issues are included in the TA. However, since they are non-CEQA issues, they are not analyzed in the Draft EIR, unless they relate to the assessment of potential conflicts with transportation-related plans, ordinances, or policies mentioned above. In addition, an analysis of intersection levels of service (LOS) is included as appendices to the TA for informational purposes only and is similarly a non-CEQA issue.

Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation. Refer to Topical Response No. 9 for additional discussion of the Project’s transportation impacts.

As discussed in Topical Response No. 9, the Project design modifications detailed in Topical Response No. 2, relating to seating, lighting, building design (swimming pool area and gymnasium), parking, grading, stormwater capture and reuse system, and water features that were made to the Project in response to comments received on the Draft EIR would not result in significant new or substantially increased transportation-related environmental impacts as evaluated in the Draft EIR.

In addition, refer to Topical Response No. 9 for a discussion of the Project’s proposed parking program, with and without the Project design modifications. The Project’s proposed parking would meet applicable LAMC requirements.

### **Comment No. Form 4-4**

3. Weddington Golf & Tennis is often referred to as “the gem of Studio City” and considered a local landmark for nearly 70 years. The LA Cultural Heritage Commission (CHC) supported Historic-Cultural Monument (HCM) designation for the ENTIRE 16-acre Weddington Golf & Tennis subject property. For that reason, we strongly support the mysterious, last-minute revisions be reversed and the designation restored to the CHC’s original recommendation: preserving the subject property, which encompasses the golf course, driving range, and a majority of the site’s green open space and tree canopy.

### **Response No. Form 4-4**

This comment supports preservation of the Project’s Site’s historic resources as well as the golf course and driving range. See Topical Response No. 6 – Historic Resources. Topical Response No. 6 addresses direct and indirect impacts on historical resources resulting from the Project. In 2021, the Project Site was designated by the City of Los

<sup>8</sup> In addition to the non-CEQA pedestrian, bicycle, and transit access topics identified in the TAG, the Draft EIR considered any environmental impacts that the Project could have related to potential conflicts with a program, plan, ordinance or policy addressing transit, roadway, bicycle, and pedestrian facilities as required in the CEQA analysis of potential conflicts with relevant plans, regulations and policies.

Angeles as a Historic-Cultural Monument (HCM) under the name Studio City Golf and Tennis Club. According to the designation as adopted by the City Council, identified character-defining features include:

- Private recreational facility open for public use
- Clubhouse
- Golf ball [-shaped] light standards
- Putting green
- Brick wall with weeping mortar surrounding the front lawn at the northeast edge of the property<sup>9</sup>

The City of Los Angeles Cultural Heritage Ordinance requires compliance with the Secretary of the Interior's Standards for Rehabilitation for properties that are designated HCMs (Los Angeles Administrative Code, Section 22.171.14).

As reflected in Chapter II, *Project Description*, and in Project Design Feature CUL-PDF-1: Rehabilitation Plan, in Section IV.D, *Cultural Resources*, of the Draft EIR, the distinctive character-defining features of the Project Site as identified in the HCM designation would be retained consistent with applicable City requirements. The historical resources analysis in Section IV.D, *Cultural Resources*, of the Draft EIR, concluded that use of the Project Site as proposed by the Project for athletic and recreational purposes is consistent with its historic use; the historic character of the Project Site overall would be retained; the identified character-defining features would be retained and rehabilitated; and the proposed new construction would not destroy historic materials, features, or spatial relationships that characterize the Project Site. Accordingly, the Project would not result in a substantial adverse change in the significance of a historical resource, the Project Site would retain sufficient historic integrity to remain eligible as an HCM, and the Project would not have a significant impact on the environment as defined by CEQA. Refer to Topical Response No. 6 for additional detail regarding the Project's direct and indirect impacts to historical resources.

### **Comment No. Form 4-5**

4. Millions of Angelenos from all over the City and San Fernando Valley have experienced Weddington Golf & Tennis since its opening in 1956. It is incumbent upon the City to protect precious affordable public spaces from developers and special interests, like Harvard-Westlake, who only serve a privileged few.

---

<sup>9</sup> Studio City Golf and Tennis Club Historic-Cultural Monument Application, Council File: 21-0470, Revised Findings, as modified by the PLUM Committee, September 14, 2021, adopted by City Council, September 29, 2021.

## Response No. Form 4-5

This comment expresses the commenter's opinion that the Project Site should be protected public space and not be developed for a privileged few.

As discussed in Topical Response No. 6 – Historic Resources, the historical components of the Project Site would be retained in accordance with the requirements of the HCM and include retaining the Project Site as a private recreational facility open for public use. See Topical Response No. 3 – Enforcement of Public Access, for a discussion of the Project's proposed public access features. As discussed in Topical Response No. 3, the Project has been designed to include approximately seven acres (304,920 square feet) of the Project Site for open space for public use and tennis recreation, daily from 7:00 a.m. to 9:00 p.m. Public use of the tennis courts and other athletic facilities would be by reservation and would be available for public use when they are not in use by the School. An extensively planted, three-quarter mile long pedestrian pathway would be created to circumnavigate the perimeter of the Project Site, including adding a connection to the Zev Greenway via an Americans with Disability Act (ADA)-compliant pedestrian ramp. The Project's gymnasium would include a ground-level community room available for public use by organizations through a reservation system. In addition, to facilitate public uses of the Project Site, the Project preserves the existing clubhouse structure and café to function as a visitor center, where members of the public would check in for tennis court reservations, use of the putting green, and for other information. The putting green would also be preserved for public use. Additionally, the public would have access to Field A or the gymnasium for various indoor activities, such as performances, lectures, or community meetings, with outdoor events on Field A including such activities as "Movies in the Park," local concerts, or other public community events (collectively referred to as Public Special Events in the Draft EIR). Public Special Events would be scheduled so they do not occur concurrently with School events or School athletics uses. Refer to Topical Response No. 3 for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR..

Moreover, the Project Site is not public property. To clarify the existing property rights and on-site uses, the Project Site is not a public property. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. Form 4-6**

5. Traffic and congestion continue to grow at an alarming rate in LA. If allowed to proceed, Harvard-Westlake will spend the next four to five years building a massive \$100 million dollar sports complex for its students, while the rest of the community grapples with the plan's significant impact on our roads, traffic, and commutes to work and school.

### **Response No. Form 4-6**

The comment mischaracterizes the nature of the Project as a “sports complex” intended only for Harvard-Westlake students. Please refer to Chapter II, *Project Description*, Objectives 4 and 5, of the Draft EIR. These objectives specifically state purposes of the Project to: (4) Create new publicly accessible open space with a broad array of recreational facilities in a safe and secure environment for the surrounding community and public to use like a City-owned park, while also providing a community room, café, and indoor and outdoor areas for public gatherings, performances, and occasional special events; and (5) Increase public access to and enhance the adjacent Los Angeles River and Zev Greenway through a network of publicly-accessible pathways, a new direct connection to the Zev Greenway, and a landscape plan that would restore native plant communities, create habitat for various species, and support the goals of the Los Angeles River Improvement Overlay District Ordinance, the Los Angeles River Revitalization Master Plan, and the Los Angeles River Master Plan Landscaping Guidelines.

Refer to Response No. FORM 4-3 for a discussion of transportation/traffic impacts evaluated in the Draft EIR. As stated therein, Section IV.M, *Transportation*, of the Draft EIR determined that the Project's CEQA-required transportation impacts would be less than significant without mitigation.

### **Comment No. Form 4-7**

This project hinges on the granting of a Conditional Use Permit (CUP) and since the proposed plan does not satisfy the necessary conditions, a CUP should absolutely NOT be granted.

### **Response No. Form 4-7**

This comment states that the Project hinges upon a CUP and that a CUP should not be granted for the Project. This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. Form 4-8**

It's shocking that Harvard-Westlake would consider spending \$100 million on a sports complex for a privileged few, when hundreds of thousands of students citywide are

lacking the most basic tools needed to succeed. Therefore, we urge Harvard-Westlake to move its proposed complex to a more cost-effective alternative site, like the nearby Los Angeles Valley College, which the School has previously used for its tennis operations – even recently refurbishing the College’s tennis courts. With this good neighbor gesture, Harvard-Westlake would not destroy a beloved community asset, but rather, provide for the community and service a much wider area by improving facilities at Los Angeles Valley College.

### **Response No. Form 4-8**

The comment requests Harvard-Westlake to develop the Project on alternative site locations, such as nearby Los Angeles Valley College.

The comment does not present any facts to establish that the use of an alternative site is feasible, would meet most of the Project’s objectives, or would avoid the Project’s significant and unavoidable temporary construction impacts.

Refer to Response No. Form 4-6 regarding the comment’s mischaracterization of the nature of the Project as a “sports complex” intended only for Harvard-Westlake students.

The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location. The Weddington Golf & Tennis parcel was purchased by Harvard-Westlake School in December 2017, and the School has continued to operate it primarily for public golf and tennis uses. However, the current Weddington Golf and Tennis operations are not consistent with the School’s educational mission or financially sustainable. The underlying purpose of the Project is to supplement the School’s athletic and recreational facilities, and to provide Harvard-Westlake School a campus that can fulfill its educational mission and athletic principles now and in the future. The Project Objectives, included on pages II-13 and II-14, in Chapter II, *Project Description*, of the Draft EIR, list the Project’s Objectives which support the underlying purpose of the of the Project.

The commenter is also referred to Subsection 4, Alternatives Considered and Rejected, on paged V-5 to V-7, in Section V, *Alternatives*, of the Draft EIR. This subsection includes an evaluation of alternative project site locations that were considered and rejected for additional study in the Draft EIR’s evaluation of Project alternatives. As analyzed therein, no feasible off-site locations were identified that would allow significant effects of the project to be avoided or substantially lessened. For additional discussion of the Project’s adequacy of alternatives in the Draft EIR, refer to Response Nos. ORG 1B-105, ORG 1B-106 and ORG 7A-146 to ORG 7A-176.

Refer to Response No. Form 4-5 for a discussion of the Project’s proposed public access features.

In addition, please see Topical Response No. 11 - Recreation: Golf and Tennis Facilities, which indicates the Project Site's golf course users can be accommodated at other golf facilities without exceeding their capacities. Also, tennis players can be accommodated at the Project Site after construction with the use of the eight (8) courts which are a part of the Project. Furthermore, the proximity of the Project Site to the surrounding residential neighborhood and the offering of recreational opportunities and park uses that do not currently exist in the area would reduce demand on other local park facilities (excluding public tennis and golf facilities).

This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. Form 4-9**

Finally, please note that more than 14,000 community members have signed a petition supporting the preservation of the 16-acre Weddington property in its entirety. These individuals are counting on you to subscribe to a higher standard, support the public's interests, stand firm against Harvard-Westlake's lobbyists and moneyed special interests, and deny approval of the CUP and certification of the DEIR.

### **Response No. Form 4-9**

The comment states that 14,000 community members are in support of preserving the Project Site in its existing condition. Additionally, the comments states the Project is supported by "lobbyists and moneyed special interests" without substantiated fact. This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

*Per Section 15132(d) of the CEQA Guidelines, a Final EIR shall include, “The Responses of the Lead Agency to significant environmental points raised in the review and consultation process.” Therefore, responses to comments, by the Lead Agency, in the Final EIR are not required to respond to non-significant environmental points/comments or other non-environmental related comments on the Project. Consistent with the CEQA Guidelines, the following form letter responses to Comment Letter No. FORM-4 address the relevant significant environmental points raised by the above listed commenters (29*

*total), which primarily provide opposition to the Project. The comments listed below are representative of the issues and comments provided by the commenters, with the recognition that variations in presentation and/or other non-significant environmental points exist within the individual comment letters. To the extent that these comment letters contain other comments that do not address the content or adequacy of the Draft EIR, no further response is necessary. Nonetheless, all comment letters are provided to the City decision-makers for their review and consideration as part of the Project review process. Copies of the original individual letters are included in Appendix A of this Final EIR.*

### **Comment No. FORM 5-1**

My name is \_\_\_\_\_. I am a recreational tennis player and a member of the LOS ANGELES TENNIS ASSOCIATION, and have been a member for \_\_\_\_ years.

### **Response to Comment No. Form 5-1**

The comment introduces the persons listed above. Individually received letters attached to this Final EIR list both the member and the number of years each commenter has been a member of the Los Angeles Tennis Association. This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. Form 5-2**

I strongly oppose Harvard-Westlake School's planned destruction of Weddington Golf & Tennis. The proposed conversion of the Weddington Golf & Tennis property into a private high school sports complex by the School is concerning for a number of reasons.

### **Response No. Form 5-2**

The comment expresses the commenter's opposition to the Project and refers to the removal of existing facilities in order to convert the property to what the commenter describes as "private use".

The comment mischaracterizes the current use of the Project Site as a public facility. To clarify the existing property rights and on-site uses, the Project Site is not a public property. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

Additionally, the comment mischaracterizes the Project as development of a private high school sports complex. See Topical Response No. 3 – Enforcement of Public Access. As discussed in Topical Response No. 3, public access to portions of the Project Site is an integral part of the Project and could result in the Project Site being used by the public more often than the School’s uses. The Project has been designed to include approximately seven acres (304,920 square feet) of the Project Site for open space for public use and tennis recreation, daily from 7:00 a.m. to 9:00 p.m. Public use of the tennis courts and other athletic facilities would be by reservation and would be available for public use when they are not in use by the School. An extensively planted, three-quarter mile long pedestrian pathway would be created to circumnavigate the perimeter of the Project Site, including adding a connection to the Zev Greenway via an Americans with Disability Act (ADA)-compliant pedestrian ramp. The Project’s gymnasium would include a ground-level community room available for public use by organizations through a reservation system. In addition, to facilitate public uses of the Project Site, the Project preserves the existing clubhouse structure and café to function as a visitor center, where members of the public would check in for tennis court reservations, use of the putting green, and for other information. The putting green would also be retained and preserved, and available for public use. Additionally, the public would have access to Field A or the gymnasium for various indoor activities, such as performances, lectures, or community meetings, with outdoor events on Field A including such activities as “Movies in the Park,” local concerts, or other public community events (collectively referred to as Public Special Events in the Draft EIR). Public Special Events would be scheduled so they do not occur concurrently with School events or School athletics uses. Refer to Topical Response No. 3 for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

The commenter is also referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location. The Weddington Golf & Tennis parcel was purchased by Harvard-Westlake School in December 2017, and the School has continued to operate it primarily for public golf and tennis uses. However, the current Weddington Golf and Tennis operations are not consistent with the School’s educational mission or financially sustainable. The underlying purpose of the Project is to supplement the School’s athletic and recreational facilities, and to provide Harvard-Westlake School a campus that can fulfill its educational mission and athletic principles now and in the future. The Project Objectives, included on pages II-13 and II-14, in Chapter II, *Project Description*, of the Draft EIR, list the Project’s Objectives which support the underlying purpose of the of the Project.

This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. Form 5-3**

I am particularly concerned with the proposed reduction (16 to 8) of publicly-available tennis courts, since this will restrict the ability of Southern California community members to learn and play tennis. Since the early 1970s, the tennis courts at Weddington have served as a teaching hub, with pros offering instruction to beginners and experienced players, alike. Nearly 100,000 Angelinos of all backgrounds and from across the San Fernando Valley and City of Los Angeles use Weddington Golf & Tennis each year. If the proposed development is approved (for the primary benefit of ~900+ Harvard- Westlake School students), tens of thousands of community members will be forced to relocate to continue playing tennis or may simply stop playing tennis altogether. Our organization, LATA, relies heavily on these courts for our weekly leagues, tournaments and visiting city tennis competitions.

### **Response No. Form 5-3**

This comment expresses opposition to the Project based on the potential reduction of tennis court availability. Please see Topical Response No. 11 - Recreation: Golf and Tennis Facilities, which indicates tennis players can be accommodated at the Project Site after construction with the use of the eight (8) courts which are a part of the Project.

This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration. Please see below for additional discussion related to this comment.

### **Comment No. Form 5-4**

Although the DEIR lists alternate "tennis courts in the East San Fernando Valley available to the public," the average number of courts at those facilities is 4.4. LATA provides larger, unique, socially-formatted tennis opportunities for our LGBTQ+ members who benefit and need that kind of community bond, who have sought us out for these larger activities, which also provide—most importantly—that safe haven our community relies on. Four courts per event does not work for our tournaments and for the larger scale leagues we produce. We use the LA City facilities as best we can for pretty much all of our events that can fit into their limited court availability (severely reduced by teaching pro concessions and a minimum of courts blocked to organizations for single reservation seekers). But for our moderately grander tennis competitions, events LATA has been organizing regularly for over 40 years now in LA, we rely on the 8-court-block facilities of which there are only three remaining in our commutable area that will let us reserve, Weddington is one of the three (and with the other two—just like with Weddington—we have to fight to get those court hours with so many other organizers).

## Response No. Form 5-4

The comment alleges that the LATA organization needs an 8-court-block facility to conduct its tournaments and that there are insufficient other facilities that would accommodate their needs. While this concern appears to be related to the specific needs of a current user of the current facility and not address the adequacy of the Draft EIR, the Draft EIR does analyze the availability of other tennis courts and the Project's impact on recreational facilities. See Section IV. L.3, *Public Services, Parks and Recreation*, of the Draft EIR. Additionally, the Project would include eight tennis courts and would continue to provide blocks of eight courts for public use, throughout the week as well as on Sundays when no School use of the tennis courts would be permitted. Please refer to Topical Response No. 11 - Recreation: Golf and Tennis Facilities, in this Final EIR. As discussed therein, the tennis courts would be available for public use by reservation. The reservation system would ensure no conflicts with the School's use and would ensure the availability of the tennis courts to the public.

This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration. Please see below for additional discussion related to this comment.

## Comment No. Form 5-5

The DEIR claims the proposed high school sports complex would be able to continue to host league matches "as under existing conditions". Simple common sense says that is misleading and in practice is not possible. A reduction from 16 to 8 courts available to the public means that organizations would never be able to book an 8-court-block for an event. Historical precedent has shown that facilities would never allow reservation of their entire inventory to one organization on a given day or weekend. The 16 courts that Weddington has now allows for an 8-court booking with room to spare for the city residents, teaching pros, and the like.

## Response No. Form 5-5

The comment speculates that the commenter's organization would not be able to book all eight of the Project's tennis courts. The Project's reservation program for use of the eight courts and the availability, discussed in Topical Response No. 11 - Recreation: Golf and Tennis Facilities, would accommodate the same number of users as under existing conditions. It is noted that the existing facilities are not used to their capacity throughout much of the week. Because the Project's tennis courts would not be a commercial enterprise through which the School receives its financial support, the School has the option to book the entire eight courts to a public organization.

## Comment No. Form 5-6

Finally, in the DEIR, there are multiple disclaimers and pre-conditions for use of the proposed project's "facilities" for the non-Harvard Westlake users, more specifically there is wording regarding access to facilities that says "when not in use by School" and "for pre-approved organizations." These limitations are in stark contrast to the publicly available amenities at Weddington Golf & Tennis which have always been open to all community members without restrictions of any kind at any time. Beyond the hoops we believe we will have to jump through to secure the use of their courts, this leads us to believe that Harvard Westlake is truly not open to the use of these facilities to outside organizations, and would use each and every tiny disclaimer as a reason to deny access, or deny a court booking. This, furthermore, alerts us to the insincerity behind their stated intentions: that they want to preserve the community's access to a well-utilized, thriving, beneficial and vital sporting complex which--by the way--we have had and have used for half a century now.

## Response No. Form 5-6

The comment alleges that the requirements for use of the tennis courts would make it difficult for the commenter's organization to use the facilities and states that there are currently no restrictions on their use of the tennis courts. This comment does not present any facts to support a contention that the Draft EIR's analysis of Project impacts to recreational facilities is inadequate. The evaluation of Project impacts on tennis activities is discussed in detail in Section IV.L.3, *Public Services - Parks and Recreation*, of the Draft EIR and in Topical Response No. 11 - Recreation: Golf and Tennis Facilities, provided in this Final EIR. The evaluation of impacts takes into account the use by the School during certain hours of the day. As noted in Section IV.L.3, Table IV.L.3-6 on page IV.L.3-25 of the Draft EIR and in Topical Response No. 11, the existing tennis courts are used, on average, for 96 sessions during a single weekday and 78 sessions during a weekend day, for a total week average of 636 sessions per week. The future tennis courts would have the capacity to accommodate 88 sessions per weekday and 112 sessions per weekend day, for a total week capacity of 664 sessions per week. The weekly sessions totals in Table IV.3-6 of the Draft EIR have been corrected in Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR, to reflect the above weekly sessions totals. Table IV.L.3-6 reflects the School's use of the tennis courts on weekdays between 3:00 p.m. and 6:00 p.m., which is a conservative assumption since the School would not use all eight courts every weekday, during the entire period from 3:00 p.m. to 6:00 p.m. and throughout the year, particularly over summer months and School breaks. In addition, outside the hours of 8:00 a.m. to 11:00 a.m. and 4:00 p.m. to 8:00 p.m., the Project's eight tennis courts would have capacity to accommodate the existing demand for those blocks of time. On weekends, there would be adequate capacity offered by the Project's eight courts. Although the weekday capacity would be eight sessions less than the existing average daily use, the weekend, during which the School would generally not conduct School-associated tennis, has a capacity of 34 sessions more than the current average use. As such, over a period of a week, the Project

would have adequate capacity to accommodate the same number of sessions on the new tennis court sessions as the Project Site's current facilities, even under the conservative assumptions included in the Draft EIR.

Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, including tennis facility use, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

### **Comment No. Form 5-7**

The sport of tennis has grown exponentially during the COVID-19 pandemic and the City should be preserving facilities available for public use, like Weddington, and denying proposed projects that are clearly not in the best interest of the community and would severely curtail public access. In conclusion, I strongly oppose the Harvard-Westlake "River Park" plan and encourage City Planning to deny approval for ENV-2020-1512-EIR.

### **Response No. Form 5-7**

The comment expresses opposition to the Project and requests that the City maintain public use of private property.

The comment that future use of the Project Site by the public would be severely curtailed under the Project is not demonstrated by fact and is counter to the findings in Section IV.L.3, *Public Services - Parks and Recreation*, of the Draft EIR. Refer to Response Nos. Form 5-3 to Form 5-6 above for a discussion of impacts related to the Project's proposed tennis facilities, which demonstrate the Project would accommodate existing tennis demand through its proposed tennis facilities and reservation system and Response No. Form 5-2 regarding the fact that the Project Site is not public property.

This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 1**

Arthur Salter

Received March 10, 2022

### **Comment No. IND 1-1**

I have read HARVARD WESTLAKE proposal and I have some serious concerns about the scope of this monstrous project. I live at 4243 Wilkinson Ave, just one block from this project.

### **Response No. IND 1-1**

This comment introduces the commenter and expresses general concerns over the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 1-2**

It is unacceptable to have such a big project in one of the few open areas in our neighborhood. It is not about the noise from construction but the lights, noise, parking, traffic in our quiet neighborhood when it is completed.

### **Response No. IND 1-2**

The comment expresses opposition to the Project based on the location of the Project in an “open area” and expresses concern over operational lighting, noise, parking, and traffic. However, the commenter does not provide any substantive facts or support for these concerns or opinions. The Draft EIR thoroughly analyzed the Project’s potential operational lighting, noise, parking, and traffic impacts.

The commenter is referred to the following topical responses of this Final EIR: Topical Response No. 4 – Aesthetics, regarding operational light and glare impacts; Topical Response No. 8 – Noise: Construction and Operation Impacts, regarding operational noise impacts; and Topical Response No. 9 – Transportation and Parking During Construction and Operations, regarding operational parking and traffic activity. As discussed in the Draft EIR and described in detail in these topical responses, the Project would result in less than significant lighting, noise, parking, and traffic impacts during operation. It is further noted that the Project Site is not an “open area”, but has operated since the 1950’s as a privately owned and operated commercial golf and tennis facility with paved tennis courts, exterior lighting to 10:00 p.m. at the tennis courts and up to 11:00 p.m. at the existing driving range. The Project’s outdoor lighting would be in use from dusk to no later than 8:00 p.m. daily (9:00 p.m. for the tennis courts).

### Comment No. IND 1-3

The school will have very little access to cite [sic] during school hours which leaves pretty much nighttime available for the neighborhood, plus removing many mature trees and replacing them by smaller ones.

### Response No. IND 1-3

The comment expresses concern related to the availability of public access to the site during school hours and the removal of trees. See Topical Response No. 3 – Enforcement of Public Access, of this Final EIR. As discussed in Topical Response No. 3, public access to portions of the Project Site is an integral part of the Project. The Project has been designed to include approximately seven acres (304,920 square feet) of the Project Site for open space for public use and tennis recreation, daily from 7:00 a.m. to 9:00 p.m. An extensively planted, three-quarter mile long pathway would be created to circumnavigate the perimeter of the Project Site, including adding a ramp connection to the Zev Greenway via an Americans with Disability Act (ADA)-compliant pedestrian ramp. In addition, to facilitate public uses of the Project Site, the Project preserves the existing clubhouse structure and café to function as a visitor center, where members of the public would check in for tennis court reservations, use of the putting green, fields, and gymnasium, and for other information. The putting green would also be preserved for public use. Additionally, the public would have access to Field A or the gymnasium for up to five Public Special Events per year, involving up to 500 attendees and for activities such as community events, lectures, “Movies in the Park,” or local concerts. Public Special Events would be scheduled so they do not occur concurrently with School events. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

The comment also expresses concern regarding tree removal and replacement. Refer to Topical Response No. 5 – Biological Resource/Trees, for a discussion of impacts to trees. As discussed in Topical Response No. 5, the Project’s tree removal and replanting program was fully analyzed in the Draft EIR’s Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). The majority of street trees would remain, and any removed street trees would be replaced at a 2:1 ratio. The existing mature trees along the Zev Greenway, Bellaire Avenue, and Whitsett Avenue would remain. The majority of mature street trees along Valley Spring Lane would also remain, except for two smaller sections along the street front (see Section IV.C, *Biological Resources*, Figure IV.C-4, *Tree Removal Plan, of the Draft EIR*). The Project would result in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree*

*Planting Plan*, of the Draft EIR). Please also refer to Response No ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Furthermore, as discussed in Response No. ORG 7A-29, the great majority of replacement trees would be in 48-inch boxes with 3 to 7 years of growth prior to installation, with an average height of 12 to 15 feet, and would be located primarily at the interior and south edge of the Project Site.

### **Comment No. IND 1-4**

Harvard Westlake already has a sports field at their school on Coldwater Canyon. Studio City HOA has stated that Harvard Westlake has not been 100 percent truthful, so I am very concerned. This is no place for this huge project.

### **Response No. IND 1-4**

The comment expresses concern that the School already has a sports field at the Upper School campus. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration. The commenter is also referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

## Comment Letter No. IND 2

Ashley Perry

Received March 10, 2022

### Comment No. IND 2-1

Harvard-Westlake's plans for its River Park campus seem to be thoughtful and well-considered. Instead of potentially having a huge impact on surrounding neighbors like a residential development would have on this site, this proposal carefully mitigates all of its potential impacts.

Case in point: parking. All of the needs would be met with the construction of an on-site subterranean structure and a handful of surface spaces. That means there will be no parking on our already impacted neighborhood streets, and there won't be cars cruising the area in search of elusive spaces.

The school has also stated that its students will take shuttles to the River Park instead of driving their own vehicles, thereby further reducing impact, and that campus security personnel will closely monitor visitor access. Any HW student or faculty or staff member who is observed driving on residential streets in the neighborhood will face losing their privilege to use the River Park facilities.

Moreover, the school has pledged its support to help us residents by working with us on efforts to secure neighborhood parking restrictions from the city, making it even more difficult for those without neighborhood parking permits to park on area streets.

By making sure to alleviate any impact their operation will have on the surrounding area, Harvard-Westlake is promising to act like a good neighbor.

### Response No. IND 2-1

The comments express support for the Project. The comment describes information contained in Chapter II, *Project Description*, and Section IV.M, *Transportation*, of the Draft EIR regarding protection of the surrounding neighborhood from project-related vehicle traffic and parking, the School's shuttling program, and on-site parking facilities. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 3

Brooke Sloan

Received March 10, 2022

### Comment No. IND 3-1

It seems to me the elimination of the golf course will be an environmental improvement over the current conditions at Weddington Golf and Tennis.

For starters, all that grass will be replaced with more appropriate, non-invasive native plants. As a result, both the residents living in the surrounding community, who will be able to enjoy the park and access to athletic facilities, and the wildlife that accesses the site stand to benefit tremendously from this change.

Beyond that, usage of water will drop dramatically at the site. Golf courses, even short par-3 ones like Weddington, are prodigious users of water. As I understand it, this property currently uses 12 million gallons of water annually. The River Park, by contrast, will only require 3.3 million gallons of water every year for landscaping purposes. That means nearly 9 million gallons of fresh water will remain in the city's reservoirs and be available for other uses, which is something that should be applauded in a time of drought like we are currently experiencing in California.

Not only will less water be used by this project, but it also contains a system to capture, clean, and reuse stormwater that would otherwise go to waste. That system, which is described as the largest private stormwater capture system in the city, is projected to hold up to 1 million gallon of water that would otherwise be diverted into the stormdrain system and be completely wasted.

And last and most definitely not least, fertilizer will no longer be used on the grass. Currently the water used on the site flows untreated, meaning it contains all the pesticide and fertilizer used on the golf course, directly into the adjacent LA River and from there to the Pacific Ocean. With the River Park, that will end, and the property will experience a substantive upgrade to its environmental health.

### Response No. IND 3-1

The comments express support for the Project. The comment describes information contained in Chapter II, *Project Description*, and Section IV.I, *Hydrology and Water Quality*, of the Draft EIR regarding capture, storage, and reuse of surface water runoff. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 4**

Celeste Namath

Received March 10, 2022

### **Comment No. IND 4-1**

This is so disappointing.

This facility is used by thousands in the surrounding community. Harvard Westlake does not need to destroy the lovely outdoors, the trees, greenery- the tennis and golf facility that has been so important for so many years just for more cement and another athletic center.

Let someone else buy this property - why not be a hero to the community as opposed to a villain.

### **Response No. IND 4-1**

The comment expresses opposition to the Project based on the removal of the existing tennis and golf facilities and tree removal.

The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), of this Final EIR, for a discussion of the rationale as to why the School is proposing the Project at the Project Site location. Additionally, please refer to Topical Response No. 5 – Biological Resources/Trees, and Response No. ORG 6A-1, of this Final EIR, for a discussion of impacts to trees and the Project’s tree replacement program.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 5**

Dan Rothblatt

Received March 10, 2022

### **Comment No. IND 5-1**

I read in the LA Times today that there is a plan to redevelop 16 acres of my neighborhood- the Weddington Golf Course. Will this enhance my life or only the lives of Harvard Westlake students (a portion of whom are my neighbors, a portion of whom live in other parts of the city)? Will you represent residents or the school?

I have been a homeowner in Valley Village since 1993. Please be sensitive to the residents of your districts and not only a well funded school.

### **Response No. IND 5-1**

The comment questions the benefits of the Project for the surrounding community. Refer to the following topical responses to this Final EIR: Topical Response No. 13 – Need for the Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location; Topical Response No. 3 - Enforcement of Public Access, for a discussion of public access to the Project Site and its open space areas; and Topical Response No. 11 - Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 6

Heather Lea Gerdes  
Received March 10, 2022

### Comment No. IND 6-1

In as much as I would like to visualize an improvement to Weddington Golf and Tennis by the acquisition and subsequent tear down and rebuild of the space for Harvard Westlake's athletic competition games hosting, I cannot. You see, I live directly across the street from the putting green on Valley Spring Lane and I've been here long enough to note how sound carries here. Whitsett is a very busy street, I call "the autobahn of the Valley." We have a fire station adjacent to Weddington that see a lot of action on Whitsett, sirens blaring.

### Response No. IND 6-1

The comment states that sound carries in the Project area, including sirens from the fire station. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration. However, it is noted that the existing noise conditions were considered in the analysis of noise impacts included in Section IV.K, *Noise*, of the Draft EIR.

### Comment No. IND 6-2

Weddington has always been a quiet property, beautifying our little nook here as everything else around it expands up and out and in. Don't get me started on the Burbank Airport flight path change with hundreds of low-flying jets going over ever week. Of note here, is that we are still under a pandemic. Obviously, that mean that many people have shifted to working from home permanently. And of course, that jet traffic threatens to increase five-fold as restrictions are lifted, more people fly, and (IF) both Van Nuys and Burbank airports succeed with their proposed terminal expansions.

Seriously, this is way too much stress.

### Response No. IND 6-2

The comment expresses discontent with the noise from aircraft. See Response No. ORG 9-16, which addresses how aircraft noise was accounted for in the Draft EIR noise analysis. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### Comment No. IND 6-3

Unfortunately, nothing about the Harvard Westlake project assures me that I am not going to be plagued with more light pollution, more cars, more loud people, dogs, increased homeless people looking to camp, shouting and rooting during games, buses, you name it. Sound cannot be contained in an open space and it is exponentially amplified in a valley. And we have not even addressed the construction disturbance. In the DEIR, it clearly states:

#### ANTICIPATED SIGNIFICANT ENVIRONMENTAL EFFECTS:

Based on the analysis included in the Draft EIR, the Project would result in significant and unavoidable impacts related to Project-level and cumulative on-site and off-site construction noise, and Project-level and cumulative off-site construction vibration (human annoyance). All other potential impacts would be less than significant or mitigated to less-than-significant levels.

### Response No. IND 6-3

The comment expresses that the Project would increase light pollution, noise, homelessness, and traffic. The comment also cites the Draft EIR's project-level and cumulative impacts conclusions that the Project would result in significant and unavoidable construction noise and vibration impacts.

See Topical Response No. 4 – Aesthetics, of this Final EIR, regarding the impact of the Project's field lights and other outdoor lighting, as well as impacts relating to scenic resources and visual character of surrounding land uses. As discussed in Topical Response No. 4, the Project's light and glare impacts were fully analyzed in the Draft EIR's Section IV.A, Aesthetics, and updated under a revised lighting plan provided in Appendix . As discussed therein, the Project's lighting would not exceed CEQA threshold standards at any of the nearby residential uses nor would it exceed lighting standards of the Los Angeles River Improvement Overlay (RIO) District Ordinance pertinent to locations near the Los Angeles River. Moreover, the Project's lighting system would generally represent an improvement for surrounding residential uses, with less off-site glare and spillover, than existing conditions. The analysis in Section IV.A. Aesthetics, of the Draft EIR, concluded that the Project's light and glare impacts would be less than significant. However, as further discussed in Topical Response No. 2 – Modifications to the Project Design, and as shown in the updated Figure II-27, Light and Signage Plan for the Project, in Chapter 3, *Revisions, Clarifications, and Corrections*, of this Final EIR, Project design modifications would reduce the overall number of light poles on the Project Site from the two athletic fields, swimming pool, and tennis courts from 39 to 22 poles. The height of the four light poles on each of Field A and Field B would all be 80 feet. As further discussed in Chapter 3, these design modifications would result in an overall decrease in luminance and illuminance relative to the Project's less-than-significant light and glare impacts.

With regard to noise, see Topical Response No. 8 – Noise: Construction and Operation Impacts, of this Final EIR. As discussed in Topical Response No. 8, the Project's construction and operation noise and vibration impacts were fully analyzed in Section IV.K, Noise, and Appendix K, Noise Technical Report, of the Draft EIR. The Draft EIR's noise analysis identified the area's noise and vibration sensitive receptors, existing ambient noise levels, maximum construction noise and vibration levels and duration, and peak operation noise levels. Operation noise levels included noise levels associated with future on-site recreational activities and special events. Noise was estimated according to conservative assumptions to provide maximum impacts and to avoid underestimating impacts. As analyzed in Section IV.K, Noise, of the Draft EIR, the Project's construction activities would result in the generation of temporary noise increases over ambient noise levels in the vicinity of the Project Site in excess of standards established by the City and impacts would be potentially significant. While the Project would implement all feasible mitigation measures to reduce construction noise levels (Mitigation Measures NOI-MM-1 [sound barriers], NOI-MM-2 [construction equipment locations and screening] and NOI-MM-3 [construction equipment requirements and sound curtains]), during various phases of construction, even with the required mitigation measures, construction-related noise levels would exceed applicable noise impact thresholds at some of the nearby sensitive receptor locations under the conservative assumptions built into the analysis. As such, construction noise impacts associated with on-site noise sources would be temporarily significant and unavoidable.

Implementation of Mitigation Measure NOI-MM-3 would reduce the construction noise impacts from the off-site improvements at the Coldwater Canyon Avenue Riverwalk Path Ramp at the off-site noise sensitive receptor (receptor location R8), to the extent technically feasible.<sup>1</sup> However, construction noise levels at the sensitive receptor location north of the Coldwater Canyon Avenue Riverwalk Path Ramp (receptor location R8) would still exceed the 5-dBA significance threshold, as noise barriers would not be effective given that the construction work would take place at a lower elevation than the sensitive receptor. The sensitive receptor would still have a direct line-of-sight to the pedestrian ramp construction site and any benefits of a noise barrier would not occur. It is not feasible to install a construction noise barrier of sufficient height that would block the line-of-sight for receptor location R8 due to technical limitation needs, including barrier foundation, and wind load capacities. The construction work area is within 100 feet from the nearest off-site sensitive land uses. Thus, Mitigation Measures NOI-MM-1 and NOI-MM-2 are not technically feasible for construction of the off-site improvements at the Coldwater Canyon Avenue Riverwalk Path Ramp. Therefore, construction noise impacts associated with construction of the off-site improvements at the Coldwater Canyon Avenue Riverwalk Path Ramp would be temporarily significant and unavoidable, as analyzed in the Draft EIR.

---

<sup>1</sup> Technical infeasibility shall mean that said noise limitations cannot be complied with despite the use of mufflers, shields, sound barriers, and/or other noise reduction devices or techniques during the operation of the equipment. LAMC Chapter XI, Art. 1, Section 112.05.

Operation noise impacts, including a conservative analysis of all athletic facilities being used simultaneously (and including spectators), would not exceed noise impact standards established by the City and would be less than significant.

The comment also expresses concern that the Project may result in homeless people looking to camp. The Project's effect on homelessness is an economic/social effect, which under CEQA Guidelines Section 15131, shall not be treated as a significant effect on the environment. Further, the issue is related to the effects of the existing environment on the Project, which is not evaluated in the Draft EIR in accordance with the *California Building Industry Association v. Bay Area Air Quality Management District* (2015) Cal.4th (Case No. S213478). This case held that the impact of existing environmental conditions on a project's future users or residents is not required in a Draft EIR. Nonetheless, it can be expected that unauthorized camping on-site would be prevented by on-site security. Project Design Feature POL-PDF-2: Security Features During Operation, in Section IV.L.2, Police Services, page IV.L.2-15, of the Draft EIR, would include 24-hour on-site security personnel. POL-PDF-2 would ensure that the Project would not operate as an unmonitored public open space which might attract homeless populations.

#### **Comment No. IND 6-4**

I am really at a loss here as to what I can do. I feel I will not be able to safely and healthfully weather such construction and it's potential outcome. This means I am being driven from my home, my work, my friends, my support system. I've lived in Studio City for 25 years and half of it here, right across the street. As I stated, I've attempted to envision this a plus to our neighborhood, but as I also stated, this is way too much stress. Sadly, I must voice my opposition to this project.

#### **Response No. IND 6-4**

The comment expresses opposition to the Project based on its construction and operational impacts. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 7

Karen Kaplan

Received March 10, 2022

### Comment No. IND 7-1

The takeover, destruction and development of Weddington by Harvard Westlake is a travesty and tragedy of monumental proportions for the neighborhood and the city. But let's get to the matter at hand, which is the discussion of its environmental impact.

### Response No. IND 7-1

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### Comment No. IND 7-2

Weddington is an iconic 70 year old space open to the public and enjoyed by every demographic. It is beloved by all who use it—and even those who don't—for its historic, recreational and, yes, environmental value.

It goes without saying that the removal of acres and acres of public open green space with hundreds of mature trees that is an animal habitat is detrimental to the environment.

### Response No. IND 7-2

The comment expresses opposition to the Project based on tree removal and detrimental impacts to habitat on a 70-year-old open space. However, the commenter does not provide any substantive facts or support for these concerns or opinions. Please refer to Topical Response No. 5 – Biological Resources/Trees, and Response No. ORG 6A-1, of this Final EIR, for a discussion of impacts to trees and the Project's tree replacement program. The commenter is also referred to Section IV.C, *Biological Resources*, of the Draft EIR, with supporting data provided in Appendix D, Biological Resources Technical Report, of the Draft EIR. As analyzed therein, biological resources impacts would be less than significant with mitigation, where applicable.

To clarify the existing property rights and on-site uses, the land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

In addition, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

### **Comment No. IND 7-3**

Imagine how the neighborhood will be impacted during years of on-site and off-site construction, with the accompanying noise, dirt, dust, rumbling, streets filled with large trucks and cement mixers, and hundreds of constructions workers parking their cars on residential streets.

### **Response No. IND 7-3**

The comment expresses concern about the Project based on construction noise, dust, traffic, and parking. However, the commenter does not provide any substantive facts or support for these concerns or opinions.

The Draft EIR addressed air quality impacts in Section IV.A, *Air Quality*, with supporting data provided in Appendix B, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed in Section IV.A and illustrated in Tables IV.B-6 and IV.B-9 of the Draft EIR, with implementation of dust control measures under SCAQMD Rule 403, construction-related PM<sub>2.5</sub> and PM<sub>10</sub> (dust) emissions would not exceed threshold standards..

With regard to noise impacts, see Response No. IND 6-3 and Topical Response No. 8 – Construction and Operation Noise and Vibration.

Further, refer to Topical Response No. 9 – Transportation and Parking During Construction and Operations, regarding truck traffic and construction parking. As discussed therein, with the implementation of Project Design Feature TRAF-PDF-1, Construction Management Plan, parking spillover will be controlled during Project construction and parking spillover to residential streets in the surrounding neighborhood would not be permitted.

### **Comment No. IND 7-4**

If the proposed plans are implemented, imagine how the neighborhood will be impacted by the increased traffic at all hours of the day and night, by a nonstop parking nightmare, by glaring stadium lighting, by the noise from games and competitions, and by sports fans wandering the streets after events.

### **Response No. IND 7-4**

The comment expresses concern about the Project based on operational traffic, parking, lighting, and noise. However, the commenter does not provide any substantive facts or

support for these concerns or opinions. Refer to Response No. IND 1-2 for a discussion of impacts related to these concerns.

In addition, as discussed in Topical Response No. 9 - Transportation and Parking During Construction and Operations, all parking for events on site would be provided on-site. No off-site parking for events on the Project Site would be permitted. Therefore, the commenter's speculation that sports fans would wander the streets after events is unfounded and incorrect.

### **Comment No. IND 7-5**

The glorious eucalyptus trees that perfume the area and make the air easier to breathe will be cut down, and when they disappear, so too will the hundreds of squirrels who breed and live in the trees' ancient and gnarled trunks. Gone, too, will be the wide variety of birds who call the trees' branches home.

The environmental impact of the desecration of Weddington cannot be overstated. The neighborhood will be destroyed.

### **Response No. IND 7-5**

The comment expresses concern to the Project based on tree removal and impacts to common wildlife and bird species. However, the commenter does not provide any substantive facts or support for these concerns or opinions.

Refer to Topical Response No. 5 – Biological Resources/Trees, in this Final EIR, for a detailed discussion regarding the Project's tree removal and replacement program. Note that the mature eucalyptus trees along Bellaire Avenue and most of the eucalyptus trees on Valley Spring Lane, as well as along the Zev Greenway, would be preserved. In addition, refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife and nesting birds.

## **Comment Letter No. IND 8**

Karen Solokoff

Received March 10, 2022

### **Comment No. IND 8-1**

I am writing as a resident in the area of the Weddington Golf and Tennis which is slated to be removed to make way for a private schools sport facility. Even writing that out just then, sounded rather unfair and elitist.

I had been a resident of Studio City since 1990. I realize the city has grown and changed, and I am not against all improvement if what is being proposed truly is an improvement - but is the Harvard Westlake project truly an improvement? And for whom?

### **Response No. IND 8-1**

This introductory comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

### **Comment No. IND 8-2**

I have watched and adjusted to my neighborhood being changed a lot in the past years and it appears no one has taken a good hard look at this proposal. We have recently been subjected to the new traffic issues at the corner of Coldwater and Ventura (which is always an accident waiting to happen.) Now the city wants to subject us to more traffic by putting in this sport facility?

### **Response No. IND 8-2**

The comment expresses concern that traffic would increase due to the Project. See Topical Response No. 9 - Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation. Also see the LOS analysis of the Ventura Boulevard/Coldwater Canyon Avenue intersection in the Transportation Assessment (TA) in Appendix M of the Draft EIR. As evaluated therein, the Project would not adversely impact existing or future service levels. However, it is noted that the CEQA Guidelines do not require the evaluation of street and intersection service levels in a Draft EIR, and as such, are non-CEQA issues.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 8-3**

Outside of this, the fact that you are going to allow the removal of those much loved spectacular trees and remove one of the few Green spaces this community has is just heart breaking. This is adding to the destruction of our (the people who actually live here) environment.

### **Response No. IND 8-3**

The comment expresses concern about the Project based on tree removal and loss of green space. Refer to Topical Response No. 5 – Biological Resource/Trees, for a discussion of impacts to trees. As discussed in Topical Response No. 5, the Project's tree removal and replanting program was fully analyzed in the Draft EIR's Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). The majority of street trees would remain and any removed street trees would be replaced at a 2:1 ratio. The existing mature trees along the Zev Greenway, Bellaire Avenue, and Whitsett Avenue would remain. The majority of mature street trees along Valley Spring Lane would also remain, except for two smaller sections along the street front (see Section IV.C, *Biological Resources*, Figure IV.C-4, *Tree Removal Plan, of the Draft EIR*). The Project would result in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree Planting Plan, of the Draft EIR*).

In addition, refer to Topical Response No. 3 - Enforcement of Public Access, in this Final EIR for additional details regarding public access and use of the Project Site, and a discussion of the School's commitments to maintain public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 8-4**

If the proposed plans are implemented, imagine how the neighborhood will be impacted by the increased traffic at all hours of the day and night, by a nonstop parking nightmare, by glaring stadium lighting, by the noise from games and competitions, and by sports fans wandering the streets after events.

### **Response No. IND 8-4**

This comment is similar to Comment No. IND 7-4. Refer to Response No. IND 7-4.

### **Comment No. IND 8-5**

I am hoping a environmental study will be done regarding this project so that the study can accurately indicate that the proposed facility will most certainly impact our environment,

By creating traffic

By creating noise

Removing numerous trees

Removing green space

Taking away a much loved and used facility in exchange for pacifying a private school who has other options - when we do not hardly seems environmentally logical.

### **Response No. IND 8-5**

The comment requests the preparation of an environmental study to identify impacts of traffic, noise, tree removal, and loss of the existing green space. The issues of open space, tree removal, noise, parks and recreation, and traffic are fully evaluated in Sections IV.C *Biological Resources*, IV.K *Noise*, IV.J, *Land Use and Planning*; IV.L.3 *Public Services – Parks and Recreation*, and IV.M *Transportation*, of the Draft EIR, respectively.

## **Comment Letter No. IND 9**

Louis Sanford

Received March 10, 2022

### **Comment No. IND 9-1**

Thank you very much for this notice. Given the epic nature of this project, can the community (as in past proposed developments of this historic property) expect an extended comments period?

### **Response No. IND 9-1**

The comment inquires if the City will extend the Project's 47-day public review period. Refer to Topical Response No. 1 – Public Participation and Review, in this Final EIR, which discusses public participation, CEQA public review requirements, and the steps undertaken by the City to facilitate public participation in association with the Draft EIR. Also, refer to Response Nos. FORM 1-1 and FORM 1-2 regarding public review of the Draft EIR.

## **Comment Letter No. IND 10**

Matthew Levy

Received March 10, 2022

### **Comment No. IND 10-1**

The Harvard-Westlake River Park stands to bring about a number of improvements to Studio City, from the elimination of a water-wasting and pesticide-using golf course, to the replacement of invasive non-native trees with more sustainable drought-tolerant landscaping.

### **Response No. IND 10-1**

The comment expresses support for the Project based on the elimination of water and pesticide use at the existing golf course and the replacement of existing non-native trees with drought tolerant landscaping. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 10-2**

One important element that many forget to mention is that a significant source of light pollution in the area will be eliminated with the construction of this project. There are tall, antiquated flood lights illuminating the driving range at Weddington impacting the surrounding neighborhood every night until 10 p.m.

While new lights will rise in their place on the fields that will be built as a part of the River Park, they will be modern, energy-efficient models with little spillover light compared to those that exist today. To me, that is a huge quality of life improvement versus the current conditions.

### **Response No. IND 10-2**

The comment expresses support for the Project based on the replacement of the existing flood lights for the driving range with modern, energy efficient lighting and reduced light spillover. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 10-3**

To this end, as a resident of CD4, I support the River Park project as proposed.

### **Response No. IND 10-3**

The comment expresses general support for the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 11**

Robin Small

Received March 10, 2022

### **Comment No. IND 11-1**

I hear a lot of people in my community complain that construction of the Harvard-Westlake River Park will result in the loss of trees on this property, but they are wrong.

First of all, the existing old-growth trees along the perimeter of the site will remain in place in order to preserve the look and feel of the property.

The trees on the Weddington Golf and Tennis property that will be removed in the course of construction are Mexican fan palms, which are non-native, invasive species. The plans for River Park call for those trees to be replaced on a 2:1 basis, which means that at the end of the day there will actually be more than 150 additional trees onsite than there are currently.

And nearly as important as the sheer number of trees, which as I said will be greater than it is now, is that the trees will be environmentally appropriate for the site. That means that they will offer greater shade canopy, consume less water, and sequester carbon more efficiently.

In the end, not only will the persons living in Studio City benefit, but so will the migratory birds and other wildlife who frequent the site because the biodiversity of this property will be increased as a result of the Harvard-Westlake River Park. The golf course and tennis courts currently provide marginal wildlife habitat and foraging opportunities, but the future holds much greater possibility for all creatures great and small.

### **Response No. IND 11-1**

The comment expresses support for the Project based on the replacement of the existing trees at a 2:1 ratio with species that will provide habitat, reduce water use, and increase carbon sequestration. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 12**

Scott Sloane

Received March 10, 2022

### **Comment No. IND 12-1**

Hope all is well. There are many attributes to the proposed Harvard-Westlake River Park that make it sound exciting to me, but as a Valley neighbor, the number one benefit is that it will increase the recreational opportunities in the Studio City neighborhood.

Today, as it has been for much of the last 50 years, the site has been welcome to exactly two kinds of recreational activities: golf and tennis. For golfers, there is a pitch-and-putt golf course, putting green, and driving range. The tennis players have 16 courts to choose from. For the non-tennis players or golfers, it is just a big plot of land that they do not use.

With the River Park, opportunities will dramatically expand for those of us who don't play golf or tennis. To start with, the property will be open to the public. Today, it is only open to paying golf and tennis customers. You can't walk around and enjoy nature, much less take your dog out for a walk. In the future we will be able to do so, and we most certainly will.

In addition, my neighbors and others in the community will have access to the athletic facilities on the River Park campus when not in use by the Harvard-Westlake student body. That means we can swim in the pool, play on one of the fields or basketball court or tennis courts, and easily connect with the Zev Yaroslavsky LA River Greenway.

The health and welfare benefits and quality of life improvements probably can't be quantified, but they will most certainly be appreciated by the neighborhood.

### **Response No. IND 12-1**

The comment expresses support for the Project based on the provision of additional recreational facilities for the neighborhood. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 13

David and Mindy Tennen  
Received March 12, 2022

### Comment No. IND 13-1

I have lived in the San Fernando Valley my whole life, 20 years Tarzana and 40 years in North Hollywood. My Husband and I have worked on a variety of City Councils, all involving “quality life” issues. My Husband has/is a Real Estate Broker and this could be catastrophic for neighborhoods surrounding this project.

We must stop the “Harvard – Westlake Rover Project! The Whitsett Golf Course and Tennis Facility is a beloved Landmark and cannot be destroyed!

There are so many negative reasons to lose this beautiful environmental space, so rare in our community. Removal of grass and mature trees provides oxygen into the atmosphere and quiet tranquility in the midst of chaos. The neighboring homes have had peace and quiet, this would be a NIGHTMARE! Housing values would likely plummet and vintage homes would be replaced by McMansions resembling “Big Box” stores.

What is no [sic] necessary is catastrophic construction noise, flying particles of debris, traffic congestion with truck activity.

And what is the upside from calm and peace, to a lighted stadium. Traffic coming/going to events, pedestrians wandering through nearby neighborhoods and people yelling at all hours of day/night.

### Response No. IND 13-1

The comment expresses opposition to the Project based on tree removal, construction noise, flying particles of debris, construction truck traffic, operational lighting, operational traffic, and operational noise.

Refer to Topical Response No. 5 – Biological Resource/Trees, for a discussion of impacts to trees. As discussed in Topical Response No. 5, the Project’s tree removal and replanting program was fully analyzed in the Draft EIR’s Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). The majority of street trees would remain and any removed street trees would be replaced at a 2:1 ratio. The existing mature trees along the Zev Greenway, Bellaire Avenue, and Whitsett Avenue would remain. The majority of mature street trees along Valley Spring Lane would also remain, except for two smaller sections along the street front (see Section IV.C, *Biological*

*Resources*, Figure IV.C-4, *Tree Removal Plan*, of the Draft EIR). The Project would result in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree Planting Plan*, of the Draft EIR). Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.

With regard to flying particles of debris, it is assumed the commenter is referring to construction-related air quality impacts. The Draft EIR addressed construction and operational air quality impacts in Section IV.A, *Air Quality*, with supporting data provided in Appendix B, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant after mitigation, where applicable.

Refer to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion regarding truck traffic and construction parking. As discussed therein, with the implementation of Project Design Feature TRAF-PDF-1, Construction Management Plan, parking spillover will be controlled during Project construction and parking spillover to residential streets in the surrounding neighborhood would not be permitted. Topical Response No. 9 also addresses operational traffic impacts. In addition, with implementation of Project Design Feature TRAF-PDF-3, all parking for events on site would be provided on-site. No off-site parking for events on the Project Site would be permitted. Therefore, the commenter’s speculation that sports fans would wander the streets after events is unfounded and incorrect. In addition, as discussed in Topical Response No. 9, with the Project design modifications (presented in Topical Response No. 2 – Modifications to the Project Design), the Project’s number of parking spaces would be reduced from 532 to 403, for a reduction of 129 spaces.

The commenter is referred to Topical Response No. 4 – Aesthetics, for a discussion regarding operational light and glare impacts.

With regard to noise impacts, see Response No. IND 6-3 and Topical Response No. 8 – Noise: Construction and Operation Impacts.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 14**

Laura Glass

Received March 13, 2022

### **Comment No. IND 14-1**

My home is about a block and a half north of Valley Spring Lane, right down the street from Weddington Golf & Tennis.

What Harvard-Westlake proposes to do to Weddington must not be permitted. The destruction of this property (to say nothing of the loss of its many beautiful, mature trees) and subsequent build-out of the massively over-sized proposed sports complex will have a permanent negative impact on the community and the environment.

### **Response No. IND 14-1**

The comment expresses general opposition to the Project based on the scale of the Project, tree removal, and states that the Project would have a permanent negative impact on the community. Please refer to Topical Response No. 5 – Biological Resources/Trees and Response No. ORG 6A-1 for a discussion of impacts to trees and the Project's tree replacement program.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 14-2**

While parts of Weddington abut Whitsett, a great portion of it is in a residential neighborhood, and the noise of the destruction, its dust, parking of construction workers' vehicles to say nothing of the actual construction vehicles themselves, etc. will severely adversely impact many. If permitted, once built, the over-height stadium lighting, the increase of vehicles / traffic in the area, the noise of the crowds, amongst other ills will also have a lasting negative impact on the lives of those who live in the area.

Don't let Harvard-Westlake destroy this community asset that is used and loved by so many. I beg and implore you to vote this proposed project down.

### **Response No. IND 14-2**

The comment raises concerns about construction worker parking, and operational lighting, traffic and noise.

Refer to Topical Response No. 9 – Transportation and Parking During Construction and Operations, regarding construction-related truck traffic and construction parking. As discussed therein, with the implementation of Project Design Feature TRAF-PDF-1,

Construction Management Plan, parking spillover will be controlled during Project construction and parking spillover to residential streets in the surrounding neighborhood would not be permitted. Also, operational transportation impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation.

See Topical Response No. 4 – Aesthetics, regarding the impact of the Project’s field lights and other outdoor lighting, as well as impacts relating to scenic resources and visual character of surrounding land uses. As discussed, therein, the Project’s light and glare impacts would not exceed CEQA threshold standards at any of the nearby residential uses nor would it exceed lighting standards of the Los Angeles River Improvement Overlay (RIO) District Ordinance. All light and glare levels as evaluated in the Draft EIR would be below regulatory standards. As also discussed in Topical Response No. 4, the Project’s lighting program with design modifications, as shown in Chapter 3, *Revisions, Clarifications, and Corrections*, of this Final EIR, would further reduce the Project’s lighting effects with the exception of one receptor location (4202 Bellaire Avenue). As discussed, therein, the Project with design modifications would not create a new source of substantial light or glare.

The commenter is referred to Response No. IND 6-3 and Topical Response No. 8 – Noise: Construction and Operation Impacts, in this Final EIR for a discussion of construction and operational noise impacts.

The comment is a request to the decision-makers to deny the proposed Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 15**

Adam Howard

Received March 14, 2022

### **Comment No. IND 15-1**

I'm writing to share my support for the Harvard-Westlake River Park project.

I've been a resident of Studio City for 46 years. Over that time, both Studio City and Harvard-Westlake have grown into the best versions of themselves. Bringing the city and school together through the River Park project would not only benefit both the school and the area, but it would also serve as a marquee example of collaboration between two high-profile entities. Everybody wins with this - the neighborhood, the school, and the environment.

Many thanks for your consideration during this process. I know you have a tough job. I look forward to working with you on this project.

### **Response No. IND 15-1**

The comment expresses support for the Project based on the mutual benefits for the school, the neighborhood, and the environment. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 16

Hong Zhou

Received March 14, 2022

### Comment No. IND 16-1

My name is Hong Zhou and live at 10940 Terryview Dr., Studio city. I have attended meetings about the Harvard-Westlake River Park. I notice there are some concerns about the project. But I really think the project is good for the community.

Everything have two sides. The most important things for us is think about what is more important and how much will benefit [sic].

I think this project will benefit the family with children the most, no matter if they attended HW or not. Becasue [sic] these facilities are accessable [sic] by the whole community. And they also have a good view for how a good school runs. it will rise the whole communitie [sic] level. It is good for the whole society.

The project is good for the elders too. I notice that there are quite a lot of them attending the meeting. Right now the Golf is surrendered [sic] by fence and have very little space for elders to access. But according to the school's plan, there a [sic] walk trial around the project, this is much more friendly for elders. They will enjoy life there.

I do understand it will be inconvient [sic] for local golf players. But in my point of view, this poject [sic] will benifict [sic] much more people. In my family, if my wife, children and old people are be [sic] happier, I don't mind to drive 10 miles more to play golf at all. It is not a daily activity.

I have studied the traffic. The project sit [sic] is on a very good position, the change will influence very few people. There are about 12 single house around [sic]. Once the project is finished, they will benifit [sic] more. Whitsett Ave is already a busy road. The ratio of traffic inccress [sic] will be very few.

We should not worry about the change, change normally makes progress, especially the change is made by Harvard-Westlake school. the exist of HW will increase the value of the community. Especially the project is more open to the society than the school site itself. We are very luck HW can raise funds to develop such a project there. This is a rare opportunity. This project is much better than other project. Good school is long last business. The society will benifit [sic] now and for the future.

I strongly hope to get your support for the project.

### Response No. IND 16-1

The comment expresses support for the Project based on the benefits the Project will provide to the School as well as families with children and elderly community members.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 17**

Jodi Plageman

Received March 14, 2022

### **Comment No. IND 17-1**

I'm Jodi Plageman and I'm a longtime neighbor of Weddington Golf and Tennis. While my family and I have fond memories of playing tennis and hitting a bucket of golf balls at Weddington, that hardly seems to qualify it as a place that deserves status as an LA monument. I fail to see what historic purpose there is in preserving a "pitch and putt" golf course. This effort to pursue historic designation of the entire site seems to be just a ploy to stymie the proposed development of the site.

Nearly 15 years ago members of the Studio City community developed a plan for the land that sounds a lot like what the current owners are proposing. That plan called for closing the golf course and turning the property into open space for public enjoyment. Those same people are now advocating preserving the golf course. It wasn't considered a historic property worth saving then, so why is it worthy of historic designation now?

I look forward to working with you. Thank you Councilmember Raman for your support of the Harvard-Westlake River Park.

### **Response No. IND 17-1**

The comment expresses general support for the Project. Please see Topical Response No. 6 – Historic Resources, in this Final EIR regarding the historic features contributing to the Project Site's Historic-Cultural Monument (HCM) designation.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 18**

Marika Tsircou

Received March 14, 2022

### **Comment No. IND 18-1**

A longtime Studio City and valley family, I am writing to extend my support for the Harvard-Westlake River Park project. After reviewing the details presented at the SCRA meeting on Oct. 1, it is clear to me that this project will be quite an asset to the Studio City community. I am particularly impressed with the design and size of the public spaces provided in the project. It is really quite beautiful. I did not expect that they would provide so much space for public use. I was relieved to see that the buildings were relatively low profile and were confined towards the center of the property, away from the residential areas. It all seems very unobtrusive.

We have lived near the location, and my husband and I have three young boys who attended Carpenter. I was also happy to hear that the HW is open to the idea of accommodating access for residents to some of facilities during off hours/off days. We are looking forward to walks through the beautiful grounds.

I was always fearful that this property would be developed into a densely populated mixed-use facility, with commercial and residential, which would have been a nightmare for our property values and traffic. I am relieved that is not the case.

Please feel free to contact me, if I can be of assistance.

### **Response No. IND 18-1**

The comment expresses support for the Project based on provision of public spaces and overall design and size of the proposed development. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

---

## **Comment Letter No. IND 19**

Nancy & Mosa Kaleel  
Received March 14, 2022

### **Comment No. IND 19-1**

We are writing in strong support of Harvard-Westlake's River Park Campus Project. We attended several community meetings to listen to details of the project and stakeholder queries.

As strong environmentalists, we are concerned that the existing use — the golf course — consumes 12 million gallons of water per year and requires hundreds of pounds of petroleum-based fertilizer, pesticides, and herbicides. The water reclamation element, combined with reduced water and fertilizer use, shows much-needed environmental stewardship on the part of Harvard-Westlake for Studio City and our planet.

We've had a longterm commitment to being green at our house. We are a politically active family in Sherman Oaks. We are members of SOHA (and a former SOHA Board Member) and we work with our neighbors to make our community better. We are proud to live in CD-4 and appreciate the work you do on behalf of CD-4 and the City of Los Angeles.

The Harvard-Westlake River Park Project aligns with our family's longterm advocacy for projects that do right by the community and help combat the global climate crisis. We believe that the sooner this project gets underway the better. We appreciate your careful consideration and support.

### **Response No. IND 19-1**

The comment expresses support for the Project based on the removal of the golf course and resulting reductions in water and fertilizer use. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 20**

Phillip Small

Received March 14, 2022

### **Comment No. IND 20-1**

As a longtime Valley resident, I am writing to say that I proudly support the Harvard-Westlake River Park.

What makes this property a special place to so many in the community is the very element that will not just remain under Harvard-Westlake's plans but will be expanded: a privately owned green space available for public recreational enjoyment. Time marches on, and we should too by removing impediments to transforming this property into a multipurpose facility that offers a wide variety of recreational opportunities open to all.

Please support this project that offers positive outcomes for the community, school, and the environment.

### **Response No. IND 20-1**

The comment expresses support for the Project based on the provision of privately owned green space available for public use. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 21**

Tim Smith & Chris Baker  
Received March 14, 2022

### **Comment No. IND 21-1**

My husband and I attended the October 1, 2019 SCRA meeting at the Christian Science Center to hear the proposal from Harvard-Westlake about the plans they have for the current Weddington Golf and Tennis property – the new River Park campus.

After seeing their presentation, we could not support this project more fully. The improvements Harvard-Westlake plans for the neighborhood - creating a walking park, installing a filtration system to deal with water runoff, subterranean parking to alleviate parking congestion - to name a few, are very well-thought out and impressive. That they will remove all of the environmentally unsound trees and replace them with more eco-friendly and native trees (which will also cut down on water and chemical fertilizer use) is also great for our air quality and local wildlife.

We hope that we can count on your support for this neighborhood-friendly project.

### **Response No. IND 21-1**

The comment expresses support for the Project based on the creation of a public pathway, infiltration system for water runoff, and subterranean parking to alleviate parking congestion. The comment also expresses support for the removal of non-native trees, reduction of water use and fertilizer, and improvements for air quality and wildlife. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 22**

Casey Kim

Received March 15, 2022

### **Comment No. IND 22-1**

I am writing to express my support for the Harvard-Westlake School River Park.

The Harvard-Westlake River Park campus project guarantees that the Weddington Golf & Tennis property will remain as urban open space for the long-term. The draft site plan has only one significant structure and nearly 15 acres of recreational and open spaces, including athletic fields, tennis courts, and a River Park that includes walking paths, plazas, and water features. We've always known that Weddington Golf & Tennis was going to go away. But, this is exactly the kind of project that many in the community had hoped would replace it. I couldn't be happier.

### **Response No. IND 22-1**

The comment expresses support for the Project based on the provision of open space and recreational facilities for the community. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 23**

Julie Giehl

Received March 15, 2022

### **Comment No. IND 23-1**

I am a renter living at 14947 Dickens Street Apt. 4, Sherman Oaks in Council District 4 and I strongly support the River Park.

The River Park will offer recreational amenities for my family such as a walking path, green space for my dog and baby to enjoy, and a pool! We are golfers, and we will miss the driving range, but we can still go to City owned facilities at Encino/Balboa golf and Griffith Park.

We are also happy that the largest water recycling system in the city will be built, all by private funding. That is a community benefit worth celebrating for our community and environment.

I hope you will join us and support the River Park - a project that the whole community can enjoy.

### **Response No. IND 23-1**

The comment expresses support for the Project based on the provision of recreational amenities for public use and the implementation of a water recycling system. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 24**

Rosita & Salvador Jimenez  
Received March 15, 2022

### **Comment No. IND 24-1**

I am a 35 year valley resident, voter, and renter. Outdoor space is needed more now than ever. The Harvard Westlake River Park will be open for public use and create more opportunities for families like mine that live in the area in apartment buildings. We value having a safe place for walking and recreational activities.

I don't play golf or tennis. But I would enjoy a safe walking path near the LA River. Thank you for your help with this matter.

### **Response No. IND 24-1**

The comment expresses support for the Project based on the provision of recreational open space and pathway for public use. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 25

Alexis Arinsburg

Received March 16, 2022

### Comment No. IND 25-1

I am writing to you to voice my strong support of the Harvard-Westlake River Park.

I grew up in the San Fernando Valley, and my family has resided in our current home for several years. We are particularly grateful for the continuation of tennis on this site. We are also looking forward to more public, open space that is adjacent to the LA River for the community to enjoy.

The proposal to build a sports complex open for public use and accompanying park space on the site in place of the golf course would create more recreation opportunities than exist today. Plainly speaking, it would continue to be used as privately owned property being made available for public recreational uses, just as it has been since it first opened.

There are features on the property that are older and have charm, such as the Clubhouse, cafe and the golf ball lights. As is being smartly proposed by Harvard-Westlake in their plans for the River Park, they should be preserved on site and incorporated into the development plans. That, to me, is a sensitive recognition of the history that has transpired on this site.

### Response No. IND 25-1

The comment expresses support for the Project based on the provision of public open space adjacent to the LA River and the maintenance of the existing tennis courts. The comment also notes that the clubhouse and golf ball lights should be preserved as proposed. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

However, it is noted that the Project would preserve the clubhouse, café and the golf ball-shaped light standards. See Chapter II, *Project Description*, of the Draft EIR, for additional details on the Project's retention of these and other existing character-defining features.

## **Comment Letter No. IND 26**

Elizabeth Hurchalla  
Received March 16, 2022

### **Comment No. IND 26-1**

I urge you to support the Harvard-Westlake School River Park. I support the project for its environmental benefits to the community.

When the River Park project is completed, there will be 150+ MORE trees onsite than there are today. Most of the existing trees on the perimeter of the site will remain in order to preserve the look and feel of the property. And the environmentally appropriate trees that Harvard-Westlake plants will increase the biodiversity of the site, offer greater shade canopy, consume less water, and sequester carbon more efficiently.

### **Response No. IND 26-1**

The comment expresses support for the Project based on the replacement of the existing trees with additional trees appropriate for the site, increasing biodiversity, offering more shade, requiring less water, and resulting in greater carbon sequestration. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 27**

Evan Lovett

Received March 16, 2022

### **Comment No. IND 27-1**

Hello - we received the letter from Rick Commons of Harvard-Westlake, and as neighbors 150 yards to the east on Valley Spring (SE corner at Wilkinson), allow me to say that we are VERY excited for this project to commence. For the record, our address is 12422 Valley Spring Lane and we are active constituents of Councilmember Raman's new district.

We realize there was an uphill battle throughout the duration of HW's attempts to create this project, but as homeowners - we are proud that such a wonderful set of facilities will be in Studio City, walking distance from our home. I also want to be clear that we have no connections to the school, other than being fans of most local high schools, including Notre Dame. But we realize the caliber of this facility, as part of a respected, wonderful institution such as Harvard-Westlake, can only benefit our neighborhood and community.

We are realistic in anticipating the noise, potential parking issues, & other minor inconveniences during construction, but that is a small price to pay for living adjacent to what will become a tangible icon in Studio City. We hope that this will inspire our eight-year old son, Felix, to one day attend Harvard-Westlake and attain those lofty heights.

I truly want to give sincere thanks to everybody involved in this project and urge Councilmember Raman to be supportive and realize the benefits to her district.

Please contact me at any time and thank you.

### **Response No. IND 27-1**

The comment expresses support for the Project based on the provision of recreational facilities within walking distance for the local community. The comment acknowledges the potential for noise and parking during construction but expresses support for the Project regardless of construction impacts. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 28**

Lesa Miller

Received March 16, 2022

### **Comment No. IND 28-1**

Hi and thank you for sending this email, Kimberly. I assume it's been shared on Nextdoor, but if not it's worth posting so people can weigh in with comments opposing this extremely undesirable proposed development.

Thank you.

### **Response No. IND 28-1**

This comment acknowledges receipt of the Notice of Availability of the Draft EIR for the Project and expresses general opposition to the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 29

Shana Glassman

Received March 16, 2022

### Comment No. IND 29-1

I write to you as a constituent of council district 4 living at 18735 Wells Drive. I truly do not understand why anyone would consider Weddington Golf and Tennis a historic property. Furthermore, I don't understand why it needs protecting when the property owners have publicly agreed to preserve the golf clubhouse, cafe, and putting green.

Please do not be swayed by a few members of our community who seek to stop progress. Many more of us in Studio City and the greater San Fernando Valley are excited about the community improvement the property owners are planning for the site. We are opposed to designating the site historic because it does not meet that standard.

Historic designation proponents are merely trying to designate this property in an attempt to stop the project from moving forward. Designating this property would only lower the standard for designation citywide and would reward a small group of residents that do not represent the entire Studio City and San Fernando Valley community.

Our family fully supports the Harvard-Westlake School River Park. We hope we can count on your support.

### Response No. IND 29-1

The comment expresses support for the Project based on the planned improvements for the site. The comment also expresses opposition to the designation of the site as a historic property. Please refer to Topical Response No. 6 – Historic Resources, regarding the designation of the Project Site as a Historical-Cultural Monument (HCM) and the character-defining features that give the Project Site this historic status. As discussed in Topical Response No. 4 and Chapter II, *Project Description*, of the Draft EIR, and in Project Design Feature CUL-PDF-1: Rehabilitation Plan, the distinctive character-defining features of the Project Site as identified in the HCM designation would be retained. Specifically, the Project Site would remain a private recreational facility open for public use in Studio City, and the character defining features of the HCM, specifically the clubhouse, putting green, golf ball-shaped light standards, and brick wall with weeping mortar, would all be retained such that the Project Site would retain its historic integrity and continue to convey its significance as a 1950s community recreational facility.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 30**

Jeanne Johnson

Received March 17, 2022

### **Comment No. IND 30-1**

I am writing to voice my support for Harvard-Westlake's River Park campus. I am 21 year resident of Studio City.

I attended the SCRA, October 1st, 2019, meeting at the church on Whitsett, that is directly across from the golf and tennis club.

I listened to the heartfelt comments from community members and neighbors; the excellent presentation from the school, and the respectful and productive exchange that followed.

I am encouraged that the communities can forge a strong partnership on this project; and as a resident I am especially confident in the school's commitment to that partnership.

### **Response No. IND 30-1**

The comment expresses support for the Project based on the potential for partnership between the community and the School. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 31**

Brad Goldberg  
Received March 18, 2022

### **Comment No. IND 31-1**

I am a resident of your district, residing at 3555 Stonewood Drive, and an active member of SOHA.

I'm writing to you to express my support for the planned development of the Harvard-Westlake River Park.

The plan, as I understand it, is a model for urban planning and development - private development of land that preserves and improves public space, creates a riverside refurbishment with green foliage, employs good environmental technology to reclaim and reuse area rainwater, provides modern, state of art recreational facilities to be shared with our residents, and serves to improve studio city and the wider valley community opportunities.

Also, I regularly see generations of Harvard-Westlake families at our toy drives, boulevard beautifications, river cleanups, etc. expressing their pride in our valley community and improving our surroundings, right here where the school resides. The school has historic roots in our backyard and endeavors to responsibly improve valley initiatives and support our neighborhood.

I sincerely hope our family, homeowners association, council district and neighborhood can count on your support for the Harvard-Westlake River Park ENV-2020-1512-EIR.

### **Response No. IND 31-1**

The comment expresses support for the Project based on the development of private land that preserves and improves public space, river refurbishment, water reuse and reclamation, and provision of recreational facilities for the community. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 32**

Donna and Fred Mendes  
Received March 18, 2022

### **Comment No. IND 32-1**

Change is hard. Especially when it is in our backyards. But the difficulty of the process of change and the fear of a horrible consequence of change should not dictate whether change occurs. We must base our decisions on facts and of course, in the interest of progress.

Harvard-Westlake's River Park Campus Project is an excellent plan to improve a massive plot of land in Studio City. It is a plan that includes the entire community by inviting us residents to use its grounds AND facilities and it cleans up an area which has limited access to the public. (Chain link fences and inaccessible areas which lead to nowhere). The environmental improvements are many from its massive water reclamation proposal to the planting of trees.

My husband and I attended a meeting held in October of 2019 at the Church across from Weddington with representatives of Harvard Westlake and residents. We listened carefully to the concerns of people who live nearby. Their objections were not rooted in a realistic and honest analysis of what the project actually is and the benefits it will provide to the city and its residents. There were many residents who spoke in favor of the project, and we applaud the residents who were able to see beyond their fear of change and embrace Harvard-Westlake's plan. I would like to share with you a few thoughts in response to the points made at the meeting.

While driving home from the event, my husband and I noticed that dozens of incredibly bright tennis lights lit up the Studio City skies. We could not hear a single game being played. Those bright lights are a total waste of electricity and of course, an unnecessary visual eyesore for nearby residents. Residents have expressed concern that the plan will leave a massive carbon footprint creating an environmental catastrophe. But this fear is not based on fact. The River Park will actually decrease ridiculous waste in the neighborhood while contributing to sound environmental improvements and upgrades. Harvard-Westlake will replace water soaking and decayed trees with greenery which the city deems is more suitable to that land space. The water reclamation project is brilliant and is a clear sign of the school's willingness to create an environmentally safe space for residents. One resident said that the development will prevent our seniors who currently enjoy the space from partaking in the beauty of the new space. Nothing could be further from the truth! We all know the city requires all new development to be ADA compliant. This project would give seniors and people with disabilities more access to beautiful park space than they ever had before! In fact, because the grounds are so old, so much of the space is inaccessible not only to an average park goer, but to people with disabilities. Harvard Westlake's plan will make the space available AND accessible to everyone.

We all have to deal with change in our city. Our neighbors are building and improving their homes all around us. And while perhaps it is true that the construction is slightly disruptive, this annoyance is temporary and fleeting and should never stand in the way of progress. The residents who oppose this project didn't want the condos. They fought against that project and won. A condo development would have completely excluded them from accessing the property at all. Now they have an owner who is saying, 'Yes, we want to develop this land to benefit our Harvard-Westlake community, AND we also have created a plan which invites you all to partake in the River Park, keeping the community in mind, and being inclusive of all.'

My husband and I fully support Harvard-Westlake's project and as District 4 neighbors, look forward to partaking in the amenities the school has invited us to enjoy.

### **Response No. IND 32-1**

The comment expresses support for the Project based on the provision of publicly accessible land, water reclamation improvements and tree planting plan. The comment also expresses support for the ADA compliance improvements and access to the site for the community. The comment also acknowledges temporary construction annoyance. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 33**

Emma Woodhouse Graber  
Received March 18, 2022

### **Comment No. IND 33-1**

I live at 17357 W Magnolia Blvd Encino 91316 in Council District 4 and I strongly support the Harvard-Westlake River Park. I urge you to support this project because it is good for the school, good for the environment, and good for the Studio City community.

While I do have a daughter who is a student at Harvard Westlake, she will only be there for 3 more years and will not be there when the project is complete. I have no other children. I am writing this because I truly believe this project is a net positive for the surrounding community as well as the school community. I have studied it in detail.

I am aware that there are some community members against the River Park making this a difficult decision for you. However I am sure that once the project is complete, the hearts and minds of activists against it will change. Of course I am not privy to all of their concerns, but I have reviewed the project and tried to see it through the eyes of someone not affiliated with the school. In my humble opinion it is a win for the ENTIRE community.

Thank you for your time and service to our city.

### **Response No. IND 33-1**

The comment expresses support for the Project based on the benefits for the school, environment and community. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 34**

Jen Azimzadeh

Received March 18, 2022

### **Comment No. IND 34-1**

I strongly object to this development. My objection is based on fairness, equity, and public vs private benefit.

### **Response No. IND 34-1**

The introductory comment expresses opposition to the Project based on public versus private benefit. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 34-2**

I feel this is a bad look for Studio City and Los Angeles as a whole. LAUSD has been underserving its students for years. School choice is a hot topic these days due to many perceived and actual failures of free public education especially as that relates to LAUSD. Seeing a 45k+ a year tuition private school with college-level amenities and a beautiful sprawling campus purchase and developing the last patch of open publicly accessible open space in Studio City highlights and frames the vast chasm between the haves and the have-nots.

### **Response No. IND 34-2**

The comment expresses concern about the development of an existing “publicly accessible open space” by a private school. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

However, it is noted the Project Site is not public property. To clarify the existing property rights and on-site uses, the land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner’s sole discretion.

In addition, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the

School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

### **Comment No. IND 34-3**

A few blocks away, Studio City Rec Center which is a fraction of the size is jam-packed with residents, families, children's sports programs.... desperately in need of open public space. The size and scope of this project will only rub salt in the wound, with a demoralizing impact and loss of quality of life that will be subjected upon Studio City for years of construction. Those on the outside looking in (if we can even see over the walled compound) will be reminded day after day, what the privilege of wealth brings to the students whose parents can afford the tuition, while their children suffer at separate and far less than equal taxpayer-funded public schools.

### **Response No. IND 34-3**

The comment expresses opposition to the Project based on the need for open public space and the development of the site by a private school. The commenter is referred to Topical Response No. 3 – Enforcement of Public Access, of this Final EIR, which include a discussion of the Project's proposed publicly accessible features and components, which the commenter acknowledges as the public being "desperately in need of".

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 34-4**

While it may sound as if I begrudge the affluent for their successes, this is not the case. There are other far more suitable alternatives for a well-funded private school to expand their sports facilities that are not at the expense of Studio City, the nearby residents and businesses, and an infrastructure that can not [sic] handle such a large development.

Stated in the DEIR ENV-2020-1512-EIR – Section V. Alternatives Project Site Page V-6:

...".Accordingly, given the nature of the Project's significant unavoidable impacts, evaluation or an alternative location was not pursued as it would be likely to shift impacts to another location rather than helping to avoid or substantially lessen the significant effects of the location rather than helping to avoid or substantially lessen the significant effects of the project... In conclusion, the development of the project at an off-site location would not be feasible based on CEQA criteria and an off-site location is not given further consideration as a Project alternative."

THIS IS NOT TRUE AND by this statement, HW ADMITS IN THIS STATEMENT that there are significant effects of the project at the current location!

## Response No. IND 34-4

The comment cites the discussion of Project alternatives in Chapter V, *Alternatives*, of the Draft EIR and disputes the statement in the Draft EIR regarding the use of an off-site location. The comment cites the Draft EIR conclusion that the Project would result in environmental impacts at the Project site. As disclosed in the Draft EIR, significant impacts that cannot be mitigated to less than significant levels would be limited to on- and off-site short-term noise and vibration impacts occurring during the Project's construction. The Draft EIR evaluates Alternatives that would reduce these significant impacts. Because similar construction activities would also likely occur at an alternative site, it is not likely that an alternative site would reduce these significant and unavoidable construction impacts to a less than significant level. As such, development at an alternative site location would not serve a purpose respective to CEQA requirements. As concluded in Chapter VI, *Other CEQA Considerations*, the Project is being proposed, notwithstanding significant unavoidable construction noise and vibration, because it would support the RIO District Ordinance for revitalization of the Los Angeles River environment, enhance public enjoyment of the open space environment, and meet the needs of the School in providing recreational and academic opportunities to its students. In addition, as a result of the conclusions of the analysis contained within the Draft EIR, a statement of overriding considerations supported by substantial evidence will be prepared and reviewed by the decision-maker in accordance with the State CEQA *Guidelines* Section 15093 when making a determination on the Project.

## Comment No. IND 34-5

Valley College is a prime example. A sports complex here would also benefit the adjacent college AND Grant High School, a win-win for all. The Sepulveda Basin (HW has a field there already) is another suitable alternative that is not sandwiched in-between so many single-family homes, and narrow streets that cannot handle the current traffic and are already subjected to large developments.

Harvard Westlake has every right to expand its facilities, but that doesn't mean the property at Weddington Golf & Tennis is the right location for this expansion. Studio City cannot handle this type of development.

## Response No. IND 34-5

The comment identifies Valley College and Sepulveda Basin as alternative Project Site locations for expanded recreational facilities. The alternative sites included in this comment would not satisfy the Project Objectives and are not realistic alternatives given that the School does not own or otherwise control Valley College or the Sepulveda Basin. The reasons that alternative sites were considered and rejected is provided in Chapter V, *Alternatives*, page V-6, of the Draft EIR. In addition to a site with the size to accommodate the Project Objectives, the other criteria for the Project include proximity to the existing Harvard-Westlake's Upper School campus on Coldwater Canyon Avenue and a site with level topography to allow for the development of the contemplated

recreational facilities. Proximity is a criteria factor because of the need for daily commuting from the Upper School campus, as it relates to higher daily vehicle miles. As concluded in Chapter V, of the Draft EIR, no other location with adequate acreage and topography exists within proximity to the Upper School campus.

The comment also expresses concern that the streets near the Project location cannot handle the current traffic but does not provide any substantial evidence to support these claims or raise any issues with respect to the content or adequacy of the Draft EIR. The commenter is also referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, in this Final EIR for a discussion of the Project's traffic patterns, effects on local streets, and consistency with CEQA threshold levels.

### **Comment No. IND 34-6**

Councilmember Raman and Councilmember Krekorian please be our stop this development and become our community hero and advocate for moving this project to another location.

### **Response No. IND 34-6**

The comment expresses general opposition to the Project and requests an alternative project location. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 35A

Andre Karchemsky  
Received March 20, 2022

### Comment No. IND 35A-1

I send this email to you today to be heard, just briefly, on the matter of Studio City Golf and Tennis. I first met you when you were protesting the lobby floor of my building against an oil maverick in downtown Los Angeles with Ricci Sergienko. A few years later, it seems like you and a group of your colleagues made it to a position of power. To be quite honest, I think you have done nothing positive for this community (Sherman Oaks, Studio City), or at least nothing that I have noticed. Consequently, I think your position is coming to a close in short order. However, it seems to me that there may be some hope for you to do something meaningful in the Studio City community that could give you some credibility. Prevent a private school, that charges ridiculous tuition, from taking over a staple of the San Fernando Valley. What purpose does this venture serve our community? The school is not even walking distance to Weddington. This is simply a property grab to store assets and grow their bottom line. They aren't the first to try and take this place over.

If you were once able to stand against a oil company to protect clean water and the environment, then what about standing up against the demolishing of a landscape nested in the heart of this city. Weddington acts like a park - where people gather to exercise, socialize, and escape from the realities of the world. You have the power to prevent that from ending.

Now that you have constituents, it is your duty to represent them. Your move.

-----

Response from Councilmember Raman's office (Council District 4) dated March 21, 2022:

"Thank you for reaching out to the council office about the proposed Harvard-Westlake River Park Project at the former Weddington Golf & Tennis site, an important landmark for the community. We appreciate how engaged Studio City residents have been since the inception of this proposal.

Per Los Angeles City Planning (LACP) and California Environmental Quality Act (CEQA) standards for projects of this scale that are also reviewed by state agencies, the comment period for the Draft Environmental Impact Report (DEIR) is currently set for 45 days.

Councilmember Raman and her staff have respectfully requested that City Planning extend the DEIR comment period to more than 45 days so that constituents, community stakeholders, and the council office can ensure adequate time for a complete and in-depth review process for this dynamic project. We are currently awaiting the Department's decision on an extension.

We understand that there will be more opportunities for community members to weigh in with their feedback and suggestions, including at a public hearing held by City Planning following the final EIR release as well as at a future City Planning Commission meeting.

The Council Office is closely tracking this and again, we appreciate your comments.”

### **Response No. IND 35A-1**

Comment No. 35A-1 from Mr. Karchemsky is derived from email communication between Mr. Karchemsky and the Council Office. This email communication is considered a comment for the purposes of this Final EIR and has been made part of the administrative record. The above response was provided by the Council District 4 Office.

In addition, the comment expresses opposition to the Project based on the loss of a property that “acts like a park.” This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

However, it is noted the Project Site is not public property. To clarify the existing property rights and on-site uses, the land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner’s sole discretion.

In addition, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

## Comment Letter No. IND 35B

Andre Karchemsky  
Received March 21, 2022

### Comment No. IND 35B-1

I appreciate your prompt response. I tend to disagree with your most recent email because an extension for 45 days is simply not good enough. As you know, there is precedence for a 90-day public comment period for other large projects, and the Department of Planning is not going to deny Ms. Raman's request.

Please think about the implications of this project if it passes:

- A local school will own acres of land that pose ZERO benefit to the community
- A place for local business, people, families, and friends to exercise is displaced
- A landscape that makes Studio City appealing will be displaced
- The local economy takes a hit

Harvard-Westlake has been trying to expand its campus for years. They tried to build a large parking lot and bridge over Coldwater Canyon, or something to that effect. This campus is desperate to reallocate their funds because they know that if they don't reallocate them, they will lose them to taxes and so forth. So why not invest in property?! Of course, if I was their financial advisor, I would agree with everything they are doing. However, it is up to you and your team to prevent them from destroying natural resources, public space, and the local economy.

Please commit to the 90 days for public comment. I am happy to go ahead and speak as a member of the community against Harvard Westlake. It would not be first time I stand up to them, I am a graduate of Sherman Oaks, Notre Dame.

90 days! We need time.

-----

Response from Councilmember Raman's office (Council District 4) dated March 25, 2022:

"Thank you for reaching out to the council office about the proposed Harvard-Westlake River Park Project at the former Weddington Golf & Tennis site, an important landmark for the community. We appreciate how engaged Studio City residents have been since the inception of this proposal.

-----

Response from Los Angeles Department of City Planning on March 25, 2022 stated:

“Thank you for your email and comments regarding the proposed Harvard-Westlake River Park Project. Your comments will be included in the record for this Project. If you have not already been included on City Planning's Interested Parties list to receive future correspondence regarding the proposed Harvard-Westlake River Park Project, you will be added to our Interested Parties list for this proposed project.”

### **Response No. IND 35B-1**

Comment No. 35B-1 from Mr. Karchemsky is derived from email communication between Mr. Karchemsky, Los Angeles Department of City Planning, and the Council District 4 Office. This email communication is considered a comment for the purposes of this Final EIR and has been made part of the administrative record.

The comment requests an extension of the public comment period from 45 days to 90 days. Refer to Topical Response No. 1 – Public Participation and Review, in this Final EIR, which discusses public participation and CEQA public review requirements and steps undertaken by the City to facilitate public participation in association with the Draft EIR. Also, refer to Response Nos. FORM 1-1 and FORM 1-2 regarding public review of the Draft EIR.

In addition, the comment expresses opposition to the Project based on lack of community benefits, loss of a park recreational resource, changes to the City's landscape, and economic concerns. Please refer to Response No. IND 35A-1 regarding the use of the Project by the public and to Topical Response No. 3 - Enforcement of Public Access, in this Final EIR. The latter includes a discussion of the Project's facilities and features for public use and the School's commitment to public access. Landscape changes, including the tree removal and replacement program are addressed in Topical Response No. 5, Biological Resources/Trees, in this Final EIR. As stated in CEQA Guidelines Section 15131, economic or social issues are not topics for EIR consideration unless they lead to a physical change in the environment.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Response No. IND 35D-1**

Comment No. IND 35D-1 from Mr. Karchemsky is derived from email communication between Mr. Karchemsky and the Los Angeles Department of City Planning. This email communication is considered a comment for the purposes of this Final EIR and has been made part of the administrative record. The comment requests their personal email address to be added to the City’s distribution list for the Project and does not raise any issues with respect to the content or adequacy of the Draft EIR. No further response is necessary.

## Comment Letter No. IND 36

Charles Cox

Received March 20, 2022

### Comment No. IND 36-1

Please, as a concerned citizen of Valley Village. I am asking you to please do everything in your power to stop the demolition of the Weddington Golf and Tennis center. It is one of the few green spaces our community has left. This little green oasis has served my family and friends for as long as I can remember. I have memories learning the game of golf with my father and also teaching my son to play. It is a magical place that should be shared with many generations to come. I remember seeing the 'Skipper' from Giligans Island playing there as a kid. This place hold many great memories for me and others I am sure. More importantly, it is a beautiful open green space that should be preserved. Preserving the trees and wild life should be a priority as these things are disappearing more and more.

Please Councilmember, help to save this beautiful place for other generations to enjoy. It is a place where family and friends meet to enjoy the outside. We have seen enough sprawl in recent years. Please let this be our own 'Central Park' of Studio City. Big business will find other ways to meet their demand and thirst for profits. Please help us save this rare gem. Please help our environment.

### Response No. IND 36-1

The comment expresses opposition to the Project based on the loss of green space and tree removal. The Project would provide 5.4 acres of publicly accessible, landscaped open space and a 0.75-mile pathway connecting to the adjacent Zev Greenway, via an ADA-compliant pedestrian ramp. The Project would add a broad array of native plant species and contribute to the number of trees. Refer to Topical Response No. 5 – Biological Resource/Trees, for a discussion of impacts to trees. As discussed in Topical Response No. 5, the Project's tree removal and replanting program was fully analyzed in the Draft EIR's Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). The majority of street trees would remain and any removed street trees would be replaced at a 2:1 ratio. The existing mature trees along the Zev Greenway, Bellaire Avenue, and Whitsett Avenue would remain. The majority of mature street trees along Valley Spring Lane would also remain, except for two smaller sections along the street front (see Section IV.C, *Biological Resources*, Figure IV.C-4, *Tree Removal Plan*, of the *Draft EIR*). The Project would result in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree Planting Plan*, of the *Draft EIR*).

In addition, refer to Topical Response No. 3 - Enforcement of Public Access, in this Final EIR for additional details regarding public access and use of the Project Site, and a discussion of the School's commitments to maintain public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 37**

David Hilton

Received March 21, 2022

### **Comment No. IND 37-1**

It was nice meeting you and your kids at the Encino Little League opening night. As the past president for the league, I have to say we always love the support of our local council members offices at the league. If you ever want to stop by on a weekend please let me know and I'll treat you to some of our amazing burgers and fries.

I am also very involved at my kid's school, Harvard Westlake. As a member of the community, we are super excited to be able to give back to the neighboring communities with the development of the River Park Area. As a native Los Angeleno, I remember going to Weddington Park and I can only imagine how amazing the park is going to look once Harvard Westlake preserves the open space and provides brand new recreation facilities for the local community members.

If you haven't met with the Harvard Westlake team yet, I would be happy to introduce them to you and set up a lunch for you to meet with the community.

Thank you for any help you can offer in creating a new place for our community to enjoy the outdoors!

### **Response No. IND 37-1**

The comment expresses support for the Project based on the benefits for the School and community. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 38**

John Ruffner

Received March 21, 2022

### **Comment No. IND 38-1**

I am very concerned about the environmental impact of this proposed development. I am sure there are many other who can articulate the issues better, but I am particularly concerned about construction noise and all the other nuisances related to construction; traffic caused by events at the new venue; increased light pollution; but especially about the removal of all the trees and the open grassy areas.

### **Response No. IND 38-1**

The comment expresses opposition to the Project based on construction noise, construction traffic, light pollution, tree removal, and loss of grassy area. Refer to Response No. IND 13-1 which discusses the concerns raised in the comment.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 39**

Kelly DeMarco

Received March 21, 2022

### **Comment No. IND 39-1**

We live across the street from Weddington Golf Course, along Valley Spring Lane, and support the Harvard- Westlake River Park Campus project wholeheartedly. In fact, we live directly across from where the soccer bleachers will be installed, and are not troubled by this at all. We have lived here for 24 years, appreciating the beautiful golf course all this time, but this project is a dream come true.

The River Park Campus will bring wonderful value to our neighborhood. We can't wait to utilize the walking paths, meeting up with our neighbors, who I am sure will be out and about using it (at least in the beginning). I look forward to it being a nice focal point for the community. We also look forward to using the RiverWalk to go from Whitsett to Coldwater, which currently you'll never catch us doing because it is scary down there. With H-W's presence, security and safety will be heightened, and taking a stroll to the now- developed Sportsmen Lodge Complex will be dreamy. We are so thrilled for both of these developments.

We have been utmost impressed by H-W's professionalism throughout this process. Their desire to engage with the community is highly respectful. We wish some of the community would actually process what they are hearing, instead of being stubborn. All will be beautiful and property values will increase. Sure there will be noise and cars parking along Valley Spring Lane, but compared to how it was in the past—motorhomes—and how it is now—weirdos sitting in their cars during daylight hours—it will be an improvement. I have spoken at many community meetings, in favor of everything we have in the future to come.

We look forward to having a cocktail on our front patio and enjoying the sounds and views of youth playing athletics, long after our own children have left the nest.

We say rah-rah to Harvard-Westlake River Park Campus!! Thank you.

### **Response No. IND 39-1**

The comment expresses support for the Project based on the provision of a community pathway and heightened security that would accompany the proposed facilities. The comment acknowledges future noise and parked cars from the Project but states the Project will provide improvements over existing conditions.

Note that parking on neighborhood streets would be prohibited by the Project Design Feature TRAF-PDF-3, which would be enforced through the Project's Mitigation Monitoring Program (MMP). Also, future operational noise levels, including composite

noise from crowds, amplifiers, and traffic would not exceed the City's noise standards or CEQA thresholds.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 40**

Marnie Messler-Wilkins  
Received March 21, 2022

### **Comment No. IND 40-1**

As residents of the Studio City area and frequent patrons of Weddington, we're saddened and extremely disappointed by the environmental impact of the proposed plans. The removal of trees, increased air pollutants, huge parking garage, nightmare traffic and overall noise, would be such a disservice to the broader community. As mentioned, this space is one of the few left where integrity has gone untouched. Many of the families who attend this school, are not even constituents of the Valley. I ask that you please consider all of these factors when determining the outcome of this lovely space. We are so thankful for it and hope to continue to use it for many years to come.

### **Response No. IND 40-1**

The comment expresses concerns about tree removal, increased air pollutants, the parking garage, traffic, and noise. Refer to Response No. IND 13-1 which discusses the concerns raised in the comment. Also, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitments to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 41**

Tanya Kinoshita

Received March 21, 2022

### **Comment No. IND 41-1**

My name is Tanya Kinoshita. I live at 12700 Moorpark Street, Apt. #403 in Council District 4 and I strongly support the Harvard-Westlake River Park.

I have lived here for the last 3 years. Within my building and around me there is a large community of dog owners. The dog walking community and I urge you to support this project because it creates a safe place for us to walk our dogs. I walk my dog around the block from Bellaire to Valley Vista to Whitsett and back to Moorpark twice a day. As it stands now VALLEY SPRING LANE between BELLAIRE AVE and WHITSETT AVE is UNSAFE. In the morning and afternoon/evenings, this is a prime thoroughfare for runners, walkers, dogs, babies in strollers and cars/trucks both moving and parked. We need a walkway or at the very least a sidewalk because cars traveling in opposite directions cannot pass with enough room and sometimes traveling too fast around us, our kids and our pets.

The Harvard-Westlake River Park will ensure our safety by providing a beautiful space for us to walk that is a safe distance from the street and cars.

Thank you for supporting the Harvard-Westlake River Park and improving our small but caring community.

### **Response No. IND 41-1**

The comment expresses support for the Project based on the provision of a safe pathway for the community. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 42A

Teri Austin

Received March 21, 2022

### Comment No. IND 42A-1

I see on the DEIR cover page:

Prepared For:

The City of Los Angeles

Department of City Planning

Prepared By:

Environmental Science Associates

Am I correct in assuming that the City of Los Angeles paid ESA for this report? And since this report is finished, has this invoice has been paid in full?

May I ask where I would find out what the total cost to the City of this study was?

I think I understand that the applicant does have to reimburse the City for this study. May I also ask where I inquire to see if that debt has been also paid in full as of yet?

Thank you kindly.

----

Response from the Los Angeles Department of City Planning dated March 23, 2022:

“For EIR projects, the applicant/developer pays an EIR ‘deposit’ fee to the City. City staff then charge hourly for our work, review, and preparation of the EIR. Quarterly invoices are sent to the applicant/developer for payment to the City. As work is still ongoing, the applicant/developer will continue to pay hourly fees to the City for environmental work on an ongoing basis.

In addition, the developer must choose from the City’s list of pre-approved third-party environmental consultants, who help prepare the EIR at the direction and guidance of City staff. The developer pays those third-party consultants directly, and we do not have access to those invoices/payments.

In general, costs associated with an EIR can cost a developer anywhere in the range from \$100,000 to millions of dollars, especially if litigation is involved.”

### Response No. IND 42A-1

Comment No. 42A-1 from Ms. Austin is derived from email communication between Ms. Austin and the Los Angeles Department of City Planning. This email communication is

considered a comment for the purposes of this Final EIR and has been made part of the administrative record. Please find my Public Comment for ENV-2020-1512-EIR both attached with a word document and also available with this Dropbox link  
<https://www.dropbox.com/t/FsPpDfQumthcx4Tk>

I am writing this letter to address the inadequacy of the Draft Environmental Impact Report (DEIR) ENV-2020-1512-EIR -Harvard Westlake Riverpark Project. As detailed in this letter, the DEIR provides an inaccurate and inadequate project description, and an inaccurate and incomplete picture of the potential environmental impacts of the proposed project. This DEIR must be augmented and recirculated.

### **Response No. IND 42D-1**

This introductory comment states the Draft EIR provides an inaccurate and inadequate project description. The comment also references an attached comment letter. This comment does not raise any specific issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration. Responses to the referenced attached comment letter are provided below in Responses to Comments Nos. IND 42D-2 to IND 42D-35 below.

### **Comment No. IND 42D-2**

*Note: Comment Nos. IND 42D-2 through IND 42D-25 are included in the commenter's letter dated May 10, 2022.*

My name is Teri Austin and I am writing this letter to address the inadequacy of the Draft Environmental Impact Report (DEIR) ENV-2020- 1512-EIR -Harvard Westlake Riverpark Project. As detailed in this letter, the DEIR provides an inaccurate and inadequate project description, and an inaccurate and incomplete picture of the potential environmental impacts of the proposed project. This DEIR must be augmented and recirculated.

### **Response No. IND 42D-2**

Refer to Response No. IND 42D-1.

### **Comment No. IND 42D-3**

I would like to add at the beginning of my letter that I find it patently unfair that a resident such as myself who is not a professional in urban planning, architecture or landscaping is expected to digest and then respond to a 6,000 page document within 60 days. In contrast the extremely wealthy developer received over a year to hire a raft of professionals to compose this DEIR and also had an abundance of funds to afford the necessary experts.

I do not have the funds to engage the level of experts the developer has and that puts me at distinct disadvantage to respond in the most complete manner to this document. This project will cause a significant impact to my personal health, quality of life, property value, and enjoyment of my neighborhood.

### **Response No. IND 42D-3**

The comment states that the review period (actually 62 days) was not adequate to review the Draft EIR. Refer to Topical Response No. 1 – Public Participation and Review, in this Final EIR, which discusses public participation and CEQA public review requirements and steps undertaken by the City to facilitate public participation in association with the Draft EIR. Also, refer to Response Nos. FORM 1-1 and FORM 1-2 regarding public review of the Draft EIR.

The comment also expresses general opposition to the Project based on impacts to health, quality of life, property value, and personal enjoyment. See Response No. FORM 3-3 which addresses these concerns.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 42D-4**

In addition, this project will demolish and destroy a historically designated landmark. I wrote the application for the HCM nomination for this property. The nomination for HCM status received a last minute substitution in the wording, purportedly by a request from Councilmember Krekorian which profoundly changed its intent for protection of it's historical use as a golf course, not just a "recreational facility". That matter is currently in the courts and its outcome remains unknown. The DEIR does not mention the lawsuit and that omission is reason enough for this DEIR to be augmented and recirculated as the public must be made aware of pending litigation regarding this DEIR.

### **Response No. IND 42D-4**

See Topical Response No. 6 – Historic Resources. The implied statement that the golf course is a character-defining feature of the Project Site is the opinion of the commenter

and is not part of any official determination or designation of the Project Site as a historical resource. Based on an application that the commenter submitted to the City to designate the Project Site a historical monument, the City reviewed all of the evidence related to the history of the Project Site, and determined the historical significance and character-defining features as identified in the Draft EIR. It is the City's identification of the character-defining features of the Project Site that appropriately provides the basis for the analysis in the Draft EIR. The speculative comment that there is pending litigation on the Draft EIR is not relevant to the analysis and conclusions of the Draft EIR. Further, the fact that there is a lawsuit<sup>2</sup> challenging the City's determination is not relevant to the analysis and conclusions of the Draft EIR.

### **Comment No. IND 42D-5**

What I do have to offer in terms of facts in response to the inadequacy of this DEIR, is my first hand experience as I have lived within 4 blocks of this property for over 30 years. I have walked my dogs on Valleyspring [sic] and Bellaire thousands of times. I have ridden by my bike on Whitsett, Valleyspring, [sic] Bellaire, and on the Zev Yaroslavsky Greenway. I have driven my car on all the streets that border this property as well as all the streets between Coldwater Canyon, Moorpark, Laurel Canyon and Ventura Blvd and South of Ventura, for 3 decades. I have travelled all the before mentioned roads at all times of day and night, during Holidays and through all four seasons.

I have first hand knowledge (as do many of my neighbors) of the ambience, noise level and traffic conditions in this neighborhood. The bucolic atmosphere on Valley Spring and Bellaire where currently residents walk their dogs, bike and push baby carriages, will be destroyed, and made dangerous when far more traffic is driven to this property not only by the staff and students arriving daily but also hundreds and sometimes thousands of by people attending events.

### **Response No. IND 42D-5**

The comment expresses concerns about changes to the ambient noise levels and traffic. However, the commenter does not provide any substantive facts or support for these concerns or opinions. The commenter is referred to Response No. IND 6-3 and Topical Response No. 8 – Noise: Construction and Operation Impacts, in this Final EIR for a discussion of construction and operational noise impacts.

In addition, see Topical Response No. 9 - Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR

---

<sup>2</sup> See *Save Weddington Inc. v. City of Los Angeles* (Los Angeles Superior Court Case No. 21STCP04158; filed Dec. 22, 2021)

determined that all CEQA-required transportation impacts would be less than significant without mitigation.

### **Comment No. IND 42D-6**

The entrances to the so-called “Riverpark” will mean people have to cross Whitsett, Vallyspring [*sic*] or Bellaire to enter. The increase in traffic will make crossing, especially with small children and baby carriages, dangerous. Is the city going to provide several new crosswalks, one at each entrance, and is HW going to provide crossing guards at each one?

### **Response No. IND 42D-6**

The comment expresses the concern that pedestrian crossings would be required for families crossing Whitsett Avenue and other streets for safe access to the Project Site. The commenter’s concerns about pedestrian safety are noted, given that Project-generated vehicle activity would increase with implementation of the Project and that increases in pedestrian crossings would occur as residents of the neighborhood to the east utilize the community and recreational spaces in the Project. However, there is no specific threshold regarding when an increase in pedestrian volumes at a location with a very limited history of pedestrian collisions would be significant. As discussed in Chapter 4 of the Transportation Assessment (TA) (included as Appendix M of the Draft EIR), per the City’s criteria, the Project would not create an excessive burden on any of the surrounding residential streets in either the Non-Event Scenario or the Special Event Scenario. That is, the City’s criteria for an impact to a residential street segment is the addition of 120 trips. Furthermore, given the lack of a history of pedestrian-related collisions and the fact that the City of Los Angeles has not identified Whitsett Avenue as part of its high injury network, the increase was not identified as a significant impact.

In addition, as indicated in Topical Response No. 9 – Transportation and Parking During Construction and Operations, following circulation of the Draft EIR, the City installed a traffic signal at the intersection of Whitsett Avenue and Valley Spring Lane. The intersection of Whitsett Avenue and Valley Spring Lane was unsignalized at the time of publication of the Draft EIR. The addition of the traffic signal would allow for pedestrian and bicycle crossings from the surrounding areas to the Project Site through the intersection in marked crosswalks, thus, enhancing pedestrian safety in the Project Site area.

For additional detail and discussion of prior traffic safety records at Whitsett Avenue, please refer to Response No. IND 225-4. This comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 42D-7**

The so called “river park” in reality is simply the 30 foot set back on which the developer is prohibited from building. This narrow strip, less than 20 feet in width in some parts, will

be dangerous to children, bikers and dog walkers all crammed into a too narrow space to avoid dog bites and collisions of bicycles and people/dogs. Please note map A.0.00 in this DEIR at the South/West corner of Field B which illustrates this too narrow pathway.

### **Response No. IND 42D-7**

The comment states the publicly accessible pathways would be too narrow for public use and that they are located wholly within the required A zone's 30-foot setback.

Regarding the potential for dog bites and collisions between pedestrians/bicyclists, CEQA does not require analysis of speculative conditions. Furthermore, the comment does not provide any substantial evidence that Project operation would result in substantial safety conflicts. Pursuant to CEQA Guidelines Section 15143, "[t]he significant effects should be discussed with emphasis in proportion to their severity and probability of occurrence." Furthermore, CEQA Guidelines Section 15064(d)(3) states that "[a]n indirect physical change is to be considered only if that change is a reasonably foreseeable impact which may be caused by the project. A change which is speculative or unlikely to occur is not reasonably foreseeable."

In addition, unlike suburban sidewalks, bicycles would not be permitted on the path, which would further ensure pedestrian safety. The landscaped pathways would vary in width to allow for seating and would be, at minimum, as wide as a public sidewalk which could accommodate groups of people.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 42D-8**

This DEIR information is inadequate and inaccurate for section **Section IV L.3 Recreation and Parks**.

This DEIR inadequately describes significant impacts for recreation standards, cultural or historical sites, environmental and ecological balance and undeniably unique sites. The Weddington Golf and Tennis property is not just a golf and tennis facility it is unique due to its history (it is an HCM) and its culturally planned landscape which is unlike any other par 3 golf course in Los Angeles County. See below.

### **Response No. IND 42D-8**

The comment states the Draft EIR is inadequate and inaccurate regarding impacts to recreational standards, cultural or historical sites, environmental and ecological balance, and unique sites. Please refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, regarding the adequacy of public and private, off-site nine-hole golf courses to accommodate relocated golfers and the adequacy of the Project's eight tennis courts to

provide the same number of weekly sessions to the public as under existing conditions. As discussed therein, and in Section IV.L.3, *Parks and Recreation*, of the Draft EIR, the Project would not exceed the CEQA impact thresholds to parks and recreational facilities. The commenter does not provide any substantive facts or support for these concerns or opinions. Refer to Response No. IND 42D-4 for a discussion of the HCM nomination.

## **Comment No. IND 42D-9**

### **RELEVANT GENERAL PLAN FRAMEWORK ELEMENT POLICIES**

#### **(ii) Open Space Element**

“This document distinguishes open space areas as privately- or publicly-owned, and includes goals, objectives, policies, and programs directed towards the regulation of privately-owned lands both for the benefit of the public as a whole and for protection of individuals from the misuses of these lands. In addition, this document discusses the acquisition and use of publicly-owned lands and recommends further implementation of studies and actions to guide development of open space in the City. Furthermore, in order to address the standards and criteria of identifying open space, this document describes various contextual factors that may affect open space, including, but not limited to, recreation standards; scenic corridors; density and development; cultural or historical sites; safety, health, and social welfare; environmental and ecological balance; and unique sites” In addition, by this DEIR’s own account, on pages IV L. 3-14 over 63,000 individuals use the Weddington golf course and driving range. However the DEIR goes on to state that “. *Because existing municipal golf courses have available capacity to accommodate the relocated golfers from the Weddington Golf Course, ....the relocation of golfers is not expected to increase demand at a level that would foreseeably require the provision of new or physically-altered public golf courses.*”

This data is not just “flawed” its flat out wrong.

Please refer to the letter from Craig Kessler, Legislative Deputy for the Southern California Golf Association, stating, “ *as evidenced by the reality that Los Angeles’ Recreation and Park’s 13-facility golf Internet reservation system sells out in less than one minute each and every day. The system is fully booked 9 days in advance year-round.*”

## **Response No. IND 42D-9**

The comment states that the Draft EIR’s data on golf course availability is incorrect. Refer to responses to the Kessler letter included as Response Nos. ORG 17-1 to ORG 17-8 of this Final EIR. As discussed therein, the relocation of golfers caused by the Project is not expected to increase demand at a level that would foreseeably require the provision of new or reconstructed public golf courses. Therefore, the Draft EIR correctly determined that the Project would not cause the substantial or accelerated physical deterioration of public park and recreational facilities that would require the construction or expansion of

recreational facilities that might have an adverse physical effect on the environment. Please also see Topical Response No. 11 - Recreation: Golf and Tennis Facilities, in this Final EIR. Topical Response No. 11 details the methodology utilized in preparing the Draft EIR to substantiate the conclusion that existing municipal golf courses have available capacity to accommodate the relocated golfers from the Project Site's course.

### **Comment No. IND 42D-10**

Another example of the inaccuracy of this DEIR is on page L.3-9 the use of the words "assumed" and "no data available" with references to phone calls and emails. There are no copies of these emails and no transcripts of phone calls in the DEIR but only the assumptions of the preparer. There are indeed many resources that the preparer could have utilized to find the appropriate data. This is not a subjective or speculative claim. Please again refer to the attached letter from Mr. Craig Kessler stating "*The drafters of the Draft EIR cherry picked a few unrelated statistics, made a few phone calls, and cited some E-mails in support of a conclusion about a "less than significant impact" re loss of golf play/practice functionality in the most golf starved region of the United States – a conclusion that anyone with the slightest knowledge of the golf market in Los Angeles finds laughable.*

*The drafters could have and should have engaged credible 3rd party expertise like the National Golf Foundation or one of many golf consulting firms governments routinely use in drafting RFP's and strategic plans. Instead, they chose to employ the shoddiest of methodologies to come to what can only be charitably called a pre-determined conclusion. Terms like "insufficient" or "inadequate" hardly suffice to describe the analysis of the mid-San Fernando Valley golf market/community they produced.*

I concur with Mr. Kessler that this DEIR presents an inaccurate and incomplete picture of the potential environmental impacts of the proposed project as it relates to "Public services/parks and recreation". This DEIR requires augmentation by credible 3rd party expertise capable of accurately assessing the environmental impacts thereof and recirculated.

### **Response No. IND 42D-10**

The comment cites direct comments included in Comment No. ORG 17-7, which states the Draft EIR preparers "cherry picked" various data and should have engaged credible 3<sup>rd</sup> party expertise on golf facilities. Refer to Response No. ORG 17-7, which addresses these comments. In addition, copies of the sourced information (i.e., footnotes) included in the Draft EIR are available upon request to the Los Angeles Department of City Planning.

### **Comment No. IND 42D-11**

If LA golf courses are currently turning away people daily then the "assumption" on page L-27 that there are adequate tee times available is incongruous and proves there are not

63,000 available tee/driving range times for people displaced by the complete loss of the golf facility to “migrate to”.

Section IV L.3 needs to be further studied as the DEIR has inadequate research and data to reflect the significant impact on recreation in the area. **The loss of this golf course and driving range is a significant impact that cannot be mitigated as there are no new golf courses planned by City of Los Angeles or anyone else in our area.**

### **Response No. IND 42D-11**

The comment inaccurately uses 63,000 as a yearly usage to comment on available replacement tee times, conflating tee times for golf courses and available stalls at golf driving ranges. The Draft EIR states the existing golf course use ranges from 100 golfers per weekday to 150 golfers per day on the weekends. The availability of off-site tee times, as analyzed in the Draft EIR, is based on daily availability rather than a yearly total number of users to ensure demand is met on a daily basis. The commenter is referred to Response Nos. IND 42D-9 and IND 42D-10 and Topical Response No. 11, Recreation: Golf and Tennis Facilities, in this Final EIR for additional detail regarding the relocation of existing golf course users.

### **Comment No. IND 42D-12**

**3. Project Impacts** a) Thresholds of Significance In accordance with Appendix G of the CEQA Guidelines, a project would have a significant impact related to parks and recreation if it would:

**Threshold (a):** Result in substantial adverse physical impacts associated with the provision of new or physically altered government facilities, need for new or physically altered governmental facilities, the construction of which would cause significant environmental impacts, in order to maintain acceptable service ratios, or other performance objectives for parks;

Threshold (b): Increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated;

**or Threshold (c):** Include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment.

This DEIR claims, in error, that 63,000 golfers could simply play at other public access courses. If that many more golfers were allowed at the golf courses within a 10 mile range it would accelerate the deterioration of those facilities. Or in order to maintain the acceptable service ratios new golf facilities would need to be constructed or expanded for which the available land does not exist. **Therefore there are significant impacts that cannot be mitigated.**

## Response No. IND 42D-12

The comment states that 63,000 displaced golfers would result in significant impacts based on the Appendix G CEQA thresholds included in the Parks and Recreation section of the Draft EIR. The commenter is referred to Response Nos. IND 42D-9 and IND 42D-11 regarding the number of existing golfers and availability of replacement facilities to support the relocation of those golfers. The commenter is also referred to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, in this Final EIR and responses to Comment Letter No. ORG 17 for additional detail regarding impacts on recreational facilities. The issue of adequate recreational resources to support the relocated golfers is fully evaluated in the Draft EIR, and the Draft EIR correctly determined that the Project would not cause the substantial or accelerated physical deterioration of public park and recreational facilities that would require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment.

## Comment No. IND 42D-13

On the DEIR's page L.3-27 they again state the "assumption" with no supportive data, that people using this par 3 golf course can migrate to 18 hole golf courses. "As described earlier, this assumes that all current users of the Weddington Golf Course would seek to play at other nine-hole courses, which is a conservative assumption since golfers could also play at full-length, regulation courses".

This is inaccurate and proves a complete lack of knowledge of the reality of this sport and the significant impact on recreational golf facilities in the direct area and region. I have already demonstrated that the displaced golfers could not be accommodated at other golf courses within a reasonable distance, as the reservations are not available.

## Response No. IND 42D-13

The comment again states that Weddington golfers could not be accommodated at other golf courses within a reasonable distance, based on the commenter's belief that reservations are not available. By analyzing the availability of other nine-hole golf courses, the analysis fully evaluates the demand on similar courses including the private Van Nuys nine-hole golf course and the City's four nine-hole golf courses (e.g., Roosevelt Golf Course, Los Feliz Golf Course, Rancho Park, and Penmar Golf Course) as replacement facilities for the relocated golf course users. The analysis does not analyze the capacity of 18-hole golf courses. Therefore, as stated in the Draft EIR, the analysis presented is conservative, as some current users may utilize 18-hole golf courses, but this potential is not factored into the analysis and conclusions regarding capacity. Refer also to Response Nos. IND 42D-9 to 42D-12 regarding availability of golf reservations at nearby golf courses.

### **Comment No. IND 42D-14**

Also the preparer of this DEIR assumes incorrectly that all of the people using the Weddington facility can “migrate” to the larger 18 hole [sic] course.

The DEIR does not take into account that an 18 hole golf course demands that each player have a complete set of clubs, unlike the par 3 course which requires the player to use just 3 clubs, a putter, and two irons, this would cause many people to be denied the opportunity to participate because of the increased cost of purchasing a complete set of clubs. Being required to have a full set of clubs would specifically impact lower income individuals.

### **Response No. IND 42D-14**

The commenter is referred to Response No. IND 42D-13 regarding the inaccurate claim that the Draft EIR relies on the availability of 18-hole courses to substantiate the less than significant impact conclusion related to the CEQA thresholds for adequate provision of recreational facilities.

### **Comment No. IND 42D-15**

This DEIR further negates the fact, not an assumption, that many senior citizens and young children do not have the stamina to play an 18 hole golf course. This DEIR also gives an incomplete argument for a “less than significant impact” by not taking into account the increased cost for green fees to play a larger course and again the need for most people, not only seniors, to rent a golf cart again doubling the cost as walking the course requires one to be in good physical shape. I can attest to the fact that I am 65 in better than average physical condition for my age and I cannot complete an 18 hole golf course on most days even with a cart. It is just physically too taxing. I can always play the much shorter 9 hole par 3 golf course at Weddington which takes one hour to play in contrast to 5 hours for an 18 hole course.

### **Response No. IND 42D-15**

The commenter is referred to Response No. IND 42D-13 regarding the inaccurate claim that the Draft EIR relies on the availability of 18-hole courses to substantiate the less than significant impact conclusion related to the CEQA thresholds for adequate provision of recreational facilities.

### **Comment No. IND 42D-16**

In addition, the listed golf courses that the DEIR says that the current people using Weddington can “migrate to” will entail a huge increase in miles travelled which is opposite to what the city’s green new plan seeks to achieve. “As the crow flies” can never be used as an indication of the famously congested traffic in Los Angeles. Driving from the San Fernando Valley to the Los Feliz par 3 course can take over an hour different times of the

day. I know this to be a fact because I make a drive to this area from my house for my job and am well acquainted with the traffic problems for this route.

### **Response No. IND 42D-16**

The comment makes the assumption that users of the golf facilities are located in close proximity to the Project Site. As discussed in Response No. ORG 1B-94, according to the Department of Recreation and Parks, golfers are willing to travel to municipal courses as evidenced by the fact that the existing location of users who use the Project Site's golf facilities already derive from throughout the region. Although the focus of the Draft EIR analysis was on municipal facilities, for existing users who live in the San Fernando Valley, the private Van Nuys Golf Course would provide a convenient option to the public at similar rates as the Weddington Golf facility.

### **Comment No. IND 42D-17**

The Southern California Golf Association states that 10 percent of all Californians either play golf or play golf regularly. This DEIR does not address the significant impact of removing this facility from availability.

**Removing this golf course is a significant impact to available recreation that cannot be mitigated**

### **Response No. IND 42D-17**

This comment states that 10 percent of Californians play golf and the Draft EIR does not address removing the golf course from availability. This comment refers to "all Californians", who are not relevant to the analysis included in the Draft EIR, which focuses on existing golf usage patterns and volumes at the Project Site. The commenter is referred to Response Nos. IND 42D-9 through IND 42D-16 and Topical Response No. 11 – Recreation: Golf and Tennis Facilities, in this Final EIR for additional detail regarding the relocation of existing golf course users. As noted therein, the CEQA impact is not the removal of the golf facility and the reduction or loss of golf opportunities but the relocation of golfers that could result in the need to construct new or repair/enlarge existing facilities. The analysis and evidence contained in the Draft EIR indicates that 9-hole golf courses in the local area do have adequate capacity to accommodate the dislocated Weddington Golf & Tennis users, and that such relocated users would not result in the need to construct new or repair existing facilities.

### **Comment No. IND 42D-18**

#### **Relevant General Plan Framework Element Policies.**

Policy 6.4.5 Provide public open space in a manner that is responsive to the needs and wishes of the residents of the City's neighborhoods through the involvement of local

residents. SOURCE: City of Los Angeles, The\_Citywide General Plan Framework, An Element of the City of Los Angeles\_General Plan, re-adopted 2001.

Although the property in question is privately owned, it is only through providing a public benefit through access that the developer can hope to meet the requirements for a Conditional Use Permit. To date the developer has not taken the “needs and wishes” of local residents into the design and use of this project. In every local meeting or local open forum (such as several meetings of the Studio City Neighborhood Council, Studio City Residents Association, meetings held at the Six Restaurant, comments made on Nextdoor, the over 13,000 petition signers, and over 2,000 letters in opposition received by both Councilmembers Krekorian and Raman and the Dept. of Planning.) the vast majority of residents have expressed opposition to this project. These meetings were not all arranged by the developer, many are meetings held by different community organizations because of the strong opposition to this project by residents.

### **Response No. IND 42D-18**

The comment expresses opposition to the Project, stating that the School has not taken into consideration the “needs and wishes” of local residents. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

However, the commenter is referred to Topical Response No. 3 – Enforcement of Public Access, which provides additional details regarding public access and use of the Project Site, which discusses the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

### **Comment No. IND 42D-19**

After holding the mandated community outreach meetings the developer then submitted to the Dept. of Planning the exact same design package they had originally received from Gensler in March 2019, six months before any community meetings were held. Not a brick was changed. To the best of my knowledge when architects alter their design maps there is a notation such as “revised January 1, 2020”. There are no such notations on the design package submitted to Dept of Planning in March 2020. There was zero community input respected or utilized. There are no “redesign” notations on any of the design packages maps. The map we were shown at community meetings is not in the original design package. One can only surmise why different drawing was shown at the community meetings and then the claim of “changes” made due to community input.

Here is David Weil at The Six restaurant in August 2019 and the map he claimed was the design for the Riverpark project.

*(Note: See original comment letter in Appendix A of this Final EIR for photos included in this comment letter)*

Note that the tennis courts and Field A are in reverse position and there is no Clubhouse. However, in the original designs dated March 2019, the tennis courts and Field A are in the position submitted in March 2020 and the clubhouse is noted as “existing structure to remain.” Anyone with experience with DEIR’s would know that the property already listed on Survey L.A. even before the designation of the HCM would be an issue for CEQA regarding Cultural Resources.

The point I am trying to make is for whatever reason the above map was shown to our community, the plans submitted to the Department of Planning in March 2020 are exactly to the last brick the original design package by created by Gensler Architects in March 2019. There has been no community input reflected or respected.

Here is the front of the design package showing date March 2019, 6 months before 1st community meeting. It does not include the map David Weil showed with revisions.

*(Note: See original comment letter in Appendix A of this Final EIR for photos included in this comment letter)*

## **Response No. IND 42D-19**

The comment states that the Site Plan was not changed to reflect community interests. The Initial Study and Draft EIR are based on plans submitted to the Department of City Planning as part of the Project’s application and for the preparation of the Initial Study (September 2020) and the Draft EIR (March 2022). The original plans reviewed by the community were not the subject of either the Initial Study or the Draft EIR and were not provided to the Department of City Planning. As such, specific changes or lack of changes are not required. It is understood, however, that, at the time of the Initial Study, the plans may have reflected several changes that were made in response to previous community comments and interests, including public access into the private property and use by the public of the Project’s recreational facilities and everyday free access to landscaped open space. These interests are reflected in the Project’s Objectives set forth in Chapter II of the Draft EIR. Also, the Project’s stormwater capture and reuse system was included to address community concerns regarding flooding along Whitsett Avenue. The purpose of the CEQA process is to provide full disclosure of environmental impacts and opportunity for public review and input. Based on community and agency comments on the Draft EIR further, broader design modifications were made to the Project as discussed in Topical Response No. 2 – Modifications to the Project Design, and as shown in Chapter 3, *Revisions, Clarifications, and Corrections*, of this Final EIR. As shown therein, surface and below-grade parking, outdoor bleacher seats, the total number of light poles, the height and width of the pool canopy, and excavation volumes have been reduced. The window area of the south side (second floor) of the gymnasium (previously covered with metal louvers) has been removed from the Project design and will be converted to solid walls, and the window area of the north side of the gymnasium has been reduced in size. In response to water conservation concerns, the Project eliminated water features throughout the Project Site. These changes are fully disclosed in this Final EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment No. IND 42D-20**

### **OTHER PROBLEMS WITH THIS PROJECT**

1) **This project is far too big for this location.** It is so large it exceeds the property HW owns and necessitates renting County land to build on which currently the public has FULL access to along the river. The so called "River Park" is not a continuous acreage "park" but rather the cobbled together bits and pieces on the perimeter of the project. The size of this mega sports complex does not fit the character or ambience of this neighborhood. The renderings in the design package make blatant use of forced perspective to make the huge buildings seem less imposing than they are.

## **Response No. IND 42D-20**

The commenter expresses the commenter's opinion on the size of the Project being too big for this location.

See Topical Response No. 4 – Aesthetics, regarding the Project's aesthetics-related impacts. Also, impacts related to views, scenic resources and visual character were evaluated in the Initial Study (Appendix A of the Draft EIR) and determined to be less than significant. Contrary to the commenter's statement, existing Project Site uses also rely on 1.1 acres leased from the County of Los Angeles, referred to in the Draft EIR as the Leased Property, which the public currently has access only in the context of fee-based golf. By comparison, the Project would incorporate the Leased Property as part of the approximate 5.4 acres of free, publicly accessible open space and pathway.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment No. IND 42D-21**

2) In 2022 to think about destroying hundreds of healthy mature 100 foot trees and 43% tree canopy and replacing with new plantings is not the best plan for our current climate crisis. New much younger native trees, if they survive, will take a generation to produce less than half the current canopy. Any cooling effect will be lost because of the heat island effect caused by 2 artificial turf fields, acres of concrete and glass buildings and hardscape. Further, any trees planted will not reduce any of the heat reflected by the artificial turf fields. In order to keep leaves off the field and reduce the need to remove them, trees will not be planted close enough to shade the fields. This is a common landscaping practice with all artificial turf fields so new trees will not mitigate reflected heat from artificial fields.

## Response No. IND 42D-21

The comment states that the Project will be subject to heat island effects resulting from the loss of tree canopy and the use of artificial turf fields. However, the commenter does not provide any substantive facts or support for these concerns or opinions.

Topical Response No. 7 - Artificial Turf and Effects on Localized Heat and Health, addresses the potential health-related and urban heat island effects due to the Project's use of artificial turf fields. Refer to Topical Response No. 7 Section (2)(b) for a discussion of human health-related risks from heat effects related to the use of artificial turf.

In addition, Section IV. G, *Greenhouse Gas Emissions*, of the Draft EIR, included an analysis of urban heat island effects from Project implementation. As analyzed therein, the Project's artificial turf would not substantially contribute to an increase in the urban heat island effect for the area.

Refer to Topical Response No. 5 – Biological Resource/Trees, for a discussion of impacts to trees. As discussed in Topical Response No. 5, the Project's tree removal and replanting program was fully analyzed in the Draft EIR's Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). The majority of street trees would remain and any removed street trees would be replaced at a 2:1 ratio. The existing mature trees along the Zev Greenway, Bellaire Avenue, and Whitsett Avenue would remain. The majority of mature street trees along Valley Spring Lane would also remain, except for two smaller sections along the street front (see Section IV.C, *Biological Resources*, Figure IV.C-4, *Tree Removal Plan, of the Draft EIR*). The Project would result in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree Planting Plan, of the Draft EIR*). Please also refer to Response No ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.

Also, refer to Topical Response No. 3 - Enforcement of Public Access, in this Final EIR for additional details regarding public access and use of the Project Site, and a discussion of the School's commitments to public access and shared use of recreational facilities as set forth in the Draft EIR.

## Comment No. IND 42D-22

The microclimate of the entire area will be degraded and the watershed poisoned by tons of new underground cement that will leach into the soil for decades to come. All these issues were given scant attention in the DEIR.

## Response No. IND 42D-22

The comment states that the microclimate of the entire area will be degraded and the watershed poisoned by tons of new underground cement that will leach into the soil for decades to come. However, the commenter does not provide any substantive facts or support for these concerns or opinions.

The commenter is referred to Response No. IND No. 42D-21 for a response regarding the microclimate and localized heat impacts from the artificial turf field. In addition, the Draft EIR addressed hydrology and water quality impacts in Section IV.I, *Hydrology and Water Quality*, with supporting data provided in Appendix I, Hydrology and Water Quality Report, of the Draft EIR. As analyzed therein, hydrology and water quality impacts would be less than significant. The comment that the watershed would be poisoned by tons of new underground cement that will leach into the soil for decades to come is unfounded and not supported by substantive facts.

## Comment No. IND 42D-23

The constant repetition of the buzz word "invasive" in regard to Palm trees requires more nuance. Although current thinking recommends native species when possible for new projects, these Palm trees are not invasive as they are in a groomed area. The Palms and many other species of trees at Weddington are only 25% through their life span and have roots established deep into the L.A. river watershed so they will be able to withstand the drought we now face.

## Response No. IND 42D-23

The comment states that the use of the word "invasive" requires more nuance and that palms and other species are suited to withstand drought conditions because they have deep roots in the L.A. River watershed. However, the commenter does not provide any substantive facts or support for these concerns or opinions. As stated on page IV.C-14 of the Draft EIR, Mexican fan palms are considered invasive species by the California Invasive Plant Council.<sup>3</sup> The Project's landscaping program is consistent with the Los Angeles River Master Plan Landscaping Guidelines and Plant Palettes, and consists entirely of native trees that would require significantly less water as compared to the ornamental or invasive species that currently exist on the Project Site. Further, the Project's native landscaping would help to enhance the existing off-site native habitat, as well as the surrounding area, by expanding the habitat, creating a greater native seed source. It is also noted that fan palms are discussed as "trees" in the context of assessing Project impacts to biological resources and the City's tree replacement ratios because the palms have a single trunk, but palms are, anatomically not woody trees like oak, sycamore, ash, elm, or eucalyptus. Rather, palms are a type of monocot, closer in relation to bananas, grasses and bamboo as they do not contain wood in concentric

---

<sup>3</sup> California Invasive Plant Council, The Cal-IPC Inventory, <https://www.cal-ipc.org/plants/inventory/>.2020, accessed December 10, 2020.

annual rings, do not grow bark, nor commonly produce branches or limbs, in the way that oak, sycamore or eucalyptus develop. A Mexican fan palm will not branch, but die, when the top is removed, unlike a woody tree with secondary growth such as an oak that can produce new branches.

### **Comment No. IND 42D-24**

3) The mitigation offered for various impacts in the DEIR are not sufficient. To name just one such issue: 12 foot wall/fence and a partial pool canopy, will not adequately reduce the noise from hundreds sometimes thousands of cheering students and spectators. Not to mention the loud sounds competitive water sports generate, starting pistols, horns, and whistles. I don't think one needs to be an expert to know that a 12 wall/fence is not going to mitigate sufficiently the noise from one side of the wall to the other.

### **Response No. IND 42D-24**

The comment states the proposed wall/fence and pool canopy would not adequately reduce noise from Project operations. See Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of operational noise impacts associated with operation activities, including special events. As discussed in Topical Response No. 8, the Project's operation noise impacts were fully analyzed in Section IV.K, *Noise*, and Appendix K, Noise Technical Report, of the Draft EIR. The Draft EIR's noise analysis identified the area's noise and vibration sensitive receptors, existing ambient noise levels, maximum construction noise and vibration levels and duration, and peak operation noise levels. Operation noise levels included noise levels associated with future on-site recreational activities and special events. Noise was estimated according to conservative assumptions, using industry-accepted standards and modeling software, to provide maximum impacts and to avoid underestimating impacts. Operation noise impacts, including a conservative analysis of all athletic facilities being used simultaneously, would not exceed noise impact standards established by the City and would be less than significant.

### **Comment No. IND 42D-25**

The DEIR does offer a sound study but one that merely compares that noise generated to be similar to other sport venues but not how drastically the noise level will increase from what it is now in this residential area 500 feet from people's homes. The DEIR is inadequate because it does not include any data regarding the refracted noise from the Santa Monica Mountains, the 2 acre glass and concrete gym or the concrete channel of the L.A. River. I have first hand experience that currently any sounds in the evening of people yelling or music from cars is echoed through the LA River cement channel and bounces back into this neighborhood. The noise generated from events and regular exuberant teenagers will not be mitigated to a reasonable level by a wall and pool canopy. These suggested mitigations are inadequate and the noise levels will be a significant impact.

## Response No. IND 42D-25

The comment claims that the Draft EIR is inadequate since it does not include any data regarding the refracted noise from the Santa Monica Mountains, the Project's gym, or the concrete channel of the L.A. River. However, the commenter does not provide any substantive facts or support for these concerns or opinions. Nonetheless, the Santa Monica Mountains are not located in proximity to the site such that they would affect noise levels beyond those identified in the Draft EIR for the nearest noise sensitive receptors. As evaluated in Section IV.K, Noise, of the Draft EIR, operational noise levels included noise levels associated with future on-site recreational activities and special events. Noise was estimated according to conservative assumptions to provide maximum impacts and to avoid underestimating impacts. The noise from use of the Project's recreational facilities would primarily be from the athletic facilities (i.e., Field A and B, pool, and tennis courts) located on the northern and western portions of the Project Site. Maximum noise levels from use of these Project facilities was calculated at the noise sensitive receptors immediately across the adjacent streets, and was compared to existing (i.e., ambient) noise levels at the same sensitive receptors (contrary to the commenter's statements). Operational composite noise levels would increase by 3 dBA or less at the nearest noise sensitive receptors (see Table IV.K-20 in the Draft ER). A change of 3 dBA in ambient noise levels is considered to be a barely perceivable difference. Given the Project's largely imperceivable noise increase, relative size of the gymnasium, its distance of over 500 feet to sensitive receptors, and intervening trees/landscaping as part of the Project, any noise refracted from the gymnasium building would not change the noise levels at the nearest noise receptors as provided in the Draft EIR. For these same reasons, and given the L.A. River is below grade from the Project Site, any noise refracted from the L.A. River would also not change the noise levels at the nearest noise receptors as provided in the Draft EIR. The commenter is also referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, in this Final EIR, which discusses the adequacy of the operational noise analysis included in the Draft EIR.

## Comment No. IND 42D-26

4) Replacing the current multi-generational sports with exclusively team sports that require practices, uniforms and schedules will dramatically reduce public access for people of all ages and instead cater to a much smaller demographic of school aged participants. The "assumption" in the DEIR that people using this par 3 golf course will "migrate" to larger 18 hole courses does not take into account *that seniors and younger children will be excluded* by either age or stamina to utilize much larger courses. Also the increased cost and travel involved will also deprive many of opportunity and access.

## Response No. IND 42D-26

The comment claims that current multi-generational sports would be replaced by a smaller demographic of school aged participants. It is noted that the Project would continue to provide eight tennis courts, approximately 5.4 acres of landscaped areas and

pathways, including a 0.75-mile pathway that circumnavigates the Project Site and provides seating, dog walking jogging, and birdwatching, and artificial turf fields that provide consistent, year-round playability for a multitude of team and individual sports. These uses provide recreational opportunities that serve the community in replacement of existing golf uses. In the South San Fernando Valley, of the 26 recreational uses ranked by the RAP's Citywide Community Needs Assessment, walking and biking trails are ranked No. 1, small neighborhood parks are ranked No. 2, nature trails are ranked No. 4, indoor gyms are ranked No. 8, outdoor tennis courts are ranked No. 9, outdoor swimming pools are ranked No. 12, nature/environment centers are ranked No. 13, youth soccer fields are ranked No. 21, and adult soccer fields are ranked No. 25. Golf courses/driving ranges are ranked No. 19. The commenter is referred to Response No. IND 42D-13 regarding the inaccurate claim that the Draft EIR relies on the availability of 18-hole courses to substantiate the less than significant impact conclusion related to the CEQA thresholds for adequate provision of recreational facilities.

### **Comment No. IND 42D-27**

5) The "Public Access" is extremely limited (please see attachment, Public Access). Currently over 100,000 Angelenos utilize this facility. According to the DEIR that number will drop by 90% and our formal rebuttal will prove the DEIR is in error about the availability of alternate recreational venues for the displaced community members. This is a significant impact on recreation and parks.

### **Response No. IND 42D-27**

The comment claims that public access is extremely limited. Refer to Response No. IND 1-3 and Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitments to public access and shared use of recreational facilities as set forth in the Draft EIR. The commenter is also incorrect that the Draft EIR contains a conclusion that public use will drop by 90 percent following Project construction.

### **Comment No. IND 42D-28**

6) The claim of fulfilling the city's plan for connecting the river park way is not an added benefit as there are already existing entrance ramps on either side of the property. Plus in 2017 \$800,000 tax payer dollars were spent landscaping the Zev Yaroslavsky greenway. Those plants are now established, healthy and currently provide a biodiverse area with butterflies, birds, and small mammals. With the thousands of people that will be on campus the noise and trampling of the area will destroy what we paid for and enjoy currently. Here is a link to the State of California's description Of the Zev Yaroslavsky Greenway project. [Zev Yaroslavsky Greenway Phase II \(ca.gov\)](#)

## Response No. IND 42D-28

The comment states that Project noise and trampling of the area will adversely affect the recently landscaped (in 2017) Zev Greenway. However, the commenter does not provide any substantive facts or support for these concerns or opinions.

The Project will install fencing along the edge of the Leased Property and along the Project's ADA-compliant pedestrian ramp leading from the Project Site to the Zev Greenway to prevent people from trampling down the side of the hill to the Zev Greenway trail. As designed, the fencing has spacing that would allow for local wildlife (e.g., smaller animals) to pass through while still providing a nice aesthetic and line-of-sight to the river. While this fencing was accounted for in the Draft EIR impact analysis, Project Design Feature BIO-PDF-2 has been added to provide further details of the proposed Project fencing. Project Design Feature BIO-PDF-2 is included in Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR. In addition, as discussed in Section IV.C, *Biological Resources*, of the Draft EIR, the Project's indirect impacts to plant and wildlife species from noise generated by construction and operation of the Project would be less than significant. See pages IV.C-40, IV.C-41 for a discussion of indirect noise impacts to sensitive wildlife species, and IIV.C-47 and V.C-48 for a discussion of such impacts to wildlife movement and nesting birds. As stated therein, indirect impacts associated with a change in the on-site operational noise and human activities would be similar to existing conditions with the potential for more noise and human activities during sports events. If present on-site, wildlife species are already adapted to living in an urbanized setting and ambient noise and human activities associated with frequent use of the golf and tennis facilities on-site. Increases in noise and human activities would be concentrated around outdoor athletic activities within the fields, tennis courts, and swimming pool, which do not contain vegetation or have suitable roosting habitat for the special-status bats, and larger sporting events would be limited to specific hours, as well as limited in duration. A change in the on-site operational noise levels and associated human activities would be low and would not diminish the chances for long-term survival or significantly impact wildlife species.

## Comment No. IND 42D-29

7) The traffic study in the DEIR glosses over the cumulative effect of the 11 new developments planned for Ventura Blvd in this direct area from Lankershim to Sepulveda and the increase in traffic they will generate resulting in thousands of more car trips and compounded by shuttle buses. No permits should be granted until the traffic studies for these 11 new developments have been completed. The DEIR only mentions 5 new project surrounding the Sportsman's Lodge.

## Response No. IND 42D-29

The comment states that the traffic study did not thoroughly evaluate the cumulative impact of other new developments on Ventura Boulevard. The analysis of transportation related impacts was included in Section IV.M, *Transportation*, of the Draft EIR. The

section assessed potential Project impacts based on the Transportation Assessment (TA) prepared by Fehr & Peers, dated April 2021 and included as Appendix M of the Draft EIR. The TA was prepared in accordance with the Los Angeles Department of Transportation's (LADOT's) Transportation Assessment Guidelines (TAG) adopted in July 2019 (updated in July 2020). The TA was approved by LADOT on June 10, 2021, with an updated approval on June 11, 2021. As stated on page 16 of the TA, based on information provided by LADOT on October 27, 2020 and other sources, there are five mixed-use projects, including health club, restaurant, retail, and residential land uses, within a half mile radius of the Project Site and a quarter mile beyond the outermost study intersections. All of these projects are located on Ventura Boulevard. Table 3 shows the list of related projects and their corresponding land uses. The list of related projects was correctly generated in accordance with the City's TAG criteria. In addition, it is noted that for the non-CEQA transportation analysis included in the TA, an ambient growth factor of 0.6 percent per year was applied to adjust the baseline year (2020) traffic volumes to reflect the effects of regional growth and development. This adjustment was applied to the baseline year (2020) traffic volume data to reflect the effect of ambient growth by the year 2025. This methodology is consistent with standard practices and TAG methodology for TA's in the City, which was approved by LADOT. Furthermore, the methodology to analyze cumulative transportation impacts was consistent with the applicable requirements of CEQA Guidelines Section 15130 in determining cumulative impacts.

### **Comment No. IND 42D-30**

#### **ALTERNATIVE PLANS**

**#1** HW could be offered a land swap at L.A. Valley College. They could build everything they have planned on parking lots A or partially on Parking lot **A** and **B**, and Weddington would become part of Dept. of Parks and Rec and be open to the public in perpetuity. There is already precedent for HW utilizing Valley College as their tennis program has been there for the past 8 years. HW would be adding trees where there are none. And the horrendous traffic problem would be alleviated as there are five lanes including turning lanes on all four sides of L.A. Valley College. Or HW could build part of their project at L.A. Valley College and part on their current campus or part at Weddington. A proposal would need to be prepared and offered to the trustees at Valley College. This alternative cannot be dismissed without engaging Valley College with a formal proposal.

See Map #1 and #3

**This Alternative meets all the objectives of the developer's plan.**

### **Response No. IND 42D-30**

The comment provides an alternative site, L.A. Valley College, for evaluation. The alternative site included in this comment would not satisfy the Project Objectives. The reasons that alternative sites were considered and rejected are provided in Chapter V, *Alternatives*, page V-6, of the Draft EIR. In addition to a site with the size to accommodate

the Project Objectives, the other criteria for the Project include proximity to the existing Harvard-Westlake's Upper School campus on Coldwater Canyon Avenue and a site with level topography to allow for the development of the contemplated recreational facilities. Proximity is a criteria factor because of the need for daily commuting from the Upper School campus, as it relates to higher daily vehicle miles. As concluded in Chapter V, no other location with adequate acreage and topography exists within proximity to the Upper School campus, and the notion that the Project could be built at L.A. Valley College is speculative and unsubstantiated.

### **Comment No. IND 42D-31**

2) The developer could scale their project down to the southern part of the Weddington property thus reducing many of the most egregious impacts to the community and preserving the historic use of the part of property for a wide demographic and people of all ages. In order to fulfill the needs of their project, HW could build another pool on their current Coldwater Canyon Campus over their existing pool like there are in high rise apartments or hotels. Currently they waste enormous amounts of energy heating their outdoor pool so much so that steam comes off it at night. I have first hand knowledge of this fact as I have driven home past the school in the evening from work for over 30 years. ( see Map 2 on page 19 ) Or they could also build a second pool or Field A or B ( Field B without a track around it) using the current surface level on their South parking. The developer has several unused buildings and a defunct gym on their current campus that could be renovated in order to add another gymnasium or expand their current gym. Additional parking could be accomplished by creating underground parking or building a parking structure and/or utilizing underground parking. **Any combination of the above mentioned plans meets the developers project objectives.** See Map # 2 and #3

### **Response No. IND 42D-31**

The comment states that, as an Alternative, the Project could be scaled down to the most southerly section of the Project Site or provide improvements to the existing Upper School campus. The commenter is also referred to Subsection 4, Alternatives Considered and Rejected, on paged V-5 to V-7, in Chapter V, *Alternatives*, of the Draft EIR. This subsection includes an evaluation of alternative project site locations that were considered and rejected for additional study in the Draft EIR's evaluation of Project alternatives. As analyzed therein, no feasible off-site locations were identified that would allow significant effects of the project to be avoided or substantially lessened.

Suggestions to expand the School's recreational facilities on the existing Upper School campus fail to meet the Project Objectives related to the provision of publicly accessible open space and shared use of recreational facilities and community activities. Public use of recreational facilities on the existing campus would have greater limitations due to School security limitations and ongoing educational activities, as opposed to the shared use of a separate publicly accessible facility that is proposed by the Project.

For additional discussion of the Project's adequacy of alternatives in the Draft EIR, refer to Response Nos. ORG 1B-104 through ORG 1B-106, and ORG 7A-146 to ORG 7A-174. Please also refer to Topical Response No. 13 - Need for Project (Non-CEQA), for a discussion of the existing, space-constrained athletic and recreational facilities on the School's Upper School campus.

### **Comment No. IND 42D-32**

3) HW could be offered a different land swap by the City of Los Angeles next to their current baseball facility on City owned land at Balboa Park, they could build some or all of their project there and then, as with alternate plan number 1, Weddington would then be made part of L.A. Parks and Rec Dept. open to the public in perpetuity. **This alternative would meet all of the developer's objectives and since they already use this as a sports venue we know that there is already precedent for their students travelling to this site.**

**Further regarding distance, Harvard Westlake's golf team utilizes the 18 hole golf courses at Balboa Golf Course. So clearly travelling to this site is something that Harvard Westlake already does. No Map of this plan as there is adequate land to build entire project.**

### **Response No. IND 42D-32**

The comment states that the Project could be relocated to land next to their current baseball facility at Balboa Park. The commenter is referred to Response No. IND 42D-30 for a response regarding alternative sites. Similar to the L.A. Valley College site, Balboa Park is also located within an urban area surrounded by residential land uses and would not reduce the significant and unavoidable impacts of the Project. While the School's golf team may use this site, this site is located approximately 7.0 miles from the Upper School campus and additional shuttles for additional student use would result in greater VMT impacts than the Project Site, located approximately 1.5 miles from the Upper School campus.

### **Comment No. IND 42D-33**

**There would be no burden to the Dept of Parks and Recreation if Weddington was to become a L.A. City facility.**

Weddington generates enough income to pay for the operation of the facility. This is proven in the school's 990 tax returns which are available to the public as the school has non-profit status.

The City of Los Angeles operates 6 wonderful though overburdened golf courses that use non-potable water and utilizes the most environmentally friendly protocols for landscaping and fertilizing. Further the Audubon Society of the United States states that golf courses are important biodiverse open space areas and is now working with many golf courses

across the country to create butterfly and bee habitats. This is a link to the SCGA Fore Magazine, Winter 2022, with the article I quote here speaking about the sustainability of golf courses. [One With the Land: Sustainability Actions Speak Louder Than Words – FORE Magazine](#)

### **Response No. IND 42D-33**

The comment suggests that the Project Site could become a City facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration. However, it is noted that the Project Site is privately owned by Harvard-Westlake School, not the City.

### **Comment No. IND 42D-34**

#### **THE SCHOOL'S PRESENT PLAN DOES NOT MEET THE CRITERIA OF A CONDITIONAL USE PERMIT WITHOUT IT THEY CANNOT RECEIVE PERMITS TO BUILD**

This mega complex is larger than any high school in California, and far exceeds the needs of a student body of 835. If the school wishes to build a facility who's larger purpose is to generate income and not solely for the use of the school's students then it does not meet the criteria for a school to receive permission to build on Agricultural land. Further the specifics of the CUP are also not met by their present development design.

#### **CUP criteria. SEC. 12.24. CONDITIONAL USE PERMITS AND OTHER SIMILAR QUASI-JUDICIAL APPROVALS.**

**Findings for Approval. (Amended by Ord. No. 182,095, Eff. 5/7/12.)** A decision-maker shall not grant a conditional use or other approval specified in Subsections U., V., W., or X. of this Section without finding:

1. that the project will enhance the built environment in the surrounding neighborhood or will perform a function or provide a service that is essential or beneficial to the community, city, or region;
2. that the project's location, size, height, operations and other significant features will be compatible with and will not adversely affect or further degrade adjacent properties, the surrounding neighborhood, or the public health, welfare, and safety; and
3. that the project substantially conforms with the purpose, intent and provisions of the General Plan, the applicable community plan, and any applicable specific plan.

### **Response No. IND 42D-34**

The comment states that findings needed for approval of a CUP are not met by the present development design. This statement that the Project does not meet the criteria

to grant a CUP is not founded in substantiated facts cited and represents the opinion of the commenter. Also, please note that Los Angeles Municipal Code (LAMC) Section 12.24.T.3(b) specifically allows public and private schools (kindergarten through 12<sup>th</sup> grade) to be located in the Agriculture (A) zone under an approved CUP. Please refer to this section of the LAMC. Although both public schools and private schools are cited in the text of the LAMC, a CUP is commonly and more typically used for private schools throughout the City. For additional discussion of the Project's CUP, refer to Response Nos. ORG 7A-78, ORG 7A-79 and ORG 9-22. The comment, however, is primarily a request for project disapproval. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 42D-35**

In conclusion, for all the reasons explained in my comments, this DEIR provides an inaccurate and inadequate project description, and an inaccurate and incomplete picture of the potential environmental impacts of the proposed project. This DEIR must be augmented and recirculated.

### **Response No. IND 42D-35**

The comment states that the Draft EIR provided an inaccurate Project Description and inaccurate evaluation of environmental impacts. The reasons provided in Comment Letter No. IND 42D do not provide substantial evidence, as discussed in the Response Nos. IND 42D-1 through IND 42D-34, to support this statement. This comment provides a summary of the comments provided in Comment Letter No. IND 42D and requests the Draft EIR to be augmented and recirculated. As provided in the responses above, the Draft EIR has fully evaluated all issues raised by the commenter and all issues required to be evaluated by CEQA, and therefore, no further analysis and recirculation of the Draft EIR is needed.

### **Comment No. IND 42D-36**

The commenter has included a copy of a letter written by Craig Kessler with the Southern California Golf Association.

### **Response No. IND 42D-35**

The letter by Craig Kessler with the Southern California Golf Association is included as ORG 17. Refer to Response Nos. ORG 17-1 to ORG 17-8, which addresses comments in the letter written by Craig Kessler with the Southern California Golf Association.

## **Comment Letter No. IND 42E**

Teri Austin

Received May 10, 2022

### **Comment No. IND 42E-1**

I think the attached letter from the SoCal Bat Working group is just further proof that the DEIR for ENV-2020-1512 EIR is inadequate and lacking in supportive data for the analysis of significant environmental impacts.

### **Response No. IND 42E-1**

This introductory comment cites an attached letter submitted by the SoCal Bat Working Group and claims that the letter provides proof the Draft EIR is inadequate. The letter submitted by SoCal Bats, which is provided in this Final EIR as Comment Letter ORG 10, includes responses to each cited concern. Neither the comments in the SoCal Bats letter nor this comment provide substantial evidence to support the claim that it is proof that the Draft EIR lacks supporting data. Please refer to Response Nos. ORG 10-1 through ORG 10-12.

### **Comment No. IND 42E-2**

There is no excuse, certainly not a lack of funds, for this developer to not engage the very best experts for each category [sic] of this DEIR. In the case of special species there was NO expert retained even though this property is teeming with birds, mammals, amphibians and insects. All vital to the bio diversity of our local and indeed our global climate and environment.

### **Response No. IND 42E-2**

The comment states that the Draft EIR should have used experts in faunal biology to evaluate impacts on potential onsite species. The ESA team of fully qualified, professional biologists identified the potential for sensitive species in accordance with CEQA requirements. Impacts related to biological resources including candidate, sensitive, and special-status species are fully evaluated in Section IV. C, *Biological Resources*, of the Draft EIR, in accordance with all applicable CEQA requirements. Furthermore, refer to Chapter VII, *List of EIR Preparers and Organizations and Persons Contacted*, for the list of experts retained for preparation of the Draft EIR, including a team of biologists, traffic engineers, geotechnical engineers, historians, and acoustical engineers.

### **Comment No. IND 42E-3**

The disdain and disingenuous attitude our community has received from this developer is highlighted again and again in the DEIR by shoddy methodology used in preparation of this DEIR.

### **Response No. IND 42E-3**

The comment states that the School has been disdainful and disingenuous and that the methodology in the Draft EIR is shoddy, providing no facts or support for such statement. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 42E-4**

The inadequacy of the Draft Environmental Impact Report (DEIR) ENV-2020-1512-EIR - Harvard Westlake Riverpark Project provides an inaccurate and inadequate project description, and an inaccurate and incomplete picture of the potential environmental impacts of the proposed project.

This DEIR must be augmented and recirculated.

### **Response No. IND 42E-4**

This comment is similar Comment No. IND 42D-35. Please refer to Response No. 42D-35.

## **Comment Letter No. IND 43**

Tiff Williams

Received March 21, 2022

### **Comment No. IND 43-1**

I am a tax paying, law abiding natural born citizen of the United States, who currently lives in Studio City, California. I've lived in the Los Angeles area over twenty years, and I've seen so many unnecessary changes in and around the city - all for the worse.

I moved to Studio City because I always loved the small community feel as I worked at the CBS Radford studio on many TV shows. Like everything else in this country, the corporate side of CBS moved into the studio and has killed the vibe of the community of creatives and artists, who worked there for many, many years.

Well, in the way CBS Radford was taken over by the corporation, so too, has Studio City been slowly taken over by corporations and big business. I'm thankful to see some of the smaller "moms and pops" shops that have miraculously made it - even through the pandemic, but I can't help but see the many chains of retail shops and restaurants, which have taken over the community. Quite frankly, the greed of these companies has killed the vibe of a small community and only raised housing prices, displacing many wonderful residents. There are more homeless people living in the area, which was never an issue before, but is now a way of life and people who have the means to help should be ashamed at doing nothing but further lining their pockets.

### **Response No. IND 43-1**

The comment personal background and expresses concern regarding social changes throughout the Studio City community. However, the comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 43-2**

Finally, I live on Whitsett, across the street where Harvard Westlake wants to build a monstrosity of a project and destroy a lovely neighborhood that doesn't need it!! Weddington Golf & Tennis is an iconic recreational site that has been open to the public for nearly 70 years. It possesses historic, recreational, and environmental value to Angelenos, but the community it sits in. Harvard Westlake has outlined extremely limited days and times as well as very restrictive rules for community use of this sports complex by non-Harvard Westlake students. Harvard Westlake specifically states in their paperwork to the city, occasional weekday use of tennis courts for "APPROVED STUDIO CITY ORGANIZATIONS only" when not in use by students, alumni or Harvard Westlake parents.

This is UNACCEPTABLE! Most of the Harvard Westlake families don't even live in Studio City!

### **Response No. IND 43-2**

The comment expresses concern regarding the perceived scale of the Project and concern that tennis courts would not be available for use by the general public. Please refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities. As discussed therein, the Project would provide for public use of tennis courts for the majority of weekdays and weekends and, in addition to School use, would maintain public use at the same number of weekly sessions as under existing conditions. Additionally, refer to Topical Response No. 3 - Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitments to public access and shared use of recreational facilities as set forth in the Draft EIR.

### **Comment No. IND 43-3**

PLEASE STOP this project or move to STOP THE HARVARD WESTLAKE RIVER PARK PROJECT!!! Not only will it no longer benefit the community, but it will also kill and destroy the greenery and beautiful older trees that help to shade the area, which we need in light of longer and unbearable hot summers. If anything, please designate the area for more housing, not creating an unnecessary sports facility to an already rich school that should look to develop in their students' neighborhoods.

PLEASE STOP THIS PROJECT!!!!!! Keep Weddington Golf and Tennis the way it is and let the community continue to try to thrive as a charming, tranquil small city of Los Angeles county.

### **Response No. IND 43-3**

The comment expresses opposition to the Project based on perceived loss greenery and trees. Refer to Topical Response No. 5 – Biological Resource/Trees, for a discussion of impacts to trees. As discussed in Topical Response No. 5, the Project's tree removal and replanting program was fully analyzed in the Draft EIR's Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). The majority of street trees would remain and any removed street trees would be replaced at a 2:1 ratio. The existing mature trees along the Zev Greenway, Bellaire Avenue, and Whitsett Avenue would remain. The majority of mature street trees along Valley Spring Lane would also remain, except for two smaller sections along the street front (see Section IV.C, *Biological Resources*, Figure IV.C-4, *Tree Removal Plan*, of the Draft EIR). The Project would result in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree Planting Plan*, of the Draft EIR). Please also refer to Response No ORG 6A-

1, which discusses how the Project would result in an increased tree canopy in less than 10 years.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 44

Tony Knight

Received March 21, 2022

### Comment No. IND 44-1

I wish to state that I strongly oppose the proposed development of the Studio City Golf and Tennis property into the Harvard Westlake Athletics facility. I am a member of the Studio City Neighborhood Council Sustainability Committee and have reviewed the proposal. My comments, however, are my own as an individual. The proposed use of space will have a highly negative and adverse impact on the surrounding neighborhoods, and most importantly on the environment by removing mature trees, excavation, and then continued traffic in and out of the facility. Respectfully,

### Response No. IND 44-1

The comment expresses opposition to the Project based on tree removal, excavation, and traffic.

The commenter is referred to Topical Response No. 5 – Biological Resources/Trees, in this Final EIR for a discussion of the Project’s tree removal and replacement program. The commenter is also referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a detailed discussion of the Project’s operational traffic impacts. As discussed in these Topical Responses, impacts to biological resources and with respect to transportation/traffic would be less than significant. Further, as discussed in Topical Response No. 2 – Modifications to the Project Design, the subterranean parking structure would be reduced from 503 spaces to 386 spaces. This modification would result in a reduction of 53,000 cubic yards of excavation materials, which would reduce the overall amount of excavation from 250,000 cubic yards to 197,000 cubic yards. Although noise impacts during construction-related excavation activities would still be significant and unavoidable, the Project design modification would reduce the duration of excavation activities. See Topical Response No. 2 and Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, which provides these Project updates.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 45**

Zach Schwartz

Received March 21, 2022

### **Comment No. IND 45-1**

I live at 14626 Hesby Street in Council District 4, and I am a lifelong San Fernando Valley resident.

I am a big advocate of the Harvard-Westlake River Park project, and I encourage you to support this project due to all of its community benefits. Harvard Westlake is putting in a tremendous effort to ensure that the school looks beyond its own development as an institution. The plan I have seen for River Park looks to be a major win for the Studio City community in its focus on the preservation of urban open space and the access granted to citizens beyond Harvard Westlake's student body.

Combined with the environmental considerations and eco-innovation with features like large scale water reclamation, Studio City has so much to gain by welcoming this project and evolving our valley landscape to accommodate a destination that promotes inclusion, wellness and communal gatherings.

I look forward to the day when I can join family and friends in taking advantage of this amazing recreational outlet.

### **Response No. IND 45-1**

The comment expresses support for the Project based on the community benefits of preserved urban open space and public access as well as environmental benefits of water reclamation. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 46**

Molly Lorenz

Received March 22, 2022

### **Comment No. IND 46-1**

I live at 16065 Royal Oak Road in Encino and also in Council District 4.

I am pleased to see your involvement in our community, such as your participation in last weekend's Encino Little League's opening day, the Reseda Food Pantry drives, and the unhoused outreach and placement programs. Your team did a great job placing the unhoused from Sherman Oaks and Studio City over the last month.

My daughter was really happy to receive the news last week that she will be interviewing for the first ever Junior City Council.

I would also like to voice my support for the Harvard-Westlake River Park. I urge you to support this project because it is good for the school, good for the environment, and good for the Studio City community. The River Park will preserve urban open space and will provide more recreational amenities for the Studio City community than currently exist on the site.

I also believe that the school is operating with ethics that keep the best for everyone in mind.

### **Response No. IND 46-1**

The comment expresses support for the Project based on the community benefits of preserved urban open space and environmental benefits. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 47**

Cristina M. Molina

Received March 23, 2022

### **Comment No. IND 47-1**

I am writing to express my opposition to the proposed Harvard-Westlake River Park Project.

You have what I would consider a fairly historic plot of land in the location of the proposed project. Those tennis courts and putting green have been around pretty much my entire life. (I am 49 years old.)

Creating a monster athletic facility will bring nothing but problems. Harvard Westlake is a VERY wealthy school. They have extremely deep pockets which is why I think this proposed project has gotten as far as it has.

### **Response No. IND 47-1**

The comment expresses opposition to the Project based on the loss of a “fairly historic” property, tennis courts, and putting green. Please refer to Topical Response No. 6 – Historic Resources, in this Final EIR for a discussion of the preservation of the Project Site’s character-defining historic features, including the putting green.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 47-2**

In removing the existing facilities, you are opening up the area to increased noise and traffic - not only during construction but ongoing. What the area needs is LESS traffic, not more.

### **Response No. IND 47-2**

The comment expresses concerns related to increased noise and traffic during construction and operation. With regard to noise impacts, see Response No, IND 6-3 and Topical Response No. 8 – Noise: Construction and Operation Impacts. Also, see Topical Response No. 9 - Transportation and Parking During Construction and Operations, for a discussion of traffic-related impacts.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 47-3**

Does it make sense to remove 240 trees only to plant 393 new trees? That is an absolute waste of money. New trees will take time to grow in their new environment. It just makes no sense to remove already established trees.

**Response No. IND 47-3**

The comment questions the replacement of 240 existing trees (of which more than half are fan palms) with 393 new, native trees. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Nonetheless, refer to Topical Response No. 5 – Biological Resources/Trees, and Response No. ORG 6A-1 for a discussion of impacts to trees and the Project's tree replacement program.

**Comment No. IND 47-4**

80,000+ square foot *[sic]* gymnasium? Two athletic fields? That is ALL overkill and not what this community needs right now! This project will create a place for the entitlement of Harvard Westlake to be carried on within the community. It just isn't right for the neighbors or for the existing facilities.

I strongly oppose this project. There are better ways to invest in the community and this is definitely not one of them.

**Response No. IND 47-4**

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 48**

Kim Turner

Received February 11, 2022 (Letter A)

Received March 24, 2022 (Letter B)

### **Comment No. IND 48A-1**

Weddington Golf & Tennis is an iconic recreational site that has been open to the public for nearly 70 years that possesses historic, recreational, environmental, and sentimental value. Harvard-Westlake School has proposed a massive \$100-million development plan to build a sports complex, which has alarmed our community. Angelenos have an unwavering commitment to preserving this irreplaceable green open space in the heart of the San Fernando Valley.

### **Response No. IND 48A-1**

The comment expresses opposition to the Project based on historic, recreational, environmental and sentimental value of the existing facilities. Refer to Response No. IND 43-1 which addresses these similar concerns.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 48A-2**

The school is trying to mask the massive development under the guise of outdoor areas and public access. The scale of this project can't be disguised. It will be massive with stadium lights, bleachers and noise. Operations could be seven days a week, 16 hours a day. Please be reminded that this sports complex will be in the middle of a quiet neighborhood and will be highly disruptive to residents.

### **Response No. IND 48A-2**

The comment expresses concerns based on the Project's lighting and noise (including presumably noise from the bleachers) from Project operations. Refer to Response No. IND 6-3 which addresses these similar concerns.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 48A-3**

As a former HW parent, I am usually supportive of their endeavors, however in this instance, I think the school has ignored the cries of the surrounding neighborhood. We

therefore would appreciate your help in preserving the integrity of the existing open green space.

### **Response No. IND 48A-3**

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 48B-1**

Thank you for your response. I also respectfully request that the Public Comment period for the DEIR be extended from 45 days to 90 days with the end date being June 9<sup>th</sup>, 2022.

This report was compiled over two years and encompasses over 6,000 pages. It is an unfair burden to unfunded community volunteers and all CD4 constituents and community at large to not only read this DEIR but research, hire and fund the subject matter experts required to create a comprehensive Response for Public Comment in less than 90 days. The Developer has had years and unlimited funds to produce this DEIR.

Please level the playing field so that the community can have their very real concerns and fears addressed. We also are requesting an in-person hearing after the comment period closes.

Other extenuating circumstances include:

- Our neighborhood councils require at least a 30 day notice to agendaize for different committees and to weigh in on the Project.
- The current public notice period March 10th to April 25th includes both the Easter and Passover holidays.
- The NOCA states, " The Dept. of City Planning recognizes the unprecedented nature of COVID-19 " as an impediment to the usual methods of gathering and disseminating information to our community.

Thank you for your responsiveness and willingness to engage with our community!

### **Response No. IND 48B-1**

The City extended the review period to 62 days from March 10, 2022 to May 10, 2022. For additional details regarding the City's determination to extend the Draft EIR comment period to 62 days, the commenter is referred to Topical Response No. 1 – Public Participation and Review, which includes a discussion of CEQA public participation requirements and steps undertaken by the City to facilitate public participation in association with the Draft EIR. The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. As such, no further response is necessary.

## **Comment Letter No. IND 49**

Li Fan Gad

Received March 25, 2022

### **Comment No. IND 49-1**

I live at the Wonder View Dr area in the Hollywood Hills area in Council District 4 and I strongly support the Harvard-Westlake River Park.

Over the years, I have observed the current Weddington Golf and Tennis club deteriorate, and I am very excited that Harvard Westlake River Park is going to immensely improve that area. One common misconception is that the HW River Park is going to cut down mature trees currently growing on the Weddington property. I have been a long-time environment advocate, and have discussed with experts at Tree People, and have come to the conclusion that the trees growing at Weddington are predominantly an invasive species that does nothing to help the environment. Harvard Westlake River Park is going to replace those invasive trees with drought-resistant native trees. This will fall in with LA's strategy for combating climate change and its current work of restoring native species along the LA River corridor.

I urge you to support this project because it is good for the school, good for the environment, and good for the Studio City community. The River Park will preserve urban open space and will provide more recreational amenities for the Studio City community than currently exist on the site.

### **Response No. IND 49-1**

The comment expresses support for the Project based on the improvements to the current Project Site, replacement of the existing invasive trees with drought-tolerant species, preservation of urban open space, and provision of recreational amenities for the community. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 50

Karen Swift

Received March 26, 2022

### Comment No. IND 50-1

I'm doing something I almost never do as a government and community relations professional, which is appeal to my own Councilmember in support of a land use project, in this case the Harvard-Westlake River Park. I'm really excited about the tremendous improvements this project will bring to Weddington while maintaining the community character of the site and adding much-needed open space and recreational opportunities in the East Valley - all within a block of busy transit lines on Ventura Boulevard that connect directly to the Red Line at Universal Station.

As this project has found itself in the crosshairs of Valley NIMBYs and a great deal of misinformation, and since this area is new to your district, I wanted to provide our family's perspective for your consideration. My 21-year-old daughter grew up playing tennis at Weddington Golf and Tennis, and our family has logged thousands of hours there, as Grace took lessons twice a week, played for Weddington's weekend club team all through middle school at Walter Reed, worked as a counselor at summer and winter break tennis camps, and taught weekly lessons every Saturday all through high school to earn money for college. After transferring to Harvard-Westlake in 10th grade, Grace finished her time on the Weddington courts as co-captain of the Harvard-Westlake varsity tennis team her senior year.

Despite claims on Nextdoor, Weddington was never a public court like the courts at Sherman Oaks-Van Nuys Park, and it was of no interest to affluent tennis or golf players who could afford to play at the much fancier Mulholland Tennis Club or Lakeside in Toluca Lake. Instead, Weddington filled a niche in the East Valley, drawing a wide range of "old school Valley" local residents like us and children from nearby public and private schools. It's important for you to know that Weddington was always owned privately and poorly maintained, and I would bet many of the people currently opposing the project have never set foot on the property. There was a run-down small building with two bathrooms that were anything but ADA-compliant, and I dreaded the unavoidable times when Grace had to change clothes in there or I had to change her younger brother's diapers on the floor. The owners steadily raised the court fees while making no improvements to the space, and we saw quite a few coaches and their students pushed out who couldn't afford the higher rates. There was nowhere to walk around during tennis lessons - no green space, no paths where I could entertain Grace's siblings - just a maze of concrete and a big parking lot. The owners always threatened to sell Weddington to developers to turn it into condos, and "Save Weddington" was emblazoned on yard signs for years before Harvard-Westlake came along.

We have three kids who've attended different schools all over the Valley, and Grace is the only one who went to Harvard- Westlake. We found Rick Commons and the

leadership of Harvard-Westlake to be thoughtful and responsive in all that they did. I appreciate the efforts the school has demonstrated to be a good neighbor in Studio City. The East Valley is tough as you and I know, and authentic relationship-building takes a commitment from the top and a lot of legwork from staff, parents, students and alumni. I see all of that reflected in the River Park project, and I know Harvard-Westlake will continue to engage the community and work closely with your office as the project advances.

I hope you'll lend your support to the project and appreciate your consideration. Thanks so much.

### **Response No. IND 50-1**

The comment expresses support for the Project based on the provision of open space and recreational facilities for the community. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 51A

Barbara Garner

Received March 31, 2022

### Comment No. IND 51A-1

So there goes the last public tennis facility near us except for Balboa Park which has absolutely no shading on the tennis courts during the hot summer months. This is really terrible that one school has the right to displace a public facility that was enjoyed by the entire community. I'm disgusted with our city officials.

### Response No. IND 51A-1

The comment expresses opposition to the Project based on the presumed loss of “public tennis courts.” The commenter is referred to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, in this Final EIR for a discussion of impacts related to the Project’s provision of tennis facilities for public use. As discussed therein, the Project would accommodate the same number of weekly sessions, including existing and future student use, as under existing conditions. Tennis would be available to the public under a reservation system that allows concurrent use with students (who use the courts in the late afternoons) when courts are available. The tennis courts would be located in the northeast portion of the Project Site. As shown in Figure IV.C-4, *Tree Removal Plan*, in Section IV.C, *Biological Resources*, of the Draft EIR, existing trees would be retained around the clubhouse, along Whitsett Avenue and along Valley Spring Lane near the tennis courts. In addition, as shown in Figure IV.C-5, *Tree Replacement Plan* of the Draft EIR, additional trees would be planted along the east, north and south sides of the tennis courts that would provide shading. Further, upon completion of the Project, public access to the various recreational amenities, including the tennis courts, would be provided. The commenter is referred to Topical Response No. 3 - Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitments to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 51B**

Barbara Garner  
Received April 28, 2022

### **Comment No. IND 51B-1**

I honestly don't think the city cares about people when big money is involved. Why don't you just tell us it's a done deal and you have no intention of listening to us. I really want to get out of L.A. There are literally no more public parks near us except Balboa. And those tennis courts have not one shred of shade. I almost had heat stroke the last time I played there. At least put up some shade on those courts.

### **Response No. IND 51B-1**

The comment expresses opposition to the Project based on loss of a tennis courts. Refer to Response No. IND 51A-1 for a discussion of impacts pertaining to on-site tennis courts.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 52

Camilla Bravo

Received March 31, 2022

### Comment No. IND 52-1

I strongly oppose the plan for Harvard Westlake expansion.

It will have a severely negative impact on our environment. It will create more pollution, use more water and impact traffic, the air and add additional strain to our already declining city infrastructure.

Please do not approve this project.

### Response No. IND 52-1

The comment expresses concerns about the Project based on air pollution, water use, traffic, and strain on city infrastructure. However, the commenter does not provide any substantive facts or support for these concerns or opinions. Under the CEQA Guidelines, strain or wear and tear on infrastructure, such as streets and highways, is not a CEQA-issue and not required to be addressed in an EIR.

With regard to pollution, the Draft EIR addressed air quality impacts in Section IV.A, *Air Quality*, with supporting data provided in Appendix B, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant after mitigation, where applicable.

The issue of water use is fully evaluated in Section IV.O.1, *Water Supply* of the Draft EIR. Please refer to Draft EIR Section IV.O.1 for a detailed evaluation of the Project's impacts on water use and supply. As described therein, with Project Design Feature WS-PDF-2, the Project's irrigation demand would be reduced from existing conditions to 6,064 gpd or 6.8 afy at minimum. The Project's overall water demand would be reduced to 36,885 gpd or 41.31 afy, at minimum.

The Draft EIR addressed infrastructure impacts in Sections IV.O.1, *Utilities and Service System – Water Supply*, and IV.O.2, *Utilities and Service System – Wastewater*, with supporting data provided in Appendix O-1, Utility Infrastructure Technical Report, of the Draft EIR. As analyzed therein, water and wastewater infrastructure impacts would be less than significant after mitigation, where applicable.

Also, see Topical Response No. 9 - Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation.

## **Comment Letter No. IND 53**

Diane Hart

Received March 31, 2022

### **Comment No. IND 53-1**

Since the pandemic it is alleged that the participation and people playing tennis is risen 30%. Public tennis courts that were once available are not.

This is exceptionally bad for us seniors. Being on fixed incomes we can't exactly afford to be part of the hi Tony clubs. Where memberships are usually over \$1000 a year.

Weddington provided a place that had reasonable rates. I've enjoyed many a tennis game there and I'm quite distressed that that we'll no longer be available.

### **Response No. IND 53-1**

The comment expresses the concern that tennis would not be available on-site for public use. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Nonetheless, the commenter is referred to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, in this Final EIR for a discussion of impacts related to the Project's provision of tennis facilities for public use. As discussed therein, the Project would accommodate the same number of weekly sessions, including existing and future student use, as under existing conditions. Tennis would be available to the public under a reservation system that allows concurrent use with students (who use the courts in the late afternoons) when courts are available.

### **Comment No. IND 53-2**

What use have I for big stadiums.? Am I going to see a high school Game of any kind?

### **Response No. IND 53-2**

The comment implies that the commenter isn't personally interested in watching high school sports. Please refer to Chapter II, *Project Description*, pages II-47 to II-50, of the Draft EIR for a discussion of the various onsite uses that the Project would provide, including those for students, visitors, and the general public. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 53-3**

I don't live too far from Weddington which also maybe convenient, but now I will only get traffic and noise. Please reconsider this plan it is not good for the environment and is not good for humans.

### **Response No. IND 53-3**

The comment expresses concerns about traffic and noise and states that the plan is not good for the environment or for humans.

With regard to noise impacts, see Response No, IND 6-3 and Topical Response No. 8 – Noise: Construction and Operation Impacts.

Also, see Topical Response No. 9 - Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 54**

Joseph Tourouk  
Received March 31, 2022

### **Comment No. IND 54-1**

I've lived in the valley all my life and this is a travesty that the city is letting this happen... Shame on all the people that have their hands in this.

Rather than work on the homeless crisis in our neighborhoods, focusing on taking a "park" away from the neighborhood where children can learn to play golf and tennis is a sad stand!

But as long as the elite and rich can have access to whatever this will become I'm sure that will be great for the community at large.

### **Response No. IND 54-1**

The comment expresses opposition to the Project based on loss of a "park." The commenter is referred to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitments to public access and shared use of recreational facilities as set forth in the Draft EIR. Also refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, regarding the use of the Project's recreational facilities, including tennis courts, landscaped open space, and pathway to the Zev Greenway.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration

## **Comment Letter No. IND 55**

Josh Rodine

Received March 31, 2022

### **Comment No. IND 55-1**

Why has the time for comment been extended?

### **Response No. IND 55-1**

City of Los Angeles Department of City Planning Case Planner provided the following response to the commenter: “As the Department of City Planning and Council District Offices have received multiple requests to extend the comment period for this Draft EIR, the comment period is being extended so that the public has some additional time, as permitted under CEQA Guidelines Section 15105, to review the Draft EIR document.”

The response above was provided by the Los Angeles Department of City Planning via email communication with Mr. Rodine. The numbered comment from Mr. Rodine is derived from email communication between Mr. Rodine and the Department of City Planning. This email communication is considered a comment for the purposes of this Final EIR and has been made part of the administrative record. The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. As such, no further response is necessary.

Also refer to Topical Response No. 1 – Public Participation and Review, in this Final EIR, which discusses public participation and CEQA public review requirements and steps undertaken by the City to facilitate public participation in association with the Draft EIR.

## Comment Letter No. IND 56

Joshua Campbell

Received March 31, 2022

### Comment No. IND 56-1

This is a horrible turn of events for Studio City. Harvard Westlake was dishonest throughout the process. And now the public will be losing access to a wonderful amenity that was always intended to be used in perpetuity by everyone.

The environmental impact will be irreversible — a permanent loss of green, open space in a very congested area. More noise. More pollution. I beg everyone involved in this process to reconsider

### Response No. IND 56-1

The comment states that the School has been dishonest throughout its meetings with the public through the planning process. This statement is not supported by substantiated facts and is, thus, not addressed herein. The comment also states that the Project would result in an irreversible environmental impact regarding loss of open space, congestion, noise and pollution. However, the commenter does not provide any substantive facts or support for these concerns or opinions.

The comment expresses concern regarding the loss of green open space. The Project would provide 5.4 acres of publicly accessible, landscaped open space and a 0.75-mile pathway connecting to the adjacent Zev Greenway, via an ADA-compliant pedestrian ramp. The Project would add a broad array of native plant species and contribute to the number of trees on-site. Refer to Topical Response No. 5 – Biological Resource/Trees, for a discussion of impacts to trees. As discussed in Topical Response No. 5, the Project's tree removal and replanting program was fully analyzed in the Draft EIR's Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent).

Refer to Topical Response No. 3 - Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitments to public access and shared use of recreational facilities as set forth in the Draft EIR.

Also, see Topical Response No. 9 - Transportation and Parking during Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR

determined that all CEQA-required transportation impacts would be less than significant without mitigation.

With regard to noise impacts, see Response No, IND 6-3 and Topical Response No. 8 – Noise: Construction and Operation Impacts.

The Draft EIR addressed air quality impacts in Section IV.A, *Air Quality*, with supporting data provided in Appendix B, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant after mitigation, where applicable.

## **Comment Letter No. IND 57**

Karen Kaplan  
Received March 31, 2022

### **Comment No. IND 57-1**

If we have already submitted comments on the last EIR, do we have to submit new ones, or will the old one suffice?

### **Response No. IND 57-1**

The City of Los Angeles Department of City Planning Case Planner: “If you have already submitted comments, you do not need to submit them again or submit new ones, unless you have more to add to what you have already submitted. The comments that you previously submitted are still part of the record for this Project, and will be responded to accordingly as required by CEQA.”

The response above was provided by the Los Angeles Department of City Planning via email communication with Ms. Kaplan. The numbered comment from Ms. Kaplan is derived from email communication between Ms. Kaplan and the Department of City Planning. This email communication is considered a comment for the purposes of this Final EIR and has been made part of the administrative record. The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. As such, no further response is necessary.

## **Comment Letter No. IND 58**

Laurie Cohn

Received March 31, 2022

### **Comment No. IND 58-1**

Thank you for the updates you send, and this notice of the comment period extension.

However, I have a question. In my years of viewing DEIRs and involvement fighting development of Weddington, I have never seen NOCA before. What exactly is considered already COMPLETED to deserve that title?

### **Response No. IND 58-1**

The City of Los Angeles Department of City Planning Case Planner: "The NOCA is the abbreviation used for Notice of Completion and Availability. At the top right of the first page of the notice, you'll see that it says "Notice of Completion and Availability of Draft Environmental Impact Report," which is noticing to the public that the Draft Environmental Impact Report for a project has been completed and is available for public review."

The response above was provided by the Los Angeles Department of City Planning via email communication with Ms. Cohn. The numbered comment from Ms. Cohn is derived from email communication between Ms. Cohn and the Los Angeles Department of City Planning. This email communication is considered a comment for the purposes of this Final EIR and has been made part of the administrative record. The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. As such, no further response is necessary.

## **Comment Letter No. IND 59**

Lisa Battista

Received March 10, 2022

### **Comment No. IND 59-1**

Thanks, anything we can do to counter act the development as stated by the report "Project would result in significant and unavoidable impacts"?

### **Response No. IND 59-1**

The comment inquires if anything can be done regarding the significant and unavoidable impacts. The Draft EIR discloses the Project's significant and unavoidable impacts and includes all feasible mitigation measures to reduce significant impacts for consideration by the City's decision-makers in the environmental review process. As a result of the conclusions of the analysis contained within the Draft EIR, a statement of overriding considerations supported by substantial evidence will be prepared and reviewed by the decision-maker in accordance with the State CEQA *Guidelines* Section 15093 when making a determination on the Project.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration

## **Comment Letter No. IND 60**

Maria Olympia Feig  
Received March 31, 2022

### **Comment No. IND 60-1**

My name is Maria Olimpia Feig. I have lived at 4210 Bluebell Avenue, Studio City since 1983. This letter addresses the development proposed by Harvard -Westlake at 4047-4155 N. Whitsett Avenue; 12506-12630 W. Valley Spring Lane and APN 2375-018-903, Los Angeles, CA 91604.

Before I give my opinion about Harvard-Westlake proposed development , I would like to mention the importance that site has played in the lives of the people living in the immediate neighborhood and of the community of Los Angeles.

Public Schools and the public in general have been using this site for decades in a manner that has never interfered with the quietness, safety and well being of the residents of the area.

When Harvard - Westlake. bought the property, they knew in advance that the neighborhood and the community in general opposed the development, choosing to keep the space as an Open Space to the benefits of communities in Sherman Oaks, Studio City, Toluca Lake, Cahuenga Pass and of individuals from all over Los Angeles.

Considering the urban constraints of Los Angeles, keeping this site as an Open Space is necessary for the physical and mental health of us all Humans, and in this case the Humans living there.

Harvard-Westlake came into a residential neighborhood considered a jewel of a place by parents, children, property owners and Real Estate Businesses and is proposing to build a massive Sports Facility that does not fit into a residential area and has to be taken into consideration by the city of Los Angeles when preparing the Environmental Impact for this site.

### **Response No. IND 60-1**

The comment expresses the commenter's general opinion that the Project Site should be kept in operation as existing. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration

### **Comment No. IND 60-2**

The lights at 10:00 or 11:00 at night from the games will invade our houses, our bedrooms. The noise will be a cruelty and the traffic that will inundate our streets will make our safe neighborhood into a dangerous area where pedestrians walk , adults and children bicycle.

## Response No. IND 60-2

The comment expresses concerns about the Project based on late hour lighting, noise, and traffic. However, the commenter does not provide any substantive facts or support for these concerns or opinions. The Draft EIR thoroughly analyzed the Project's potential operational lighting, noise, and traffic impacts.

The commenter is referred to Topical Response No. 4 – Aesthetics, for a discussion regarding operational light and glare impacts, including the conditions that would require lights and outdoor activities to cease no later than 8:00 p.m. (9:00 p.m. for the tennis courts), as compared to existing uses which, daily, extend until 11:00 p.m.

With regard to noise impacts, see Response No. IND 6-3 and Topical Response No. 8 – Noise: Construction and Operation Impacts.

The commenter is also referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, in this Final EIR for a discussion of the Project's traffic patterns, effects on local streets, and consistency with CEQA threshold levels.

## Comment No. IND 60-3

By the way, how will the traffic generated by this Sports Facility will be redirected ( or diverted)? To Whisett [*sic*] Avenue? Or to the Residential Streets, where we live ? What does " OFF -SITE IMPROVEMENTS to Valleyheart Drive PUBLIC RIGHT OF WAY " means?

## Response No. IND 60-3

The comment inquires about traffic circulation, and improvements on Valleyheart Drive. Valleyheart Drive is accessed via Whisett Avenue, as shown in Figure II-6, *Conceptual Site Plan*, in Chapter II, *Project Description*, of the Draft EIR. Improvements are changes to the roadway, such as paving or the construction of sidewalks within the street right of way. The "right-of-way" is that section of the roadway that is mapped as the original or actual street alignment and that is not part of a private property. A public right of way may or may not be improved (paved) or used as roadway. For instance, sidewalks are typically located in the public domain (the street right-of-way). As shown in Figure II-6, Valleyheart Drive is paved, with the pavement extended to the Project's property line. At that point, it would adjoin a roundabout within the Project Site, and connect to the driveway into the subterranean structure. All access into and out of the Project Site would be via Valleyheart Drive to Whisett Avenue (a secondary highway) or directly to Whisett Avenue via the Project's north driveway. The Project would not have any direct access to local neighborhood streets in the area. Further, as stated on page II-53 of the Draft EIR, vehicles would enter the Project Site on Whisett Avenue via a driveway located several hundred feet south of Valley Spring Lane (to the north of Field A) (referred to as north driveway) and via a driveway at the paved portion of Valleyheart Drive located just south

of LAFD Fire Station 78 (referred to as south driveway). The south driveway would adjoin the Valleyheart Drive right-of-way..

Both driveways would provide access to the proposed single-level underground parking structure. No new driveways would be installed along Valley Spring Lane or Bellaire Avenue, and the existing service driveway on Valley Spring Lane would be removed, thus eliminating an existing potential conflict location.

The southern driveway via Valleyheart Drive would lead to both the below-grade parking structure and to a drop-off/pick-up roundabout area at the southeast corner of the Project Site. See Figure II-6, *Harvard-Westlake School Athletic and Recreational Facilities Conceptual Site Plan*, of the Draft EIR for an illustration of the Project's site plan.

The comment does not raise any issues regarding the content or adequacy of the Draft EIR. As such, no further response is necessary.

### **Comment No. IND 60-4**

Harvard-Westlake could have bought property in an area of Los Angeles where there was a need for improvements. But, NO, it chose to destroy one of the most perfect solution for an Urban Center, loved by its neighbors and general public.

They knew ,way before the purchase of this site, that the general public opposed any development that wouldn't keep the area as "OPEN SPACE" , for many obvious reasons: INVADING BRIGHT LIGHTS , TRAFFIC, NOISE and the COMPLETE LOST OF PRIVACY inside our own homes.

I urge you members involved in the EIR for this proposed development to please consider the incredible Environmental Impact that this development will bring into the lives of the people living in the immediate neighborhood and let the Light of Wisdom guide your steps.

I thank you very much for reading my letter and considering its content when evaluating the EIR on Harvard -Westlake River Park Project.

### **Response No. IND 60-4**

The comment summarizes the commenter's opposition for the Project based on loss of open space, lighting, traffic, and noise impacts, as described in the preceding comments. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 61**

Natalie Adomian

Received March 31, 2022

### **Comment No. IND 61-1**

Hi. Why is this being extended? It seems like this has been going on forever and I'm excited for the plans to start. Thank you

### **Response No. IND 61-1**

The Los Angeles Department of City Planning Case Planner: "As the Department of City Planning and Council District Offices have received multiple requests to extend the comment period for this Draft EIR, the comment period is being extended so that the public has some additional time, as permitted under CEQA Guidelines Section 15105, to review the Draft EIR document."

The response above was provided by the Los Angeles Department of City Planning. The City extended the review period to 62 days from March 10, 2022 to May 10, 2022. For additional details regarding the City's determination to extend the Draft EIR comment period to 62 days, the commenter is referred to Topical Response No. 1 – Public Participation and Review, which includes a discussion of CEQA public participation requirements and steps undertaken by the City to facilitate public participation in association with the Draft EIR. The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. As such, no further response is necessary.

## Comment Letter No. IND 62

Paul Kradin

Received March 31, 2022

### Comment No. IND 62-1

I saw that you are the deputy who oversees Studio City issues and neighborhoods, and wanted to direct this message to you rather than the councilwoman.

I've lived in Studio City on and off since 1969 when my folks moved us there, and have owned my home at 4333 Laurelgrove Ave – about 5 blocks from the project site – since October 2000.

I am generally a pro-development individual who recognizes we can't freeze our communities in place. I've supported many of the projects in Studio City that have turned what was a sleepy suburb in my youth into the densely packed, hard-to-find-parking area it is today. And by and large, those construction projects have conformed to the zoning codes and rules in place at the time – which I think we're obligated to follow.

Not so in the case of Harvard Westlake's plan, which violates both the letter and spirit of the zoning rules in our neighborhood, and more broadly reflects the entitled attitude of the school and its parentbody to muscle their way to full approval. The fact that they laid out tens of millions of dollars to buy the property without once scoping out the situation with neighbors demonstrates their belief in the inevitability of their oversized project.

### Response No. IND 62-1

The comment claims that the Project violates the zoning regulations but does not provide any substantial evidence to support these claims and does not raise any issues with respect to the content or adequacy of the Draft EIR. The Project Site is zoned A1-1XL-RIO. The "A1" zone, which allows one-family dwellings, parks, golf courses, and farming among other uses, also permits a school use with a conditional use permit.<sup>4</sup> LAMC Section 12.24.T.3(b) explicitly permits schools and school-related facilities within an agricultural (A) zone and in all residential (R) zones under a conditional use permit (CUP). Most private schools in the City operate under a CUP (public schools are not subject to the City's zoning code). Therefore, the Project's application for a CUP to operate its athletic and recreational facilities is not an unusual circumstance that indicates a conflict with the Project Site's existing zoning or the City's Zoning Code.

The commenter is also referred to Topical Response No. 1 – Public Participation and Review, in this Final EIR, which discusses public participation and CEQA public review

---

<sup>4</sup> Los Angeles Municipal Code (LAMC) Section 12.05.A (A1 Zone defined uses).

requirements and steps undertaken by the City to facilitate public participation in association with the Draft EIR.

### **Comment No. IND 62-2**

Despite the generous use of green ink in their renderings to project an eco-friendly footprint, the vast majority of our greenspace will in fact be paved over with structures, walkways and parking. The adjacent greenway is not something they “bring” to the neighborhood, the city was already using taxpayer funds to complete this amenity and having the school take credit for certain enhancements to it is disingenuous and misleading.

### **Response No. IND 62-2**

The comment claims the Project will pave over the majority of the existing greenspace with structures, walkways and parking and that the Project claims to “bring” the Zev Greenway to the neighborhood. The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. However, the Project does not claim to “bring” the Zev Greenway to the neighborhood, but rather it would provide public access through the Project Site to the Zev Greenway via an ADA-compliant pedestrian ramp. The Draft EIR throughout acknowledges the Zev Greenway in its documentation of existing conditions, and notes that it is not part of the Project Site.

### **Comment No. IND 62-3**

For the rest, it’s simply too much – too much built space, too many seats, too many car trips, too much night time lighting. The mitigations like parking permits, lights-out at the dinner hour, and all those things will work for the first year, and will quickly fall away as bad habits form and the spotlight is off of school compliance. The single-exit parking structure will be a major headache so parents will park in the neighborhood and walk in. The stadium lights won’t be turned off as promised in the middle of a match, and calls to the school to complain will go unanswered.

### **Response No. IND 62-3**

The comment expresses opposition to the Project based on too much built space, too many seats, car trips, and nighttime lighting, and alludes to the School not consistently abiding by City-mandated conditions of approval. The comment also speculates that mitigation measures and project design features will not be enforced and/or implemented in the future. These speculative statement do not contain any facts that contradict the findings of the Draft EIR.

See Topical Response No. 4 – Aesthetics, regarding the impact of the Project’s field lights and other outdoor lighting, as well as impacts relating to scenic resources and visual character of surrounding land uses. As discussed, therein, the Project’s light and glare impacts would not exceed CEQA threshold standards at any of the nearby residential

uses nor would it exceed lighting standards of the Los Angeles River Improvement Overlay (RIO) District Ordinance. All light and glare levels as evaluated in the Draft EIR would be below regulatory standards. As also discussed in Topical Response No. 4, the Project's lighting program with design modifications, as evaluated in Chapter 3, *Revisions, Clarifications, and Corrections*, of this Final EIR, would further reduce the Project's light and glare conditions with the exception of one receptor location (4202 Bellaire Avenue). As discussed, therein, the Project with design modifications would not create a new source of substantial light or glare.

In addition, see Topical Response No. 9 - Transportation and Parking During Construction and Operations, for a discussion of the Project's traffic impacts and parking. As discussed therein, all parking for the Project would be provided on-site. No off-site parking would be permitted.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

#### **Comment No. IND 62-4**

It's all very predictable, and will lead to a fundamental decline in the quality of the neighborhood that so many people have come to love. The headache of rejecting the project as proposed will be nothing compared to the avalanche of complaints to the council office once it's up and running in a few years.

I strongly urge you to oppose this project and press HW to downscale their proposal to something more in keeping with the neighborhood. This is basically THE thing the councilwoman will be judged on in this area, and there won't be another chance to make a first impression after this.

If you read this far, thank you!

#### **Response No. IND 62-4**

The comment claims that the Project would lead to a fundamental decline in the quality of the neighborhood based on prior claims and urges the decision-maker to oppose the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 63**

Ellen Little

Received April 1, 2022

### **Comment No. IND 63-1**

I should like to submit my comments with regard to the proposed conversion of the Weddington Golf & Tennis property into a private high school sports complex by the Harvard-Westlake School.

Weddington Golf & Tennis is an iconic recreational site that has been open to the public for nearly 70 years that possesses historic, recreational, environmental, and sentimental value. The School has proposed a massive \$100-million development plan, which has alarmed our local community. It pains me to think that, in the midst of the global warming crisis, we will lose this irreplaceable green open space in the heart of the San Fernando Valley.

Thousands of your constituents have signed a petition supporting the preservation of the Weddington property in its entirety. We are counting on you to support our interests and stand firm against Harvard-Westlake School's lobbyists and monied special interests.

### **Response No. IND 63-1**

The comment expresses opposition to the Project based on historic, recreational, environmental and sentimental value of the existing facilities. Refer to Response No. IND 43-1 which addresses these similar concerns.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 63-2**

My hope is that Weddington Golf & Tennis as it exists today should be preserved for the benefit of future generations and all Angelenos. But, failing that, the "alternate plans" listed in the DEIR are very deficient and further alternate plans need to be explored such as reducing the size of this project by building some of the purposed facilities on the current HW campus, or working with the city of LA to acquire land next to their baseball facility in Encino, or an alternate site.

### **Response No. IND 63-1**

The comment expresses that Weddington Golf & Tennis should be preserved and that the alternatives evaluated in the Draft EIR are deficient. Weddington Golf & Tennis was sold to the School in 2017. As a signal of goodwill to the public, the School has maintained the golf and tennis facilities as an interim use while the Project was being considered.

The alternative site included in this comment would not satisfy the Project Objectives. The reasons that alternatives sites were considered and rejected is provided in Chapter V, *Alternatives*, page V-6, of the Draft EIR. In addition to a site with the size to accommodate the Project Objectives, the other criteria for the Project include proximity to the existing Harvard-Westlake's Upper School campus on Coldwater Canyon Avenue and a site with level topography to allow for the development of the contemplated recreational facilities. Proximity is a criteria factor because of the need for daily commuting from the Upper School campus, as it relates to higher daily vehicle miles. As concluded in Chapter V of the Draft EIR, no other location with adequate acreage and topography exists within proximity to the Upper School campus.

For additional discussion of the Project's adequacy of alternatives in the Draft EIR, refer to Response Nos. ORG 1B-104 through ORG 1B-106 and ORG 7A-146 to ORG 7A-174.

## Comment Letter No. IND 64A

Jentle “Red” Phoenix  
Received April 1, 2022

### Comment No. IND 64A-1

Here’s what I find disheartening. Looking at the history of this land and the people who originally farmed it before leasing it. When the land was sold it was with a promise that this would CONTINUE to operate as a golf and tennis facility open to the public. I doubt very much that a putting green and a few hours of public availability to courts is what that agreement meant.

Destroying the place that means so much to so many. That allows people with moderate means to play at a beautiful place. Where people meet and form relationships who would never meet. This spot is one of a kind and truly is a place open to the public. The misinformation they are spreading about it being a public park is something that should not be ignored. This is a guise for rich kids to have more private access to the land.

I never get involved with things like this. But this place means to much to so many!

You can read below the history of the land and see what I’m talking about. The putting green and “tennis court access” as well as addition of the iconic golf posts are only so they can say they are honoring the agreement they made.

### WEDDINGTON GOLF HISTORY

*The history of the Weddington Golf & Tennis Club parcel is a rarity in Los Angeles, for it has been owned by the same family continuously since the 1890s. The Weddingtons were originally from Iowa, but like many lowans and other Midwesterners, the family moved to the Los Angeles region to try their hand at farming in the balmy climate of Southern California. Wilson Weddington, formerly a sheriff in Iowa, visited the region in 1890 with his wife Mary and two sons Fred and Guy. On the property that is now Weddington Golf & Tennis the family operated a sheep farm then switched to wheat and*

*finally casaba melons before stopping agricultural operations as Studio City became developed.*

*Leasing the property from the Weddington Family, Joe Kirkwood Jr., son of Australian professional golf legend, Joe Kirkwood, opened “The Joe Kirkwood Jr. Golf Center” on New Years Day 1956. In 1957, Kirkwood, Jr. sold an option to the course to George McCallister, Sr., a golfer and investor in sporting goods and real estate and his partner and fellow Wilshire Country Club member, Art Andersen, founder of Western Freight and an industrial real estate investor and together they owned and operated what became known as the “Studio City Golf & Tennis Club” until June of 2007 at which time the lease with the Weddington family came to an end. With the promise that the facility would continue to operate as a golf and tennis center open to the public the McCallister and Andersen turned over the business to be owned and operated by the Weddington Family who changed the name “Weddington Golf & Tennis.”*

### **Response No. IND 64A-1**

The comment expresses general opposition to the Project based on the removal of Weddington Golf & Tennis.

As discussed in Topical Response No. 13 – Need for Project (Non-CEQA), the Weddington Golf & Tennis parcel was purchased by Harvard-Westlake School in December 2017, and the School has continued to operate it primarily for public golf and tennis uses. However, the current Weddington Golf & Tennis operations are not consistent with the School’s educational mission or financially sustainable. In addition, refer to Topical Response No. 3 - Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitments to public access and the shared use of recreational facilities as set forth in the Draft EIR.

The underlying purpose of the Project is to supplement the School’s athletic and recreational facilities, and to provide Harvard-Westlake School a campus that can fulfill its educational mission and athletic principles now and in the future. The Project Objectives, included on pages II-13 and II-14, in Chapter II, *Project Description*, of the Draft EIR, list the Project’s Objectives which support the underlying purpose of the Project. At no time during or after the acquisition of the Project Site did Harvard-Westlake promise that the facility would continue to operate in perpetuity as a golf and tennis center open to the public. This statement is not supported by substantiated facts and is, thus, not addressed herein.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 64B**

Jentle “Red” Phoenix  
Received April 24, 2022

### **Comment No. IND 64B-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This beloved place that brings joy to 75,000 people a year shouldn't be destroyed so that only 1500 students have access to the grounds.

### **Response No. IND 64B-1**

The comment expresses general opposition based on the loss of public use. Upon completion of the Project, public access to the various recreational amenities onsite would be provided. The commenter is referred to Topical Response No. 3 - Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitments to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 64B-2**

There are golf team students that use the golf course to practice. They have asked for our help to keep the course here for them.

### **Response No. IND 64B-2**

The comment expresses opposition to the Project based on the loss of the golf course used by the students and golf team. The commenter is referred to Topical Response No.11 – Recreation: Golf and Tennis Facilities, which discusses how existing municipal golf courses have available capacity to accommodate relocated golfers from the Project Site's course.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 64B-3**

The owners are telling the staff that work there that it is a done deal and that they will all be out of work come the end of the year.

One of the golf pros already relocated because his business is teaching golf and according to the owners nothing is going to stop their construction.

### **Response No. IND 64B-3**

The comment states owners and staff are indicating they will be out of work soon and implies the Project will be moving forward with construction. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 64B-4**

Please stand with us and for us. Please help all of us who are fighting so hard to keep this beautiful place from being destroyed.

However I can help please let me know. Thank you in advance.

### **Response No. IND 64B-4**

The comment requests the decision-makers to retain Weddington Golf & Tennis. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 65**

Julien Bassan

Received April 1, 2022

### **Comment No. IND 65-1**

As a Studio City resident, I appreciate the opportunity Weddington gives to Angelenos to enjoy their community. The proposed plan by Harvard Westlake would detract from our community in numerous ways – primarily from the elimination of an openly available space. Their proposed “park” is a farce, and the years of construction and related pollution will be a detriment to those in the surrounding neighborhood.

### **Response No. IND 65-1**

The comment expresses opposition to the Project based on loss of open space, construction activity and pollution. Refer to Response Nos. IND 7-2 and 7-3 which address these similar concerns. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 66

Linda Roletti

Received April 1, 2022

### Comment No. IND 66-1

Dear Councilmember Raman, My family has lived at 4312 Babcock Ave since the early 70s. The Studio City golf/tennis has been a very part of our lives. Please do not destroy our fun times. I am 70 years old and I love walking down by the golf course. The trees are beautiful please do not take the tree away. The traffic will be horrible. Whitestt [sic] is already a freeway.

### Response No. IND 66-1

The comment expresses opposition to the Project based on loss of walking by the golf course, tree removal, and traffic on Whitsett Avenue.

See Topical Response No. 9 – Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation.

The Project would provide a landscaped, 0.75-mile pathway for pedestrians that would be open to the public from 7:00 a.m. to 9:00 p.m. seven days a week. The pathway would provide seating and direct access through the Project Site to the Zev Greenway. The commenter is also referred to Topical Response No. 5 – Biological Resources/Trees, in this Final EIR for a discussion of the Project's tree removal and replacement program. As discussed in Topical Response No. 5, the Project's tree removal and replanting program was fully analyzed in the Draft EIR's Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent).

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 67**

Rob Langer  
Received April 1, 2022

### **Comment No. IND 67-1**

As a longtime Studio City resident, I cannot believe you are still considering the approval this project.

In addition to the “ANTICIPATED SIGNIFICANT ENVIRONMENTAL EFFECTS” contained in the EIR report, this project will have many more significant and material negative impacts on our neighborhood. Anyone who thinks this is a good idea has never experienced the traffic which already exists in this neighborhood that will be greatly exacerbated with this development- and this is just one example of the many severe impacts this development would create.

I understand that many of the families sending their children to this school do not live near the neighborhood that they are planning to devastate and will be unaffected by this disruption to our daily lives. I firmly believe they would not be supporting this development if it was destroying their neighborhoods. Our representatives should be protecting our community and not allowing this to happen.

### **Response No. IND 67-1**

This comment expresses general opposition to the Project and concerns over traffic caused by the Project in addition to the “anticipated significant environmental effects.”

See Topical Response No. 9 – Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project’s construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 67-2**

On behalf of myself and our community, we strongly oppose the development and the destruction of the historic Weddington recreation facility as well as the much-needed open space, many trees and natural elements that will be destroyed along with it.

## **Response No. IND 67-2**

The comment expresses opposition to the Project based on destruction of a historic facility, loss of open space, and tree removal. Refer to Response No. IND 7-2 which addresses these similar concerns. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 68**

Susan Pratt

Received April 1, 2022

### **Comment No. IND 68-1**

I live at 4229 Wilkinson Ave., which is right across from Weddington in Council District 4, and I strongly support the Harvard-Westlake River Park.

I have been excited about this project for years and don't understand all of the local pushback. I currently don't enjoy access to Weddington as it's all fenced and I have to pay to use the golf/tennis. I am really looking forward to being able to go for walks on this publicly accessible land when it becomes the River Park. I know it will be a pain while it's under construction because I live so close, but it will be worth it. I truly feel like Harvard Westlake has taken community interests to heart in its design and implementation.

### **Response No. IND 68-1**

The comment expresses support for the Project based on the provision of publicly accessible recreational facilities. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 69

Tom Imai  
Received April 1, 2022

### Comment No. IND 69-1

I am disappointed to hear that Harvard-Westlake is planning to significantly transform the Weddington Golf and Tennis facility. Weddington Golf and Tennis has been a Studio City landmark, and I've been informed that this new project will eliminate everything golf related, which includes a small 9 hole par 3 course and one of the nicest driving ranges in Southern California. The beauty of the golf complex with all of its greenery is an oasis in a hectic city. I've been coming to Weddington for over 40 years and it would be a shame to see all of this beautiful landscape disappear. Please do whatever you can to keep Weddington Golf and Tennis intact, as it is today.

Thank you for your attention to this urgent matter.

### Response No. IND 69-1

The comment expresses opposition to the Project based on the loss of the golf course and requests the City to keep Weddington Golf & Tennis intact, as it is today. The comment also expresses that the Project Site's greenery is an oasis in the city. Refer to Topical Response No. 5 – Biological Resource/Trees, for a discussion of impacts to trees. As discussed in Topical Response No. 5, the Project's tree removal and replanting program was fully analyzed in the Draft EIR's Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). The majority of street trees would remain and any removed street trees would be replaced at a 2:1 ratio. The existing mature trees along the Zev Greenway, Bellaire Avenue, and Whitsett Avenue would remain. The majority of mature street trees along Valley Spring Lane would also remain, except for two smaller sections along the street front (see Section IV.C, *Biological Resources*, Figure IV.C-4, *Tree Removal Plan, of the Draft EIR*). The Project would result in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree Planting Plan, of the Draft EIR*).

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 70**

Nicolette Del Barrio  
Received April 3, 2022

### **Comment No. IND 70-1**

My name is Nicolette del Barrio and throughout my entire life, Weddington Golf and Tennis has played an important role in my life every single day. My father, Ron del Barrio, has been an independent contractor/golf instructor there for the last 35+ years and we also happen to live in the apartments right across the street. When Harvard Westlake's proposal was first brought to light, my family and I were beyond broken to pieces and since then, we have been praying that these plans fall behind with the broken promises HW presented. In recent times, we've heard that construction may happen as soon as October of this year, and we're not letting a moment in time be wasted until our voices are heard.

### **Response No. IND 70-1**

The comment expresses general opposition based on the family occupation as a golf instructor. The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 70-2**

This specific plot is not only heartbreaking to lose, but may cause possible harm to students in the future. The stretch of Whitsett between Moorpark and Ventura has been known to be dangerous crossing between due to unlawful speeding. Multiple accidents have happened including a casualty, in which my father witnessed, due to the recklessness of drivers. As someone who crosses this street often, I worry about my own life being risked just to get to the other side of the street, and with the introduction of young high school kids, the possibility of accidents are bound to increase.

Speaking from our broken hearts and voicing our pain from this plan has not seemed to work enough, but if it takes light being brought to the potential danger of students, then this is something I will continue to voice until it is heard by higher authorities at Harvard Westlake.

### **Response No. IND 70-2**

The comment expresses concern regarding increased accidents and safety concerns for students crossing the street. Meaningful increases in pedestrian crossings by students, spectators, and employees of Harvard-Westlake are not anticipated given that students will be shuttled to the Project Site and sufficient parking will be provided on-site to accommodate anticipated athletic competitions and events. Further, Harvard-Westlake

intends to implement a Parking and Transportation Management Plan including a parking reservation system and management controls to ensure that students, spectators, and employees do not park in the neighborhood and walk onto the Project Site (see Topical Response No. 9 – Transportation and Parking During Construction and Operations, and the modified version of Project Design Feature TRAF-PDF-3 in Chapter 3, *Revisions, Clarifications and Additions to the Draft EIR*, of this Final EIR). In addition, a review of collision records obtained from the Transportation Injury Map System (TIMS) found that 12 collisions resulting in injuries (and none involving fatalities) have occurred at the Whitsett Avenue/Valley Spring Lane intersection in the 11 year period between January 2011 and December 2021. Of these, only one involved a pedestrian and the pedestrian was crossing Valleyheart Drive, not Whitsett Avenue. Moreover, the City of Los Angeles maintains a High Injury Network (HIN) that identifies streets with a high concentration of traffic collisions that result in severe injuries, with an emphasis on those involving people walking and bicycling. The City of Los Angeles has not identified Whitsett Avenue as one of these streets and it is not on the HIN.

In addition, as indicated in Topical Response No. 9 – Transportation and Parking During Construction and Operations, following circulation of the Draft EIR, the City installed a traffic signal at the intersection of Whitsett Avenue and Valley Spring Lane. The intersection of Whitsett Avenue and Valley Spring Lane was unsignalized at the time of publication of the Draft EIR. The addition of the traffic signal would allow for pedestrian and bicycle crossings from the surrounding areas to the Project Site through the intersection in marked crosswalks, thus, enhancing pedestrian safety in the Project Site area.

For additional details and discussion of prior traffic safety records at Whitsett Avenue, please refer to Response No. 225-4.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 71

Dan Rothblatt  
Received April 4, 2022

### Comment No. IND 71-1

Please see my email below (from last month) to elected officials and you. Thank you for adding me to your list so I can stay informed.

I continue to be concerned that the Weddington Golf Course project and Harvard Westlake's project will ruin my neighborhood by: destroying trees, adding massive traffic, reduce public spaces and turn them into private spaces. PLEASE DO NOT ALLOW THIS PROJECT TO MOVE FORWARD.

### Response No. IND 71-1

The commenter references a previously submitted email. The cited email is included and addressed in Comment Letter No. IND 5.

The commenter expresses continued opposition to the Project based on tree removal and traffic impacts and the conversion of a "public space" to a "private space." The commenter is referred to Topical Response No. 5 – Biological Resources/Trees, in this Final EIR for a discussion of the Project's tree removal and replacement program.

See Topical Response No. 9 – Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation. Furthermore, upon completion of the Project, public access to the various recreational amenities onsite would be provided. The commenter is referred to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 72**

Zach Felber

Received April 5, 2022

### **Comment No. IND 72-1**

My name is Zach Felber and I'm a 30 year old Studio City resident residing in the neighborhood across the street from Weddington. I live here with my wife Ashley Gonzales and we are proud to call Studio City home.

One aspect that is troubling, is how much the middle class is being pushed out. What's left of a middle class that is. Homes that are somehow affordable (1M and under) are being knocked down to build multi mega mansion homes on the land which in my mind is the same thing as saying "Rich People only" to one of the few nice remaining pockets of LA without a million developments, insane traffic, and beyond.

On the same tip, what I also feel is insanely twisted and wrong about Studio City is the fact that a private school for the rich is free and clear to be able to destroy a massive piece of Studio City history, Weddington Golf and Tennis. I've lived here for 4 years now and there's never more of a sense of community than when I spend time at Weddington. It's normal people, neighbors, friends, and beyond who all get to have a place to stay active, healthy, relieve stress, and enjoy themselves by escaping the chaos of life and specifically LA. It makes me so sad to think that can just by the right price tag be ruined and gone to a privileged private high school who only wants more and more and more. The rich pushing out middle class people is exactly what destroying Weddington is and it's disgusting to me. What does that say to our community? It says that we don't matter.

I ask that you please help save this Los Angeles treasure that brings so much joy and happiness to so many peoples lives.

### **Response No. IND 72-1**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 73**

Erin Boorstin  
Received April 7, 2022

### **Comment No. IND 73-1**

I live at 3657 Woodhill Canyon Rd. in Council District 4 and I strongly support the Harvard-Westlake River Park. I urge you to support this project because it is good for the school and better for the community than many other potential uses for the site. Although having a golf course there is nice in theory, I believe the new River Park development strikes an appropriate balance between serving the private interests of the landowner who must build and maintain any development and the public interests of the community.

### **Response No. IND 73-1**

The comment expresses support for the Project based on balance of benefits for the school and the community. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 74**

Linda Roletti  
Received April 8, 2022

### **Comment No. IND 74-1**

Please Please Do not change the impact of our neighborhood.

### **Response No. IND 74-1**

The comment expresses general opposition for the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 75

Matthew Flynn & Dr. Pedro Ontiveros  
Received April 8, 2022

### Comment No. IND 75-1

My husband and I lived one block from Weddington Golf and Tennis. We are VERY WORRIED about increased traffic, noise and crime in our already congested and crowded neighborhood. We have no parking, AWFUL TRAFFIC and increase break-ins. With the newly-opened development at Sportmens's Lodge, there is NO WAY the area can take ANY MORE congestion with construction, sports gatherings, lights and CARS.

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

### Response No. IND 75-1

The comment expresses opposition to the Project based on traffic, parking, noise, lighting and crime. The comment speculates there will be an increase in break-ins. Regarding the potential increased break-ins, CEQA does not require analysis of speculative conditions. Furthermore, the comment does not provide any substantial evidence that Project operation would result in substantial crime risks. Pursuant to CEQA Guidelines Section 15143, "[t]he significant effects should be discussed with emphasis in proportion to their severity and probability of occurrence." Furthermore, CEQA Guidelines Section 15064(d)(3) states that "[a]n indirect physical change is to be considered only if that change is a reasonably foreseeable impact which may be caused by the project. A change which is speculative or unlikely to occur is not reasonably foreseeable."

See Topical Response No. 9 - Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation. Further, as discussed in Topical Response No. 9, all parking for the Project would be provided on-site. No off-site parking would be permitted.

The commenter is referred to Topical Response No. 4 – Aesthetics, for a discussion regarding operational light and glare impacts.

Regarding crime and public safety, police services impacts were addressed in Section IV.L.2, *Public Services - Police Protection*, of the Draft EIR, with supporting data provided in Appendix L-2 of the Draft EIR. Pursuant to the CEQA Guidelines, and the thresholds used by the City to determine the significance of impacts to police services, the focus of the analyses is on whether or not new or expanded facilities are needed to maintain adequate public service and whether a potential physical impact could occur if

construction of facilities was warranted. In the case of the Project, it was determined that the Project would not generate a demand for additional police protection services that would result in the need for new or expanded fire and police services facilities. As such, Section IV.L.2 concluded that impacts to police services would be less than significant. Notably, regarding public safety, as provided in Project Design Feature POL-PDF-2, the Project would incorporate a security program to ensure the safety of its students, employees, and spectators, as well as public users of the Project Site. The Project's security features would help reduce the potential for on-site crimes, including loitering, theft, and burglaries, and would reduce demand for LAPD services. Implementation of Project Design Feature POL-PDF-2 would help to offset the Project's operational demand for police protection services from LAPD.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 75-2**

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

### **Response No. IND 75-2**

This comment is the same as Comment No. FORM 3-3. Please refer to Response No. Form 3-3.

### **Comment No. IND 75-3**

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

### **Response No. IND 75-3**

This comment is the same as Comment No. FORM 3-4. Please refer to Response No. Form 3-4.

### **Comment No. IND 75-4**

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning.

It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

## **Response No. IND 75-4**

This comment is the same as Comment No. FORM 3-5. Please refer to Response No. Form 3-5.

## **Comment Letter No. IND 76**

Tiff Williams (2<sup>nd</sup> Letter in Opposition)  
Received April 8, 2022

### **Comment No. IND 76-1**

My name is Tiff Williams and I first wrote to you on March 21, 2022, and I am writing to you again. I will write to you for as long as it takes to STOP this Harvard Westlake River Park Project.

Again, I am a tax paying, law abiding natural born citizen of the United States, who currently lives in Studio City, California. I've lived in the Los Angeles area over twenty years, and I've seen so many unnecessary changes in and around the city - all for the worse. \*I believe greed is much to blame for these changes which makes the city and county less and less charming as it's taken over by the corporations hidden behind banks, chain stores and even educational institutions.

I moved to Studio City because I always loved the small community feel as I worked at the CBS Radford studio on many TV shows. Like everything else in this country, the corporate side of CBS moved into the studio and has killed the vibe of the community of creatives and artists, who worked there for many, many years. The small town vibe increases to be diminished by national franchises - destroying anything that makes a city or town unique and distinguishable from one another.

In the way CBS Radford was taken over by the corporation, so too, has Studio City been slowly taken over by corporations and big business. I'm thankful to see some of the smaller "moms and pops" shops that have miraculously made it - even through the pandemic, but I can't help but see the many chains of retail shops and restaurants, which have taken over the community. Quite frankly, the greed of these companies has killed the vibe of a small community and only raised housing prices, displacing many wonderful residents. There are more homeless people living in the area, which was never an issue before, but is now a way of life and people who have the means to help should be ashamed at doing nothing but further lining their pockets.

Finally, I live on Whitsett, across the street where Harvard Westlake wants to build a monstrosity of a project and destroy a lovely neighborhood that doesn't need it!! Weddington Golf & Tennis is an iconic recreational site that has been open to the public for nearly 70 years. It possesses historic, recreational, and environmental value to Angelenos, but the community it sits in. Harvard Westlake has outlined extremely limited days and times as well as very restrictive rules for community use of this sports complex by non-Harvard Westlake students. Harvard Westlake specifically states in their paperwork to the city, occasional weekday use of tennis courts for "APPROVED STUDIO CITY ORGANIZATIONS only" when not in use by students, alumni or Harvard Westlake parents.

This is UNACCEPTABLE! Most of the Harvard Westlake families don't even live, work or "play" in Studio City!

PLEASE STOP this project or move to STOP THE HARVARD WESTLAKE RIVER PARK PROJECT!!! Not only will it no longer benefit the community, but it will also kill and destroy the greenery and beautiful older trees that help to shade the area, which we need in light of longer and unbearable hot summers. If anything, please designate the area for more housing, not creating an unnecessary sports facility to an already rich school that should look to develop in their students' neighborhoods.

PLEASE STOP THIS PROJECT!!!!!! Keep Weddington Golf and Tennis the way it is and let the community continue to try to thrive as a charming, tranquil small city of Los Angeles county.

### **Response No. IND 76-1**

This comment is largely similar to Comment No. IND 43-1. See Response No. IND 43-1 which addresses the concerns raised in this comment letter.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 77**

Jayne Campbell  
Received April 9, 2022

### **Comment No. IND 77-1**

I have resided at Longview Valley Rd in Council District 4 for almost 24 years. I am a retired music teacher and I have experience teaching in the private school arena. Of all the building projects I witnessed during my tenure, let me say that the River Park proposal is unique in the creation of facilities that will provide benefits for both Harvard-Westlake and the Studio City community. The proposal preparation is thoughtful, thorough and inclusive. The preservation of urban open space and the creation of more recreational amenities under the umbrella of environmental responsibility is a win-win situation for all. I strongly support the Harvard-Westlake River Park and I encourage you to give your fullest support.

### **Response No. IND 77-1**

The comment expresses support for the Project based on the benefits provided for the School and the community. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 78**

Michael Jeon

Received April 9, 2022

### **Comment No. IND 78-1**

I live at 12942 Bloomfield St. in Council District 4 and I strongly support the Harvard-Westlake River Park. I urge you to support this project because it is good for the school, good for the environment, and good for the Studio City community. The River Park will preserve urban open space and will provide more recreational amenities for the Studio City community than currently exist on the site.

I have been a homeowner in Studio City for the last 15 years, and strongly believe the Harvard Westlake River Park project will be of great benefit to our community. As both a tennis player and a golfer, I actually use the current Weddington facility quite often. Even so, I think the HW River Park project would benefit a much broader segment of our district -- not just the few who happen to play tennis or golf there.

### **Response No. IND 78-1**

The comment expresses support for the Project based on the benefits provided for the School, the community, and the environment with the preservation of open space and provision of recreational amenities. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 79**

Dana Howbert  
Received April 10, 2022

### **Comment No. IND 79-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

Think about the families who cannot afford country clubs and want a place to teach their kids tennis and golf. And the kids who will never go to Harvard Westlake but want a nice place to be outside.

### **Response No. IND 79-1**

The comment expresses opposition to the Project based on the loss of the golf and tennis facilities. The commenter is referred to Topical Response No.11 – Recreation: Golf and Tennis Facilities, which discusses how existing municipal golf courses have available capacity to accommodate relocated golfers from the Project Site's course.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 80**

Deborah Novak  
Received April 11, 2022

### **Comment No. IND 80-1**

I am not in your district but I just returned from spending the day at Weddington Golf and Tennis with four kids to play disc golf. Even though we live on the Westside, we visit Weddington routinely for golf and disc golf. It is the only disc golf location within 20 miles of the 405 and 101. Even though it is the only one that requires a fee, we go there frequently because of the beautiful landscape and because we always have such a nice time primarily because all of the other golfers and disc golfers are so friendly. Over the years what I have noticed is that the people of all ages who utilize this a facility are all very humble about their level of play, and are really there to just practice their skills and respectful of everyone there regardless of their skill level.

It would be a huge loss to not only the immediate community but the LA community at large for Weddington to become a private space.

I strongly support your district constituents in their effort to preserve Weddington as a public golf and tennis space. There are so few options available in the LA area. It would be a significant loss to people from all over LA who use this space that is easily accessible and affordable to learn to play tennis, golf and disc golf.

### **Response No. IND 80-1**

The comment expresses opposition to the Project based on the claim the Project would convert the site to private space, and the loss of golf, disc golf and tennis facilities. The commenter is referred to Topical Response No.11 – Recreation: Golf and Tennis Facilities, which discusses how existing municipal golf courses have available capacity to accommodate relocated golfers from the Project Site’s course. To clarify the existing property rights and on-site uses, the land that currently comprises Weddington Golf & Tennis has been privately owned since the late 1800s, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner’s sole discretion. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 81**

Sophie Colette

Received April 11, 2022

### **Comment No. IND 81-1**

I am a lifelong resident of the Encino neighborhood, now in CD4. I am writing in favor of the Harvard-Westlake School River Park.

The school has done extensive community outreach and the project provides environmental benefits and public access. I urge you to vote in favor of the repurposing of an environmentally damaging golf course.

Thank you for your attention to this matter.

### **Response No. IND 81-1**

The comment expresses support for the Project based on environmental benefits and public access. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 82**

Periel Kaczmarek  
Received April 11, 2022

### **Comment No. IND 82-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

Trees are beneficial to our area for so many reasons and I do not want to see the trees on this property killed for a development project that will detract from and not enhance the beauty of Studio City.

### **Response No. IND 82-1**

This comment is similar to Comment No. FORM 3-1 and 3-2. Please refer to Response Nos. Form 3-1 and Form 3-2.

### **Comment No. IND 82-2**

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

### **Response No. IND 82-2**

This comment is the same as Comment No. FORM 3-3. Please refer to Response No. Form 3-3.

### **Comment No. IND 82-3**

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

### **Response No. IND 82-3**

This comment is the same as Comment No. FORM 3-4. Please refer to Response No. Form 3-4.

### **Comment No. IND 82-4**

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to

speak for over 100,000 Angelenos who enjoy this beloved facility annually and deny permission to build this project.

**Response No. IND 82-4**

This comment is the same as Comment No. FORM 3-5. Please refer to Response No. Form 3-5.

## **Comment Letter No. IND 83**

Dale Fernandez  
Received April 13, 2022

### **Comment No. IND 83-1**

My name is Dale Fernandez, a resident of Studio City and a business owner Valley Village.

I volunteer for Save LA River Open Space. Thank you for keeping such a productive forum related to the Harvard Westlake project.

### **Response No. IND 83-1**

The comment is introductory and expresses appreciation of the City's public outreach. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 83-2**

I believe land-use policy decisions should be based on common sense for the good of the city's community as well as its environment.

I am sure a private school offering high level athletics is a priority for Harvard Westlake but having a second set of sports facilities for their 900 students seems a bit redundant.

Harvard Westlake already has an Olympic size pool built recently in 2012 as well as multiple indoor gyms, soccer fields and tennis courts already on their main campus.

For a relatively small student body to be utilizing a redundant set of sports facilities doesn't seem environmentally sound to me in a land-use perspective. I would like to have some sort of guarantee for actual equitable community use.

### **Response No. IND 83-2**

The comment states the provision of facilities for the School seems redundant and requests a guarantee for equitable community use.

The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), of this Final EIR for a discussion of the purpose and underlying need for the Project for the School and the community. In addition, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 83-3**

My second point is that I am concerned about the heat island effect of this project. The land-use aspect of replacing the cooling effect of hundreds of shade canopy mature trees and the natural grass turf with thousands of square feet of roofing, immature trees, and artificial turf will effectively create a large heat island. Although there will be a cistern placed on site, the natural ground water aquifer infrastructure will not be able to be fully replenished with this type of development.

Although artificial turf may last up to ten years, the petroleum based turf might momentarily save in water use, our current water infrastructure has no way of filtering the micro plastics created by such a sports complex endeavor.

### **Response No. IND 83-3**

The comment expresses concern regarding the potential for heat island effects and microplastics from the proposed artificial turf field. Refer to Topical Response No. 7 - Artificial Turf and Effects on Localized Heat and Health, which provides a detailed analysis of the potential heat island effects and contamination related to microplastics. As summarized therein, studies show there is little difference in heat indicators between synthetic turf, grass, and sand surfaces. Topical response No. 7 also evaluates potential impacts of Polyfluoroalkyl Substances (PFAs), microplastics, and other toxic chemicals potentially leaching from microplastics in artificial turf. As concluded, therein, and based on detailed studies, the compounds in artificial turf or recycled rubber do not present a public health concern and that no significant risks associated with any discharge of PFAS or other chemicals from microplastics would not be harmful to groundwater or any receiving waters, such as the Los Angeles River. Also, refer to Response No. ORG 8-12 for a discussion of microplastics, including the scientific studies indicating that microplastics from artificial turf would not create a significant risk to the public or the environment.

Please also refer to Response No ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.

In addition, the Draft EIR addressed hydrology and water quality impacts in Section IV.I, *Hydrology and Water Quality*, with supporting data provided in Appendix I, Hydrology and Water Quality Report, of the Draft EIR. As analyzed therein, hydrology and water quality impacts would be less than significant. As discussed in Appendix I, infiltration into the groundwater table at the Project Site is not feasible and the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such

that the Project may impede sustainable groundwater management of the SFV Groundwater Basin. Therefore, the Draft EIR concluded that groundwater recharge impacts would be less than significant. Further, refer to Response No. ORG 9-5 regarding groundwater impacts.

## **Comment Letter No. IND 84**

Martha Bissell

Received April 13, 2022

### **Comment No. IND 84-1**

My husband and I have lived one block directly up-hill from the potential development for more than 30 years. The D-EIR appears to have been done without consideration for other potential neighborhood developments, including Sunswept place. The effects of Harvard-Westlake's 80ft lights, noise, traffic concerns, and the loss of our jewel will affect us forever. Contrary to fliers that arrived in our mailbox, the Studio City residents that I know, do not "support the Harvard-Westlake River Park" and I believe that the many comments tonight that we 'don't understand' are unnecessarily divisive. Thanks Diana Nicole, Tess Taylor, and Kelly deMarco for your wise words.

### **Response No. IND 84-1**

The comment expresses concerns about the Project based on lighting, noise, and traffic to hillside residents. However, the commenter does not provide any substantive facts or support for these concerns or opinions. Refer to Response No. ORG 9-8 which addresses these concerns.

### **Comment No. IND 84-2**

I am getting the impression tonight that 'stakeholder' or 'council district 4' means that the speakers work at, or are parents at Harvard Westlake. We live here and are not in support.

### **Response No. IND 84-2**

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 85**

Rachel Tonisson

Received April 14, 2022 (Letter A)

Received May 2, 2022 9 (Letter B)

### **Comment No. IND 8A5-1**

Hi I'm writing to say that I oppose the plan to demolish the Weddington golf course. It should be preserved in its entirety as a cultural landmark and remain open to all of the public not just rich kids for their sports. We need green spaces in our city. We need facilities that all are welcome at.

### **Response No. IND 85A-1**

The comment requests the site be preserved as a cultural landmark. The comment also states the Project Site should remain open as a green space for the public.

The commenter is referred to Topical Response No. 6 – Historic Resources, in this Final EIR for a discussion of direct and indirect impacts on historical resources resulting from the Project, including project design features that would preserve historic character-defining features of the Project Site.

To clarify the existing property rights and on-site uses, the land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

In addition, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 85A-2**

I know Harvard Westlake says the public will have access to their facilities when they aren't being used. They will make it unavailable by always having scheduled student use.

## **Response No. IND 85A-2**

The comment states the facilities will be unavailable for public use because the School will make it unavailable by always having scheduled student use. However, the commenter does not provide any substantive facts or support for this concern or opinion.

Also, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment No. IND 85A-3**

Also they say there will be a river walk, But a river walk already exists, my family and I regularly visit the trail. Harvard Westlake is not adding anything to our neighborhood they are taking away.

## **Response No. IND 85A-3**

The Draft EIR does not state that the Project would provide a “river walk.” The Project would provide public access through the Project Site to the Zev Greenway via an ADA-compliant pedestrian ramp. The Draft EIR throughout acknowledges the Zev Greenway in its documentation of existing conditions, and notes that it is not part of the Project Site.

## **Comment No. IND 85A-4**

The traffic would increase dramatically along with unsafe levels of speeding often associated with teen drivers.

In addition I’m concerned with the parking situation. Where will the busses park from opposing teams and all the parents coming to watch their kids?

## **Response No. IND 85A-4**

The comment expresses concerns about the Project based on traffic impacts including speeding from teen drivers and parking for school events. However, the commenter does not provide any substantive facts or support for these concerns or opinions. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, in this Final EIR for a discussion of the Project’s traffic patterns, effects on local streets, and consistency with CEQA threshold levels. No off-site parking for events on the Project Site would be permitted. All parking would be on the Project Site within the parking garage or surface parking lot, and the Project would

provide for ingress and egress of buses and shuttles via a roundabout accessible from Valleyheart Drive.

**Comment No. IND 85A-5**

Please do not let Harvard Westlake demolish this beloved place.

**Response No. IND 85A-5**

The comment requests decision-makers to not let the School demolish the Weddington golf course. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 85B-1**

1. Can you tell me where I can find information on the provision that allows a school to use agricultural land for a CUP development?
2. Where can I find the provision for a private school to do the same ( use agricultural land for a CUP development)?

**Response No. IND 85B-1**

The following response was provided by the Los Angeles Department of City Planning on June 9, 2022.

*Hi Rachel,*

*My apologies for the delay in getting back to you regarding your questions. You can find the code provisions for Conditional Use Permits (CUPs) in the Los Angeles Municipal Code Section 12.24, which you can find online here:  
[https://codelibrary.amlegal.com/codes/los\\_angeles/latest/lapz/0-0-0-7378](https://codelibrary.amlegal.com/codes/los_angeles/latest/lapz/0-0-0-7378)*

*Thanks,*

*Kimberly*

## **Comment Letter No. IND 86**

Scott Dragicevich  
Received April 14, 2022

### **Comment No. IND 86-1**

Thank you, and your colleagues, for leading the discussion yesterday. I am thankful to live in a community where we can openly share our different views respectfully. I know this is a passionate discussion and thank you for leading us.

As I shared yesterday, I strongly support the proposed Riverpark project. I know the park will be a valuable place to gather for all of our community members - young and old, athletics lovers and non athletes. It will be a great addition to our neighborhood.

Thank you again for all that you are doing.

### **Response No. IND 86-2**

The comment expresses support for the Project based on the value the Project will provide to the community. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 87A**

Suellen Wagner  
Received April 14, 2022

### **Comment No. IND 87A-1**

Attached, please find my public comment to the Studio City Neighborhood Council regarding the Harvard-Westlake River Park Project. I would like to mention that on Harvard-Westlake's website, the Project is now called Harvard-Westlake River Park Campus Project. I believe this should be noted as we approach a possible Conditional Use Permit, which should encompass both Harvard-Westlake campuses, to guarantee that there will not be a continual, at will shifting of operations without review. I would also like to reiterate the years-long request for a 25 year Master Plan from Harvard- Westlake and a 20-year Moratorium on expansion in the case that any iteration of this project is approved.

Please enter my attached comment and this email into the record.

### **Response No. IND 87A-1**

This comment is similar to Comment No. ORG 9-12. Please refer to Response No. ORG 9-12.

### **Comment No. IND 87A-2**

Re: Public Comment SCNC Land Use Meeting April 13, 2022, Item 5: Harvard-Westlake River Park Project Case Number: ENV-2020-1512-EIR:

In late 2017, upon the suspension of the Harvard-Westlake Parking Structure Project and the announcement of their purchase of Weddington Golf and tennis, Councilmember Paul Krekorian issued a public update that included the following:

“Weddington is a property central to the history of Studio City. It is the largest privately held open space facing the Los Angeles River in the entire San Fernando Valley. For more than a decade ... I have worked hard to preserve open space at Weddington and improve access to the LA River.

Harvard-Westlake has indicated that it intends to work closely with the community in developing a plan for Weddington...The school has also acknowledged that it will respect the community’s desires by maintaining the tranquility of the property and preserving as much open space as possible, improving public access to the revitalized Los Angeles River, and enhancing community benefits from the property.”

## **Response No. IND 87A-2**

This comment provides a reference to a public update from Councilmember Paul Krekorian regarding the intention of the School in the development of the Project Site. This comment is unrelated to the environmental review for the Project, and does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment No. IND 87A-3**

The plan for the Harvard Westlake River Park Campus Project shatters this promise. If this out of character, out of scale Project is approved, there will never again be tranquility at Weddington.

## **Response No. IND 87A-3**

The comment states the Project is out of character and scale and that it shatters the promise to work with the community. This comment is similar to Comment No. ORG 9-2. Please refer to Response No. ORG 9-12.

## **Comment No. IND 87A-4**

The project violates the Los Angeles General Plan, the Open Space element of the General Plan, the Sherman Oaks Studio City Toluca Lake Cahuenga Pass Community plan, and the RIO Specific Plan.

The Project comes with a lengthy laundry list of Harvard-Westlake WANTS – discretionary entitlements, reviews, permits and approvals from the City, County, and various agencies required to implement the Project – including a Conditional Use Permit to operate a private school in an A-1 zone. I want to emphasize that these requests are discretionary and each requires an exemption or variance from existing codes, regulations and laws.

## **Response No. IND 87A-4**

The comment states that the Project has a long list of necessary entitlements and each requires an exemption or variance from existing codes, regulations and law. Please note that most public and private schools in the City operate under a CUP in accordance with LAMC Section 12.24.T.3(b), which allows school uses in residential and agricultural zones. For additional discussion of the Project's CUP, refer to Response Nos. ORG 7A-78, ORG 7A-79 and ORG 9-22.

The Project was compared to all applicable land use policies, including the policies of the Los Angeles General Plan, the Open Space element of the General Plan, the Sherman Oaks Studio City Toluca Lake Cahuenga Pass Community plan, and the RIO Specific

Plan, as provided in Appendix J, Land Use Plans and Policies: Project Consistency Tables, in the Draft EIR. As evaluated in detail, therein, the Project would not conflict with applicable plans and policies in accordance with CEQA requirements. Please refer to Appendix J of the Draft EIR.

### **Comment No. IND 87A-5**

The School seeks to appropriate the last and best open space along the river and to demolish an historic public asset and green open space – to literally dig it all up – almost 500 trees and 250 thousand cubic yards of soil (1/15 the size of the Great Pyramid of Giza), and throw it away.

### **Response No. IND 87A-5**

The comment expresses general opposition to the Project based on the Project Site being an historic asset, the removal of trees, and loss of green space, and claims that the Project seeks to appropriate the last and best of the open space along the Los Angeles River.

The commenter is referred to Topical Response No. 6 – Historic Resources, in this Final EIR for a discussion of direct and indirect impacts on historical resources resulting from the Project, including project design features that would preserve historic character-defining features of the Project Site.

Refer to Topical Response No. 5 – Biological Resources/Trees, and Response No. ORG 6A-1 for a discussion of impacts to trees and the Project's tree replacement program.

Also, see Topical Response No. 3 – Enforcement of Public Access, for additional details regarding the public access to the Project's available recreational facilities and amenities for public use.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 87A-6**

There is no doubt that surrounding neighborhoods will be severely and detrimentally impacted by both construction and operations. Noise, dangerous traffic, polluted air, unwanted light, visual blight, EXCLUSION, and the terrible loss of irreplaceable green open space and an institution that has served all of Los Angeles for 70 years.

### **Response No. IND 87A-6**

The comment expresses opposition to the Project based on non-specific and unsubstantiated construction and operation impacts related to noise, traffic, air pollution, light, visual blight, exclusion, loss of green open space and the golf facility.

The commenter is referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, regarding noise impacts; Topical Response No. 9 – Transportation and Parking During Construction and Operations, regarding traffic impacts; Topical Response No. 4 – Aesthetics, regarding aesthetics and light impacts; Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project’s tree replacement program; Topical Response No. 3 – Enforcement of Public Access, for additional details regarding the public access to the Project’s available recreational facilities and amenities for public use; and Topical Response No. 6 – Historic Resources, for a discussion of direct and indirect impacts on historical resources resulting from the Project, including project design features that would preserve historic character-defining features of the Project Site. Also, please refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, regarding the availability of other public and private nine-hole courses in the area and the continued public use of the Project’s tennis courts. As discussed therein, private nine-hole courses (e.g. the Van Nuys Golf Course) and municipal courses have the same fee structure as the existing Weddington course.

In addition, the Draft EIR addressed air quality impacts in Section IV.A, *Air Quality*, with supporting data provided in Appendix B, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant after mitigation, where applicable.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 87A-7**

No reasonable alternatives have been presented by the Applicant/Developer. There must be at least one Alternative with no events, no spectators, no underground parking, no lights, no amplified noise, and enough contiguous public open space (35%) to actually warrant the label of “Park.” The projects has exploded far beyond the initial concept into a behemoth public nuisance that will destroy quality of life for far too many.

### **Response No. IND 87A-7**

The comment states that reasonable alternatives have not been presented by the School and recommends additional alternatives to be considered. As discussed in Chapter V, *Alternatives*, of the Draft EIR, CEQA Guidelines Section 15126.6(a) generally requires that an EIR shall describe a range of reasonable alternatives to the Project, or to the location of the Project, which would feasibly attain most of the basic objectives of the Project but would avoid or substantially lessen any of the significant effects of the Project, and evaluate the comparative merits of the alternatives. In the case of the Project, significant short-term noise and vibration impacts would occur during the Project’s construction activities. No other significant and unavoidable impacts were identified in the Draft EIR analyses. Thus, the Draft EIR appropriately evaluates alternatives that would reduce the significant construction noise and vibration impacts. Since other environmental

issues were not found to be significant, the evaluation of an alternative that would provide no events, no spectators, no lights, no amplified noise, and more contiguous public open space would serve no purpose with respect to CEQA requirements, nor would it support the basic objectives of the Project.

Thus, contrary to the comment, the Draft EIR does evaluate a reasonable range of alternatives consistent with the requirements of the State CEQA Guidelines Section 15126.6(a), which states an EIR need not consider every conceivable alternative to a project. For additional discussion of the Project's adequacy of alternatives in the Draft EIR, refer to Response Nos. ORG 1B-104 through ORG 1B-106, and ORG 7A-146 to ORG 7A-174.

### **Comment No. IND 87A-8**

I urge the Land Use Committee of the Studio City Neighborhood Council to oppose this Project and send Harvard- Westlake back to the drawing board.

### **Response No. IND 87A-8**

The comment urges the Studio City Neighborhood Council's land use committee to oppose the Project. This comment is unrelated to the environmental review for the Project, and does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 87B**

Suellen Wagner  
Received April 14, 2022

### **Comment No. IND 87B-1**

I am confounded by the very small size of the Study Area, measured from the center of this extremely large 16-acre project. It cannot possibly capture the wide range of severe impacts and disadvantages communities east and south of the Project. I have seen that there have been project study areas as large as 1 mile, which would be more appropriate for a job of this unprecedented scale and that involves an astronomical amount of grading and hauling of soil. By confining study to such a tiny area of impact, the environmental review fails to capture a great number of sensitive receptors, including elderly and children, in several neighborhoods, including mine, the Silver Triangle, in Studio City. Our neighborhoods have a very high rate of respiratory disease, which is well documented.

### **Response No. IND 87B-1**

The comment expresses concern over the size of the study area, particularly in reference to sensitive receptors and states the neighborhood is documented for high rates of respiratory disease. This similar comment is included as Comment No. ORG 9-14. Refer to Response No. ORG 9-14 which addresses these concerns.

### **Comment No. IND 87B-2**

In addition, neighborhoods south and southeast of the project, including mine, contain north-facing hillsides, which are geologically susceptible to vibration and in a landslide prone area. Potential vibration impacts to hillside homes must be studied.

I am hereby requesting an extension of the radius to one-mile.

### **Response No. IND 87B-2**

The commenter requests the evaluation of vibration impacts to hillside homes susceptible to landslides and vibration impacts. The nearest hillside homes are located approximately 500 feet south of the Project Site. Refer to Response No. ORG 9-8 for a discussion of vibration impacts to hillside residences. Also, while the homes within hillside area are located within a landslide susceptibility zone, Section IV.F *Geology and Soils*, of the Draft EIR correctly states the Project Site is not located within a City-designated landslide area and no hillside areas or steep slopes occur adjacent to the Project Site. As discussed in Response No. ORG. 9-8, there would be no significant vibration impacts to hillside residences to the south of the Los Angeles River. As such, the Project would not result contribute to any landslide potential in the hillside areas.

## **Comment Letter No. IND 87C**

Suellen Wagner

Received April 26-27, 2022

### **Comment No. IND 87C-1**

When is the applicant required to reveal the Haul Route? I can't find it in the DEIR?

### **Response No. IND 87C-1**

The comment questions the identification of the construction haul route. The haul route is discussed in Chapter II, Project Description, page II-62 of the Draft EIR, among other sections throughout the Draft EIR.

Comment IND 87C-1 from Ms. Wagner is derived from email communication between Ms. Wagner and the Los Angeles Department of City Planning. This email communication is considered a comment for the purposes of this Final EIR and has been made part of the administrative record. The above response was provided by the Los Angeles Department of City Planning.

As stated on page II-62 of the Draft EIR, the inbound haul route would come from US-101, head southbound on Coldwater Canyon Avenue, eastbound on Moorpark Street, and southbound on Whitsett Avenue to access the Project Site. The outbound haul route would leave the Project Site and head southbound on Whitsett Avenue, westbound on Ventura Boulevard, and northbound on Coldwater Canyon Avenue to reach US-101.

### **Comment No. IND 87C-2**

Thank you. As I recall that is only between the 101 and the site. What is the destination of the export?

### **Response No. IND 87C-2**

The comment requests the destination of the export. As discussed in Section IV.O.3 *Utilities and Service Systems – Solid Waste*, in the Draft EIR, the Project would dispose of construction-related waste at a variety of potential destination sites. These may include the County's inert landfill site, Azusa Land Reclamation, or one of a number of inert debris engineered fill operations throughout the County. Although unlikely, the County may require that the Project's construction-related construction and demolition (C&D) waste be exported to out-of-County jurisdictions. Future use of the waste-by-rail system to the Mesquite Regional Landfill in Imperial County may also be considered by the County. As required by City Ordinance No. 181,519 (Waste Hauler Permit Program), Project construction waste would be hauled by permitted haulers and taken only to City-certified C&D processing facilities that are monitored for compliance with recycling regulations. It is also noted that since excavated soils have a reuse value, the soils may be sold directly to a development site needing clean fill materials. As such, the specific destination of

exported soils may have a variety of destinations or a single destination that is not known at the Project's approval (EIR) stage. The origin and destination of inert construction materials are not CEQA issues and are not evaluated in specific detail in the Draft EIR.

## **Comment Letter No. IND 88**

Beth Dymond  
Received April 15, 2022

### **Comment No. IND 88-1**

Has Harvard Westlake filed form CP7768 listing the special events that will take place at the Harvard Westlake River Park. This information was omitted on their application however special events was checked.

Please let me know as soon as possible and if CP7768 has been filed please attach a copy.

### **Response No. IND 88-1**

The Los Angeles Department of City Planning Case Planner: “Yes, the CP-7768 Form was filed by Harvard-Westlake at the time the Project case(s) were originally filed with Planning.

Please see attached.”

Comment No. IND 88-1 from Ms. Dymond is derived from email communication between Ms. Dymond and the Los Angeles Department of City Planning. This email communication is considered a comment for the purposes of this Final EIR and has been made part of the administrative record. The above response was provided by the Los Angeles Department of City Planning.

## **Comment Letter No. IND 89**

James H. Korris  
Received April 16, 2022

### **Comment No. IND 89-1**

I spoke in favor of the Harvard-Westlake proposal to develop River Park at the Zoom hearing on April 13, 2022. I understand there is an option to enter written comments, which I herewith offer:

### **Response No. IND 89-1**

The comment expresses general support for the Project. This comment is unrelated to the environmental review for the Project, and does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 89-2**

Harvard-Westlake's plans for its River Park campus seem to be thoughtful and well-considered. Instead of having an outsized impact on surrounding neighbors like a residential development would have on this site, this proposal carefully mitigates all of its potential impacts.

### **Response No. IND 89-2**

The comment expresses that the Draft EIR provides careful mitigation for all of its environmental impacts. It is noted, however, that with the implementation of all feasible mitigation measures, impacts related to construction noise remains significant and unavoidable.

### **Comment No. IND-89-3**

For those who are concerned about the loss of Weddington and its recreational facilities, I am unaware of a competing plan proposing to offer a replacement. The most likely alternative use would be residential housing, which would likely offer no benefits to area residents. Weddington is not coming back. Whatever development assumes the Weddington space, there will be disruptions from construction – so the proposed Harvard-Westlake project is, to my thinking, no worse than other options. To the contrary, to my thinking, there are advantages to the River Park plan.

### **Response No. IND 89-3**

The comment expresses support for the Project based on the proposed use of the Project Site and advantages of the Project compared to alternative development options. This comment is unrelated to the environmental review for the Project, and does not raise any

issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 89-4**

For example: parking. All of the River Park needs would be met with the construction of an on-site subterranean structure and a handful of surface spaces. There will be no parking on our already impacted neighborhood streets, and there won't be cars cruising the area in search of elusive spaces.

The school has stated that its students will take shuttles to the River Park instead of driving their own vehicles, thereby further reducing impact. Campus security personnel will closely monitor visitor access. Any HW student or faculty or staff member who is observed driving on residential streets in the neighborhood will face losing their privilege to use the River Park facilities.

Moreover, the school has pledged its support to help residents by working with us on efforts to secure neighborhood parking restrictions from the city, making it even more difficult for those without neighborhood parking permits to park on area streets.

This indicates to me that Harvard-Westlake is taking pains to act like a good neighbor.

### **Response No. IND 89-4**

The comment expresses support for the Project based on the provision of on-site parking and the School's commitment to enforcing on-site parking requirements. This comment is unrelated to the environmental review for the Project, and does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 90

Kathy Anaya

Received April 16, 2022 (Letter A)

Received April 18, 2022 (Letter B)

Received April 27, 2022 (Letter C)

### Comment No. IND 90-1

I appreciate the additional time to send comments....While the current plans seem attractive to some, in my opinion with blind support, I've spoken to the Harvard Westlake communications team, these conversations haven't been consistent and appear to be more "marketing" than honest communication.

### Response No. IND 90A-1

The comment expresses the opinion that conversations with the School's communication team appear to be more "marketing" than honest communication. The comment is not supported by specific evidence and is based on personal opinion. This comment is unrelated to the environmental review for the Project, and does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### Comment No. IND 90A-2

Before this DEIR is approved I do have comments (questions):

Top of mind is are [sic] there any restrictions on future expansion once the school gets this approval? Can the school commit to this? Would the zoning restrict this?

For instance, Campbell Hall campus continues to expand. These expansions have many ramifications on the neighborhood and not just their Laurel Canyon campus address, but the neighborhood behind the Tujunga Wash (Riverside/Moorpark/Whitsett corridor).

### Response No. IND 90A-2

The comment inquires if there are any restrictions on future expansions. Any future discretionary projects, including potential expansions of the Project Site, would be subject to revisions to the Project's requested CUP and discretionary review and approval by the City. All future discretionary projects would be subject to environmental review under the CEQA. Future environmental review under CEQA would analyze and disclose potential environmental impacts of future proposed discretionary projects to the City and decision-makers prior to approval of any project development applications. CEQA requires a review of land use compatibility including an analysis of consistency with existing zoning regulations; however, it is up to the discretion of the City to approve or reject future projects.

### **Comment No. IND 90A-3**

Any restrictions on P.A. levels. Campbell Hall levels are excessively high and amplified by the Wash. I suspect the River will have the same sound effect on the surrounding neighborhood. Campbell Hall ignores neighbors' request to study this.

### **Response No. IND 90A-3**

The comment inquires about restrictions on public address (P.A.) levels. Project Design Feature NOI-PDF-2 establishes restrictions on the Project's proposed amplified sound system. As stated therein:

NOI-PDF-2: The Project's amplified sound system for special events at Field A will be installed and designed using a line-array speaker system, so as to not exceed a maximum noise level of 92 dBA (Leq) at a distance of 50 feet from the amplified sound system. In addition, the stage for special events will be located at the north side of Field A, with the amplified sound system facing south in the opposite direction from the off-site sensitive uses to the north of Field A, which would reduce speaker noise at the nearest off-site sensitive uses to the north and east of Field A.

Furthermore, operational noise impacts to off-site receptors are fully evaluated in Section IV.K, *Noise*, of the Draft EIR. As described in Section IV.K, operation noise impacts, including a conservative, composite analysis of all athletic facilities, the sound system, and noise being used simultaneously, would not exceed noise impact standards established by the City and impacts would be less than significant. Refer to Topical response No. 8 - Noise: Construction and Operation Impacts, for additional discussion of noise impacts.

### **Comment No. IND 90A-4**

Is the school obligated to disclose which organizations (of which there seem many) and size outside of their own schools events going forward?

### **Response No. IND 90A-4**

The comment requests if the School would be required to disclose all events, including the names of the organizations and the size of the events going forward. The City does not generally require such disclosure, absent an environmental or compliance matter that would make such disclosure relevant.

### **Comment No. IND 90A-5**

They say that traffic won't be impacted, but they're going from the current 69 parking spaces to approx 535. How is traffic not going to be impacted with the addition of these many cars?

## Response No. IND 90A-5

The comment questions the impacts to traffic with the increase in on-site parking spaces. The Project Site currently has 89 parking spaces. The issue of traffic and parking is discussed in Topical Response No. 9 - Transportation and Parking During Construction and Operations, in this Final EIR. As evaluated therein, impacts with respect to transportation and traffic would be less than significant and no mitigation measures are required. The 500-space parking structure would accommodate instances during which visitor and spectator attendance is elevated, such as during a School Special Event or notable interscholastic game. As described in Chapter II, *Project Description*, page II-48 of the Draft EIR, there are fewer than 400 spectators for 90 percent of interscholastic games. Though these instances are relatively infrequent, LAMC nonetheless requires the provision of school parking spaces in proportion to the number of fixed seats (including bleachers), regardless of how often such capacities are actually utilized. As discussed in Topical Response No. 9, with the Project design modifications (presented in Topical Response No. 2 – Modifications to the Project Design), the Project's number of parking spaces would be reduced from 532 to 403, for a reduction of 129 spaces.

## Comment No. IND 90A-6

They say a recommended driving route will be Coldwater Canyon north to Moorpark, east to Whitsett, then south to the facility. Has there been a thorough study on this already congested portion of our Studio City?

## Response No. IND 90A-6

The comment asks if a traffic analysis has been performed for the roadways/intersections that would be impacted by the Project. Although not required by CEQA, the Transportation Assessment (TA) provided in Appendix M of the Draft EIR includes a traffic (intersection level of service [LOS]) analysis for off-site street segments that would comprise the primary routes between the Upper School campus and the Project Site. The LOS analysis is provided in Appendix G of the TA.

## Comment No. IND 90A-7

Not to mention Ventura at both Coldwater and Whitsett? There are many other large projects on point to be constructed on, or just off Ventura in the general area. I've heard that the Sportsman's project's DEIR was for the current situation as it exists and not broadened to include the impact of future growth of other sites.

## Response No. IND 90A-7

The comment asks if certain intersections and other nearby projects in the area were evaluated in the traffic analyses. The LOS evaluation provided in Appendix G of the TA took into consideration intersections along Ventura Boulevard, including Ventura Boulevard/Whitsett Avenue and Ventura Boulevard/Coldwater Canyon Avenue. The TA's

analysis of LOS impacts is a non-CEQA issue. The analysis includes vehicle trips that would be generated by the Project and the related projects in the area, as projected to 2025 and as required for all LOS studies by the LADOT. Related projects include the Sportsmen's Lodge, as listed in Chapter III, *Environmental Setting*, of the Draft EIR. The Sportsmen's Lodge shopping center with gym and retail uses was recently constructed but is not yet fully operational (Related Project No. 1). The Sportsmen's Lodge apartments and restaurant/retail uses are not operational (Related Project No. 5). An ambient growth factor of 0.6 percent per year was applied to adjust the baseline year (2020) traffic volumes to reflect the effects of regional growth and development. This adjustment was applied to the baseline year (2020) traffic volume data to reflect the effect of ambient growth by the year 2025. This methodology is consistent with standard practices and TAG methodology for TA's in the City, which was approved by LADOT. Furthermore, the methodology to analyze cumulative transportation impacts was consistent with the applicable requirements of CEQA Guidelines Section 15130 in determining cumulative impacts.

The TA was prepared in accordance with LADOT's Transportation Assessment Guidelines (TAG) adopted in July 2019 (updated in July 2020). The TA was approved by LADOT on June 10, 2021, with an updated approval on June 11, 2021.

### **Comment No. IND 90A-7**

They profess neighbors and the community stakeholders will have access, "with approval". Do we know what this approval process is and if it has limitations? Seems they post a very narrow window for swimming pool access and for "approved" visitors only.

### **Response No. IND 90A-7**

Refer to comment to Topical 3 – Enforcement of Public Access, which describes the approval process and why an approval process is needed.

### **Comment No. IND 90A-8**

I haven't seen where public restrooms will be for the portion they call "Riverpark", which in itself appears to be misleading and the term "park" limited in scope. I'd expect there to be laws, handicap regulations, etc.

### **Response No. IND 90A-8**

Refer to Figure II-6, Conceptual Site Plan, in Chapter II, *Project Description*, of the Draft EIR for the location of the proposed restrooms. As seen therein, restrooms are located adjacent to or within each of the Project's athletic facilities and would be available for any users of those facilities. Restrooms are also available in the clubhouse in the Project Site's northeast corner. The clubhouse and the café will be preserved and would function as a visitors center, accessible free of charge. Hours of operation for the clubhouse are described as 7:00 a.m. to 9:00 p.m., daily, and include access to restrooms. For more

information, please refer to Table II-3 in Chapter II, *Project Description*, of the Draft EIR. The site plans will be reviewed by the City for compliance with all City regulations, including compliance with the Americans with Disabilities Act (ADA) for compliance.

### **Comment No. IND 90A-9**

Many other considerations to bring more specificity to:

How will the existing animal population be handled once trees are taken down, specifically the owls going back generations and other birds that migrate along the River? Or bats living in the palms? (They help keep the mosquito population in check.)

### **Response No. IND 90A-9**

The comment expresses concerns with impacts to wildlife during Project construction. Please refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife, bats, and nesting birds, including owls.

### **Comment No. IND 90A-10**

Is their water reclamation project the most environmentally sound one?

### **Response No. IND 90A-10**

This comment asked whether the water reclamation project is the most environmentally sound option. All water reclamation systems/projects are designed based on project specific parameters, which vary from project to project. The question of being “the most environmentally sound” is subjective based on personal opinion. For the Project at hand, the water reclamation is being installed to improve stormwater runoff water quality from the approximately 17-acre Project Site. As discussed in Topical Response No. 2 – Modifications to the Project Design, and in Chapter 3, *Revisions, Clarifications, and Revisions*, of this Final EIR, the capacity of the Project’s stormwater capture and reuse system has been reduced from a 1 million gallon cistern (under the Project as discussed in the Draft EIR) to an approximately 350,000 gallon cistern (under the Project with design modifications). The Project’s stormwater capture and reuse system will reduce water demand from LADWP consistent with numerous local and state policies and ordinances pertaining to water conservation, especially during drought conditions.

### **Comment No. IND 90A-11**

Their artificial turf, same question?

### **Response No. IND 90A-11**

The comment expresses concern regarding the environmental impacts of artificial turf. Appendix H-2 of the Draft EIR provides a summary of scientific studies on the effects of artificial turf (also referred to as synthetic turf). In addition, Topical Response No. 7 -

Artificial Turf and Effects on Localized Heat and Health, in this Final EIR provides a more detailed analysis of the environmental effects of artificial turf based on additional scientific studies. As summarized in Appendix H-2 and in Topical Response No. 7, the Project's use of artificial turf would not result in an adverse on the environment, including effects on water quality, air quality, or human health.

### **Comment No. IND 90A-13**

My house is on Bellaire which isn't affected by the current lighting of the golf course. I'm concerned that the new lighting planned will, and in turn bring down my property value.

### **Response No. IND 90A-13**

The comment expresses concerns about the Project's field lights and how they potentially might lower their property values. First, see Topical Response No. 4 – Aesthetics, regarding the impact of the Project's field lights and other outdoor lighting. As discussed in Topical Response No. 4, the Project's light and glare impacts were fully analyzed in the Draft EIR's Section IV.A, *Aesthetics*, which were based on the Lighting Technical Study contained in Appendix B of the Draft EIR. As discussed therein, the Project would not exceed CEQA threshold standards at any of the nearby residential uses nor would it exceed lighting standards of the Los Angeles River Improvement Overlay (RIO) District Ordinance pertinent to locations near the Los Angeles River. The Project's outdoor lighting would be in use from dusk to no later than 8:00 p.m. daily (9:00 p.m. for the tennis courts). Field lights would not be used on a daily basis. Existing tennis court lights are kept on up to 10:00 p.m. and lighting for the driving range may extend to 11:00 p.m. Moreover, the Project's lighting system would generally represent an improvement for surrounding residential uses, with less off-site glare and spillover, than existing conditions. In addition, the Project's lighting program has been revised to reduce the number of field and tennis court lights. The Supplemental Lighting Report Memorandum is attached as Appendix B to this Final EIR and, as further evaluated in Topical Response No. 4 - Aesthetics, the reduction in lighting would further reduce the Project's light and glare levels. Consistent with the analysis in Section IV.A. light and glare impacts would be less than significant, and as such, would not contribute to cumulative light and glare impacts. Please refer to the specific changes in the number and heights of lights provided in Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR.

Second, the comment expresses concern based on lowered property values. However, the commenter does not provide any substantive facts or support for this concern. Additionally, economic and social effects of a project are not treated as significant effects on the environment under CEQA unless they would lead to a physical impact on the environment. See CEQA Guidelines Section 15131.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 90A-14**

I am highly appreciative of their commitment for security along the adjacent portion of the River!

However, I feel strongly that before this project can move forward (and I am under no illusion that it won't since they do currently own it) many issues need further study.

**Response No. IND 90A-14**

The comment expresses appreciation for the additional security the Project would provide along the river near Bellaire Avenue, but also states that many issues need further study. This comment does not raise any specific issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 90B-1**

It has now come to my attention that Harvard Westlake is proposing that their new "Riverpark" property's 535 parking spaces is intended for main campus "spill over" parking. Is this being taken into consideration in the traffic report?

**Response No. IND 90B-1**

The comment expresses that the Project Site may be used for "spill over" parking from the Upper School campus or use by outside organizations. This comment is not based in fact. The parking structure upper capacity would only be needed for larger, onsite events, and would not be used for events occurring on the Upper School campus. If the Project were to be approved, the Project's CUP would prohibit "spill over" parking by establishing potential conditions of approval that would limit the use of the parking structure for the School's use during on-site activities and only to visitors to the Project Site that the School has approved. Refer also to Topical Response No. 9 - Transportation and Parking During Construction and Operations, for additional discussion of the Project's parking program. In addition, refer to Response No. ORG 7A-17 for further discussion of student parking, which indicates students will not be able to park at River Park to start the school day, and then be shuttled over to the Upper School for classes. Also, as discussed in Topical Response No. 9, with the Project design modifications (presented in Topical Response No. 2 – Modifications to the Project Design), the Project's number of parking spaces would be reduced from 532 to 403, for a reduction of 129 spaces.

**Comment No. IND 90C-1**

They are looking for more parking under the guise of sports facilities helping the community when it does not and only helps the school. Proposed offering to outside organizations only helps them pay for the cost of creating more off site parking for the school. Please evaluate and take this into account.

## **Response No. IND 90C-1**

The comment expresses concerns regarding parking. Refer to Response No. IND 90B-1 which addresses these parking concerns.

## **Comment Letter No. IND 91**

Margot Riemer  
Received April 17, 2022

### **Comment No. IND 91-1**

As requested in last Wednesday's SCNC meeting, I am enclosing a copy of the comments that I made in support of the Harvard-Westlake River Park project.

As a twenty-four year resident of Studio City, I enthusiastically support the Harvard-Westlake River Park project.

### **Response No. IND 91-1**

The comment expresses general support for the Project. This comment is unrelated to the environmental review for the Project, and does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 91-2**

I was a member of the original committee formed in July, 200, [sic] to protest the proposed plan to build over 200 tall condos on the site.

Now that Harvard-Westlake has acquired the golf and tennis property, we have a plan that will preserve and actually increase green space, and it will be free to the public as well as serve Harvard-Westlake's students.

It is safe to say, I think, that NO other developer would design a plan that is as thoughtful and as beautiful as this one. At the Studio City Residents Association meeting I attended in October of 2019, a member of the Weddington family confirmed this, saying gleefully that he would have built high condos "out to the sidewalk" if he had been able to.

I feel confident that Harvard-Westlake's plan for the River Park will keep this beautiful space open and green, and that Harvard-Westlake's careful stewardship of the property will truly allow it to be Studio City's crown jewel for generations to come.

### **Response No. IND 91-2**

The comment expresses support for the Project based on the increase in green space and public access. This comment is unrelated to the environmental review for the Project, and does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 92**

Beverly Wilkerson  
Received April 18, 2022

### **Comment No. IND 92-1**

I participated in the Zoom meeting last week regarding Weddington Golf & Tennis, and I have attached the copy of my opposition stance toward Harvard-Westlake's proposal of the River Park. I did speak briefly that night.

### **Response No. IND 92-1**

The comment expresses general opposition to the Project. The comment also references an attached comment letter. Responses to the referenced letter are provided below in Response Nos. IND 92-2 through IND 92-9 below.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 92-2**

I strongly oppose Harvard-Westlake's development plan. Weddington Golf & Tennis has been a haven for me for decades. I have established a tight circle of tennis friends through this public club. Unfortunately, since H-W started taking over, over half of my circle has moved on to country clubs: Braemar, Mulholland, Mountaingate, Toluca Lake, etc. I am not able, financially, to afford such a luxury, but to be honest, it's not my preference. I much preferred the diversity and openness of the Weddington community through the years. I loved my little pocket of comfort in this "public" club, the security, the fact that people said hello to me, by name, as I arrived. It is truly the only remaining vestige of such quaintness that we have in the area. I guess that is what has troubled me the most through all of this. Why take away the one good thing, no matter how supposedly great the next thing may be? Why not put this supposed greatness into some other space that is sitting idle or is in disrepair?

### **Response No. IND 92-2**

The comment expresses opposition to the Project based on the loss of the Weddington Golf & Tennis facility and an interest in the Project relocating to another site. The Draft EIR evaluated alternative locations for the Project in Chapter V, *Alternatives*. As concluded in Chapter V, no other location with adequate acreage and topography exists within proximity to the Upper School campus to serve as an alternative locations for the Project. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 92-3**

I play tennis at Weddington almost daily and eat at the café several times a week. Golf and tennis are an important part of our quality of life in Studio City. In recent years, we've already lost two other tennis options in the area, replaced by shopping plazas and the like. If this goes, we will be sorely limited. Since H-W took ownership, we currently fight for court space. We can barely schedule a tournament and have been transferring many such tournaments to Balboa (which now is a battle between MANY different teams) and Fremont (rather far away). To book a court, one court, requires waking up at the crack of dawn and calling repeatedly, as the busy signal prevails. Harvard-Westlake bookings seem to take priority, understandably. Imagine losing half of these courts. Yes, H-W can say it's going to be open to the public, but will it truly be available?

### **Response No. IND 92-3**

The comment expresses opposition to the Project based on the presumed loss of public access to tennis courts. The commenter is referred to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, in this Final EIR for a discussion of impacts related to the Project's provision of tennis facilities for public use. As discussed therein, the Project would accommodate the same number of weekly sessions, including existing and future student use, as under existing conditions. Tennis would be available to the public under a reservation system that would allow concurrent use with students (who use the courts in the late afternoons) when courts are available.

In addition, the Project would retain and rehabilitate the existing clubhouse with café and associated putting green, which would remain open to the public.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 92-4**

There will be no place to "learn" how to play golf, in any public way in the area. I used to spend Sundays with my dad at a golf range in Connecticut, very much like the one at Weddington.

We'd hit, he'd teach me how to stand, teach me about the physics of the pendulum swing, applaud my great shots. Then we'd have lunch at the quaint restaurant attached. This was such a quality of life that will be lost once the golf is gone. A walk along a perimeter will not be the same for any child. My range in Connecticut was also bought out by some big conglomerate. I don't recall what it became, because, you know why? I never went back. Why would I? And why would I ever go back to Harvard-Westlake's River Park?

## **Response No. IND 92-4**

The comment provides reflections on personal experiences by the commenter and expresses concern over the loss of the golf course due to lack of other public courses in the area. The commenter is referred to Response Nos. IND 42D-9 through IND 42D-16 and Topical Response No. 11 - Recreation, Golf and Tennis Facilities, in this Final EIR for details regarding the relocation of existing golf course users. As noted therein, the appropriate basis for an evaluation of CEQA impact is not on the removal of the golf facility and the reduction or loss of golf opportunities but the relocation of golfers that could result in the need to construct new or repair/enlarge existing facilities. The Draft EIR study and current evidence indicate that 9-hole golf courses in the local area do have adequate capacity to accommodate the dislocated Weddington Golf & Tennis users.

In addition, see Topical Response No. 3 – Enforcement of Public Access, for additional details regarding the public access to the Project’s available recreational facilities and amenities for public use.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment No. IND 92-5**

As I listened to all the many pro Harvard-Westlake speakers the other night on the Zoom forum, my fears were multiplied. Yes, it all sounded great.

Sounds great to hear about what they plan for Angel City Sports. But why not offer Angel City Sports the same benefits on their current campus? Have they done such things in the past? Angel City Sports seem more like a “plant” in their new flora and fauna plan.

## **Response No. IND 92-5**

The comment expresses that Angel City Sports should be offered certain benefits at Harvard-Westlake’s current campus. As discussed in Topical Response No. 3 – Enforcement of Public Access, public access to portions of the Project Site is an integral part of the Project. Angel City Sports is one of numerous community organizations that would be able to utilize the recreational facilities on the Project Site.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 92-6**

Inclusive? Really? Inclusive for non-tennis players, non-golfers, perhaps. But the number of people who lose out seems greater to me, though I can't quote numbers. Seems more like a benefit to the already privileged.

My daughter played soccer for most of her school years. Her least organic experience was when she had to play on the field of the Harvard-Westlake campus. The field was state of the art. And hot. And unpleasant. The general atmosphere on campus was cold, non-inclusive to anyone not from the school, and unforgiving. And entitled. It permeated from and around the synthetic turf.

**Response No. IND 92-6**

The comment expresses general opposition for the Project and the commenter's own feelings about whether the School is inclusive or not. The comment is based on personal opinion and does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 92-7**

I lived west of Laurel Canyon when I first started playing tennis at Weddington. I had to leave a half hour earlier than necessary to accommodate the tie-up at Laurel Canyon. Wonder what the traffic will be like at Whitsett? How is underground parking for 500 more appealing to a community than the current 30-space aboveground lot? That merely means that more traffic. How is that good to the neighborhood?

**Response No. IND 92-7**

The comment questions the benefits of the Project's parking structure and raises concerns regarding traffic impacts. It should be noted that the existing surface parking lot provides 89 spaces. The Project's parking structure maximum capacity would only be needed for larger, on-site events, and would not be used for events occurring on the Upper School campus. The Project's parking capacity is provided to ensure that parking does not spill over into the adjacent residential neighborhoods. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, in this Final EIR for a discussion of the Project's traffic patterns, effects on local streets, and consistency with CEQA threshold levels. Also, as discussed in Topical Response No. 9, with the Project design modifications (presented in Topical Response No. 2 – Modifications to the Project Design), the Project's number of parking spaces would be reduced from 532 to 403, for a reduction of 129 spaces.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 92-8**

The pool. How many locals have their own pools in their backyards? How many pools does Harvard-Westlake really need?

**Response No. IND 92-8**

The comment questions why an additional swimming pool is needed by the School. The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), of this Final EIR for a discussion of the purpose and underlying need for the Project for the School and the community.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 92-9**

I see the writing on the wall. The River Park is more a ploy for Harvard-Westlake to get more money, more students, more clout. How much more does it truly need? How much more does the Studio City community need to improve the quality of their lives? I know that Harvard-Westlake owns the space. The argument that what they're going to do far surpasses the option of high-rise apartments and the like holds weight. But why take away what from the positive that we have? Maybe there are other options that Harvard-Westlake can get behind, options which truly save the local history with the power they obviously possess. I propose researching the options. There are signs in almost every lawn in the area opposing the complex.

Look at the signs. Look at the writing on the River Park wall.

**Response No. IND 92-9**

The comment expresses opposition to the Project based on the need for Project and proposes that other options or alternatives (i.e., other uses for the Project Site) should be researched. The Draft EIR evaluated Project Alternatives, Chapter V, *Alternatives*, in accordance with CEQA Guidelines Section 15126.6(a), which require an EIR to evaluate a range of reasonable alternatives that would feasibly attain most of the basic objectives of the Project but would avoid or substantially lessen any of the significant effects of the Project. The evaluation of alternative uses that are not related to the EIR process would not meet the objectives of the Project nor would be required for the Draft EIR. The comment primarily reflects personal opinion and does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 93**

David Nelson  
Received April 18, 2022

### **Comment No. IND 93-1**

Here are my comments on the Harvard-Westlake River Park Project.

I am OPPOSED to this project. I've lived in the immediate neighborhood of the Weddington Golf and Tennis property for 23 years. I work from home and walk by the property daily, if not multiples times a day. I also use the golf course.

This property has often been called "The gem of Studio City". It's true; it really is! It would be a shame to lose this special place.

### **Response No. IND 93-1**

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 93-2**

One of the main things I'm concerned about is the amount of additional traffic to the neighborhood if this project moves forward. I live on Woodbridge St at Alcove Ave. Woodbridge is the main east-west artery through the neighborhood. No matter what traffic pattern policies Harvard- Westlake puts in place people will do what they want when arriving or leaving the site. Traffic on Woodbridge and throughout the neighborhood will increase. As it is now, cars already roll through many of the stop signs in the neighborhood. It's just going to get worse. There are a lot of walkers in the neighborhood and many of those are families with kids or nannies pushing strollers. And since a fair amount of the neighborhood does not have sidewalks, people walk in the street.

### **Response No. IND 93-2**

The comment expresses concern regarding the increase of traffic on Woodbridge and in the surrounding neighborhood. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, in this Final EIR for a discussion of the Project's traffic patterns, effects on local streets, and consistency with CEQA threshold levels. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation.

The comment also expresses concern about pedestrian safety as much of the neighborhood does not have crosswalks and people walk in the street. Please refer to Response Nos. IND 42D-6 and IND 70-2, above, regarding intersection and pedestrian safety.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 94**

Louis Sanford  
Received April 20, 2022

### **Comment No. IND 94-1**

I STRONGLY OPPOSE HARVARD WESTLAKE'S SO CALLED RIVER PARK PROJECT AND I'M NOT ALONE.

NEARLY 14,000 STAKEHOLDERS HAVE SIGNED A PETITION ADVOCATING THE PRESERVATION OF WEDDINGTON GOLF & TENNIS IN ITS ENTIRETY, ALL 16 ACRES OF NATURAL, GREEN OPEN SPACE.

### **Response No. IND 94-1**

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 94-2**

THINK ABOUT IT. WHAT WOULD MANHATTAN BE WITHOUT CENTRAL PARK BECAUSE THAT'S EXACTLY WHAT GENERATIONS OF ANGELENOS HAVE ENJOYED HERE, WHICH MAKES WEDDINGTON TRULY IRREPLACEABLE.

I UNDERSTAND THE SCHOOL'S ATHLETICS DEPARTMENT NOW DWARFS ITS ACADEMICS SO TO STAY COMPETITIVE AND PROFITABLE. THEY HAVE ONE GOAL: TO BUILD A SPORTS COMPLEX FOR ITS 900+ STUDENTS—BUT AT WHAT COST TO A COMMUNITY OF 45,000 AND A CITY OF OVER 12 MILLION?

### **Response No. IND 94-2**

The comment expresses opposition to the Project based on the loss of Weddington Golf & Tennis, which the commenter likens to Central Park in New York. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 94-3**

CLEARLY, HISTORY AND SCIENCE ARE NOT BEING FOLLOWED HERE.

HISTORY? THE COMMUNITY HAS PUSHED BACK EACH TIME THIS ICONIC PROPERTY WAS THREATENED WITH MINDLESS, NOT MINDFUL PLANS.

SCIENCE? HARVARD WESTLAKE WILL CUT DOWN MORE THAN 200 MATURE TREES, WHICH WILL IMPACT OUR FRAGILE CANOPY FOR 50 YEARS OR MORE UNTIL THOSE REPLACEMENTS MATURE.

WHY JUST THE OTHER WEEK, MAYOR GARCETTI APPLAUDED ONE LA NEIGHBORHOOD FOR BOOSTING THE CITY'S TREE CANOPY BY PLANTING SEVERAL DOZEN NEW ONES. WHERE IS THE CONSISTENCY IN PUBLIC PLANNING?"

### **Response No. IND 94-3**

The comment expresses the concern that the Draft EIR does not provide a valid analysis of scientific or historic issues. Regarding the cutting of trees, the Project would add a broad array of native species and contribute to the number of trees on-site. Refer to Topical Response No. 5 – Biological Resource/Trees, for a discussion of impacts to trees. As discussed in Topical Response No. 5, the Project's tree removal and replanting program was fully analyzed in the Draft EIR's Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). Many of the removed species, such as the Mexican Fan Palms are identified as invasive and would be replaced by trees that are compliance with the River Improvement Overlay (RIO) Ordinance. The majority of street trees would remain and any removed street trees would be replaced at a 2:1 ratio. The existing mature trees along the Zev Greenway, Bellaire Avenue, and Whitsett Avenue would remain. The majority of mature street trees along Valley Spring Lane would also remain, except for two smaller sections along the street front (see Section IV.C, *Biological Resources*, Figure IV.C-4, *Tree Removal Plan, of the Draft EIR*). The Project would result in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree Planting Plan, of the Draft EIR*). Please also refer to Response No ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.

### **Comment No. IND 94-4**

AND...RIPPING OUT ACRES AND ACRES OF NATURAL GRASS AND REPLACING THEM WITH PLASTIC TURF? CAN THE SCHOOL SPELL ... HEAT ISLAND?

### **Response No. IND 94-4**

The comment expresses concern regarding the potential for heat island effects from the proposed artificial turf field. Regarding the heat effects of artificial turf, refer to Topical Response No. 7 - Artificial Turf and Effects on Localized Heat and Health, which provides a detailed analysis of the potential heat island effects. As summarized therein, studies

show there is little difference in heat indicators between synthetic turf, grass, and sand surfaces.

### **Comment No. IND 94-5**

SO HERE WE ARE WITH A PRIVATE SCHOOL PLAN THAT ADVOCATES THE DESTRUCTION OF OUR PRECIOUS NATURAL RESOURCE, GREEN OPEN SPACE, AND DESPITE ALL THE BACK AND FORTH, NOISE, LIGHT, TRAFFIC, ENVIRONMENT AND “TRANQUILITY”—WHICH IS WHAT THE SCHOOL PROMISED TO PRESERVE--WILL ALL BE CHANGED FOREVER.

### **Response No. IND 94-5**

The comment expresses opposition to the Project based on loss of green open space, noise, light, and traffic. To clarify the existing property rights and on-site uses, the land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner’s sole discretion. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

With regard to noise impacts, see Response No. IND 6-3 and Topical Response No. 8 – Noise: Construction and Operation Impacts.

The commenter is referred to Topical Response No. 4 – Aesthetics, for a discussion regarding operational light and glare impacts.

The commenter is also referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, in this Final EIR for a discussion of the Project’s traffic patterns, effects on local streets, and consistency with CEQA threshold levels.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 94-6**

CLEARLY, NO MATTER HOW YOU SLICE AND DICE THIS, IT’S SIMPLY THE WRONG PLAN, IN THE WRONG PLACE, AT THE WRONG TIME AND IF NOT STOPPED

DURING YOUR WATCH, IT WILL GO DOWN AS A TRAGIC EXAMPLE OF PRIVATE INTEREST TRUMPING PUBLIC INTEREST.

**Response No. IND 94-6**

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 95

Teri Austin  
Received April 22, 2022

### Comment No. IND 95-1

I hope you are well and happy. May I ask for clarification please? Can you tell me who is defined as " A decision-maker" in the ordinance below?

Are you the decision-maker? Is the full City Council the decision-maker? Is one individual Councilmember the decision-maker? This is so vague to me and I'm confused. I'm wondering who is the decision-maker for ENV-2020-1512-EIR.

Attachment: "CUP criteria. SEC. 12.24. CONDITIONAL USE PERMITS AND OTHER SIMILAR QUASI- JUDICIAL APPROVALS.

12. Findings for Approval. (Amended by Ord. No. 182,095, Eff. 5/7/12.) A decision-maker shall not grant a conditional use or other approval specified in Subsections U., V., W., or X. of this Section without finding:

1. that the project will enhance the built environment in the surrounding neighborhood or will perform a function or provide a service that is essential or beneficial to the community, city, or region;
2. that the project's location, size, height, operations and other significant features will be compatible with and will not adversely affect or further degrade adjacent properties, the surrounding neighborhood, or the public health, welfare, and safety; and
3. that the project substantially conforms with the purpose, intent and provisions of the General Plan, the applicable community plan, and any applicable specific plan."

### Response No. IND 95-1

Who the decision-maker is on any project is based on the type of entitlements being requested. For this Project and certification of the EIR, it is the City Planning Commission.

*Comment No. IND 95-1 is derived from email communication between the commenter and the Los Angeles Department of City Planning. This email communication is considered a comment for the purposes of this Final EIR and has been made part of the administrative record. The above response was provided by the Los Angeles Department of City Planning.*

## **Comment No. IND 95-2**

Do I understand then In this instance is that Commission the Planning and Land Use Management Commission also known as PLUM that is the decision-maker and not anyone at Dept. of Planning? Does this mean that Dept. of Planning is only advisory to PLUM and not a decision-maker?

## **Response No. IND 95-2**

No, it is the City Planning Commission that is the decision-maker in this case, not the Planning and Land Use Management Committee. I think this information on our City Planning webpage will be most helpful for the questions that you have on this: <https://planning.lacity.org/development-services/land-use-process/planning-processes>.

*Comment No. IND 95-2 is derived from email communication between the commenter and the Los Angeles Department of City Planning. This email communication is considered a comment for the purposes of this Final EIR and has been made part of the administrative record. The above response was provided by the Los Angeles Department of City Planning.*

## **Comment Letter No. IND 96**

Zach Kleiman

Received April 22, 2022

### **Comment No. IND 96-1**

This is a sad and ecologically awful plan of what to do with Open Space in Los Angeles.

Especially for maybe 300 teenagers a year, this is limited and selfish.

Losing 10 acres of breathing land and displacing a mecca for 20- 30,000 (annually) golf and tennis players (from beginners to world class) is brutal, unconscionable and pandering to an elitist organization.

### **Response No. IND 96-1**

The comment expresses opposition to the Project based on loss of open space and displacing golf and tennis players. To clarify the existing property rights and on-site uses, the land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

In addition, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

Regarding displaced golf and tennis players, refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, which discusses the availability of other public and private nine-hole courses in the area and the continued public use of the Project's tennis courts. As discussed therein, private nine-hole courses (e.g. the Van Nuys Golf Course) and municipal courses have the same fee structure as the existing Weddington course.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 97A

Mary Riley  
Received April 23, 2022

### Comment No. IND 97A-1

I am having trouble accessing the Transportation Appendix (M) in the Draft EIR. I can access all of the other exhibits so I wonder if it had something to do with the downloading end. Could you look at that? If it is fine, is there any other way that I can receive that appendix M?

I am also trying to find the Conditional Use Permits for the Harvard-Westlake School at 700 North Faring Road, and the conditional use permits (if any) for the Upper Harvard Westlake School on Coldwater. I can't seem to figure out Zimas, so any help is very appreciated.

Thanks for your work on this project.

### Response No. IND 97A-1

Los Angeles City Planning Case Manager:

"I took a look at the Transportation Appendix M, on multiple different computers and did not have any issues accessing it, so I'm not sure what the issue you are experiencing could be. I've linked directly to that appendix below, for your reference, so hopefully the link below will work for you, but if not, the Studio City Public Library also has a digital copy of the entire Draft EIR and all Appendices that you can access.

[https://planning.lacity.org/eir/Harvard-Westlake\\_River\\_Park\\_Project/deir/Appendices/App%20M%20Transportation.pdf](https://planning.lacity.org/eir/Harvard-Westlake_River_Park_Project/deir/Appendices/App%20M%20Transportation.pdf)

Regarding the Condition Use Permit for the Harvard-Westlake School properties that you listed, you can try looking up the properties (by address) on ZIMAS, then opening the case numbers tab on the left side to find the case numbers for the property and click on each case number to find the correct ones you are looking for. If the case number links on ZIMAS do not work for you, you can write down the case number, and use the Case Search feature on our City Planning webpage (<https://planning.lacity.org/>) to search for the Conditional Use documents you are looking for.

Hopefully this info helps you find what you are looking for."

*Comment No. IND 97A-1 from Ms. Riley is derived from email communication between the commenter and the Los Angeles Department of City Planning. This email communication is considered a comment for the purposes of this Final EIR and has been made part of the administrative record. ## Comment Letter No. IND 97B

Mary Riley  
Received May 5, 2022

### Comment No. IND 97B-1

I am having so much trouble trying to access two things. First, the Middle School (Harvard-Westlake) CUP and corresponding EIR. EIR is SCH No. 2001121016; Jimmy Liao was the planner. The CPC number is 2001-3472-CU-SPI. Nothing comes up through Zimas or City site (so I must be doing it wrong). I would love links to the final approval document by the City with the Conditions of Approval; and the EIR.

The second item is the Harvard-Westlake 2013 project which wasn't approved- where they wanted to build a 3 story 750 parking structure at 3701 N. Coldwater -- that EIR is SCH No. 2013041033; CPC-2013-148-VCU. Again no luck on the City site, and too early for Ceqanet. Emily Dwyer was the planner. I would love to see the final document that got denied- I don't know if it was at the Planning Commission or Council, with the proposed conditions of approval and the EIR.

Thank you so much. I really tried to find it myself....sorry.

### Response No. IND 97B-1

Los Angeles Department of City Planning Case Manager:

"My apologies for the delay in getting back to you. You can search for the cases using the City Planning Case numbers on the City Planning website, by using the case search box on the homepage, <https://planning.lacity.org/>

The best way would be to search using case number without the string of letters at the end (i.e. CPC-2001-3472, or CPC2013-148).

You should also be able to find EIRs on our City Planning webpage, <https://planning.lacity.org/development-services/eir>. The easiest way to find the EIRs you are looking for, would be to use the search box and search for "Harvard".

Hopefully, this info will help you are looking for online."

*Comment No. IND 97B-1 from Ms. Riley is derived from email communication between the commenter and the Los Angeles Department of City Planning. ## Comment Letter No. IND 97C

Mary Riley

Received May 10, 2022

### Comment No. IND 97C-1

Attached is my comment letter for the DEIR review. (Two hours early!). Thanks for your continued help.

This comment letter is in response to the Draft Environmental Impact Report for the Harvard-Westlake River Park Project. ("Project").

### Response No. IND 97C-1

This introductory comment, which notes an attached comment letter but does not include specific comments. Responses to the referenced attached comment letter are provided below in Responses to Comments Nos. IND 97C-2 through IND 97C-30 below.

### Comment No. IND 97C-2

#### Project Description

The DEIR does not have a clear and consistent project description. Harvard-Westlake has two campuses and the word "School" is defined in the Project Description to include both campuses- the Upper School on Coldwater and the Middle School in Holmby Hills. Analysis of impacts oftentimes ignore the Middle School; this is especially apparent in the Transportation Section. The VMT Study never mentions any trips from the Middle Campus in Holmby Hills, 4.2 miles away. From the Project Site.

Also, the word "School" continues to be used as follows: "The underlying purpose of the Project is to supplement the School's athletic and recreational facilities and provide Harvard-Westlake School a campus that can fulfill its educational mission and athletic principles now and *in the future*."(emphasis added)

### Response No. IND 97C-2

The comment states that the Draft EIR does not have a clear and consistent project description. The term "School" is defined in the Draft EIR as both the School's Upper campus located on Coldwater Canyon Avenue and Middle School campus located on Holmby Hills. The environmental analysis contained with the Draft EIR evaluates the environmental impacts of the proposed Project, which includes the repurposing of the existing Weddington Golf & Tennis facility located at 4141 Whitsett Avenue. The Project's facilities would be utilized by the School, which includes students at both the Upper School campus and Middle School campus. However, the Project's recreational facilities would primarily supplement the facilities of the Upper School campus, not to

provide supplemental facilities for the Middle School campus. As stated on Page II-55 of the Draft EIR:

On typical weekdays with after school programs occurring on the Project Site, the School would provide three shuttle buses to transfer students, coaches, and visitors between the Upper School campus and the Project Site between 2:30 p.m. to the end of the day's latest activity. Shuttles would have a rider capacity of 24 and service is anticipated every 5 to 10 minutes. On days in which event attendance is expected to surpass 300 spectators, including parents and other spectators, students would not be permitted to drive to the Project Site and would be required to use the shuttle service (see Project Design Feature TRAF-PDF-3 in Section IV.M, Transportation). The great majority of students would originate directly from the Upper School campus.

There are no shuttles proposed to provide transportation for students between the Middle School campus and the Project Site. Also, middle school students are not of age to drive to the Project Site. Section IV.M, *Transportation*, of the Draft EIR explicitly evaluates the proposed shuttle service between Upper School campus and the Project Site for these reasons. The statement that "the great majority of students would originate directly from the Upper School campus" is intended to indicate that there may be some occasions where students originate from another location in order to utilize the shuttle at the Upper School campus, but as there is no planned route or program to shuttle students from another location, any analysis beyond what is provided in the Draft EIR would be speculative in nature and the Draft EIR properly evaluates the VMT that would be generated by the Project. Also, refer to Response No. ORG 1B-85, which discusses how Middle School students are already shuttled on a daily basis to the Upper School campus, such as for sports, after school activities, or to meet with an older sibling; as such, there is no additional VMT from Middle School to River Park.

### **Comment No. IND 97C-3**

The purpose of this Project seems to consolidate some of the athletic uses from the two campuses and to provide a brand new state of the art facility, available to both campuses, while possibly freeing up space on the respective campuses. The word "supplement" means something that completes or enhances something else when added to it. The DEIR project description really intended to study how the Project Site enhances the other two campuses, collectively called "School"; yet the DEIR fails to study any impacts on either respective campus, impacts existing and impacts that may exist "in the future" after enrollment perhaps expands. The Project adds 16 plus new acres to existing Upper Campus of 18 acres, and 15 acres at Middle Campus - about a 50% increase in land. It is reasonably foreseeable that development of the Project's 16 plus acres will free up or change the two campuses and possibly increase future number of students. The Upper Campus only has one field; however, it has a 51 meter pool constructed in 2013 (made out of stainless-steel featuring a surge tank underneath the pool deck to keep the water level, which reduces water resistance for swimmers).

The Middle Campus in Holmby Hills has its own 25 yard pool, one field and gym. The current total number of students at the School is approximately 1620 (according to its website)- 755 at the Middle Campus and 875 in the Upper Campus. The Middle Campus also has a conditional use permit approved with EIR Sch No. 2001121016, approved in 2004, with many conditions of approval. Hopefully, none of those conditions will be violated by expanding and consolidating or supplementing its facilities, or by traveling to the Project Site as a supplement to its campus.

### **Response No. IND 97C-3**

The comment contends that the purpose of this Project is to consolidate some of the athletic uses from the two campuses and to provide a brand new state of the art facility, available to both campuses, while possibly freeing up space on the respective campuses. However, the commenter does not provide any substantive facts or support for this opinion, nor is it within the School's ability to do so without a public process and relevant City approvals.

The Project Site that is correctly evaluated in the Draft EIR is the existing Weddington Golf & Tennis facility as well as the adjacent parcel leased by the School from the Los Angeles County Flood Control District. While the Project includes proposed athletic and recreational facilities for the School and public use, it does not include any improvements, including abandonment or redevelopment of the School's existing facilities on the Upper School campus or Middle School campus that would require an evaluation of environmental impacts at those existing locations. Any future discretionary projects, including potential expansions of the Project Site or on either School campus, would be subject to future environmental review under CEQA. CEQA requires a review of land use compatibility including an analysis of consistency with existing zoning regulations; however, it is up to the discretion of the City to approve or reject future projects.

Impacts associated with future improvements by the School not currently proposed by the Project would be speculative in nature since the Project is proposed to accommodate the School's existing recreational needs.

### **Comment No. IND 97C-4**

Once athletic and recreational facilities at the School are consolidated, (or supplemented) then each respective school campus will have extra space, for it no longer should need duplicative athletic facilities. Do 1620 individuals really need three pools- two 51/52 meters and one 25 yards? As stated in the Harvard -Westlake Public Improvement Plan, EIR (Sch No. 2013041033), (the project where Harvard-Westlake owned 4 acres of adjacent property and desired to build a three story garage, practice field on top, and connected to the Upper Campus with a pedestrian bridge over Coldwater), the Upper Campus needs approximately 750 new parking spaces, enhanced practice field facilities, and more school bus drop off on site (as of 2013). Have those needs changed?

## Response No. IND 97C-4

The comment questions the School's need for the proposed athletic and recreational facilities. The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA) of this Final EIR for a discussion of the purpose and underlying need for the Project for the School and the community. As discussed in Response No. 97C-3, no improvements are being proposed at the Upper School campus or Middle School campus. Should future improvements be contemplated by the School at either or both of those campuses, they would be subject to future CEQA environmental review. It is up to the discretion of the City to approve or reject future projects.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment No. IND 97C-5

The DEIR presents the story of a Project looked at in a vacuum, ignoring the two other campuses which the Project will join. It is really hard to ignore statements about Harvard-Westlake Upper School in SCH No. 2013041033, that the Upper Campus needed more athletic fields for practice (only one exists at the current Upper School,) and it needed over 700 new parking spaces.

If the new Project isn't going to physically impact the existing campuses, why did this statement appear in this Project's DEIR project description and goals section "...repurpose the Project Site for use as an athletic and recreational facility to supplement the School's **existing, space-constrained** athletic facilities."(emphasis added). In order to discuss existing, space constraints, the DEIR needs to examine how the Project impacts each campus, now and in the future, which this DEIR fails to do.

The project description seems in flux throughout the entire document.

## Response No. IND 97C-5

The comment states that the Project would impact the Upper School and Middle School campuses. As discussed in Response No. 97C-3, no improvements are being proposed at the Upper School campus or Middle School campus. Should future improvements be contemplated by the School at either or both of those campuses, they would be subject to future CEQA environmental review. It is up to the discretion of the City to approve or reject future projects.

## Comment No. IND 97C-6

The cornerstone of CEQA is the definition of the project, and Section 15378 states:

“Project means the whole of an action, which has potential for resulting in either direct physical change in the environment, or a reasonably foreseeable indirect physical change in the environment.” Even if a reasonable foreseeable consequence of a project (such as expanding respective campus space once freed up because of the new 16 acre project site), is speculative at this time, CEQA still requires some discussion and as much information available about the future phases. The DEIR fails to provide this information.

### **Response No. IND 97C-6**

The commenter incorrectly identifies future improvements or impacts to the existing campus sites as a reasonably foreseeable indirect physical change in the environment. As the Project does not include any improvements to the existing School campuses, including abandonment or redevelopment of the existing facilities, there are no reasonably foreseeable impacts to those sites as a result of the Project. The EIR prepared for this Project is not a programmatic or Master EIR and is not intended to facilitate future projects or improvements by the School at either of its campuses.

### **Comment No. IND 97C-7**

#### *Growth Inducing Impacts.*

DEIR Vi-9 states: The Project is associated with the existing Harvard-Westlake School and intended to serve the School’s existing need for recreational facilities, for which adequate space is not available at the School’s Upper Campus. The Project described in this section of the DEIR sounds like a Project providing new facilities not otherwise available at the Upper Campus. Such expansion does reasonably trigger additional students, induce residential density growth or provide substantial new employment opportunities that would foster a substantial economic growth. Maybe not today, but it is very reasonable to expect the elimination of all of the Upper Campus athletic facilities and total reliance on the Project Site. Without a clear project definition, impacts cannot be adequately examined, especially growth inducing impacts.

### **Response No. IND 97C-7**

The comment speculates on growth-inducing impacts, which are similar to those in Comment No. ORG 1B-112. Please refer to Response No. ORG 1B-112.

### **Comment No. IND 97C-8**

#### *Use of Design Modification TRAF-PDF-1:*

Design modification TRAF-PDF-1 in the DEIR requires a construction management plan before any permits are issued, to eliminate any significant adverse impact on the Fire Station 78, which opened in January 2009. The use of design modifications rather than mitigation measures violates CEQA because the DEIR does not adequately evaluate the significance of impacts during construction. “CEQA requires that an EIR include, among

other things, a detailed statement setting forth all significant effects on the environment of the proposed project and mitigation measures proposed to minimize significant effects on the environment”, *Lotus v. Department of Transportation*, 223 Cal. App. 4th 645 (2014). In *Lotus*, certain mitigation measures were wrongly characterized as changes or alterations incorporated into the project; that EIR was inadequate for the impacts associated with the incorporated design features, called “Avoidance, Minimization and/or Mitigation Measures” were not properly evaluated. This DEIR similarly fails to adequately evaluate the significance of impacts during construction, especially on Fire Station 78. See especially footnote 8 in *Lotus* to help distinguish between appropriate design standards and mitigation measures. It is especially baffling why Applicant refuses to call this a mitigation measure, especially when Applicant has stated the design modifications will be included in the Mitigation Monitoring Plan.

### **Response No. IND 97C-8**

This comment regarding Project Design Feature TRAF-PDF-1 is similar in content to Comments Nos. ORG 1B-33 and ORG 1B-34. Please refer to Response Nos. ORG 1B-33 and ORG 1B-34. Note, however, that the term, “Design Modification” in lieu of “Project Design Feature,” (or PDF) is inconsistent with provision of the CEQA Guidelines that allow for project features as part of the essential properties of a Project. The PDFs presented in the Draft EIR are not modifications of the Project - they are actual components of the Project.

This comment also states the DEIR fails to adequately evaluate the significance of impacts during construction, especially on LAFD Fire Station 78. However, the commenter does not provide any substantive facts or support for this concern, while the Draft EIR considered and analyzed the evidence regarding potential environmental impacts of the Project on LAFD Fire Station 78 throughout the Draft EIR, as applicable.

### **Comment No. IND 97C-9**

#### **Short term Construction Activity Impacts on Fire Station 78:**

One area of concern is exactly how many haul trucks will be used to export 250,000 cubic yards- the DEIR area says 35,714 haul truck trips; another section says a maximum 252 daily haul truck trips up to 300 trips (without saying what portion of the 30 month construction period involves hauling). What is the length of these trucks, and will any be double trucks? Also, it is unclear which access point on Whitsett will be used by the haul trucks and equipment trucks, and which route will be used leaving the site (it most likely will impact the fire station, but the DEIR does not properly evaluate those impacts.)

### **Response No. IND 97C-9**

The comment expresses concerns with the impacts of soil hauling on LAFD Fire Station 78. Hauling activities are controlled by the Construction Management Plan (CMP), a worksite traffic control plan under Project Design Feature TRAF-PDF-1. As approved by

the City of Los Angeles, the CMP must ensure that access will remain unobstructed for land uses in proximity to the Project Site during project construction, that coordination with the City and emergency service providers is conducted to ensure adequate access, that emergency access is maintained to the Project Site and neighboring businesses and residences, and that emergency access points will be marked accordingly in consultation with LAFD, as necessary. The interface of construction sites and hauling is not an unusual circumstance in an urban area and the implementation of CMPs have demonstrated effectiveness in meeting the City's requirements. The haul route is described in Chapter II, *Project Description*, page II-62 of the Draft EIR. The Project's construction assumptions including phase lengths, construction equipment list and truck trips per phase were provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. Page IV.K-42 in Section IV.K, Noise, of the Draft EIR states that, "The peak period (i.e., daily number of truck trips) of construction with the highest number of construction trucks would occur during the site grading and excavation phase. During this phase, there would be a maximum of 150 construction trucks into and out of the Project Site (equal to 300 total trips) per day." Table IV.K-10, *Estimate of Off-Site Construction Traffic Noise Impacts*, includes detailed breakdown of Project noise impacts by months, with footnotes indicating what construction phases would occur during the referenced month calculations.

In addition, as stated in Section IV.B, *Air Quality*, haul truck trip estimates were based on excavation volumes obtained from the Project's engineering representative and include: 7 cubic yard capacity haul trucks for demolition and site preparation phase and 14 cubic yard soil capacity haul trucks for the grading/excavation phase. Also, cement truck trip estimates were based on the Project's engineering representative and include 10 cubic yard concrete capacity concrete trucks. Please also refer to Response No. ORG 1B-6 for further discussion of the grading phase and haul truck information.

### **Comment No. IND 97C-10**

#### *Cumulative Impacts on Fire Station 78 during construction:*

The DEIR admits that significant impacts may result from cumulative impacts during construction; yet fails to properly study or mitigate these impacts:

Traffic from the Project and related projects has the potential to increase emergency vehicle response times due to travel time delays caused by the additional traffic. However, as with the Project, related projects are expected to include design features and mitigation measures that would serve to reduce traffic impacts. Furthermore, as previously stated, emergency response vehicles can use a variety of options for dealing with traffic, such as using their sirens to clear a path of travel or driving in the lanes of opposing traffic. Therefore, despite the cumulative increase in traffic, the Project and related projects would not significantly impair the LAFD from responding to emergencies at the Project Site or the surrounding area.

The DEIR improperly concludes that other projects will self mitigate to avoid cumulative construction impacts. This should not be acceptable mitigation or assumptions, and the DEIR should study cumulative construction impacts.

### **Response No. IND 97C-10**

The comment states that the Draft EIR improperly concludes that related projects would self-mitigate to avoid cumulative construction impacts. The statement that “[t]he DEIR admits that significant impacts may result from cumulative impacts during construction; yet fails to properly study or mitigate these impacts” is not accurate. The Draft EIR does acknowledge the potential for increases in traffic; however, the whole of the analysis regarding cumulative impacts on LAFD Fire Station 78 demonstrates that cumulative impacts regarding emergency access would be less than significant. For example, the comment fails to provide the full discussion from the cumulative impact analysis in Section IV.M, *Transportation*, of the Draft EIR, including text on page IV.M-47, which states:

“As indicated above, the five related projects are located on Ventura Boulevard. Therefore, the related projects would not share adjacent street frontages with the Project Site, and the preferred driving route to the Project Site is not along Ventura Boulevard. The emergency access points to/from these related projects would not have a cumulative impact in conjunction with the Project’s emergency access points, given the physical distance from the Project Site. Furthermore, each related Project would have its own CMP during construction activities. Implementation of the CMPs would ensure that if there are overlapping construction activities for the related projects, that measures would be put in place to ensure adequate emergency access is maintained on the local roadway network at all times.”

In addition, it is reasonable to expect that related projects would implement CMPs consistent with standard City construction practices and requirements, as applicable. CMPs are common for sizeable development projects such as those included on the DEIR’s related projects list included Chapter III, *Environmental Setting*, of the Draft EIR.

### **Comment No. IND 97C-11**

The DEIR incorrectly provides as “another reason why construction related traffic would not significantly impact LAFD response time, is because firefighters who drive the trucks can use sirens to clear a path of travel or drive in lanes opposing traffic (IV L1-27).” Safety measures that the firefighters have under the law cannot be used if construction traffic blocks access to the street, or delays response time by large trucks moving away from the firefighters slowly; this measure should be examined in more detail with more information about cumulative construction impacts.

## Response No. IND 97C-11

The comment states that Project construction traffic could significantly affect LAFD response times despite the use of sirens. As discussed in the Draft EIR, the use of sirens is only one tool used by emergency services to clear a path of travel. The use of sirens would be used, as necessary, to clear traffic on local street segments, including construction traffic. The comment fails to mention the requirements of the CMP, as discussed under Response No. IND 97C-9. The implementation of the CMP, as required by the City of Los Angeles for all large construction projects, requires construction traffic control and plan to ensure emergency access, as well as coordination with the LAFD for all construction projects. The CMP would ensure that access to/from the Fire Station is not significantly impeded by construction vehicles.

## Comment No. IND 97C-12

As to cumulative projects, is there a list of these projects, if not, how will they be identified? The DEIR fails to adequately study cumulative construction impacts on Fire Station 78.

## Response No. IND 97C-12

The comment questions whether the Project adequately identified the related projects. The list of related projects analyzed for cumulative impacts is provided in Table III-1 in Chapter III, *Environmental Setting*, of the Draft EIR. See Response Nos. IND 97C-9 to IND 97C-11 for a discussion of cumulative impacts to LAFD Fire Station 78.

## Comment No. IND 97C-13

### Use of Design Modification TRAF-PDF-2:

Design Modification TRAF-PDF-2 according to the DEIR to minimize conflicts with emergency vehicles exiting LAFD Fire Station 78, a flashing red warning light(s) would be installed on the southern exit driveway within the Project Site at a point located before vehicles reach Valleyheart Drive that will hold back vehicles exiting the Project Site roundabout onto Valleyheart Drive. This warning light would be activated by a remote control button pressed by LAFD staff in the emergency vehicle when an emergency vehicle is approaching Valleyheart Drive from Whitsett Avenue or exiting from one of the two LAFD driveways on Valleyheart Drive. This feature is identified as Project Design Feature TRAF-PDF-2 in Section IV.M, Transportation, of this Draft EIR.

The DEIR incorrectly concludes that this design modification eliminates any impacts on Fire Station 78. First, this use of a flashing red light as a design modification rather than a mitigation measure, violates CEQA because the DEIR does not adequately evaluate the significant impacts to the Fire Station. The discussion set forth above in TRAF-PDF-1 as Lotus is incorporated herein by this reference.

## **Response No. IND 97C-13**

This comment regarding Project Design Feature TRAF-PDF-2 is similar in content to Comment Nos. ORG 1B-33 and ORG 1B-34. Please refer to Response Nos. ORG IB-33 and ORG 1B-34.

## **Comment No. IND 97C-14**

Also, it is unclear how the light will be operated (DEIR states, the light will be activated by LAFD staff by a remote control button in the emergency vehicle-will this require additional employees at the fire station, or will it be part of the Fire Preemption System (“FPS”), the system that automatically turns traffic light to green for emergency vehicles? How will it be maintained; will the activation of this light impact the fire fighters response time? How can this design measure be enforced? Since it is on private property, how can the City enforce it? If people violate it? There is no Vehicle Code violation applicable to private property, so what would be the enforcement mechanism available to the City? It is also unclear if this light will assist with the queuing problem that will result on days during surge times (when games near start, completion, events finish, etc.) on Whitsett. Perhaps a better type of light would be one on Whitsett, that stops traffic around both sides of the fire station, is part of the FPS, and is enforceable by the City should someone run the red stoplight. And perhaps a better option is to look at a new Project alternative to find a better second exit, such as an exit leading to Valleyheart DR. South of the River (a wider street than the northern Valleyheart remnant), by providing a bridge over the LA River- this approach will eliminate any long term reliance on the City of LA maintaining a remnant part of Valleyheart Dr. and the County of LA leasing a portion its public property for a private school turnaround. This alternative also mitigates impacts on the Fire Station. DEIR fails to study this proposed mitigation measure and to study appropriate alternatives.

## **Response No. IND 97C-14**

The comment questions the function and enforceability of the warning light included in Project Design Feature TRAF-PDF-2 at Valleyheart Drive. Please refer to Topical Response No. 10 – Emergency Access, in this Final EIR for a detailed discussion of the operation and efficacy of this system, including using the Project’s southern driveway to the subterranean parking garage for vehicular entry only. Also, additional LAFD staff would not be required to operate the light. This Project Design Feature will be included as part of the Project’s Mitigation Monitoring Program and, as such, will become a potential condition of approval for the Project, if approved by the City. The Project’s security staff would be on-site at all times to enforce vehicles stopping per the warning light and not entering the driveway along Valleyheart Drive that would be used by LAFD vehicles during emergency response. Final design of the flashing light and its operating system would be subject to review and approval by City of Los Angeles LADOT and LAFD. Because the analysis on the Draft EIR adequately demonstrates that emergency access impacts and impacts regarding fire protection services/facilities would be less than

significant, additional emergency access suggestions recommended in this comment are not required to be analyzed in the Draft EIR.

### **Comment No. IND 97C-15**

#### Valleyheart Drive Use (North of LA River)

As to the significant impacts to public services-fire, the Project's access point off Valleyheart Dr. (north of the River) and Whitsett, adjacent to Fire Station 78, creates a significant adverse impact on fire station activities incorrectly dismissed in the DEIR as insignificant. These impacts must be adequately studied.

### **Response No. IND 97C-15**

The comment states that the Draft EIR incorrectly dismissed impacts on LAFD Fire Station 78 as less than significant. However, the commenter does not provide any substantive facts or support for these concerns or opinions. Impacts to fire protection services, including operations at LAFD Fire Station 78, are evaluated fully in Section IV.L.1, *Public Services - Fire Protection*, of the Draft EIR. Additional analysis of emergency access is included in Section IV.M, *Transportation*, of the Draft EIR. As analyzed in Section IV.L.1, *Public Services – Fire Protection*, and Section IV.M, *Transportation*, impacts to fire protection services, including operations at LAFD Fire Station 78, as well as emergency access associated with LAFD Fire Station 78, would be less than significant. Refer to Topical Response No. 10 – Emergency Access, for additional discussion of LAFD emergency access in and around Fire Station 78.

### **Comment No. IND 97C-16**

The DEIR fails to adequately analyze how the Project transforms a little used public piece of a remnant street, Valleyheart Dr. and turns it into a major public access point to a 16 plus acre school site, providing a drop off and turnaround area, informational kiosk, short term parking and access to and exiting from a subterranean parking garage. DEIR fails to adequately describe this access point. The traffic section of the DEIR calls this access point a “second service driveway at the end of Valleyheart Dr.” (IV-M-18). Will the first service driveway off Valley Spring Land have the same level of activity that this Second Service Driveway will have?

### **Response No. IND 97C-16**

The comment states that the Project fails to adequately analyze how the Project transforms the remnant of Valleyheart Drive that would be used for access to the Project's roundabout. The comment's reference to a “second service driveway at the end of Valleyheart Dr.” (IV-M-18) is referencing the Draft EIR's description of existing conditions, not conditions under the Project. The access conditions under the Project are illustrated in Chapter II, *Project Description*, Figure II-6, Harvard-Westlake School Athletic and Recreational Facilities Conceptual Site Plan. A description of the Project's driveways and

access are provided on pages II-53 and II-55 in Chapter II, *Project Description*, and on pages IV.M-42 and IV-43 in Section IV.M, *Transportation*, of the Draft EIR. The Project's access as described therein was assumed for the entire Draft EIR, as applicable.

### **Comment No. IND 97C-17**

A detailed design and discussion of ownership from Whitsett to the Project Site needs to occur given the unusual layers of multiple public agencies involved. In this Project three segments exist: 1) The first several hundred feet from Whitsett towards the Project Site on Valleyheart directly adjacent to Fire Station 78 is a City maintained street. Will this street stay as is? What will happen to the parking spaces which exist now for public to park to access the River? Since this City Street will solely serve the School, the DEIR should examine the vacation of this street. 2) The next segment is the rest of the Valleyheart Dr. owned by the County of Los Angeles, according to the DEIR, (it also states that Valleyheart Dr. -the unimproved portion -is a paper road). In any event, the County is apparently leasing to Applicant the rest of the paper street- Valleyheart Dr. for use in part with its School Project. Specifically, almost half of the turnaround will be built on County property, and the only access to Valleyheart Dr and Whitsett, is over County property. Is that use consistent with land uses imposed by the County? How can the turnaround /drop off- a major part of any school- be on property that the Applicant leases, but doesn't own? There is no direct access to Whitsett from this part of the Project except through County of LA property and City of LA public street property. If that is the case, then applicant's major turnaround is located in substantial part on County land, and it looks like access must use County land too. Policies which may be relevant for land use discussions cannot be adequately identified until public ownership is identified and disclosed to the public. Does the County require a CUP for school use too? In any event the DEIR should explain these facts. It seems like a significant safety concern that the Project could lose a second access at some time in the future, because a lease may be terminated, or a street may be vacated.

### **Response No. IND 97C-17**

With regard to ownership of the areas affected by the Project, Chapter II, *Project Description*, clearly describes and illustrates the location of the 16.1-acre Property, which is owned by Harvard-Westlake School, and the 1.1-acre parcel the School leases from the Los Angeles County Flood Control District (Leased Property), which collectively comprise the 17.2-acre Project Site. Figure II-6, *Harvard-Westlake School Athletic and Recreational Facilities Conceptual Site Plan*, of the Draft EIR also graphically illustrates the location of the Property and Leased Property, including all Project components within the Leased Property. Like most development projects, the Project Site would be accessible from a public street, Valleyheart Drive, as shown on Figure II-6. The parking spaces referenced in the comment near the entrance to the Zev Greenway are not marked or official parking spaces maintained by the City. It is also noted that the referenced parking spaces are bordered by several City-posted "no parking" signs and that, therefore, vehicles parking

in the area are subject to citation and/or towing. This unofficial parking area is not part of the Project Site.

The comment states that Valleyheart Drive from Whitsett Avenue to the Project Site will solely be utilized by the School, and as such the Draft EIR should analyze the vacation of this street. This statement is not accurate. This portion of Valleyheart Drive will remain accessible to the public and the School, and will continue to be utilized by LAFD to access LAFD Fire Station 78. No vacation of this street segment is proposed by the Project. No portion of Valleyheart Drive currently accessible to the public or LAFD is owned by the County. As stated in Chapter II, *Project Description*, of the Draft EIR, the list of discretionary approvals include execution of a rental agreement with the Los Angeles County Flood Control District for use of the Leased Property. Also, the list of approvals for the Project stated in Chapter II of the Draft EIR will include a request by the School for a revocable permit to make certain improvements in the Valleyheart area.

In addition, the Draft EIR evaluated the Project's consistency with relevant plans, policies and regulations adopted for the purpose of avoiding or mitigating an environmental effect, as applicable in Section IV.J, *Land Use and Planning*, of the Draft EIR. The fact that a portion of the Project Site is within an area leased from the County does not present any safety concerns beyond those considered and evaluated in the Draft EIR.

### **Comment No. IND 97C-18**

A major turnaround expected to be used by School buses, opposing team buses, shuttles, cars, ride-sharing vehicles, will be adjacent to the River which violates LA River Design Guidelines, strategies 4-1 and 4-2. Visible on-site parking and loading facilities should not "dominate" the river corridor. Landscaping will not eliminate the "dominance" of busses idling, cars honking, fire sirens and loud speakers blaring and demanding cars that block Whitsett move out of the way. All of those noises will clearly "dominate" the peaceful river corridor in violation of the aforementioned policy.

### **Response No. IND 97C-18**

The comment states the opinion that the turnaround would be in violation of the Los Angeles River Design Guidelines. The strategies more specifically state: "Place on-site parking so that it does not dominate the river corridor" and "Locate loading facilities so that docks and doors do not dominate the river frontage and are screened from the river." Regarding parking, the Project's vast majority of parking would be located in a subterranean parking structure. The one aisle surface parking lot would represent a small percentage of the Project's overall frontage along the LA River, which would largely be screened from views along the Zev Greenway due to intervening vegetation and changes in topography. As such, the surface parking area would not dominate views of the Project Site from the LA River. Furthermore, the loading areas referenced in the Los Angeles River Design Guidelines pertain to loading docks and doors, not passenger loading/unloading areas as would occur with the Project. Thus, no conflicts with the Los

Angeles River Design Guidelines in these regards would occur with Project implementation.

### **Comment No. IND 97C-19**

The DEIR states that the driveway on County owned property violates LADOT Driveway Design MPP Section 321, in that the driveways should not be wider than 30 feet; but Project's driveway will be 33 feet to match Valleyheart Dr. (although maps show Valleyheart right-of-way to be 40 feet). 33 feet is too wide yet, Applicant does not propose to reduce the width to comply. Therefore, the design of the driveway does not meet City design standards, creating a significant impact.

### **Response No. IND 97C-19**

The comment states that the width of the Project driveways do not meet City design standards, creating a significant impact. However, the analysis on pages IV.M-34 and IV.M-35 in Section IV.M, *Transportation*, of the Draft EIR provide a full analysis of the Project's driveways. As discussed therein, MPP Section 321 recommends that two-way driveways for commercial/industrial/multi-family residential developments be no wider than 30 feet in width. The proposed driveways would not comply with the City's applicable requirements as the north driveway is proposed to be 39 feet wide and the south driveway is proposed to be 33 feet wide. However, the Project would reduce the number of driveways on Whitsett Avenue from two to one (the south driveway is considered an extension of Valleyheart Drive, which is an existing street), which would overall be a benefit since there would be reduced potential driveway conflicts between vehicles and pedestrians. The north driveway would be wider than the recommended 30 feet to permit provision of a median island on the driveway configured to restrict turns into and out of the driveway to right-turns only, and to enhance safety by minimizing conflicts. Additionally, the south driveway is the extension of a public street, Valleyheart Drive, which is currently 33 feet wide. Therefore, while the Project would not be consistent with this recommendation in MPP Section 321, the inconsistency would not result in increased circulation, pedestrian or vehicular conflicts.

Under CEQA, a project is considered consistent with an applicable plan if it is consistent with the overall intent of the plan and would not preclude the attainment of the plan's primary goals. A project does not need to be in perfect conformity with each and every policy. The potential conflict with MPP Section 321 is discussed in Section IV.M, *Transportation*, of the Draft EIR. As discussed therein, the Project would not conflict with the intent of MPP Section 321 to provide safe access and to reduce vehicle/pedestrian conflicts, and the MPP does not include required laws or regulations that the Project must comply with, the Project would result in a less-than-significant impact related to consistency with programs, plans, ordinances or policies addressing the circulation system, including transit, roadway, bicycle and pedestrian facilities.

## Comment No. IND 97C-20

The main entrance on Whitsett is being proposed to limit exiting to right turns only, forcing that traffic towards Fire Station 78 to mix with the Valleyheart Dr –Project exit/entrance. Project description states: “The north driveway would be flat for at least 25 feet within the Project Site before it intersects with the Whitsett Avenue sidewalk. To reduce conflicts and enhance safety, a triangular median island would be provided on the north driveway configured to restrict turns into and out of the driveway to right-turns only “. (Vehicle Access and Parking) The DEIR fails to study these impacts on the Fire Station.

## Response No. IND 97C-20

The comment states that the Draft EIR fails to study impacts of the north driveway on LAFD Fire Station 78. See Topical Response No. 10 - Emergency Access, in this Final EIR. As discussed in Topical Response No. 10, the Project’s emergency access impacts were fully evaluated in Section IV.L.1, *Public Services – Fire Protection*, and Section IV.M, *Transportation*, of the Draft EIR. Despite the Project’s periodic and temporary increase in localized traffic, the Project would not significantly impair the LAFD from responding in a timely manner to emergencies at the Project Site or the surrounding area. As under existing conditions, LAFD vehicles would employ the traditional method of sirens and horns to alert other drivers of their presence when exiting the fire station. Furthermore, the non-CEQA traffic analysis included in the Project’s Transportation Assessment (TA), included in Appendix M of the Draft EIR, revealed that per the City’s criteria, no instances were found where the Project would cause or substantially contribute to unacceptable queuing at nearby signalized intersections, including the intersection at Ventura and Whitsett (see Table 11 of the TA). Accordingly, the Project’s trips would not substantially cause or contribute to congestion along Whitsett Avenue such that LAFD vehicles exiting Fire Station 78 would be adversely impacted.

## Comment No. IND 97C-21

### VMT concerns:

This study ignores the Middle Holmby Hills campus, and any trips from it

## Response No. IND 97C-21

The commenter is referred to Response No. 97C-2. There is no planned route or program to shuttle students from the middle school campus to the Project Site. Middle School students who participate in the School’s junior varsity or varsity athletic programs are already bussed to the Upper School campus for sports activities at the end of the school day. Since this is an existing condition, no further increase in VMT would be generated.

## **Comment No. IND 97C-22**

Applicant's VMT study exempts community recreation uses (per City standards) but does not exempt Weddington Golf and Tennis from its study – that is a community recreation use too (the fact that a small amount of money is charged to participate should be meaningless- it is open to the public-they did not ever turn away individuals who wanted to watch or just walk around) .It is wrong to net out the vehicles traveled to Weddington, a community recreation use, and should be exempted from the VMT study under the same LA City principle that exempts community recreation uses.

## **Response No. IND 97C-22**

The comment states that the existing use should be exempted in the VMT study and not subtracted from the Project's VMT to calculate the net VMT. The TA was prepared per the direction of LADOT. While the commenter notes that the Weddington Golf & Tennis facilities would let people watch or walk around on their private property, the fact is that Weddington Golf & Tennis is operated as a private facility, with no public access requirements and charges fees for tennis or golf uses. Thus, the use of the golf and tennis facilities on the Project Site is controlled by the private property owners. The Project Site is not generally open to the public as implied by the comment. Unlike public property, the Project Site may be closed at the property owner's sole discretion. For these reasons, the existing site use was appropriately not classified as a community recreation use in the TA, as approved by LADOT.

## **Comment No. IND 97C-23**

There are no studies about the impact of the turnaround/drop off. At any school, this is the point of major tension and backup, since cars, shuttles, ride share vehicles convergence on this point at the same time – usually occurring moments before games start, moments before practice starts, moments after games end, after practice, etc. This surge use is not examined. Where do the buses and shuttles go once they drop off students? Will Harvard- Westlake have empty shuttles return to the Upper Campus, and then drive empty shuttles back when practice is over or games are over? Where will opposing team buses park after drop off? Will they travel back to the Upper Campus until the game is over? By returning to the campus, those trips should be included in the VMT.

## **Response No. IND 97C-23**

The comment poses a number of questions regarding the use of the Project's roundabout for cars, shuttles, and rideshare vehicles. Pages 62 and 63 of Appendix M to the Draft EIR, *Transportation Assessment* (TA), address the passenger loading at the on-site turnaround off of Valleyheart Drive. The turnaround at the western edge of Valleyheart Drive would be used exclusively for drop-off and pick-up activities (i.e., shuttles, transportation network company [TNC] vehicles). The available storage capacity in the turnaround was found to be sufficient for the estimated queuing on special event days, which is the worst-case, highest trip generating event anticipated at the Project Site. Since

the storage capacity is sufficient to contain the vehicular queue at the turnaround, queue spillback from the turnaround onto Valleyheart Drive would not occur and thus would not interfere with LAFD Fire Station 78 operations on Valleyheart Drive. Regarding the shuttle system that the School would provide its students and employees whenever School activities are underway at the Project Site, and which the School would require all Project Site visitors use on days in which maximum concurrent attendance is estimated to be 300 or more individuals, three shuttles would be provided (with a 24-rider capacity each). Page II-55 in Chapter II, *Project Description*, of the Draft EIR, describes that shuttle service is anticipated every 5 to 10 minutes. A single shuttle would therefore remain stationary for the same amount of time before departing and would be parked, temporarily, in the roundabout accessed from the Project's southern driveway.

Visiting team buses would remain at River Park. The roundabout would be designed with two lanes for much of its circumference, specifically for the purpose of having sufficient capacity for buses and vans to remain for the duration of games, while not adversely affecting storage capacity or movement through the roundabout. Furthermore, the roundabout and surface parking area could accommodate a large collection of buses that would not overwhelm on-site storage capacity.

### **Comment No. IND 97C-24**

The estimate of VMT for opposing visiting teams seems impossible to check. As of 2022, (according to Wikipedia), Harvard-Westlake has 22 varsity teams as well as junior varsity and junior high level teams. "60% of students participate in interscholastic sports." Aside from sports during the academic year, the School provides a robust summer sport camp for various sports. Has the Applicant just made a list of activities that will occur on the Project Site, and based on those listed activities with specific teams, the VMT was calculated? Since occupancy load at Project Site is increasing for the facilities, it is reasonable to expect higher numbers of visitors and guests and games and practice. Relying on a list based on 2018-19 schedule seems arbitrary.

### **Response No. IND 97C-24**

The comment questions the VMT associated with visiting teams. The Project's land use anticipates visitor uses that are included in the VMT calculations, as provided in Appendix M, Transportation Assessment (TA), of the Draft EIR. The TA was reviewed and approved by the LADOT. The 2018-19 list of activities provides context for and, because the list is based on pre-Covid activities and reflects Harvard-Westlake School's standard athletic program, is generally representative of the uses and hours of activity that could take place at the Project Site. While yearly scheduling can and will vary slightly, the 2018-2019 list of activities represents the best and most accurate estimation of future on-site activities. Also, the relocation of an interscholastic game from the Upper Campus to River Park will not substantively affect VMT, as those miles are already being traveled by the visiting team and its spectators. As such, a reasonable estimate of VMT was considered, which was factored into the Draft EIR transportation analysis.

## **Comment No. IND 97C-25**

Why is the baseline of October 2020 not used? The City DOT said that traffic was too light due to covid, so they chose another date April 2019 for three intersections and 2017 data for two intersections, each increased by ambient growth. The wrong baseline invalids this VMT, and Applicant should have used the CEQA baseline, determined on the date of the NOP.

## **Response No. IND 97C-25**

The NOP was in fact released in October 2020, which typically establishes the baseline from a CEQA perspective. However, as a result of the Mayor's Safer at Home Order issued March 19, 2020, the October 2020 NOP release date coincided with the COVID-19 global pandemic whereby traffic congestion within the City was significantly less throughout the City than compared to "non-pandemic" conditions. Due to the COVID-19 pandemic and the shelter-in-place orders from the Governor and County, along with a memo released by LADOT in April 2020, turning movements counts could not be collected at the study area intersections in 2020 and would further not reflect typical conditions. Because of the pandemic conditions, an appropriate baseline was calculated based on the best, most recently-available data, which does not invalidate any portion of the transportation analysis. Furthermore, the comment states this baseline data invalidates the VMT analysis, but the VMT analysis is not based on the baseline traffic conditions. Rather, the non-CEQA components of the TA utilize the baseline traffic data to assess traffic conditions (i.e., LOS) under the Project. As such, the baseline traffic data is not relevant to VMT analysis. The methodology followed by the TA was reviewed and approved by the LADOT and does not invalidate the Draft EIR TA in any manner.

## **Comment No. IND 97C-26**

Attachment B fn 3 states that trip estimates for the community uses are based on rates in the ITE Trip Generation Manual... The peak trips are estimates based on Tennis Courts land use ...because only the tennis courts will be open to the public during the peak hour periods when Harvard-Westlake is using the other facilities. Is this statement inconsistent with Table II-3 of the DEIR Project description? The School's table of public uses is illusory since it states that the public can use the track, pool, tennis, between certain hours (mostly 7a-9p) "when not in use by School". Does that mean if one student is on the track it being used by the School precluding community use? Or does it mean that only scheduled School use as to a specific facility will prohibit community use during that time. This should allow a calendar then of scheduled School uses/ community uses on a weekly or monthly basis. Without more parameters, to Table 11-3 though, any offset for community use should not have been applied here, for the actual community use is rather tenuous.

## Response No. IND 97C-26

The comment questions whether the methodology described in the LADOT’s approval letter, Appendix M of the Draft EIR, Attachment B footnote 3, accounts for the community’s use of the Project’s facilities and is consistent with Draft EIR Table II-3, Public Use of the Project. The Draft EIR states in Chapter II, *Project Description*, Subsection 4.a)(2), Public Use of the Project Site, beginning on page II-33 of the Draft EIR, "Table II-3, Public Use Days and Hours, outlines the anticipated days and hours for access to facilities available to the public, recognizing that public use of the tennis courts and other athletic facilities would be by reservation when they are not in use by the School." . As stated on page II-47 in Chapter II, of the Draft EIR under Subsection 4.b), School Operations at the Project Site, “Most of the School’s outdoor events, including those at the athletic fields, would occur in the late afternoons and would end between the hours of 4:45 p.m. to 7:45 p.m., with approximately 50 percent of school days containing no outdoor athletic activities after 5:30 p.m. Indoor activities in the gymnasium would end no later than 9:30 p.m. although indoor activities would generally cease by 7:30 p.m. Other than the tennis courts, members of the public would not have access to Project Site athletic facilities when they are in use by the School.”

During the afternoon peak hour traffic periods, the playing fields, pool, and gymnasium would be in use by the School as described on page II-47 in Chapter II of the Draft EIR in Subsection 4.b), School Operations at the Project Site. However, the tennis courts may be available to the public during the late afternoon. The courts would not be in use every day by the School and the Project provides for concurrent use of the courts by the school and public. The estimated use of the tennis courts by the public would represent a conservative estimate for assessing peak hour traffic Project trip generation since some students may also be using tennis courts during the same peak hour traffic period.

As discussed above, the public use of the tennis courts cited in the Attachment B footnote 3 does not conflict with Table II-3 of the Draft EIR.

Please also refer to Topical Response 2 – Enforcement of Public Access, for a description of how Project facilities might be used by the public even with concurrent School use of a different Project facility.

## Comment No. IND 97C-27

Why are there no outbound trips attributed in the VMT estimate for School students? The footnote says that outbound trips lengths “were found to be the same as the existing outbound trip length for student vehicles leaving the Upper School to return home.” If the student drives home from the Project Site, the VMT must reflect that trip.

## Response No. IND 97C-27

The comment is similar to Comment No. ORG 7A-123. Please refer to Response No. ORG 7A-123.

## Comment No. IND 97C-28

Pedestrians have been ignored in the DEIR except for those on site or at the River Project. Pedestrians will cross Whitsett to get to one of the pedestrian gates at the Project Site, or to River Walk from Valleyheart especially if the existing parking is removed on Valleyheart. Whitsett is very dangerous, especially since the speed limit recently increased, and the four lane street is not pedestrian friendly. DEIR needs to study pedestrian access on Whitsett.

## Response No. IND 97C-28

The comment expresses concern about pedestrian safety along Whitsett. Please refer to Response Nos. IND 42D-6 and IND 70-2, above, regarding intersection and pedestrian safety.

## Comment No. IND 97C-29

### New Swimming Pool at Project:

The swimming pool will be emptied from time to time, (discharge of 500,000gpd), and because capacity in existing sewer lines are filling up, the Applicant will be required to discharge into two separate lines (MM-2). However, the proposed mitigation measure does not reduce impacts on sewer capacity discharges that may occur in 5, 10 or more years, or any time after the sewer connection permit is issued. MM-2 should be changed to apply whenever Applicant desires to empty and refill pool, which may occur “a few times per year if at all”. The end of MM-2 should be changed to add the following: “...unless an alteration split is otherwise approved by LASAN based on future detailed gauging and evaluation as part of the final approval for the sewer connection permit, *and in the event a discharge is needed after the issuance of that permit, the sewer discharge shall be reviewed prior to any subsequent water discharge permit issued by DWP. If enough capacity in the sewer lines does not exist at the time of discharge, Applicant shall expand, modify or otherwise provide for additional sewer lines as determined necessary by LASAN to maintain capacity in the lines that was in existence at the time of the issuance of the sewer connection permit.* (proposed language in italics).

## Response No. IND 97C-29

The comment requests revisions to Mitigation Measure WW-MM-2. Mitigation Measure WW-MM-2 would be implemented in collaboration with Mitigation Measure WW-MM-1, which limits the volume of the swimming pool to be discharged at a rate of no more than 166,000 gallons per day. The mitigation measures cited in the Draft EIR are reflective of the conditions recommended for the Project in the Wastewater Service Information (WWSI) letter prepared by LASAN’s Wastewater Engineering Division (WESD). Not only would the mitigation address the Project’s impacts, but they would also ensure cumulative impacts, which consider wastewater from the related projects (see Chapter II, Environmental Setting, of the Draft EIR), are less than significant. It would be speculative

to assume that discharges that may occur in 5, 10 or more years, or any time after the sewer connection permit would exceed available capacities. As discussed in the cumulative impacts analysis on page IV.O.2-18 of the Draft EIR, the City would continue to review new development projects to ensure that sewer capacity is available prior to the on-set of construction, and fees and mitigation, including requirements to improve infrastructure if necessary to account for the project, would be required. Related projects connecting to the surrounding sewer system would be required to obtain a sewer connection permit and submit a Sewer Capacity Availability Review (SCAR) and/or Wastewater Services Information to LASAN as part of the related project's development review. Impact determination will be provided following the completion of project-specific Wastewater Services Information analyses. If system upgrades are required as a result of a given related project's additional flow, arrangements would be made between the related project and the LASAN to construct the necessary improvements. Based on these considerations, no revisions to Mitigation Measure WW-MM-2 are necessary.

### **Comment No. IND 97C-30**

#### Conclusion:

As the DEIR states: in *City of Hayward v. Trustee of California State University* (2015) 242 Cal. App. 4th 833, the court found under Section 35 that cities have "a constitutional obligation to provide adequate fire protection services". Although not clear why this court reference appears in a DEIR, it is clear that as presented, the DEIR questions whether adequate fire protection will be maintained for the community given Project impacts.

### **Response No. IND 97C-30**

The comment questions the reference to the *City of Hayward v. Trustee of California State University* (2015) 242 Cal. App. 4th 833 case. The reference to the Hayward case cited in the comment is made in Section IV.L.1, Public Services- Fire Protection, of the Draft EIR. An additional reference to the case in Section IV.L.1 states, "In conformance with the California Constitution Article XIII, Section 35(a)(2) and the *City of Hayward v. Board of Trustees of California State University* (2015) 242 Cal.App.4th 833 ruling, the City has and will continue to meet its legal obligations to provide adequate public safety services, including fire protection." The Hayward case is cited as reference to the fact that the obligation to provide adequate fire protection service is the responsibility of the City. In no way does this reference suggest that the Draft EIR questions whether adequate fire protection will be maintained for the community given Project impacts. To the contrary, the analysis included in Section IV.L.1 of the Draft EIR demonstrates that Project impacts to fire protection services and/or facilities would be less than significant.

### **Comment No. IND 97C-31**

Please incorporate herein by reference EIR Sch No. 2001121016 (2004)/2004 Middle Campus expansion Conditional Use Permit with Conditions associated therewith; and EIR

Sch 2013041033 (2013-Upper Campus proposed expansion). This letter made referenced to those documents.

Thank you for your work on this project.

### **Response No. IND 97C-31**

The comment requests reference of previous EIRs (SCH No. 2001121016 and SCH No. 2013041033) prepared by the School. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 98**

Rich Neher

Received April 25, 2022

### **Comment No. IND 98-1**

I assume you are very busy and therefore not aware of an interesting plan HW has successfully executed in order to draw down the number of players coming to the facility every week.

For the last 13 years I've been organizing a group of local tennis players on Friday nights. I'm keenly aware of what's going on at that facility throughout the week through communications with a lot of players and some of the teaching pros at Weddington. Before Covid, my estimate is that between 1,000 and 1,500 players frequented that facility on a regular basis.

### **Response No. IND 98-1**

The comment indicates the commenter's experience with the existing on-site tennis facilities and estimates that between 1,000 and 1,500 players frequent that facility on a regular basis. The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 98-2**

When Harvard Westlake bought the property from the previous owners 2-3 years ago, they knew of strong opposition to any new project from local tennis players. Why have those players been concerned and outspoken for so many years? Because there isn't any facility nearby that is large enough to accommodate an influx of about a thousand extra players and dozens of teaching pros. Some are just full (Balboa), some have bad lights (Van Nuys), some have no lights (Beeman), and others are just too expensive like the local private clubs. Because of that knowledge, they had to come up with a plan to reduce the number of people asking for courts at Weddington. I think I know how they did it by reducing the number of courts available to the public.

### **Response No. IND 98-2**

The comment states that other tennis facilities are not available and speculates that Weddington Golf & Tennis has reduced the current number of courts available to the public in order to reduce the number of tennis players that utilize Weddington.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment No. IND 98-3

### 1. Reduce the hours the club is open

The tennis courts were available 7 days a week from 7 am until 10 pm. HW immediately changed that to 8 am to 9 pm on Weekdays and 9 am to 5 pm on weekends. That reduced the number of court hours available for everyone, coaches, HW team, HW players, and the public from 105 to 81 per week. That's a 23% reduction right there. The noose began to tighten for us regular players.

### 2. Let every coach teach at Weddington

They immediately ramped up the number of coaches 2 years ago. At one point before Covid, they had 40 coaches working there. That took courts away from the public. At the same time they must have encouraged coaches to book evening hours for kids classes and camps. It never happened before that so many courts were busy with kids between the hours of 7 and 9 pm. That took evening courts away from the working people.

### 3. Provide a strong presence for HW players

Soon enough, they gave HW teams the right to occupy any court they wished, although HW teams had and still have a trainings [sic] facility at LA Valley College. Separately, HW players got the right to preferentially book any court at any time free of charge. That also took more courts away from the public.

### 4. Partition the facility even more

Recently, they gave the 6 back courts exclusively to coaches. Again, the public was screwed.

### 5. Close two courts for good

A short while ago, the HW tennis team claimed a stray golf ball from the driving range hit one of their players on court 9. So they closed courts 9 and 10 for good. Guess what, now only courts 1-8 are available at times the HW team and any of their players are not present which is rarely the case.

All that time, the public was turned away when asking for courts. What happened in effect is that the number of court hours available to the public was reduced by 70-80% just so they can show fewer people playing on their court sheets. The strategy worked. They can now take the court sheets to the city and say "See, the public doesn't need/want our courts. They're going somewhere else already." The sad part is, that many of the working people who need to play in the evenings, are screwed the most. Many of them are leaving the sport forever. "Studio City, that's where tennis players go to die" I heard someone say.

**Response No. IND 98-3**

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 98-4**

That's how their plan was executed in my humble opinion. Shame on HW for deceiving everyone just like they were planning to deceive the Historical Commission by only presenting picture boards with trees and open space and omitting the 2 planned football fields, swimming pool, and large gymnasium during the hearing last year. Shame on them.

**Response No. IND 98-4**

The comment accuses the School of planning to deceive the Historical Commission during the hearing last year. This comment represents the opinion of the commenter and does not raise any issues with respect to the content or adequacy of the Draft EIR. However, it is acknowledged that in the Cultural Heritage Commission's recommendation to City Council for the designation of the Project Site as a Historic-Cultural Monument (HCM), the Cultural Heritage Commission had a full understanding of the scale of the Project as the Initial Study and all the graphics had been circulated to public agencies in the City in September 2020.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

---

## **Comment Letter No. IND 99**

Patty & Terry Kirby  
Received April 27, 2022

### **Comment No. IND 99-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

The proposed project is simply too large for this property.

### **Response No. IND 99-1**

The comment expresses opposition to the Project based on the size of the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 99-3**

Councilmember Raman, this mega-complex will not move forward without your support. This is not a "buy right" project but one that requires a CUP. With your leadership, a true compromise can be reached. As you know, a CUP primarily requires 1. that the project will enhance the built environment in the surrounding neighborhood, or will perform a function or provide a service that is essential or beneficial to the community, city, or region. 2 that the project's location, size, height, operations, and other significant features will be compatible with and will not adversely affect or further degrade adjacent properties, the surrounding neighborhood, or the public health, welfare, and safety. 3. that the project substantially conforms with the purpose, intent, and provisions of the General Plan, the applicable community plan, and any applicable specific plan.

This Over-development does not meet any of these criteria.

### **Response No. IND 99-3**

The comment states that findings needed for approval of a CUP are not met by the Project's design. This statement that the Project does not meet the criteria to grant a CUP is not founded in substantiated facts cited and represents the opinion of the commenter. Also, please note that most public and private schools in the City operate under a CUP in accordance with LAMC Section 12.24.T.3(b), which allows school uses in residential and agricultural zones. For additional discussion of the Project's CUP, refer to Response Nos. ORG 7A-78, ORG 7A-79 and ORG 9-22. The comment, however, is primarily a request for project disapproval. The comment does not discuss the adequacy or content of the Draft EIR and no further response is necessary.

**Comment No. IND 99-4**

ADDITIONALLY, our community feels cheated with only a 60-day response period to rebut the DEIR. LA City planning (with Harvard-Westlake) took 17 months to develop the DEIR and the community only gets 60 days?

The opposition groups do not have the sources and money as does Harvard Westlake. BUT the opposition groups do have the VOTING PEOPLES VOICES with over 14,000 responses of opposition on a recent petition.

**Response No. IND 99-4**

The comment states that the review period (actually 62 days) was not adequate to review the Draft EIR. Refer to Topical Response No. 1 – Public Participation and Review, in this Final EIR, which discusses public participation and CEQA public review requirements and steps undertaken by the City to facilitate public participation in association with the Draft EIR. Also, refer to Response Nos. FORM 1-1 and FORM 1-2 regarding public review of the Draft EIR.

**Comment No. IND 99-5**

The opposition is growing by the day and you can be our hero and get this project moved to another location. (Also, Harvard-Westlake could also be heroes in the eyes of our community by moving to another location. HW can do a great thing and build up a location that is void of trees and youth sports along with teaming with other schools and colleges. A WIN-WIN for everyone.

**Response No. IND 99-5**

The comment expresses opposition to the Project and interest in moving the Project to another location. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 100**

Michael Konopisos  
Received April 28, 2022

### **Comment No. IND 100-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

Weddington is a great place for a round of golf that I have enjoyed many times with friends. Would be a shame to turn it into yet another private space only the wealthiest in the community can enjoy.

### **Response No. IND 100-1**

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 101**

Jami Ferreira

Received April 29, 2022

### **Comment No. IND 101-1**

I don't need to cut and paste a form letter. You already know how many in this community feel about this mega complex. My position is that I play golf there every Sunday for years! And I live in the community as well. The thought of my special place being gone is my original sadness. But - I also think about the traffic, loudness and - frankly, why this location? I used to live directly across from it - my balcony overlooking the driving range. So I can't imagine that if this happens. Traffic, Screaming fans! Such a shame.

Just my two cents that I don't want to see this happen.

### **Response No. IND 101-1**

The comment expresses opposition to the Project and expresses concern over operational noise and traffic. The commenter is referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, in this Final EIR for a discussion of operational noise impacts, and Topical Response No. 9 – Transportation and Parking During Construction and Operations for a discussion of operational parking and traffic impacts.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 102**

Jonathan Kern

Received April 29, 2022

### **Comment No. IND 102-1**

The Weddington golf and tennis center is a Valley treasure and needs to be kept open to the public. It serves many purposes, but most notable it is a rare green space in an otherwise congested area. It will harm the existing charm of Studio City. It will add traffic to the area, and ruin the quietness of the area. Most of us who have kids have taken our children to learn tennis there and that is very hard to replace. It has a rustic charm that cannot be replaced!

I strongly urge that this place be protected and not allowed to go forward! PLEASE DO NOT ALLOW THIS TO PASS.

### **Response No. IND 102-1**

The comment expresses opposition to the Project based on the removal of open space available to the public and expresses concerns regarding operational noise and traffic.

The commenter is referred to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding the public access to the Project’s available recreational facilities and amenities for public use; Topical Response No. 8 – Noise: Construction and Operation Impacts, regarding noise impacts; and Topical Response No. 9 – Transportation and Parking During Construction and Operations, regarding traffic impacts.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 103**

Allison Lane

Received April 29, 2022

### **Comment No. IND 103-1**

I voted for you. I can't think of another issue that means more to me or presents a clearer chance to do the right thing.

I grew up in Studio City. I am a California native. I love this city. And I love Weddington Golf and Tennis. I do not want to see it destroyed by Harvard Westlake.

I do play tennis occasionally but it means so much more to me and the people who live here. It is open space. There are trees and fields of grass. It is zoned an agricultural/open space and Harvard Westlake will kill it and the character of the neighborhood. Los Angeles IS neighborhoods and I love ours.

I voted for you because you have the guts to stand up to big money and the old guard that protects developers at the expense of neighborhoods.

Please help save what we love about living here. We will never be able to get it back if they win. How can we be considering losing all those trees when we are in desperate need of the canopy.

Please speak for us and stop this outrageous attempt by those with money to overcome the will of those of us who live here.

### **Response No. IND 103-1**

The comment expresses opposition to the Project based on the removal of the existing tennis and golf facilities and expresses concern over tree removal and changes to community character. The commenter is referred to Topical Response No. 4 – Aesthetics, in this Final EIR for a discussion of community character, and Topical Response No. 5 – Biological Resources/Trees for a discussion of impacts related to tree removal.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 104**

Daphne Brogdon  
Received April 29, 2022

### **Comment No. IND 104-1**

Please leave this oasis for working and middle class. I could never afford to golf in such a lovely place. I meet a retired friend here to golf, I brought my kids for lessons. It gives me solace. Let the wealthy school find another way. But having been on the Central Area Planning commission I know emotional arguments don't win the day. So, Please do not allow yet another rich institution ride over city zoning. Too often the city has rolled over for the well heeled developers. Our city needs this green space that is open to ALL.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 104-1**

The comment expresses general opposition to the Project. The requested CUP for a school use is a standard provision of the LAMC and is not a "special entitlement." LAMC Section 12.24.T.3(b) specifically allows public and private schools (kindergarten through 12<sup>th</sup> grade) to be located in the Agriculture (A) zone under an approved CUP. Please refer to the cited LAMC section. Although both public schools and private schools are named in the text of the LAMC, the CUP is commonly and more typically used for private schools throughout the City. For additional discussion of the Project's CUP, refer to Response Nos. ORG 7A-78, ORG 7A-79 and ORG 9-22. Upon completion of the Project, public access to the various recreational amenities onsite would be provided. The commenter is, further, referred to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

## **Comment Letter No. IND 105**

Kevin Keegan, Julie Keegan, Olivia Keegan, Jessica Keegan  
Received April 29, 2022

### **Comment No. IND 105-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis as the current plans and application exist.

We live on Teesdale Ave., one lot away from Valley Spring so our home is 90 feet from Weddington Golf & Tennis property. We love the golf and tennis facility which is one of the many reasons we relocated to Studio City.

We also support local schools and understand the desire of HW to expand and grow the campus and student body enrollment. We would hate to see the golf and tennis property go away but if it does and HW prevails there are some conditions to the conditional use permit that we feel should be placed upon, required of HW's potential approval process.

### **Response No. IND 105-1**

The comment expresses opposition to the Project based on the removal of the existing tennis and golf facilities. The comment also introduces suggested conditions to the conditional use permit should the Project be approved. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 105-2**

- 1) The swimming pool facility should not be allowed to be placed so close to single family residential zoning due to the immense amount of noise created at swim events. As former parents of swim team children we are well aware of how loud cheering parents and students are at swim meets literally screaming and yelling and cheering for kids underwater, as well as the starting guns, start buzzers, crowd noise, etc. The swimming facility should be relocated over near the fire station, LA river and the commercial zoning towards Ventura Blvd. due to the noise generated by these events. HW has 16 acres to work with so these loud facilities have no reason to be built right along Valley Spring and abutting many, many homes directly across the street. This level of noise disturbance for this feature should not be allowed, especially when there are so many other options for it's location among the 16 acres.

### **Response No. IND 105-2**

The comment expresses concern over siting the swimming pool facility near residential areas due to operational noise. The commenter is referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, regarding operational noise impacts. As

discussed therein, operational noise impacts from the Project would be less than significant. It is also noted that the pool would be more than 150-feet from the nearest residence to the north, and bordered by walls/bleachers on the west, north, and east. Also, there would be lockers and meetings rooms on the northern side of the pool area.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 105-3**

- 2) The word is that if/when HW's plan prevails it is only a matter of time after the completion of their new sports campus, that the football field and swimming facilities at the existing Coldwater campus would potentially be demolished for the expansion of school facilities to increase campus building square footage and student body enrollment. This makes complete sense in the long range plans because how many schools maintain two complete football stadiums and two complete Olympic size competition swim meet size pool facilities? This will of course increase, possibly double the burden and use of the Weddington facilities further impacting the neighborhood. So we therefore suggest placing permanent restrictions on the conditional use permit for both the school campus as well as the Weddington sports facility to prevent this increase in use and expansion from happening.

### **Response No. IND 105-3**

This comment contends that after the Project is completed, the Upper School campus' recreational facilities will be demolished for the expansion of School facilities to increase campus building square footage and student body enrollment. However, the commenter does not provide any substantive facts or support for these concerns or opinions. Future improvements by the School not currently proposed by the Project are speculative in nature since the Project is proposed to accommodate the School's existing recreational needs. While the Project includes proposed athletic and recreational facilities for the School and public use, it does not include any improvements, including abandonment or redevelopment of the School's existing facilities, on the Upper School campus or Middle School campus that would require an evaluation of environmental impacts at those existing locations. Any future discretionary projects, including potential expansions of the Project Site or on either School campus, would be subject to future environmental review under the CEQA. CEQA requires a review of land use compatibility including an analysis of consistency with existing zoning regulations; however, it is up to the discretion of the City to approve or reject future projects.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 105-4**

3) Of course we object to the height of the stadium and field lighting that is proposed.

**Response No. IND 105-4**

The comment expresses concern about the height of the proposed stadium and operational lighting. No stadium is proposed by the Project. The Project's building heights would be within allowable limits per LAMC regulations, although the Project is requesting discretionary approval of the proposed maximum light pole heights as discussed in Chapter II, *Project Description*, of the Draft EIR. The commenter is referred to Topical Response No. 4 – Aesthetics, for a discussion of operational field lighting impacts. In addition, the Project's lighting program has been revised to reduce the number of field and tennis court lights. The Supplemental Lighting Report Memorandum is attached as Appendix B to this Final EIR and, as further evaluated in Topical Response No. 4 - Aesthetics, the reduction in lighting would further reduce the Project's light and glare levels. Consistent with the analysis in Section IV.A. light and glare impacts would be less than significant, and as such, would not contribute to cumulative light and glare impacts. Please refer to the specific changes in the number and heights of lights provided in Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 105-5**

4) Restrictions should be placed on the "Rental or Leasing" out of the sports facilities to other schools and entities so that the impact to the neighborhood is minimized.

**Response No. IND 105-5**

The comment requests that restrictions be placed on future rental/leasing terms for the Project to minimize the impact to the neighborhood. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 105-6**

Again, we'd prefer that the Golf and Tennis facility remains as it is, as it has been for decades, a treasure of Studio City, a valuable resource for our city and neighborhood. Weddington is a heavily used facility enjoyed by children, schools, families and friends of Studio City. In fact it is often difficult to arrange court time due to the demand of the tennis facility and we often wait for tee times and driving range slots.

If HW prevails with their efforts, then many measures should be taken to assure that reasonable, permanent restrictions to the conditional use permit protect our neighborhood interests for the long term.

### **Response No. IND 105-6**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. Refer to Topical Response No. 11 - Recreation: Golf and Tennis Facilities, regarding public use of the Project's tennis courts and the capacity of the future courts to accommodate the same number of sessions for the public as under existing conditions. Topical Response No. 11 also details the methodology utilized in preparing the Draft EIR to substantiate the conclusion that existing municipal golf courses have available capacity to accommodate the relocated golfers from the Project Site's course.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 106**

Annie Wiebe

Received April 29, 2022

### **Comment No. IND 106-1**

As a long-time Studio City resident, I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 106-1**

This comment expresses the same concerns presented in Form Letter 3. Refer to Response Nos. FORM 3-3 to 3-5.

### **Comment No. IND 106-2**

Thank you for taking the time to evaluate this issue and consider the needs and values of our residential neighborhood, as well as the wildlife that call Weddington home, and the value this open, undeveloped space holds beyond dollars and cents.

### **Response No. IND 106-2**

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 107**

This comment expresses the same concerns presented in Form Letter 3. Refer to Response Nos. FORM 3-3 to 3-5.

### **Comment No. IND 107-2**

On a personal note, I have been a regular golfer at Weddington Golf since I moved here in 1989. This property provides an affordable space for recreation to thousands of locals every year. If the proposed changes go through, it will be a tremendous loss to the community, not only in terms of a recreational space but as a green space as well. With the Pickwick complex being redeveloped, affordable public accessible recreational spaces like this are becoming rarer and rarer. We must keep spaces like this intact or Los Angeles will become a concrete jungle. Urban planning (maintaining a balance with green spaces) has always been an afterthought pushed aside by wealthy developers, please don't let them take this space as well. As single homes in my Studio City neighborhood are quickly being replaced by multi-unit dwellings, recreational spaces for the public like Weddington Golf and Tennis become an even more critical component in keeping Los Angeles liveable.

## **Response No. IND 107-2**

The comment expresses concern over the loss of recreational opportunities for the public. Please refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR; and Topical Response No. 11 - Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 112-2**

In the last 5 years, Studio City has been bombarded with endless construction of luxury condos built by greedy investors which is overpopulating and ruining the peaceful city it once was. The amount of traffic has tripled. The noise, pollution and crime has increased exponentially.

### **Response No. IND 112-2**

The comment expresses general concerns over the construction of residences and associated population, traffic, noise, pollution and crime increases within the City over the past 5 years. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 112-3**

Now Harvard Westlake wants to take and destroy the last green open space that the community has had to enjoy over the last 50 years. Harvard Westlake HAS a campus. This isn't needed. They plan to build 12 foot walls to privatize and shut out the beautiful community from this quiet, green filled solace in this ever growing greedy brick jungle. This will add more noise, traffic and continue the degradation of a once beautiful neighborhood in the name of greed and privilege. This is an attack on the neighborhood's right to peaceful living.

### **Response No. IND 112-3**

The comment expresses concern regarding noise, traffic, and loss of open space and states the Project is not needed. The commenter is referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, in this Final EIR for a discussion of

operational noise impacts and Topical Response No. 9 – Transportation and Parking During Construction and Operation, for a discussion of operational parking and traffic impacts.

To clarify the existing property rights and on-site uses, the land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion. In addition, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

The commenter is also referred to Topical Response No. 13 – Need for Project (Non-CEQA), of this Final EIR for a discussion of the purpose and underlying need for the Project for the School and the community.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 112-4**

## **Comment Letter No. IND 113**

David Edelstein and Libby Goldstein  
Received April 30, 2022

### **Comment No. IND 113-1**

Please read the following. Thank you.

The plans put forward by Harvard Westlake would tragically eliminate some of the last open, green space in the San Fernando Valley, i.e., Weddington Golf and Tennis.

The choice is this:

Do we need to compromise this rare, historic, beautiful and much beloved space in order to provide more athletic facilities for a wealthy private school? A school that already enjoys athletic facilities far beyond what our public schools can offer?

We taxpayers support public schools that can only afford modest athletic programs. And now we taxpayers are asked to support the sure degradation of our neighborhood and our quality of life to satisfy the grandiose ambitions of a wealthy private school.

Harvard Westlake prides itself for its educational prowess and yet, it ignores the real, rare, and precious educational value of preserving this beautiful area.

I ask you this:

Would Harvard Westlake students, as well as all of our young people, reap greater educational benefit from

- 1) another swimming pool, gym, underground parking lot, and athletic field... or
- 2) from a well-preserved and maintained natural environment: where plant life, animal life, and a living ecosystem await our careful stewardship and scholarly study.

Certainly, Harvard Westlake can and should look elsewhere for their expansion. There are areas all over the valley that are not open, precious, green space. Those areas are ripe for development. They are in need of development. Homeowners there would surely welcome the investment of a prestigious private high school.

We must come to our senses. You are in a position to bring that about.

### **Response No. IND 113-1**

The comment expresses general opposition to the Project with concerns regarding loss of open/green space, loss of a historic resource, and the need for the Project.

The Project Site is not public open space that is supported by taxpayers. To clarify the existing property rights and on-site uses, the land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. However, upon completion of the Project, public access to the various recreational amenities onsite would be provided. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

The commenter is referred to Topical Response No. 6 – Historic Resources, in this Final EIR for a discussion of direct and indirect impacts on historical resources resulting from the Project, including project design features that would preserve historic character-defining features of the Project Site. The commenter is also referred to Topical Response No. 13 – Need for Project (Non-CEQA), of this Final EIR for a discussion of the purpose and underlying need for the Project for the School and the community.

Also, the Draft EIR did consider alternative sites to the Project Site. The reasons that alternative sites were considered and rejected is provided in Chapter V, *Alternatives*, page V-6, of the Draft EIR. In addition to a site with the size to accommodate the Project Objectives, the other criteria for the Project include proximity to the existing Harvard-Westlake's Upper School campus on Coldwater Canyon Avenue and a site with level topography to allow for the development of the contemplated recreational facilities. Proximity is a criteria factor because of the need for daily commuting from the Upper School campus, as it relates to higher daily vehicle miles. As concluded in Chapter V, no other location with adequate acreage and topography exists within proximity to the Upper School campus.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Eyal Podell

Received April 30, 2022

### **Comment No. IND 115-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

Since moving to Studio City in 2007, my children have been a part of the tennis camps hosted at the facility, taken lessons throughout the year, and had pitch and putt parties at the golf course. More than that, the green space is what makes Studio City feel like a suburb within a city.

### **Response No. IND 115-1**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 115-2**

While I am not opposed to private schools spending their funds to create facilities for their students, I struggle to approve of it when they do so at the expense of public space. HW already has ample field space, and they rent fields in Encino. They have a luxury. The public does not. It would be a travesty of social inequity should this proposal go through.

### **Response No. IND 115-2**

The comment expresses opposition to the Project based on the loss of public facilities in place of private facilities. To clarify the existing property rights and on-site uses, the Project Site is not public open space. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

However, upon completion of the Project, public access to the various recreational amenities onsite would be provided. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

The commenter is also referred to Topical Response No. 13 – Need for Project (Non-CEQA), of this Final EIR for a discussion of the purpose and underlying need for the Project for the School and the community.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 115-3**

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

This comment expresses the same concerns presented in Form Letter 3. Refer to Response Nos. FORM 3-3 to 3-5.

## Comment Letter No. IND 116

Greg Siegel  
Received April 30, 2022

### Comment No. IND 116-1

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

I WAS BORN IN LA. MY PARENTS, GRANDPARENTS, GREAT GRANDPARENTS ... WE ARE ALL HERE. SAVE WEDDINGTON FROM BEING TORN DOWN. IT WON'T BE THE SAME EVER AGAIN. WE ARE LOSING TOO MANY ICONIC PLACES IN OUR CITY AND WE WILL BECOME A GENERIC TOWN QUICKLY. NOT TO MENTION THE POLLUTION AND TRAFFIC IT WILL CREATE. I AM A HOMEOWNER IN CD4 AND I VOTE.

### Response No. IND 116-1

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility and concerns regarding increased pollution and traffic.

The Draft EIR addressed air quality impacts in Section IV.A, *Air Quality*, of the Draft EIR with supporting data provided in Appendix B, *Air Quality/Greenhouse Gas Emissions Technical Documentation*, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant after mitigation, where applicable.

See Topical Response No. 9 - Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### Comment No. IND 116-3

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 116-3**

This comment expresses the same concerns presented in Form Letter 3. Refer to Response Nos. FORM 3-3 to 3-5.

## Comment Letter No. IND 117

Howard Ekerling  
Received April 30, 2022

### Comment No. IND 117-1

On national Arbor Day this video truly sounds the alarm, again, of what removal of hundreds of trees does to our Community in so many ways: heat, air quality( produce oxygen, help with smog), sequester carbon, add beauty, and the peace that old trees provide. It asks the question that has been on my mind since Harvard Westlake tried so hard to destroy 148 PROTECTED trees in Coldwater Canyon years ago. Are they an aggressive developer who cares nothing about the science of climate change- or an educator who should be following very clear science that unequivocally states that mature trees must be preserved. Furthermore, this science says the metrics of replacing old growth trees with saplings and saying this is an improvement- is absolutely false. Doesn't make scientific sense, nor common sense.

Please watch this video and write letters to council/ mayor's office- for your sake, your children's sake, your grandchildren's sake.

### Response No. IND 117-1

The attached video by Angelenos For Trees provides appropriate and correct information regarding the importance of the tree canopy to the overall ecosystem. Regarding the effect of the Project on trees, the existing and future tree canopy, and other native landscape, refer to Topical Response No. 5 – Biological Resources. As discussed in Topical Response No. 5, the Project's tree removal and replanting program was fully analyzed in the Draft EIR's Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). Many of the removed species, such as the Mexican Fan Palms are identified as invasive and would be replaced by trees that are compliance with the River Improvement Overlay (RIO) Ordinance. The majority of street trees would remain and any removed street trees would be replaced at a 2:1 ratio. The existing mature trees along the Zev Greenway, Bellaire Avenue, and Whitsett Avenue would remain. The majority of mature street trees along Valley Spring Lane would also remain, except for two smaller sections along the street front (see Section IV.C, *Biological Resources*, Figure IV.C-4, *Tree Removal Plan, of the Draft EIR*). The Project would result in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree Planting Plan, of the Draft EIR*). Please also refer to Response No ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.

## **Comment Letter No. IND 118**

Jennifer Manley  
Received April 30, 2022

### **Comment No. IND 118-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This huge project will take away a gem of a space that the community loves and enjoys. We've been playing tennis at Weddington since before our son was born and when he was about four he started lessons. We play there as a family and with friends. It's a special place that gives us access to courts we wouldn't find easily elsewhere. It's also beautiful. The trees in the golf course make the neighborhood feel so lush and green.

### **Response No. IND 118-1**

The comment expresses opposition to the Project based on the loss of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 118-2**

I can't imagine what it will be like if Harvard Westlake gets their way. They have enough space with their two campuses. And I'm dubious about whether we will in fact get access to the spaces as they say they will.

We need more green space in L.A. Please help us protect Weddington.

### **Response No. IND 118-2**

The comment questions the need for the Project and expresses concern regarding public access to the Project. The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), of this Final EIR for a discussion of the purpose and underlying need for the Project for the School and the community. Also, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 118-3**

Here's what Save Weddington wants me to add which I'm sure you've read multiple times: This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 118-3**

Refer to Response No. FORM 3-5.

## **Comment Letter No. IND 119**

Jodie Stern

Received April 30, 2022

### **Comment No. IND 119-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

### **Response No. IND 119-1**

The comment expresses opposition to the Project based on the loss of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 119-2**

This is a beautiful and unique neighborhood...we live in an adjacent studio city neighborhood but come here to walk, meet with friends and do group dog walks. The idea that this calm safe neighborhood would be taken over with traffic, parking restriction, and the loss of the last area for healthy outdoor community recreation is unacceptable. The new density and traffic issues created by the recent construction/retail destination at Coldwater and Ventura has taken away enough of our neighborhood greens. Trees that were not supposed to be taken down at that new shopping center are now gone. Please, for our children, families, neighbors and animals KEEP Weddington intact for us all.

### **Response No. IND 119-2**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility and concerns regarding loss of recreation facilities, loss of trees and traffic/parking.

Please refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

Refer to Topical Response No. 5 – Biological Resources/Trees, and Response No. ORG 6A-1 for a discussion of impacts to trees and the Project's tree replacement program. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions - a 36 percent increase. The commenter is also referred to Section IV.C, *Biological Resources*, of the Draft EIR, with supporting data provided in Appendix D, Biological Resources Technical Report, of the Draft EIR. As analyzed therein, biological resources impacts would be less than significant with mitigation, where applicable.

Also, see Topical Response No. 9 - Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 119-3**

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 119-3**

## **Comment Letter No. IND 120**

Joe Dungan  
Received April 30, 2022

### **Comment No. IND 120-1**

I am STRONGLY opposed to Harvard Westlake's destruction of Weddington Golf and Tennis -- for all the reasons you've already heard, I'm sure.

I'm especially strident since the par-3 course in Verdugo Hills has been taken away. We don't need to lose another one.

### **Response No. IND 120-1**

The comment expresses opposition to the Project based on the loss of the golf course. Refer to Topical Response No. 11 - Recreation: Golf and Tennis Facilities, in this Final EIR for a discussion regarding the relocation of existing golf course users and adequacy of other nine-hole golf courses in the area.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 121**

Kathryn Savage  
Received April 30, 2022

### **Comment No. IND 121-1**

I treasure the beautiful open space that is Weddington golf and tennis, part of which makes studio city so special. I would hate to see the destruction of hundreds of mature trees and the overdevelopment of this beautiful park by Harvard Westlake. I am against the added traffic and noise and disruption that this would bring to our neighborhood.

### **Response No. IND 121-1**

The comment expresses concerns over tree removal, traffic, and noise. The commenter is referred to Topical Response No. 5 – Biological Resources/Trees for a discussion of the impacts from tree removal and the Project’s tree replacement plan. With regard to noise impacts, see Response No. IND 6-3 and Topical Response No. 8 – Noise: Construction and Operation Impacts. The commenter is also referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, in this Final EIR for a discussion of the Project’s traffic patterns, effects on local streets, and consistency with CEQA threshold levels.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 121-2**

I grew up in Studio City and went to Weddington as a child, and I now live in Studio City with hopes of having my own family.

I have to say that I was really excited to see you were elected to the City Council, and I would love to see you champion this cause.

### **Response No. IND 121-2**

The comment requests the Councilmember champion the commenter’s cause. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 122**

Katya Volpi  
Received April 30, 2022

### **Comment No. IND 122-1**

I am writing in strong opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

### **Response No. IND 122-1**

The comment expresses opposition to the Project based on the loss of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 122-2**

I live near the intersection of Laurel Canyon and Ventura Blvds, one of the most congested in the area. The building of this mega sportsplex will greatly impact my quality of life in the most negative way by increasing traffic, and that's one of the lesser negative impacts.

### **Response No. IND 122-2**

The comment expresses concern over increased traffic. Please refer to Topical Response No. 9 – Transportation and Parking During Construction and Operations, in this Final EIR for a discussion of the Project's traffic patterns, effects on local streets, and consistency with CEQA threshold levels.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 122-3**

I enjoy walking along that section of the L.A. river that passes the beautiful golf course and I see how many wild birds and creatures enjoy that open space. To destroy it would be tragic at best.

### **Response No. IND 122-3**

The comment expresses concern over loss of open space and impacts to birds and wildlife. Please refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set

forth in the Draft EIR. In addition, refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife and birds.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 122-4**

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. ### **Comment No. IND 123-3**

This property is zoned for agricultural and open space and in the best interest of the community it should remain that way.

Please speak up in behalf of the thousands of community residents who enjoy this facility and deny permission to build this project.

**Response No. IND 123-3**

This comment expresses similar zoning-related concerns presented in Comment No. FORM 3-5. Refer to Response No. FORM 3-5.

## Comment Letter No. IND 124

Lynne Moses

Received April 30, 2022

### Comment No. IND 124-1

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

I live in an apartment on Whitsett, a busy street. Walking by the golf course every day gives me a sense of calm and nature that is irreplaceable in this urban/suburban landscape. I also see a broad socio-economic mix of people enjoying the golf course for relaxation and the enjoyment of nature. Young people, families, groups of friends. White people and people of color. It's a beautiful thing, and something we don't usually associate with golf courses. The value of green space is incalculable.

When I first heard about the plans to replace the beautiful golf course, I was against it. Then I read about how the new facility would be using native plantings and save water and offer sports facilities to the public, and I became neutral. Now I'm leaning back toward preserving the golf course, but want something better for the area.

### Response No. IND 124-1

The comment expresses general opposition to the Project based on the loss of green space and the removal of the golf course from the Project Site. However, the commenter acknowledges that the Project would be using native plantings, promote water conservation, and offer sports facilities to the public. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### Comment No. IND 124-2

I'm now concerned about the chemicals used to fertilize the grass.

### Response No. IND 124-2

This comment raises concerns about chemicals currently used to fertilize the grass. As described in Chapter II, *Project Description*, of the Draft EIR, the Project's sustainability features include the use of artificial grass, which would reduce water demand, use of pesticides, and fertilizer compared to existing conditions. As described in Section IV.I, *Hydrology and Water Quality*, of the Draft EIR, the elimination of large grass areas associated with the golf course would reduce levels of fertilizers compared to existing conditions and water quality impacts during operation were determined to be less than significant without mitigation.

### **Comment No. IND 124-3**

I'm want [sic] to see a more sustainable use of water on the property. Basically, take the best of the Harvard-Westlake plan for the environment and the city and make those upgrades. This controversy might lead to something that retains the value of the current use, while making it even a better resource for the community and part of LA's reduced water future.

### **Response No. IND 124-3**

The comment advocates for a project that promotes sustainable water use and retains in part the current use of the Project Site, but with upgrades that would make it an even better resource for the community. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 125**

Nigel Daly  
Received April 30, 2022

### **Comment No. IND 125-1**

Thank you for taking the time to read this email and especially for visiting the Weddington Golf and Tennis Club. I am writing in opposition to Harvard Westlake's destruction of it.

For many years my family have enjoyed the golf and tennis club, it holds many memories for us with our children and even our visiting families from Australia and England, who we would take as a special outing for all the family.

There are so little activities like this for families in this area. The beautiful outdoor space and history of the club make it a natural item on the agenda to show off our home here in LA having moved here over 17 years ago.

### **Response No. IND 125-1**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 125-2**

What is so sad is we are seeing so much of the character of Studio City being taken away and no respect for the community as a whole. This will be detrimental to the quality of life, community, family and not to mention the enjoyment and health values that are afforded from recreational open spaces.

### **Response No. IND 125-2**

This comment expresses similar concerns presented in Comment No. FORM 3-3. Refer to Response No. FORM 3-3.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 125-3**

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 125-3**

This comment provides the same comments presented in Form Letter 3. Responses to this comment are provided in Response Nos. FORM 3-4 and 3-5.

### **Comment No. IND 125-4**

Harvard Westlake has a huge campus already and it seems unfair that just because they can afford to take away public use spaces they should. This space is for all not for some, and it's sad to see the community spaces and more importantly the natural landscapes being taken away by constant development. 260 Trees will be destroyed too, which is hard to even comprehend.

Again thank you for your time and we hope you are able to help the community save something that is precious.

### **Response No. IND 125-4**

The comment states that the Project would take away public space and expresses concern regarding tree removal. To clarify the existing property rights and on-site uses, the Project is not a public open space. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

However, upon completion of the Project, public access to the various recreational amenities onsite would be provided. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

Also, refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project's tree replacement program. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions - a 36 percent increase.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 126**

Paul Grein

Received April 30, 2022

### **Comment No. IND 126-1**

Like many of my Studio City neighbors, I am opposed to Harvard Westlake's plans for Weddington Golf and Tennis.

I have lived on Valleyheart Drive, a few short blocks east of Whitsett, since December 1984. When I bought my house, people still talked about Studio City's "unique village character." You don't hear that phrase much anymore. To a certain extent, that's inevitable. The city of Los Angeles, including the Valley, has grown and changed over the past 37 years. There are more people, more cars, more traffic, more noise, more graffiti, more litter, more of a homeless issue.

We can't turn back the clock. But that doesn't mean we have to open the door to a massive new project that will greatly accelerate the congestion, traffic and noise that have already taken a toll on Studio City as a nice place to live.

### **Response No. IND 126-3**

The comment expresses general opposition to the Project and expresses concerns regarding traffic and noise resulting the Project. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project's traffic patterns, effects on local streets, and consistency with CEQA threshold levels. With regard to noise impacts, see Response No. IND 6-3 and Topical Response No. 8 – Noise: Construction and Operation Impacts.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 126-4**

The studies included in the recently released DEIR, paid for by Harvard Westlake, fail to adequately address the most serious impacts, including traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit." As I understand it, your approval would be needed for either to be granted. According to the Studio City Residents Association, you are the only current councilmember with a master's degree in urban planning. Please use your unique skills to stand up for more than 100,000 Angelenos who enjoy this facility annually and deny permission to build this project.

## **Response No. IND 126-4**

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 128-1**

This comment provides the same comments presented in Form Letter 3. Responses to this comment are provided in Response Nos. FORM 3-1 and 3-3 to 3-5.

### **Comment No. IND 128-2**

PS. We will loose [sic] a quiet, clean air and traffic neighborhood. Please fight back for us!

### **Response No. IND 128-2**

This comment asserts the commenter's opinion that the Project will result in noise, unclean air, and traffic. The commenter does not provide any substantive facts or support for these concerns or opinions.

The commenter is referred to Topical Response No. 8 - Noise: Construction and Operation Impacts, for a discussion of operational noise impacts. Refer to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of operational traffic impacts. Also, the Draft EIR addressed air quality impacts in Section IV.A, *Air Quality*, with supporting data provided in Appendix B, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant after mitigation, where applicable.

## **Comment Letter No. IND 129**

Sheila Hall

Received April 30, 2022

### **Comment No. IND 129-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

It is gratifying to learn that you visited Weddington recently to gain personal understanding of why this property is so dear to the hearts of valley denizens. My family, friends and I have frequented the facility for decades and know it as a beloved corner of our community. We were all shocked to learn about Harvard-Westlake's intended project to convert the property into a complex.

### **Response No. IND 129-1**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 129-2**

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

### **Response No. IND 129-2**

This comment provides the same comment presented in Form Letter 3. A response to this comment is provided in Response No. FORM 3-3.

### **Comment No. IND 129-3**

Not only does the plan destroy this beloved property, but also adds years of construction and traffic blockage, followed by increased traffic and noise in what is now a much-needed and appreciated green space in the middle of our town.

### **Response No. IND 129-3**

The comment expresses concern over construction and operational traffic, as well as operational noise. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of construction and operational traffic impacts. Also, refer to Topical Response No. 8 - Noise: Construction and Operation Impacts, for a discussion of operational noise impacts.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 129-4**

The studies included in the recently released DEIR paid for by Harvard Westlake do not adequately address the most serious impacts including, but not limited to: traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 129-4**

This comment provides the same comments presented in Form Letter 3. Responses to this comment are provided in Response Nos. FORM 3-4 and 3-5.

## **Comment Letter No. IND 130**

Victoria Maguire  
Received April 30, 2022

### **Comment No. IND 130-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

### **Comment No. IND 130-2**

Please consider the wildlife and the tress I moved here from Monterey California and always feel at peace at this golf course hole number 4 goes by the river bunny's [sic] are all over that hole the tress [sic] the hawks the owls even the bettels [sic]. How can you allow a school very far away to take open space away. The trees the historical. Please re consider

### **Response No. IND 130-2**

The comment expresses concern about the Project based on tree removal, which the commenter asserts are "historical", and impacts to common wildlife and bird species. The commenter is referred to Topical Response No. 5 – Biological Resources/Trees, in this Final EIR, for a detailed discussion regarding the Project's tree removal and replacement program. In addition, refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife and nesting birds.

The Project Site is not currently public open space. However, upon completion of the Project, public access to the various recreational amenities onsite, including open space, would be provided. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

In addition, refer to Topical Response No. 6 – Historic Resources, for a discussion of the preservation of the Project Site’s character-defining historic features. The topical response includes a discussion of the Project Site’s trees from a CEQA historic resources perspective.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 131**

Cindy Kimbrell Poling

### **Comment No. IND 131-2**

Native Angeleno, live from 1954 to present day. In SF valley. Former resident camp director - nature & recreation for the public is essential for healthy communities. Demolition of Weddington Golf Course is not acceptable. Traffic on and off Whitsett is maxed as is. Those 240 trees are essential to ecological necessity. Three years of construction is hideous! Inhumanizing!

### **Response No. IND 131-2**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility and concerns over traffic, tree removal, and the length of construction.

The Project Site is not currently public open space. However, upon completion of the Project, public access to the various recreational amenities onsite, including open space, would be provided. Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also, the commenter is referred to Topical Response No. 11 –

Recreation: Golf and Tennis Facilities, for a discussion of impacts related to the Project's provision of recreation and tennis facilities for public use.

The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of construction and operational traffic impacts.

Please refer to Topical Response No. 5 – Biological Resources/Trees, and Response No. ORG 6A-1 for a discussion of impacts to trees and the Project's tree replacement program.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 132**

David Gaines

Received May 1, 2022

### **Comment No. IND 132-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 132-1**

This comment provides the same comments presented in Form Letter 3. Responses to this comment are provided in Response Nos. FORM 3-1 and FORM 3-3 to 3-5.

### **Comment No. IND 132-2**

Although I did not personally draft this letter to you, I agree with the information contained in it and urge you to use the power you have to stop this disastrous development!! The rich and powerful have got to stop riding roughshod over the rest of us. When poorer people are involved; this city has no trouble invoking 'imminent [sic] domain' to seize their land in the service of the 'greater good,' it's time for the city to use this power in service of the greater good; the preservation of our shade cover and air quality. Thank you for doing your job and protecting your constituents!

### **Response No. IND 132-2**

The comment expresses general opposition to the Project and requests preservation of shade and air quality.

Please refer to Topical Response No. 5 – Biological Resources/Trees, and Response No. ORG 6A-1 for a discussion of impacts to trees and the Project's tree replacement

program. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions - a 36 percent increase. The Project's tree replacement program would provide shading within the Project Site.

In addition, the issue of air quality is fully evaluated in Section IV.B, *Air Quality*, of the Draft EIR. Regarding air quality, construction impacts related to air quality would be less than significant with implementation of Mitigation Measure AQ-MM-1 to limit and require specific construction equipment features. Operational impacts would be less than significant without mitigation.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 133**

Dr. and Mrs. Joseph Church  
Received May 1, 2022

### **Comment No. IND 133-1**

We are writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

My husband and I have lived on Goodland Avenue in Studio City (91604) 2 blocks from Weddington Golf and Tennis for 40 years. I can imagine nothing more horrific than to see an athletic complex serving a small number of highly privileged students be the atrocity that destroys the last 16 acres of open space in our peaceful neighborhood. Beware of Harvard Westlake's bait and switch approach that attempts to portray a project that is in the community's best interest. They should be ashamed of the deceptive tactics that have been employed through-out the rollout of their concept. In my opinion, the construction of a Sportzilla of this magnitude, will not only be detrimental to our environment but will FOREVER destroy the character of a charming residential neighborhood.

### **Response No. IND 133-1**

The comment expresses general opposition to the Project by asserting the Project will be detrimental to the environment and destroy the character of a charming residential neighborhood. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 133-2**

Additionally, public safety on the Zev Greenway adjacent to the Project Site has been undermined due to rampant harassment from violent unhoused individuals. This lovely walkway is essentially unusable. There cannot be any new access in the form of the proposed "ADA compliant ramp to provide a pedestrian connection between the Zev Greenway and Coldwater Canyon Avenue northwest of the Project Site" that is part of Harvard Westlake's plan.

### **Response No. IND 133-2**

The comment expresses concern over public safety related to the existing Zev Greenway and does not support the contemplated ADA compliant ramp to provide a pedestrian connection between the Zev Greenway and Coldwater Canyon Avenue northwest of the Project Site.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 133-3**

Lastly, this property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelinos who enjoy this beloved facility annually and deny permission to build this project.

### **Response No. IND 133-3**

This comment provides the same comment presented in Form Letter 3. A response to this comment is provided in Response No. FORM 3-5.

### **Comment No. IND 133-4**

I implore you to support the preservation of this land as open space where it can continue to serve the community at large and the tranquility of our neighborhood.

### **Response No. IND 133-4**

The comment requests the preservation of the Project Site as open space. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 134**

Elizabeth, Margie, and Eddie Mullen  
Received May 1, 2022

### **Comment No. IND 134-1**

My family and I have lived in this community in Studio City for 22 years. This open air space at Weddington is some of the only green space we have.

### **Response No. IND 134-1**

The comment expresses concern about the development of an existing green space. The Project Site is not currently public open space. However, upon completion of the Project, public access to the various recreational amenities onsite, including open space, would be provided. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 134-2**

The traffic on Whitsett cannot accommodate any more activity. Laurel Canyon and Coldwater Canyon hardly move any time of the day.

### **Response No. IND 134-2**

The comment expresses concern regarding traffic. Refer to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of operational traffic impacts. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 134-3**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise,

construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. ### **Response No. IND 134-3**

This comment provides the same comments presented in Form Letter 3. Responses to this comment are provided in Response Nos. FORM 3-1 and 3-3 to 3-5.

### **Comment No. IND 134-4**

It would be so destructive to use this space for the betterment of so few, while it is now available for so many thousands of community members. We need your help.

### **Response No. IND 134-4**

The comment expresses opposition to the Project over the loss of the Weddington Golf & Tennis facility. The commenter is referred to Response No. IND 134-1 for a discussion of publicly available open space and recreational amenities provided by the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 135

Jackelyn Puignau  
Received May 1, 2022

### Comment No. IND 135-1

Below is the pre-written (but well agreed with) email that was kindly written out by those wanting to save Weddington. It is imperative that you choose to preserve Weddington Golf and Tennis. There are 45,000 people in Studio City who should not have to suffer through construction noises, traffic and the loss of a wonderful recreational space solely for a school of 1,500 students. I love living in Studio City and often can't relate to the problems of other Los Angelinos because of our lush trees, parks, and beautiful nature. Studio City is a little haven amongst this hectic big city and not saving Weddington would chip away at the lush and serene environment that makes Studio City so great. Please SAVE WEDDINGTON!!

### Response No. IND 135-1

The comment expresses general opposition to the Project and concerns about the Project regarding construction noise, traffic, and loss of recreational amenities. With regard to noise impacts, see Response No. IND 6-3 and Topical Response No. 8 – Noise: Construction and Operation Impacts. Refer to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project's traffic patterns, effects on local streets, and consistency with CEQA threshold levels.

Also, the comment incorrectly states the Project would be solely for students. With regard to public access, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

Refer to Topical Response No. 5 – Biological Resource/Trees, for a discussion of impacts to trees. As discussed in Topical Response No. 5, the Project's tree removal and replanting program was fully analyzed in the Draft EIR's Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). The majority of street trees would remain and any removed street trees would be replaced at a 2:1 ratio. The existing mature trees along the Zev Greenway, Bellaire Avenue, and Whitsett Avenue would remain. The majority of mature street trees along Valley Spring Lane would also remain, except for two smaller sections along the street front (see Section IV.C, *Biological Resources*, Figure IV.C-4, *Tree Removal Plan, of the Draft EIR*). The Project would result

in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree Planting Plan*, of the Draft EIR).

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 135-2**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. ## **Comment Letter No. IND 136A**

Neal Vitale

Received May 1, 2022

### **Comment No. IND 136A-1**

I'd like to weigh in on behalf of me and my family. We think the proposed Harvard-Westlake project, if it proceeds as currently proposed, would be a tragedy and an avoidable disaster. The loss of a landmark facility and its green space in a residential neighborhood would be truly sad. The EIR undercounts and minimizes the disruption to the community in terms of, among other things, noise, traffic, light pollution, and parking. We strongly urge you to support our community and your constituents in opposing this massive overdevelopment.

### **Response No. IND 136A-1**

The comment expresses general opposition to the Project due to the loss of the Weddington Golf & Tennis facility and concerns related to noise, traffic, light pollution, and parking. The commenter is referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, regarding noise impacts; Topical Response No. 4 – Aesthetics, regarding operational light and glare impacts, and Topical Response No. 9 – Transportation and Parking During Construction and Operations, regarding operational parking and traffic.

As discussed in detail in these topical responses, and in respective sections of the Draft EIR, impacts related to operational noise, traffic, light and glare, and parking would be less than significant. Field lighting would result in less light and glare than under existing conditions (refer to Topical Response No. 4). Construction noise impacts associated with excavation and hauling activities would, however, remain significant and unavoidable. As discussed in Topical Response No. 2 – Modifications to the Project Design, the subterranean garage was reduced to reduce excavation volumes and activity. The reduction from 250,000 cubic yards (under the Project as evaluated in the Draft EIR) to 197,000 cubic yards (the Project with design modifications), would reduce the number of haul truck trips from 35,714 trips to 28,142 trips, a reduction of 7,572 truck trips (each trip is one way [an inbound trip is one trip and an outbound trips is one trip]). With the modification, the excavation and hauling (dirt export) would be reduced from seven months to 5.5 months. Also, as discussed in Topical Response No. 9, with the Project design modifications (presented in Topical Response No. 2 – Modifications to the Project Design), the Project's number of parking spaces would be reduced from 532 to 403, for a reduction of 129 spaces. See Topical Response No. 2 – Modifications to the Project Design, and Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR.

## Comment Letter No. IND 137

Renault Family  
Received May 1, 2022

### Comment No. IND 137-1

Opposition to the Harvard Westlake's destruction of Weddington Golf and Tennis. This is where our son learned to play golf with his father. Additionally, the site offers reasonable rates for the citizens of the San Fernando Valley to partake in 'country club sports'. The site also provides a lovely green space for the locals, serves to mitigate the carbon in the area, maintains a heritage site as well. I cannot imagine the amount of noise and traffic the neighborhood will need to endure. This neighborhood is already busy as commuters drive through the neighborhood in hopes of shaving 10-15 minutes off of their commute. Please represent our community the way we ask you to, not as the elite alumni of the entertainment industry expects.

### Response No. IND 137-1

The comment expresses opposition to the Project due to the loss of the Weddington Golf & Tennis facility and concerns related to noise, traffic, and the loss of green space that mitigates carbon for locals, and the designation of the Project Site as an historical resource.

Please see Topical Response No. 11 - Recreation: Golf and Tennis, in this Final EIR. Topical Response No. 11 details the methodology utilized in preparing the Draft EIR to substantiate the conclusion that existing municipal golf courses have available capacity to accommodate the relocated golfers from the Project Site's course.

Refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project's tree replacement program. Please also refer to Response No ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.

The commenter is also referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, regarding noise impacts; and Topical Response No. 9 – Transportation and Parking During Construction and Operations, regarding operational parking.

Please refer to Topical Response No. 6 – Historic Resources, regarding the designation of the Project Site as a Historical-Cultural Monument (HCM) and the character-defining features that give the Project Site this historic status. As discussed in Topical Response No. 4 and Chapter II, *Project Description*, of the Draft EIR, and in Project Design Feature CUL-PDF-1: Rehabilitation Plan, the distinctive character-defining features of the Project Site as identified in the HCM designation would be retained. Specifically, the Project Site

would remain a private recreational facility open for public use in Studio City, and the character defining features of the HCM, specifically the clubhouse, putting green, golf ball-shaped light standards, and brick wall with weeping mortar, would all be retained such that the Project Site would retain its historic integrity and continue to convey its significance as a 1950s community recreational facility.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 137-2**

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

Hi, The Weddington Golf course is such a bright green oasis that appreciates Studio City and those that live near, even if they don't use it everyday. How fun would it be to take my grandkids, generations from now, to such an amazing piece of Hollywood History.

I hope you get to help keep it alive and its legacy strong for many years:)

### **Response No. IND 138-1**

The comment expresses general opposition to the Project due to the loss of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 139**

Bill Nye

Received May 2, 2022

### **Comment No. IND 139-1**

I oppose Harvard Westlake's plan to destroy Weddington Golf and Tennis.

I find the argument in favor Harvard Westlake's planned destruction of Weddington Golf & Tennis utterly unpersuasive. Please do what you must to preserve the Weddington Golf and Tennis green space. It is an emerald gem. The enormous proposed project would degrade the integrity and character of Studio City; it would be detrimental to the quality of life, property values, and access to recreational open space.

### **Response No. IND 139-1**

This comment provides the similar comments presented in Form Letter 3. Please refer to responses to such comments in Response Nos. FORM 3-1 and 3-3.

### **Comment No. IND 139-2**

I acknowledge that irrigation water, for example, is precious. So is green space. In my view, Weddington is exactly the place to deploy our limited water resources. Harvard Westlake's rationale does not (pun intended) hold water.

### **Response No. IND 139-2**

The comment asserts that irrigation water is precious, but appropriately utilized at the existing Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 139-3**

Fundamentally, the studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the serious impacts, such as increased traffic, more noise, and a degraded local climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites. After all, this property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. With your credentials in urban planning, you're more qualified to evaluate this environmental impact than you council colleagues. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

Whether one plays ball-golf, disk-golf, or tennis, or, if one simply lives around here, Weddington is special and irreplaceable.

### **Response No. IND 139-3**

This comment provides similar comments presented in Form Letter 3. Responses to such comments are provided in Response Nos. FORM 3-4 and 3-5.

## Comment Letter No. IND 140

Chris Hazzard

Received May 2, 2022

### Comment No. IND 140-1

Weddington Golf & Tennis is an iconic recreational site that has been open to the public for nearly 70 years that possesses historic, recreational, environmental, and sentimental value. As a community member and resident of the neighborhood I am writing to you to voice my opposition to the Harvard-Westlake sports center development.

### Response No. IND 140-1

The comment expresses opposition to the Project based on the historic, recreational, environmental, and sentimental value of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

However, to clarify the existing property rights and on-site uses, the Project Site is not public open space. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

Please refer to Topical Response No. 6 – Historic Resources, regarding the designation of the Project Site as a Historical-Cultural Monument (HCM) and the character-defining features that give the Project Site this historic status. As discussed in Topical Response No. 4 and Chapter II, *Project Description*, of the Draft EIR, and in Project Design Feature CUL-PDF-1: Rehabilitation Plan, the distinctive character-defining features of the Project Site as identified in the HCM designation would be retained. Specifically, the Project Site would remain a private recreational facility open for public use in Studio City, and the character defining features of the HCM, specifically the clubhouse, putting green, golf ball-shaped light standards, and brick wall with weeping mortar, would all be retained such that the Project Site would retain its historic integrity and continue to convey its significance as a 1950s community recreational facility.

### Comment No. IND 140-2

Weddington Golf & Tennis is a staple of our community that is open to everyone and adds beautiful and essential green space to the neighborhood. The idea of tearing all that down

for private school sports fields that will increase traffic on our neighborhood streets, be disruptive with noise, and remove a beloved city landmark is appalling. I hope you will stand with our community against Harvard-Westlake School's lobbyists and monied special interests.

### **Response No. IND 140-2**

The comment expresses general opposition to the Project due to the loss of the Weddington Golf & Tennis facility and concerns related to traffic and noise.

The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion regarding operational traffic; and Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion regarding noise impacts. Also, see Response No. IND 40-1 which clarifies public use of the Project Site under existing conditions.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 140-3**

I appreciate your commitment to saving Weddington Golf & Tennis for the benefit of future generations and all Angelenos.

### **Response No. IND 140-3**

The comment provides a general statement of appreciation. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 141

Chris Marble

Received May 2, 2022

### Comment No. IND 141-1

I have been living in Studio City since 2001. Every year it gets busier and busier. The Burbank Airport Gen One flight path is just another layer of stress on our system. Weddington Golf Course is one of the things I look forward to every week. It is the cool oasis for people not to mention all of the plants animals and insects that have called it home. The last biggest piece of land on the LA River.

Although it doest [sic] seem like a big deal to redevelop it for the betterment of the students of Harvard Westlake, it will be years of construction, traffic and deforestation.

### Response No. IND 141-1

The comment expresses concerns about the Project based on years of construction, traffic, and tree removal. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project’s traffic patterns, effects on local streets, and consistency with CEQA threshold levels.

Also, refer to Topical Response No. 5 – Biological Resources/Trees, and Response No. ORG 6A-1 for a discussion of impacts to trees and the Project’s tree replacement program. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions - a 36 percent increase. The commenter is also referred to Section IV.C, *Biological Resources*, of the Draft EIR, with supporting data provided in Appendix D, Biological Resources Technical Report, of the Draft EIR. As analyzed therein, biological resources impacts would be less than significant with mitigation, where applicable. In addition, refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife and nesting birds.

The comment makes the claim that the Project Site is the “last” largest property along the Los Angeles River. The term, “last,” implies that the Project Site is not in use or is vacant open space. The property has been occupied and in continual use since the 1880s and, as an occupied property that is open in character, is not as large as Weddington Park, Lakeside Golf Course, Los Angeles Equestrian Center, Forest Lawn Cemetery, and other large holdings that are located adjacent to the Los Angeles River in the vicinity of Studio City.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 141-2**

And then think about the weekly football games under a canopy [sic] of bright lights, noise and ultimately cutting off the community at large to only be enjoyed by a privileged few.

**Response No. IND 141-2**

The comment expresses opposition to the Project based on the proposed lighting, noise, and claim that the Project would not provide public access to the proposed recreational amenities.

The commenter is referred to Topical Response No. 4 – Aesthetics, for a discussion of operational field lighting impacts. In addition, the Project’s lighting program has been revised to reduce the number of field and tennis court lights. The Supplemental Lighting Report Memorandum is attached as Appendix B to this Final EIR and, as further evaluated in Topical Response No. 4 - Aesthetics, the reduction in lighting would further reduce the Project’s light and glare levels. Consistent with the analysis in Section IV.A. light and glare impacts would be less than significant, and as such, would not contribute to cumulative light and glare impacts. Please refer to the specific changes in the number and heights of lights provided in Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR.

Also, the commenter is referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of operational noise impacts. To clarify, the Project would not involve football games being played at the Project Site. Refer to Chapter II, Project Description, of the Draft EIR, for a discussion of the proposed School-related activities that would occur on the Project Site.

Also, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 141-3**

Why cant [sic] the State of California buy it? Dont [sic] we have a huge surplus of money in the coffers? Once its gone, we will realize just how valuable it was to all. Please reconsider any development and really think about what is at stake.

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

### **Response No. IND 141-3**

The comment expresses general opposition to the Project and asks why the State of California cannot buy the Project Site. The Project Site is currently owned by Harvard-Westlake School. As the property owner, the School has right to seek approval from the City for the Project. However, it is up to the discretion of the City to approve or reject the Project. In addition, as discussed in Chapter II, *Project Description*, page II-3, of the Draft EIR, the Weddington Golf & Tennis parcel was purchased by Harvard-Westlake School in December 2017, and the School has continued to operate it primarily for public golf and tennis uses. However, the current Weddington Golf & Tennis operations are not consistent with the School's educational mission or financially sustainable. The underlying purpose of the Project, as discussed in Project Objectives (pages II-13 and II-14 of the Draft EIR) and in Topical Response No. 13 – Need for the Project, is to supplement the School's athletic and recreational facilities, and to provide Harvard-Westlake School a campus that can fulfill its educational mission and athletic principles now and in the future.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. 141-4**

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

### **Response No. IND 141-4**

This comment is the same as Comment No. FORM 3-3. Please refer to Response No. Form 3-3.

### **Comment No. IND 141-5**

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

### **Response No. IND 141-5**

This comment is the same as Comment No. FORM 3-4. Please refer to Response No. Form 3-4.

### **Comment No. IND 141-6**

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only

councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. 141-6**

This comment is the same as Comment No. FORM 3-5. Please refer to Response No. Form 3-5.

## **Comment Letter No. IND 142**

Elizabeth, Margie, and Eddie Mullen  
Received May 2, 2022

### **Comment No. IND 142-1**

My family and I have lived in this community in Studio City for 22 years. This open air space at Weddington is some of the only green space we have.

The comment asserts the Weddington Golf & Tennis facility is some of the only green space available, presumably in the local area. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

The traffic on Whitsett cannot accommodate any more activity. Laurel Canyon and Coldwater Canyon hardly move any time of the day.

The comment expresses concern regarding traffic. Refer to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of operational traffic impacts. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space, and traffic patterns.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

This comment provides similar comments presented in Form Letter 3 with an added concern regarding traffic. Responses to this comment are provided in Response Nos. FORM 3-1 and FORM 3-3 to 3-5. Refer to Response IND. 142-2 regarding traffic concerns.

It would be so destructive to use this space for the betterment of so few, while it is now available for so many thousands of community members. We need your help.

The comment expresses opposition to the Project over the loss of the Weddington Golf & Tennis facility. The commenter is referred to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Response No. IND 142-1**

The comments are identical to comments received in Letter No. IND 134. Please refer to Response Nos. IND 134-1 to IND 134-4.

## **Comment Letter No. IND 143**

Katalina Anaya  
Received May 2, 2022

### **Comment No. IND 143-1**

Ari Engelberg with Harvard Westlake first claimed the facility would be for practice only, however it now appears they're allowing competition events as well. Stadium seating implies a good size attendance, as does the packed athletic schedule on the website.

Is the school disclosing which outside organizations (of which there seem many) and size outside of their own schools events going forward. And if , so do they intend to add to these in the future, i.e., the ability to call the Olympics an "outside organization" during the upcoming Olympics, specifically the pool?

### **Response No. IND 143-1**

The comment questions whether the School would be required to disclose all events, including the names of the organizations and the size of the events going forward. The City's approval process does not generally require such disclosure, absent an environmental or compliance matter that would make such disclosure relevant. See pages II-33 to II-35 of the Draft EIR for additional details regarding organizations and public use of the Project Site. Also, the Project Site would not be a venue for the Olympics.

### **Comment No. IND 143-2**

They say that traffic won't be impacted, but it's going from the current 69 parking spaces to approx 535.

How is traffic not going to be impacted with the addition of these many cars and/or possible overflow onto neighboring streets? The golf course, with their attendance from all over the city did well with 69 spaces and I never had any spill in my street.

### **Response No. IND 143-2**

This comment is similar to Comment No. IND 90-5. Please refer to Response No. IND 90-5.

### **Comment No. IND 143-3**

There are many other large projects on point to be constructed on, or just off Ventura in the general area. Are these future traffic issues being addressed? I've heard that the Sportsman's project's DEIR was rushed and was for the current situation as it existed at the time, and was not broadened to include the impact of future growth sites.

Website says a recommended driving route will be Coldwater Canyon north to Moorpark, east to Whitsett, then south to the facility.

Has there been a thorough study on this already congested portion of our Studio City? Not to mention Ventura between Coldwater and Whitsett? Plus, you might be able to give school buses a route but not individual cars. People already drive through residential streets hoping to avoid the more congested ones (Coldwater/Moorpark/Whitsett).

### **Response No. IND 143-3**

The comment asks if other large projects, including the Sportsmen’s Lodge Project, was assessed as part of a traffic analysis. See Topical Response No. 12 – Related Projects: Cumulative Traffic Analyses. The Sportsmen’s Lodge shopping center with gym and retail uses (Related Project No. 1) was recently constructed but is not yet fully operational. The Sportsmen’s Lodge apartments and restaurant/retail uses is not yet constructed and is in the entitlement phase (Related Project No. 5). These projects were accounted for the Project’s cumulative traffic analysis, as discussed below.

The analysis of transportation related impacts was included in Section IV.M, *Transportation*, of the Draft EIR. The section assessed potential Project impacts based on the TA prepared by Fehr & Peers, dated April 2020 and included as Appendix M of the Draft EIR. The TA was prepared in accordance with LADOT’s TAG adopted in July 2019 (updated in July 2020). The TA was approved by LADOT on June 10, 2021, with an updated approval on June 11, 2021.

In accordance with the TAG and consistent with the City CEQA Transportation Thresholds (adopted July 30, 2019), the TA includes an analysis of intersection LOS, which is a non-CEQA issue. The analysis assesses traffic conditions along Ventura Boulevard between Coldwater Canyon Avenue and Whitsett Avenue, as well as the driving routes between the Upper School campus and the Project Site.

“Non-CEQA” issues are not required to be included in the Draft EIR. The non-CEQA issues are included in the TA (Appendix M of the Draft EIR) for informational purposes only. Refer to Topical Response No. 9, Transportation and Parking During Construction and Operations, for additional information on CEQA and non-CEQA issues that are included in the TA and Draft EIR Section IV.M, *Transportation*.

With regard to the LOS traffic analysis, traffic from all related projects, including Sportsmen’s Lodge, which are listed in Chapter III, *Environmental Setting*, of the Draft EIR, was accounted for in the traffic analysis.<sup>5</sup> Based on the proposed uses of the related projects, the TA calculated trips from these projects and included them in the future (2025) Project buildout traffic analyses using LADOT-required assumptions about future traffic growth. In addition, an ambient growth factor of 0.6 percent per year was applied to adjust the baseline year (2020) traffic volumes to reflect the effects of regional growth and

<sup>5</sup> The list of related projects was provided by LADOT.

development. This adjustment was applied to the baseline year (2020) traffic volume data to reflect the effect of ambient growth by the year 2025. This methodology is consistent with standard practices and TAG methodology for TA's in the City, which was approved by LADOT. Furthermore, the methodology to analyze cumulative transportation impacts was consistent with the applicable requirements of CEQA Guidelines Section 15130 in determining cumulative impacts. Refer to Topical Response No. 12 for additional detail regarding the Project's cumulative traffic impacts.

### **Comment No. IND 143-4**

There is the added, quiet, recently suggested admission to by supporters, prospect that this project is creating more "off site general parking" for the school when it suits your needs. Many claim that the limited number of students won't be disruptive, but this amount of parking spaces suggest a greater attendance by the school, if not "off site parking".

Can Harvard Westlake commit in writing that this is not the case?

### **Response No. IND 143-4**

This comment inquires if the School will commit to no off-site parking. The parking structure's full capacity would only be needed for larger, onsite events, and would not be used for events occurring on the Upper School campus or for daily parking by students during the academic day. If the Project were to be approved, the Project's CUP would prohibit "spill over" parking by establishing potential conditions of approval that would limit the use of the parking structure for the School's use during on-site activities and only to visitors to the Project Site that the School has approved. Refer also to Topical Response No. 9 - Transportation and Parking During Construction and Operations, for additional discussion of the Project's parking program. Also, as discussed in Topical Response No. 9, with the Project design modifications (presented in Topical Response No. 2 – Modifications to the Project Design), the Project's number of parking spaces would be reduced from 532 to 403, for a reduction of 129 spaces.

### **Comment No. IND 143-5**

They profess neighbors and the community stakeholders will have access, "with approval".

As currently stated "when not in use by students" is disingenuous, as the site is being offered to outside organizations which further limits general public use. I don't see the added benefit of recreation use to the neighbors with these windows being limited.

Seems a very narrow window for swimming pool access alone, to say the least, and for "approved" visitors only.

## **Response No. IND 143-5**

Refer to comment to Topical Response No. 3 – Enforcement of Public Access, which describes the approval process and why an approval process is needed. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

## **Comment No. IND 143-6**

The claim is 6 acres for public use, but these are aggregated by the walking paths. Walking paths does not a park make. The club house and putting green on the north/east corner were mandated this was not an offering in generosity.

## **Response No. IND 143-6**

This comment states that walking paths (the Project’s publicly accessible pathway) are not the same as a park and claims the clubhouse and putting green were mandated and not an offering in generosity. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

The commenter is referred to Response No. IND 42D-26 which discusses the need for pathways in the San Fernando Valley based on the City of Los Angeles Department of Recreation and Parks (RAP) Citywide Community Needs Assessment. Of listed recreational facilities, the Needs Assessment lists “walking paths” as the greatest recreational need above all other recreational uses in the south San Fernando Valley. In addition, see Topical Response No. 3, as referenced above, for additional discussion of the Project’s publicly available recreational opportunities.

## **Comment No. IND 143-7**

It has been brought to my attention that new construction property “adds value” to a city and that added value which is considered taxable, is on us. That added value tax is carried forward by individual property owners. The developers receive tax incentives to build. Private schools are usually non for profit and are exempt from many taxes. When the city does not absorb those incentives the incentives given away are passed on thru and carried by the citizens. This school facility will likely cause property taxes to rise for the neighborhood.

Can they say with any authority that this is not the case?

## **Response No. IND 143-7**

The comment inquires if property taxes in the surrounding community would rise as a result of the Project’s “added value.” This concern is based on speculative statements

that are not supported by facts. An EIR is not required to engage in speculation. (*Napa Citizens for Honest Government v. Napa County Board of Supervisors* (2001) 91 Cal. App. 4th 342, 373.) Moreover, in addition to the comment lacking evidence to support the concern that the Project would impact property values, economic effects of a project are not appropriate CEQA considerations unless they would lead to a physical impact on the environment. See CEQA Guidelines Section 15131.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 143-8**

I'm further informed: "These existing trees are mature and some are 85 feet tall and 46' DBH (width breast height) They are about 70 years old. At this point they have sequestered CO2 equivalent of carbon 310,225.13 lbs. So cutting down these trees to put in 46" box California oak trees with a DBH of about 4' cannot keep apace [sic] with the carbon sequestering. In 20 years these new oaks would sequester the CO2 equivalent of carbon 3,031.11 lbs. Also, when you cut down that Blue Gum, all the carbon it has sequestered in the ground, gets released.

So "replacing mature trees" suggested does not appear accurate scientifically. It is a net loss to raze these mature trees".

### **Response No. IND 143-8**

The comment expresses concerns about the Project based on the removal of trees. While the comment includes data on sequestered carbon, no evidence or sources are provided to support the data. See Topical Response No.5 – Biological Resources/Trees, for a discussion of impacts to on-site trees. Refer to Response No. ORG 14A-1 for additional discussion of the Project's tree replacement program. Please also refer to Response No ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 143-9**

Even so, how will the existing animal population be handled once trees are taken down, specifically the owls going back generations, and other birds that migrate along the river? Or bats that help keep the mosquito population in check.

### **Response No. IND 143-9**

The comment expresses concern about the Project based on tree removal and impacts to common wildlife and bird species. The commenter is referred to Topical Response No. 5 – Biological Resources/Trees, in this Final EIR, for a detailed discussion regarding the Project's tree removal and replacement program. In addition, refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife and nesting birds. Also, refer to Response No. ORG 7A-143 for a discussion of bat populations that currently use the Project Site.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 143-10**

Is the water reclamation project the most environmentally sound one due its proximity to the river? And is the water reclaimed to be used by any entity other than HW?

### **Response No. IND 143-10**

This comment asked whether the water reclamation project is the most environmentally sound one. All water reclamation systems/projects are designed based on project specific parameters, which vary from project to project. For the Project at hand, the water reclamation system is being installed to improve stormwater runoff water quality from the approximately 17-acre Project Site. As discussed in Topical Response No. 2 – Modifications to the Project Design, and in Chapter 3, *Revisions, Clarifications, and Revisions*, of this Final EIR, the capacity of the Project's stormwater capture and reuse system was reduced from a 1 million gallon cistern under the Project as evaluated in the Draft EIR to an approximately 350,000 gallon cistern under the Project with modifications discussed in this Final EIR. The stormwater capture and reuse system will control and filter stormwater from the Project Site that currently flows directly into the Los Angeles River and would, thus, serve a beneficial purpose. It would also reduce demand on the LADWP's domestic water supply.

### **Comment No. IND 143-11**

What will the excavation for the 535 underground parking spaces, and the other underground structures, adversely do to the underground water table? Climate studies show artificial turf is a questionable alternative environmentally.

It blocks access to the soil beneath for burrowing insects, such as solitary bees, and the ground above for soil dwellers such as worms, feeding birds, frogs, which will be starved of food beneath it.

## Response No. IND 143-11

This comment raises concerns about impacts to the groundwater table and from the Project's artificial turf. As discussed in Topical Response No. 9, with the Project design modifications (presented in Topical Response No. 2 – Modifications to the Project Design), the Project's number of parking spaces would be reduced from 532 to 403, for a reduction of 129 spaces.

The Draft EIR addressed hydrology and water quality impacts in Section IV.I, *Hydrology and Water Quality*, with supporting data provided in Appendix I, Hydrology and Water Quality Report, of the Draft EIR. As analyzed therein, hydrology and water quality impacts would be less than significant. Further, refer to Response No. ORG 9-5, which explains that infiltration at the Project Site is not feasible and that the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the SFV Groundwater Basin. Thus, groundwater recharge impacts would be less than significant.

The type of artificial turf anticipated for use at the Project Site is a permeable medium and would not block air or water from entering the ground. Spreading tree roots can also survive below the artificial turf surface. Worms, insects, grubs and other species that live in soils and rely on moisture, access to air, and the biome created among tree roots would continue to be viable.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment No. IND 143-12

Are there any restrictions on future expansion once the school gets this approval? Current zoning restricts this? Future variants to the code may not.

Will HW commit in writing that they will not go deeper, higher or wider than their current proposed footprint?

For instance, Campbell Hall campus continues to expand. (Recently received a variance for additional lighting I suspect HW will eventually as well. ) These expansions have many ramifications on the neighborhood and not just their Laurel Canyon campus address, but the neighborhood behind the Tujunga Wash/Riverside/Moorpark/Whitsett corridor. As do Notre Dame and Oakwood (on Magnolia also residential area).

## Response No. IND 143-12

The comment inquires if there are any restrictions on future expansions. Any future discretionary projects, including potential expansions of the Project Site, would be subject

to revisions to the Project's requested CUP and discretionary review and approval by the City. All future discretionary projects would be subject to environmental review under CEQA. Future environmental review under CEQA would analyze and disclose potential environmental impacts of future proposed discretionary projects to the City and decision-makers prior to approval of any project development applications. CEQA requires a review of land use compatibility including an analysis of consistency with existing zoning regulations; however, it is up to the discretion of the City to approve or reject future projects.

### **Comment No. IND 143-13**

I was told they wouldn't use a P.A. system, I'm now told otherwise. Any restrictions on P.A. levels. Campbell Hall levels are excessively high and amplified by the Wash? I suspect the Harvard Westlake levels will have the same sound effect on the surrounding neighborhood. BTW, Campbell Hall ignores neighbors' request to study this. Which alerts my concerns that Harvard Westlake, once entrenched [sic] will ignore the same.

### **Response No. IND 143-13**

The comment inquires about restrictions on public address (P.A.) levels. Project Design Feature NOI-PDF-2 established restrictions on the Project's proposed amplified sound system. As stated therein:

NOI-PDF-2: The Project's amplified sound system for special events at Field A will be installed and designed using a line-array speaker system, so as to not exceed a maximum noise level of 92 dBA (Leq) at a distance of 50 feet from the amplified sound system. In addition, the stage for special events will be located at the north side of Field A, with the amplified sound system facing south in the opposite direction from the off-site sensitive uses to the north of Field A, which would reduce speaker noise at the nearest off-site sensitive uses to the north and east of Field A.

Furthermore, operational noise impacts to off-site receptors are fully evaluated in Section IV.K, *Noise*, of the Draft EIR. As described in Section IV.K, operation noise impacts, (including a conservative, composite analysis of all athletic facilities, the sound system, and noise being used simultaneously) would not exceed noise impact standards established by the City, and impacts would be less than significant. Refer to Topical Response No. 8 – Noise: Construction and Operation Impacts for additional discussion of noise impacts.

### **Comment No. IND 143-14**

Two + years of development with the noise, traffic and air pollution (as I see it largely from excavation) will be a nightmare for those in the direct vicinity even before intended use. (And as stated before Campbell Hall recently received a variance for additional lighting.)

There aren't walls high enough to mitigate it in a residential area.

## Response No. IND 143-14

The comment expresses concern about the Project based on construction noise, traffic, air pollution and lighting.

The commenter is referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, Topical Response No. 9 – Transportation and Parking During Construction and Operations, and Topical Response No. 4 – Aesthetics, in the Final EIR for a discussion of construction and operational noise, traffic, and lighting impacts, respectively. Also, the Draft EIR addressed air quality impacts in Section IV.A, *Air Quality*, with supporting data provided in Appendix B, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant after mitigation, where applicable.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment No. IND 143-15

I'm told the CUP for HW does not match the commitment of the city to the tenets of the environmental impact of the large number of buildings and turf to the heat index created to the neighborhood and city/region. Since this property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit", I don't feel that it's a fair "playing field" with the resources available to the school for the DEIR, and our only resources are appealing to the city. We as individuals don't make those kinds of donations to city officials, which unfortunately makes our voices less heard and less valuable. Yet try we will.

My house is on Bellaire which isn't affected negatively by the lighting on the golf course, nor any other aspect of the current facility.

I'm concerned that all mentioned above will degrade my quality of life, bring down my property value and at the same time raise my taxes. All for the benefit of a few.

## Response No. IND 143-15

The comment expresses concerns about the Project based on the CUP, lighting, quality of life and property values. With regard to the Project CUP, refer to Response No. 42D-34 for a discussion of the Project's requested CUP. Refer to Topical Response No. 4 – Aesthetics, for a discussion of operational field lighting impacts. Refer to Response No. Form 3-3 for a discussion of issues related to quality of life, property values and taxes.

The comment also expresses concern regarding the impact of artificial turf and associated heat island effects. See Topical Response No. 7 – Artificial Turf and Effects on Localized

Heat and Health, which addresses the potential health-related and urban heat island effects due to the Project's use of artificial turf fields.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 143-16**

I am highly appreciative of their commitment for security along the adjacent portion of the River!

### **Response No. IND 143-16**

The comment expresses appreciation for the commitment to security along the Los Angeles River. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 143-17**

However, I feel strongly that before this project can move forward (and I am under no illusion that it won't in some form since you currently own it) many questions and issues demand further study.

My request is they reduce their footprint, taking into consideration the impact of; traffic, noise, construction, the environment and climate in areas that are in dispute and appear to be in the schools interest alone.

If these negative issues can be addressed, promising in writing no future expansion, and future variances not be included in the grand plan, adding increased public use, perhaps Harvard Westlake can actually contribute to the neighborhood and gain support. I fear the cost benefit to them for my illusion is too great.

(One suggestion was a swap with Valley City College. Harvard Westlake uses their facility and the city uses Weddington. Works for me.)

### **Response No. IND 143-17**

The comment suggests that the School reduce building footprint in consideration of traffic, noise, construction and climate impacts. These issues are addressed in responses provided above within this letter. Also, refer to Response Nos. IND 34-4 and 34-5 for a discussion of alternative sites considered in the Draft EIR, including Valley College.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 144

Laurie Cohn

Received May 2, 2022

Received May 9, 2022 (Per commenter, replaces May 2, 2022 letter)

### Comment No. IND 144-1

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

### Response No. IND 144-1

This comment provides the same comments presented in Form Letter 3. Responses to this comment are provided in Response Nos. FORM 3-1, FORM 3-3 and 3-4.

### Comment No. IND 144-2

Their list of the 4 Alternatives are NOT TRUE ALTERNATIVES.

In DEIR Section V -Alternatives, the following is stated:

*In order for the Project to satisfy the Project Objectives, a property would need to be of sufficient size to accommodate two playing fields, tennis courts, a pool, all with respective bleachers, and a gymnasium that would provide for recreational practice and instruction, as well as allow for competitive meets with available spectator seating and adequate onsite parking to preclude off-site parking. The other criteria for the Project include relatively close proximity to the existing Harvard-Westlake's Upper Campus on Coldwater Canyon Avenue in Studio City (occupied since 1937) and a site with level topography to allow for the development of the contemplated recreational facilities. Proximity is a criteria factor because of the need for daily commuting from the Upper Campus, as it relates to higher daily vehicle miles. The Project Site is the only nearby site in proximity to Harvard Westlake's Upper Campus with the appropriate topography and size to accommodate the School's proposed recreational facilities. Although the 17.2-acre Project Site would have enough space to allow 5.4 acres of additional open space, this still indicates that an acreage of approximately 12 acres would be required to allow the proposed recreational facilities. No other location with adequate acreage and topography exists within close proximity to the School's Upper Campus. Another important factor in the proposed use of this site is that, in addition to convenience and topography, the Project Site is owned by*

*Harvard-Westlake School. The School does not own or have the current opportunity to own another similar site within the nearby area.*

This is completely disingenuous. The developer has created such an overly MASSIVE plan, with all of their dream scenarios crammed onto one site, that they've tried to present it as impossible to relocate elsewhere. This is not so. They already have multiple gyms (one which is old and can be rebuilt on their Coldwater campus). They already have an Olympic sized pool with Italian tile they are quite proud of. They don't need another. The argument is made that if the alternate site is further from their campus it will create higher daily vehicle miles. How about all the vehicle miles and increased traffic( students, coaches, spectators, visiting teams for numerous events), increased parking in residential neighborhoods that their current development plan will create?

## **Response No. IND 144-2**

This comment states that the Draft EIR's discussion of alternative sites in Chapter V, *Alternatives*, of the Draft EIR, is disingenuous, citing in part the available existing facilities on the Upper School campus. The comment also refers to VMT, increased traffic and parking within residential neighborhoods near the Project Site.

With regard to alternatives evaluated in the Draft EIR, refer to Response No. IND 87A-7 which includes a discussion substantiating how the Draft EIR included a reasonable range of alternatives as required by CEQA. Refer to Response Nos. IND 34-4 and 34-5 for a discussion of alternative sites considered in the Draft EIR. For additional discussion of the Project's adequacy of alternatives in the Draft EIR, refer to Response Nos. ORG 1B-104 through ORG 1B-106, and ORG 7A-146 to ORG 7A-174.

The comment further questions the Project's VMT and implies there would be increased traffic impacts compared to existing conditions. The evaluation VMT for the Project is fully analyzed in Section IV.M, *Transportation*, of the Draft EIR and further explained in Topical Response No. 9 – Transportation and Parking During Construction and Operations, in this Final EIR. As described in more detail therein, the Project would reduce VMT compared to existing conditions. Also, refer to Topical Response No. 9 for a discussion of the Project's traffic patterns, effects on local streets, and consistency with CEQA threshold levels.

Also, the parking structure's maximum capacity would only be needed for larger, onsite events, and would not be used for events occurring on the Upper School campus. If the Project were approved, the Project's CUP would prohibit "spill over" parking by establishing potential conditions of approval that would limit the use of the parking structure for the School's use during on-site activities and only to visitors to the Project Site that the School has approved. Refer also to Topical Response No. 9 - Transportation and Parking During Construction and Operations, for additional discussion of the Project's parking program. Also, as discussed in Topical Response No. 9, with the Project design modifications (presented in Topical Response No. 2 – Modifications to the Project Design), the Project's number of parking spaces would be reduced from 532 to 403, for a reduction of 129 spaces.

**Comment No. IND 144-4**

They wrote this DEIR as their wish list with no consideration for the damage to the environment, the massive loss of mature trees, the destruction of a precious outdoor community recreational facility and gathering place which during our Covid times is more needed than ever.

**Response No. IND 144-4**

The comment expresses concerns about damage to the environment, loss of mature trees, and removal of the outdoor community facilities associated with the Weddington Golf & Tennis facilities.

As described in Sections 15121(a) and 15362 of the California Environmental Quality Act (CEQA) Guidelines, an EIR is an informational document that will inform decision-makers and the general public of the environmental impacts resulting from a project, identify possible ways to minimize any significant effects, and consider reasonable project alternatives.

The commenter is referred to Topical Response No. 5 – Biological Resources/Trees, in this Final EIR, for a detailed discussion regarding the Project's tree removal and replacement program.

As discussed in Chapter II, *Project Description*, of the Draft EIR, the Project would retain and rehabilitate the existing clubhouse with café and associated putting green, which would remain open to the public. Refer to Topical Response No. 11 - Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation. Also, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 144-5**

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Please consider the 100,000+ Angelenos who enjoy this beloved facility and open green space and deny permission to build this project.

**Response No. IND 144-5**

This comment provides the same comment presented in Form Letter 3. A response to this comment is provided in Response No. FORM 3-5.

## **Comment Letter No. IND 145**

Lorenzo Family  
Received May 2, 2022

### **Comment No. IND 145-1**

Save Weddington Golf and Tennis! It's our only Historically Public Tennis and Golf, for the NoHo, Studio City, Sherman Oaks, Valley Village, Toluca Lake and all the surrounding areas.

### **Response No. IND 145-1**

The comment advocates for the preservation of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 145-2**

Public transit, car pulling, walking, cycling, electric vehicles provide simple environment conscious transportation.

If you live within 5 miles or even 10 miles from Weddington Golf and Tennis, It takes less than one \$6.00 gallon of gas to participate in two of the best sports for all age groups, genders, cultures, races, religions and all family members of the human race.

### **Response No. IND 145-2**

The comment provides general information regarding community access to the existing Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 145-3**

Both sports are competitively, ethically, physically challenged and community supportive.

Not everyone can participate in high impact team sports. Not everyone can afford a country club membership.

Everyone has an opportunity to be physically active practicing mobility adding to good health and mind wellness.

**Response No. IND 145-3**

The comment expresses that the existing golf and tennis facilities are beneficial to the community for the various reasons stated in the comment. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 145-4**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

**Response No. 145-4**

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. 145-5**

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

**Response No. IND 145-5**

This comment is the same as Comment No. FORM 3-3. Please refer to Response No. Form 3-3.

**Comment No. IND 145-6**

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

**Response No. IND 145-6**

This comment is the same as Comment No. FORM 3-4. Please refer to Response No. Form 3-4.

**Comment No. IND 145-7**

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to

speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

**Response No. 145-7**

This comment is the same as Comment No. FORM 3-5. Please refer to Response No. Form 3-5.

## **Comment Letter No. IND 146**

Michael Hooks

Received May 2, 2022

### **Comment No. IND 146-1**

I live at 12934 Valleyheart in Studio City, in Council District 4. I believe that Harvard-Westlake's plans for River Park will not only be a benefit to the environment, but the community as well. I am in full support of their proposed plans. It's good for Harvard-Westlake School and preserves open space for the neighbors to enjoy. As a neighbor of the property, I look forward to using it!

### **Response No. IND 146-1**

The comment expresses support for the Project based on the environmental and community benefits. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 147**

Michael O'Connell  
Received May 2, 2022

### **Comment No. IND 147-1**

I live at 3893 Franklin Ave in Council District 4 and I strongly support the Harvard-Westlake River Park. My address may seem a long distance from the project, but I've been deeply involved with issues along the Los Angeles River for the last 15 years.

I urge you to support this project because it is good for the school, good for the environment, and good for the Studio City community. The River Park will preserve urban open space and will provide more recreational amenities for the immediate community than currently exist on the site. Moreover, the redeveloped site can serve as an experiential learning opportunity for students, helping them understand the role of the LA River in our ecosystem.

### **Response No. IND 147-1**

The comment expresses support for the Project based on the benefits to the school, environment, and community through the preservation of open space and provision of recreational amenities. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 148**

Stuart Lichtman and Gloria Walther  
Received May 2, 2022

### **Comment No. IND 148-1**

We are firmly and absolutely opposed to the proposed devastation of this beautiful oasis that we and our neighbors frequently visit.

In our opinions, there is no justification for diminishing our environment for the sole benefit of money and ego grabbers.

We'd frankly like to restructureu [sic] the entire Planning Commission that even seriously entertains projects like this and the Millennium travesty.

You're supposed to be acting on the community's behalf to protect us from scofflaw developers. Please start doing that job. Please start by denying this application.

### **Response No. IND 148-1**

The comment expresses general opposition to the Project based on the loss of the existing Weddington Golf & Tennis facility and suggest the Project would diminish the environment. However, the commenter does not provide any substantive facts or support for these concerns or opinions. The comment further requests the City decision-makers disapprove the Project.

This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 149**

Victoria Miller  
Received May 2, 2022

### **Comment No. IND 149-1**

As a lifelong Angeleno, spending most of my adult life living in the San Fernando Valley, I am writing you to share my deep opposition to Harvard Westlake School's destruction of Weddington Golf and Tennis based in Studio City.

### **Response No. IND 149-1**

The comment expresses general opposition to the Project based on the loss of the existing Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 149-2**

The sheer size and scale of this proposed project will destroy a large parcel that is full of history and mature trees, and forever change the integrity and character of Studio City, and surrounding communities.

### **Response No. IND 149-2**

The comment expresses opposition to the Project based on the size and scale of the Project, history of the site, and tree removal.

The commenter is referred to Topical Response No. 4 – Aesthetics, for a discussion of the Project's aesthetics impacts, including impacts related to the visual character and quality of the Project Site.

Refer to Topical Response No. 6 – Historic Resources, for a discussion of direct and indirect impacts on historical resources resulting from the Project, including project design features that would preserve historic character-defining features of the Project Site.

The commenter is also referred to Topical Response No. 5 – Biological Resources/Trees, for a discussion of the Project's tree removal and replacement program.

This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 149-3**

If this project is approved “as is” it will become detrimental to the quality of life, property values, and access to recreational open space in the San Fernando Valley.

The environmental studies included in the recently released DEIR [paid for by Harvard Westlake, mind you], do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

While I live in Encino, the mere fact that I am writing to protect this special gem hopefully will demonstrate how much it is valued by so many. This particular property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit." Both would require your approval to be granted. You are the only current Councilmember who has a master's degree in Urban Planning— it is arguable that you know more about this subject than any other Councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

Thank you in advance for your time and attention to this matter,

### **Response No. IND 149-3**

This comment provides similar comments presented in Form Letter 3. Responses to this comment are provided in Response Nos. FORM 3-3 to 3-5.

## **Comment Letter No. IND 150**

Alan Penchansky  
Received May 3, 2022

### **Comment No. IND 150-1**

I am writing in opposition to Harvard Westlake's planned destruction of Weddington Golf and Tennis but am not sending the text prepared by the Save Weddington organization.

### **Response No. IND 150-1**

The comment expresses general opposition to the Project based on the loss of the existing Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 150-2**

I want to say simply that the plan is abhorrent. With vanishing green space and climate change encroaching on our very existence it is insane to consider tearing out what little established natural environment still exists.

### **Response No. IND 150-2**

The comment expresses opposition to the Project based on the loss of green space and climate change. Refer to Topical Response No. 5 – Biological Resources/Trees, and Response No. ORG 14A-1 for a discussion of impacts to trees and the Project's tree replacement program. Please also refer to Response No ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.

In addition, the Draft EIR addressed greenhouse gas emissions (GHG) impacts in Section IV.G, *Greenhouse Gas Emissions*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, GHG impacts would be less than significant.

This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 150-3**

Harvard Westlake will deprive the entire Studio City community of enjoyment of Weddington's peacefulness and quiet while inflicting years of severe disruption and permanent financial harm on hundreds of homeowners.

### **Response No. IND 150-3**

The comment expresses general opposition to the Project citing years of severe disruption and permanent financial harm. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 150-4**

This project is so outsized and such a terrible fit for our neighborhood that I am astonished it has gotten so far!

### **Response No. IND 150-4**

The comment expresses general opposition to the Project based on the size of the proposed development. The commenter is referred to Topical Response No. 4 – Aesthetics, for a discussion the visual impacts of the Project. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 150-5**

I urge your support in seeking an alternative to the Harvard-Westlake project. We need your help to stop this insanity.

### **Response No. IND 150-5**

The comment requests an alternative to the Project. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 151**

Barbara Hobbs  
Received May 3, 2022

### **Comment No. IND 151-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

## **Comment Letter No. IND 152**

Deborah and Christopher Nibley  
Received May 3, 2022

### **Comment No. IND 152-1**

We are concerned homeowners of four homes directly impacted by Harvard/Westlake's plans to build an oversized sports center at Weddington Golf & Tennis.

Besides the problem of increased traffic, additional parking and loss of privacy, we are extremely concerned about noise. All of our neighbors, on a daily basis, will hear crowd cheers, coaches directing students and every other noise emanating from the sports field. One of the reasons we invested in this neighborhood was because of the quiet, safety and bucolic nature of the area.

### **Response No. IND 152-1**

The comment expresses concerns about traffic, parking and noise resulting from the Project. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of operational traffic impacts. Also, refer to Topical Response No. 8 - Noise: Construction and Operation Impacts, for a discussion of operational noise impacts.

The parking structure's maximum capacity would only be needed for larger, on-site events, and would not be used for events occurring on the Upper School campus. If the Project were to be approved, the Project's CUP would prohibit "spill over" parking by establishing potential conditions of approval that would limit the use of the parking structure for the School's use during on-site activities and only to visitors to the Project Site that the School has approved. Refer also to Topical Response No. 9 for additional discussion of the Project's parking program. Also, as discussed in Topical Response No. 9, with the Project design modifications (presented in Topical Response No. 2 – Modifications to the Project Design), the Project's number of parking spaces would be reduced from 532 to 403, for a reduction of 129 spaces.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 152-2**

We and our tenants will bear the brunt of three years of construction. Especially, since our properties are adjacent to the planned sports field. The dirt and dust will greatly impact our homes, front and back yards. We take pride in maintaining our properties and keep them in excellent condition. It will be terrible to have a deluge of construction particulates in the air, so that we cannot enjoy our own private areas.

### **Response No. IND 152-2**

The comment expresses concerns about construction-related dirt and dust. Refer to Response No. IND 7-3 which addresses these issues.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 152-3**

And finally, the wild animal population (racoons, opossums, skunks, birds and other creatures) who live on the golf course, will be displaced. They will look for the closest place to relocate, and infiltrate our neighbor's homes.

### **Response No. IND 152-3**

The comment expresses concerns about impacts to common wildlife who live on the golf course. Please refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 153**

Larry Rogers  
Received May 3, 2022

### **Comment No. IND 153-1**

I am writing in opposition to Harvard Westlake's destruction of the Weddington Golf and Tennis.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

### **Response No. IND 153-1**

This comment provides the same comments presented in Form Letter 3. Responses to this comment are provided in Response Nos. FORM 3-1 and 3-2.

### **Comment No. IND 153-2**

This is one of the last Green Spaces in Studio City where I have lived since 1987. The plan will remove all of the wonderful trees (240) on Valley Spring Lane and Whitsett. This planned change will dramatically increase traffic on Whitsett where people already speed at 40MPH and on the quiet residential side streets on "Game Days" . By adding all of the new concrete and removing the trees and grass from our neighborhood it will only increase the noise, temperature and CO2 pollution so a privileged school can have a bigger athletic department.

### **Response No. IND 153-2**

The comment expresses concerns about the Project based on tree removal, traffic, noise, temperature and CO2 pollution.

Please refer to Topical Response No. 5 – Biological Resources/Trees, and Response No. ORG 6A-1 for a discussion of impacts to trees and the Project's tree replacement program. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, and Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of construction and operational traffic and noise impacts.

With regard to temperature changes resulting from the Project, refer to Response No. ORG 12-4. Please also refer to Response No ORG 6A-1, which discusses how the Project would result in an increased tree canopy after nearly 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.

The Draft EIR addressed air quality impacts in Section IV.A, *Air Quality*, with supporting data provided in Appendix B, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant after mitigation, where applicable.

Also, the Draft EIR addressed GHG impacts in Section IV.G, *Greenhouse Gas Emissions*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, GHG impacts would be less than significant.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 153-3**

In addition, what will be the impact on the nearby residents for their quality of life when they have to hear the loud noise of various games at the location and the bright lights that will also fall on the nearby homes? How much will the home values decrease?

### **Response No. IND 153-3**

The comment expresses concerns about quality of life due to noise and lighting impacts, as well as property values. The commenter is referred to Topical Response No. 4 – Aesthetics, for a discussion of impacts related to light and glare and Topical Responses No. 8 – Noise: Construction and Operation Impacts. for a discussion of noise impacts. Refer also to Response No. IND 153-1 which addresses concerns regarding quality of life and property values.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 153-4**

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

## **Response No. IND 153-4**

This comment provides the same comments presented in Form Letter 3. Responses to this comment are provided in Response Nos. FORM 3-4 and 3-5.

## **Comment Letter No. IND 154**

Sheri Herman  
Received May 3, 2022

### **Comment No. IND 154-1**

And then there is this!!! PLEASE DON'T ALLOW HARVARD-WESTLAKE DESTROY STUDIO CITY!!

They have plenty of money to build their MEGA Sport's Complex elsewhere and not in a residential area where traffic is bad and right next to a fire station.

The city failed by not purchasing this historic site when the Weddington Family was selling it. I am sure a deal could have been made.

There is so much corruption in our City and with Building and Safety allowing these McMansions that are being built in charming historic neighborhoods all they care about are the developers and the \$\$\$ that crosses their palms!

### **Response No. IND 154-1**

The comment expresses general opposition to the Project, including concerns regarding traffic and proximity to a fire station. Although not required under the CEQA Guidelines, the Project's traffic impacts were evaluated in the Transportation Assessment (TA) contained in Appendix M of the Draft EIR. The TA, which was reviewed and approved by the LADOT, determined that the Project's vehicle traffic would not exceed thresholds of significance on surrounding streets and arterials. Regarding local neighborhood streets, the Project would take access at Whitsett Avenue, a secondary highway. Access points include the Project's north driveway, which is directly on Whitsett Avenue, or from the south driveway, which access Whitsett Avenue via Valleyheart Drive. The only other user of this segment of Valleyheart Drive is LAFD Station 74. No residential uses would be impacted. The Project would have no direct access to adjacent local residential streets, such as Bellaire Avenue or Valley Spring Lane. The use of residential streets would be inconvenient in entering or leaving the Project Site, unless the origin or destination location would be specifically accessible through the nearby residential streets. As such, the Project vehicle traffic would not adversely impact local neighborhood streets.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 154-2**

<https://youtu.be/5dxmr-zsfhE>.

## Response No. IND 154-2

The link to the Angelenos For Trees video provides appropriate and correct information regarding the importance of the tree canopy to the overall ecosystem. Regarding the effect of the Project on trees, the existing and future tree canopy, and other native landscape, refer to Topical Response No. 5 – Biological Resources. Regarding the effect of the Project on trees, the existing and future tree canopy, and other native landscape, refer to Topical Response No. 5 – Biological Resources. As discussed in Topical Response No. 5, the Project's tree removal and replanting program was fully analyzed in the Draft EIR's Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). Many of the removed species, such as the Mexican Fan Palms are identified as invasive and would be replaced by trees that are compliance with the River Improvement Overlay (RIO) Ordinance. The majority of street trees would remain and any removed street trees would be replaced at a 2:1 ratio. The existing mature trees along the Zev Greenway, Bellaire Avenue, and Whitsett Avenue would remain. The majority of mature street trees along Valley Spring Lane would also remain, except for two smaller sections along the street front (see Section IV.C, *Biological Resources*, Figure IV.C-4, *Tree Removal Plan, of the Draft EIR*). The Project would result in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree Planting Plan, of the Draft EIR*). Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.

## **Comment Letter No. IND 155**

James Krug

### **Comment No. IND 155-1**

Thank you

Please don't ever forget Joanie [sic] Mitchell's Big Yellow Taxi. Her words are more relevant today than ever.

### **Response No. IND 155-1**

The comment cites to a Joni Mitchell song. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 156**

Katya Volpi  
Received May 4, 2022

### **Comment No. IND 156-1**

I am writing to you to let you know of my strong opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

### **Response No. IND 156-1**

The comment expresses general opposition to the Project based on the loss of the existing Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 156-2**

I just moved near the intersection of Laurel Canyon and Ventura Blvds, one of the most congested in the area. The building of this mega sportsplex will greatly impact my quality of life in the most negative of ways with the addition of traffic that is normally not associated with the public going to Weddington.

### **Response No. IND 156-2**

The comment expresses general opposition to the Project and expresses concerns regarding traffic resulting the Project. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project's traffic patterns, effects on local streets, and consistency with CEQA threshold levels.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 156-3**

One the activities I most I enjoy in my new neighborhood, is walking along that section of the L.A. river that passes the beautiful golf course, and I see how many wild creatures enjoy that open space as well. It's a place where they made their homes, too.

### **Response No. IND 156-3**

The comment includes personal sentiments regarding the commenter's experiences walking along the L.A. River. The Project would not adversely impact the Zev Greenway trail. However, construction of an ADA-compliant pedestrian ramp connecting from the

Project's pathway to the Zev Greenway trail and river fence within the Project Site have the potential to impact 0.14 acre of recently restored California brittlebush scrub adjacent to the Greenway trail. The habitat would be fully restored under Mitigation Measure BIO-MM-2, with the selected locations and species types to the satisfaction of the Department of City Planning and in conformance with the landscape and planting guidelines in the Los Angeles River Master Plan Landscaping Guidelines and Plant Palettes. The Project's pathway and ramp to the Zev Greenway would enhance access to the Zev Greenway.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

#### **Comment No. IND 156-4**

I would also like the opportunity of enjoying rounds of golf there since it's open to the public, and it is my plan to do so. To destroy this place would be tragic at best. It's like a peaceful oasis in the middle of the city, it serves its residents, and it offers tranquility for its creatures. To take it away to install a private sports complex with fake grass and members who do not appreciate the neighborhood, would be such a disgrace.

#### **Response No. IND 156-4**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facilities. To clarify the existing property rights and on-site uses, the land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

In addition, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

#### **Comment No. IND 156-5**

I ask you to seriously consider my comments and point of view as it reflects the views of many, and I thank you for your time and consideration.

## **Response No. IND 156-5**

This comment concludes the letter and does not address the adequacy or content of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 157**

Sue Taylor

Received May 4, 2022

### **Comment No. IND 157-1**

As we discussed in our call in February, I am opposed to the Harvard Westlake's destruction of Weddington Golf and Tennis. I very much appreciate you taking the time to meet with our Studio City community leaders on site and see first hand what is at stake.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

### **Response No. IND 157-1**

This comment provides similar comments presented in Form Letter 3. Responses to this comment are provided in Response Nos. FORM 3-1 and 3-3.

### **Comment No. IND 157-2**

The feedback that I am getting in our local Footbridge Square community of Studio City is mostly related to concerns about the effect on the environment, the huge impact on traffic that is already atrocious, and the inevitable light/noise factor from having a stadium and events next door to single family housing.

### **Response No. IND 157-2**

The comment expresses concerns about the Project related to traffic, noise and lighting. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, Topical Response No. 8 – Noise: Construction and Operation Impacts, and Topical Response No. 4 – Aesthetics, in the Final EIR for a discussion of traffic, noise, and lighting impacts, respectively. Also, note that the Project would provide high school playing fields and bleachers, which do not constitute a stadium.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 157-3**

And not the least of it is the loss of recreational space that is really accessible to many who otherwise might not have similar opportunities.

The picture that is being painted by HW of community access and vast walking trails is pretty clear to see through and not at all what is being sold in their social media campaign.

If they are disingenuous now, I can't imagine what it will be like if they are allowed to proceed.

### **Response No. IND 157-3**

The comment expresses concerns about the Project based on the loss of recreational space. Please refer to Topical Response No. 3, Enforcement of Public Access, and Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for discussions regarding public access and recreational uses available to the public under the Project.

The comment asserts that the School has been disingenuous, but provides no facts or support of any kind for such assertions.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 157-4**

This property is zoned agricultural/open space and requires “special entitlements” and a “conditional use permit”. Harvard Westlake knew this when buying the property and they took a gamble to see if they could get their plans through. Both those entitlements and CUP would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember.

Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 157-4**

This comment provides the same comment presented in Form Letter 3. A response to this comment is provided in Response No. FORM 3-5.

## **Comment Letter No. IND 158**

John Mullins

Received May 5, 2022

### **Comment No. IND 158-1**

Ms. Henry, thank you and your office for preparing this comprehensive report on the Harvard-Westlake River Park Project. In reviewing the report, I am in general agreement with its conclusions and wanted to register my full support of this project moving forward.

I am a Studio City resident who lives less than one mile from the project site. I have no ties to Harvard-Westlake School.

As a resident who too often observes uniformly vocal neighborhood opposition to almost any development project, which includes the various project iterations proposed for this site over the years, I feel that Harvard-Westlake has made a good faith effort to incorporate community feedback into its plans.

Although the primary site purpose is to support school athletics, they have included various public spaces and points of access to the LA River. They have retained elements of the historical property, including the large golf ball fixtures, clubhouse, and putting green. They are removing non-native trees and replacing them with native trees.

I am most enthusiastic about the perimeter trail. As a local runner, I have faced oncoming traffic and uneven dirt paths to the river while jogging in the area, so to have a defined pedestrian path that also includes river access is a very welcome community and environmental addition.

### **Response No. IND 158-1**

The comment expresses support for the Project based on the retention of historic elements and tree replacement. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 158-2**

My only concern (which I'm sorry if this is not for your office to pursue) is whether their proposed public access measures have any enforcement mechanisms. Could Harvard-Westlake change their mind at any time and deny public access to the facilities beyond their currently stated restrictions? I would like to see their commitment to public access codified as much as possible in their final plan, which should include an ongoing monitoring relationship with the community (possibly through a Neighborhood Council subcommittee).

## **Response No. IND 158-2**

The comment expresses a concern regarding enforcement of public access provisions contemplated by the Project. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment No. IND 158-3**

I am not worried about the noise or construction impacts, though I do not live as close to the site as others. I am more worried about the frenzied attempts to “save” the space rather than embrace its potential to better contribute to the community. This project looks wonderful and is conscious of the surrounding neighborhood’s needs and concerns. I hope the Harvard-Westlake River Park Project will proceed.

## **Response No. IND 158-3**

The comment expresses general support for the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 159**

Kevin Haibach

Received May 5, 2022

### **Comment No. IND 159-1**

I am writing to you to voice my opposition to the private Harvard Westlake Sports MEGA development. This is an ill advised project for many reasons. I am a 30+ year resident of Studio City and live on Sunswapt Drive above the proposed project. This project will have a direct NEGATIVE & SEVERE impact on our home.

### **Response No. IND 159-1**

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 159-2**

We will be subject to untenable noise and light pollution from the proposed light poles (up to 80' tall), ball fields, swimming pool, tennis courts, and grandstands. This project will be a public nuisance and there is no way to mitigate the impact from these facilities on our home. We did not purchase a home next to a sports complex such as the one that is being proposed.

### **Response No. IND 159-2**

The comment expresses concerns about the Project based on lighting and noise impacts. The commenter is referred to Topical Response No. 4 – Aesthetics, for a discussion of operational field lighting impacts. Also, the commenter is referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of operational noise impacts.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 159-3**

I understand that as an exclusive private institution Harvard Westlake is very wealthy and politically connected. We have been subject to a slick PR campaign from Harvard Westlake for a number of years that masks the true impact of this project. Harvard Westlake tried to force a similar ill advised project on Coldwater Canyon that was

rebuffed by that neighborhood. This project should be opposed for many reasons, including the following:

1. The land is zoned agricultural. This proposed project does not comply with current zoning. Harvard Westlake took the gamble when they purchased this property that they could use their money, lobbying and political influence to force this project on the Studio City community.

### **Response No. IND 159-3**

The comment implies that Harvard-Westlake has masked the true impacts of the Project, but provides no facts or support of any kind for such assertions. The comment also states the Project does not comply with existing zoning. Refer to Response No. FORM 3-5, which discusses how the Project would not conflict with the Project Site's existing zoning.

### **Comment No. IND 159-4**

2. Harvard Westlake is a private institution, the vast majority of the people who will use this facility are from outside the community. They make vague reference to some use for the general public. I don't believe them. This is from the group that at one time claimed that there would be no noise impact and that they would use 'silent whistles' on the ballfields that now have proposed grandstands!

### **Response No. IND 159-4**

The comment states that the majority of users would be from outside the community. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

The comment states Harvard-Westlake one time claimed there would be no noise impact and that they would use 'silent whistles' on the ballfields that now have proposed grandstands, but provides no facts or support for such assertions.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 159-5**

3. Harvard Westlake already has similar facilities on their existing campus.

## **Response No. IND 159-5**

The comment states that the School has similar facilities on its existing campus. The commenter is also referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment No. IND 159-6**

4. Los Angeles is already short of open space. The environmental impact of the loss of the open space, mature trees and wildlife habitat cannot be replaced.

## **Response No. IND 159-6**

This comment states that Los Angeles is short on open space, and that the loss of the open space, mature trees and wildlife habitat cannot be replaced.

To clarify the existing property rights and on-site uses, the Project Site is not public open space. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

However, upon completion of the Project, public access to the various recreational amenities onsite would be provided. Refer to Topical Response No. 3, Enforcement of Public Access, and Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for discussions regarding public access and recreational uses available to the public under the Project. The commenter is referred to Topical Response No. 5 – Biological Resources/Trees, for a detailed discussion regarding the Project's tree removal and replacement program. Also, refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife and nesting birds.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 159-7**

5. The existing Weddington golf and tennis courts are open to the general public 7 days a week. The private sports mega complex will not be. I know this is private property, but it is not zoned for this use and its development will be detrimental to the quality of life for the Studio City community.

**Response No. IND 159-7**

The commenter is referred to Response No. IND 159-4 for a discussion regarding public access and Response No. IND 159-3 regarding the Project's consistency with the existing zoning regulations.

**Comment No. IND 159-8**

6. Whitsett & Ventura Blvd. are already over taxed with traffic. The opening of the Sportsman's lodge shopping complex has added to this gridlock. In addition, there is another large project proposed on Ventura Blvd just west of Whitsett (Sunswept Place). The scope and size of this proposed project is out of scale for the neighborhood.

**Response No. IND 159-8**

This comment expresses traffic concerns over the Project and in consideration of nearby projects such as Sportsmen's Lodge. The commenter is referred to Response No. IND 154-1 for a discussion of the Project's traffic analysis provided in Appendix M, Transportation Analysis (TA), of the Draft EIR. The TA, which included nearby related projects along Ventura Boulevard, determined that traffic impacts on the area's roadways and intersections would not exceed service level thresholds. The TA traffic analysis, although not required by CEQA, was reviewed and approved by the LADOT.

Also, refer to Topical Response No. 4 – Aesthetics, for a discussion of the visual character of the Project Site and surrounding land uses.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 159-9**

7. There will be a detrimental impact from this project on all the surrounding neighborhoods. As I mentioned earlier, our home is on the hill directly above the project, and will be subject to severe impacts from the noise and light pollution from this project. The other adjacent neighborhoods will be subject to similar noise, light and traffic issues.

### **Response No. IND 159-9**

The comment expresses concerns about the Project based on noise, light, and traffic impacts. Refer to Response No. IND 159-2 which addresses noise and lighting impacts, and Response No. IND 159-8 which address traffic concerns.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 159-10**

I ask you to please OPPOSE this project. Reject the money and political influence that will benefit a few at the expense of many.

Thank you for your consideration of these issues.

### **Response No. IND 159-10**

The comment requests the City decision-makers to oppose the Project. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 160

Lesa Miller

Received May 5, 2022

### Comment No. IND 160-1

You have heard all the arguments opposing HW's development of a sports complex on the Weddington Golf/Tennis property, so I'll refrain from repeating them. I want to add my name to the list in hopes you'll do right by your constituents and NOT allow this lovely green space to be covered up! Even if you don't care about aesthetics and the fauna dependent on the existing trees and ground space, surely you must care about Studio City residents like me who adamantly oppose this project over and above any money it might bring in and everything else that goes with it, right?

Thanks for your consideration.

### Response No. IND 160-1

The comment expresses general opposition to the Project. Please refer to Topical Response 4 – Aesthetics, for a summary of aesthetic impacts, including the evaluation provided in the Initial Study (included in Appendix A of the Draft EIR). Also, please refer to Section IV.C, *Biological Resources*, of the Draft EIR for a full discussion of the Project's impact on wildlife, including bird species. As discussed therein, the Project would not result in adverse impacts regarding biological resources as defined by CEQA. In addition, with the implementation of Mitigation Measure BIO-MM-1, the Project would not result in significant impacts on wildlife species in accordance with the CEQA Guidelines. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 161**

Tracey Hughes

Received May 5, 2022

### **Comment No. IND 161-1**

I am writing this email as a longtime resident of the Studio City and Sherman Oaks area. My family has a long-standing relationship with Weddington Golf and Tennis. My brother in law worked there in the 60s and knew the family. I have played tennis. My children have learned and played tennis and golf there. We love the green space and mature trees that create the park atmosphere. It is a cool oasis in the hot temperatures of The valley.

### **Response No. IND 161-1**

This introductory comment provides reference to the commenter's relationship with the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 161-2**

I am very aware that LA CITY has determined that climate change is real and that LA CITY is committed to retention of green spaces and mature canopy to cool the city. As you know ripping out mature canopy would be VERY detrimental to our climate and for the important function trees serve to filter our smoggy air. I find it almost laughable that HW is promoting the false premise that they will "replace" the existing canopy. We live down the hill from TreePeople...why don't you ask them about the importance of trees?

### **Response No. IND 161-2**

This comment expresses concerns about climate change and how the loss of trees would be detrimental to our climate and air quality. However, the commenter does not provide any substantive facts or support for these concerns or opinions. Refer to Topical Response No. 5 – Biological Resources/Trees, and Response No. ORG 14A-1 for a discussion of impacts to trees and the Project's tree replacement program. Please also refer to Response No ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions. In addition, the Draft EIR addressed GHG impacts in Section IV.G, *Greenhouse Gas Emissions*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, GHG impacts would be less than significant.

This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 161-3**

HW plans of developing this site shows a huge number of buildings and increase of artificial turf, which in and of itself increases ambient temperature.

### **Response No. IND 161-3**

This comment raises concerns regarding increases in ambient temperature due to the Project's use of artificial turf and new buildings. With regard to temperature changes resulting from the Project, refer to Response No. ORG 12-4.

This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 161-4**

Further, access to the last green space in the southern valley is a really bad idea. As you know Los Angeles is one of the most park poor cities in the US. This destruction of green space is an abomination.

### **Response No. IND 161-4**

The comment expresses concern that the Project would result in the destruction of the green open space in the southern valley.

To clarify the existing property rights and on-site uses, the Project Site is not public open space. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

However, upon completion of the Project, public access to the various recreational amenities onsite would be provided. The commenter is referred Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. In addition, the commenter is referred to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, which discusses the recreational needs in the San Fernando Valley based on

the City of Los Angeles Department of Recreation and Parks (RAP) Citywide Community Needs Assessment, many of which the Project would provide and /or support, such as a publicly accessible pathway (walking path), indoor gyms, outdoor tennis courts, outdoor pools, and soccer fields.

This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 161-5**

I vigorously opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

**Response No. IND 161-7**

This comment provides similar comments presented in Form Letter 3. Responses to this comment are provided in Response Nos. FORM 3-1 and 3-3 to 3-5.

## **Comment Letter No. IND 162**

Ed Cunningham  
Received May 6, 2022

### **Comment No. IND 162-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

I have lived in Studio City and Valley Village and have been using Weddington Golf and Tennis for 22 years. I am currently teaching my daughters, who attend Walter Reed Middle School and North Hollywood High School, how to play golf at Weddington.

My father was a member of a US Open golf course outside Washington D.C. (Congressional Country Club) and I was very lucky to learn the game there from some of the best teachers in golf. My daughters are not as fortunate. But it's clear to me that they actually appreciate their course (Weddington) more than I appreciated mine growing up. As you may know, history is a big part of the game of golf-- the pictures of Bobby Jones and Jack Nicklaus currently inside the clubhouse at Weddington demonstrate this passion for the game's memories. So it feels all the more violating that this little piece of golf history in Studio City, where a Par 3 course was designed with the intention of allowing more people to learn the game of golf, should suddenly disappear after 80 years of golf memories being made there, simply because a private school serving the needs of a few hundred of the most privileged kids IN THE WORLD needs more space.

ARE YOU KIDDING ME...

This will be a stain on the soul of Studio City for decades to come, and it will virtually ruin what's left of Studio City's identity after decades of overdevelopment. Not to mention the permanent damage this will do to Harvard Westlake's brand. I honestly think the parents of Harvard Westlake would be relieved if they found another location for their precious sports complex. My neighbors' kids attend HW and have told me as much.

### **Response No. IND 162-1**

The comment expresses general opposition to the Project due to the loss of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 162-2**

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. ## **Comment Letter No. IND 163**

John Moorhead  
Received May 6, 2022

### **Comment No. IND 163-1**

Please bring your twins to Weddington.

This small green breath of fresh air is open to the public. I take my child there to practice putting on the green for free, we eat fries afterwards at the Cafe and sometimes play 9 holes.

If it was being repurposed for housing that would be a different story. A private playground for another one of the many elite private schools is only necessary to less than 1% of the valley population.

### **Response No. IND 163-1**

The comment expresses opposition to the Project citing the Project will become a private playground for a private elite school. To clarify the existing property rights and on-site uses, the land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion. Regarding the commenter's suggestion that the Project Site be repurposed for housing, it is noted that a proposed project by the prior owners to do just that was opposed by the community, leading to the Project Site's sale to the School. Furthermore, residential uses are not permitted on the Project Site, and would require the approval of a General Plan amendment and Zone Change.

The putting green and café will be retained by the Project, as discussed in Chapter II, Project Description, of the Draft EIR. The commenter is referred to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 164**

Judy, Norman and Geoffrey Millar  
Received May 6, 2022

### **Comment No. IND 164-1**

Our Millar family home was built in 1936, one of the first houses on Babcock Avenue, just a few hundred feet north of Weddington Golf and Tennis.

Norman was raised at 4216 Babcock. When he was growing up, Weddington was a dusty vacant lot where kids played all day. His mom complained that when the Santa Anas came through, the house was covered in dust and dirt. When they planted grass, and it became a golf course, nothing changed. The kids continued to use the facility nonstop. It remained a popular gathering place.

Norman and many of the neighborhood kids got their first jobs there pulling weeds from the putting green and washing golf balls.

Norman met his future wife, Judy, in San Francisco., When he brought her to Los Angeles for the first time, the first stop was Babcock Avenue and Weddington. It was his way of introducing her to his family, his home, the neighborhood, and the history and charm of Studio City.

When they moved back into the family home in 1994, again the first stop was the golf course, driving range, tennis courts and restaurant. It was a way for their ten-year old son, Geoff, to get to know the new neighborhood and meet new friends. It became the center of family activities – day and night.

In the 28 years we have lived here, now three generations of the family, we see new families who have just moved to the neighborhood walking down the block towards Weddington with their children, doing the same thing we did (and Norman did since the 40's) – making use of our treasured neighborhood gathering place: to play and mingle with the community and enjoy the rich history and charm of Studio City. Weddington Golf and Tennis continues to be its heart and soul.

Councilmember Raman, hopefully with your urban planning background, you can see the merit of preserving our neighborhood landmark.

### **Response No. IND 164-1**

This comment provides reference to the commenter's relationship and history with the Weddington Golf & Tennis facility, and further requests the City to preserve the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Suzanne Hunt Jenner and family  
Received May 7, 2022

### **Comment No. IND 167-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

My family - husband, children and I - have lived in the same home in Studio City since 1970 and we are very close to the Weddington Golf and Tennis. One of the reasons we moved here is because of the facility, so our boys could grow up playing golf and tennis with us as a family without the prohibitive costs of joining a country club. The boys are now grown, live with their families in Studio City and now take their children there to play golf and tennis on weekends and sometimes during the week. There is something beautiful about passing down a tradition and we are so grateful to have had this beautiful property within walking distance.

### **Response No. IND 167-1**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 167-2**

Losing this amazing open space with its gorgeous trees, to an unnecessary big development that benefits so few, will increase traffic, noise, pollution and deprive thousands of families who use the facility each year.

### **Response No. IND 167-2**

The comment expresses concerns about tree removal, traffic, noise, pollution, and loss of recreational facilities. The commenter is referred to Topical Response No. 5 – Biological Resources/Trees, for a detailed discussion regarding the Project's tree removal and replacement program. The commenter is also referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, and Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of traffic and noise impacts, respectively.

The Draft EIR addressed air quality impacts in Section IV.A, *Air Quality*, with supporting data provided in Appendix B, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant after mitigation.

Please refer to Topical Response No. 3, Enforcement of Public Access, and Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for discussions regarding public access and recreational uses available to the public under the Project.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 167-3**

PLEASE HELP US TO KEEP THIS BELOVED OPEN SPACE!! This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational activities for so many families.

Chris Norlin

Received May 8, 2022

### **Comment No. IND 168-1**

I'm someone who has enjoyed the Weddington tennis facilities since 2008. Back then I was a gay man who had no gay friends, because I didn't know how to meet people in bars. Someone suggested I join the gay tennis league Los Angeles Tennis Association (LATA), and it changed my life. I finally became part of a community. My current husband I met playing tennis, we will celebrate our five-year anniversary this year. So many gay and lesbian tennis players moving to L.A. from elsewhere and not knowing anyone have come to LATA and felt instantly welcomed here.

I am so grateful to the volunteers that make LATA the thriving organization it is. HOWEVER, we need tennis facilities for our weekly leagues and tournaments, and there are so few viable options. Because of LA traffic and how spread out our city is, we need them in multiple locations to serve our members. Long Beach, Beverly Hills, Burbank, and Weddington - all four facilities are absolutely critical to our existence. They are irreplaceable.

I urge you to do everything in your power to preserve this jewel in the heart of the valley so that our organization, along with, youth, senior, and USTA organizations, can continue to make use of it.

### **Response No. IND 168-1**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. Refer to Topical Response No. 11 - Recreation: Golf and Tennis Facilities, regarding public use of the Project's tennis courts and the capacity of the future courts to accommodate the same number of sessions for the public, including tournament play, as under existing conditions. In addition, see Response Nos. ORG 15-10 for a response to LATA, which further indicates tennis facilities under the Project would be available to LATA.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 169**

Christine Bilson

Received May 8, 2022

### **Comment No. IND 169-1**

I moved to the valley some 10 years ago. I felt sad, lonely and removed from my old community I had lived in for over 43 years. My sister in law told me she had been playing tennis for many years at a wonderful club called Weddington. I first signed up for lessons and found a great coach that to this day I still see on a weekly basis. He introduced me to other tennis players and suddenly I had found a home. I currently play two to three times a week on the courts at Weddington and would personally feel a great loss, as would my friends, if Weddington would cease to offer tennis courts to the public. It is my greatest hope that Weddington remain as it is, an oasis of mature trees and green spaces, a place to gather and recreate, a home to over 100,000 Angelenos every year and my home. It is rare that we, the public, get an opportunity to do something important. Saving Weddington is important! It is a piece of history, a landmark from a bygone era. I hope that I as well as thousands of others like me are heard and that WEDDINGTON CAN BE SAVED.

**DO SOMETHING IMPORTANT! SAVE WEDDINGTON!**

Thank you for the opportunity to be heard.

### **Response No. IND 169-1**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. ## **Comment Letter No. IND 171**

Michellene DeBonis  
Received May 8, 2022

### **Comment No. IND 171-1**

I am writing in opposition to Harvard Westlake's complete destruction of Weddington Golf and Tennis and it's proposal and most recent Environmental Impact Report. This huge project will destroy every living being (animal habitats and mature, desperately-needed trees and green space), while degrading the integrity and character of Studio City forever. It's impacts will be detrimental to the quality of life, property values, environment, and access to recreational open space for the public.

### **Response No. IND 171-1**

The comment expresses concerns about impacts to wildlife, trees and loss of green space. The commenter is referred to Topical Response No. 5 – Biological Resources/Trees, in this Final EIR, for a detailed discussion regarding the Project's tree removal and replacement program. Refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife and nesting birds. The commenter is referred to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

The comments regarding quality of life, property values, environment, and access to recreational open space for the public are similar to those included in Comment No. FORM 3-3. A response to these issues is provided in Response No. FORM 3-3.

### **Comment No. IND 171-2**

Our family, friends, and neighbors have enjoyed this facility for decades. There is nowhere else like it in Los Angeles. At its heart, this is a massive project that will amount to COMPLETE destruction, a long and protracted building process, the planting of new vegetation that will take DECADES, if not a CENTURY to replace what was there – all to create a giant sports complex to benefit an exclusive and privileged few at the expense of our neighborhood, our city, and our climate.

### **Response No. IND 171-2**

The comment expresses opposition to the Project based on tree removal, the length of time for new vegetation to be established, and the length of time for construction, and climate effects.

Refer to Topical Response No. 5 – Biological Resources/Trees, and Response No. ORG 14A-1 for a discussion of impacts to trees and the Project's tree replacement program. Please also refer to Response No ORG 6A-1, which discusses how the Project would

result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.

In addition, the Draft EIR addressed GHG impacts in Section IV.G, *Greenhouse Gas Emissions*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, GHG impacts would be less than significant.

Refer to Response No. IND 171-1 for a discussion of public access on the Project Site under the Project.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 171-3**

The studies included in the recently released DEIR paid for by Harvard Westlake do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

## **Comment Letter No. IND 172**

Nolan Heath

Received May 8, 2022

### **Comment No. IND 172-1**

My name is Nolan Heath. I am a recreational tennis player, UCLA student, and a member of the LOS ANGELES TENNIS ASSOCIATION. LATA has helped me find a supportive community and has made a huge difference in my emotional and mental health during COVID.

I strongly oppose Harvard-Westlake School's planned destruction of Weddington Golf & Tennis. The proposed conversion of the property into a private high school sports complex by the School is concerning for a number of reasons.

You will be taking away courts that are available to the public in order to provide more courts for the population of a small private school.

It is very difficult to find enough courts already. LATA uses the Weddington courts for weekly leagues, tournaments, and visiting tennis competitions. LATA has used Weddington courts since the 1970s. The destruction of Weddington Golf & Tennis for Harvard Westlake would hugely impact LATA and its members, who are from all walks of life and are members of the greater LA community, not a small group of private school students.

The publicly available amenities at Weddington Golf & Tennis have always been open to all community members without restrictions of any kind at any time. The city should preserve the community's access to a well-utilized, thriving, beneficial and vital sporting complex.

The sport of tennis has grown exponentially during the COVID-19 pandemic and the City should be preserving facilities available for public use, like Weddington, and denying proposed projects that are clearly not in the best interest of the community and would severely curtail public access.

### **Response No. IND 172-1**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. Refer to Topical Response No. 11 - Recreation: Golf and Tennis Facilities, regarding public use of the Project's tennis courts and the capacity of the future courts to accommodate the same number of sessions for the public, including tournament play, as under existing conditions. In addition, see Response Nos. ORG 15-1 through ORG 15-10 for a response to LATA, which further indicates tennis facilities under the Project would be available to LATA.

Also, with regard to public access, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 172-2**

I strongly oppose the Harvard-Westlake “River Park” plan and encourage City Planning to deny approval for ENV-2020-1512-EIR.

**Response No. IND 172-2**

The comment requests the City decision-makers to deny approval of the Project. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 173**

Norman Tucker  
Received May 8, 2022

### **Comment No. IND 173-1**

Please save the very few tennis courts available to Loa [sic] Angeles and Valley residents. Recreation is so important in this COVID age. Please help us!!!!

### **Response No. IND 173-1**

The comment expresses opposition to the Project based on the removal of tennis courts. Refer to Topical Response No. 11 - Recreation: Golf and Tennis Facilities, regarding public use of the Project's tennis courts and the capacity of the future courts to accommodate the same number of sessions for the public, including tournament play, as under existing conditions. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 174**

Cathy Frank

### **Comment No. IND 174-1**

Please keep these courts for the many players, teachers, and community. So many of us have grown up with these courts, the 3-par golf course and driving range. Please don't take these away from us.

### **Response No. IND 174-1**

The comment expresses opposition to the Project based on the removal of tennis courts and golf course/driving range. Refer to Topical Response No. 11 - Recreation: Golf and Tennis Facilities, regarding public use of the Project's tennis courts and the capacity of the future courts to accommodate the same number of sessions for the public, including tournament play, as under existing conditions. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 175

Olivia DeBonis

Received May 8, 2022

### Comment No. IND 175-1

I grew up in Studio City and when I try to imagine Weddington Golf and Tennis, the place where my dad taught me how to swing a golf club for the first time when I was in elementary school, replaced with a dirt hole in the ground, it feels like a piece of my community has gone missing.

Weddington Golf and Tennis is not only a charming and iconic landmark, but also an entire ecosystem of plants and animals. We are in a climate crisis so we must nurture our trees which act as natural climate regulators. Trees are also the homes for wildlife and insects. Many animals will die as a result of the demolition, and the ones who do survive will be displaced to our backyards.

### Response No. IND 175-1

The comment expresses concerns about tree removal and climate effects, and impacts to wildlife. Refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project's tree replacement program. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions. Also, refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife and nesting birds. In addition, the Draft EIR addressed GHG impacts in Section IV.G, *Greenhouse Gas Emissions*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, GHG impacts would be less than significant.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### Comment No. IND 175-2

A lot has changed in my community since I was a kid, I have seen many old businesses become uprooted by fancier ones, but I really hope our golf course will be the exception.

Harvard Westlake will be fine, they will easily find another location for their sports complex, but Weddington will not, and our community will have lost something that can never be replaced.

I hope you would honor the history and integrity of Studio City and intervene on our behalf.

## Response No. IND 175-2

The comment states that Harvard-Westlake can easily find another location for the Project. This statement is not substantiated in fact. Also, the Draft EIR did consider alternative sites to the Project Site. The reasons that alternatives sites were considered and rejected is provided in Chapter V, *Alternatives*, page V-6, of the Draft EIR. In addition to a site with the size to accommodate the Project Objectives, the other criteria for the Project include proximity to the existing Harvard-Westlake's Upper School campus on Coldwater Canyon Avenue and a site with level topography to allow for the development of the contemplated recreational facilities. Proximity is a criteria factor because of the need for daily commuting from the Upper School campus, as it relates to higher daily vehicle miles. As concluded in Chapter V, no other location with adequate acreage and topography exists within proximity to the Upper School campus.

The comment otherwise requests the City decision-makers to deny approval of the Project. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 176**

Art Manask

Received May 9, 2022

### **Comment No. IND 176-1**

I am 2nd generation, growing up in this area and playing and practicing golf at Weddington Golf & Tennis. I was friends with the McCallisters, worked at the golf course and driving range putting clean balls in baskets I also managed the Putt Putt Golf Course that was located across the Wash, about where Carney's sits now.

Why cannot my grandchildren and their children and grandchildren also have similar Golf & Tennis growing up? There are few, healthy, safe and fun options for these young people and families in the area that were and in the case of Weddington Golf & Tennis?

### **Response No. IND 176-1**

The comment expresses general opposition regarding the loss of golf and tennis facilities on the Project Site. The commenter is referred to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for a discussion of impacts related to the Project's provision of recreation and tennis facilities for public use. Also, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 176-2**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis. The closest public golf at Balboa, Encino and/or Griffith Park are not options like Weddington Golf & Tennis.

### **Response No. IND 176-2**

This comment expresses general opposition to the Project and concerns over the available golf options to the Weddington golf course. Please see Topical Response No. 11 – Recreation: Golf and Tennis Facilities, which indicates the Project Site's golf course users can be accommodated at other golf facilities without exceeding their capacity. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 176-3**

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelinos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 176-3**

This comment provides the same comments presented in Form Letter 3. Responses to this comment are provided in Response Nos. FORM 3-3 to 3-5.

### **Comment No. IND 176-4**

The City of Los Angeles has enough problems with crime, homelessness, etc. and hopefully the Los Angeles City Council will not enable what is currently proposed Weddington Golf & Tennis and create more problems and not take care of our youth, families and seniors in this geographic area.

### **Response No. IND 176-4**

The comment expresses general concerns that the Project would create more problems for the City's youth, families, and seniors. The comments regarding societal conditions are not related to CEQA. However, the commenter is referred to Response No. IND 75-1 for a discussion of crime and public safety as related to the Project. Also, refer to Response No. IND 6-3 for a discussion of the Project's effect on homelessness. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration

### **Comment No. IND 176-5**

So many of my friends and contemporaries have moved from L.A. and California for lots and lots of reasons, losing Weddington Golf & Tennis is another good reason to leave L.A. and California; not good planning for this potentially wonderful city and State! Please do NOT do it.

## **Response No. IND 176-5**

The comment expresses opposition to the Project based on the loss of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 177

Ashley Hunt

Received May 9, 2022

### Comment No. IND 177-1

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis. I grew up walking distance from the Weddington complex and my parents still live in our family home blocks away. The thought of losing a properly public space with access to all to the expansion of an elite private school that we could never afford to attend would typify all that seems going the wrong way in our city. The years of construction, the increase in traffic, the absolute nuisance it will pose for the neighborhoods will destroy what has made our neighborhood special and hurt property values, stealing access to that land from its neighbors and from fellow citizens who've also come from around the city for affordable recreation.

As one of the cities with the least amount of public green space in the country, Los Angeles needs MORE open spaces, not to be losing ones to the elite interests of a few.

### Response No. IND 177-1

The comment expresses concerns regarding the loss of public access to the Project Site, years of construction, increased traffic, loss of property values, and loss of recreational facilities and open space.

To clarify the existing property rights and on-site uses, the Project Site is not public open space. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion. However, upon completion of the Project, public access to the various recreational amenities onsite would be provided. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also, refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

With regard to construction impacts, the Draft EIR addressed air quality impacts in Section IV.A, *Air Quality*, with supporting data provided in Appendix C, *Air Quality/Greenhouse Gas Emissions Technical Documentation*, of the Draft EIR. As

analyzed therein, air quality impacts would be less than significant after mitigation, where applicable. With regard to construction noise impacts, see Response No. IND 6-3 and Topical Response No. 8 – Noise: Construction and Operation Impacts.

In addition, see Topical Response No. 9 – Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR and all CEQA-required transportation impacts were determined to be less than significant without mitigation.

With regard to decreased property values, the commenter does not provide any substantive facts or support for this concern. Additionally, economic and social effects of a project are not treated as significant effects on the environment under CEQA unless they would lead to a physical impact on the environment. See CEQA Guidelines Section 15131.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 177-2**

We agree with all of the following information about the DEIR:

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 177-2**

This comment provides the same comments presented in Form Letter 3. Responses to this comment are provided in Response Nos. FORM 3-3 to 3-5.

## **Comment Letter No. IND 178**

Rebecca Baughman  
Received May 9, 2022

### **Comment No. IND 178-1**

As a long time user of the Weddington golf and tennis center (I use both) I would be devastated to see this wonderful resource change. Countless adults, seniors and children use this facility! Not to mention the amount of Tennis and Golf instructors who earn their livelihood here. It makes no sense to argue there are other places to go when other facilities do not offer nearly as much, this environment in this location.

Please think about the enormous number of people that would be impacted by this decision before making a commitment. We trust or elected officials to save our facilities, even to make them better, not take them away!

### **Response No. IND 178-1**

The comment expresses general opposition to the Project due to the loss of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 179

Caren Lieberman  
Received May 9, 2022

### Comment No. IND 179-1

My children have grown up in Studio City and learned to play golf in Studio City. They have chosen to stay in Studio City. Our family owns 2 homes at 4326 and 4342 Bellaire ave [sic] 1.5 blocks from the golf course, and we also own a home at 12110 Cantura Street and we don't want to have a heat island there after they remove all of the trees. The trees are vital.

### Response No. IND 179-1

The comment expresses concern regarding the potential for heat island effects. Refer to Topical Response No. 7 - Artificial Turf and Effects on Localized Heat and Health, which addresses the potential health-related and urban heat island effects due to the Project's use of artificial turf fields. .

Refer to Topical Response No. 5 – Biological Resource/Trees, for a discussion of impacts to trees. As discussed in Topical Response No. 5, the Project's tree removal and replanting program was fully analyzed in the Draft EIR's Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). The Project would result in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree Planting Plan*, of the Draft EIR). Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years.

### Comment No. IND 179-2

Stating the obvious:

Massively out of scale and inappropriate for the neighborhood

Robs this neighborhood of mature trees and a space of tranquility

### Response No. IND 179-2

The comment expresses concerns over the massing of the Project, loss of trees and loss of space of tranquility. See Topical Response No. 4 – Aesthetics, regarding the Project's less than significant aesthetics-related impacts. Also, impacts related to views, scenic

resources and visual character were evaluated in the Initial Study (Appendix A of the Draft EIR) and also determined to be less than significant.

Please refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project’s tree replacement program. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 179-3**

Harvard Westlake purchased the Weddington property knowing it's not zoned for what they wish to build. This is a far cry from their "pitch" of saving a neighborhood greenspace. Preserve every tree!

### **Response No. IND 179-3**

The comment expresses the concern that the Project Site is not zoned for school uses. The Project Site is zoned A1-1XL-RIO. The “A1” zone, which allows one-family dwellings, parks, golf courses, and farming among other uses, also permits a school use with a conditional use permit.<sup>6</sup> LAMC Section 12.24.T.3(b) explicitly permits schools and school-related facilities within an agricultural (A) zone and in all residential (R) zones under a conditional use permit (CUP). Most private schools in the City operate under a CUP (public schools are not subject to the City’s zoning code). Therefore, the Project’s application for a CUP to operate its athletic and recreational facilities is not an unusual circumstance that indicates a conflict with the Project Site’s existing zoning or the City’s Zoning Code.

Also, refer to Response No. IND 179-1 regarding impacts to trees and the Project’s tree replacement program.

<sup>6</sup> Los Angeles Municipal Code (LAMC) Section 12.05.A (A1 Zone defined uses).

## **Comment Letter No. IND 180**

Charlotte Glover  
Received May 9, 2022

### **Comment No. IND 180-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 180-1**

This comment expresses the same concerns presented in Form Letter 3. Responses to this comment are provided in Response to Comment Nos. FORM 3-1 and 3-3 to 3-5.

### **Comment No. IND 180-2**

I cannot stress enough the negative impact that this project will make on this community, today, tomorrow, and possibly decades in the future if their plans are allowed to continue. The fact that they have misled the public with information about what their construction will actually do to the environment as well as the community should be a lesson to us all. We are in a global climate crisis and this is not lost on any of us in California and the fact that we are even contemplating allowing this type of construction that will not only destroy green space, but destroy animal habitat AND affect the water table is unconscionable.

### **Response No. IND 180-2**

The comment expresses concerns about the Project based on its potential for adverse impacts to the community, global climate change, loss of green space, animal habitat, and the water table. However, the commenter does not provide any substantive facts or support for these concerns or opinions.

Refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project’s tree replacement program. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions. In addition, the Draft EIR addressed greenhouse gas emissions (GHG) impacts in Section IV.G, *Greenhouse Gas Emissions*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, GHG impacts would be less than significant.

Refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife and birds.

Also, the Draft EIR addressed hydrology and water quality impacts in Section IV.I, *Hydrology and Water Quality*, with supporting data provided in Appendix I, Hydrology and Water Quality Report, of the Draft EIR. As analyzed therein, hydrology and water quality impacts would be less than significant. Further, refer to Response No. ORG 9-5, which explains that infiltration at the Project Site is not feasible and that the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the San Fernando Valley Groundwater Basin, and groundwater recharge impacts would be less than significant.

### **Comment No. IND 180-3**

Let's say this project were to move forward, in addition to the students who use the facility, they say they are going to rent it out for events, then the other children and, in theory, those within the neighborhood who will somehow find time to use the 500+ underground parking spots? How many people is it actually going to accommodate and how many many hours is it is it actually going to be in use? How many lights will be used? Mark how many trees will get torn down? How much noise will there be? How many cars, buses, and vans will be driving up and down what now is a very quiet residential street where are the busiest activity includes people walking their dogs, riding their bikes, and pushing strollers with their children.

Please see through all the misinformation that they've been spreading. Please understand the damage this will do to so many people. Please stop this construction.

Thank you so much for reading.

### **Response No. IND 180-3**

With regard to on-site parking, note that current updates to the Project would reduce the overall parking capacity from 532 spaces to 403 spaces. Specifically, the parking capacity of the underground structure has been reduced from 503 spaces to 386 spaces and the capacity of the above grade surface parking lot has been reduced from 29 spaces to 17

spaces. See Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, and Topical Response No. 2 – Modifications to the Project Design, of this Final EIR, which provides these Project updates. As discussed in Topical Response No. 9 – Transportation and Parking During Construction and Operations, all parking for events on site would be provided on-site. No off-site parking for events on the Project Site would be permitted.

With regard to on-site activity, use of the Project Site will vary throughout the year. For a description of public use of the Project Site, see pages II-33 to II-35 in Chapter II, Project Description, of the Draft EIR. School operations at the Project Site are described on pages II-47 to II-51 of the Draft EIR.

See Topical Response No. 4 – Aesthetics, of this Final EIR, regarding the impact of the Project's field lights and other outdoor lighting. As discussed in Topical Response No. 4, the Project's light and glare impacts were fully analyzed in the Draft EIR's Section IV.A, Aesthetics, and updated under a revised lighting plan provided in Appendix B of this Final EIR. As discussed therein, the Project's lighting would not exceed CEQA threshold standards at any of the nearby residential uses nor would it exceed lighting standards of the Los Angeles River Improvement Overlay (RIO) District Ordinance pertinent to locations near the Los Angeles River. Moreover, the Project's lighting system would generally represent an improvement for surrounding residential uses, with less off-site glare and spillover, than existing conditions. The analysis in Section IV.A. Aesthetics, of the Draft EIR, concluded that the Project's light and glare impacts would be less than significant. However, as further discussed in Topical Response No. 2 – Modifications to the Project Design, and as shown in the updated Figure II-27, *Light and Signage Plan for the Project*, in Chapter 3, *Revisions, Clarifications, and Corrections*, of this Final EIR modifications would reduce the overall number of light poles on the Project Site from the two athletic fields, swimming pool, and tennis courts from 39 to 22 poles. The height of the four light poles on each of Field A and Field B would all be 80 feet. As further discussed in Chapter 3, these modifications would result in an overall decrease in luminance and illuminance relative to the Project's less-than-significant light and glare impacts.

Refer to Topical Response No. 5 – Biological Resource/Trees, for a discussion of impacts to trees. As discussed in Topical Response No. 5, the Project's tree removal and replanting program was fully analyzed in the Draft EIR's Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). The Project would result in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree Planting Plan*, of the Draft EIR). Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years.

With regard to noise impacts, see Response No. IND 6-3 and Topical Response No. 8 – Construction and Operation Noise and Vibration.

With regard to traffic, see Topical Response No. 9 - Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation. Also see the level of service (LOS) analysis of the study area intersections in the Transportation Assessment (TA) in Appendix M of the Draft EIR. As evaluated therein, the Project would not adversely impact existing or future service levels. However, it is noted that the CEQA Guidelines do not require the evaluation of street and intersection service levels in a Draft EIR, and as such, are non-CEQA issues.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 181

Cindy Abrams  
Received May 9, 2022

### Comment No. IND 181-1

I am writing to voice my opposition to the destruction of the precious open green space in Studio City. The loss of trees, additional traffic congestion and heavily restricted access does not maintain the open space that is so appreciated in this area.

### Response No. IND 181-1

The comment expresses opposition to the Project based on the loss of open space and trees, additional traffic, and restrictions on public access to the Project Site.

It is noted that the Project Site is not public property. To clarify the existing property rights and on-site uses, the land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also, refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

Please refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project's tree replacement program. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase.

In addition, see Topical Response No. 9 – Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR and all CEQA-required transportation impacts were determined to be less than significant without mitigation.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 181-2**

This is why people moved to the area for use of this culturally significant location. To have green space, tennis, golf and community access is what makes our hometown so special. Allowing one group to circumvent the zoning and build on this Agricultural open space is not something that should be allowed.

### **Response No. IND 181-4**

The comment expresses the opinion of the commenter that the Weddington Golf & Tennis facility is a culturally significant location and community access to green space, tennis, and golf contributes to the area's hometown character. See Response No. IND 181-1 for a discussion of the existing property rights and on-site uses, and access to the Project Site under the Project.

Also, the comment claims that the Project would circumvent the zoning and build on Agricultural open space. The Project Site is zoned A1-1XL-RIO. The "A1" zone, which allows one-family dwellings, parks, golf courses, and farming among other uses, also permits a school use with a conditional use permit.<sup>7</sup> LAMC Section 12.24.T.3(b) explicitly permits schools and school-related facilities within an agricultural (A) zone and in all residential (R) zones under a CUP. Most private schools in the City operate under a CUP (public schools are not subject to the City's zoning code). Therefore, the Project's application for a CUP to operate its athletic and recreational facilities is not an unusual circumstance that indicates a conflict with the Project Site's existing zoning or the City's Zoning Code.

### **Comment No. IND 181-5**

Please listen to the voices of your community and note the impact it will have on Studio City.

### **Response No. IND 181-5**

The comment expresses that the Project would have an adverse impact on Studio City. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

---

<sup>7</sup> Los Angeles Municipal Code (LAMC) Section 12.05.A (A1 Zone defined uses).

## **Comment Letter No. IND 182**

Janine Milne

Received May 9, 2022 (two letters)

### **Comment No. IND 182A-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

### **Response No. IND 182A-1**

This comment expresses the same concerns presented in Form Letter 3. Responses to this comment are provided in Response to Comment Nos. FORM 3-1, 3-3, and 3-4.

### **Comment No. IND 182A-2**

The DEIR shows clearly that the much touted "6 acres of community open space from 7:00am to 9:00pm" is in reality the 30 foot set back required for the development by the City. They propose "an extensively planted 3/4 mile long pedestrian path would be created to circumnavigate the perimeter of the Project Site providing opportunities for cardiovascular exercise, shaded areas, and bench seating for relaxation, bird watching, dog walking and general enjoyment of the natural environment." in table 11-3 Public Use Days it "outlines days and hours for access to facilities available to the public, public use of tennis courts and other facilities would be by RESERVATION, WHEN they are not in use BY THE SCHOOL. The Project would support field, gym based sports by PRE-APPROVED COMMUNITY GROUPS, or SWIM PROGRAM MEMBERS WHEN NOT IN USE BY THE SCHOOL. Regular access to 236,224 square feet of passive open space."

### **Response No. IND 182A-2**

The comment asserts that the Project's open space is in actuality the required zoning setback. A setback is the area, which is privately owned property without a requirement to provide any public access, located between the property line and the built structures and is a maximum of 25 feet in the A zone. The Project's open space areas on the other hand average 50 to 75 feet in width. The purpose of the Project's pathway location is not to keep the pathway within the required setback but to locate the pathway where the public would have use of the open space without interference with or from other recreational users. In fact, sections of the pathway, particularly in the south sector of the

Project Site and near the gymnasium, are outside the setback area. The pathway would be heavily landscaped and provide amenities such as seating and direct access to the Zev Greenway. The public would also have all day free access to the putting green, café, and clubhouse, which are generally outside the maximum 25-foot setback. The public would have access to the tennis courts, including concurrent use of the tennis courts with the School when open tennis courts are available. The purpose of reservations for the tennis courts is to ensure availability of tennis courts and security of the Project Site for community users. Note that based on the scheduling for the School, public access (with reservations or for approved public groups) would be available for the majority of hours during weekdays, and a greater majority of hours on the weekends. Hours of public access to the pool are more limited, consisting of weekday access between 7:00 a.m. and 9:00 a.m., given the need to provide certified lifeguard supervision. See Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

### **Comment No. IND 182A-2**

So the above is directly from the DEIR, they are clearly stating that the set-back, which they will landscape, throw a few benches on, is available to the public OUTSIDE THE WALLS- and that is the only true public access space. So folks can walk it, jog it (cardiovascular exercise) walk their dogs on it- and enjoy whatever birds might be around after they destroy over 250 mature trees that house birds, endangered bats, and further devastate the eco system with over 25 40 foot, 60 foot and 80 foot stadium lights, LED large billboard score boards and a massive P.A. system. They have completely been disingenuous with the Community by trying to pretend this acreage is a park within the walls. I have neighbors, who with extensive marketing and mis-leading assertions, believe they will get to take their dogs to a 6 acre (converted from square footage) dog park like setting within the walls- 6 acres together- not a set- back that is landscaped. I have neighbors who believe because of this marketing that they will be able to go with friends and play basketball, swim laps, etc. when only "pre-approved community groups" will have access, and then only when Harvard Westlake is not using those amenities. They believe this because Harvard Westlake has mis-lead them. Harvard Westlake has presented liberal use of the tennis courts and other amenities. I have sat in multiple Neighborhood Council meetings thru the SFV when both Ari and Stacey have said that the community would have essentially unlimited use of amenities until after school. It has honestly changed many times. Harvard Westlake has a long history of renting their facilities and so "when not in use by the school" will be pretty much never. There has been such a smoke and mirrors marketing campaign to deceive the Community into believing they will have shared access, and that the unlimited recreation the Community has enjoyed for over 7 decades, will actually be increased. The DEIR, that in its large scale is not likely to be read by the majority of the Community, shows the opposite in writing to be true. A deception has truly been perpetrated on members of the Community thru massive money to spend. Because of that mis-information campaign, this DEIR should be re-circulated so the Community has an opportunity to know the reality of "shared public and

private recreational access”. I can send the Council office multiple marketing pamphlets dropped by or mailed to my home over the last two years or more, that clearly show a pattern of mis-representation.

### **Response No. IND 182A-2**

The comment expresses that the Project’s facilities and use of the facilities by the public have been misrepresented by the Harvard-Westlake. Further, this comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Nonetheless, it should be noted that the comment does not accurately reflect the information provided in the Draft EIR. Please refer to Chapter II, *Project Description*, pages II-33 through II-35 regarding public use of the Project Site and pages II-47 to II-51 regarding use of the Project Site by the School. The Draft EIR states that “most of the School’s outdoor events would occur in the late afternoons and would end between the hours of 4:45 p.m. to 7:45 p.m., with approximately 50 percent of school days containing no outdoor athletic activities after 5:30 p.m.” The School would use the Project facilities Monday through Friday during the school year and students would generally begin to arrive after 3:00 p.m. at the end of the academic day. During weekends and summers, School use would be lighter.

Also, please refer to Topical Response No. 3 – Enforcement of Public Access and Topical Response No. 11 – Parks and Recreation: Golf and Tennis Facilities in this Final EIR regarding the comparison between School use and public use of the Project Site.

### **Comment No. IND 182A-3**

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 182A-3**

This comment is identical to Comment No. FORM 3-5. Please refer to Response No. FORM 3-5.

### **Comment No. IND 182B-1**

This DEIR should be recirculated for many reasons- the below, one of the alternatives named, is but one. Alternative #3 is an example of Harvard Westlake’s not acting in good faith to address the deep Community concerns expressed since 2017. Alternative 3

actually exacerbates those concerns in a deeply troubling way and creates larger public safety concerns. In the below you can see that alternative 3# calls for 230 surface level parking spaces at the corner of Bellaire and Valley Spring. Both which are residential two lane streets with homes almost directly on the streets, particularly Valley Spring. The amount of spaces and the massive traffic both coming and going on such small roads with high pedestrian traffic, would be extremely dangerous to the neighborhood. Dangerous to pedestrians, a neighborhood and City public safety liability.

### **Response No. IND 182B-1**

This comment expresses opposition to Alternative 3 in the Draft EIR citing traffic and safety concerns. As with the Project, the design of Alternative 3 would provide driveways and on-site improvements that would be subject to review and approval by the City. As discussed in Chapter V of the Draft EIR, with the implementation of appropriate setbacks of the parking lot serving driveways from street intersections, Alternative 3 would not significantly contribute to any roadway geometric design hazards. Also, there is no specific threshold regarding when an increase in pedestrian volumes at a location with a very limited history of pedestrian collisions would be significant. However, the commenter's concerns about pedestrian safety are noted, given that Project-generated vehicle activity would increase with implementation of Alternative 3 and that increases in pedestrian crossings would occur as nearby residents would utilize the community and recreational spaces in the Project. In addition, as indicated in Topical Response No. 9 – Transportation and Parking During Construction and Operations, following circulation of the Draft EIR, the City installed a traffic signal at the intersection of Whitsett Avenue and Valley Spring Lane. The intersection of Whitsett Avenue and Valley Spring Lane was unsignalized at the time of publication of the Draft EIR. The addition of the traffic signal would allow for pedestrian and bicycle crossings from the surrounding areas to the Project Site through the intersection in marked crosswalks, thus, enhancing pedestrian safety in the Project Site area. This comment will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 182B-2**

The developer has always committed traffic would not come thru the neighborhood, as did previous Council- and would remain on Whitsett (which is already rated a D for traffic several years ago and has only gotten busier). Clearly, having 500 underground parking spaces on a sensitive water table by a river is an issue that has been brought up by the Community - as that kind of excavation would most certainly leach ground water. But to then expose a quiet residential neighborhood that is constantly walking, (Valley Spring does not have sidewalks), is not a good faith alternative and proposes danger to adults, babies and dogs. Not only is this coming and going high volume car traffic- but it is car traffic with teenage drivers!

## Response No. IND 182B-1

This comment expresses concerns regarding traffic, impacts to the ground water table, noise and safety. The issue of traffic and parking is discussed in Topical Response No. 9 – Transportation and Parking During Construction and Operations. As evaluated therein, impacts with respect to transportation and traffic would be less than significant and no mitigation measures are required.

The Draft EIR addressed hydrology and water quality impacts in Section IV.I, *Hydrology and Water Quality*, with supporting data provided in Appendix I, Hydrology and Water Quality Report, of the Draft EIR. As analyzed therein, hydrology and water quality impacts would be less than significant. Further, refer to Response No. ORG 9-5, which explains that infiltration at the Project Site is not feasible and that the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the San Fernando Valley Groundwater Basin, and groundwater recharge impacts would be less than significant.

The commenter is referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of operational noise impacts.

The comment also expresses concern about pedestrian safety as much of the neighborhood does not have crosswalks and people walk in the street. Please refer to Response Nos. IND 42D-6 and IND 70-2, above, regarding intersection and pedestrian safety.

## Comment No. IND 182B-2

Community alternatives are, building such a massive complex NOT in a quiet residential neighborhood, that does not support the traffic without dire public safety consequences. The noise, lights, destruction of an ecosystem and the climate issues that brings -the quality of life and real loss of property value. The community alternative is an already commercially zoned property like Valley College, a Staples or other commercial development where this kind of huge Sports complex makes sense for zoning, infrastructure and public safety.

## Response No. IND 182B-2

The comment expresses general opposition to the Project and recommends the Project be built on an alternative commercial site. With regard to alternatives evaluated in the Draft EIR, refer to Response No. IND 87A-7 which includes a discussion substantiating how the Draft EIR included a reasonable range of alternatives as required by CEQA. Refer to Response Nos. IND 34-4 and 34-5 for a discussion of alternative sites considered in the Draft EIR. For additional discussion of the Project's adequacy of alternatives in the Draft EIR, refer to Response Nos. ORG 1B-104 through ORG 1B-106, and ORG 7A-146 to ORG 7A-174.

With regard to noise impacts, see Response No. IND 6-3 and Topical Response No. 8 – Construction and Operation Noise and Vibration.

The commenter is referred to Topical Response No. 4 – Aesthetics, for a discussion regarding operational light and glare impacts.

The comment also expresses concerns about impact to the ecosystem and climate effects. Refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project's tree replacement program. Please also refer to Response No ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions. In addition, the Draft EIR addressed GHG impacts in Section IV.G, *Greenhouse Gas Emissions*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, GHG impacts would be less than significant.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 183**

S. Gregory  
Received May 10, 2022

### **Comment No. IND 183-1**

I am writing in opposition to ENV – 2020 – 1512 – EIR.

If the development proposed by Harvard Westlake is approved, not only will Studio City be adversely affected, but a precious resource enjoyed by people from far and wide be lost forever.

### **Response No. IND 183-1**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 183-2**

The environmental impact is shameful. Old growth trees will be cut down and the replacements planned by Harvard Westlake are a travesty. They are a mere drop in the bucket that will in no way mitigate the loss of these trees so crucially important to this area.

### **Response No. IND 183-2**

The comment expresses concerns regarding the loss of trees. Please refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project's tree replacement program. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 183-3**

Light and sound pollution will also be created. Long-established residential neighborhoods surrounding the project will suffer for the brief pleasures enjoyed by a select few.

### **Response No. IND 183-3**

The comment expresses concern over light and sound pollution associated with the Project. However, the commenter does not provide any substantive facts or support for these concerns or opinions. The commenter is referred to Topical Response No. 4 – Aesthetics regarding the impact of the Project’s field lights and other outdoor lighting. Also, please refer to Topical Response No. 8 – Noise: Construction and Operation Impacts for a discussion of construction and operational noise impacts.

### **Comment No. IND 183-4**

The Weddington Golf Course is a treasure and a gem in our city. It cannot be sacrificed.

Thank you.

### **Response No. IND 183-4**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 184**

Josh Silver

Received May 9, 2022

### **Comment No. IND 184-1**

I have been following Ms. D'Antonio's work on behalf of LA's trees, along with it's entire environment, and feel she understands the issues, both from a scientific and human perspective. I've copied her email and am sending it to you with my endorsement, as she lays out the entire issue re: Harvard Westlake far better than I can. Thank you.

### **Response No. IND 184-1**

The comment refers to and attaches the comments provided by Joanne D'Antonio in Comment Letter No. ORG 14. The comments in the attachment are identical to Comment Letter No. Org 14. The responses would also be identical to those prepared for Comment Letter No. ORG 14. This comment does not otherwise raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 185

Keith Blaney  
Received May 9, 2022

### Comment No. IND 185-1

Thank you for sharing so much of your precious time and attention to this extremely important environmental community emergency.

I was on the recent community zoom call where it was publicly uncovered that indeed Harvard Westlake (referred to moving forward as, “hw”) has been continually, purposefully spreading misleading information to the entire Studio City community regarding the size, scope, and nature of their proposed multi-sport stadium-arena, where hw is deliberately destroying hundreds of trees and the last public green space for miles and miles, all in order to construct a 2nd sports stadium, just over a mile from the stadium they already have on their campus, just up the hill.

The blatant lies, often carried out on the zoom call with prepared, boiler-plate statements read aloud by hw parents and students – many of whom may not have understood the words they were saying in public – concerning hw’s sudden, passionate interest in conserving water, while at the same time HIDING the engineering portion of their plans regarding the environmental altering/adjusting of the water table to include the proposed 500 underground parking spots.

This now publicly exposed information is more than reason enough to stop any progress of this unwanted & unneeded community nightmare...now.

### Response No. IND 185-1

The comment expresses that the Project’s proposed features and facilities, as well as the use of the facilities by the public have been misrepresented by the Harvard-Westlake. However, the commenter does not provide any substantive facts or evidence to support these concerns or opinions. Further, this comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

The Project being considered for approval by the City is described in Chapter II, *Project Description*, of the Draft EIR, with any subsequent revisions included in Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR. Also, note that the Project would provide high school playing fields and bleachers, which do not constitute a stadium.

It is noted the Project Site is not public property. To clarify the existing property rights and on-site uses, the land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late

2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also, refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

Refer to Topical Response No. 5 – Biological Resource/Trees, for a discussion of impacts to trees. As discussed in Topical Response No. 5, the Project's tree removal and replanting program was fully analyzed in the Draft EIR's Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). The Project would result in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree Planting Plan*, of the Draft EIR). Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years.

Regarding the portion of the comment that the Project would alter or adjust the water table, please refer to Response Nos. ORG 7A-74 and 7A-75 which address impacts to groundwater. As discussed therein, impacts to groundwater would be less than significant.

Also, as discussed in Topical Response No. 2 – Modifications to the Project Design, with the Project design modifications, the Project's number of parking spaces would be reduced from 532 to 403, for a reduction of 129 spaces.

### **Comment No. IND 185-2**

The school was pleading with us on the zoom about the passionate cause of saving water, while at the same time, planning to: disrupt the water table that's been there for centuries.

### **Response No. IND 185-2**

The comment states that the School shows the intent to save water but that it would disturb the water table.

The Draft EIR addressed hydrology and water quality impacts in Section IV.I, *Hydrology and Water Quality*, with supporting data provided in Appendix I, Hydrology and Water Quality Report, of the Draft EIR. As analyzed therein, hydrology and water quality impacts would be less than significant. Further, refer to Response No. ORG 9-5, which explains that infiltration at the Project Site is not feasible and that the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the San Fernando Valley Groundwater Basin, and groundwater recharge impacts would be less than significant.

### **Comment No. IND 185-3**

That is who & what hw is. Please, never forget this.

With 500 proposed underground parking spots, and each car only brings 2 people... it's easy to do the math. That's 1000 more people making their way into and out of a tiny area, in a small community, to attend the different multi-sport events that hw described in great detail would be happening, night and day. There was also talk on the zoom about hw renting out the planned facilities when the school isn't using them.

How is that supposed to work? Crowds? More parking? More screaming?

### **Response No. IND 185-3**

The comment expresses the opinion that the Project would result in the day and night use of the Project Site by 1,000 people resulting in large crowds and noise.

The issue of traffic and parking is discussed in Topical Response No. 9 – Transportation and Parking During Construction and Operations, in this Final EIR. As evaluated therein, impacts with respect to transportation and traffic would be less than significant and no mitigation measures are required. Please refer to Chapter II, *Project Description*, pages II-33 through II-35 regarding public use of the Project Site and pages II-47 to II-51 regarding use of the Project Site by the School. Regarding School use, page II-48 indicates there are fewer than 400 spectators for 90 percent of interscholastic games. Though instances of larger spectator groups are relatively infrequent, LAMC nonetheless requires the provision of school parking spaces in proportion to the number of fixed seats (including bleachers), regardless of how often such capacities are actually utilized.

Note that current updates to the Project would reduce the overall number of seats provided by the Project from 2,217 seats to 2,005 seats, which is a reduction of 212 seats. The changes to seating include: 1) pool area bleacher seats reduced from 348 to 214; 2) Field B bleacher seats reduced from 255 to 109; 3) Field A bleacher seats increased from 488 to 542; 5) gymnasium seats increased from 1,026 to 1,056; and 6) tennis bleacher seats reduced from 100 to 84. Also, the overall parking capacity has been reduced from 532 spaces to 403 spaces. Specifically, the parking capacity of the underground structure has been reduced from 503 spaces to 386 spaces and the capacity of the above grade

surface parking lot has been reduced from 29 spaces to 17 spaces. See Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, which provides these Project updates.

The commenter is referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of operational noise impacts.

Also, refer to comment to Topical Response No. 3 – Enforcement of Public Access, which describes why an approval process is needed for the use of the sports fields, pool, and gym-based sports by pre-approved community groups or swim program members when not in use by the School. Topical Response No. 3 for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

### **Comment No. IND 185-4**

On the zoom, it was also described by hw that there would be a constant shuttle service bringing students, etc., back and forth from the Coldwater Canyon campus, all day long in order to accommodate so many different sporting events

This shuttle service – would be IN ADDITION – to all the cars and people attending the daily and nightly sporting events. Take all those hypothetical people being shuttled to the hw arena and add them to the cars and people already in attendance.

What happens when there’s not enough parking for all the events? Park on Whitsett? People running across Whitsett? At the fire house? Park on Ventura? Every available parking meter? Park at the Bed, Bath, & Beyond parking lot or The Coffee Bean? Park all over the neighborhood in front of every house and apartment that never wanted or needed this monstrosity forced into our lives and neighborhood in the first place?

### **Response No. IND 185-4**

The comment expresses concern that the Project would result in constant shuttle service around the Project Site resulting in off-site parking spillover.

As discussed in Topical Response No. 9 – Transportation and Parking During Construction and Operations, all parking for events on site would be provided on-site. No off-site parking for events on the Project Site would be permitted. Therefore, the commenter’s speculation that spectators and visitors would wander the streets before/after events is unfounded and incorrect. The School would shuttle its students and employees whenever School activities are underway at the Project Site, and require all Project Site visitors use the shuttles on days in which maximum concurrent attendance is estimated to be 300 or more individuals. Three shuttles would be provided with a 24-rider capacity each. Page II-55 in Chapter II, *Project Description*, of the Draft EIR, describes that shuttle service is anticipated every 5 to 10 minutes. A single shuttle would remain

stationary for the same amount of time before departing and would be parked, temporarily, in the roundabout accessed from the Project's southern driveway.

All access to the Project Site would be via Whitsett Avenue, which is classified as an "Avenue II," an arterial street that is intended to accommodate higher traffic levels and to receive vehicle traffic from collector and local streets. Since the shuttle buses and other vehicle activity would be from Whitsett Avenue, or from Whitsett Avenue via Valleyheart Drive, vehicles would not have a need to use local residential streets to access the Project Site.

### **Comment No. IND 185-5**

If our community cannot believe anything hw says in public about this project, how is the community supposed to go about believing, anything hw says, at all?

If hw went so far out of their way to hide these really important, relevant things from the public it's going to directly impact the most in order to get what they want, it seems they're willing to say and do...anything, no matter who or what it hurts and destroys along the way.

The head of hw's pr department (Stacy Marble at hw) has been reaching out to me periodically, personally, begging for a zoom with "the school" and me. Like I got called to the principal's office for telling the truth. What do they want with me? Are they attempting to offer me something in order to change my mind? Are they going to try and intimidate me? They refuse to tell me what they want with me. That alone is a form of intimidation.

So, excuse me if I've become curious what in the world hw wants with me, just because I don't like their rotten project and the lies they continually spread about it.

I did directly ask her in one email, how many seats are being installed at the hypothetical arena-stadium & how many parking spots would be installed. I asked her repeatedly in one email. She's never responded with that specific information, the specific numbers that were finally made public on the zoom.

I've engaged in a minimal dialogue with her via a few emails inviting her to join me for a cup of coffee at the golf course marked for destruction, instead of the zoom. I've received no response to my multiple invitations. I believe she was on the zoom call as well that evening, and if it was her, sat in the shadows and let all the hw students spread the lies for them.

The intention of hw that evening, was to rebrand lies about community destruction, and present them as unselfish conservation activism and neighborhood birthday presents. It was quite a performance. I believe our community is more than smart enough to realize and deter such a classic, nefarious bait and switch operation.

It's a sad and sickening tactic far too reminiscent of Florida's present governor's obsession with using young children as props in pr stunts in order to get across dangerous, nefarious messages that can have very harmful outcomes for a lot of innocent people.

This alone shows how serious hw is in making something happen, that no one else other than hw, wants to... happen.

First, it was a gated river park nobody knew they needed. Then, it was the trees. Then, it was the water. Now in addition to trying to convince everyone that their proposed complex is "good" for the neighborhood and the environment, they've also included a sudden focus on: special needs children. This is an important and admirable cause, to say the least.

For me, this shift in focus could be described by one familiar sports analogy: "that's the most sickening Hail Mary I've ever seen."

### **Response No. IND 185-5**

The comment contends that the School has not been forthcoming with the public about the Project. However, the commenter does not provide any substantive facts or evidence to support these concerns or opinions. Further, this comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

The Project being considered for approval by the City is described in Chapter II, *Project Description*, of the Draft EIR, with any subsequent revisions included in Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR. Also, refer to Response No. IND 185-3 for a discussion of the Project's current seating and parking, which have been reduced from that described in the Draft EIR.

### **Comment No. IND 185-6**

Perhaps, since hw cares as much about special needs children playing sports as it does conserving water, instead of having the children in question have to travel back and forth from all over the valley, to play sports at the hypothetical hw sports arena, hw could build one, two, maybe three or more different very specific special needs sports facilities all over the valley, closer to where the kids who really need them actually live.

I think the hopeful possibility of hw doing that, instead of the proposed hw stadium project that the neighborhood does not want, and one the public still doesn't really know all the facts about, would be an excellent option to address hw's concerns about special needs children having proper access to playing sports whenever they want and are able to do so.

### **Response No. IND 185-6**

The comment states that the School should consider constructing additional athletic facilities throughout the San Fernando Valley to serve special needs children. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 185-7**

As I've seen, the school continually changes its public messaging every time it doesn't get what it wants. Please, as a 16-year resident of Studio City, do not believe one word that makes its way to us from hw, about: anything.

Please, on behalf of our neighborhood and our community, please stop this development from ever happening. Thank you.

### **Response No. IND 185-7**

The comment states again that the School has continually changed its public message and expresses general opposition to the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 186**

Kim Tashman

Received May 9, 2022

### **Comment No. IND 186-1**

The following reflects my professional comments and opinion with regards to the Draft Environmental Impact Report (DEIR) for the Harvard-Westlake River Park Project (Case Number ENV- 2020-1512-EIR), based on the information about the project available as of March, 2022.

### **Response No. IND 186-1**

This is an introductory comment regarding Kim Tashman's comments and opinions on the Draft EIR. The comment, however, does not discuss the adequacy of the Draft EIR and no further response is necessary.

### **Comment No. IND 186-2**

I hold a Master's degree in Historic Preservation-Heritage Conservation from the University of Southern California, and work as an architectural and historic preservationist. I wrote my Master's thesis on the historical and cultural aspects and value of the Weddington Golf site and its landscape. Based on this experience, and in my expert opinion, the Cultural Resources Impact Analysis in the DEIR is inadequate for the following reasons:

First, the analysis is defective because it fails to address the impacts of the project on all of the character-defining features of the site. Per my thesis research, and according to the 2012 Architectural Resources Group Historical Resources Assessment Report (ARG Report) regarding the site, Weddington Golf's historic and character-defining features include: the 9-hole golf course, the clubhouse, the putting green located in front of the clubhouse, the driving range, the golf ball light standards, and the open green space and park-like setting of the site (including the extensive canopy of mature trees). These features are not adequately nor individually addressed in the DEIR. The DEIR arbitrarily limits its own list of "character defining features" to only the clubhouse, putting green, and golf ball light standards. The DEIR's Cultural Resources analysis asserts that because the site will retain these limited features, there will not be significant cultural or historic losses. But this limited list is inaccurate, and contradicts their own statement on DEIR page IV-D-22 that the "primary physical characteristics" of the site include both the nine-hole golf course and the driving range. This more detailed list of character defining features is also supported by the ARG Report, which is referenced throughout the DEIR. Should the Project go forward as planned, these conveniently excluded historic elements will be either damaged or lost entirely – a significant impact on the site's historic characteristics.

## **Response No. IND 186-2**

This comment states the Draft EIR's Cultural Resources analysis is defective because it fails to address the impacts of the project on all of the character-defining features of the site. Please refer to Response No. ORG 1B-165 which addresses concerns related to cultural resources impacts raised in this comment.

## **Comment No. IND 186-3**

Furthermore, the DEIR has completely failed to reference the existing lawsuit filed by Save Weddington Inc. against the City of Los Angeles (Superior Court of California, County of Los Angeles Case Number: 21STCP04158) regarding the last-minute removal of historically and culturally significant terms from final HCM determination. The essential defining terms "golf club" and "golf course" were improperly removed at the last minute during the final vote for the nomination. This was done without any evidence, as is required by law, as to why these essential historical and cultural terms were to be removed. This needs to be addressed and responded to in the DEIR, as once the case is settled it may alter the mitigation measures required to sustain the historic nature of the site. The removal of these terms is suspect, given how convenient their removal is for the developer's desired outcome for the site. Ignoring, or outright invalidating, the historic nature of the golf course's landscape only serves to benefit the developer's interests.

## **Response No. IND 186-3**

The comment asserts that the Project should have discussed a lawsuit filed by Save Weddington, Inc. Please refer to Response No. ORG 1B-166 which addresses concerns related to cultural resources impacts raised in this comment.

## **Comment No. IND 186-4**

Moreover, the DEIR is incorrect when it states on page IV-D-39 that "[c]umulative impacts to historic resources...were determined to be less than significant...and no mitigation measures are required." Once the lawsuit is settled, it is likely that numerous mitigation measures will be required in order to protect the golf course and driving range from significant damage to their historic character.

## **Response No. IND 186-4**

The comment states that the Draft EIR was incorrect in the conclusion of "less than significant" regarding cumulative impacts to historic resources. Please refer to Response No. ORG 1B-167 which addresses concerns related to cultural resources impacts raised in this comment.

**Comment No. IND 186-5**

The historic nature of the course's design is thoroughly documented in my thesis research attached. In removing these terms from the HCM, and ignoring the significance of the golf course itself in the DEIR, the DEIR is deliberately downplaying or outright denying the historic quality of the course, relegating the defining features of the historic site as irrelevant. As such, the DEIR has failed to accurately assess the impact of the Project on the HCM, a California Register eligible resource, and the site's cultural and historic landscape. It has failed to identify significant and unmitigated impacts of the Project.

If you have any questions regarding the content of this document, please contact me using the information below. Thank you for your time.

**Response No. IND 186-5**

The comment asserts that the Draft EIR deliberately downplayed the significance of the golf course as a contributing historic feature. Please refer to Response No. ORG 1B-168 which addresses concerns related to cultural resources impacts raised in this comment.

**Comment No. IND 186-6**

*Ms. Tashman Master's thesis is provided as an attachment to her comments. Refer to Appendix A of this Final EIR for copies of these attachments.*

**Response No. IND 186-6**

Ms. Tashman Master's thesis is provided as an attachment to her comments. However, the thesis does not include comments on the Draft EIR. Refer to Appendix A of this Final EIR for copies of these attachments.

## **Comment Letter No. IND 187**

Kimberly Turner  
Received May 9, 2022

### **Comment No. IND 187-1**

I am writing in opposition to Harvard Westlake's massive project that will result in the loss of Weddington Golf and Tennis. Weddington Golf & Tennis is an iconic site, open to the public for nearly 70 years, that possesses historic, recreational, environmental, and sentimental value.

Harvard-Westlake School has proposed a massive \$100-million development plan to build a sports complex, which has alarmed our community. Angelenos have an unwavering commitment to preserving this irreplaceable green open space in the heart of the San Fernando Valley.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space. At the very least, the scope requires a Health Care Assessment.

### **Response No. IND 187-1**

The comment expresses opposition to the Project based on the scale of the proposed development, the loss of the Weddington Golf & Tennis facility, and a presumed detriment to the quality of life, property values and access to recreational open space. However, the commenter does not provide any substantive facts or support for these concerns or opinions. Please refer to Response No. FORM 3-3 which addresses the environmental concerns raised in this comment.

This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration. Please see below for additional discussion related to this comment.

### **Comment No. IND 187-2**

The project will include the removal of 250,000 cubic yards of undisturbed soil and the elimination of 246 trees, leaving a barren pit in the middle of Studio City.

### **Response No. IND 187-2**

The comment claims that Project would leave a “barren pit” and eliminate 246 trees. As discussed in Response No. IND 185-3, updates to the Project would reduce the parking capacity of the underground structure from 503 spaces to 386 spaces. With this reduction, the amount of grading would be reduced from 250,000 cubic yards to 197,000 cubic yards, a reduction of approximately 53,000 cubic yards. See Chapter 3, *Revisions*,

*Clarifications, and Corrections to the Draft EIR*, of this Final EIR, which provides these Project updates. The excavated area would be temporary, until the Project's parking structure and underground water treatment are constructed. As such, there would be no long-term barren pit from Project implementation.

Also, please refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project's tree replacement program. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase.

### **Comment No. IND 187-3**

It will interrupt wildlife connectivity -- disturbing and displacing all species of wildlife that currently call Weddington home.

### **Response No. IND 187-3**

The comment expresses that the Project would disturb wildlife connectivity. Please refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife and nesting birds.

### **Comment No. IND 187-4**

The school is trying to mask the massive development under the guise of outdoor areas and public access but the scale of this project can't be disguised. It will be massive with stadium lights, bleachers and noise. Operations could be seven days a week, 16 hours a day. Please be reminded that this sports complex will be in the middle of a quiet neighborhood and will be highly disruptive to residents.

### **Response No. IND 187-4**

The comment expresses concerns based on the Project's lighting and noise (including presumably noise from the bleachers) from Project operations. Refer to Response No. IND 6-3 which addresses these similar concerns.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 187-5**

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. Other impacts include intrusive light, air quality, and greenhouse gases. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

## Response No. IND 187-5

This comment is similar to Comment No. FORM 3-4 in that it raises concerns regarding traffic, noise, construction, climate and alternative plans. Please refer to Response No. FORM 3-4 which addresses these concerns.

The commenter is referred to Topical Response No. 4 – Aesthetics, for a discussion regarding operational light and glare impacts.

The Draft EIR addressed air quality impacts in Section IV.A, *Air Quality*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant after mitigation, where applicable.

In addition, the Draft EIR addressed GHG impacts in Section IV.G, *Greenhouse Gas Emissions*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, GHG impacts would be less than significant.

## Comment No. IND 187-6

An example of impacts that were not sufficiently addressed are the cumulative noise impacts from relocated Burbank Airport NextGen flight paths that moved over Studio City from historical paths. Jet noise concentrates primarily over and south of the project area, and therefore aircraft noise and related health impacts must be studied as part of the requirement to study cumulative noise impacts.

## Response No. IND 187-6

The comment states that jet noise from the Hollywood Burbank Airport (BUR) was not sufficiently addressed in the evaluation of cumulative noise impacts. Refer to Response No. ORG 9-16 for a discussion of aircraft noise. As discussed therein, the noise analysis included evaluation of the Project's contribution of ambient noise to determine if the Project's noise would exceed the thresholds of significance. Ambient noise measurements were taken as part of the noise analysis in the Draft EIR in 2020 and 2022. Thus, aircraft noise from relocated flight paths from BUR and Van Nuys Airport (VNY) airports was included in the existing conditions noise measurements. Therefore, the jet noise generated by the airports was included as part of the ambient noise in the Project vicinity. The Project would not exacerbate any existing noise issues that the community may have with airport noise; therefore, no additional analysis is required by CEQA.

## Comment No. IND 187-7

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know

more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

**Response No. IND 187-7**

This comment is identical to Comment No. FORM 3-5. Please refer to Response No. FORM 3-5.

**Comment No. IND 187-8**

As a former HW parent, I am usually supportive of their endeavors, however in this instance, I think the school has ignored the cries of the surrounding neighborhood of Studio City. The benefits of the project to the students are far outweighed by the damaging and destructive impacts forced upon neighborhoods in Studio City, not only during construction, but during ceaseless operations for decades to come.

**Response No. IND 187-8**

The comment expresses general opposition to the Project due to short-term construction and long-term operational impacts. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 188**

Kyle Biren

Received May 9, 2022

### **Comment No. IND 188-1**

I am a 36 year old man who was born and raised in Sherman Oaks. My father brought me to Weddington, or as we call it “Whitsett,” when I was 8 years old to hit golf balls. I developed a love for the sport and have been playing golf ever since. My dad and I still regularly hit balls together on Friday nights at Weddington. This place is a gem of the neighborhood and loved by all. It also serves as one of the few decent options in the area to get people outside, especially kids who are mainly on some sort of screen all day. It would be a real shame to lose a major bright spot of the community.

Please consider the positive impact this place has on so many and not let it be turned into an unnecessary center for the privileged few.

### **Response No. IND 188-1**

The comment expresses general opposition to the Project based on the loss of the Weddington Golf & Tennis facility. The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 189**

Lee Haxall

Received May 9, 2022

### **Comment No. IND 189-1**

Upon reading the EIR, I was horrified to see that the city somehow thinks the impact of this project would be “less than significant,” once construction was finished. This development is, quite simply, a nightmare for our neighborhood. I live a block over from what will now be years of noisy construction and devastation to our tree filled green space if this “project” goes.

### **Response No. IND 189-1**

The comment expresses disagreement with the findings on the Draft EIR that impacts would be less than significant during the operation phase (after construction). The determination of significant impacts is based on the standards established under the CEQA thresholds and are not arbitrary conclusions. With regard to noise impacts, see Response No. IND 6-3 and Topical Response No. 8 – Noise: Construction and Operation Impacts.

Also, please refer to Topical Response No. 5 – Biological Resources/Trees, and Response No. ORG 6A-1 for a discussion of impacts to trees and the Project’s tree replacement program. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase.

### **Comment No. IND 189-2**

Over half of the oxygen producing canopy of old growth trees, some of which have been here since before the neighborhood houses were built, will be torn out and replaced with little trees that will take 60 years to grow to the height of the current trees. The 16 acres of oxygen producing cooling grass used by the public to enjoy a 9 hole golf course, will be smothered by hot, toxic, plastic astro turf fields available only to the wealthy kids who pay their tuition.

### **Response No. IND 189-2**

The comment expresses concerns regarding the removal of the oxygen-producing canopy of old growth trees and replacement with hot, toxic, plastic astro turf fields.

Refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project’s tree replacement program. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.

Also, see Topical Response No. 7 – Artificial Turf and Effects on Localized Heat and Health, which addresses concerns related to the Project’s use of artificial turf fields.

### **Comment No. IND 189-3**

Speaking of oxygen, we all know that everyone drives to school in LA. The traffic will greatly increase on our little neighborhood streets which are currently mainly used by pedestrians. This neighborhood is a very walking and bicycling friendly neighborhood, with very little automobile traffic. Everyone in the neighborhood feels safe to walk or roller skate or bicycle, even with baby strollers, little kids, and dogs. Our strolling lifestyle will be destroyed as students and teachers crowd our streets driving their cars and school busses to and from the facility.

### **Response No. IND 189-3**

The comment asserts that the Project would increase traffic and cause a hazard to pedestrian traffic. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project’s traffic patterns, effects on local streets, and consistency with CEQA threshold levels. Please refer to Response No. IND 42D-6 and IND 70-2 regarding intersection and pedestrian safety.

Also, the Project would reduce the number of driveways on Whitsett Avenue from two to one (the south driveway is considered an extension of Valleyheart Drive, which is an existing street), which would overall be a benefit since there would be reduced potential driveway conflicts between vehicles and pedestrians. In addition, vehicle traffic into the Project from Whitsett Avenue would be right turns only, which would further reduce pedestrian/vehicle conflicts. Because Whitsett Avenue is an arterial street, the Project’s vehicle traffic would have no purpose or convenience to use the local neighborhood streets to enter or leave the Project Site. Also, as discussed in Response No. IND 185-4, the School would utilize a shuttle system to reduce the number of students and visitor driving to the Project Site. It is further noted that the Project would provide a landscaped pathway through the Project Site, which would be available to the public. This pathway, which would provide access through the Project Site to the Zev Greenway would contribute to the area’s “strolling” lifestyle.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 189-4**

Then there’s the wildlife. I am an avid birdwatcher and enjoy watching our Western Bluebirds, Goldfinches, Oregon Juncos, Phoebes, Warblers, Hawks, Owls, and the local murder of Crows all hang out on the golf course and in the huge trees with the squirrels, skunks and opossums. I can see the golf course through the open fencing on Valley

Spring and Bellaire, despite not being a golfer. The devastation to these habitats will break my heart. Birds and animals don't hang out on plastic astro turf, and they shy away from loud noises like screaming teenagers. And what about those 11 foot tall fences along Valley Spring Rd? The Harvard Westlake project drawing shows Valley Spring with 6 foot tall open fences bordered by lots of mature trees. But then the "Requested Actions" state that the fence will be an 11 foot tall fence along Valley Spring and Bellaire. This essentially fences us public stakeholders completely out, especially if it is a solid fence. Just yesterday a magnificent, huge skunk came trotting out of the golf course under the fence and walked right in front of me, headed into one of the neighbor's yards. His huge, puffed out tail and confident walk cracked me up and made my day. His path will be cut off with the monstrous new walls. No more wildlife viewing for us.

### **Response No. IND 189-4**

The comment expresses concerns that wildlife would be adversely affected by the Project due to fencing/walls, artificial turf and noise. Please refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife and nesting birds. Refer to response No. IND 42D-28 for a discussion of noise impacts to wildlife and proposed fencing adjacent to the Zev Greenway. See pages II-27 and II-28 in Chapter II, *Project Description*, of the Draft EIR for a discussion of the Project's walls and fencing. With regard to walls along Whitsett Avenue and Valley Spring Lane, as stated on page II-19 in Chapter II, *Project Description*, of the Draft EIR, a generally 8-foot-tall sound attenuation wall, with some sections as high as 11 feet above the track, would be located at the north and west of Field B to reduce noise levels in the surrounding neighborhood and separate Field B from public pathway areas.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 189-5**

Oh and let's not forget the impact of parking. Despite building an underground parking lot, we all well know that nobody will use it until our streets are filled to capacity with parked cars. Everyone hates parking underground, especially if there's a valet you have to wait for. So next thing you know, we will all be turning our streets into restricted parking streets, which means we residents will have to pay for parking permits. I had to do this in my old neighborhood and it was expensive and really annoying!

### **Response No. IND 189-5**

The comment states that Project Site visitors would not use the subterranean parking structure until the neighborhood streets are parked to capacity. Please see Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project's traffic impacts and parking. As discussed therein, all parking for the Project would be provided on-site. No off-site parking would be permitted.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 189-6**

Which brings me to the noise. Isn't noise pollution considered an environmental impact? I can already hear the Harvard Westlake kids cheering at their football games and swim meets, over 1/2 mile from my house. Now with 2 fields, tennis courts, a pool and the gym 2 blocks away, I figure there will be some sort of match occurring every day and night until 9:00 pm. While the sounds of occasional cheering and children playing may be music to some peoples' ears, to hear it all day every day, will be trying, to say the least.

### **Response No. IND 189-6**

The comment expresses concerns regarding noise impacts from the Project's proposed athletic and recreational facilities. The commenter is referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, regarding operational noise impacts. As discussed therein, operational noise impacts from the Project would be less than significant.

Also, the commenter states that noise would occur all day every day. This statement is not supported by the facts of the Project. School operations and activities on the Project Site are described beginning on page II-47 in Chapter II, *Project Description*, of the Draft EIR, under Subsection 4.b), School Operations at the Project Site. As stated therein, "Most of the School's outdoor events, including those at the athletic fields, would occur in the late afternoons and would end between the hours of 4:45 p.m. to 7:45 p.m., with approximately 50 percent of school days containing no outdoor athletic activities after 5:30 p.m. Indoor activities in the gymnasium would end no later than 9:30 p.m. although indoor activities would generally cease by 7:30 p.m. Other than the tennis courts, members of the public would not have access to Project Site athletic facilities when they are in use by the School."

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 189-7**

And for what? This very wealthy private school already has a swimming pool, gymnasium and athletic field on its main campus. Why does it need to destroy 16 acres of open, green, wildlife filled space and public golfing and public tennis courts, to erect a bunch of buildings, plastic fields and an 80,000 square foot behemoth gym?

### **Response No. IND 189-7**

The comment questions the need for the Project when the School already has a swimming pool, gymnasium and athletic field on its main campus. The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 189-8**

This is an environmentally devastating project to our neighborhood, our pedestrian lifestyle, and the local wildlife. I am sure there are other things to consider as well, which I don't know much about, like whether this will be a drain on the local water, power, and sewer systems, and whether the requested giant lights will keep the neighbors from ever sleeping again. How could this all be deemed environmentally "less than significant?"

### **Response No. IND 189-8**

The comment states that the Project would be "environmentally devastating" and would impact the area's pedestrian lifestyle and local wildlife. The comment questions whether the Project would drain local water, power, and sewer systems, and whether the lights would "keep the neighbors from ever sleeping again." The commenter is referred to Response No. IND 189-3 which addresses pedestrian activity and Response No. IND 189-4 for a discussion of wildlife impacts. In addition, impacts to water and sewer systems were evaluated in Sections IV.O.1 and IV.O.2, *Utilities and Services Systems*, of the Draft EIR. Also, Section IV.E, *Energy*, of the Draft EIR evaluated impacts with respect to energy consumption. The analyses provided therein concluded that all such impacts would be less than significant or less than significant after mitigation, where applicable (wastewater only).

The commenter is also referred to Topical Response No. 4 – Aesthetics, regarding the impact of the Project's field lights and other outdoor lighting.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 189-9**

We need this open green space left as it is – one of the last open green spaces in the valley, available to the public and to the animals and birds. And yes, I'd rather be smelling a skunk than the cigarette smoke, pot, and vaping smoke of the crowds of students and spectators who will be crowding the neighborhood until 9:00 every night.

## Response No. IND 189-9

The comment expresses an interest in keeping the Project Site in its current open green space condition. The comment regarding cigarette and vaping smoke is primarily based on conjecture and personal opinion and is not substantiated by facts or evidence.

It should also be noted the Project Site is not public property. To clarify the existing property rights and on-site uses, the land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

However, upon completion of the Project, public access to the various recreational amenities onsite would be provided. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 190**

Lisa Fimiani

Received May 9, 2022

### **Comment No. IND 190-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 190-1**

This comment expresses the same concerns presented in Form Letter 3. Responses to this comment are provided in Response to Comment Nos. FORM 3-1 and 3-3 to 3-5.

### **Comment No. IND 190-2**

While I am sending this email as an Angeleno, not representing the organizations I am affiliated with below, I can tell you that living in SOCAL for the past 35 years has taught me the value of trees, open space, and the need to save these things as the climate keeps changing. Our Urban footprint needs to be reduced and consolidated – not expanded into mature tree growth areas. Thank you!

### **Response No. IND 190-2**

The comment expresses concerns for loss of trees and effects regarding climate change. Please refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project's tree replacement program. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions. . In addition, the Draft EIR addressed GHG impacts in Section IV.G, *Greenhouse Gas*

*Emissions*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, GHG impacts would be less than significant. The commenter is also referred to pages II-60 and II-61 in Chapter II, *Project Description*, of the Draft EIR for a list of sustainability features provided by the Project.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 191**

Michael Levy  
Received May 9, 2022

### **Comment No. IND 191-1**

Please save Weddington Golf!

I have lived in the area my entire life and would love to see it kept as an open space for our local wildlife and for our own quality of life. Please do whatever is in your power to save this local treasure.

### **Response No. IND 191-1**

The comment expresses an interest in keeping the Project Site in its existing condition as an open space for local wildlife and quality of life. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 192**

Patrice Berlin  
Received May 9, 2022

### **Comment No. IND 192-1**

I was born in the area and have owned my present home at Alcove and Valleyheart across the river from Sportsmans for 26 years.

I am OPPOSED to the project for all the reasons 14,000 others have signed a petition against it. It is way too big and does not belong in a residential neighborhood.

### **Response No. IND 192-1**

The comment describes the commenter's proximity to the Project Site and expresses general opposition to the Project based on its size. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 192-2**

Weddington is the crown jewel of Studio City and should not be lost to an elite school that already has a sufficient campus. The loss to the community will be devastating to so many stakeholders, the environment, traffic, peace & quiet, the trees, birds, and other living things and replaced with concrete, a wall around it, and toxic grass.

### **Response No. IND 192-2**

The comment questions the need for the Project and expresses concerns about impacts to the environment, traffic, peace and quiet, trees, wildlife, and toxic grass (presumably artificial turf).

The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

In addition, please refer to Topical Response No. 9 – Transportation and Parking During Construction and Operations, in this Final EIR for a discussion of the Project's traffic patterns, effects on local streets, and consistency with CEQA threshold levels.

Please refer to Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of operational noise impacts.

Please refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project's tree replacement program. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to

existing conditions – a 36 percent increase. Refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife and nesting birds.

Also, see Topical Response No. 7 – Artificial Turf and Effects on Localized Heat and Health. Topical Response No. 7 addresses the potential health-related and urban heat island effects due to the Project's use of artificial turf fields.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 192-3**

An elite school with its deep pockets and rich connections should not be allowed to take this away from the community.

Harvard Westlake deny that the Olympics may be involved and other events where they will pocket tons of money at our neighborhood's expense. They all already have a relationship with the Special Olympics that have had events at the campus on Coldwater.

### **Response No. IND 192-3**

This comment questions whether the Project Site will be used for the Olympics given its current relationship with Special Olympics and related events at the Upper School campus. The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 192-4**

What about the emissions and traffic that an added 500-car parking garage will mean to our neighborhood?

### **Response No. IND 192-4**

The comment questions the emissions and traffic associated with the 500-car garage.

Note that current updates to the Project would reduce the overall parking capacity from 532 spaces to 403 spaces. Specifically, the parking capacity of the underground structure has been reduced from 503 spaces to 386 spaces and the capacity of the above grade surface parking lot has been reduced from 29 spaces to 17 spaces. See Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, which provides these Project updates.

With regard to air quality impacts, the Draft EIR addressed air quality impacts in Section IV.A, *Air Quality*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant after mitigation, where applicable.

As discussed in Topical Response No. 9 – Transportation and Parking During Construction and Operations, all parking for events on site would be provided on-site. No off-site parking for events on the Project Site would be permitted.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 192-5**

I have attached the petition below I initiated in 2020 if you did not see it in the 6000+ page DEIR.

Our neighborhood will be directly affected by a switchback ramp on the north side of the river and are overwhelmingly adamantly opposed to it.

There is already a ramp on the south side of the river. Approving this ramp that cost millions of dollars, and it is a ramp to nowhere. You cannot cross Coldwater to the other side, so Krekorian's reasoning to continue the greenway is inaccurate and doesn't make sense. It would be deadly for people to try and cross Coldwater at that location.

Since the south side ramp was built, there has been nothing but crime, encampments, graffiti, and gang activity. If the north side is opened, it exposes our neighborhood to easy access and dangerous for us.

### **Response No. IND 192-5**

The comment expresses opposition to the Coldwater Canyon Riverwalk Path Ramp and includes reference to the petition the commenter initiated in 2020 which opposes the ramp. This comment states that the ramp on the south side of the Los Angeles River at Coldwater Canyon Avenue has resulted in increased crime, encampments, graffiti, and gang activity. The commenter speculates that similar circumstances would occur if a ramp is built on the north side of the river at Coldwater Canyon Avenue. Regarding these crime-related issues, CEQA does not require analysis of speculative conditions. Furthermore, the comment does not provide any substantial evidence that Project operation would result in substantial crime risks. Pursuant to CEQA Guidelines Section 15143, “[t]he significant effects should be discussed with emphasis in proportion to their severity and probability of occurrence.” Furthermore, CEQA Guidelines Section 15064(d)(3) states that “[a]n indirect physical change is to be considered only if that change is a reasonably foreseeable impact which may be caused by the project. A change which is speculative or unlikely to occur is not reasonably foreseeable.”

The comment also expresses concern that the Project's Coldwater Canyon Riverwalk Path Ramp may result in increased encampments. The Project's effect on homelessness is an economic/social effect, which under CEQA Guidelines Section 15131, shall not be treated as a significant effect on the environment. Further, the issue is related to the effects of the existing environment on the Project, which is not evaluated in the Draft EIR in accordance with the *California Building Industry Association v. Bay Area Air Quality Management District* (2015) Cal.4th (Case No. S213478). This case held that the impact of existing environmental conditions on a project's future users or residents is not required in a Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 192-6**

In addition, as you know, they are short of parking at Sportsmans. During planning, we fought this, knowing there would not be enough parking for the project. The lot is full most of the time, with just the market and a few restaurants and stores. Once the gym is open, it would give people easy access to our neighborhood to park, with gym hours starting at 6 am.

This ramp would also be another way for HW students /staff to access the new campus through our neighborhood when there already is access at the south side ramp to Whitsett.

The ramp would also cause additional pedestrian and auto traffic and parking to our once quiet and safe neighborhood.

### **Response No. IND 192-6**

The comment indirectly speculates that the Coldwater Canyon Avenue Riverwalk Path Ramp would be used to access the Sportsmen's Lodge project site across the Los Angeles River and for Harvard-Westlake students and employees to access the new campus. However, the commenter does not provide any substantive facts or support for this concern. There is no evidence provided in the comment to support the statement that there is a parking shortage at the Sportsmen's Lodge project site. All projects are required to provide parking to meet their user needs based on City parking requirements. Also, as discussed in Topical Response No. 9 – Transportation and Parking During Construction and Operations, all parking for events on the Project Site would be provided on-site. No off-site parking for events on the Project Site would be permitted.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 192-7**

More importantly, Three 80-YEAR-OLD pine trees would be sacrificed for this ramp. It's unconscionable!

**Response No. IND 192-7**

The commenter correctly indicates that three pines are located near the Coldwater Canyon Avenue Riverwalk Path Ramp. The final design of the ramp structure would avoid and retain the trees in their current location. This will be included in as part of Mitigation Measure BIO-MM-3 for the final ramp design. This clarification has also been made in Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR.

**Comment No. IND 192-8**

It does not make sense that millions of dollars are spent on a ramp to nowhere when the neighbors are adamantly against it, and it makes no sense to build.

**Response No. IND 192-8**

This comment expresses general opposition to the Coldwater Canyon Avenue Riverwalk Path Ramp. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 192-9**

Has anyone from the City looked at the many accident reports in the last few years on Coldwater between Ventura and Moorpark as well as on Whitsett? There have been many injury accidents including my neighbor on Alcove that totaled her car at Valleyspring [sic] and Whitsett. If the project is approved the number of accidents and injuries will explode in number.

If the City approves this ramp and someone is hurt or killed trying to cross Coldwater after this being brought to the City's attention, the City will be responsible for those injuries or even death.

**Response No. IND 192-9**

The comment expresses that, with the construction of the Coldwater Canyon Avenue Riverwalk Path Ramp, the Project would increase the potential for accidents and injuries. The comment is speculation without support for the contention. CEQA does not require analysis of speculative conditions. Furthermore, the comment does not provide any substantial evidence that Project operation would result in substantial safety conflicts. Pursuant to CEQA Guidelines Section 15143, "[t]he significant effects should be discussed with emphasis in proportion to their severity and probability of occurrence." Furthermore, CEQA Guidelines Section 15064(d)(3) states that "[a]n indirect physical

change is to be considered only if that change is a reasonably foreseeable impact which may be caused by the project. A change which is speculative or unlikely to occur is not reasonably foreseeable.” Additionally, the Coldwater Canyon Avenue Riverwalk Path Ramp would be constructed in accordance with all ADA and applicable safety standards, and the LAMC, and would be reviewed by the City during the plan check process.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 192-10**

*A photograph of the south and north sides of the Los Angeles River at the Coldwater Canyon Avenue Riverwalk Path Ramp location is provided as an attachment to the comment letter. Refer to Appendix A of this Final EIR for copies of these attachments.*

### **Response No. IND 192-10**

The photograph does not include comments on the Draft EIR. Refer to Appendix A of this Final EIR for a copy of the photograph.

### **Comment No. IND 192-11**

A copy of the signed petition opposing the Coldwater Canyon Avenue Riverwalk Path Ramp is included as an attachment.

### **Response No. IND 192-11**

The petition is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 193**

Peter Cole

Received May 9, 2022

### **Comment No. IND 193-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

I own a home on Alcove about 1,000 feet from the proposed Harvard Westlake Sports Complex, and I am against the project as described in the DEIR.

### **Response No. IND 193-1**

The comment expresses general opposition to the Project and described the commenter's proximity to the Project Site. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 193-2**

#### **BULLET POINTS:**

- Massively out of scale and inappropriate for the neighborhood
- Harvard Westlake paid experts do not make their case that the sound from the Sports Complex and during construction can be mitigated to an acceptable level.
- Two to three years of construction is too long and an undue burden on the neighborhood. Show stopper.
- The applicant purchased the Weddington property knowing it's not zoned for what they wish to build.
- The neighborhood does not want the "public benefit" ADA ramp to Coldwater (see the petition in DEIR)
- Too many large scale projects that potentially overlap.
- Obvious major environmental issues – Haul route, destruction of trees, creating a heat island, wildlife.

### **Response No. IND 193-2**

With regard to the commenter's bullet point describing the School's "paid experts," while the Draft EIR technical studies were paid for by Harvard-Westlake (the Project Applicant), this is standard practice for all development projects in the City that require the preparation of an environmental impact report. The Draft EIR was prepared under the City's supervision, authority, and input and is the City's document, as the Lead Agency.

The City, using its independent judgment, reviewed all technical studies associated with the Draft EIR, prepared by licensed and highly qualified experts in their respective fields of work, and determined they met the requirements of CEQA, as applicable.

The commenter states that the applicant purchased the Weddington property knowing it does not have the “right” zoning. It should be noted that the Project Site is zoned A1-1XL-RIO. The “A1” zone, which allows one-family dwellings, parks, golf courses, and farming among other uses, also permits a school use with a conditional use permit.<sup>8</sup> LAMC Section 12.24.T.3(b) explicitly permits schools and school-related facilities within an agricultural (A) zone and in all residential (R) zones under a CUP. Most private schools in the City operate under a CUP (public schools are not subject to the City’s zoning code). Therefore, the Project’s application for a CUP to operate its athletic and recreational facilities is not an unusual circumstance that indicates a conflict with the Project Site’s existing zoning or the City’s Zoning Code.

Refer to Topical Response No. 5 – Biological Resource/Trees, for a discussion of impacts to trees. As discussed in Topical Response No. 5, the Project’s tree removal and replanting program was fully analyzed in the Draft EIR’s Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). The Project would result in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree Planting Plan*, of the Draft EIR). Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years.

Refer to Topical Response No. 7 - Artificial Turf and Effects on Localized Heat and Health, which addresses the potential health-related and urban heat island effects due to the Project’s use of artificial turf fields.

The remaining bullet points and issues cited by the commenter are individually articulated and addressed in Response Nos. IND 193-3 through IND 193-9, below.

### **Comment No. IND 193-3**

#### **SIZE:**

Massively over scale for this residential neighborhood. Harvard Westlake provided misleading artist renderings that use the trick of forced perspective to make the project appear smaller than it is in reality. If Harvard Westlake truly believes this project is a win for all, they should not be hiding behind unrealistic artist representations. Why does the school “need” two olympic sized pools? It’s so large it spills over into county property on

---

<sup>8</sup> Los Angeles Municipal Code (LAMC) Section 12.05.A (A1 Zone defined uses).

the LA River. City Planning should require the applicant to put up story poles (not balloons) for all structures proposed. Gym, Pool, spectator bleachers, 80-foot tall light poles, location of speakers, scoreboards, or any other structures not currently part of Weddington Golf and Tennis.

### Response No. IND 193-3

The comment expresses concerns regarding the scale of the Project. Please refer to Topical Response No. 4 – Aesthetics, which discusses the aesthetics impacts of the Project. The comment also contends that the artist renderings are unrealistic. However, no specific examples from the Draft EIR or evidence are provided in the comment to support this contention. The renderings provided in the Draft EIR are used to illustrate the conceptual features of the Project. Additional, numerous graphics/plans included in Chapter II, *Project Description*, of the Draft EIR, also illustrate the floor plans and elevations of the Project, most of which include dimensions and/or scales, to indicate the size of the Project’s various features/components.

The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

The comment requests that City require the School to install “story poles” prior to construction. The proposed “story poles” could be required at the discretion of the Project’s decision-makers but are not a part of the Project evaluated in the Draft EIR, nor are they required by or related to any impacts evaluated in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 193-4****LACK OF PUBLIC BENEFIT:**

Councilman Krekorian asked to build a ramp from Coldwater to the north side of the LA River as a public benefit. There was no discussion with the adjacent residents on this item. Adding a ramp at this location may allow overflow parking from the recently opened Sportsmen's Lodge Mall to park on Alcove and Valley Spring. Parking at the new Mall is already showing signs of nearing capacity. The Mall is not fully operational, and many stores are not yet open, including one of the anchor tenants, Equinox gym.

*The comment also includes an aerial view of the Sportsmen's Lodge site with labels indicating the Project's proposed ramp location, existing ramp on the north side of Los Angeles River, trees, and building descriptions. Please refer to Appendix A in this Final EIR for the complete commenter letter, including this graphic.*

**Response No. IND 193-4**

The comment speculates that the Coldwater Canyon Avenue Riverwalk Path Ramp would be used to access the Sportsmen's Lodge project site across the Los Angeles River. Please refer to Response No. IND 192-6 which addresses this issue.

**Comment No. IND 193-5****SOUND:**

After reviewing the DEIR, I find I have more questions than answers. This document of 6,503 pages is conspicuously lacking in detail. One of those areas is sound, where I have made my living for over four decades as a re-recording mixer for television.

**Response No. IND 193-5**

The comment claims that the Draft EIR does not adequately evaluate sound. The comment does not provide any detail as to the type of noise evaluation presumed missing in the Draft EIR. The Project's noise impacts, including construction and operational noise, are evaluated in Section IV.K, Noise, of the Draft EIR. The Noise evaluation is supplemented by a detailed and extensive Noise Technical Study provided in Appendix K of the Draft EIR. In a worst-case study of operational noise, the Draft EIR evaluates composite noise from combined crowds, amplifiers, vehicles, and other noise sources on page IV.K-54 and in Table IV.K-20, *Composite Noise Impacts* (page IV.K-55), of the Draft EIR. As evaluated in the Draft EIR, in accordance with CEQA protocols, any disturbance from activities, such as an increase in operation noise levels from composite activities and vehicles, would not exceed threshold levels at any of the sensitive receptor sites or within the adjacent residential neighborhood.

## Comment No. IND 193-6

For example, if tasked with setting up a sound system on the proposed site to the specifications cited in the DEIR, I would have lots of wiggle room. There is no specificity in the speaker system's coverage area (vertical or horizontal). There is a specification for a maximum noise level of 92 dBA (Leq) at a distance of 50 feet from the amplified sound system that doesn't state if that measurement is on-axis or off-axis. Suppose the goal is to protect the surrounding neighborhood from amplified noise from the "special event" located on the north side of Field A. In that case, the height of the stage is a critical factor in reducing the spill of sound into the surrounding neighborhood. Harvard Westlake provided vague technical specifications with no specificity of the proposed events.

Once sound arrives at its intended target from the PA system, it doesn't just stop. It continues.

## Response No. IND 193-6

The comment expresses that the Draft EIR did not adequately evaluate noise from amplified sound. As discussed in Draft EIR, Appendix K, Noise Technical Study, page 18, the regulatory limit for amplified sound is established under Section 112.01 of the LAMC. Section 112.01 specifies that operation of an amplified sound system (i.e., machine or device producing, reproducing or amplification of the human voice, music, or any other sound) shall not exceed the ambient noise level on the premises of any other occupied property by more than five (5) decibels. Project Design Feature NOI-PDF-2 requires that the Project's "amplified sound system for special events at Field A be installed and designed using a line-array speaker system, so as to not exceed a maximum noise level of 92 dBA (Leq) at a distance of 50 feet from the amplified sound system. In addition, the stage for special events will be located at the north side of Field A, with the amplified sound system facing south in the opposite direction from the nearest off-site sensitive uses to the north of Field A, which would reduce speaker noise at the nearest off-site sensitive uses to the north and east of Field A." The objective of the noise analysis and the amplification system for the purpose of the Draft EIR is not to result in silence or no discernable sound but to comply with LAMC requirements in accordance with the CEQA threshold. With regard to stage height, stage heights could vary, but typically can be up to approximately four to five feet high. Regardless of the stage height, Project Design Feature NOI-PDF-2 conservatively requires the noise level to be at a maximum of 92 dBA (Leq) at a distance of 50 feet from the amplified sound system. As the speaker height increases, the noise level requirement at 50 feet stays the same. At this distance, the noise levels from the amplified system would not significantly impact nearby noise sensitive receptors, as shown in Tables IV.K-14 and IV.K-15 of the Draft EIR. Furthermore, even under a conservative, worse-case scenario evaluating composite noise impacts, which evaluates all Project-related noise sources (including speakers) operating simultaneously plus existing ambient noise levels, the Draft EIR shows that operational noise impacts would be less than significant. Also, it is acknowledged that sound does continue after reaching its target, but since the noise analysis evaluates the

nearest noise sensitive receptors, any receptors beyond those analyzed in the Draft EIR would experience lower noise levels due to natural attenuation and, thus, reduced less than significant noise impacts.

### **Comment No. IND 193-7**

Wind, temperature, and nearby reflective surfaces like the large proposed gym, structures to the south behind Ventura blvd, [sic] etc., may act as points of reflection, as does the LA River. I have first-hand knowledge that sound travels unpredictably near the LA River. I can hear the crowd reactions from games at the Coldwater Harvard Westlake Campus at my house. A few years ago, the Sportsmen's Lodge Hotel had a lucrative business hosting tour buses. These buses had onboard generators that would run all night. I could hear these generators parked on the east side of the property loud and clear inside my house, specifically when I was lying on my den's couch.

The neighborhood to the north is a mixture of old and new construction, and it's a collection of single-story 1940-era homes adjacent to modern two-story McMansions. Some residents will experience significantly different levels of sonic irritation depending on home construction and where the errant sound from the proposed site decides to land.

My point is that the math necessary to predict how sound will travel on and around the proposed project is too complicated to quantify. With the current use as golf and tennis, in 35 years, I have never heard a sound from the Weddington property walking past it on Valley Spring except for occasional wildlife up close. The idea that Harvard Westlake wants to radically change the current site usage and replace nearly all of the soft natural sound-absorbent surfaces with plastic turf and concrete, stating the adjacent neighborhood will be protected simply by making vague claims with some technical sound jargon that few understand is preposterous.

### **Response No. IND 193-7**

The comment claims that noise levels from the Project are too complicated to quantify given the noise reflection caused by the Los Angeles River and various hard and soft surfaces on and off the Project Site. However, the commenter does not provide any substantive facts or support for these concerns or opinions. As evaluated in Section IV.K, *Noise*, of the Draft EIR, operational noise levels included noise levels associated with future on-site recreational activities and special events. Noise was estimated according to conservative assumptions to provide maximum impacts and to avoid underestimating impacts. The noise from use of the Project's recreational facilities would primarily be from the athletic facilities (i.e., Field A and B, pool, and tennis courts) located on the northern and western portions of the Project Site. Maximum noise levels from use of these Project facilities were calculated at the noise sensitive receptors immediately across the adjacent streets, and was compared to existing (i.e., ambient) noise levels at the same sensitive receptors. Operational composite noise levels would increase by 3 dBA or less at the nearest noise sensitive receptors (see Table IV.K-20 in the Draft ER). A change of 3 dBA in ambient noise levels is considered to be a barely perceivable difference. Given the

Project's largely imperceivable noise increase, intervening trees/landscaping as part of the Project, and the fact that the L.A. River is below grade from the Project Site, any noise refracted from the L.A. River would not change the noise levels at the nearest noise receptors as provided in the Draft EIR. Also, it is acknowledged that noise impacts were assessed at the property line of the noise sensitive receptors, thus, the construction type/date of the noise receptor buildings does not factor into the determination of noise impacts. The commenter is also referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, in this Final EIR, which discusses the adequacy of the operational noise analysis included in the Draft EIR.

### **Comment No. IND 193-8**

On pages IV.K-46 and IV.K-49, when the DEIR says off-site noise for residential uses would be designated to not exceed 92 dBA", but dBA does not reflect the annoyance from the sub-bass (boom boom) content. Page IV.K-47 does not consider the varying sound levels from activities – the intermittent nature of crowd noise, and the sound system is annoying and a nuisance.

### **Response No. IND 193-8**

The comment asserts that the dBA level would not deflect certain sounds, such as intermittent crowd noise and the sub-base sounds. The Draft EIR analysis is based on LAMC regulatory standards in accordance with CEQA thresholds. Various intermittent sound types that do not exceed the standard set forth in LAMC Section 112.01 could result in temporary or short-term annoyance are not considered to be significant noise impacts. However, please note that field activities and special events would terminate at 8:00 p.m. and, thus, would not extend into the quieter evening hours in which sound types such as sub-bass sound would be more perceptible and annoying.

### **Comment No. IND 193-9**

#### **CONSTRUCTION AND THE BURDEN ON THE NEIGHBORHOOD – DESTROYING OUR QUALITY OF LIFE:**

There are many large-scale construction projects in the planning stages within 1,000 feet or so of the proposed Harvard Westlake Sports Complex. Sportsmen's Lodge Apartments/Mixed Use on the Sportsmen's Lodge hotel site. The Sportsmen's Mall isn't fully open for business yet. The Sunswept Place Mix use project on the south side of Ventura Blvd. The Pinz Bowling Property on Ventura Blvd, to name a few.

Harvard Westlake has shared with the neighborhood they plan on starting construction in 2022-2023. The DEIR appears to be missing the complete haul route and realistic amount of truck trips for the project. Work has just started on Ventura Blvd. Mainline Improvement Project. <https://files.constantcontact.com/f20e008b001/272c5fd5-0d3d-49ad-849e-c79af0203a08.pdf>

The Mainline Improvement project is scheduled to be completed in 13 months.

This is a recipe for how to destroy a community.

Two to three years of construction is too much of a burden on the neighborhood for a project that belongs in a more appropriate location.

*The comment also includes a map of the Ventura Boulevard Mainline Improvement Project with reference to the locations of the Project. Please refer to Appendix A in this Final EIR for the complete commenter letter, including this graphic.*

## **Response No. IND 193-9**

The comment states that the combined construction of the Project and related projects would be too much of a burden on the neighborhood. The comment also states the Draft EIR appears to be missing the complete haul route and realistic amount of truck trips for the project.

As stated on page II-62 in Chapter II, *Project Description* of the Draft EIR, the inbound haul route would come from US-101, head southbound on Coldwater Canyon Avenue, eastbound on Moorpark Street, and southbound on Whitsett Avenue to access the Project Site. The outbound haul route would leave the Project Site and head southbound on Whitsett Avenue, westbound on Ventura Boulevard, and northbound on Coldwater Canyon Avenue to reach US-101. During the first month of Project construction, with concurrent demolition and site preparation activities, 252 maximum daily haul truck trips would be generated, and during the subsequent grading and excavation phase, up to 300 haul truck trips would be generated on peak haul days. Hauling hours are anticipated to begin at 8:00 a.m. and continue to 4:00 p.m.

Also, updates to the Project would reduce the parking capacity of the underground structure from 503 spaces to 386 spaces. With this reduction, the amount of grading would be reduced from 250,000 cubic yards to 197,000 cubic yards, a reduction of approximately 53,000 cubic yards. This reduction in grading would reduce the duration of grading from approximately 7 months to 5.5 months, and reduce the number of grading truck trips from 35,714 trips to 28,142 trips. See Topical Response No. 2 – Modifications to the Project Design, and Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, which provide these Project updates. However, the overall construction duration would remain the same.

With regard to impacts from other future construction projects, the Draft EIR identified a list of related projects in Chapter III, *Environmental Setting*. For each issue analyzed in Chapter IV of the Draft EIR, an analysis of cumulative impacts was included which evaluated the combined impacts of the Project together with the related projects. The Draft EIR did disclose the potential significant and unavoidable cumulative impacts related to on-site construction equipment noise, off-site construction noise – mobile sources, off-site construction noise from the Coldwater Canyon Avenue Riverwalk Path

Ramp, and off-site improvements at Coldwater Canyon Avenue Riverwalk Path Ramp for construction vibration – human annoyance.

Also, as discussed in Section IV.M, *Transportation*, page IV.M-26 of the Draft EIR, Project Design Feature TRAF-PDF-1 would require a Construction Management Plan (CMP). Under the CMP, construction procedures will be formalized and specific actions will be identified and required to reduce effects on the surrounding community. The CMP will be based on the nature and timing of the specific construction activities and other projects in the vicinity of the Project Site. Construction management meetings with City Staff and other surrounding construction-related project representatives (i.e., construction contractors), whose projects will potentially be under construction at around the same time as the Project, will be conducted bimonthly, or as otherwise determined appropriate by City Staff. This coordination will ensure construction activities of the concurrent related projects and associated hauling activities are managed in collaboration with one another and the Project.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 194**

Rita Levy  
Received May 9, 2022

### **Comment No. IND 194-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

### **Response No. IND 194-1**

This comment provides the same comments presented in Form Letter 3. Responses to this comment are provided in Response to Comment Nos. FORM 3-1 and 3-3.

### **Comment No. IND 194-2**

Not to mention, it will ruin the habitats of many skunk and ground squirrel families.

### **Response No. IND 194-2**

The comment states that habitats of many skunk and ground squirrels would be adversely affected by the Project. Refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife.

### **Comment No. IND 194-3**

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 194-3**

This comment provides the same comments presented in Form Letter 3. Responses to this comment are provided in Response Nos. FORM 3-4 and 3-5.

## **Comment Letter No. IND 195**

Ryan Carl O'Meara  
Received May 9, 2022

### **Comment No. IND 195-1**

I am writing you this email in hope that you consider an alternate location for this project.

Weddington is a historic golf facility that provides an inclusive green space for the public.

It would be a mistake to pursue the project in this location. Please find a solution other than the one proposed. Many thanks for your time and consideration.

PLEASE DONT DO IT!?!

### **Response No. IND 195-1**

The comment requests an alternate location for the Project. The comment, however, does not suggest or recommend an alternative site(s).

Also, to clarify the existing property rights and on-site uses, the Project Site is not public open space. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 196**

Sara Haskins  
Received May 9, 2022

### **Comment No. IND 196-1**

I'm writing to register my concerns about the upcoming Harvard-Westlake takeover and renovation of the Weddington property.

I think it's a sign of how drastically we're failing the kids in our community that something like this is being built for the express use of kids at one of the city's most exclusive private schools. Sure Harvard-Westlake they might share it, they might rent it out but once they invest in this project there will be no chance to change the fact that they will own and operate a massive tract of land in the middle of a dense urban neighborhood that only belongs to them, probably forever. Their interest and cooperation with the community will depend solely on their sense of noblesse oblige and there will be no vested public right to that space.

One could argue that Weddington is private now – but it's so inexpensive that it truly is a space that can serve the public and instead of transitioning to something LESS accessible, why not make it more?

There is already an unequal playing field between public and private schools (pun intended and literal) – this project is just a massive example of how much goes to so few.

### **Response No. IND 196-1**

The comment expresses general opposition to the Project based on the private use of the Project Site by Harvard Westlake. As noted by the commenter, the Project Site is currently private property, although public access is allowed with payment of fees. Contrary to the commenter's claim that the Project would make the Project Site less accessible, public access to the various recreational amenities onsite would be provided free of charge upon completion of the Project. Thus, the Project would increase accessibility to the Project Site. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 197**

Steve Caplan  
Received May 9, 2022

### **Comment No. IND 197-1**

I am writing in opposition to Harvard Westlake's proposed elimination of Weddington Golf and Tennis. This effort by a well-heeled private school to provide less than 1,000 students with a **\$100 million dollar sports facility** at a space that has provided generations of Angelenos with a respite from the stress, noise, and concrete of our City (at the same time our schools struggle to get the most basic of services and supplies!) is truly a disgrace.

### **Response No. IND 197-1**

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 197-2**

This huge project will degrade the integrity and character of not just Studio City and its adjacent communities, but will eliminate one of the last remaining open spaces for those of us who live in the San Fernando Valley to enjoy outdoor recreation, connect with friends, and enjoy a low-cost, stress free day with our families.

### **Response No. IND 197-2**

The comment expresses opposition to the Project based on degraded integrity and character of Studio City and detriment to quality of life, property values and access to recreational open space. This comment is similar to Comment No. FORM 3-3. Please refer to Response No. FORM 3-3 which discusses the issues raised in this comment.

### **Comment No. IND 197-3**

I could write at length about my concerns with the DEIR and the impacts of this project on traffic, noise, and our climate, but I think this issue goes even deeper than that. It is about our quality of life, and what we value as a community.

### **Response No. IND 197-3**

The comment expresses concerns regarding traffic, noise, and climate impacts. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, regarding traffic impacts; and Topical Response No. 8 – Noise: Construction and Operation Impacts, regarding noise impacts. Also, the Draft EIR

addressed GHG impacts in Section IV.G, *Greenhouse Gas Emissions*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, GHG impacts would be less than significant.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

#### **Comment No. IND 197-4**

I am thankful that we have elected officials and policymakers who have the ability to determine what is best for our neighborhoods regardless of the power and influence wielded by deep pocketed, politically connected interests. Our City has lost too many valuable spaces over the years to allow another irreplaceable part of our community to be swallowed up by those who are only looking out for their own interests.

Please, oppose this misguided plan and find a fair alternative that will preserve something that is so important to thousands of us in this community -- and not just a select few.

#### **Response No. IND 197-4**

The comment expresses general opposition to the Project and requests an alternative to the Project. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 198**

Susan Gleason

Received May 9, 2022

### **Comment No. IND 198-1**

I am writing to express my extreme concern about the above proposed Harvard Westlake project. This property has been a community golf and tennis resource for decades and it is beloved by thousands of people in the cities that surround it. Generations of families have enjoyed the golf course, driving range, putting green, and tennis courts. It seems very unfair that a well funded private school could destroy this beloved community resource and turn it into a private facility reserved for 900 wealthy students who already have an athletic facility of this nature at their primary campus nearby.

### **Response No. IND 198-1**

The comment expresses general opposition to the Project based on the loss of the Weddington Golf & Tennis facility and private use of the Project Site by Harvard Westlake. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

To clarify the existing property rights and on-site uses, the Project Site is not public open space. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion. However, upon completion of the Project, public access to the various recreational amenities onsite would be provided. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR

### **Comment No. IND 198-2**

This property is the last undeveloped land on the LA River. It is a travesty that Harvard Westlake wants to destroy the integrity of our neighborhood and this pristine open land with exterior stadium lighting, a massive amount of additional traffic and noise, huge underground and surface parking lots, massive walls, and bleacher seating. It is also upsetting that the community service it provides for golf and tennis facilities that are used by all walks of life in our community will be demolished for the benefit of the wealthy few.

## Response No. IND 198-2

The comment expresses opposition to the Project based on the location of the Project adjacent to the Los Angeles River and expresses concerns over operational lighting, traffic, noise, parking, walls and bleacher seating. However, the commenter does not provide any substantive facts or support for these concerns or opinions. The commenter is referred to Topical Response No. 4 – Aesthetics, regarding the impact of the Project’s field lights and other outdoor lighting. The commenter is also referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project’s parking, traffic patterns, effects on local streets, and consistency with CEQA threshold levels; and Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of construction and operational noise impacts.

Note that current updates to the Project would reduce the overall number of seats provided by the Project from 2,217 seats to 2,005 seats, which is a reduction of 212 seats. The changes to seating include: 1) pool area bleacher seats reduced from 348 to 214; 2) Field B bleacher seats reduced from 255 to 109; 3) Field A bleacher seats increased from 488 to 542; 5) gymnasium seats increased from 1,026 to 1,056; and 6) tennis bleacher seats reduced from 100 to 84. Also, the overall parking capacity has been reduced from 532 spaces to 403 spaces. Specifically, the parking capacity of the underground structure has been reduced from 503 spaces to 386 spaces and the capacity of the above grade surface parking lot has been reduced from 29 spaces to 17 spaces. See Topical Response No. 2 – Modifications to the Project Design, and Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, which provide these Project updates.

This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment No. IND 198-3

Your report does not adequately quantify the negative environmental and emotional impact this massive development will have on our neighborhood.

## Response No. IND 198-3

The comment makes a general statement that the report (presumably the Draft EIR) does not adequately quantify the negative environmental and emotional impact this massive development will have on the neighborhood. The comment does provide any evidence that CEQA-required subjects are not adequately addressed. The City confirmed that the Draft EIR adequately complies with the procedures and thresholds set forth in the CEQA Guidelines in addressing the Project’s environmental effects.

## **Comment Letter No. IND 199**

Joseph & Joanne Gallagher  
Received May 8, 2022

### **Comment No. IND 199-1**

As our elected representative, we urge you to stand up for your constituents, and oppose this catastrophic proposal.

This huge project conceived and developed by wealthy special interests from outside our neighborhood, is of NO BENEFIT to this community. This project led by lobbyists on behalf of influential Westside families and business interests, would disrupt & permanently damage our neighborhood.

Weddington Golf & Tennis was one of the main reasons we came to this pristine, unspoiled neighborhood to buy our home. It is a piece of beautiful green space which provides a natural habitat for the wildlife here, and a place of peaceful refuge to those of us seeking a quiet neighborhood in busy Los Angeles.

### **Response No. IND 199-1**

The comment expresses general opposition to the Project based on the loss of the Weddington Golf & Tennis facility and private use of the Project Site by Harvard-Westlake. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 199-2**

This extensive construction will greatly increase traffic and noise to this community which already suffers from horrible traffic congestion. This project will destroy any quiet time we homeowners and residents have left. This is NOT acceptable!

### **Response No. IND 199-2**

The comment expresses concerns regarding traffic and noise impacts. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project’s parking, traffic patterns, effects on local streets, and consistency with CEQA threshold levels. Please also refer to Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of construction and operational noise impacts.

This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 199-3**

Also, extensive construction will disrupt the geological terrain, and pose possible risks of earthquakes & damage to the water table!

This NEEDS to be studied!

### **Response No. IND 199-3**

The comment expresses concerns regarding geotechnical issues and damage to the water table. Section IV.F, *Geology and Soils*, of the Draft EIR addressed geology and soils impacts, including those associated with earthquakes, , based on the *Geotechnical Engineering Investigation – Proposed Academic and Athletic Development at 4141 Whitsett Avenue, Studio City, California* (“Preliminary Geotechnical Report”),<sup>9</sup> which is provided as Appendix G of the Draft EIR. The Draft EIR concluded that geology and soils impacts would be less than significant.

The Draft EIR addressed hydrology and water quality impacts in Section IV.I, *Hydrology and Water Quality*, with supporting data provided in Appendix I, Hydrology and Water Quality Report, of the Draft EIR. As analyzed therein, hydrology and water quality impacts would be less than significant. Further, refer to Response No. ORG 9-5, which explains that infiltration at the Project Site is not feasible and that the Project would not substantially decrease groundwater supplies. Furthermore, the Project would not interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the San Fernando Valley Groundwater Basin. As such, groundwater recharge impacts would be less than significant.

### **Comment No. IND 199-4**

PLEASE PROTECT THIS RARE & BEAUTIFUL GREEN SPACE FROM RUIN & DESTRUCTION OF STUDIO CITY BY SPECIAL INTERESTS & WEALTHY FAMILIES WHO DON'T EVEN LIVE HERE.

Our STUDO[sic] CITY residents treasure this pristine and unspoiled neighborhood blessed with Weddington Golf & Tennis, a recreational green space, like NO OTHER!

Council member Raman, please stand with us and save the history & integrity of Weddington Golf and Tennis for us and our families to enjoy!

<sup>9</sup> Geotechnologies, Inc., *Geotechnical Engineering Investigation – Proposed Academic and Athletic Development at 4141 Whitsett Avenue, Studio City, California, 91604*, Revised June 19, 2020.

## **Response No. IND 199-4**

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 200**

Teryne Dorret  
Received May 9, 2022

### **Comment No. IND 200-1**

I urge you to reject this project proposed by Harvard Westlake. It will be detrimental to the existing trees and natural area that many residents in the community now enjoy. As a member of the Neighborhood Council Sustainability Alliance and the Trees Committee, I am aware of the rapidly diminishing tree canopy in the San Fernando Valley. It is a devastating situation. The City Council has projects to plant trees and encourage tree planting, yet does not address the trees that are destroyed by private property projects. This is an issue that matters to all of us, as trees are crucial to our health and to keeping our valley liveable as the climate warms.

Please do not approve this detrimental project.

### **Response No. IND 200-1**

The comment expresses opposition to the Project based on the loss of trees and changes in the tree canopy in the region. Please refer to Topical Response No. 5 – Biological Resources/Trees, a discussion of impacts to trees and the Project's tree replacement program. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase.

This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 201**

Andrew Johnson

Received May 10, 2022

### **Comment No. IND 201-1**

As a co-founder of a womens startup in a male [sic] dominated industry of golf (sports in general) – we sincerely encourage you to reconsider the proposal to remove this historic and landmark facility that has had open arms to women joining the sport.

The rise of golf in past two years and push for inclusiveness is incredible and can only continue to succeed where institutions that foster the development of new participants is encouraged.

Thank you for your consideration.

### **Response No. IND 201-1**

The comment expresses opposition to the Project based on the loss of the Weddington Golf & Tennis facility, which the commenter states has been welcoming to women joining the sport of golf. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

The commenter is referred to Topical Response No. 6 – Historic Resources, in this Final EIR for a discussion of direct and indirect impacts on historical resources resulting from the Project, including project design features that would preserve historic character-defining features of the Project Site.

Also, please refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, in this Final EIR for a discussion regarding the relocation of existing golf course users and adequacy of other nine-hole golf courses in the area.

## **Comment Letter No. IND 202**

Eric Preven

Received May 10, 2022

### **Comment No. IND 202-1**

I strongly oppose Harvard-Westlake School's planned destruction of Weddington Golf & Tennis. The proposed conversion of the Weddington Golf & Tennis property into a private high school sports complex is concerning for a number of reasons.

1. With LA's green open space disappearing, Harvard-Westlake plans to service a privileged, select few by replacing 16 irreplaceable acres with artificial turf and concrete buildings, as well as by exerting their influence to secure variances to Weddington Golf & Tennis' A1 Agricultural Open Space zone allowances from the City.

### **Response No. IND 202-1**

The comment expresses opposition to the Project based on the loss of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 202-2**

2. By destroying the property's significant existing urban tree canopy along the LA River and replacing it with 12-foot walls, artificial turf, saplings, and towering light poles, the end result allows practices, games, and special events that will generate increased noise and traffic, which does not conform to the surrounding community.

### **Response No. IND 202-2**

This comment expresses concerns regarding loss of tree canopy, noise and traffic impacts.

Please refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project's tree replacement program. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase.

The commenter is referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of operational noise impacts.

In addition, please refer to Topical Response No. 9 – Transportation and Parking During Construction and Operations, in this Final EIR for a discussion of the Project’s traffic patterns, effects on local streets, and consistency with CEQA threshold levels.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 202-3**

3. Weddington Golf & Tennis is often referred to as “the gem of Studio City” and considered a local landmark for nearly 70 years. The LA Cultural Heritage Commission (CHC) supported Historic-Cultural Monument (HCM) designation for the ENTIRE 16-acre Weddington Golf & Tennis subject property. For that reason, we strongly support the mysterious, last-minute revisions be reversed and the designation restored to the CHC’s original recommendation: preserving the subject property, which encompasses the golf course, driving range, and a majority of the site’s green open space and tree canopy.

### **Response No. IND 202-3**

The comment asserts that the entire Weddington Golf & Tennis should be part of the HCM designation, which encompasses the golf course, driving range, and a majority of the site’s green open space and tree canopy. The commenter is referred to Topical Response No. 6 – Historic Resources, which addresses the historical resources on the Project Site. The assertion that the entire site should be part of the HCM designation is the opinion of the commenter and is not part of any official determination or designation of the Project Site as a historical resource. The City reviewed all of the evidence related to the history of the Project Site, and determined the historical significance and character-defining features as identified in the Draft EIR. It is the City’s identification of the character-defining features of the Project Site that appropriately provides the basis for the analysis in the Draft EIR.

### **Comment No. IND 202-4**

4. Millions of Angelenos from all over the City and San Fernando Valley have experienced Weddington Golf & Tennis since its opening in 1956. It is incumbent upon the City to protect precious affordable public spaces from developers and special interests, like Harvard-Westlake, who only serve a privileged few.

### **Response No. IND 202-4**

The comment requests the City decision-makers to oppose the Project. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Also, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

### **Comment No. IND 202-5**

5. Traffic and congestion continue to grow at an alarming rate in LA. If allowed to proceed, Harvard-Westlake will spend the next four to five years building a massive \$100 million dollar sports complex for its students, while the rest of the community grapples with the plan’s significant impact on our roads, traffic, and commutes to work and school. This project hinges on the granting of a Conditional Use Permit (CUP) and since the proposed plan does not satisfy the necessary conditions, a CUP should absolutely NOT be granted.

### **Response No. IND 202-5**

This comment raises concerns regarding the Project’s potential traffic impacts. Please refer to Topical Response No. 9 – Transportation and Parking During Construction and Operations in this Final EIR for a discussion of the Project’s traffic patterns, effects on local streets, and consistency with CEQA threshold levels.

Also, the comment states that findings needed for approval of a CUP are not met by the Project. This comment that the Project does not meet the criteria to grant a CUP is not founded in substantiated facts cited and represents the opinion of the commenter. Also, please note that most public and private schools in the City operate under a CUP in accordance with LAMC Section 12.24.T.3(b), which allows school uses in residential and agricultural zones. For addition discussion of the Project’s CUP, refer to Response Nos. ORG 7A-78, ORG 7A-79 and ORG 9-22. The comment, however, is primarily a request for project disapproval. The comment does not discuss the adequacy or content of the Draft EIR and no further response is necessary.

### **Comment No. IND 202-6**

Finally, please note that more than 14,000 community members have signed a petition supporting the preservation of the 16-acre Weddington property in its entirety.

These individuals are counting on you to subscribe to a higher standard, support the public’s interests, stand firm against Harvard-Westlake’s lobbyists and moneyed special interests, and deny approval of the CUP and certification of the DEIR.

Thank you for your time and consideration of this most important matter.

## **Response No. IND 202-6**

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment No. IND 202-7**

*The text below is provided as an attachment to Mr. Previn's e-mail correspondence, which appears to be an excerpt from the "citywatchla" website.*

Hopefully, we'll be able to cut through the confusion as we expose the many interesting characters through a compelling plot with real stakes and, you know, if all goes well, we'll open to a strong box office.

And if we win an award, we'll be sure to leave plenty of time to get over Laurel Canyon.

Pay to Play (and get away): The Washington Post had the inside scoop (behind a paywall) about the newly released "Pandora Papers" showing how wealthy people, including national leaders, accumulate secret assets and dodge accountability. I was hoping to scan for references to Charles Munger or Warren Buffett.

These fellows, and I'm only including Buffett, who has nothing to do with Weddington, because I know he's a folksy guy who read some of the screeds my brother and I wrote about Mayor Garcetti's alma mater-antagonist, Harvard Westlake, have done a lot of things. Charlie Munger, Buffett's right hand man, is a big donor to the elite athletics-obsessed school and recently plunked down \$43 million to buy up the Weddington Golf and Tennis Courts in Studio City. One of our last most treasured open space assets.

The United States has apparently become an "oligarchy" in which "unlimited political bribery" has created "a complete subversion of our political system as a payoff to major contributors." Seems a bit strong coming from former President Jimmy Carter, but please stop in to Studio City to see for yourself.

The casualness with which acts seem to be done, and the apparent unconcern that there might be harsh consequences, is severely problematic. The pervasive culture of corruption and their individual experiences with it have told Paul Krekorian and Karo Torossian that they have little to fear.

Golf and Tennis (open to) anyone!

When I went over to the local par nine to revisit my roots recently I was surprised at how rude the gal who ran the register was when I started taking pictures. She shut me right down.

I was a social tennis player back in the day and would invite several of my friends over for a morning game of tennis and maybe brunch at Jerry's or Belwood Bakery. Eventually, we moved our doubles game to my neighbor Mel Shavelson's house. Mel was a former president of the Writers Guild of America who wrote scripts for Bob Hope, so he embodied the authentic Studio City Slicker ethos. Smart and funny.

After he passed away, I bought some of his art and furniture from his kids because he and his wife Lucy had good taste and I was striving to stay connected to a time I knew was going to slip away.

A new TV couple that I do know, Linwood Boomer and Tracy Katsky of Malcolm in the Middle and HBO respectively redid the house that sits on what must be several acres of prime Studio City, approximately 300 feet from the now Charter elementary school, Carpenter Avenue. I would support fines for people whose places seem ultra lush during a drought.

But when I was playing tennis, it was a different time: there was water and a path to home ownership. At barely thirty years old, I moved off of a rental on Arch Drive at Vineland and Ventura into a small house in the hills above Carpenter Avenue school. Each and every day, I would drive to the Sportsmen's lodge wearing my bathing suit, slip in the side entrance, and take a short swim.

Rather than fussing around about changing clothes on site, I would just hop in the car, drive 300 feet to Belwood Bakery and still dripping gather the blueberry bran muffins, warm ham and cheese croissants, pain au chocolat, almond croissants... etc. In the afternoon I would tee off at the par nine... not really, but ...

Enayat was a good man, and worked the poolside security beat at Sportsmen's diligently and after eight months or so had detected that, though I appeared to swim there daily, and our eyes often met in greeting, I was not staying in the hotel. I was what you call, "a fence jumper."

Enayat said, "Sir, please, may I talk to you..." motioning me over to the side of the pool. I swam over, "What's up?"

Enforcement is reasonable and I could not argue with Enayat that I was a guest, because I was not. I decided, as I normally do, to go with the truth. "I'm a local guy, but we put people in this hotel for the shows that I'm constantly working on...my dad stays here!"

At the time this was all true information, we had memorably housed Margot Kidder at the Lodge, prior to her dumpster drama, alongside many others. "Is there a problem?"

He pointed out that the hotel pool was for guests only. I told Enayat that I would speak to the manager. Steve Scheck, who approved the plan of me being given permission to use the pool. "No problem, Mr. Preven, I'll speak with Enayat. We appreciate your business."

Sportsmen's Lodge was a popular gathering spot for cast and crew in old Hollywood, including Clark Gable, Bette Davis, John Wayne, Humphrey Bogart, Lauren Bacall, Spencer Tracy and Katharine Hepburn. The Ventura Boulevard restaurant which had murals of 2nd rate cowboy actors, quickly became a hot spot, a place where patrons could hook their dinner and have it fried fresh in the kitchen.

One year I personally arranged for a convention of Soap Opera fans and brought hundreds of paying customers to the hotel to meet the stars of NBC's Santa Barbara, A Martinez and Marcy Walker, Nancy Grahn and Lane Davies.

Local producers could be seen swimming laps in the good-sized and well maintained swimming pool as 3rd rate cowboy stars and stunt guys would chain smoke, so infuriating poolside guests.

The pond and trees surrounding the common areas were magnificent and the hot tub by the pool was an early tasteful version of what has become de rigueur for fancy hotels everywhere.

The whole Sportsmen's lodge property had been set for designation as a cultural historic landmark on the research and write-up by Ken Bernstein, himself.

Charlie Munger and Warren Buffett are the two greatest sources of incredible investing anecdotes. It's fair to say they are fanatics about their craft—which includes investing and clever quips.

There's one funny story about how Buffett agreed to caddie for the winning bidder of a round of golf with Tiger to benefit the Tiger Woods Foundation. After Buffett had caddied as he said he would, Woods made a final bet with him at the final hole, "For \$5, I'll play you on my knees," he said.

Amazingly, Tiger drove over 250 yards while kneeling. Buffet shanked it and lost but when he spoke to his right-hand man, Charlie Munger, on the plane ride home, Buffett said, "On 18, I brought Tiger to his knees."

At the end, Buffet handed Tiger the \$5 but reminded him. "The caddie gets 10% of your winnings, so give me 50 cents back."

Local Course Correction: I had never seen so many local signatures, allegedly 13,000 calling for the inclusion of the Studio City Golf and Tennis Club on the list of Historic-Cultural Monuments. At least not since we came together as a community to block the horrific Bridge Over Coldwater fiasco from same local villain, Harvard Westlake. In April The Heritage Commission voted to change the proposed monument name of the subject property to the "Studio City Golf and Tennis Club," to reflect the original, historic name with which it was associated for 50 years. The whole community has called it Weddington Golf & Tennis since as long as I can remember.

Edgar Khalatian of Mayer Brown and the team of lobbyists and Harvard Westlake boosters would love to erase the actual legacy of the place by casting it as a sort of "underutilized, dilapidated climate killer" is a false narrative.

At least a dozen Neighborhood Councils, the Los Angeles Conservancy and environmental groups, were caught completely off guard and surprised by the revised findings – which were presented at the very last minute with absolutely no notice to the public.

The City's revised findings narrowing the property's distinctive characteristics to the "clubhouse, golf ball light standards, putting green, and brick wall with weeping mortar surrounding the front lawn at the northeast edge of the property" failed to meet the legal standards outlined in *Topanga Ass'n for a Scenic Cmty. v. Cnty. of Los Angeles*.

Nowhere in the findings does the commission or the city recommend removing both the terms "golf course" and "golf club."

Public comment was not allowed on the significant amendments that changed the very heart of the motion around Weddington Golf. Instead of the entire site being preserved, the council moved to only preserve part of the site.

I have reviewed and support at least two cure and correct letters under the Brown Act calling for the City to have a fair hearing. Good faith negotiations require trust.

Clear shot of the tee: When I went by that day to take some pictures, I started to dread what Harvard Westlake has been planning. Golf was once considered a rich man's sport... but Weddington had opened up the possibility for years for folks who could not afford to join a country club for access.

Our narrative could be a... golf showdown with the fate of the course at stake. A three-way battle to win, the local kid, a fancy player from Orange County who attends Harvard Westlake and is going to the 2028 Olympics. Best score takes it all ...

A good golf shot like telling a good story takes a lot of practice. You learn how to aim, like a bow and arrow. How to get the power at the right spot... whip of the wrist. It's challenging but fun. Giving a public comment is not so different.

"There's something about golf, it's very physical. It's the only game you have to play outside, other than tennis... but golf, golf is a giant ass course, you're gonna be walking. Gotta be outside."

There have been many red flags on the Harvard Westlake deal to acquire our public amenity and rezone it for private usage.

We can quibble over whether walking around a private school athletic facility, one of the big gives from Harvard Westlake is open space access, but one thing that can never be disputed is the joy when a golfer of any age makes a hole in one.

Consider, "It landed ten yards out, bounced twice and then rolled right into the cup." Make a grown woman cry. A hole in one is a super rare occurrence, some folks have said, a professional golfer might see ten or fifteen in the course of an entire lifetime of golf. There's no equivalent in any other game. A double eagle is when you sink it in 2 on a par 5. Dropping it in on the second shot. It's less rare than a hole in one, but still rare. What about a walk off grand slam? Much more likely than a double eagle or a hole in one. The odds of getting a hole in one, must be ... ask Harvard Westlake. They're allegedly very sharp over there.

(Eric Preven is a longtime community activist and is a contributor to CityWatch.)

## **Response No. IND 202-7**

This comment includes references to the commenter's personal history and reflections to various events and circumstances in and around the Project Site area.

Refer to Response No. IND 202-3 for a discussion of the site's designated historical resources.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 203**

Mark Cohen

Received May 10, 2022

### **Comment No. IND 203-1**

I do support Harvard Westlake's mission to grow and provide a quality sports and educational experience to its private community. THAT SAID, I just don't think taking over Weddington is the answer because it is at the expense of a community that already is shortchanged on open space and recreational space.

### **Response No. IND 203-1**

The comment expresses an interest in keeping the Project Site in its current condition. To clarify the existing property rights and on-site uses, the Project Site is not public property. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

However, upon completion of the Project, public access to the various recreational amenities onsite would be provided. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also, refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 203-2**

We need to protect what we have. I'm a tennis player and longtime Studio City resident. There are so few options to get outside and enjoy the outdoors here in the Valley. There is a lack of parks and recreational facilities in this city. And that is your job as a city representative to advocate for us. There used to be a tennis center on Vineland. Gone. Now it is a Ralph's. The courts at Beamon Park are few, not lit and [sic] night and crowded. The tennis courts on LAVC on Burbank Blvd are NOT open to the public. Where is one

supposed to go to enjoy some outdoor time? All the way over to Balboa Park. One should have to drive 30 minutes from Studio City to hit a tennis ball on cracked and old courts?

I personally think it would be better to let HW develop the property around its existing location on Coldwater. Please protect our scarce open recreational space to the public.

### **Response No. IND 203-2**

This comment expresses concerns about the loss of tennis courts and recreational spaces available to the public. Refer to Response No. IND 203-1 regarding public access to the Project Site and recreational opportunities available to the public with Project implementation. Also, refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, regarding public use of the Project’s tennis courts and the capacity of the future courts to accommodate the same number of sessions for the public as under existing conditions.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 204

Riley McCluskey  
Received May 10, 2022

### Comment No. IND 204-1

My name is Riley McCluskey, and I strongly oppose Harvard-Westlake School's planned destruction of Weddington Golf & Tennis. Weddington represents an all-too-rare gem in our city – a beautiful, accessible outdoor space that everyone can enjoy. When I visit Weddington, I feel like I am stepping back into a simpler, more idyllic time – there are families everywhere enjoying the sun and little kids learning the great game of golf. Weddington is an anachronistic jewel that we should protect.

### Response No. IND 204-1

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### Comment No. IND 204-2

**The symbolism of an elite institution, bloated with cash, destroying this historic property and turning it into a private playground for its wealthy students couldn't be more on the nose – an indictment of our modern age where private interests gobble up public goods without remorse.**

### Response No. IND 204-2

The comment expresses general opposition to the Project citing the loss of a historic property and conversion of the site to a “private playground”. The commenter is referred to Topical Response No. 6 – Historic Resources, in this Final EIR for a discussion of direct and indirect impacts on historical resources resulting from the Project, including project design features that would preserve historic character-defining features of the Project Site.

Contrary to the commenter's implication that the facilities currently on the Project Site are “public goods,” the Project Site is and has historically been private property. However, upon completion of the Project, public access to the various recreational amenities onsite would be provided. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also, refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 204-3**

I went to Loyola High School but many of my close friends are Harvard Westlake alums. Trust me – future generations of Wolverines will be just fine and still get into fancy colleges without their extra special tennis facility built on the remains of Weddington.

Please, please protect this beloved part of LA History. There is a deeper symbolic message at stake here and I urge you to intervene and help keep a little magic alive in this amazing town.

**Response No. IND 204-3**

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 205**

Robert Baer

Received May 10, 2022

### **Comment No. IND 205-1**

I hope this email finds you well. I live in Studio City and am writing to express my strong opposition to the proposed development of the beloved Weddington Golf/Tennis by Harvard Westlake.

In fact, I am disgusted that a Valley institution that serves tens of thousands of local residents could be sold out to an elite High School where approximately only 300 students participate in sports.

I play tennis there every week with a neighborhood friend, play golf with my father-in-law and practice at the putting green. I was there a couple of weeks ago with a different neighbor and his son to play golf. When we left – every hitting practice bay was filled.

I can't tell you how upsetting it is that this beautiful space could be basically shut down for a PRIVATE high school.

### **Response No. IND 205-1**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. To clarify the existing property rights and on-site uses, the Project Site is not public property. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

However, upon completion of the Project, public access to the various recreational amenities onsite would be provided. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also, refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment No. IND 205-2

Here are just some of the reasons AGAINST the project:

- Harvard Westlake has a campus – the community should not be negatively impacted b/c HW can't make do with the campus they have. We should not be punished b/c they keep increasing enrollment!
- The HW development will benefit the few (who can pay \$40,000+ year to attend) versus the tens of thousands of local residents who benefit from this community resource
- There will be many jobs lost at the facility from the coaches and staff at both facilities
- Many of the kids who go to HW are not even local

## Response No. IND 205-2

The comment claims that the Project would only benefit a few, that the School keeps increasing enrollment, that the School needs to use the campus it has, and that jobs will be lost. The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location. Also, the Project does not propose to increase enrollment. Any future discretionary projects, including potential expansions of the Project Site or on either School campus, would be subject to future environmental review under the CEQA. It is up to the discretion of the City to approve or reject future projects.

With regards to jobs, economic considerations are not CEQA issues and are not addressed in the Draft EIR.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment No. IND 205-3

- It's one of the few green spaces left in Studio City
- It is a treasured part of Studio City and one of the reasons I fell in love with SC when I bought a house here 15 years ago

## Response No. IND 205-3

The comment expresses opposition to the Project based on the loss of green space. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment No. IND 205-4**

- The noise, light and destruction of trees

## **Response No. IND 205-4**

The comment expresses opposition to the Project based on noise, light and destruction of trees. Please refer to Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of construction and operational noise impacts and Topical Response No. 4 – Aesthetics, for a discussion regarding operational light and glare impacts. Also, please refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project’s tree replacement program. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment No. IND 205-5**

It is so obvious that this is all about money and has nothing to do with the community that it will be impacting – it's disgusting!

We all know Garcetti is an alum of HW. This just really reeks of cronyism. Whomever is trying to push this through should be ashamed of themselves.

HW does not need this facility that will clearly devastate the community. THEY HAVE IDENTICAL FACILITIES ALREADY ON THEIR CAMPUS – WE SHOULD NOT BE PUNISHED B/C THEY WANT MORE FACILITIES

Just because HW purchased the property it does not mean that they can do whatever they please with it. I'm sure it's not zoned for what they want to do. They took a risk buying the property without proper entitlements. The community should not suffer. This would be like someone buying the house next to yours and then deciding to put in a convenience store just because they own the land.

## **Response No. IND 205-5**

The comment questions the need for the Project and expresses the commenter’s opinions based on unsubstantiated evidence or facts. The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

The comment expresses the concern that the Project Site is not zoned for school uses. The Project Site is zoned A1-1XL-RIO. The “A1” zone, which allows one-family dwellings, parks, golf courses, and farming among other uses, also permits a school use with a conditional use permit.<sup>10</sup> LAMC Section 12.24.T.3(b) explicitly permits schools and school-related facilities within an agricultural (A) zone and in all residential (R) zones under a conditional use permit (CUP). Most private schools in the City operate under a CUP (public schools are not subject to the City’s zoning code). Therefore, the Project’s application for a CUP to operate its athletic and recreational facilities is not an unusual circumstance that indicates a conflict with the Project Site’s existing zoning or the City’s Zoning Code.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 205-6**

Part of the reason we purchased our home in Studio City nearly 17 years ago was because of the community feel that is greatly enhanced by amenities like this Golf and Tennis club. I also sell Real Estate in the area and this project will have a negative impact on property values.

Thank you for your consideration. I hope that you can help do the right think for the community that you represent.

### **Response No. IND 205-6**

The comment expresses general opposition to the Project based on the loss of the Weddington Golf & Tennis facility and decreased property values. With regard to decreased property values, the commenter does not provide any substantive facts or support for this concern. Additionally, economic and social effects of a project are not treated as significant effects on the environment under CEQA unless they would lead to a physical impact on the environment. See CEQA Guidelines Section 15131. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

---

<sup>10</sup> Los Angeles Municipal Code (LAMC) Section 12.05.A (A1 Zone defined uses).

## **Comment Letter No. IND 206**

Tal Meirson

Received May 10, 2022

### **Comment No. IND 206-1**

I strongly oppose Harvard-Westlake School's planned destruction of Weddington Golf & Tennis. The proposed conversion of the Weddington Golf & Tennis property into a private high school sports complex is concerning for a number of reasons.

### **Response No. IND 206-1**

The comment expresses general opposition to the Project based on the loss of the Weddington Golf & Tennis facility and private use of the Project Site by Harvard Westlake. To clarify the existing property rights and on-site uses, the Project Site is not public property. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. However, upon completion of the Project, public access to the various recreational amenities onsite would be provided. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also, refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 206-2**

1. Harvard Westlake is not that close to their proposed sport center. The students will have to be shuttled through our neighborhood and will increase pollution and traffic. Will be dangerous to bike and walk with strollers with vans and busses added.

### **Response No. IND 206-2**

The comment expresses concerns about increased pollution and traffic. The comment further expresses concerns about bike and pedestrian safety in the neighborhood, which will be impacted by the addition of vans and buses.

With regard to increased pollution, the Draft EIR addressed air quality impacts in Section IV.A, *Air Quality*, with supporting data provided in Appendix B, Air Quality/Greenhouse

Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant after mitigation, where applicable.

The commenter is also referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, in this Final EIR for a discussion of the Project's traffic patterns, effects on local streets, and consistency with CEQA threshold levels. Refer to Response No. IND 185-4 for additional discussion of the School's shuttle service to/from the Project Site.

The comment also expresses concern about pedestrian safety as much of the neighborhood does not have crosswalks and people walk in the street. Please refer to Response No. IND 42D-6 and IND 70-2 regarding intersection and pedestrian safety.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 206-3**

2. With LA's green open space disappearing, Harvard-Westlake plans to service a privileged, select few by replacing 16 irreplaceable acres with artificial turf and concrete buildings, as well as by exerting their influence to secure variances to Weddington Golf & Tennis' A1 Agricultural Open Space zone allowances from the City.

3. By destroying the property's significant existing urban tree canopy along the LA River and replacing it with 12-foot walls, artificial turf, saplings, and towering light poles, the end result allows practices, games, and special events that will generate increased noise and traffic, which does not conform to the surrounding community.

4. Weddington Golf & Tennis is often referred to as "the gem of Studio City" and considered a local landmark for nearly 70 years. The LA Cultural Heritage Commission (CHC) supported Historic-Cultural Monument (HCM) designation for the ENTIRE 16-acre Weddington Golf & Tennis subject property. For that reason, we strongly support the mysterious, last-minute revisions be reversed and the designation restored to the CHC's original recommendation:

### **Response No. IND 206-3**

This comment expresses the same concerns presented in Comment No. IND 202-1 to IND 202-3. Responses to this comment are provided in Response to Comment Nos. IND 202-1 to IND 202-3.

### **Comment No. IND 206-4**

5. Noise from the sport event and other events will affect the living conditions that this quaint neighborhood is known for and change the quality of life for many residents.

## **Response No. IND 206-4**

The comment expresses concerns about noise from sporting and other events the commenter states will change the quality of life for many residents. The commenter is referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, regarding operational noise impacts. As discussed therein, operational noise impacts from the Project would be less than significant.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 207**

Tama Winograd  
Received May 10, 2022

### **Comment No. IND 207-1**

Wedding [sic] Golf & Tennis has been an important recreational site for the public for almost 70 years. It disgusts me that Harvard-Westlake wants to destroy it so their privileged students have another place to play sports. How about a little basic fairness instead of catering to the wealthy?

### **Response No. IND 207-1**

The comment expresses general opposition to the Project due to the loss of the Weddington Golf & Tennis facility. The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 208**

Thomas Perry  
Received May 10, 2022

### **Comment No. IND 208-1**

I strongly oppose Harvard-Westlake School's planned destruction of Weddington Golf & Tennis. The residents of Studio City all seem to feel the same way. Rather than repeat the main objections, which you will hear from others, I have a few other thoughts that I believe deserve notice.

### **Response No. IND 208-1**

The comment expresses opposition to the Project based on the loss of Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 208-2**

Every public meeting regarding this expansion, and the one proposed before it for a giant parking structure with alighted athletic field on its top has been a travesty, in which the school's administrators and lawyers made highly questionable assertions before an audience packed with Harvard Westlake parents and students, who live elsewhere and would suffer none of the consequences of these terrible projects. The sale itself, and every alteration to the original proposal, has been done in secret and then announced as an accomplished deal, which people could then comment on.

### **Response No. IND 208-2**

The comment describes general opposition to the Project and states Project meetings were largely attended by Harvard-Westlake parents and students, who live elsewhere and would suffer none of the consequences of the Project. Further, the comment implies the sale of the Project Site as well as evolvment of the Project to its current presentation in the Draft EIR have been done in secret. This statement is not supported by substantiated evidence or facts. To the contrary, the School has conducted numerous community meetings to refine the scope of the Project in consideration of community input and the Project Objectives included on pages II-13 and II-14 in Chapter II, *Project Description*, of the Draft EIR. The Project as described in Chapter 2, *Project Description*, of the Draft EIR, and the revisions included in Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR, have been made available for public review in advance of the City's forthcoming hearing process.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 208-3**

Weddington, the area around it, and above the water beside it provide habitat and food for a surprising variety of birds, a good share of the trees in the district, and other irreplaceable natural features.

### **Response No. IND 208-3**

The comment indicates the Project Site and surrounding area provide habitat and food for birds, a good share of trees, and other natural features.

Please refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project’s tree replacement program. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase. Refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife and nesting birds. The commenter is also referred to Section IV.C, *Biological Resources*, of the Draft EIR with supporting data provided in Appendix D, *Biological Resources Technical Report*, of the Draft EIR. As analyzed therein, biological resources impacts would be less than significant with mitigation, where applicable.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 208-4**

The increased traffic in the area, which will go on from early morning until late evening, will have a negative impact on everyone living in Studio City.

### **Response No. IND 208-4**

The comment asserts that the Project’s traffic would have a negative impact on everyone in Studio City. Please refer to Topical Response No. 9 – Transportation and Parking During Construction and Operations in this Final EIR for a discussion of the Project’s traffic patterns, effects on local streets, and consistency with CEQA threshold levels.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 208-5**

Harvard Westlake already has the best athletic spaces in the San Fernando Valley. There is no educational benefit to adding more. This is a vanity project, which will cause real harm to the residents. If it is allowed it will simply be one more triumph of money over principle.

### **Response No. IND 208-5**

The comment expresses the opinion that the Project is not needed by the School. The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 209**

Adele Slaughter & Jeff Kober  
Received May 10, 2022

### **Comment No. IND 209-1**

I wish we all could have met under different circumstances. I am sure that we will have a very long and fruitful relationship ahead of us. Kimberly, I have only seen you on various Zoom meetings. Jorge and I met at our Studio City Neighborhood Council Sustainability meeting, on which I volunteer, and I met Ms. Raman at the Studio City Residence association meeting where I asked a question about CEQUA [sic] having more “teeth”. I have lived in Studio City since 1994 when I moved here with my 8 year old son who attended Carpenter Elementary, then North Hollywood High.

### **Response No. IND 209-1**

The comment introduces a presentation. Since the comment is introductory in nature and does not address the Project or information contained in the Draft EIR, no further response is necessary.

### **Comment No. IND 209-2**

As you might imagine, I am not in favor of Harvard-Westlake School’s planned construction at Weddington Golf & Tennis. The conversion of the property into a private high-school sports facility is an unacceptable plan for this site. I have been looking into this project for over two years and the list of reasons that this is over-development is inappropriate for this site is long. Attached is my list of things that are inadequate in the DEIR. And while my list is not complete, it speaks to some of the most egregious things omitted from the Draft Environmental Report.

### **Response No. IND 209-2**

The comment states opposition to the Project on the basis that it is inappropriate for the Project Site. The comment introduces, but does not include a discussion of specific inadequacies of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 209-3**

The DEIR does not accurately portray how this proposal will destroy an open green park space and eliminates a park space that the Master Plan has counted on for decades. I am attaching my detailed response to the DEIR as a PDF as well as a Landscape Response as a PDF from a certified Landscape architect. Please put these into the record responses to the DEIR.

### **Response No. IND 209-3**

The comment states that the Project would destroy open green park space and introduces additional comments to the Draft EIR and a landscape plan provided as attachments to the comment letter.

To clarify the existing property rights and on-site uses, the Project Site is not public open space. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 209-4**

I am quite certain that this massive development is too big for the neighborhood. I also want Ms. Henry and Ms. Raman to know, that I have written to the school's administration and the Board of Directors asking for a community "think tank" to address some of these issues and more, but received no response.

### **Response No. IND 209-4**

The comment states that the Project would be too massive for the neighborhood. See Topical Response No. 4 – Aesthetics, regarding the Project's less than significant aesthetics-related impacts. Additionally, impacts related to views, scenic resources and visual character were evaluated in the Initial Study (Appendix A of the Draft EIR) and also determined to be less than significant.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 209-5**

Please consider aligning City Planning and CD4 with Barry Milofsky, Gail Kennard and Richard Barron historic commissioners who voted in favor of the HCM designation as well as council members who understand the unique nature of saving such a piece of open green space. Councilmembers like Paul Koretz and Mitch O'Farrell who actually work to fight climate change and protect our natural resources.

## Response No. IND 209-5

The comment provides a suggestion to the City regarding the process via which the Project is evaluated for potential environmental impacts. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment No. IND 209-6

*Response Nos. IND 209-6 to 209-42 are included in the commenter's attachments to their May 10, 2022 e-mail.*

### AESTHETICS

Stands of trees next to the tennis courts Photo #1

Scenic quality refers to the visual appeal of an area and is informed by features that contribute to overall aesthetic character. Aesthetic features may include unique or prominent natural or man-made attributes or several small features that, when viewed together, create a whole that is visually interesting or appealing.

Ariel [sic] view From Northwest to Southeast Photo #2

The Initial Study prepared for the Project, determined that impacts related to scenic vistas, scenic resources, and consistency with applicable scenic quality regulations would be less than significant. From The DEIR IV.A. Aesthetics (Light and Glare) p 95.

We disagree. The DEIR inadequately describes the views of the existing stands of trees and the value of the scenic views from the hills above Studio City, as well as along Valley Spring and Bellaire. As you can see in the above photographs #1 and #2. The stands of trees were planted to delineate the golf course and at almost 70 years old the trees are majestic and create an urban forest.

### **Response No. IND 209-6**

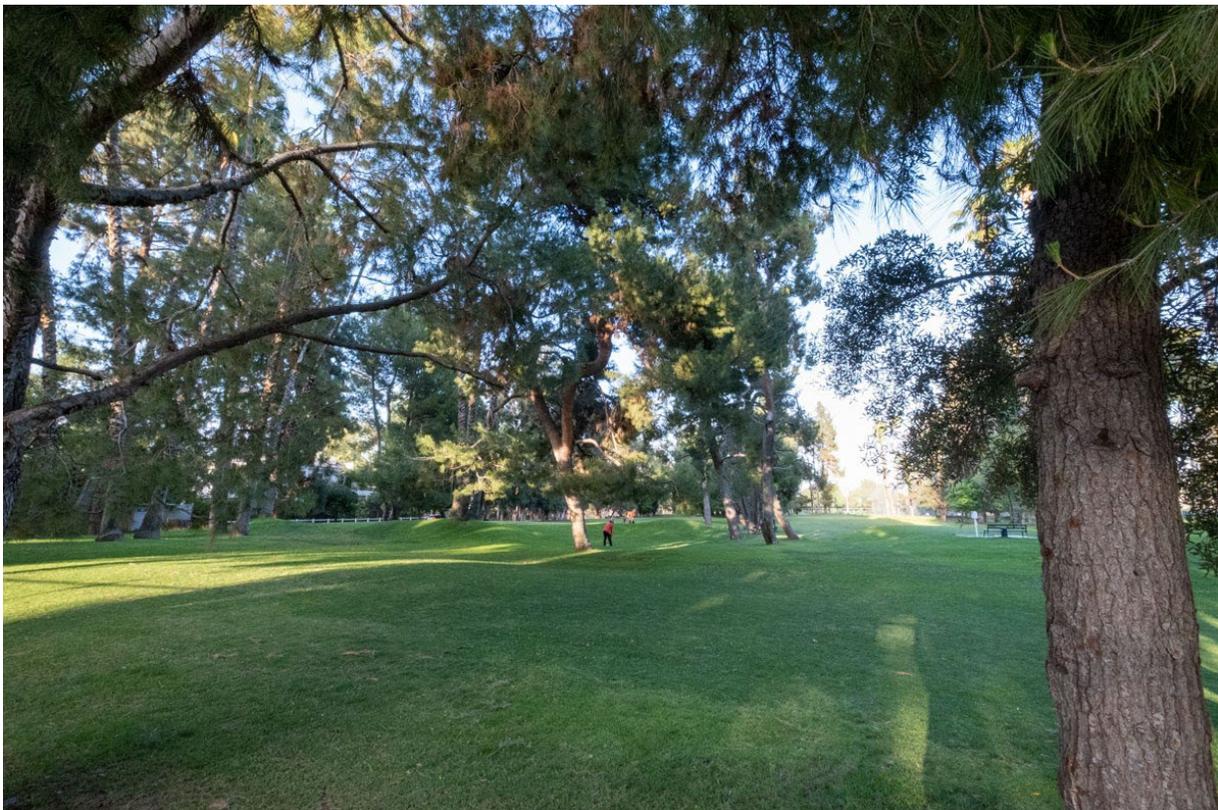

The comment challenges the conclusions of the Initial Study regarding aesthetics impacts. However, the commenter does not provide any substantive evidence that the Project would result in significant aesthetics impacts. The commenter is referred to Topical Response No. 4 – Aesthetics, regarding the aesthetic impacts of the Project. The commenter generally states that because of the stands of trees on the Project Site, some of which maybe be removed by the Project, the Project would cause significant aesthetics impacts. Removal of trees alone on the Project Site is not reason enough on its own to cause a significant aesthetic impact. The totality of the visual elements, including the tree stands, were considered in the aesthetics analysis. However, with regard to trees specifically, see Topical Response No.5 – Biological Resources/Trees, for a discussion of impacts to on-site trees. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as

compared to existing conditions – a 36 percent increase. Note that the mature eucalyptus trees along Bellaire Avenue and most of the eucalyptus trees on Valley Spring Lane, as well as along the Zev Greenway would be preserved by the Project. Based on the totality of the visual elements of the Project features, including its tree replacement program, preservation of most of the perimeter trees, and new landscaping, the Initial Study correctly concluded aesthetics impacts would be less than significant based on the threshold questions established in Appendix G of the CEQA Guidelines.

### **Comment No. IND 209-7**

The Project would not substantially damage scenic resources, including but not limited to trees... From The DEIR IV.A. Aesthetics (Light and Glare) p 95.

We disagree. The plan calls for the removal of 209 significant trees and the study of the impact of the removal of these trees is inadequate and needs further consideration. In the photo #3 below a golfer is next to an Aleppo Pine, a significant mature tree. The scenic resources would be significantly impacted and altered by the proposed construction of a walled-in sports complex. This open space view from Valley Spring and Bellaire would be extinct.

Aleppo Pine with Golfer in red Shirt #3

## Response No. IND 209-7

The comment disagrees with the conclusion that the Project would not damage scenic resources. The aesthetics analysis in the Initial Study addresses scenic resources within the view field of a state scenic highway per the CEQA Guidelines Appendix G checklist questions. Because views of the Project Site are not available from a scenic highway, no impacts would occur, as properly concluded in the Initial Study.

Furthermore, the comment omits information provided in Chapter II, *Project Description*, page II-1 and II-29 and Section IV.C, *Biological Resources*, Figures IV.C-4, *Tree Removal Plan*, page IVC.-36; Figure IV.C-5, *Tree Planting Plan*, page IV.C-37; and Figure IV.C-6, *Planting Zone Plan*, page IV.C-38 ,and page IV.C-53, that show or state that the Project would plant 393 new trees, resulting in 574 trees, which would be an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase. Refer to Response No. IND 209-6 above for additional discussion of tree replacement.

## Comment No. IND 209-8

### **If the project is in an urbanized area, would the project conflict with applicable zoning and other regulations governing scenic quality?**

As discussed in the Initial Study (Appendix A of this Draft EIR), the Project Site is located in an urbanized area and as applicable to Threshold (c), the Project would not conflict with applicable zoning and other regulations governing scenic quality. As such a less-than significant impact would occur with respect to Threshold From The DEIR IV.A. Aesthetics (Light and Glare) p 95.

Panoramic View of the golf course from Valley Spring Photo #4

We disagree. In title 22 Planning and Zoning, Chapter 22.16.010 states that the Open Space Zone (Zone O-S) is established to provide for the preservation, maintenance, and enhancement of the recreational, natural, and environmental resources of this County as defined in the General Plan. And specifically to protect sites of historical, archaeological, scenic, or scientific value. As you can see in photo #4 this is a natural recreational course that offers environmental resources such as sequestering carbon, cleaning water, keeping water runoff to a minimum and providing a view of nature in an other wise urban

environment. It has also been deemed an historical site by the City. We think that the DEIR gives these elements short shrift and ignores the impacts of building 387,086 square feet of building across the property.

### **Response No. IND 209-8**

The comment states that the Project would not comply with the Open Space zone. The comment is not supported by facts. The Project Site is located within the A1-1XL-RIO zone, not the Open Space (OS) zone. Therefore, the requirements of the Open Space (OS) zone do not apply to the Project Site.

The commenter is referred to Topical Response No. 6 – Historic Resources, in this Final EIR for a discussion of direct and indirect impacts on historical resources resulting from the Project, including project design features that would preserve historic character-defining features of the Project Site. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.

### **Comment No. IND 209-9**

NOTE: in 1973 when the zoning was changed to A1-A Open Space the then owner of the 50-year-lease, Art Anderson wanted to build a tennis club with bathrooms and showers but the city only allowed him to build a 500-square foot house with one shower and two bathrooms. Joel Wachs the Councilmember at the time of the zoning change, wrote me in an email: “Congratulations on your efforts to keep the Weddington Golf and Tennis property green, recreational and open for public use. It’s been nearly fifty years since I was first elected to office and began working with the community and the Weddington family to preserve the property for such uses.” (Joel Wachs, Councilmember Second District 1971-2001)

### **Response No. IND 209-9**

The comment states that the zoning of the Project Site was changed to Agriculture/Open Space in 1973 to provide for open space. The Project Site’s zoning was changed from Residential (R) to Agriculture (A) in the 1970s to reduce tax liability prior to Proposition 13 and to provide similar zoning to other golf course operations in the area. It was not the intention of the A zone to provide for agricultural activities or open space. The Project Site was never zoned OS. The zone change was discretionary on the part of the owner, who could have “by right” subdivided the property into almost 150 residential lots consistent with the surrounding residential neighborhood, if the owner had elected to do so. In addition to the tennis shack, the property continued to include a 2,700 square-foot residence used as the operating office and a clubhouse with café.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 209-10**

The DEIR does not adequately investigate the impacts of the following

- 2 artificial turf sports fields (1 with synthetic track)
- 1 Olympic-size swimming pool and locker rooms
- 8 newly-constructed tennis courts and locker rooms
- 387,086 square feet of building across the property
- 80,249 square-foot multi-purpose gymnasium and locker rooms
- 2,217 spectator seats spread across the property
- Removal of 240 mature, heritage trees
- 33 light poles (ranging between 26 and 80 ft high)
- 5-acre, 503-space parking structure (roughly 600% increase)

### **Response No. IND 209-10**

The comment states that the Draft EIR does not adequately evaluate the impacts of the Project's features as listed in the comment. The comment does not provide any specific issues with regard to any of the listed features. The Draft EIR analyzed the potential effects of the combined listed components, including composite noise effects, total construction activity, maximum attendance, maximum traffic, and other effects. The City, in the preparation of the Draft EIR, determined that the Draft EIR adequately meets the requirements of the CEQA Guidelines (Draft EIR, page ES-1) in the Draft EIR's scope. The claim in the comment that the Draft EIR does not adequately evaluate the impacts of the Project is not supported by fact or substantial evidence.

See Topical Response No. 7 – Artificial Turf and Effects on Localized Heat and Health, which addresses the potential health-related and urban heat island effects due to the Project's use of artificial turf fields.

Please refer to Topical Response No. 5 – Biological Resources/Trees for a discussion of impacts to trees and the Project's tree replacement program.

In addition, please refer to Chapter 3, *Revisions, Clarifications, and Corrections*, of this Final EIR, which provides updates to the Project's light poles and bleacher seats. As evaluated in Section IV.A, *Aesthetics*, of the Draft EIR, light and glare impacts would not exceed existing ambient light and glare levels in the off-site area or exceed RIO standards within the Project Site. The Project's lighting program has been revised to reduce the number of field and tennis court lights. The revised Lighting Study is attached as Appendix

B.1 to this Final EIR and, as further evaluated in Topical Response No. 4 – Aesthetics, the reduction in lighting would further reduce the Project's light and glare levels. Consistent with the analysis in Section IV.A. light and glare impacts would be less than significant.

Also, current updates to the Project would reduce the overall number of seats provided by the Project from 2,217 seats to 2,005 seats, which is a reduction of 212 seats. The changes to seating include: 1) pool area bleacher seats reduced from 348 to 214; 2) Field B bleacher seats reduced from 255 to 109; 3) Field A bleacher seats increased from 488 to 542 (accomplished by using prefabricated metal bleachers in lieu of the poured-in place concrete system previously proposed by the School); 5) gymnasium seats increased from 1,026 to 1,056; and 6) tennis bleacher seats reduced from 100 to 84. Also, the overall parking capacity has been reduced from 532 spaces to 403 spaces. Specifically, the parking capacity of the underground structure has been reduced from 503 spaces to 386 spaces and the capacity of the above grade surface parking lot has been reduced from 29 spaces to 17 spaces. See Topical Response No. 2 - Modifications to the Project Design, and Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, which provides these Project updates.

## **Comment No. IND 209-11**

### **PUBLIC SERVICES – PARKS AND RECREATION – SOCIAL EQUITY**

The impact on the parks and recreation has been given short shrift in the DEIR and is inadequately studied. This project will heavily impact the distribution of wealth, opportunities, and privileges within our community. In the DEIR they state that the tennis courts will be used "when they are not in use by Harvard-Westlake." And also for "for pre-approved Studio City-based organizations."

In Cy Carlberg tree planting plan in the DEIR she names it the "Harvard- Westlake River Park Campus". It will be a campus for the school, not a publicly accessible recreational facility as it is today.

This newly formed recreational site will have access to a select few. The school has not adequately explained how they will screen the people who walk onto their "campus" which by definition is not public access.

Currently, we estimate at least 100,000 Angeleno's use this property annually. They are a broad selection of people from all walks of life. In fact, as a Captain of two USTA teams that call Weddington home, I can tell you that my teams are a diverse group of women both in age and ethnicity.

The DEIR suggests that the tennis players will easily relocate to other tennis courts and golfers will find other places to play. Their reasoning is inadequate and uses "cold data" which does not reflect the community's experience. Loosing [sic] those courts will be a

net loss to tennis players and even greater loss for golfers who will lose all but the putting green. There are insufficient places for tennis players and golfers to utilize in the area.

### **Response No. IND 209-11**

The comment expresses concerns about the availability of the tennis courts to the public and public access to recreational facilities. Please refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. The commenter is also referred to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, in this Final EIR for a discussion of impacts related to the Project’s provision of tennis facilities for public use. As discussed therein, the Project would accommodate the same number of weekly sessions, including existing and future student use, as under existing conditions. Tennis would be available to the public under a reservation system that would allow concurrent use with students (who use the courts in the late afternoons) when courts are available.

Further, with respect to parks and recreation, the CEQA Guidelines do not provide a threshold or address the personal interests or perception of convenience of users of a land use but do consider the potential physical deterioration that potentially relocated users would create on existing public parks and recreational facilities. The CEQA thresholds also evaluate whether the Project would require the expansion or addition of parks and recreational facilities that would result in potentially significant adverse physical effects on the environment.

Also, the comment states that an estimated 100,000 Angelenos use the property annually. The stated number is misleading in that the number is generally estimated based on the daily number of visitors to the Project multiplied by 365 days/year. Since many of the daily visitors are regular/repeat visitors to the Project Site, the stated number of Angelenos using the property is highly overstated. For comparison, by using this same math, Harvard-Westlake users of the Project Site would be above 100,000 users per year, which is not accurate since the students would be repeat visitors to the Project Site.

### **Comment No. IND 209-12**

Additionally, the DEIR states the following about the fire station: "development of this proposed project, along with other approved and planned projects in the immediate area, may result in the need for the following: 1. Increased staffing for existing facilities. (i.e., Paramedic Rescue Ambulance and EMT Rescue Ambulance resources.) 2. Additional fire protection facilities. 3. Relocation of present fire protection facilities.

The DEIR indicates this development will impact the fire protection facilities and will seriously impair the fire station and their ability to provide services. Putting the recreational needs of 900 students above fire fighters who currently work next to the Weddington Golf & Tennis is the definition of “social inequity”.

## Response No. IND 209-12

The comment claims that the Project would place student needs above the needs of the LAFD. Also, the comment points out the Draft EIR indicates the Project and related projects may result in increased staffing and additional or relocated facilities. However, the comment fails to include or reference the impact analysis provided in the Draft EIR on this topic.

As discussed in on page IV.L.1-28 in Section IV.L.1, *Fire Protection*, of the Draft EIR, according to the service letter received from the LAFD, dated February 20, 2021, the LAFD stated that the development of the Project and related projects in the immediate area may result in the need for increased staffing for existing facilities, additional fire protection facilities, and relocation of present fire protection facilities. The comment letter is provided in Appendix L.1 of the Draft EIR. Note also that page IV.L.1-28 of the Draft EIR states: “However, as previously discussed, the LAFD continuously evaluates fire station placement and overall service capabilities as part of its obligation to provide fire services throughout the City. Currently, the LAFD has no plans to expand or construct new facilities to service the Project Site vicinity.”

The analysis concludes that the Project's contribution to cumulative impacts associated with the provision of new or physically altered fire facilities, the construction of which would result in substantial adverse environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for fire protection would not be cumulatively considerable, and cumulative impacts would be less than significant. As discussed in Section IV.L.1, *Fire Protection*, page IV.L.1-26, the Project would “provide a system to maintain adequate access for emergency vehicles to enter and return to the adjacent LAFD Fire Station 78 and, thus, would not interfere with the operation of that fire station or substantively increase response times.”

Also, the Draft EIR does not state that the Project “will seriously impair the fire station and their ability to provide services,” as the commenter claims. The Draft EIR appropriately evaluated impacts to fire protections services based on the CEQA Guidelines and impacts, and concluded that impacts would be less than significant.

## Comment No. IND 209-13

### HAZARDOUS MATERIALS

#### Trees & Artificial Turf & Green House Gas Emissions

Taking out significant 70-year-old trees that have sequestered many tons of carbon to put in 46” box trees that are 4 to 7 years old (even if they are Natives) is a net loss of carbon sequestration. The effects of human-caused global warming are happening now. The latest IPCC (Intergovernmental Panel on Climate Change) report shows greenhouse gas emissions continue to rise, and current plans to address climate change are not ambitious enough and will worsen in the decades to come.

The DEIR has failed to address the impacts of the removal of mature trees that have sequestered carbon at a fantastic rate.

### **Response No. IND 209-13**

Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.. In addition, the Draft EIR addressed GHG impacts in Section IV.G, *Greenhouse Gas Emissions*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, GHG impacts would be less than significant.

### **Comment No. IND 209-14**

Also the DEIR has failed to address that synthetic turf emits methane gas which is more than 25 times as potent as carbon dioxide at trapping heat in the atmosphere.

### **Response No. IND 209-14**

The comment raises concerns about methane from the Project's artificial turf and the potential heat island effects. See Topical Response No. 7 – Artificial Turf and Effects on Localized Heat and Health, which addresses the potential health-related and urban heat island effects due to the Project's use of artificial turf fields. Section IV.H, *Hazards and Hazardous Materials*, and Appendix H-2, Artificial Turf Technical Memorandum, of the Draft EIR, included a detailed evaluation of potential health impacts related to use of artificial turf. Based on the analysis, the Draft EIR determined that health-related impacts from inhalation, ingestion, dermal contact, and heat related would be less than significant.

In addition, pages IV.G-72 through IV.G-74 in Section IV. G, *Greenhouse Gas Emissions*, of the Draft EIR, included an analysis of urban heat island effects from Project implementation. As analyzed therein, the Project's artificial turf would not substantially contribute to an increase in the urban heat island effect for the area.

### **Comment No. IND 209-15**

The DEIR has given short shrift to the replacement of real turf with plastic grass. Not only are plastic grass fields heat islands, but verified research shows that Artificial turf has PFAS (forever chemicals) and microplastics both which pollute our water/aquifer. The DEIR has inadequately studied the carcinogens in synthetic turf as well as high injury rate to athletes.

### **Response No. IND 209-15**

The comment expresses concern regarding the presence of PFAS in the proposed artificial turf. The commenter is referred to Topical Response No. 7 – Artificial Turf and

Effects on Localized Heat and Health, and Response No. ORG 1B-75 which address potential hazards associated with artificial turf and PFAS. As discussed therein, the presence of PFAS in artificial turf would not create substantial adverse effects to users of the turf fields, the public, or the environment.

The comment also expresses the concern that the use of artificial turf would increase the incidence of athletic injuries. Athletic injuries are not treated as significant effects on the environment under CEQA and, therefore, are not evaluated in the Draft EIR. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 209-16**

Additionally the DEIR fails to report that artificial turf requires as much water as real turf to cool it down and to clean it so students don't get infections.

### **Response No. IND 209-16**

The comment states that the Draft EIR fails to report that artificial turf requires as much water as grass to cool and clean. No irrigation lines will be run to the turf fields, and based on information received from the School regarding their extensive use of existing artificial turf fields, watering is not necessary. Thus, irrigation water will not be used to lower the temperature of the fields or clean it.

### **Comment No. IND 209-17**

This development inadequately assesses effects of greenhouse gas emissions. The IPCC also notes the wealthiest countries are responsible for disproportionately more emissions than developing countries.

This DEIR shows an insufficient regard for climate change; although the applicant is putting in native trees and plants, they giving short shrift to the impact of the destruction of 209 significant trees that keep the city breathable. This development concept is a 1950s idea of a sports facility for a few students.

### **Response No. IND 209-17**

The comment claims that the Draft EIR does not adequately evaluate GHG emissions. The comment, however, does not include any evidence as to how the Draft EIR analysis is insufficient. In accordance with CEQA requirements, Section IV.G, *Greenhouse Gas Emissions*, of the Draft EIR determines the Project's consistency with applicable GHG reduction strategies and local actions approved or adopted by CARB, SCAG, and the City. For informational purposes, the analysis also calculates the amount of GHG emissions that would be attributable to the Project using recommended air quality models. The primary purpose of quantifying the Project's GHG emissions was to satisfy CEQA

Guidelines Section 15064.4(a), which requires a good-faith effort by the Lead Agency to describe and calculate emissions. The estimated emissions inventory is also used to determine if there would be a reduction in the Project's incremental contribution of GHG emissions as a result of compliance with regulations and requirements adopted to implement plans for the reduction or mitigation of GHG emissions. The significance of the Project's GHG emissions impacts is not based on the amount of GHG emissions resulting from the Project but is evaluated solely on the Project's consistency with GHG reduction plans, policies, and regulations. Because the Draft EIR met the CEQA requirements for the determination of significance and went beyond this requirement to quantify emissions, the evaluation of GHG emissions is not considered to be inadequate.

Also, refer to Topical Response No. 5 – Biological Resources/Trees, a discussion of impacts to trees and the Project's tree replacement program. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.

## **Comment No. IND 209-18**

### **WASTEWATER and WATER USE**

Currently, there are 4 toilets and 2 showers on site. One shower and 2 bathrooms in the golf club house and the other shower and 2 bathrooms are in the Tennis shop. The DEIR fails to detail how many bathrooms and showers will be in the locker rooms and gymnasium on the property. And therefore inadequately describes how much water will be used by those facilities. Also the DEIR inadequately describes how they will provide bathrooms, showers and locker rooms for home teams, visiting teams, and in full consideration for the expanded spectrum of needs, including male, female, nonbinary and be in compliance with the Americans with Disabilities act (ADA).

## **Response No. IND 209-18**

The comment claims that the Project inadequately evaluated water demand since it did not specifically estimate water demand for showers, locker rooms, and bathrooms. The Draft EIR summarizes the Project's estimated water demand in Section IV.O.1, *Water Supply* (see Table IV.O.1-8, *Maximum Estimated Project Domestic Water Demand*, page IV.O.1-29) and the Project's wastewater generation in Section IV.O.2, *Wastewater* (see Table IV.O.2-2, *Maximum Daily Estimated Wastewater Generation During Project Operation*, page IV.O.2-11). Table IV.O.1-8 includes estimated demand associated specifically with the gymnasium, parking structure, locker rooms, restrooms, storage and sheds, swimming pool, clubhouse, and irrigation. The CEQA threshold for water supply is whether "the Project would have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years." The threshold for wastewater is whether the Project would require or result in the "relocation or construction of new or expanded water or wastewater treatment facilities, the construction or relocation of which could cause significant environmental effects." As

evaluated in detail in these two Draft EIR sections, the Project would not exceed water supplies available to serve the Project and reasonably foreseeable future development during normal, dry and multiple dry years, or require or result in the relocation or construction of new or expanded wastewater treatment facilities. For the purpose of the Draft EIR, building plans are conceptual and the Draft EIR only evaluates Project components that are pertinent to the requirements of the CEQA Guidelines. CEQA does not require evaluation of finished building plans, in which details are presented to the City's Department of Building and Safety by the Project's architect and engineers. In the installation of facilities and consistency with ADA regulations, the Project would be required to comply with the Building Code, as determined by the City's Department of Building and Safety. This phase of design and development occurs subsequent to Project approval and is not required content of the Draft EIR.

### **Comment No. IND 209-19**

Additionally, the DEIR inadequately anticipates how much water will be needed during construction, to water down the dirt and pour concrete. These studies need to be revisited and completed.

Attached is The River Project May 9, 2022 MEMO. Appendix I

### **Response No. IND 209-19**

The comment asserts that the Draft EIR inadequately anticipates water demand during construction. This claim is not correct. Section IV.O.1, *Water Supply*, page IV.O.1-25 of the Draft EIR provides an evaluation of water demand associated with construction activities. As concluded therein, Project construction would not require or result in the relocation or construction of new or expanded water facilities, the construction of which would cause significant environmental effects. Construction impacts under the Project on water infrastructure would be less than significant.

### **Comment No. IND 209-20**

#### **EXCEPTIONS**

The 8 to 12 foot walls around the property should be denied since they will block the scenic views of open space.

The impacts of eighty foot tall lights on sports field have been inadequately studied. This net increase of lights currently on site will adversely affect the neighborhood. Birds and the bats cannot live in an environment where night is day. They can't mate, or sleep or migrate.

The DEIR is lacking in a complete description of the state of the art sound system. Additionally, it is lacking in information of the unnamed events: movies in the park, concerts, Olympics, sporting events. The description of the state of the art press box in

the field along Whitsett is lacking in concrete detail. We have inadequate information about the events the school is anticipating/planning and the sound systems they plan on installing.

## Response No. IND 209-20

The comment states that the 8-to-12-foot walls around the property should be denied since they will block the scenic views of open space. See Topical Response No. 4 – Aesthetics, regarding the Project’s less than significant aesthetics-related impacts. Additionally, impacts related to views, scenic resources and visual character were evaluated in the Initial Study (Appendix A of the Draft EIR) and were also determined to be less than significant. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

The comment states that the impacts of the Project’s field lights are inadequately evaluated in the Draft EIR. The commenter is referred to Topical Response No. 4 – Aesthetics, regarding the impact of the Project’s field lights and other outdoor lighting. As discussed in Topical Response No. 4, the Project’s light and glare impacts were fully analyzed in the Draft EIR’s Section IV.A, *Aesthetics*, and were based on the Lighting Technical Study contained in Appendix B of the Draft EIR. As discussed therein, the Project would not exceed CEQA threshold standards at any of the nearby residential uses nor would it exceed lighting standards of the Los Angeles River Improvement Overlay (RIO) District Ordinance pertinent to locations near the Los Angeles River. The Project’s outdoor lighting would be in use from dusk to no later than 8:00 p.m. daily (9:00 p.m. for the tennis courts). Field lights would not be used on a daily basis. Existing tennis court lights are kept on up to 10:00 p.m. and lighting for the existing driving range extends daily to 11:00 p.m. Moreover, the Project’s lighting system would generally represent an improvement for surrounding residential uses, with less off-site glare and spillover, than existing conditions. See Response No. IND 209-10 which discusses updates to the Project lighting program included in this Final EIR. Section IV.C, *Biological Resources*, of the Draft EIR, pages IV.C-35 and IV.C-39 to IV.C-42 provided a detailed discussion of the indirect impacts, including those associated with noise and lighting. As evaluated therein, on-site light and glare levels and noise would not significantly impact wildlife. Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, also updates the number of light poles in Section IV.C of the Draft EIR, although the indirect impact conclusion with the Project design modifications remains the same as analyzed in the Draft EIR.

The Draft EIR is not lacking a description of the proposed sound system. The Project’s required sound system is determined based on performance parameters established under Project Design Feature NOI-PDF-2, not on a specific brand. As described in Section IV.K, *Noise*, of the Draft EIR, Project Design Feature NOI-PDF-2 (see page IV.K-39) requires that the Project’s “amplified sound system for special events will be installed and designed using a line-array speaker system, so as to not exceed a maximum noise level of 92 dBA (Leq) at a distance of 50 feet from the amplified sound system.” The stage

for special events will be located at the north side of Field A, with the amplified sound system facing south in the opposite direction from the off-site sensitive uses to the north of Field A. This location would reduce speaker noise at the nearest off-site sensitive uses to the north and east of Field A. The summary noise levels results, based on the type of amplification system required under NOI-PDF-2 and the attenuation of sound over distance, are discussed on pages IV.K-46, IV.K-49, and IV.K-50 of the Draft EIR (also see Table IV.K-14, *School Related Special Events Noise Levels*, and Table IV.K-15, *Public Events Noise Levels*). As shown therein, the Project's amplified sound would not exceed ambient noise levels by 5 dBA at sensitive receptor sites. Therefore, the Draft EIR correctly concluded that noise impacts from the amplification system would be less than significant. The analysis of a sound system's performance standards, not the identification of a specific brand, is adequate for the purposes of comparing future maximum sound levels to CEQA threshold standards.

Regarding future special, non-school events, Chapter II, *Project Description*, page II-34 of the Draft EIR states: "events in the gymnasium would include such activities as performances, lectures, or community meetings, with outdoor events on Field A including such activities as "Movies in the Park," local concerts, or other performances." The Draft EIR does not cite "Olympics" or "sporting events" as stated by the commenter. The Draft EIR identifies the potential for future special events and provides a limit of annual special events (including School-related special events) and approximate maximum attendance, which are evaluated in the Draft EIR. Although attendance and special events would be limited by potential conditions of approval, an additional mitigation measure, NOI-MM-4, is provided in Chapter 3 of this Final EIR which provides additional clarity regarding the maximum attendance and number of events already discussed and analyzed in the Draft EIR. Finally, the Project would not include a press box, contrary to the comment. However, there would be a booth where livestream broadcasts would be managed, which in effect would likely reduce the number of game spectators.

## **Comment No. IND 209-21**

### **THE CONDITIONAL USE PERMIT**

**The CUP asks that that "the project will enhance the built environment in the surrounding neighborhood or will perform a function or provide a service that is essential or beneficial to the community, city, or region."**

Response: Services provided by the school are not essential to the community, and can be provided at their Coldwater campus. The project will erase the current services to the people who currently use the site.

## **Response No. IND 209-21**

The comment includes the commenter's responses to a CUP request, which convey the necessary findings are not met by the Project. This comment that the Project does not meet the criteria to grant a CUP is not founded in substantiated facts cited, and represents

the opinion of the commenter. Also, please note that most public and private schools in the City operate under a CUP in accordance with LAMC Section 12.24.T.3(b), which allows school uses in residential and agricultural zones. For additional discussion of the Project's CUP, refer to Response Nos. ORG 7A-78, ORG 7A-79 and ORG 9-22. Also, note that the findings for a CUP are non-CEQA issues. The comment, however, is primarily a request for project disapproval. The comment does not discuss the adequacy or content of the Draft EIR and no further response is necessary.

The comment states that the services provided by the Project are not essential to the community and can be provided at the Upper School campus. The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location. Also, the Project would provide a beneficial service to the community by allowing public access to the onsite recreational amenities free of charge. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

### **Comment No. IND 209-22**

**The CUP asks that "the project's location, size, height, operations and other significant features will be compatible with and will not adversely affect or further degrade adjacent properties, the surrounding neighborhood, or the public health, welfare, and safety."**

Response: The project is too big for our neighborhood. The lights too tall, the sound too loud, the services too many, and will force people to move due to the traffic increasing, events with thousands of people arriving, and the loss of open green space.

### **Response No. IND 209-22**

The comment includes the commenter's responses to a CUP request, which convey the necessary findings are not met by the Project. This comment that the Project does not meet the criteria to grant a CUP is not founded in substantiated facts cited and represents the opinion of the commenter. See Response No. IND 209-21 which discusses the CUP being requested for the Project. Also, note that the findings for a CUP are non-CEQA issues. The comment, however, is primarily a request for project disapproval. The comment does not discuss the adequacy or content of the Draft EIR and no further response is necessary.

The comment expresses concerns that the Project is too big, the lights are too tall, the sound is too loud and that there will be a loss of open space. However, the commenter does not provide any substantive facts or support for these concerns or opinions.

Please refer to Response to Comment No. IND 209-4 regarding the Project's scale. See Response No. IND 209-10 which discusses updates to the Project lighting program

included in this Final EIR and Response No. IND 209-20 for a discussion of lighting impacts. The commenter is also referred to Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of operational noise impacts. and to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project’s traffic patterns, effects on local streets, and consistency with CEQA threshold levels.

In addition, refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, including open space, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 209-23**

**The CUP asks that "the project substantially conforms with the purpose, intent and provisions of the General Plan, the applicable community plan, and any applicable specific plan."**

Response: The DIER [sic] is inadequate and does not accurately portray how this proposal will destroy an open green park space and eliminates a park space that the General Plan has defined as essential for decades.

### **Response No. IND 209-23**

The comment includes the commenter’s responses to a CUP request, which convey the necessary findings are not met by the Project. This comment that the Project does not meet the criteria to grant a CUP is not founded in substantiated facts cited and represents the opinion of the commenter. See Response No. IND 209-21 which discusses the CUP being requested for the Project. Also, note that the findings for a CUP are non-CEQA issues. The comment, however, is primarily a request for project disapproval.

The comment states that the Draft EIR is inadequate in evaluating the conflict of the Project with the General Plan’s designation of the Project Site as park space. However, the commenter does not provide any substantive facts or support for these concerns or opinions. The Project’s consistency with the City’s General Plan Framework Element, the General Plan Conservation Element, the General Plan Open Space Element, the Sherman Oaks-Studio City-Toluca Lake-Cahuenga Pass Community Plan is thoroughly analyzed in Section IV.J, *Land Use and Planning*, of the Draft EIR. As analyzed therein, the Project would not conflict with applicable objectives and policies of the General Plan and Community Plan adopted for the purpose of avoiding or mitigating an environmental effect, and impacts with respect to the General Plan and Community Plan would be less than significant.

Further, as discussed in Response No. IND 209-3, the Project Site is currently a private property, not generally considered a public facility open to the public as implied by the comment, and, unlike public property, may be closed at the property owner's sole discretion. However, upon completion of the Project, public access to the various recreational amenities onsite would be provided. Please refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also, refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for a discussion regarding recreational uses available to the public under the Project. As discussed within the topical responses, the proposed use of the Project Site would provide publicly-accessible open space and would thus meet the intent of the General Plan regarding the park uses at the Project Site (more so than Weddington Golf & Tennis facility, a private tennis and golf facility).

### **Comment No. IND 209-24**

*Appendix 1 is the above referenced letter from The River Project, which is included as Letter ORG 12-1.*

### **Response No. IND 209-24**

Refer to Response Nos. ORG 12-1 to 12-7 which addresses comments letter from The River Project.

### **Comment No. IND 209-25**

*Comment Nos. IND 209-25 to 209-43 are from the commenter's Landscape Response attachment.*

## **LANDSCAPE RESPONSE**

### **WEDDINGTON GOLF AND TENNIS PARK. LANDSCAPE CULTURAL HERITAGE**

This document is a LANDSCAPE RESPONSE to the Draft EIR for the Proposed Harvard Westlake River Park Project Draft Environmental Impact Report (dated March 2022). ENV-2020-1512-EIR

### **Response No. IND 209-25**

The comment introduces the "LANDSCAPE RESPONSE" but does not discuss the adequacy of the Draft EIR. No further response is necessary.

## **Comment No. IND 209-26**

### **ACKNOWLEDGEMENT**

While the landscape masterplan and amenities described in the Proposed Harvard Westlake River Park Project Draft Environmental Impact Report of March 2022 is wonderfully presented and looks to be a dynamic sporting facility, as determined by the analysis outlined below, it is widely felt that this particular site is not suited to the intensity of development and intrusion on the local micro ecosystem that exists at Weddington Golf and Tennis Park.

## **Response No. IND 209-26**

The comment states that the Project would intrude on the local micro ecosystem. The comment is introductory and does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment No. IND 209-27**

### **EXISTING CONDITIONS**

The Weddington property rests on the last 16 acres of unprotected green open space along the Los Angeles River in the San Fernando Valley.

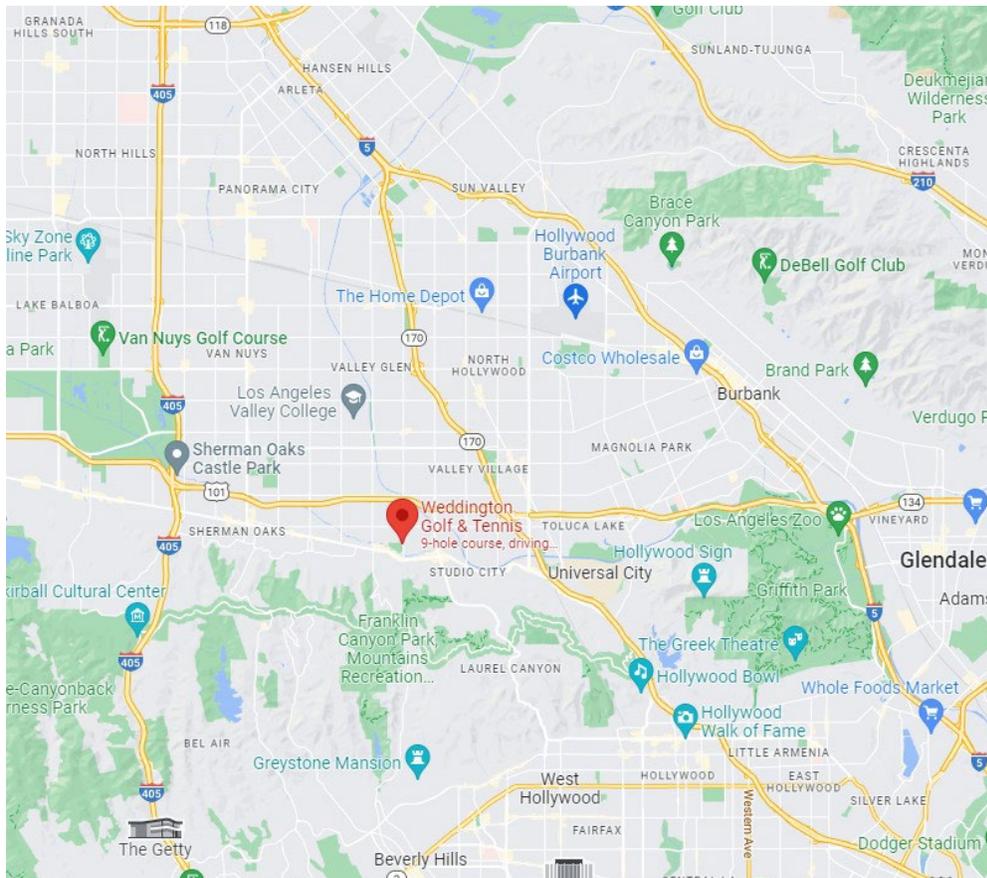

The existing parkland at Weddington Golf and Tennis demonstrates a simple and classic example of suburban parkland that reinforced and contributed to the culture and values of family life from the 1950s San Fernando Valley, California. Set within a significant stands of shade trees and iconic palms, Weddington Golf and Tennis Park transcends time and allows for a peaceful and restorative experience. The park is an inviting oasis and offers a cool serenity; a peaceful respite from the traffic and over built hard surfaced density of much of Los Angeles and San Fernando Valley. Both passive and active recreation is provided on site in a way that evokes a sense of community with the edges of the park sweetly permeable without significant boundaries, high walls or intrusive lighting and meanders down to the Los Angeles River as one of the only purely green edges to the riparian strip. Earmarked as a floodplain, the park provides a permeable buffer for the community in extreme rain events and a safe habitat for many local wildlife species including a significant number of bird communities as out lined [sic] in the attached tree survey and habitat report.

### **BACKGROUND + CULTURAL LANDSCAPE VALUES**

As mentioned, **Weddington Golf and Tennis Park** and associated parkland is a green respite in the urban sea that surrounds the little pocket of simple, timeless suburban nature.

Kissing gently the Los Angeles River with an innocent lack of fuss or fanfare, **Weddington Golf and Tennis Club** evokes remnant memories of a classic thriving 1950s Californian suburban community, a recreational facility and recreational open space in the San Fernando Valley when America was a beacon of light to the world. This positive feeling of sunshine and optimism, hopes and dreams, growth and possibilities [sic] emanated from California through the stories told by cinema and television, of inspiring landscapes and the lifestyles it afforded; [sic] living in thriving communities with all the commercial and natural amenities anyone could hope for – the idea of the neighborhood park, a relaxed and simple place people could connect was as essential as the front yard. In beautiful Californai [sic] and this dynamic Los Angeles, the dream of a happy life was the sunshine everyone craved in a post World War II world, at a time when everything had almost lost all sense of meaning.... a time very much like NOW.

A time very much like the world we have awoken to yet again.

## Response No. IND 209-27

The comment expresses opinions of the Project Site by the commentor and describes the existing Project Site as “open green space” and “neighborhood park.” However, these terms mischaracterize the commercial Weddington Golf & Tennis facility.

To clarify the existing property rights and on-site uses, the Project Site is not public open space. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 209-28**

The value of our Cultural Landscape is evident in the history of **Weddington Golf & Tennis Park** and the quaint layout of the site. Weddington opened in 1956 as a 9-hole, par-three golf course, putting green, and driving range and became a gathering spot for community members and celebrities (even to this day). Tennis courts and a disc golf course were added over time, which reflected those sports' rise in popularity and 65 years later, the site still functions as it was originally intended to when it opened – as a publicly accessible recreational facility families have enjoyed for generations.

Infused with a sense of calm and steadiness in this rapidly changing world, the steadiness of this community park hold the memories and stories of the families and newlyweds, silver dreams of the entertainment industry, [sic] the businesses and the business deals, the clubs, parties, lazy Sunday afternoons and brisk morning walks – encapsulating a unique community identity and hopes – the California dream. There is a feeling that the shade filtered onto the quiet open space; the golf course, the tennis courts, the soft and imperfect recreational space, the walking paths and the sounds of birds that enjoy the park as their home, dapples what seems like evaporating hope for the simple pleasures of life; a salve for the complicated, competitive nature of our cities and money driven developments that provide nothing but a sensory overload and a feeling of existential angst.

In contrast to the overly commercialized and programmed shopping malls, stadiums and campuses disguised as 'public' open space, **Weddington Golf and Tennis Park** offers a softness, a retro throwback to a simpler time, a genuineness and a connectedness to LOCAL ecosystems, to LOCAL community, to LOCAL stories that defy generic developments and weave themselves into San Fernando Valley, into Los Angeles, into California.

## Response No. IND 209-28

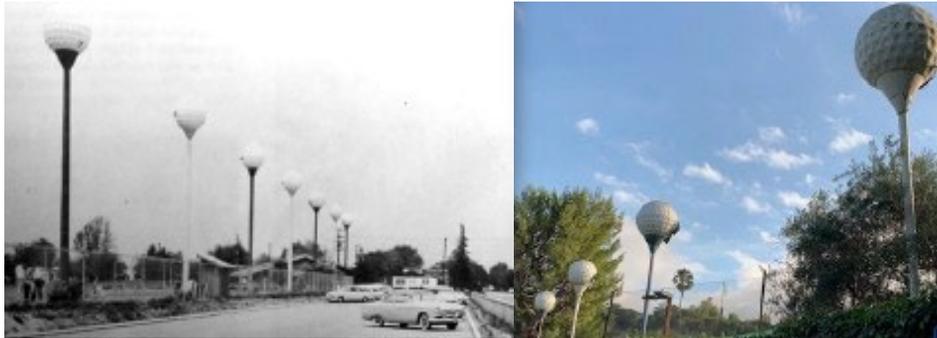

The comment expresses nostalgia and opinions for Weddington Golf & Tennis facility. As indicated in Response No. IND 209-27, the Project Site is not generally considered a public facility open to the public as implied by the comment, but rather is a private property that may be closed at the property owner's sole discretion.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment No. IND 209-29

Golf ball-shaped lights that line the driving range identify the property's historical importance to the story of larger than life 1950s and 1960s Southern California classic iconic emblems that celebrated the car culture of the time and locals and tourists alike flock to see (others are such as Randy's Donuts, Pinks, Norms).

Remnant iconic landscape such as these, such as the classic Los Angeles palm lined streets deserve our kind protection, reverence and respect.

## Response No. IND 209-29

The comment discusses the historic importance of the Project Site's iconic golf-ball shaped light standards. The commenter is referred to Topical Response No. 6 – Historic Resources, in this Final EIR for a discussion of direct and indirect impacts on historical resources resulting from the Project, including project design features that would preserve historic character-defining features of the Project Site. As discussed in Chapter II, *Project Description*, and Section IV.D, *Cultural Resources*, of the Draft EIR, the Project would preserve the clubhouse, café, and the golf ball-shaped light standards. Regarding the Mexican fan palms that comprise the majority of existing Project Site trees, it is noted that the California Invasive Plant Council considers them to be invasive species and the City's and County's landscaping guidelines expressly forbid their planting along the Los Angeles River, including the Project Site.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 209-30**

#### **RECREATIONAL AMENITY**

While there are compelling reasons to increase active recreation facilities, sporting fields, gymnasiums and respond to the growing enthusiasm for new sports – the soft, passive and community orientated recreational amenities provided at **Weddington Golf and Tennis Park** also hold significant recreational value and community amenity. Considering the importance of mental health and the importance for equal access to outdoor recreational space (both passive and active) – for ‘fresh air’ – the current conditions provides in abundance to the local community these very things.

### **Response No. IND 209-30**

The comment states that Weddington Golf & Tennis has significant recreational and community value. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 209-31**

#### **THE LOS ANGELES RIVER – RIVER HABITAT AND REVITALIZATION OF INDUSTRIAL EDGE OPPORTUNITES**

As we gaze along the edges of the Los Angeles River we can see very simply here that very few emeralds shine, few opportunities exist where the edges are soft and verdant; able to percolate what little precious water is collected into the land that for millenia was a braided stream; flowing and then drying in the California sun through the seasons making for a woven tapestry through the desert.

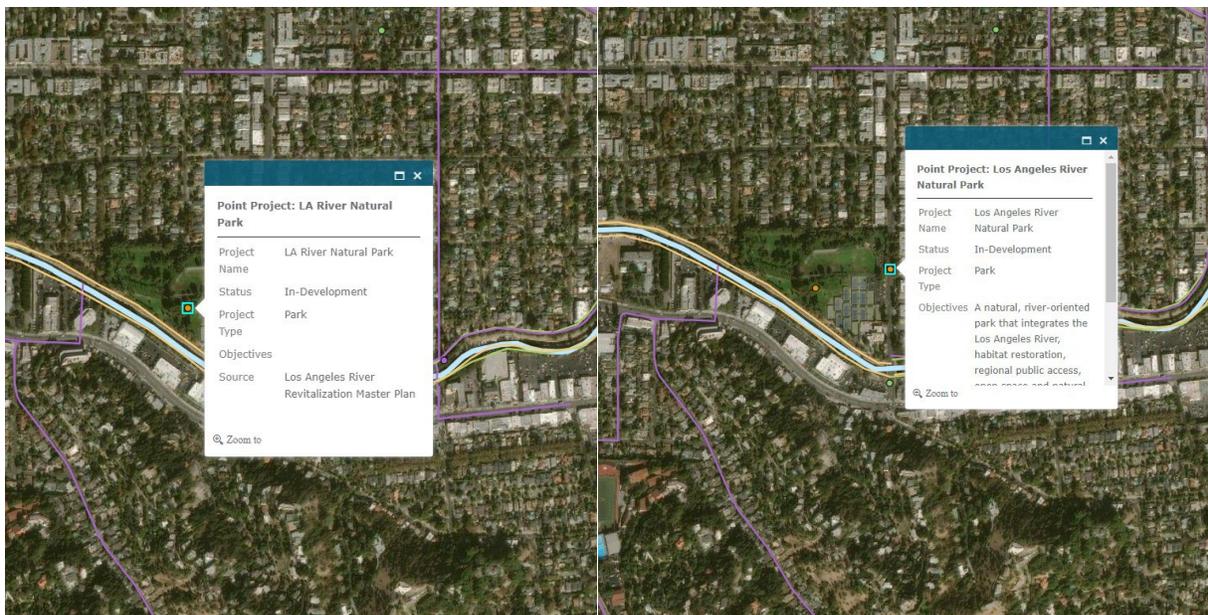

The Los Angeles River became an engineering solution to an environmental problem in the late 1800s and early 1900s and over the last century concrete replaced the grasses and verdant wetlands, changing river and stream edges as we sought to control the environment and support the hopes and dreams of those that found Los Angeles [sic] and California to be their home. These Engineers were doing the very best with the technology and information they had. Now we know more, we can do more. We know very well, the necessity of soft permeable surfaces, the need to cleanse and redirect urban runoff [sic] and the need to cherish and protect what sacred green edges we have.

**Mia Lehrer and Associates** devoted many years to the modern archeological dig and reimagining of the Los Angeles River as a legacy project to last generations; the unearthing and revealing of potentialities and opportunities to puncture and perforate the

concrete blight, brown lands, asphalt and concrete surfaces, parking lots, abandoned [sic] warehouses and toxic yards that beg for regeneration, rejuvenation, rehabilitation and sustainable growth.

In the Masterplan that Mia Lehrer as Landscape Architects, other landscape visionaries, engineers, architects and Masterplanners imagined as part of the team that worked on the Los Angeles River Masterplan, the **Weddington Golf and Tennis Park** has been noted as a 'Natural River Park' as defined below for best use of the land as part of the green infrastructure of the LA River:

“A natural, river-oriented park that integrates the Los Angeles River, habitat restoration, regional public access, open space and natural treatment of runoff to improve water quality.”

## Response No. IND 209-31

The comment expresses the need for soft permeable surfaces to cleanse and redirect urban runoff. The Draft EIR addressed hydrology and water quality impacts in Section IV.I, *Hydrology and Water Quality*, with supporting data provided in Appendix I, Hydrology and Water Quality Report, of the Draft EIR. As analyzed therein, hydrology and water quality impacts would be less than significant. Further, refer to Response No. ORG 9-5, which indicates that infiltration at the Project Site is not feasible and that the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the San Fernando Valley (SFV) Groundwater Basin, and groundwater recharge impacts would be less than significant.

As discussed in Chapter II, *Project Description*, of the Draft EIR, the Project would include native landscaping enhancements along the Zev Greenway which is located adjacent to the Los Angeles River (see pages II-51 and II-52 of the Draft EIR), which in effect would maintain soft, passive connection between the Project Site and the Zev Greenway. Also, Mia Lehrer is the Project's landscape architect, and as such, will ensure the Project's consistency with relevant and applicable policies, as well as the vision, of the Los Angeles River Master Plan.

Furthermore, the Project is proposing an underground stormwater system that would capture and treat stormwater runoff from the Project Site. The captured stormwater could be used on-site for irrigation purposes and excess treated stormwater during larger storm events would be discharged back onto Whitsett Avenue where it would flow into the Los Angeles River. Stormwater and other urban runoff currently sheet flows (untreated) from impervious surfaces such as City streets, directly into the Los Angeles River.

Again, as indicated in Response No. IND 209-27, the Project Site is not generally considered a public facility open to the public as implied by the comment, but rather is a private property that may be closed at the property owner's sole discretion. In other words, the Project Site has never been considered a "natural, river-oriented park" in the past.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment No. IND 209-32**

### **SUSTAINABILITY AND ECOLOGY**

#### **Existing Vegetation**

Throughout the site there are stands of significant existing trees providing shade, habitat and structure to the soil (refer Tree Survey) in the DEIR.

While the tree survey denotes many stands of ornamental or non-native species present on the site, these deep rooted trees provide structure and stability to the soil, shade to the environment and habitat for birds and other animals living on the site.

Obviously, long term – the most prudent planting agenda would be mass planting of California Native plant material, however given that the most strict water restrictions in response to the most prolonged and devastating droughts in California history are in place (and this is becoming the new normal), a more nuanced, staged and gentle introduction of new planting material on site would be recommended to minimize or greatly reduce disturbance to the vegetation balance and harmony on site. Slowly introducing native understory shrubs, groundcovers and mulch to protect the soil and sensitively placing native trees to reinvigorate the landscape story of **Weddington Golf and Tennis Park**

would be the most respectful strategy and long term solution for the site planting rejuvenation.

While a beautiful curation of native plant species is proposed, the new development would require the removal of many of the larger structural trees on the site (for site works, access, construction etc) to be replaced with smaller native specimens. Further, the overall disruption and trauma that the massive site excavation, construction (noise and light intrusion, traffic and air quality issues) in the middle of one of the most historically harsh droughts the State has ever seen – the new plant material will be required to thrive in a most hostile environment and that shock, soil nutrient loss, the loss or dramatic change of habitat would be devastating to the ecology of the **Weddington Golf and Tennis Park** microhabitat and to the quality of life for surrounding residents. Much if not all of the wildlife would be decimated.

Over time, the staged introduction of California native species will transform the nature of the site in a way that allows for water conservation, respect of habitat. This is our recommendation.

### **Response No. IND 209-32**

The comment expresses concerns about the loss of trees and states that the loss or change in habitat would be devastating to the ecology of the Project Site. However, the commenter does not provide any substantive facts or support for these concerns or opinions. Refer to Response No. IND 209-6 for a discussion of the Project's tree replacement program. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase. The commenter is also referred to Section IV.C, *Biological Resources*, of the Draft EIR, with supporting data provided in Appendix D, Biological Resources Technical Report, of the Draft EIR. As analyzed therein, biological resources impacts would be less than significant with mitigation, where applicable. In addition, refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife and nesting birds. Note that as discussed in Topical Response No. 2 – Modifications to the Project Design, the subterranean parking structure would be reduced from 503 spaces to 386 spaces. This modification would result in a reduction of 53,000 cubic yards of excavation materials, which would reduce the overall amount of excavation from 250,000 cubic yards to 197,000 cubic yards. Although noise impacts during construction-related excavation activities would still be significant and unavoidable, the modification would reduce the duration of excavation activities. See Topical Response No. 2 and Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, which provides these Project updates.

Further, the Project would primarily remove invasive and undesirable species and replace such with low water demand species consistent with the Los Angeles River Master Plan Landscaping Guidelines and Plant Palettes. These species would improve the sustainability of the Project Site. The Project's native species landscaping, which would

exclude invasive exotic plant species, would help to enhance this sensitive natural community, as well as the surrounding area, by expanding the habitat, creating a greater native seed source, and providing a larger buffer from non-native ornamental landscaping in the surrounding developed areas. As further evaluated in Section IV.C of the Draft EIR, with the implementation Project Design Feature BIO-PDF-1 for nesting birds and Mitigation Measure BIO-MM-1 for roosting bat species and Mitigation Measure BIO-MM-2 regarding sensitive natural communities, impacts to biological resources during construction activities would be less than significant.

With regard to noise impacts, see Response No. IND 6-3 and Topical Response No. 8 – Construction and Operation Noise and Vibration. The commenter is referred to Topical Response No. 4 – Aesthetics, for a discussion regarding operational light and glare impacts. Refer to Topical Response No. 9 – Transportation and Parking During Construction and Operations, regarding traffic-related construction and operation impacts. Also, the Draft EIR addressed construction and operational air quality impacts in Section IV.A, *Air Quality*, with supporting data provided in Appendix B, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant after mitigation, where applicable.

### **Comment No. IND 209-33**

#### Habitat Protection, Preservation and Renewal

The landscape proposed for the new development professes to create habitat congruent with Los Angeles and California but omits the observation that an existing thriving bird and wildlife habitat already exists at **Weddington Golf and Tennis Park**. Given that the parkland is one of the only areas of natural respite in the local urban context, it is certain that the local habitat will be devastated perhaps without opportunity to recover. In addition, obviously the radical overhaul of land use, the introduction of stadium lighting, vastly increased human and vehicular traffic, noise and the infrastructure on the site will create a vastly different baseline habitat that would be hostile to the species that inhabit the site already.

Our recommendation again, is to stage gently and with intention a strategic planting plan and guidelines for ongoing maintenance and surgical removal of existing trees only if necessary and supported by the, [sic] subtle site works and development improvements, pivot the local landscape and vegetation at Weddington to invite more diverse and local wildlife to the site particularly along the river edge.

### **Response No. IND 209-33**

The comment states that Project change to land use, lighting and increased human and vehicle traffic and noise would adversely impact the Project Site's habitat and species currently on the Project Site. However, the commenter does not provide any substantive facts or support for these concerns or opinions.

Refer to Response No. IND 209-20 which address indirect impacts to wildlife on the Project Site. The commenter is also referred to Section IV.C, *Biological Resources*, of the Draft EIR, with supporting data provided in Appendix D, Biological Resources Technical Report, of the Draft EIR. As analyzed therein, biological resources impacts would be less than significant with mitigation, where applicable.

### **Comment No. IND 209-34**

#### Liquifaction [sic]

Due to the liquifaction [sic] issues of this part of the Los Angeles River, significant engineering will be required to stabilize amenities and buildings proposed on the site. Caisson [sic] structural support will be required to stabilize the site infrastructure and buildings with massive and invasive soil disturbance, removal and construction.

### **Response No. IND 209-34**

The comment states that due to liquefaction, significant engineering, such as the use of caissons that would result in massive and invasive soil disturbance, will be required to stabilize the Project's facilities. However, the commenter does not provide any substantive facts or support for these concerns or opinions. Mat foundations, not caissons, would be used for the Project's gymnasium and parking structure foundation support. Liquefaction hazards were evaluated on pages IV.F-23 and IV.F-24, in Section IV.F, *Geology and Soils*, of the Draft EIR. As evaluated therein, through compliance with regulatory requirements and site-specific geotechnical recommendations, including construction on a mat foundation system, the Project would not exacerbate, cause, or accelerate geologic hazards related to seismically induced ground failure, including liquefaction.

### **Comment No. IND 209-35**

#### Permeability

If we reference and overlay the current existing conditions versus the proposed Harvard Westlake River Park Project it is evident that much of the sites' existing permeable conditions are compromised and devoured by the new construction. In other areas of the report percentages indicate over the majority of the site will be covered with hard surfaces in complete opposition to the Masterplan mandate of the Los Angeles River. In addition the **Weddington Golf and Tennis Park** is a floodplain area. (map below)

Worryingly 9 acres of the total 16 acres are to be non permeable surfaces in the proposed plan.

1st Street Foundation current analysis of 5% Risk of flooding. Purple is 3' of water.

### **Response No. IND 209-35**

The comment indicates that the Project would convert permeable to impermeable surface and implies the majority of the Project would be covered with hard surfaces. However, the commenter does not provide any reference to impacts evaluated in the Draft EIR. Nonetheless, the commenter is referred to Response No. ORG 9-5, which indicates that infiltration at the Project Site is not feasible and that the Project would not substantially decrease groundwater supplies or interfere substantially with groundwater recharge such that the Project may impede sustainable groundwater management of the San Fernando Valley Groundwater Basin, and groundwater recharge impacts would be less than significant. Also, the Draft EIR addressed hydrology and water quality impacts in Section IV.I, *Hydrology and Water Quality*, with supporting data provided in Appendix I, Hydrology and Water Quality Report, of the Draft EIR. As analyzed therein, hydrology and water quality impacts would be less than significant, and impacts regarding flooding were also determined to be less than significant. The comment also includes a map sourced to the First Street Foundation which shows various areas in and around the Project with 5 percent risk of flooding and areas with 3 feet of water. However, no background or support for this graphic is provided. The analysis included in Section IV.I, *Hydrology and Water Quality*, with supporting data provided in Appendix I, Hydrology and Water Quality Report, of the Draft EIR, is based on City approved hydrological modeling, and this is appropriately relied upon to address hydrology and flooding impacts consistent with the CEQA Guidelines.

### **Comment No. IND 209-36**

#### **LOOKING FORWARD – ALTERNATIVE PLANS**

Given the vast amount of paved surfaces in Los Angeles and in the San Fernando Valley that could be transformed into renewed habitat, advanced and sustainably designed sporting facilities, gymnasiums, stadiums and fields, additional offstreet parking and public transportation hub and servicing Harvard Westlake and other schools, the delicate urban habitat and ecosystem, the subsequent engineering [sic] challenge and historic

community nature of Weddington Golf and Tennis Park seems to be [sic] point to the fact that this site selection for the proposed sporting facilities is a frivolous and unadvisable site choice.

It is without a doubt that the existing facilities and landscape at **Weddington Golf and Tennis Park** could do with some upgrading and strategic sustainable reevaluation of the landscape strategy and landscape masterplan moving forward (see attached Conceptual Sketch) that incorporates strategic planting and sustainability guidelines to bring the site into alignment with current climate conditions, global warming and local sustainable responsibility, however such drastic siteworks would have catastrophic and irreversible [sic] deleterious impact on the natural, cultural and community ecosystems of the area and the Los Angeles River would lose one of the very few ‘natural’ edges.

### **Response No. IND 209-36**

The comment states that the selection of the property for the Project is a “frivolous and unadvisable site choice” and that the Project would have “catastrophic and irreversible [sic] deleterious impact on the natural, cultural, and community ecosystem of the area and the Los Angeles River.” This comment is not supported by substantial evidence or facts, as demonstrated in the responses to comments relating to Comment Letter No. IND 209 regarding aesthetics, parks and recreational facilities, hazardous materials, wastewater and water use, biological resources, historical resources, habitat sustainability, hydrology, or liquefaction.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 209-37**

#### **ALTERNATIVE PLAN – LOS ANGELES VALLEY COLLEGE**

A collaborative approach to providing the sporting amenities that are in demand would be a sustainable and visionary option.

Aligning with a local school such as **Los Angeles Valley College (5800 Fulton Avenue, Valley Glen, CA 91401)** to provide a blended facility and enhance an already established sporting infrastructure on an expanded campus. This would be a respectful and sustainable use of resources and would establish a precedent for schools and colleges in Los Angeles to value the landscape and cultural fabric from which these sites emerge [sic] and become true leaders in community driven collaboratively sustainable developments for the prosperity and success of all stakeholders especially the land itself.

### **Response No. IND 209-37**

The comment suggests that another option to the Project Site’s recreational facilities, such as aligning with a local school, such as Los Angeles Valley College, should be developed based on the information provided in the commenter’s other statements. The alternative site included in this comment would not satisfy the Project Objectives. The reasons that alternative sites were considered and rejected are provided in Section V, *Alternatives*, page V-6, of the Draft EIR. In addition to a site with the size to accommodate the Project Objectives, the other criteria for the Project include proximity to the existing Harvard-Westlake’s Upper School campus on Coldwater Canyon Avenue and a site with level topography to allow for the development of the contemplated recreational facilities. Proximity is a criteria factor because of the need for daily commuting from the Upper School campus, as it relates to higher daily vehicle miles. As concluded in Section V of the Draft EIR, no other location with adequate acreage and topography exists within proximity to the Upper School campus, and the notion that the Project could be built at Los Angeles Valley College is entirely speculative and unsubstantiated.

### **Comment No. IND 209-38**

Finally, the time for organizations such as Harvard Westlake to renew their visible and their actual commitment to creating or developing campuses, sporting facilities and infrastructure that reflect the changing values and emergency that we have finally awoken to is right now. It is right now.

The time that was – where every piece of open land had every potentiality to develop wrung from the ground has passed, we should as a collective stand in stewardship of the land, of the soil, of the stories that we will leave behind. As it stands we exist under the shade of trees that others planted generations ago. Who are we to rip them from the ground? To quote Charles De Lint, ““We have not inherited the earth from our fathers, we are borrowing it from our children.”

### **Response No. IND 209-38**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 209-39**

Please find attached landscape sketches to illustrate the concepts shared in this document.

## **ADDENDUM 01 – EXISTING CONDITIONS (NTS)**

### Notes:

Most of the site is permeable and is a devoted parkland setting.

Existing stands of mature/historic trees exist on site.

Boundary and edges are soft and permeable, welcoming to the community.

Lack of shade around Tennis Court area.

Compact off street parking lot.

### **Opportunities:**

Connection to Los Angeles River bikeway could be enhanced.

Additional pathways and landscape programming to be proposed onsite at River Park.

Review pathways and site access to and within site including onsite lighting for safety.

Provide additional shade to parking areas + review onsite vehicular circulation.

Maintain all historical features onsite including [sic] Retro Golf Ball Lighting.

Create bioswales within site to capture rainwater and minimize runoff.

Increase native California plant palette onsite in a staged and managed way.

Review and enhance irrigation.

Engage specialist for habitat management plan.

### **Response No. IND 209-39**

Addendum 01 provides comments on existing conditions and identifies “Opportunities” for the Project Site. The commenter is referred to Chapter II, *Project Description*, of the Draft EIR, which discusses the Project’s proposed features, which reflect many of the “opportunities” cited in the comment.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. No further response is necessary.

### **Comment No. IND 209-40**

#### **ADDENDUM 02 – HARARD [sic] WESTLAKE PROPOSED REDEVELOPMENT SITE PLAN (NTS) LANDSCAPE ANALYSIS**

The following features of this development significantly and deleteriously negatively affect the social and ecological infrastructure of the site:

Harvard-Westlake River Park Project  
**Figure 4**  
 Harvard-Westlake School Athletic and Recreational Facilities Conceptual Site Plan

Proposed Landscape Items	Comment
<p>2 artificial turf sports fields (1 with synthetic track)</p> <ul style="list-style-type: none"> <li>- 1 Olympic-size swimming pool and locker rooms</li> <li>- 8 newly-constructed tennis courts and locker rooms</li> <li>- 387,086 square feet of building across the property</li> <li>- 80,249 square-foot multi-purpose gymnasium and locker rooms</li> <li>- 2,217 spectator seats spread across the property</li> <li>- 5-acre, 503-space parking structure (roughly 600% increase)</li> </ul>	<p><b>NEGATIVE EFFECT</b></p> <p><b>ADDITION OF NON PERMEABLE AREAS (TOTAL 9 ACRES OF 16)</b></p> <p><b>INCREASED VEHICULAR AND PEDESTRIAN TRAFFIC</b></p> <p><b>INCREASED NOISE POLLUTION</b></p> <p><b>INCREASED LIGHT POLLUTION</b></p>

<p>Removal of 240 mature, heritage trees</p>	<p><b>REMOVAL OF NATURAL AMENITY WITH MAJOR NEGATIVE ENVIRONMENTAL IMPACTS</b></p> <p><b>REMOVAL OF SHADE AND HABITAT</b></p> <p><b>IMPACT TO SOIL STABILITY</b></p>
<p>Privacy Wall</p>	<p><b>CUTS COMMUNITY OFF FROM PARKLAND</b></p> <p><b>CREATES A DISCONNECT AND A SENSE OF THAT COMMUNITY USE IS UNWELCOMED</b></p> <p><b>DISRUPTS HABITATS + WATER RUNOFF TO AND WITHIN SITE</b></p>
<p>Decomposed granite pathways</p>	<p><b>PERMEABLE PATHWAYS – EXCELLENT CHOICE</b></p> <p><b>(***NEED TO REVIEW ACCESSIBILITY ISSUES for ADA compliance)</b></p>
<p>Addition of 33 light poles (ranging between 26 and 80 ft high)</p>	<p><b>LIGHT POLLUTION</b></p> <p><b>RELOCATION OF HERITAGE GOLF BALL LIGHTS</b></p> <p><b>DISSOCIATES THE FEATURES FROM THE HISTORIC USE</b></p>
<p>Bio habitat feature, River Park</p>	<p><b>EXCELLENT FEATURES AND COULD BE A WONDERFUL FUTURE ADDITION TO THE PARK AND CONNECTION TO BIKEWAYS.</b></p> <p><b>RIVER EDGE AND EXISTING HABITAT SHOULD BE PRESERVED AND ENHANCED NOT REPLACED.</b></p> <p><b>Please refer to attached inclusion of this design piece into proposed upgrade to provide Tennis Courts as a shared sporting amenity</b></p>

## Response No. IND 209-40

Addendum 02 provides general information regarding the commenter's position on impacts to traffic, noise, lighting, loss of trees, and cultural resources. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, regarding traffic impacts; Topical Response No. 8 – Noise: Construction and Operation Impacts, regarding noise impacts; Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project's tree replacement program; and Topical Response No. 6 – Historic Resources, regarding direct and indirect impacts on historical resources. In addition, see Topical Response No. 4 – Aesthetics, for a discussion of operational field lighting impacts and Response No. IND 209-10, which discusses further updates to the Project lighting program included in this Final EIR.

The Draft EIR addressed geology and soils impacts, including slope stability hazards, in Section IV.F, *Geology and Soils*, with supporting data provided in Appendix E, Geotechnical and Paleontological Resources Documentation, of the Draft EIR. As analyzed therein, the Project Site is suitable from a geotechnical perspective and slope stability hazards would be less than significant.

As discussed in Chapter II, *Project Description*, of the Draft EIR, the Project would include native landscaping enhancements along the Zev Greenway which is located adjacent to the Los Angeles River (see pages II-51 and II-52 of the Draft EIR), which in effect would maintain a soft, passive connection between the Project Site and the Zev Greenway.

The Draft EIR addressed hydrology and water quality impacts in Section IV.I, *Hydrology and Water Quality*, with supporting data provided in Appendix I, Hydrology and Water Quality Report, of the Draft EIR. As analyzed therein, hydrology and water quality impacts would be less than significant.

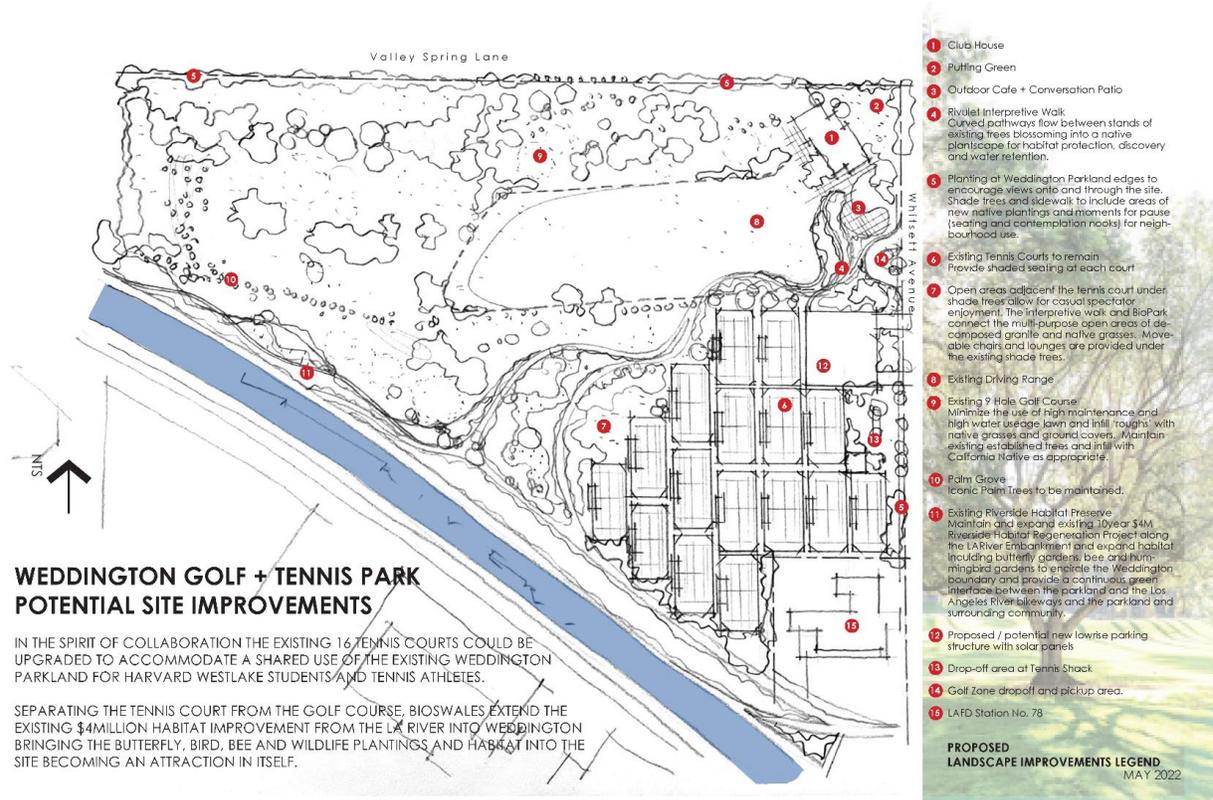

The Draft EIR addressed biological resources impacts in Section IV.C, *Biological Resources*, with supporting data provided in Appendix D, Biological Resources Technical Report, of the Draft EIR. As analyzed therein, biological resources impacts would be less than significant with mitigation, where applicable.

See Response No. IND 209-18 which discusses ADA compliance.

The commenter's opinions relating to landscape items do not address the adequacy or content of the Draft EIR and are not supported by substantiated evidence or facts. However, the comments are noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 209-41**

**ADDENDUM 03 – WEDDINGTON GOLF AND TENNIS PARK POTENTIAL IMPROVEMENTS FOR SHARED FACILITIES**

**Weddington Golf + Tennis Park Potential Site Improvements**

In the spirit of collaboration, the existing 16 tennis courts could be upgraded to accommodate a shared use of the existing Weddington Parkland for Harvard Westlake Students and tennis Athletes.

Separating the tennis court from the golf course, bioswales extend the existing \$4 million habitat improvement from the LA River into Weddington bringing the butterfly, bird, bee and wildlife plantings and habitat into the site becoming an attraction itself.

**Proposed Possible Landscape Improvements – Reinforce Ecologically and Culturally Sustainable Narrative**

Enhanced wildlife corridors and habitats, site planting with Native Planting Palette, protection of soil, existing shade trees and cultural landscape, minimize onsite disruption and construction and seismic hazards.

Enhance existing Tennis Court Facilities.

Offered as an example of how potential collaborative use of space could co-exist at Weddington Golf and Tennis Park without destroying the Cultural Landscape and Green Community Amenity.

### **Response No. IND 209-41**

This comment suggests potential site improvements, including the provision of upgrading the 16 existing tennis courts and shared use of the tennis courts between the School and the general public. Note that as discussed in Topical Response No. 11 – Recreation: Golf and Tennis Facilities, recreational opportunities would be available to the public with Project implementation, including shared use of eight (8) proposed tennis courts.

However, this suggested alternative would not meet the underlying purpose of the Project to supplement the School's athletic and recreational facilities, and would not provide Harvard-Westlake School a campus that can fulfill its educational mission and athletic principles now and in the future. This alternative would not include new athletic fields, a gymnasium, and pool, which are recreational facilities that are in line with the underlying purpose of the Project and consistent with the Project Objectives (see pages II-13 and II-14) of the Draft EIR.

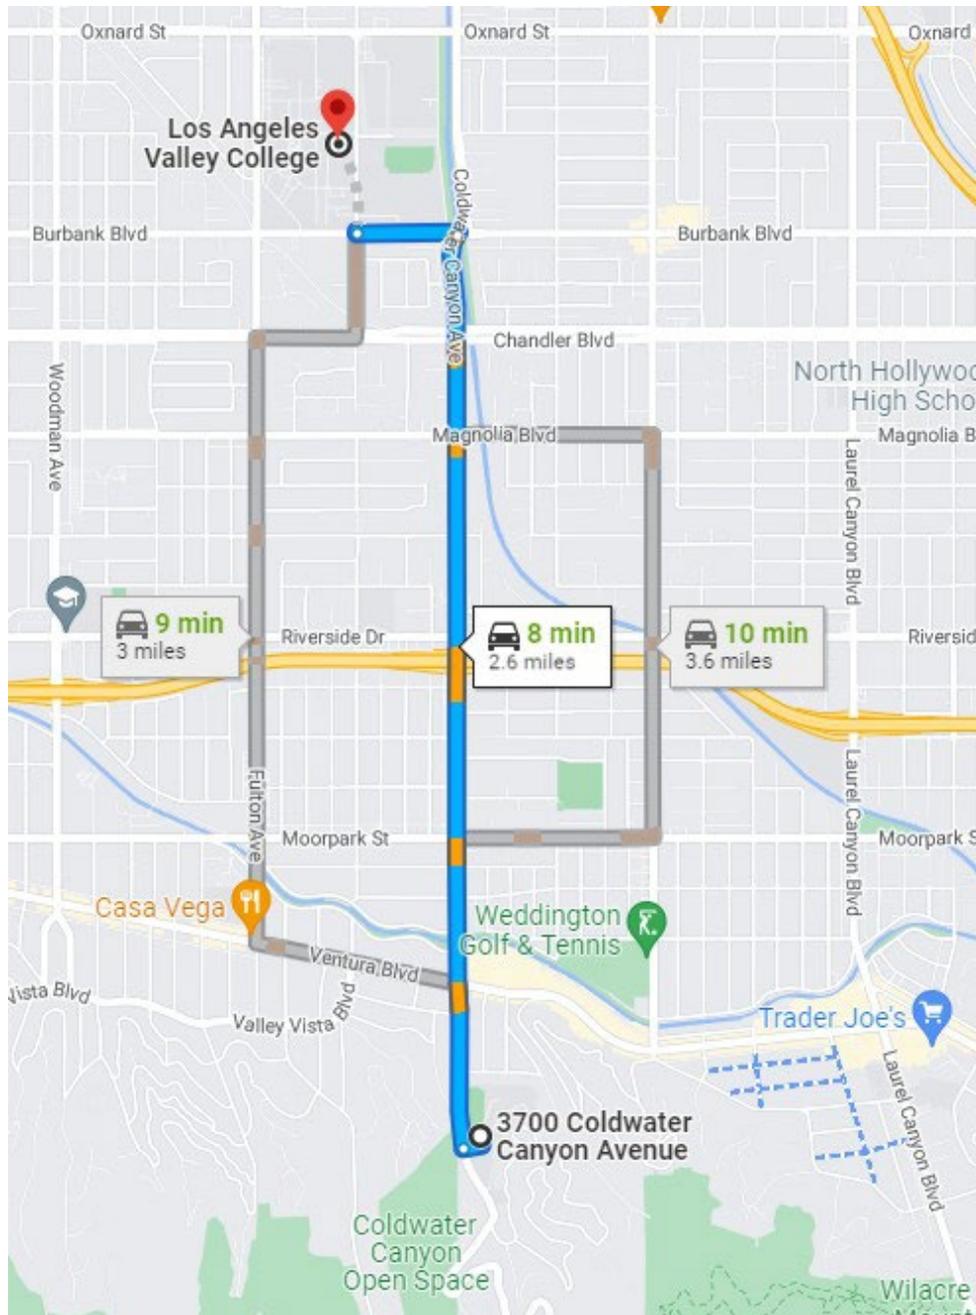

For additional discussion of the Project's adequacy of alternatives in the Draft EIR, refer to Response Nos. ORG 1B-105, ORG 1B-106, and ORG 7A-146 to ORG 7A-176. Please also refer to Topical Response No. 13 – Need for Project (Non-CEQA) for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

### **Comment No. IND 209-42**

#### **ADDENDUM 04 – Los Angeles Valley College**

Los Angeles Valley College is a direct route north from Harvard Westlake UPPER SCHOOL CAMPUS on 3700 Coldwater Canyon Avenue Studio City, CA 91604 to LAVC.

Los Angeles Valley College possesses ample land and facilities that could be transformed into combined sustainable and efficient facilities and shared with Harvard Westlake. Without the liquifaction [sic] issue the potential for larger facilities [sic] and combining underground parking etc onsite is greatly increased. Additionally, Los Angeles Valley College would be substantially [sic] enhanced by the planting plan Harvard Westlake proposes for Weddington Golf & Tennis.

## Response No. IND 209-42

This comment suggests Los Angeles Valley College as an alternative site. Refer to Response No. IND 209-37 which addresses Los Angeles Valley College as an alternative site location.

## Comment No. IND 209-43

### ADDENDUM 05 – Los Angeles Valley College VS WEDDINGTON COMPARATIVE SCALE, FACILITIES AND INFRASTRUCTURE

#### SUGGESTED COMBINED LOS ANGELES VALLEY COLLEGE AND HARVARD WESTLAKE BLENDED CAMPUS

FOR COMPARATIVE PURPOSES, THE SITEPLANS OF WEDDINGTON GOLF AND TENNIS (WITH THE PROPOSED HARVARD WESTLAKE REDEVELOPMENT FACILITIES) AND LOS ANGELES VALLEY COLLEGE ARE SHOWN AT THE SAME SCALE.

#### LOS ANGELES VALLEY COLLEGE POTENTIAL SHARED REDEVELOPMENT:

- STADIUM
- POOL
- GYMNASIUM
- TRACK
- ADDITIONAL UNDERGROUND PARKING

#### WEDDINGTON GOLF AND TENNIS PARK POTENTIAL SHARED SOFT REDEVELOPMENT:

- 16 TENNIS COURTS
- RIVER PARK AND NATIVE HABITAT GARDENS
- POTENTIAL FOR ADDITIONAL LOW RISE PARKING STRUCTURE WITH SOLAR PANELS TO MINIMISE ONGRADE ASPHALT PARKING ON SITE

## **Response No. IND 209-43**

This comment suggests Los Angeles Valley College as an alternative site. Refer to Response No. IND 209-37 which addresses Los Angeles Valley College as an alternative site location.

## **Comment Letter No. IND 210**

Anthony Allen

Received May 10, 2022

### **Comment No. IND 210-1**

I strongly oppose approval for the destruction of most of the Weddington-Golf & Tennis complex. This is an important community asset and greenbelt that our city vitally needs.

Please don't be swayed by Harvard's paid lobbyists, influence and \$\$\$.

Please stand up for our community and save this important community asset for the benefit of our residents.

I grew up playing both golf and tennis at Weddington and know how important it is.

Please use your influence and vote to keep the Weddington Golf and Tennis Complex totally intact and let it continue as a vital part of our community. Thank You!

### **Response No. IND 210-1**

The comment expresses opposition to the Project based on the loss of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 211**

Beth Miller

Received May 10, 2022

### **Comment No. IND 211-1**

I feel very strongly opposed to the proposed development at Weddington Golf Course. I've been a Studio City resident since 2003 and have raised my family here, my kids attended Carpenter Elementary, Walter Reed and Notre Dame High School. I've bought two houses in Studio City. I'm a former Disney executive, now independent producer. I love my community passionately. Which is why I am so against the Harvard-Westlake development. It's infuriating that the needs of the privileged few are being considered over the needs of the many in the Studio City community. My friends, family and neighbors have enjoyed the open, green space at Weddington for decades. It's what makes up the fabric of life and community. My kids took classes there. My friends met there for golf and tennis. I enjoyed the beauty every day driving my kids to school or on errands.

### **Response No. IND 211-1**

The comment expresses opposition to the Project based on the loss of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 211-2**

From the looks of the plan - it's a second sports facility for private school kids who already have one. And the plan for public space is a small handout - 1/3 of the space on the periphery - with the facility behind high walls.

### **Response No. IND 211-2**

The comment states that the School has similar facilities on its existing campus. The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

Also, refer to Topical Response No. 3 - Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR; and Topical Response No. 11 - Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 211-2**

And with the existential threat of global warming at our doorstep - do we really want to sacrifice all the green space we have for a pool and stadium?

### **Response No. IND 211-2**

The comment expresses concern that the use of the Project Site would be a sacrifice of green space for a pool and stadium. Refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project’s tree replacement program. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.. In addition, the Draft EIR addressed greenhouse gas emissions (GHG) impacts in Section IV.G, *Greenhouse Gas Emissions*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, GHG impacts would be less than significant.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 211-3**

It’s bad enough that we’ve lost the Sportsman Lodge property to an upscale mall. That mall was sold to the community as a great project, but after visiting several times, I won’t be returning. It’s a shame, because I have so many wonderful memories at Sportsman’s Lodge - going to the bar and restaurant there, celebrating my daughter’s Bat Mitzvah, my parents coming from out of town and staying at the hotel, going to the pool at the Sportsman’s Lodge for \$25 a day with the whole family, eating at the little coffee shop there... it was really a place the whole community could enjoy.

But now, even just the simple act of taking a ticket from a gate to enter the parking lot that holds so many memories feels like a deterrent. And as a single mother with teenagers, it’s just not in my budget to shop at Erewon. I’ll be sticking to the Ralphs across the street.

### **Response No. IND 211-3**

The comment expresses personal opinions regarding the redevelopment of the Sportsmen’s Lodge site. This comment does not raise any issues with respect to the

content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 211-4**

I think the proposed development is short-sighted, completely tone deaf and against the best interests of the community. Quality of life and access to recreational open space should be a right for all not a privilege of the few. I really hope you'll recognize the will of the people on this important subject.

**Response No. IND 211-4**

The comment expresses opposition to the Project based on the loss of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 212

Carey Smith  
Received May 10, 2022

### Comment No. IND 212-1

Good day to you.

Please note we live a block off Whitsett and the traffic grade currently a D. The street between Ventura and Moorpark is a speedway during commuting which has caused accidents and fatalities in recent decade.

### Response No. IND 212-1

The comment describes the commenter's opinions regarding traffic conditions on Whitsett Avenue. With regard to traffic, see Topical Response No. 9 - Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation. Also see the level of service (LOS) analysis of the study area intersections in the Transportation Assessment (TA) in Appendix M of the Draft EIR. As evaluated therein, the Project would not adversely impact existing or future service levels. However, it is noted that the CEQA Guidelines do not require the evaluation of street and intersection service levels in a Draft EIR. and as such, are non-CEQA issues.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### Comment No. IND 212-2

This MAJOR Development is for the good of whom? The community and its environment will suffer trauma from the years of Development, the wildlife will relocate, old established trees will be removed and replaced with trees from outside areas bringing with it new insects to the community.

### Response No. IND 212-2

The comment questions the need for the Project and expresses concerns regarding impacts to wildlife, trees, and new insects from trees.

The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location. The commenter is referred to Topical Response No. 5 – Biological Resources/Trees, for a detailed discussion regarding the Project's tree removal and

replacement program. In addition, refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife and nesting birds. Also, the Project would replace removed trees with native trees that are consistent with the Los Angeles River Master Plan Landscaping Guidelines and Plant Palettes. Replacement trees would arrive from local certified nurseries which in effect would minimize the potential for the introduction of new insects/pests to the local area.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 212-3**

Air quality will suffer due to the disruption of soil, 'the water resource need [sic] this development will pull on the community is HUGE.

### **Response No. IND 212-3**

The comment expresses concerns regarding air quality and water supply impacts. The Draft EIR addressed air quality impacts in Section IV.A, *Air Quality*, with supporting data provided in Appendix B, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant after mitigation, where applicable. The issue of water use and supply is fully evaluated in Section IV.O.1, *Water Supply* of the Draft EIR. As analyzed therein, adequate water supplies are available from LADWP to meet the future needs of the Project, with water supply impacts being less than significant.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 212-4**

So again we ask to whom will this benefit. It's a shame Mr. Weddington's wish to have this property for the community is lost on the mighty dollar. Please rethink this Development [sic] AS IF YOU LIVED A BLOCK AWAY.

Additionally we are not thrilled having teenager drivers in and out of our neighborhood. [sic] If the Development [sic] goes thru we will ask to have a committee started to log the accidents around this new complex and the model age of said drivers involved.

Thank you for taking the time to review.

### **Response No. IND 212-4**

The comment expresses the commenter's belief that the original owner's interest was to preserve the property for the community. This comment is not supported by evidence or

facts. The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

The comment also expresses general concerns about teenage drivers and states that if the Project is approved, the commenter will ask to have a committee started to log the accidents around the Project Site and the model age of said drivers involved. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 213**

Chris Trent

Received May 10, 2022 (2 letters)

### **Comment No. IND 213-1**

I'm writing in response to the proposed Harvard-Westlake sports facility at Weddington project as a 55 year resident of Studio City. After much consideration to both sides, I am strongly against this project and hope that you will also consider not supporting the project. There are many reasons this project is not a good fit for this neighborhood. My three main points are as follows...

### **Response No. IND 213-1**

The comment expresses opposition to the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 213-2**

Firstly, this project is way too large for the existing neighborhood. With 500 parking spaces and constant bussing back and forth between the facility and Harvard Westlake and other schools and entities using this facility, the traffic and noise is going to be unbearable in this small neighborhood. Clearly looking at the proposed artist renderings show the scope of this massive facility in the tiny neighborhood is overwhelming.

### **Response No. IND 213-2**

The comment expresses opposition to the Project based on the size and scale of the Project, traffic, and noise. The commenter is referred to Topical Response No. 4 – Aesthetics, for a discussion of the Project's aesthetics impacts, including impacts related to the visual character and quality of the Project Site. Of note, all built structures, other than light poles and short segments of perimeter walls, will be at or below conforming heights based on the Project Site's existing zoning. In addition, the Project's floor area ratio is several times below what is permitted on the Project Site (and less dense than many residences in the adjacent community). The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project's traffic patterns, effects on local streets, and consistency with CEQA threshold levels. Also, refer to Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of noise impacts.

Note that current updates to the Project would reduce the overall parking capacity from 532 spaces to 403 spaces. Specifically, the parking capacity of the underground structure has been reduced from 503 spaces to 386 spaces and the capacity of the above grade surface parking lot has been reduced from 29 spaces to 17 spaces. See Topical

Response No. 2 – Modifications to the Project Design, and Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, which provides these Project updates.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 213-3**

Secondly, I've been a wildlife photographer for almost 15 years and have spent thousands of hours in urban parks, golf courses and the like and, based on drawings and proposals, can see that what Harvard-Westlake is proposing, despite promising more trees, is clearly taking out a much used natural area for the local and migrating wildlife and replacing it with concrete which will severely negatively impact one of the few remaining green areas left in the Valley. I photograph wildlife, both perpetual and migratory, there regularly and have seen projects similar to this devastate once wildlife friendly areas.

### **Response No. IND 213-3**

The comment expresses concerns about the Project's impacts to wildlife, including migratory wildlife. Please refer to Response No. ORG 14A-15 for a discussion of impacts to wildlife. Also, refer to Response No. ORG 7A-39 for a discussion of impacts to migratory birds.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 213-4**

Offering to plant new trees (while taking out dozens of mature trees) is offering little to nothing if the new trees are surrounded by concrete, steel buildings, loud and large groups of people, car traffic and bright lights at night. I'd ask you to look at the available overhead photographs of the new trees planted at the nearby Sportsman's Lodge project, which are just crammed in between parking spaces surrounded by cars and concrete as an example of how developers can make a proposal sound appealing but offer something quite different in practice. This is also that case at Weddington after examining the artist's renderings.

### **Response No. IND 213-4**

The comment states the Project's tree replacement program is not appealing if the new trees are surrounded by new buildings, concrete, large groups of people, car traffic and bright lights. This comment expresses an opinion of the commenter, but does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted

for the record and will be forwarded to the decision-makers for their review and consideration. The commenter is also referred to Response No. ORG 1C-25 for additional discussion of the Project's tree planting program and spacing needed for the new trees to mature.

### **Comment No. IND 213-5**

Thirdly, this is an environmental disaster. The amount of mature trees being taken out is going to have a decades long affect on carbon sequestration, the added concrete is a carbon producing nightmare and the massive amount of artificial turf being installed which is, by all scientific studies being determined to be exceedingly toxic and may soon require a California Prop 65 carcinogen warning sign for anyone in close proximity to it. It's not good for anyone or anything.

### **Response No. IND 213-5**

The comment states that the Project would have long-term carbon sequestration impacts and hazards associated with artificial turf. However, the commenter does not provide any substantive facts or support for these concerns or opinions. Please refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project's tree replacement program. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase. Also, see Topical Response No. 7 – Artificial Turf and Effects on Localized Heat and Health, which addresses the potential health-related and urban heat island effects due to the Project's use of artificial turf fields.

### **Comment No. IND 213-6**

I understand on the outside this proposal sounds like a fine idea, but when you take any time and inform yourself on the outcome of this project it is clearly not acceptable on multiple fronts for it to happen at this property. There is another proposal to have Harvard-Westlake build and share facilities at L.A. Valley College. This sounds like a far better use of resources and use of existing facilities without destroying precious green open space. I'd ask you please consider looking into this alternate proposal as it seems like a win/win/win alternative for Studio City, LAVC and Harvard Westlake.

Thank you for your time and consideration.

### **Response No. IND 213-6**

The comment expresses general opposition to the Project and asks the City to consider an alternative site at Los Angeles Valley College for the Project. Refer to Response No.

IND 209-37 which discusses the potential for alternative off-site locations, including Los Angeles Valley College.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 213-7**

*Comment No. 213-7 is included in a separate e-mail from the commenter.*

I'm sending a supplement to my earlier email where I mentioned being a wildlife/nature photographer. Recently I've made a few outings to Weddington for just an hour or two each time and have compiled a list of identified species that I think you should have available. Every time I go I see something I hadn't seen before and there are many insect species that I'm still in the process of identifying so this is by no means a complete list of what is there ... there is MUCH more. But for just the recent few visits, here is a list of identified species to supplement DEIR and biologist reports...

Weddington Species List 20220321-20220504

#### Birds

Allen's Hummingbird Anna's Hummingbird  
 Northern Rough-winged Swallow Bewick's Wren (2 pairs with 5 chicks) Bushtit  
 Cedar Waxwing  
 Dark-eyed Junco (Nesting behavior)  
 Hooded Oriole (Male & Female nesting behavior) House Finch  
 Lesser Goldfinch Song Sparrow  
 White-breasted Nuthatch Black Phoebe  
 Brown-headed Cowbird  
 Cassin's Kingbird (Nesting behavior) Northern Mockingbird  
 Cooper's Hawk

#### Insects

Black-tailed Bumble Bee  
 West Coast Lady Butterfly  
 Checkered White Butterfly  
 Monarch Butterfly  
 Valley Carpenter Bee  
 Acmon Blue Butterfly  
 Orange Sulphur Butterfly  
 Foothill Carpenter Bee  
 Arizona Mantis  
 Umber Skipper  
 Toltec Scoliid Wasp

Leafhopper Assassin Bug  
Western Tiger Swallowtail Butterfly  
Gray Bird Grasshopper  
Tripartate Sweat Bee  
Fiery Skipper  
Alconeura Lappa Leafhopper (Exceedingly rare)

Mammals

California Ground Squirrel  
Desert Cottontail Rabbit  
Striped Skunk

Reptiles

Western Fence Lizard

**Response No. IND 213-7**

A list of wildlife is provided in the comment, which the commenter has identified to supplement the Draft EIR and biologist reports. A comprehensive list of wildlife is provided in Appendix B, Floral and Fauna Compendia, of the *Biological Resources Technical Report*, in the Draft EIR. The *Biological Resources Technical Report* is included as Appendix D in the Draft EIR. The list included in the Draft EIR is based on field observations by qualified biologists. In addition to field observations by qualified biologists, the analysis of biological resources in the Draft EIR includes searches of reputable government and organization databases to identify the potential for sensitive species to occur on the Project Site. Together, the field observations and database reviews, provided appropriate and adequate identification of observed and potentially occurring species on the Project Site to analyze impacts to biological resources in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 214**

Connie Acos

Received May 10, 2022

### **Comment No. IND 214-1**

Please do not approve or vote in favor of the motion that entails the removal of 250 Trees onsite at the Golf Area in Studio City.

This goes against the Fed/State Resolution & City Green New Deal that City Council voted to approve in 2019. Plant more trees, not cut them down.

### **Response No. IND 214-1**

The comment expresses concern regarding the loss of trees. Please refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project's tree replacement program. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions.

The comment also states the removal of trees goes against the federal/state resolution and L.A.'s Green New Deal. However, the commenter does not provide any substantive facts or evidence to support this concern or opinion.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 215**

David Campanelli  
Received May 10, 2022

### **Comment No. IND 215-1**

I strongly oppose Harvard-Westlake School's planned destruction of Weddington Golf & Tennis and the proposed conversion into a private high school sports complex.

My family and friends and I have been coming to this facility since the early 1960s and have many great memories of our experiences. And we would love to continue creating more great memories at this historic landmark.

### **Response No. IND 215-1**

The comment expresses general opposition to the Project based on the loss of the Weddington Golf & Tennis facility. The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 215-2**

It should not be torn down in favor of an individual high school supported by a group of relatively few wealthy people. The noise and traffic factors alone should be enough to stop this SELFISH AND SHORT-SIGHTED PROJECT for a privileged few.

### **Response No. IND 215-2**

The comment expresses concerns regarding traffic and noise impacts. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project's parking, traffic patterns, effects on local streets, and consistency with CEQA threshold levels. Please also refer to Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of construction and operational noise impacts.

This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 215-3**

This facility has been enjoyed by neighborhood families for miles around since the 1950s and should continue to be used as such.

Thank you for your time and consideration of this most important matter.

## **Response No. IND 215-3**

The comment expresses general opposition to the Project based on the loss of the Weddington Golf & Tennis facility.

To clarify the existing property rights and on-site uses, the Project Site is not public open space. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 216**

David Kellen

Received May 10, 2022

### **Comment No. IND 216-1**

The Weddington property is not about new and meaningless open space. The City knows when Councilmembers [sic] are being dishonest.

This is about saving a treasured historic entity. Enough historic spaces have been destroyed in Los Angeles. This one should be saved.

Councilmembers [sic] might lie because they get something by associating with Harvard Westlake. You are a City Planner. Do the right thing for the City and history.

In the end, you will do better for it.

### **Response No. IND 216-1**

The comment expresses general opposition to the Project based on the loss of the Weddington Golf & Tennis facility as a historic property. The commenter is referred to Topical Response No. 6 – Historic Resources, for a discussion of direct and indirect impacts on historical resources resulting from the Project, including project design features that would preserve historic character-defining features of the Project Site.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 217**

Diana Nicole

Received May 10, 2022

### **Comment No. IND 217-1**

**Case Number: ENV-2020-1512-EIR; Harvard Westlake River Project Draft EIR State Clearinghouse Number: 2020090536**

In the built-up areas of the City of Los Angeles, green open space is in precipitous decline. Weddington Golf and Tennis has historically made golf an accessible activity to a diverse group of users. It functions as a bird refuge, cools the surrounding areas and provides a meaningful treed [sic], green buffer for the community.

But the Draft Environmental Impact Report (DEIR) for the Harvard Westlake development project at Weddington falls short of protecting and enhancing this green open space and would result in significant adverse impacts over the course of project implementation. Key deficiencies in the analysis include the following.

### **Response No. IND 217-1**

The comment lists the benefits of the Project Site to the community as an open space, golf facility, bird refuge, and green buffer and states that the Draft EIR is deficient in the protection and enhancement of open space and that implementation of the Project would result in significant adverse impacts. Refer to Response Nos. IND 217-2 to IND 217-8 below which address the commenter's specific comments on the Draft EIR and/or Project.

### **Comment No. IND 217-2**

First, the proposed project would result in significantly less open green space than before the project. Given how few green open spaces exist in park-poor Los Angeles and that the City's open space element hasn't been updated since Nixon was president, it is logical to assume that eventually one green open space reducing project will be one too many for the well-being of the City.

### **Response No. IND 217-2**

The comment states that the Project would result in less open space than under existing conditions. To clarify the existing property rights and on-site uses, the Project Site is not public open space. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property,

the Project Site may be closed at the property owner's sole discretion. However, upon completion of the Project, public access to the various recreational amenities onsite would be provided. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also, refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

The commenter is referred to Response Nos. ORG 14A-3 and ORG 14A-5 for a description of the Project's public use and recreational components. As discussed therein, the Project's open space and recreational features are consistent with the City of Los Angeles Department of Recreation and Park's current Citywide Community Needs Assessment for the South San Fernando Valley geographic area and will provide expanded open space and recreational opportunities for the public when compared to existing conditions.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 217-3**

Second, the project will result in the destruction of a Sensitive Natural Community, California brittle brush scrub, with a State rarity rank of S3. The California Department of Fish and Wildlife (CDFW) recommended mitigation protocol for Sensitive Natural Communities with an S3 rank is a ratio of between 5:1 to 7:1 by area affected under CEQA, but the DEIR only proposes an inadequate 1:1 mitigation.

### **Response No. IND 217-3**

The comment states that the Project will result in the destruction of a Sensitive Natural Community and that the 1:1 replacement is not adequate. The assertion is not correct. Please refer to Letter AG 4 (CDFW) and Response Nos. AG 4-7 through AG 4-11, which address impacts to California brittlebrush scrub. As discussed therein, Mitigation Measure BIO-MM-2, as revised (see Chapter 3 of this Final EIR), would provide assurance that the sensitive natural community of California brittlebush scrub would be successfully restored to pre-project conditions. Also note that the CDFW does not suggest or require a 5:1 to 7:1 replacement ratio in their comment letter.

### **Comment No. IND 217-4**

Third, the DEIR fails to adequately study the wildlife in the area. A one-day site visit from a biologist in November during the off-season when wildlife activity is low is a patently cynical attempt to minimize the adverse impacts to wildlife. Rare species exist at courses like Weddington where mature vegetation is maintained and there are native buffers such

as the Zev Yaroslavsky Los Angeles River Greenway, and the California brittle brush scrub Sensitive Natural Community abutting the course, or near-by offsite native habitats such as the Coast Live Oak-California Walnut Woodland located south of the project site in the Santa Monica Mountains. A full wildlife permeability review should be conducted as part of the DEIR.

### **Response No. IND 217-4**

The comment states that the Draft EIR failed to study adequately the wildlife in the area. The wildlife study for Draft EIR included an evaluation of wildlife both within and outside (adjacent to) the Project Site. A general reconnaissance-level biological survey and vegetation mapping was conducted by ESA biologist Maile Tanaka on November 12, 2020. In addition to the site survey, ESA biologists reviewed wildlife databases to compile and inventory of faunal species potentially occurring on the Project Site. See Appendix B (Floral and Faunal Compendium) and Appendix D (Special Status Wildlife Species) of the Biological Resources Technical Report, which is provided as Appendix D of the Draft EIR.

As described in Methodology on page IV.C-30 of the Draft EIR, the analysis of wildlife movement in and near the Biological Study Area is based on information compiled from literature, analysis of aerial photographs and topographic maps, direct observations and recordings made in the field during the biological survey, and an analysis of existing wildlife movement functions and values, such as observed habitat and native vegetation that could support wildlife movement, as well as trails and evidence of frequent use. The evaluation of existing wildlife conditions is considered complete by the City, the lead agency, in its review of the Draft EIR.

### **Comment No. IND 217-5**

Fourth, the project would result in the removal of a large number of tree species that are beneficial to wildlife without in-kind mitigation. This would result in a significant adverse impact on migratory bird species. Research by Professor Eric Wood at Cal State Los Angeles has documented the relative use of different tree species by wintering migratory birds on Los Angeles street trees. These important species include non-native trees such as Chinese Elm, and Camphor trees that would be removed by the project and not replaced in-kind. The American Sweetgum trees designated for removal have value for resident birds such as sparrows but they will not be replaced in-kind, under the DEIR. The 121 Palm trees that would be removed hold unique value for nesting birds such as hooded orioles, owls, and bats but they will not be replaced in-kind, under the DEIR. By failing to replace trees in-kind, the ecological impacts will not be mitigated because the habitat type will be changed entirely. This element of the project alone is a significant adverse impact to birds.

### **Response No. IND 217-5**

The comment states that the Project removal of certain trees would not be replaced with in-kind species, and therefore, impacts would occur to birds and migratory species.

However, the commenter provides no facts or evidence that ecological impacts will occur because habitat and/or trees will not be entirely replaced with in-kind species. The commenter is referred to Response Nos. ORG 14A-7 and ORG 14A-15 which address impacts to birds and migratory species.

Please refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project’s tree replacement program. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase.

As discussed in Topical Response No. 5, the Project would replace a large number (but not all) on-site Mexican fan palms and other invasive species. Replacement trees would be consistent with the Los Angeles River Master Plan Design Guidelines and Plant Palettes, which are selected based on biological suitability for the river environment. The long-term benefit would be trees that are more drought tolerant and would ultimately benefit native plant and animal species. As discussed in Response No. AG 4-36, the Mexican fan palms make up more than half of the removed trees and provide minimal foraging or habitat opportunities for most animal species in the area. This species is specifically identified by the Los Angeles River Master Plan Landscaping Guidelines and Plant Palettes under the heading “Plants That Should Never Be Planted Along the River.” The invasive or introduced tree species cited in the comment are common throughout the Studio City area and the removal of such would not have an adverse impact on highly mobile birds or bats with the majority of mature street trees remaining on-site. Because of the long-term sustainability of tree and plant species provided in the Angeles River Master Plan Landscaping Guidelines and Plant Palettes, the Project’s tree replanting program would not have a significant impact on wildlife species.

### **Comment No. IND 217-6**

Lastly, the project site will be subject to significant disturbance by construction, planting and maintaining the 100’s of replacement trees proposed for the project mitigation. Mortality from disturbance is greater than reproduction by most species, so the populations of wildlife residing at the project site will decline. And, although oak trees provide excellent wildlife value, the proposed tree planting plan uses an ornamental landscape approach with little resemblance to a “natural habitat” as claimed in the DEIR. Cumulatively, the project would provide significantly less habitat than before the project. The remaining habitat will be subject to light and noise pollution from the sports facilities that would surround the new plantings, reducing the benefit of the remaining habitat and this mitigation even further.

### **Response No. IND 217-6**

The comment states construction, planting, and maintaining replacement trees would result in wildlife mortality that would be greater than reproduction rates. The commenter also states the Project’s tree planting plan provides little resemblance to a “natural habitat” and that there would be less habitat than under existing conditions. In addition, the

comment expresses concern regarding light and noise impacts to wildlife. However, the commenter provides no facts or evidence that to support these statements.

Please refer to Response No. IND 217-5 which discusses the Project's tree planting plan. Refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife during construction. Also, construction activity would comply with Project Design Feature BIO-PDF-1 that includes protective measures for nesting habitat of raptors or songbirds, which would support reproduction activity during construction. Refer to Response No. IND 209-20 for a discussion of the Project's lighting impacts on wildlife. Also, refer to Response No. IND 42D-28 for a discussion of noise impacts to wildlife. The commenter is also referred to Section IV.C, *Biological Resources*, of the Draft EIR, with supporting data provided in Appendix D, Biological Resources Technical Report, of the Draft EIR. As analyzed therein, biological resources impacts would be less than significant with mitigation, where applicable.

### **Comment No. IND 217-7**

People often imagine that wildlife at a development site will simply move to a new area after development but this is not true; mortality occurs during movement. Any suitable habitat surrounding will already be occupied and the wildlife numbers are reduced each time habitat is lost through development.

### **Response No. IND 217-7**

The comment states that wildlife experience high mortality during relocation. The commenter provides no facts or evidence to support this statement. Refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife and nesting birds. The commenter is also referred to Section IV.C, *Biological Resources*, of the Draft EIR, with supporting data provided in Appendix D, Biological Resources Technical Report, of the Draft EIR. As analyzed therein, biological resources impacts would be less than significant with mitigation, where applicable.

### **Comment No. IND 217-8**

I also support the list of wildlife observed at the project site by local wildlife photographer Chris Trent and submitted in his May 10, 2022 supplemental comment letter.

### **Response No. IND 217-8**

The comment expresses support for the list of wildlife provided under Comment No. IND 213-7, above. Please refer to Response No. IND 213-7 regarding Mr. Trent's list of potential on-site fauna.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 218

Donald McLeod Keefer  
Received May 10, 2022

### Comment No. IND 218-1

Along with the CBS (formerly MTM and Republic) movie and television studio on Radford on the East side of town, "Kirkwood's" (aka Weddington) Golf Course is a true defining "anchor" of the Studio City showbiz community.

Like the studio itself, the golf course has a long and distinguished history of being owned and frequented by a number of unpretentious Hollywood locals and luminaries -- from golfer-turned actor-Joe Kirkwood (star of the "Joe Paluka" series of prize-fighting films), the original owner of the golf course (as well as much of the surrounding area, including "Ringside" Liquor on Whitsett) in the 50s, to TV actress/director Betty Thomas (Hill St Blues), to a (then very modest) Will Smith carrying his own modest bag of clubs as he prepared for his starring role in The Legend of Bagger Vance.

In addition to any number of retired Hollywood producers, I also recall having hilarious conversations with George Gallo, the screenwriter (now acclaimed painter) of Midnight Run in the clubhouse's restaurant, back when it was still known as "The Cuckoo's Nest" -- all this was (and still is) on offer at this "Country Club For the People" (ie [sic] no prohibitively expensive membership required).

A true cultural magnet for everyone -- torn down for bigger, fancier facilities for the already over-advantaged rich, and their offspring? REALLY??

Would New York City ever consider "redeveloping" Rockefeller Center, or the Empire State Building? Why would Studio City voluntarily destroy one of the architectural pillars that define it as an artistic community?

### Response No. IND 218-1

The comment expresses general opposition to the Project due to the loss of the Weddington Golf & Tennis facility and questions the need for the Project. The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### Comment No. IND 218-2

I strongly oppose Harvard-Westlake School's planned destruction of Weddington Golf & Tennis. The proposed conversion of the Weddington Golf & Tennis property into a private high school sports complex is concerning for a number of reasons.

1. With LA's green open space disappearing, Harvard-Westlake plans to service a privileged, select few by replacing 16 irreplaceable acres with artificial turf and concrete buildings, as well as by exerting their influence to secure variances to Weddington Golf & Tennis' A1 Agricultural Open Space zone allowances from the City.
2. By destroying the property's significant existing urban tree canopy along the LA River and replacing it with 12-foot walls, artificial turf, saplings, and towering light poles, the end result allows practices, games, and special events that will generate increased noise and traffic, which does not conform to the surrounding community.
3. Weddington Golf & Tennis is often referred to as "the gem of Studio City" and considered a local landmark for nearly 70 years. The LA Cultural Heritage Commission (CHC) supported Historic-Cultural Monument (HCM) designation for the ENTIRE 16-acre Weddington Golf & Tennis subject property. For that reason, we strongly support the mysterious, last-minute revisions be reversed and the designation restored to the CHC's original recommendation: preserving the subject property, which encompasses the golf course, driving range, and a majority of the site's green open space and tree canopy.
4. Millions of Angelenos from all over the City and San Fernando Valley have experienced Weddington Golf & Tennis since its opening in 1956. It is incumbent upon the City to protect precious affordable public spaces from developers and special interests, like Harvard-Westlake, who only serve a privileged few.
5. Traffic and congestion continue to grow at an alarming rate in LA. If allowed to proceed, Harvard-Westlake will spend the next four to five years building a massive \$100 million dollar sports complex for its students, while the rest of the community grapples with the plan's significant impact on our roads, traffic, and commutes to work and school.

This project hinges on the granting of a Conditional Use Permit (CUP) and since the proposed plan does not satisfy the necessary conditions, a CUP should absolutely NOT be granted.

## **Response No. IND 218-2**

The comment expresses opposition to the Project based on a variety of issues including loss of green space, reduction in tree canopy, impacts to historic resources, popularity with the public, traffic impacts, and CUP approval. These same comments are addressed under Comment Nos. IND 202-1 to IND 202-5. Please refer to Response Nos. IND 202-1 to IND 202-5.

## **Comment No. IND 218-3**

It's shocking that Harvard-Westlake would consider spending \$100 million on a sports complex for a privileged few, when hundreds of thousands of students citywide are lacking the most basic tools needed to succeed. Therefore, we urge Harvard-Westlake to move its proposed complex to a more cost-effective alternative site, like the nearby Los

Angeles Valley College, which the School has previously used for its tennis operations – even recently refurbishing the College’s tennis courts. With this good neighbor gesture, Harvard-Westlake would not destroy a beloved community asset, but rather, provide for the community and service a much wider area by improving facilities at Los Angeles Valley College.

Finally, please note that more than 14,000 community members have signed a petition supporting the preservation of the 16-acre Weddington property in its entirety. These individuals are counting on you to subscribe to a higher standard, support the public’s interests, stand firm against Harvard-Westlake’s lobbyists and moneyed special interests, and deny approval of the CUP and certification of the DEIR.

Thank you for your considering, and respecting, the creative roots of this still-casual, open access local entertainment industry hot spot, and community.

Harvard Westlake can bulldoze someplace else down.

## **Response No. IND 218-2**

This comment requests Harvard-Westlake to consider alternative sites like L.A. Valley College and provides general opposition to the Project. The alternative site included in this comment would not satisfy the Project Objectives. The reasons that alternatives sites were considered and rejected is provided in Section V, *Alternatives*, page V-6, of the Draft EIR. In addition to a site with the size to accommodate the Project Objectives, the other criteria for the Project include proximity to the existing Harvard-Westlake’s Upper School campus on Coldwater Canyon Avenue and a site with level topography to allow for the development of the contemplated recreational facilities. Proximity is a criteria factor because of the need for daily commuting from the Upper School campus, as it relates to higher daily vehicle miles. As concluded in Section V, no other location with adequate acreage and topography exists within proximity to the Upper School campus, and the notion that the Project could be built at L.A. Valley College is entirely speculative and unsubstantiated.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 219**

Ingred Mellman

Received May 10, 2022

### **Comment No. IND 219-1**

I strongly oppose Harvard-Westlake School's planned destruction of Weddington Golf & Tennis. I have been a Studio City resident for many years. We need this open space to continue our lovely comfortable way of life for our families and for the future community and families. This is the reason we chose to live here in a low density area rather than an urban crowded city.

### **Response No. IND 219-1**

The comment expresses general opposition to the Project based on the loss of the Weddington Golf & Tennis facility. The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 220**

Janice Jordan

Received May 10, 2022

### **Comment No. IND 220-1**

Please do not allow Harvard-Westlake to destroy an icon of Studio City. Do not allow them to ruin the lives of so many Studio City residents.

Please choose an alternate location for this selfish and ill-conceived project.

### **Response No. IND 220-1**

The comment expresses general opposition to the Project based on the loss of the Weddington Golf & Tennis facility. The comment also requests an alternative site be chosen for the Project. The reasons that alternative sites were considered and rejected is provided in Section V, *Alternatives*, page V-6, of the Draft EIR. In addition to a site with the size to accommodate the Project Objectives, the other criteria for the Project include proximity to the existing Harvard-Westlake's Upper School campus on Coldwater Canyon Avenue and a site with level topography to allow for the development of the contemplated recreational facilities. Proximity is a criteria factor because of the need for daily commuting from the Upper School campus, as it relates to higher daily vehicle miles. As concluded in Section V, no other location with adequate acreage and topography exists within proximity to the Upper School campus.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 221**

Jeffrey Hartwick  
Received May 10, 2022

### **Comment No. IND 221-1**

I am concerned that the Harvard-Westlake River Project will adversely impact the local community as follows:

### **Response No. IND 221-1**

The comment is introductory and does not in itself discuss the adequacy of the Draft EIR. No further response is necessary.

### **Comment No. IND 221-2**

#### **Noise and Vibration Impacts**

The DEIR notes that the Project “would have significant and unavoidable noise impacts during the Project’s construction activities that cannot be fully mitigated through feasible noise control measures.” (DEIR at V-4) There is thus no way to get around this large and deleterious affect on the neighborhood. If such impacts are “significant and unavoidable,” then why should the Project continue as contemplated? A better plan would be Alternative 1, or no project. Thirty (30) months of unmitigated and significant noise and vibration is a huge impact on the health and mental well-being of local residents and stakeholders. No one would want to live nearby under such circumstances.

If Alternative 1 is not chosen, then Alternative 2 would be a better that the current Project. I note in Table V-1 that Alternative 2 would lessen the duration of the Project by 4 months, and reduce the excavation of soil by nearly 20,000 truck trips. (Imagine 35,714 dump truck trips if the Project is unaltered, a completely unreasonable number for a residential community near the Valley’s main artery, Ventura Boulevard.)

### **Response No. IND 221-2**

The comment questions why the Project would continue as contemplated with significant and unavoidable impacts. Please refer to Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of construction and operational noise impacts. It is not uncommon for projects evaluated in an Environmental Impact Report (EIR) to include significant and unavoidable impacts. As described in Sections 15121(a) and 15362 of the California Environmental Quality Act (CEQA) Guidelines, an EIR is an informational document that will inform decision-makers and the general public of the environmental impacts resulting from a project, identify possible ways to minimize any significant effects, and consider reasonable project alternatives.

As concluded in Section VI, *Other CEQA Considerations*, of the Draft EIR, the Project is being proposed, notwithstanding significant unavoidable construction noise and vibration impacts, because it would support the RIO District Ordinance for revitalization of the Los Angeles River environment, enhance public enjoyment of the open space environment, and meet the needs of the School in providing recreational and academic opportunities to its students. In addition, as a result of the conclusions of the analysis contained within the Draft EIR, a statement of overriding considerations supported by substantial evidence will be prepared and reviewed by the City of Los Angeles in accordance with the CEQA Guidelines Section 15093 when determining whether to approve the Project.

Also, the comment advocates for Alternative 1 (the No Project/No Build Alternative), then Alternative 2 (at Grade Parking Alternative), be chosen over the Project. The commenter prefers these alternatives primarily due to fewer construction activities compared to the Project. As this portion of the comment states the commenters preferences, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 221-3**

#### **Public Access**

I am concerned about public access. Most of the property would NOT be readily accessible to the public, though H-W continues to propagate this untruth. Only portions would be readily accessible. In the alternative, the Project should be reduced in scope near the river to include more publicly accessible open space and preservation of old-growth trees.

### **Response No. IND 221-3**

The comment expresses concerns about public access and advocates that the Project should be reduced in scope near the Los Angeles River to include more publicly accessible open space and preservation of old-growth trees.

To clarify the existing property rights and on-site uses, the Project Site is not public property. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion. However, upon completion of the Project, public access to the various recreational amenities onsite would be provided. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the

Draft EIR. Also, refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

Refer to Topical Response No. 5 – Biological Resource/Trees, for a discussion of impacts to trees. As discussed in Topical Response No. 5, the Project's tree removal and replanting program was fully analyzed in the Draft EIR's Section IV.C, *Biological Resources*. As discussed in Section IV.C and Chapter II, *Project Description*, of the Draft EIR, the Project would implement an extensive tree planting and landscaping program that would remove 240 of the existing 421 trees, located both on the Project Site and off-site surrounding areas (e.g., within portions of the public right-of-way), and plant 393 trees, resulting in a net increase of 153 trees (or 36 percent). The majority of street trees would remain and any removed street trees would be replaced at a 2:1 ratio. The existing mature trees along the Zev Greenway, Bellaire Avenue, and Whitsett Avenue would remain. The majority of mature street trees along Valley Spring Lane would also remain, except for two smaller sections along the street front (see Section IV.C, *Biological Resources*, Figure IV.C-4, *Tree Removal Plan, of the Draft EIR*). The Project would result in a total of 574 trees within the on- and off-site Project areas (see Section IV.C, Figure IV.C-5, *Tree Planting Plan, of the Draft EIR*). Please also refer to Response No ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment No. IND 221-4**

### **Traffic**

Traffic would be adversely impacted, particularly at Coldwater and Ventura. And it would go on for at least 30 months, or 26 under Alternative 2. This is too much. A further consideration is what if the Sportsman Lodge construction project of 500+ apartments in a nearby area is permitted at the same time? The noise, pollution, land traffic would be apocalyptic for the area. The potential impact of that project should be factored in on the H-W River Project.

## **Response No. IND 221-4**

The comment expresses concern that Project-specific and cumulative (from the Sportsmen's Lodge project) construction-related traffic, noise and pollution would adversely affect the surrounding area. With regard to traffic, see Topical Response No. 9 - Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation

impacts would be less than significant without mitigation. Also see the level of service (LOS) analysis of the study area intersections in the Transportation Assessment (TA) in Appendix M of the Draft EIR. As evaluated therein, the Project would not adversely impact existing or future service levels. However, it is noted that the CEQA Guidelines do not require the evaluation of street and intersection service levels in a Draft EIR, and as such, are non-CEQA issues.

Also, as discussed in Section IV.M, *Transportation*, page IV.M-26 of the Draft EIR, Project Design Feature TRAF-PDF-1 would require a Construction Management Plan (CMP). Under the CMP, construction procedures would be formalized and specific actions would be identified and required to reduce effects on the surrounding community. The CMP would be based on the nature and timing of the specific construction activities and other projects in the vicinity of the Project Site. Construction management meetings with City staff and other surrounding construction-related project representatives (i.e., construction contractors), whose projects would potentially be under construction at around the same time as the Project, would be conducted bimonthly, or as otherwise determined appropriate by City staff. This coordination would ensure construction activities of the concurrent related projects and associated hauling activities are managed in collaboration with the Project.

With regard to noise impacts, see Response No. IND 6-3 and Topical Response No. 8 – Construction and Operation Noise and Vibration.

With regard to air quality and pollution, the Draft EIR addressed air quality impacts in Section IV.A, *Air Quality*, with supporting data provided in Appendix B, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant after mitigation, where applicable.

Also, with regard to impacts of the Project combined with other related projects in the area, the commenter is referred to the “Cumulative Impacts” subsection included in each of the sections in Chapter IV of the Draft EIR. The cumulative impact analyses address impacts of the Project combines with the list of related projects, which include the Sportsmen’s Lodge Project.

## **Comment No. IND 221-5**

### **Tribal Cultural Impact**

The DEIR mentions that the city sent notices to 10 tribal entities but only had a consultation with 2 tribes. A 20% response rate is insufficient. The city must do a better job in seeking the input of the 80% of potentially affected tribes. It is the right thing to do.

## **Response No. IND 221-5**

The comment states that the response rate from the tribal entities to the City’s formal notifications is insufficient. It is the responsibility of the tribes that were notified by the

City to request consultation with the City pursuant to AB 52. The City does not control the response rates by the tribal entities, which vary project-by-project. The City complied with applicable AB 52 regulations pertaining to Native American Consultation, including all notification requirements.

### **Comment No. IND 221-6**

In closing, I believe the Project is too large and should be scaled back to increase green spaces and public access if the Project is not eliminated altogether. The DEIR states that noise and vibrations would be significant and unavoidable for 30 months. This is not acceptable. A CUP should therefore not be granted and the DEIR not certified unless massive changes are made.

### **Response No. IND 221-6**

The comment expresses general opposition to the Project based on its scale, loss of green space and public access, and significant and unavoidable noise and vibration impacts. See Topical Response No. 4 – Aesthetics, regarding the Project's less than significant aesthetics-related impacts including scale. Also, impacts related to views, scenic resources and visual character were evaluated in the Initial Study (Appendix A of the Draft EIR) and also determined to be less than significant. Refer to Response No. IND 221-3 for a discussion regarding open space and public access. Refer to Response No. IND 221-2 for a discussion regarding the Project's noise and vibration impacts.

The comment also states the CUP should not be granted and the Draft EIR not certified unless massive changes are made. This comment that the Project does not meet the criteria to grant a CUP is not founded in substantiated facts cited and represents the opinion of the commenter. Also, please note that most public and private schools in the City operate under a CUP in accordance with LAMC Section 12.24.T.3(b), which allows school uses in residential and agricultural zones. For addition discussion of the Project's CUP, refer to Response Nos. ORG 7A-78, ORG 7A-79 and ORG 9-22. The comment, however, is primarily a request for project disapproval. The comment does not discuss the adequacy or content of the Draft EIR and no further response is necessary. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 222**

Kaitlin Gleason

Received May 10, 2022

### **Comment No. IND 222-1**

I am writing today to express my dismay about the above proposed Harvard Westlake project. This property has been a community golf and tennis resource for decades and it is beloved by thousands of people in the cities that surround it. Generations of families have enjoyed the golf course, driving range, putting green, and tennis courts. It seems very unfair that a well funded private school could destroy this beloved community resource and turn it into a private facility reserved for 900 wealthy students who already have an athletic facility of this nature at their primary campus nearby.

### **Response No. IND 222-1**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. To clarify the existing property rights and on-site uses, the land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 222-2**

This is the last open green space on the LA River. It is a travesty that Harvard Westlake wants to destroy the integrity of our neighborhood and this pristine open land with exterior stadium lighting, a massive amount of additional traffic and noise, huge underground and surface parking lots, massive walls, and bleacher seating. It is also upsetting that the community service it provides for golf and tennis facilities that are used by all walks of life in our community will be demolished for the benefit of the wealthy few.

## Response No. IND 222-2

The comment expresses opposition to the Project based on the location of the Project near to the Los Angeles River and expresses concerns over operational lighting, traffic, noise, parking, walls and bleacher seating and loss of open space and golf and tennis facilities. However, the commenter does not provide any substantive facts or support for these concerns or opinions. The commenter is referred to Topical Response No. 4 – Aesthetics, regarding the impact of the Project’s field lights and other outdoor lighting. Of note, all built structures, other than light poles and short segments of perimeter walls, will be at or below conforming heights based on the Project Site’s existing zoning. Also, as shown in Chapter II, *Project Description*, Figures II-15 to II-20, the walls around the perimeter of the Project Site would be designed and constructed of an organic stacked stone material and heavily landscaped. Vegetation growing on and around the fences and walls would help mask the built elements, complement the trees that would be maintained and planted on-site, and deter graffiti.

The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project’s parking, traffic patterns, effects on local streets, and consistency with CEQA threshold levels. Please refer to Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of construction and operational noise impacts.

Also, refer to Topical Response No. 3 - Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR; and Topical Response No. 11 - Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

Note that current updates to the Project would reduce the overall number of seats provided by the Project from 2,217 seats to 2,005 seats, which is a reduction of 212 seats. The changes to seating include: 1) pool area bleacher seats reduced from 348 to 214; 2) Field B bleacher seats reduced from 255 to 109; 3) Field A bleacher seats increased from 488 to 542; 5) gymnasium seats increased from 1,026 to 1,056; and 6) tennis bleacher seats reduced from 100 to 84. Also, the overall parking capacity has been reduced from 532 spaces to 403 spaces. Specifically, the parking capacity of the underground structure has been reduced from 503 spaces to 386 spaces and the capacity of the above grade surface parking lot has been reduced from 29 spaces to 17 spaces. See Topical Response No. 2 – Modifications to the Project Design, and Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, which provides these Project updates.

This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment No. IND 222-4**

Besides destroying a historical landmark, this development would irreparably change the ecosystem, remove trees, and establish a dangerous precedent for private development in this community.

## **Response No. IND 222-4**

The comment states that the Project would destroy a historical landmark, change the ecosystem, remove trees, and establish a dangerous precedent for private development. The commenter is referred to Topical Response No. 6 – Historic Resources, for a discussion of direct and indirect impacts on historical resources resulting from the Project, including project design features that would preserve historic character-defining features of the Project Site.

Please refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project's tree replacement program. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase. Also, with regard to the ecosystem, the commenter is referred to Section IV.C, *Biological Resources*, of the Draft EIR, with supporting data provided in Appendix D, Biological Resources Technical Report, of the Draft EIR. As analyzed therein, biological resources impacts would be less than significant with mitigation, where applicable.

The statement that the Project would set a “dangerous precedent” for private development is unclear and the commenter does not provide any substantive facts or evidence to support this concern or opinion. See Response No. IND 222-1 clarifying the existing property rights and on-site uses, and the property owner's right to close the facilities at the property owner's sole discretion.

This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment No. IND 222-5**

Your report does not adequately quantify the negative environmental and emotional impact this massive development will have on our neighborhood.

## **Response No. IND 222-5**

The comment asserts that the Draft EIR does not adequately quantify the negative environmental and emotional impact of the Project on the neighborhood, but does not provide any substantive facts or support for these assertions. The emotional effects of a project are not impacts on the environment and are, thus, appropriately not evaluated in the Draft EIR.

This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 223**

Krycia Plonka

Received May 10, 2022

### **Comment No. IND 223-1**

Tennis and golf are built around community. Sports build character, help with mental health, and of course, keep us in good physical health. More than that, public sports are a great equalizer, people can socialize with all levels of social strata and that's just important for life. Just because one really rich school and select group of people want more land doesn't mean they should get it at the expense of an entire community. With all the money they have they should do a little more research into the land they want to acquire being the correct land. As I understand it, this would be the second gaff [sic] they have made in not considering rules in the first case, and humanity in the second.

I understand you are the only council member who has a master's degree in urban planning. It is arguable that you know more about this subject of community and the importance of green spaces than any other council member. I play tennis there twice a week, and my husband plays golf there twice a week. Having this facility at our disposal has single-handedly changed our life and our health. Please consider the impact of everyone's health and well-being with the demise of Weddington. It means so much to so many.

### **Response No. IND 223-1**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. Please refer to Topical Response No. 3 - Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also refer to Topical Response No. 11 - Recreation: Golf and Tennis Facilities, regarding public use of the Project's tennis courts and the capacity of the future courts to accommodate the same number of sessions for the public, including tournament play, as under existing conditions.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 224**

Laurissa James Gold  
Received May 10, 2022

### **Comment No. IND 224-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

I live on Whitsett Avenue just north of Weddington and have enjoyed many happy afternoons on the golf course. I'm currently teaching my daughter to play golf there. Weddington is a special corner of Studio City. It allows for a few hours of cherished, low-key, relaxation that is increasingly difficult to find in LA. There is history and community here-- and that cant be easily replicated-- not to mention open spaces, lots of trees, and a little bit of fresh(er) air.

### **Response No. IND 224-1**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 224-2**

I am also very worried about the increase in traffic. Both during the construction-- which will be extensive and long-lasting-- and when the new athletic center is in use. Whitsett is a critical artery for getting around Studio City. Laurel Canyon and Coldwater Canyon are always congested because they provide access to the 101 and go over the hill. Whitsett is the way residents move quickly around town without getting mired down on the other avenues. If it gets congested because there are big crowds coming and going from the facility it will have significant ramifications for all of Studio City.

### **Response No. IND 224-2**

The comment expresses concern regarding the Project's construction and operational traffic. Please refer to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project's traffic patterns, effects on local streets, and consistency with CEQA threshold levels.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 224-3**

The Weddington property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 224-3**

This comment provides the same comment presented in Form Letter 3. A response to this comment is provided in Response No. FORM 3-5.

### **Comment No. IND 224-4**

Thank you for your help saving Weddington Gold [sic] & Tennis-- many future residents of Studio City will thank you too.

### **Response No. IND 224-4**

The comment requests the preservation of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 225**

Lee Rosenberg  
Received May 10, 2022

### **Comment No. IND 225-1**

My name is Lee Rosenberg, and I am a close neighbor of the proposed site of the Harvard-Westlake River Park project. I'm pleased to submit the attached comment to the project. Subject to the attached comment addressing a mitigation measure related to pedestrian safety, we are pleased to support the project and believe it will be an asset to the community.

### **Response No. IND 225-1**

The comment states that with the implementation of a proposed pedestrian mitigation measure the commenter would be pleased to support the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 225-2**

We are close neighbors of what is currently Weddington Golf & Tennis who live on Wilkinson Avenue in Studio City between Valleyheart Drive and Valley Spring Lane, which is on the opposite side of Whitsett to the east, and less than 70 yards away from the above-referenced project (the "Project"). In fact, we are among the closest residential neighbors to the Project site. More broadly, we are located within the Footbridge Square pocket of Studio City, which is bounded between Valleyheart Drive in the south, Moorpark Street in the north, Whitsett Avenue in the west, and Laurel Canyon Boulevard in the East. We are writing to provide public comment to the Draft Environmental Impact Report ("DEIR").

### **Response No. IND 225-2**

The comment describes the location of the commenter's residential neighborhood and indicates the commenter's intent to provide public comment on the Draft EIR. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 225-3**

We believe that on the whole, the proposed Harvard-Westlake River Park project will likely add significant value to the Studio City community in creating open spaces, gathering spaces, and recreational facilities for the public that do not currently exist, and look forward to working with the Project Developer, Harvard-Westlake, to achieve

objectives that are in the mutual interest of the community and Harvard-Westlake's students. Subject to the below comment, as close neighbors to the Project, we otherwise support the Project in light of Harvard-Westlake's commitments to public access and public use of the site and its facilities, which we expect will be detailed, further developed, and affirmed as the process continues, and as a condition of approval. We appreciate Harvard-Westlake's efforts to mitigate noise, light, and parking concerns.

### **Response No. IND 225-3**

The comment expresses support for the Project in consideration of its open spaces and recreational facilities. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 225-4**

As neighbors, we raise a significant safety concern that we request be addressed through a required mitigation measure and offsite improvement as part of the approval of the EIR and overall project, specifically, the need for a safe, signaled pedestrian crossing or traffic light across Whitsett at or between Valleyheart Drive and Valley Spring Lane. We believe that this is necessary to avoid crossing-related deaths and serious injuries to children, adults, and senior citizens who will be expected to access the Project. This comment, and the mitigation measure we are seeking, is consistent with the City of Los Angeles' Vision Zero, the City's commitment to livable streets and eliminating all traffic deaths by 2025, (see <https://ladotlivablestreets.org/programs/vision-zero>), and other policies and initiatives of the City to ensure safety and livability.

The Project will add vehicle trips to Whitsett but will not be adding any safe pedestrian crossings to that street. Figure 6 in Appendix M shows there are no pedestrian crossings for approximately 0.5 miles on that street, and the dangers to pedestrians will be made worse by the Project. As residents who live on the other side of that street, we know firsthand from our lived experience and observations that Whitsett Avenue is a busy street and that it is dangerous for pedestrians to cross to access the site. There is a large residential neighborhood to the east of that street, and families will continue to cross the even busier street without protection once the Project is developed, at great risk of bodily injury and death.

The posted speed limit is 40 MPH, but drivers regularly exceed that, at speeds that appear to be beyond 50 MPH. Whitsett has four lanes of traffic, with parked cars on both sides. Given the speed of drivers, and parked cars, pedestrians are not readily visible to drivers, and drivers frequently ignore or do not see pedestrians standing by close to lanes of traffic seeking to cross. Because the closest traffic lights are spread half a mile apart, i.e., a quarter of a mile in each direction from the central access point to the project, thus, a pedestrian between wishing to cross Whitsett at a signaled intersection must traverse and backtrack upwards of half a mile to cross safely. We frequently encounter pedestrians make unsafe crossing of that road with their families without pedestrian protection.

We note that the dangerous conditions on Whitsett are detailed on several online postings, for example:

*Many neighbors have voiced their concern about cars speeding on Whitsett Avenue and the numerous accidents that have occurred there. My neighbor totaled her car at Valley Spring Lane and Whitsett Avenue in a two-car accident that led to the fire department having to use the jaws-of-life to extricate the driver whose car had flipped over. I personally try to not cross the street there. The drivers totally ignore pedestrians. Where do we stand with studies and a possible light or stop sign at Valley Spring Lane?*

(<http://studiocityresidents.org/wp-content/uploads/2017/09/SCRA-Newsletter-July-2017.pdf>)

*I've noticed in the past two months that there has been an inordinate number of serious accidents at the corner of Whitsett and Valley Spring Lane (right by Weddington Golf and Tennis). If you are a Studio City local who frequents the golf course or tennis court, please be extremely careful making a left or right onto Whitsett. If you often shop at the Whitsett/Ventura Coffee Bean and Tea Leaf, Bed, Bath, and Beyond, Kriser's, Staples, or Aaron Brothers, please take good care. Watch the road. Watch your fellow drivers. Please have a happy and safe Independence Day, neighbors.*

(<https://patch.com/california/studiocity/an-accidentprone-intersection--neighbors-please-be-careful/>)

Fatal Accident Report:

*Location: Whitsett Ave and Valley Spring Lane in Studio City Summary: Vehicle-2, northbound on Whitsett Ave at a high rate of speed, estimated by witnesses in excess of 80 mph, collided with the left side of Vehicle-1 when it pulled onto Whitsett Avenue from an apartment building driveway.*

(<https://www.lapdonline.org/newsroom/traffic-collision-news-release/>)

The current amenities at the site, golf and tennis, have an active but limited and specific audience that appears to draw relatively few families and young children from the neighborhood. The proposed Project, which will add walking paths, nature paths, seating areas, connections with the LA River, in addition to athletic facilities and fields, is expected to appeal to substantially more families and children than the current site. It is expected that the desire and need to cross Whitsett will increase significantly – as neighbors should – to realize the community benefits that the project is proposing to create in light of the loss of the current public uses at Weddington Golf & Tennis.

But again, it is not safe to cross Whitsett as it is. Given the expected new attraction of the Project to the community once completed, it is expected that there will be an increase in pedestrian utilization, and that traffic on Whitsett will increase meaningfully at peak times and occasions as a consequence of the Project, e.g., for games and special events.

Notably, the project will have capacity for upwards of 2,000 spectators and 532 cars, which at peak times, will increase the number of vehicles and pedestrians traveling on Whitsett to access the Project.

The DEIR acknowledges that “[t]he Project would increase pedestrian and vehicle volume around the Project Site,” that the activities related to the Project “would increase pedestrian activity as well as vehicle activity,” and observes that “[a]ll crosswalks at the intersections surrounding the Project Site are unmarked and uncontrolled.” (DEIR, Appendix M, PDF pg. 52.) Although the DEIR contains no assessment of pedestrian activity/crossing counts, in 2012, when the site was proposed to be developed into senior housing, the report at the time indicated a “moderate level of pedestrian activity at Whitsett Avenue/Valley Spring Lane and Whitsett Avenue/Valleyheart Drive, including 114 pedestrians crossing at the peak AM hour and 135 pedestrian crossers at the PM hour. ([https://planning.lacity.org/eir/StudioCity\\_SeniorLiving/DEIR/Appendix%20G\\_Pedestrian%20Study.pdf](https://planning.lacity.org/eir/StudioCity_SeniorLiving/DEIR/Appendix%20G_Pedestrian%20Study.pdf)). These counts were of course, pre-project, and did not estimate the increased pedestrian activity expected as a consequence of that project. Here, the Project is anticipated to increase pedestrian and vehicle activity, and it should be expected that that what is currently a “moderate level of pedestrian” activity will become a more significant level of pedestrian activity.

While the DEIR recognizes that “[t]he Project is expected to generate an increase in pedestrian volumes in the vicinity,” it only is “recommended that tactile warnings and marked crosswalks be installed along at the intersections of Whitsett Avenue & Valley Spring.” (DEIR, Appendix M, PDF pg. 92.) We disagree that this mitigation measure is sufficient. The DEIR does not include substantial evidence to support the City's findings under transportation impact, threshold (a) that the project would not conflict with a program, plan, ordinance, or policy addressing the circulation system. (*Kings Cty. Farm Bur. v. Hanford* (1990) 221 Cal.App.3d 692, 732.) Especially with respect to the City's policies related to pedestrian safety, the DEIR does not show the Project will not conflict with those policies.

The Project will lead to a significant impact under this threshold, as the Project, without further mitigation, will conflict with the City's policies related to pedestrian safety. The City's finding that no further mitigation is required lacks sufficient evidence. To support the City's finding of a less than significant impact, the City and Project Applicant must consider a project design feature or mitigation measure that will substantially lessen the Project's significant transportation impacts. (See Pub. Resources Code Section 21002, 21081; CEQA Guidelines Section 15126.4.) Specifically, the City and Project Applicant must consider a project design feature or mitigation measure that adds a protected pedestrian crosswalk along Whitsett Avenue that will be accessible to the large neighborhood adjacent to the Project.

## Response No. IND 225-4

The comment raises concerns regarding pedestrian safety and suggests the need for a safe, signaled pedestrian crossing or traffic light across Whitsett Avenue at or between Valleyheart Drive and Valley Spring Lane. The comment cites concerns regarding high speeds on Whitsett Avenue, the lack of marked and controlled pedestrian crossings in the vicinity of the Project, and potential increases in both vehicle volumes and pedestrian crossings with implementation of the Project, and references historical postings and reports regarding collisions along Whitsett Avenue. The comment further states that the Project's effect on pedestrian safety would be a significant impact under CEQA requiring mitigation, on the grounds that it is in conflict with City policies related to pedestrian safety including the City's Vision Zero program. As discussed below, a traffic signal has been installed by the City at the intersection of Whitsett Avenue and Valley Spring Lane, and crosswalks will be provided at the intersection.

The comment includes anecdotal comments from online postings, references a fatal accident report, and states that it is not safe to cross Whitsett Avenue as it is. It should be noted that the specific collisions mentioned in the comment were vehicle-vehicle collisions not involving pedestrians and that the fatal accident mentioned in the comment occurred in 1999.<sup>11</sup> In addition, a review of collision records obtained from the Transportation Injury Map System (TIMS) by SafeTREC and UC Berkeley based on the CHP's Statewide Integrated Traffic Records System (SWITRS) database, found that 12 collisions resulting in injuries (and none involving fatalities) have occurred at the Whitsett Avenue/Valley Spring Lane intersection in the 11 year period between January 2011 and December 2021. Of these, only one involved a pedestrian and the pedestrian was crossing Valleyheart Drive, not Whitsett Avenue. Furthermore, the City of Los Angeles maintains a High Injury Network (HIN) that identifies streets with a high concentration of traffic collisions that result in severe injuries and deaths, with an emphasis on those involving people walking and bicycling. The City of Los Angeles has not identified Whitsett Avenue as one of these streets and it is not on the HIN.

The comment also states that a report conducted for a previously proposed senior housing project indicated a "moderate level of moderate level of pedestrian activity at Whitsett Avenue/Valley Spring Lane and Whitsett Avenue/Valleyheart Drive, including 114 pedestrians crossing at the peak AM hour and 135 pedestrian crossers at the PM hour. A review of the referenced study<sup>12</sup> indicates that it indeed stated that a "moderate level of pedestrian activity currently occurs at the Whitsett Avenue/Valley Spring Lane and Whitsett Avenue/Valleyheart Drive intersections" but it does not mention 114 pedestrians crossing at the peak AM hour nor 135 pedestrians crossing at the PM peak hour. Those numbers do not appear in the study. Rather, a close inspection of the pedestrian volumes shown on Figure 3 of the study shows that only two pedestrians

---

<sup>11</sup> <https://www.lapdonline.org/newsroom/traffic-collision-news-release/>, referenced December 22, 2022.

<sup>12</sup> Memorandum from David S. Shender, et al, to Durre Shamsi dated May 31, 2012 regarding *Pedestrian Safety Study, 4141 Whitsett Avenue, City of Los Angeles*.

during the AM peak hour and two pedestrians during the PM peak hour were counted crossing Whitsett Avenue at Valley Spring Lane and eight pedestrians during the AM peak hour and four pedestrians during the PM peak hour were counted crossing Whitsett Avenue at Valleyheart Drive.

The comment also states that the Project would have a capacity of upwards of 2,000 spectators and 532 cars which would increase the number of vehicle and pedestrians traveling on Whitsett to access the Project. Only three events with up to 2,000 attendees are anticipated per year, with the vast majority less than 500 attendees. Importantly, meaningful increases in pedestrian crossings by students, spectators, and employees of Harvard-Westlake are not anticipated given that students would be shuttled to the Project Site for after-school activities, sufficient parking would be provided on-site to accommodate anticipated athletic competitions and events, and Harvard-Westlake would implement a Parking and Transportation Management Plan including a parking reservation system and management controls to ensure that students, spectators, and employees do not park in the neighborhood and walk onto the Project Site (see Topical Response No. 9 Transportation and Parking During Construction and Operations and to the revised version of Project Design Feature TRAF-PDF-3 in Chapter 3, *Revisions, Clarifications and Additions to the Draft EIR*, of this Final EIR).

Nevertheless, the commenter's concerns about pedestrian safety are noted, given that Project-generated vehicle activity would increase with implementation of the Project and that increases in pedestrian crossings would occur as residents of the neighborhood to the east utilize the community and recreational spaces in the Project. However, there is no specific threshold regarding when an increase in pedestrian volumes at a location with a very limited history of pedestrian collisions would be significant. As discussed in Chapter 4 of the Transportation Assessment (TA) (included as Appendix M of the Draft EIR), per the City's criteria, the Project would not create an excessive burden on any of the surrounding residential streets in either the Non-Event Scenario or the Special Event Scenario. That is, the City's criteria for an impact to a residential street segment is the addition of 120 trips. Furthermore, given the lack of a history of pedestrian-related collisions and the fact that the City of Los Angeles has not identified Whitsett Avenue as part of its high injury network, the increase was not identified as a significant impact.

In addition, as indicated in Topical Response No. 9 – Transportation and Parking During Construction and Operations, following circulation of the Draft EIR, the City installed a traffic signal at the intersection of Whitsett Avenue and Valley Spring Lane. The intersection of Whitsett Avenue and Valley Spring Lane was unsignalized at the time of publication of the Draft EIR. The addition of the traffic signal would allow for pedestrian and bicycle crossings from the surrounding areas to the Project Site through the intersection in marked crosswalks, thus, enhancing pedestrian safety in the Project Site area.

**Comment No. IND 225-5**

We know that we all have a mutual interest in protecting children, adults, seniors, students, spectators, and employees of Harvard-Westlake accessing the Project by foot. We have appreciated our dialogues with Harvard-Westlake's staff and the dedication they have expressed to ensuring that the Project is ultimately consistent with the interests of the community, and ultimately, safe to access. We stand ready to work with the City and Harvard-Westlake to achieve the objectives of the Project to create new community and recreational spaces in Studio City, and protect the safety of area residents. Thank you for your consideration.

**Response No. IND 225-5**

The comment expresses a mutual interest in protecting children, adults, seniors, students, spectators, and employees of Harvard-Westlake accessing the Project by foot, expresses appreciation for dialogues with Harvard-Westlake staff, and offers to work with the City and Harvard-Westlake to achieve the objectives of the Project and protect the safety of area residents. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 226**

Patty Kirby  
Received May 10, 2022

### **Comment No. IND 226-1**

Attached is my comment letter for the DEIR review. (Two hours early!). Thanks for your continued help.

### **Response No. IND 226-1**

The comment is introductory and does not in itself discuss the adequacy of the Draft EIR. No further response is necessary.

### **Comment No. IND 226-2**

(DEIR) ENV-2020-1512-EIR Harvard Westlake Riverpark Project provides an inaccurate and inadequate representation of the facts about Tennis and its use by the public. An RDEIR should be given to address further issues and correct misrepresentations in the current DEIR.

I oppose the development of Weddington Golf & Tennis to create the HW River Park development.

### **Response No. IND 226-2**

The comment states that the Draft EIR Project provides an inaccurate and inadequate representation of the facts about tennis at the Project Site. The commenter does not specify what facts were inaccurate and/or misrepresented. The comment also expresses general opposition to the Project.

The use of the tennis courts by the public is explained in detail in Chapter II, *Project Description*, pages II-33 through II-35 and in Section IV.L.3, *Parks and Recreation*, of the Draft EIR. The use of the tennis courts is further summarized in Topical Response No. 11 – Recreation: Golf and Tennis, in this Final EIR.

The commenter's opposition to the Project is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 226-3**

The department of City Planning and Harvard Westlake had over 18 months to develop this DEIR. The community was only given 60 days to respond. We the community feels severely cheated. The opposition groups and community do not have the money and the power that HW does. We are scratching together our response knowing we have not been

able to hire experts needed to refute the claims in the DEIR and to cover all aspects in response to the DEIR.

### **Response No. IND 226-3**

The comment states the community did not have adequate time or the financial resources to properly review and refute the claims in the Draft EIR. Refer to Topical Response No. 1 – Public Participation and Review, which discusses public participation and CEQA public review requirements and steps undertaken by the City to facilitate public participation in association with the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 226-4**

**My comments relate to the section: IV. Environmental Impact Analysis**

#### **L.3 Public Services – Parks and Recreation**

I begin my comment letter from three of the 30 teaching tennis pros at the Weddington Golf & Tennis Courts regarding tennis court availability should HW reduce the # of courts from 16 to 8 courts.

Note: Additional letters and comments from other teaching pros follow at the end of this letter. They are all remaining anonymous for fear of retribution by the property owner.

#### **Letter 1:**

From: Author name redacted for fear of retribution by the property owner.

Teaching Tennis Pro at Weddington Golf & Tennis > Date: Fri, Apr 22, 2022 at 1:45 PM

Subject: Re: Response on HW DEIR

To: patty.a.kirby@gmail.com <patty.a.kirby@gmail.com>

Please forward to LA City Planning regarding DEIR for Weddington Golf & Tennis.

I want to respond to you regarding the courts at Weddington. My family has a long history in this area. I personally started playing tennis in this area in 1977 and coaching full time 1989. Every tennis facility I have played at has been torn down. Racquet Centre at Ventura and Vineland had 20 courts which closed in September 1998 which is when I came to Weddington after a brief four weeks at Burbank Tennis Center. People in this area did not like going to Burbank Tennis Center because the traffic was really bad, so I moved to Weddington. I know the current Staples right here at Ventura had 4-6 courts that were removed. At Weddington 4 courts were sold to the city to build the fire station about ten years or so ago as well. We went from having 44-46 courts in the area to only 16 not including the public park courts which we are not allowed to run classes on.

During the pandemic, the 16 courts at Weddington were booked most days from 8 am-5 pm and many days until 7:00 pm or 8:00 pm. I had many students tell me this was their only exercise, and it was how they were keeping their sanity during the pandemic. The wonderful thing about the pandemic is so many people have taken up tennis as their form of exercise. I figured once the gyms reopened tennis would ease up a bit but happily people are still playing.

Currently, the courts are so busy that several of us pros are paying a VERY large amount of money each week to guarantee we have a court to coach on during the week. For weekend courts we need to call in when they first open at 7:30 am and the first people through get the courts. I got through by 7:33 am last week and the courts were sold out. I am currently on the waiting list for a court to teach my Saturday morning children's class. I tried today to book a court on Sunday from 3:00-5:00 for my ladies team to do a weekend practice and the courts are sold out. It is not just the prime morning spots that are booked.

Next week I will not be able to coach my Monday and Wednesday kids groups because all the courts will be booked from 1:00-6:00 pm by the high schools. This has happened several times during the high school tennis season.

I was informed that I will only have one court during the summer to run camps as the Harvard Westlake will be taking most of the courts for their private camps. There are three of us who run junior camps in the summer and with each of us having only one court, I am not sure how this will be possible. Last year we had two courts and that was challenging. Some of my students are low-income so I give them scholarships to participate. Where will these children play this summer? Where will the adult morning leagues play?

The 16 courts are fully booked now, I can't begin to imagine what it will be like with only 8 courts. Plus, how long will the courts be out of action as they are relocating the courts to the other side of the facility. The noise was horrendous when they were building the fire station so even if they kept the courts and moved them after things were built between the dust and noise, playing will be unbearable.

Yes, there are courts at Burbank Tennis Center and Balboa Park but kids who go to school in this area, to travel on the 101 at 3 pm or 4 pm to get to a lesson will spend more time in traffic than they will on the court. This is such a tragedy for tennis in our community. Tennis is such an amazing family and to lose a facility like Weddington will forever end tennis in this area. You can't do much with 8 courts.

Continued on 5/10/22

## **Response No. IND 226-4**

The comment provides the personal experiences regarding existing court availability from a tennis teaching professional that uses the Project Site's existing tennis facilities. The

commenter states his preferred teaching times are not always available at certain times of the week.

The commenter is referred to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for a discussion of impacts related to the Project’s provision of tennis facilities for public use. As discussed therein, the existing tennis courts are not fully booked each day and the Project would accommodate the same number of weekly sessions that actually take place under existing conditions, including existing and future student use. Tennis would be available to the public under a reservation system that allows concurrent use with students (who use the courts in the late afternoons) when courts are available.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment No. IND 226-5**

### **Letter 2:**

5/9/22 Author name redacted for fear of retribution by the property owner

I have over 200 students throughout the year in between Private, Groups, Tournaments, and Camps, both Adults and Kids from various local schools like Colfax Elementary, Carpenter, Walter Reed, Dixie, Miliken, Laurence, Wesley, Campbell hall, Country school, Oakwood and even Harvard Westlake...

My yearly court fees have doubled in 3 years’ time, from \$45K to \$90K. it’s a Joke, I have been working at Weddings goon [sic] since 1999, and I spent 1 million Dollars on court fees since then ...

I bought my house in Valley Village because I thought I will be working at Weddington for the rest of my working life, I have a mortgage and a kid to take care of and my workplace is going to be taking away from me and my family as well as all my students ...

So over the past 23 years (past & present time ), I taught many, many celebrities. (names I can provide to you confidentially.) More importantly, I coach kids at Weddington from 5 years old all the way to division 1 college, USC, Vanderbilt, Loyola, FSU, UC Irvine etcetera

I also taught too [sic] professional players at Weddington Ronald Agenor former #22 in the world, George Bastl former top 59 in the world and #1 player for USC, Gabriella Volekova former top #150 WTA, and many more

There is no other place like Weddington in the whole LA county, everything else is private clubs, country clubs, and public parks (not open for teaching).

Also, most of our students are in Local public schools...Kids in private schools go to country clubs and tennis clubs, not Weddington .

### **Response No. IND 226-5**

The comment is primarily a discussion of the user's experience with current conditions as a private teaching coach using the existing tennis facility and the commenter's concerns regarding potentially reduced access to these facilities. Please refer to Response No. IND 226-4 for a discussion regarding the use of tennis facilities under the Project.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 226-6**

#### **Letter 3:**

**5/25/22** Author name redacted for fear of retribution by the property owner

There are currently more than 30 teaching pros who teach at Weddington Tennis. Their livelihood, me included, truly counts on these Weddington courts daily. And most importantly the countless people we teach on a daily basis. From kids to adults to camps to tournaments etc.

The list is endless. There is nowhere else like these privately owned courts for us to teach on in Los Angeles or the Valley. Clubs are limited and parks are in disrepair with a first come first serve basis if you can even get a court. What makes Weddington so special is that the pros and the community can all live in harmony with the current amount of courts that are there. If you take away another 8 courts, there will no longer be enough to go around.

I have been a tennis teaching professional at Weddington Tennis for 22 years. I currently teach 8 cardio tennis classes a week and each one of them has 8 players in each class. That's 64 people that come to my classes alone, let alone the numerous other players who come to play with other pros. And then there are everyday players who want to play singles or doubles.

I have seen it all in my 22 years at Weddington. I understand that these courts, all 16 need to stay in the community so everyone can continue to enjoy them. Taking 8 courts away will be like cutting off an arm. They are ALL NEEDED.

ALL 16 courts give players and students an outlet for exercise, mingling with friends and reduce stress from their lives. We all need this in a hectic city like Los Angeles.

Without these courts, you are taking away a tennis community of teachers and students who count on these courts to be there. Please consider and understand how valuable these courts are to everyone.

Continued in letter 5/9/22

I teach 64 people every week in my 8 cardio tennis classes. Plus some privates and semi-privates. So let's say 70 people.

Also, I asked HW in a meeting a long time ago about the valley college courts. They are sitting empty. They said we couldn't use them. But nobody uses them! I would be more than happy to reach there.

It's always difficult to get courts because so many people in the community use them. Also, expensive to use courts.

These courts need to stay in the community and be used by the community. There aren't the courts available to play near here!

**Response No. IND 226-6**

The comment is primarily a discussion of the user's experience with current conditions as a private teaching coach using the existing tennis facility and the commenter's concerns regarding potentially reduced access to these facilities. Please refer to Response No. IND 226-4 for a discussion regarding the use of tennis facilities under the Project.

Also, refer to Topical Response No. 3 - Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 226-7**

**COMMENT TO SECTION:**

=====

**IV. Environmental Impact Analysis**

**L.3 Public Services – Parks and Recreation**

Page: IV.L.3-13 a. Tennis Court Facilities

As shown in Table IV.L.3-3, the current demand for the on-site tennis courts, on average, is 91 one-hour sessions per weekday and 74 sessions per weekend day. This indicates that the courts are not used to maximum capacity at any period throughout a typical weekday or weekend.

(DEIR) ENV-2020-1512-EIR Harvard Westlake Riverpark Project provides an inaccurate and inadequate.

#### (4) Off-Site Tennis Courts with Public Access

The City provides a wide range of public tennis facilities. The RAP tennis facilities in the east San Fernando Valley (the area in which the majority of existing users of the Project Site resides), as well as schools that have tennis courts for public use, including free-to-the-public tennis courts and fee-required courts. Existing public courts or private courts to which the public has access in the area are listed in Table IV.L.3-4, Tennis Courts in the East San Fernando Valley Available to the Public, below. The geographic location of courts in Table IV.L.3-4 reflects the origins of existing users of the Project Site. As shown in Table IV.L.3-4, there are 58 public courts that do not charge a fee and 50 fee-required public courts in the geographic area served by the Weddington facilities. The off-site no fee courts are available on a “first-come, first-served” basis and the fee-required courts are available with reservations. Fees for tennis courts in the City’s RAP system are approximately \$12.00 per hour. With the exception of the three school sites (Grant High School, North Hollywood High School, and Valley College), all of the “no fee” courts are public courts operated and maintained by the RAP. Because current tennis players at the Weddington facility reside primarily in the east San Fernando Valley, courts located in the east San Fernando Valley are listed in Table IV.L.3-4. However, some members who use the Weddington tennis facilities also reside in Hollywood, Burbank, Toluca Lake and areas within the west Los Angeles basin, and would have access to additional public tennis facilities in those communities, not listed in Table IV.L.3-4.

**(DEIR) ENV-2020-1512-EIR Harvard Westlake Riverpark Project provides an inaccurate and inadequate.**

#### **Response No. IND 226-6**

The comment cites text from the Draft EIR and claims that the information is inaccurate and inadequate. However, the comment does not describe any disputed facts or provide factual evidence to contradict the information provided in the Draft EIR. As such, no further response is necessary.

**Comment No. IND 226-7**

Page: IV.L.3-22

**(b) Operation**

The Project would not include a residential component and, thus, would have no impact on existing public parks and recreational facilities caused by population increase. In addition, while the Project would eliminate play-for-fee golf and eight of 16 tennis courts available for fee, it would substantially increase publicly-available parkland for a wide variety of users in the nearby neighborhood and broader community.

In conclusion, the Project's construction workers or the relocation of tennis and golf users during Project construction is not expected to require the need for new or physically-altered government facilities, the construction of which would cause significant environmental impacts, in order to maintain acceptable service ratios. As such, impacts to public parks and recreational facilities during Project construction would be less than significant.

**Comment No. IND 226-8**

Page: IV.L.3-24 &amp; IV.L.3-25

**(i) Reduction in Tennis Facilities**

Table IV.L.3-6, Projected Capacity of Future, On-Site Tennis Courts, illustrates the average weekday and weekend use of the existing 16 tennis courts and the future capacity of the Project's eight tennis courts. As shown in Table IV.L.3-6, the existing tennis courts provide, on average, 96 sessions during a single weekday and 78 sessions during a weekend day, for a total week average of 174 sessions. The future tennis courts would have the capacity to accommodate 88 sessions per weekday and 104 sessions per weekend day, for a total week capacity of 192 sessions. The table reflects the School's use of the tennis courts on weekdays between 3:00 p.m. and 6:00 p.m., which is a conservative assumption since the School would not use all eight courts every weekday during the year, particularly during summer months and School breaks. In addition, outside the hours of 8:00 a.m. to 11:00 a.m. and 4:00 p.m. to 8:00 p.m., the

Project would have capacity to accommodate the same number of sessions as the current facility. In addition, on weekends, there would be adequate capacity offered by the Project's eight courts, other than between the hours of 8:00 a.m. and 11:00 a.m. Although the weekday capacity would be 8 sessions below the existing average daily use, the weekend, during which the School would generally not conduct School-associated tennis, has a capacity of 26 sessions more than the current average use. As such, over a period of a week, the Project would have adequate capacity to accommodate the same number of tennis court sessions as the current Weddington Golf & Tennis facility.

**(DEIR) ENV-2020-1512-EIR Harvard Westlake Riverpark Project provides an inaccurate and inadequate.**

### **Response No. IND 226-8**

The comment cites text from the Draft EIR and claims that the information is inaccurate and inadequate. However, the comment does not describe any disputed facts or provide factual evidence to contradict the information provided in the Draft EIR. As such, no further response is necessary.

### **Comment No. IND 226-9**

Page: IV.L.3-27

#### **(iii) Conclusion**

As described above, the Project would provide all-day public access to 5.4 acres of landscaped walking trails, direct access through the Project Site to the Zev Greenway, and tennis courts for public use (with reservations). Other facilities, such as the multi-purpose athletic fields, swimming pool, gymnasium sports, and eight tennis courts, would be available to approved public groups. These features would reduce demand for off-site parks and recreation uses and meet the criterion of neighborhood park uses within walking distance of the surrounding neighborhood, as well as provide the highest priority recreational use (walking paths) identified in the RAP's Citywide Community Needs Assessment for the South San Fernando Valley geographic area.

Therefore, the Project would not require the need for new or physically-altered government facilities, the construction of which would cause significant environmental impacts, in order to maintain acceptable service ratios. Impacts to public parks and recreational facilities during Project operation would be less than significant.

**(DEIR) ENV-2020-1512-EIR Harvard Westlake Riverpark Project provides an inaccurate and inadequate.**

## **Response No. IND 226-9**

The comment cites text from the Draft EIR and claims that the information is inaccurate and inadequate. However, the comment does not describe any disputed facts or provide factual evidence to contradict the information provided in the Draft EIR. As such, no further response is necessary.

## **Comment No. IND 226-10**

### **(2) Mitigation Measures**

Impacts were determined to be less than significant. Therefore, no mitigation measures are required.

### **Letter 5: Author name redacted for fear retribution by property owner**

Thank you for all of your work on the preservation of this important community source of recreation and landmark. I have been fortunate enough to be coaching at Weddington for a number of years now. I average about 34 hours a week on court with Players aging from three through 78

It has been so important for everybody during these trying Covid times for sure, and hopefully can continue to be a source of joy in the community.

Cutting the number of courts in half ,as indicated by the current plan, would certainly impact the chances for enjoying our great sport.

Please let me know if there's anything I can do to aid in the endeavor of preserving Weddington Golf & Tennis

With much Gratitude and hope

## **Response No. IND 226-12**

## **Comment No. IND 226-14**

### **Letter 7: Author name redacted for fear retribution by property owner**

Dear Ms. Henry,

I strongly oppose Harvard-Westlake School's planned destruction of Weddington Golf & Tennis. The proposed conversion of the Weddington Golf & Tennis property into a private high school sports complex is concerning for a number of reasons. 1. With LA's green open space disappearing, Harvard-Westlake plans to service a privileged, select few by replacing 16 irreplaceable acres with artificial turf and concrete buildings, as well as by exerting their influence to secure variances to Weddington Golf & Tennis' A1 Agricultural Open Space zone allowances from the City. 2. By destroying the property's significant existing urban tree canopy along the LA River and replacing it with 12-foot walls, artificial turf, saplings, and towering light poles, the end result allows practices, games, and special events that will generate increased noise and traffic, which does not conform to the surrounding community. 3. Weddington Golf & Tennis is often referred to as "the gem of Studio City" and considered a local landmark for nearly 70 years. The LA Cultural Heritage Commission (CHC) supported Historic-Cultural Monument (HCM) designation for the ENTIRE 16-acre Weddington Golf & Tennis subject property. For that reason, we strongly support the mysterious, last-minute revisions be reversed and the designation restored to the CHC's original recommendation: preserving the subject property, which encompasses the golf course, driving range, and a majority of the site's green open space and tree canopy. 4. Millions of Angelenos from all over the City and San Fernando Valley have experienced Weddington Golf & Tennis since its opening in 1956. It is incumbent upon the City to protect precious affordable public spaces from developers and special interests, like Harvard-Westlake, who only serve a privileged few. 5. Traffic and congestion continue to grow at an alarming rate in LA. If allowed to proceed, Harvard-Westlake will spend the next four to five years building a massive \$100 million dollar sports complex for its students, while the rest of the community grapples with the plan's significant impact on our roads, traffic, and commutes to work and school. This project hinges on the granting of a Conditional Use Permit (CUP) and since the proposed plan does not satisfy the necessary conditions, a CUP should absolutely NOT be granted. It's shocking that Harvard-Westlake would consider spending \$100 million on a sports complex for a privileged few, when hundreds of thousands of students citywide are lacking the most basic tools needed to succeed. Therefore, we urge Harvard-Westlake to move its proposed complex to a more cost-effective alternative site, like the nearby Los Angeles Valley College, which the School has previously used for its tennis operations –

even recently refurbishing the College's tennis courts. With this good neighbor gesture, Harvard-Westlake would not destroy a beloved community asset, but rather, provide for the community and service a much wider area by improving facilities at Los Angeles Valley College. Finally, please note that more than 14,000 community members have signed a petition supporting the preservation of the 16-acre Weddington property in its entirety. These individuals are counting on you to subscribe to a higher standard, support the public's interests, stand firm against Harvard-Westlake's lobbyists and moneyed special interests, and deny approval of the CUP and certification of the DEIR. Thank you for your time and consideration of this most important matter.

### **Response No. IND 226-14**

The comment described as Letter 7 raises the same comments and issues included in Form Letter No. 4. Please refer to Response Nos. Form 4-1 to Form 4-9 which addresses these comments.

### **Comment No. IND 226-15**

#### **OTHER COMMENT:**

- **A Conditional Use Permit should not be granted. Should one be granted, Harvard-Westlake, the developer should be required to TRANSPORT or MOVE the trees to another location, not destroy them by chopping them down. There are companies that do this and this should be a requirement.**
- This development is just too big of a footprint for the last 16 acres of unprotected open space along the LA River in the San Fernando Valley.
- HW should move it to another location and improve another property with this development and open to College and High School Students along with the community as they claim they will do.
- Cutting down mature trees to replace with saplings that could not possibly grow to the heights of existing trees due to lack of space in the concrete complex! See this picture.

A FUTURE BILLBOARD if Harvard Westlake is given a CUP:

## Response No. IND 226-15

The comment expresses opposition to the Project and states that, if a CUP were granted, mature trees to be removed should be replanted elsewhere. In this regard, please refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of the Project’s tree replacement program. The majority of trees to be removed would be exotic or invasive species, such as the Mexican fan palm considered an invasive species by the California Invasive Plant Council. Trees, such as removed eucalyptus and Mexican fan palms, would not be appropriate species for re-planting. In addition, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase. The mature eucalyptus trees along Bellaire Avenue and most of the eucalyptus trees on Valley Spring Lane, as well as along the Zev Greenway would be preserved. Replacement trees would be consistent with the Los Angeles River Master Plan Landscaping Guidelines and Plant Palettes and would be more sustainable than existing non-RIO-compliant species. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years.

The comment states that the Project would be too big for the last 16 acres of unprotected open space along the LA River in the San Fernando Valley. To clarify the existing property rights and on-site uses, the Project Site is not public open space. The land that currently

comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

Also, with regard to the size and scale of the Project, see Topical Response No. 4 – Aesthetics, regarding the Project's less than significant aesthetics-related impacts. Also, impacts related to views, scenic resources and visual character were evaluated in the Initial Study (Appendix A of the Draft EIR) and also determined to be less than significant.

Also, the Draft EIR did consider alternative sites to the Project Site. The reasons that alternatives sites were considered and rejected is provided in Chapter V, *Alternatives*, page V-6, of the Draft EIR. In addition to a site with the size to accommodate the Project Objectives, the other criteria for the Project include proximity to the existing Harvard-Westlake's Upper School campus on Coldwater Canyon Avenue and a site with level topography to allow for the development of the contemplated recreational facilities. Proximity is a criteria factor because of the need for daily commuting from the Upper School campus, as it relates to higher daily vehicle miles. As concluded in Chapter V, no other location with adequate acreage and topography exists within proximity to the Upper School campus. Refer to Response Nos. IND 34-4 and IND 34-5 for additional discussion of alternative sites considered in the Draft EIR.

---

## **Comment Letter No. IND 227**

Paul Ketrick  
Received May 10, 2022

### **Comment No. IND 227-1**

I am writing to let you know I strongly oppose the plans put forth by Harvard-Westlake for Weddington Golf & Tennis. I am a longtime user of the tennis courts and other facilities there, and it would be a terrible loss to the community to have any tennis courts destroyed or to lose the golf course or other open, green spaces at the location.

### **Response No. IND 227-1**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 227-2**

This space is zoned as Agricultural and needs to remain that way, with no zoning changes or conditional-use permits granted.

### **Response No. IND 227-2**

This comment expresses similar zoning-related concerns to those presented in Comment No. FORM 3-5. Refer to Response No. FORM 3-5.

### **Comment No. IND 227-3**

The entire DEIR is many hundreds of pages and I have not yet had time to read all of it; I hope to submit to you more specific comments after I have read it all. But the sheer size of the DEIR speaks to the money behind it and the massive impact it will have on the neighborhood near Weddington.

### **Response No. IND 227-3**

The comment suggests the size of the Draft EIR is an indication that impacts on the neighborhood would be significant. The size of the Draft EIR and potential impacts of the project are unrelated. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 227-4**

We have already been through several attempts to try to destroy this lovely property, and each time it has been denied due to the negative impact it would cause to the surrounding area and the extreme loss to the community of this Valley treasure. I hope that once again the proposal to destroy this wonderful refuge will be denied.

Thank you for your consideration and concern for the residents who live near Wedding [sic] Golf & Tennis and the rest of us across the Valley who use and benefit from this great open space and recreational center.

### **Response No. IND 227-4**

The comment expresses general opposition to the Project based on the removal of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 228**

Scott Mandell

Received May 10, 2022

### **Comment No. IND 228-1**

I am the Vice President of the Studio City Neighborhood Council however this email is coming from Scott Mandell the private citizen.

I feel that the release of the DEIR just before a holiday and tax period, along with its sheer size and complexity, made a Neighborhood Council review impossible based on the deadline. Even with the extension, there was simply not enough time to properly review one of the largest if not the largest most complex document ever to come across our NC as it relates to the largest construction project to take place in Studio City in recent memory.

### **Response No. IND 228-1**

The comment states that the review period was not adequate to review the Draft EIR. Refer to Topical Response No. 1 – Public Participation and Review, which discusses public participation and CEQA public review requirements and steps undertaken by the City to facilitate public participation in association with the Draft EIR. Also, refer to Response Nos. FORM 1-1 and FORM 1-2 regarding public review of the Draft EIR. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 228-2**

I do not support the Harvard-Westlake River Park Project Case Number: ENV-2020-1512-EIR at this time due to the size, scope, length of construction.

### **Response No. IND 228-2**

This comment expresses general opposition to the Project based on the size, scope, and length of construction. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 228-3**

I was unable to properly review the DEIR due to the size, scope and length of the document.

Thank you for your time and consideration of this most important matter.

### **Response No. IND 228-3**

The comment states the commentor was not able to review the Draft EIR due to the size, scope and length of the document. Refer to Response No. IND 228-1 which addresses this similar comment.

## Comment Letter No. IND 229

Suellen Wagner  
Received May 10, 2022

### Comment No. IND 229-1

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

Attached, please find the comment from Save Coldwater Canyon!, which I endorse and which represents my comment on the Project, as a resident homeowner in Studio City for more than thirty years.

### Response No. IND 229-1

The comment expresses general opposition to the Project and introduces comments from "Save Coldwater Canyon!". The "Save Coldwater Canyon!" comments are addressed in Letter No. ORG 9 in this Final EIR. The commenter is referred to Response Nos. ORG 9-1 to ORG 9-23.

### Comment No. IND 229-2

I have made one small, additional comment, in the text below, regarding my neighborhood, the Silver Triangle, and traffic protections that would be necessary if the Project was approved.

If the Project is approved, Laurel Terrace Drive, a 30-foot wide collector street south of Ventura that traverses the Silver Triangle neighborhood, and designated as HCM "Laurel Terrace Residential Historic District," would need to be protected from masses of traffic seeking to bypass Ventura and enter the neighborhood from the north or west. Laurel Terrace Drive is not a continuation of Whitsett and isn't mentioned a single time in the DEIR. However, it would surely become a cut-through route and be heavily overburdened with traffic during Project destruction, construction and operations. Traffic calming measures, including physical barriers like bulbouts to limit or prevent entry from the north or west, permanent turn restrictions, turn arrows, signage, and signal timing would be needed to restrict or block through traffic to Laurel Terrace and right turns to Laurel Terrace from eastbound Ventura. The Silver Triangle is used by many pedestrians, cyclists, and students. It is the gateway to Carpenter Avenue Charter and The Bridges School.

### Response No. IND 229-2

The comment claims that Laurel Terrace Drive could experience an increase in cut-through traffic due to the Project. The Transportation Assessment (TA), contained in Appendix M of the Draft EIR, provided an analysis of cut-through traffic on residential streets. The analysis was conducted on four local residential street segments near the

Project Site, which were selected in conjunction with the City of Los Angeles as it was determined to have a greater likelihood of experiencing neighborhood cut-through traffic from the Project. These segments include: Valley Spring Lane west of Whitsett Avenue; Valley Spring Lane east of Whitsett Avenue; Woodbridge Avenue west of Whitsett Avenue; and, Woodbridge Avenue east of Whitsett Avenue. Under the analysis of cut-through traffic, an impact would be considered significant by the City if it increased daily traffic by 120 trips. The Project would not reach this threshold on any of the most impacted analyzed residential street segments, and therefore, would also not exceed the City's threshold for a traffic impact on Laurel Terrace Drive. Based on this analysis, traffic calming measures as referenced in the comment are not required for the Project.

During construction, the inbound haul route would come from US-101, head southbound on Coldwater Canyon Avenue, eastbound on Moorpark Street, and southbound on Whitsett Avenue to access the Project Site. The outbound haul route would leave the Project Site and head southbound on Whitsett Avenue, westbound on Ventura Boulevard, and northbound on Coldwater Canyon Avenue to reach US-101. The staging area is expected to be located on the Project Site. Thus, no construction vehicles are anticipated along Laurel Terrace Drive.

In addition, see Topical Response No. 9 - Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation.

### **Comment No. IND 229-3**

The Applicant did not include any traffic calming measures in the DEIR. This is a serious omission worthy of review in a revised and recirculated DEIR (RDEIR).

### **Response No. IND 229-3**

The comment suggests that the Draft EIR was inadequate in not evaluating or proposing traffic calming measures but does not present any facts or support for the need of such measures. During construction, as discussed in Section IV.M, *Transportation*, page IV.M-26 of the Draft EIR, Project Design Feature TRAF-PDF-1 would require a Construction Management Plan (CMP). Under the CMP, construction procedures would be formalized and specific actions would be identified and required to reduce effects on the surrounding community. The CMP would be based on the nature and timing of the specific construction activities and other projects in the vicinity of the Project Site. Construction management meetings with City Staff and other surrounding construction-related project representatives (i.e., construction contractors), whose projects would potentially be under construction at around the same time as the Project, would be conducted bimonthly, or as otherwise determined appropriate by City staff. This coordination would ensure

construction activities of the concurrent related projects and associated hauling activities are managed in collaboration with the Project.

In addition, see Topical Response No. 9 - Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation. It is noted that the final Project design is subject to review and approval by the Los Angeles Department of Transportation (LADOT), to confirm all applicable transportation-related City design and safety standards are met by the Project. Under the current design, the north driveway along Whitsett Avenue would be flat for at least 25 feet within the Project Site before it intersects with the Whitsett Avenue sidewalk. To reduce conflicts and enhance safety, a triangular median island would be provided on the north driveway configured to restrict turns into and out of the driveway to right-turns only. However, no traffic calming devices, such as speed bumps or other roadway constraints, are required to be analyzed in the Draft EIR under CEQA, and recirculation of the Draft EIR would not be required under this issue.

## **Comment Letter No. IND 230**

Tim McGeary  
Received May 10, 2022

### **Comment No. IND 230-1**

I strongly oppose Harvard-Westlake School's planned destruction of Weddington Golf & Tennis. It is one of the few green spaces in the area, and is a treasured recreational facility that is available to the public. Harvard-Westlake's plan will benefit a privileged few, to the detriment of the surrounding community.

### **Response No. IND 230-1**

The comment expresses general opposition to the Project due to the loss of the Weddington Golf & Tennis facility. To clarify the existing property rights and on-site uses, the Project Site is not a public recreational facility. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion. However, upon completion of the Project, public access to the various recreational amenities onsite would be provided.

The commenter is referred to Topical Response No. 3 - Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also, see Topical Response No. 11 - Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 231**

Tracy Bodis  
Received May 10, 2022

### **Comment No. IND 231-1**

Everything the community was told about Harvard-Westlake acquiring Weddington Golf and Tennis has been false. We believed an agreement was made when they acquired it:

- 1) they would never tear it down
- 2) they just needed additional tennis space for their teams to train for competition
- 3) they promised they would always work with the public so we all continue to have access to this historic wonderful facility here in Studio City
- 4) and more promises and more promises

### **Response No. IND 231-1**

The comment suggests information provided to the public regarding the Project has been inaccurate or misleading but does not provide any evidence or facts to support these claims. To the contrary, the School has conducted numerous community meetings to refine the scope of the Project in consideration of community input and the Project Objectives included on pages II-13 and II-14, in Chapter II, *Project Description*, of the Draft EIR. The Project as described in Chapter 2, *Project Description*, of the Draft EIR, and the revisions included in Chapter 3, *Revisions, Clarifications and Corrections to the Draft EIR*, of this Final EIR, have been made available for public review in advance of the City's forthcoming hearing process to determine whether or not to approve the Project.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 231-2**

Now there are some serious rumors demolishing the entire historical property and then they have an unbelievable plan of what they want to do to develop in that space.

We all understand that life's not fair but in this case, they're taking their money and abusing their power with it.

Can you imagine if someone had enough money to buy the Eiffel tower because they love the location so much they want to tear that structure down and put up apartment buildings? Can you imagine how the French would feel about that?

OK the two structures are in slightly different levels, but I think you get my point. Money shouldn't always win.

Hear the voice of the people We're asking the city to support us for once.

And considering all the losses the people of Los Angeles have sustained since summer of 2020

Riots

Defund the police

An uptick in crime like Los Angeles has never seen before Homelessness

The list goes on and on

Let us just have something

Something to give us a little bit of joy

Because it hasn't been such a happy place living in LA lately.

### **Response No. IND 231-2**

The comment expresses general opposition to the Project due to the loss of the Weddington Golf & Tennis facility, and specifically that the Project would demolish the entire historical property. Please refer to Chapter II, *Project Description*, in the Draft EIR regarding the scope of the Project. Also, the commenter is referred to Topical Response No. 6 – Historic Resources, for a discussion of direct and indirect impacts on historical resources resulting from the Project, including project design features that would preserve historic character-defining features of the Project Site. As discussed therein, the Weddington Golf & Tennis clubhouse, including its café, the putting green to the northeast of the clubhouse, six existing golf ball-shaped light standards and poles, and the low brick retaining wall along the northeastern edge of the Property would remain under the Project.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 232**

Adam Grealish

Received May 10, 2022

### **Comment No. IND 232-1**

I am opposed to the proposed development plan of Weddington Golf and Tennis by Harvard-Westlake. I am not opposed to development of the area in general; however, I am specifically concerned that, under the current proposed plan, the limited public access to facilities are very much not in the best interest of the community.

### **Response No. IND 232-1**

The comment expresses opposition to the Project based on loss of a public recreational facility. To clarify the existing property rights and on-site uses, the Project Site is not a public recreational facility. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion. However, upon completion of the Project, public access to the various recreational amenities onsite would be provided.

The commenter is referred to Topical Response No. 3 - Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also, see Topical Response No. 11 - Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 232-2**

Additionally, I am concerned about the size of the proposed parking structure and the level of congestion the current plan will create.

### **Response No. IND 232-2**

The comment expresses concern over the size of the parking structure and traffic associated with operation. The Project's parking structure maximum capacity would only

be needed for larger, onsite events that are infrequent in nature. The Project's parking capacity is provided to ensure that parking does not spill over into the adjacent residential neighborhoods. No off-site parking for events on the Project Site would be permitted. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project's traffic patterns, effects on local streets, and consistency with CEQA threshold levels.

Note that current updates to the Project would reduce the overall parking capacity from 532 spaces to 403 spaces. Specifically, the parking capacity of the underground structure has been reduced from 503 spaces to 386 spaces and the capacity of the above grade surface parking lot has been reduced from 29 spaces to 17 spaces. See Topical Response No. 2 – Modifications to the Project Design, and Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, which provides these Project updates.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 232-3**

Again, this is very much not in the best interest of the community. Thank you for your consideration on this matter.

### **Response No. IND 232-3**

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 233**

Angela Martinez

Received May 10, 2022

### **Comment No. IND 233-1**

This letter is to state my opposition to Harvard-Westlake School's planned destruction of Weddington Golf & Tennis. The proposed conversion of the Weddington Golf & Tennis property into a private high school sports complex is concerning for a number of reasons.

Plans to demolish this property will fundamentally alter the feeling of an area that is steeped in historic Americana. A place where figures from Hollywood's Golden Age played golf. A place that has defined Studio City for generations.

For most of that time it was known as the Studio City Golf and Tennis Center, a fitting name because it seemed to belong not just to the neighborhood, but to the people who loved and enjoyed it. A place so diverse in its unique appeal that it's not unusual to find accomplished golfers and tennis players at one end, and fledgling putters and servers at the other.

I moved my family to this area 14 years ago, partly because its mature trees and greens provided a peaceful oasis to an area that has become increasingly developed and urbanized. We are not a family of great means, but my own two sons have, since grade school, been able to pay the modest fee and practice their drives and forehands. Visits often included a stop at the tiny grill where, for years, a kind Korean-American couple served up giant hamburgers and French fries. My sons are now 24 and 26 years old, and I hope they are not the last generation of young people to enjoy the pleasures of this neighborhood jewel because when people have access to areas filled with historic significance, those places become a kind of living history lesson in themselves.

### **Response No. IND 233-1**

The comment expresses general opposition to the Project due to the loss of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 233-2**

I find it sadly ironic that Harvard-Westlake, the most exclusive, elite prep school in Los Angeles, is seeking to demolish a neighborhood institution in which children and families from all backgrounds have loved and learned to play sports for generations. Please don't allow this to happen.

**Response No. IND 233-2**

The comment expresses general opposition based on the loss of recreational resources. Please refer to Topical Response No. 3, Enforcement of Public Access, and Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for discussions regarding public access and recreational uses available to the public under the Project.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 233-3**

This project hinges on the granting of a Conditional Use Permit (CUP) and since the proposed plan does not satisfy the necessary conditions, a CUP should absolutely NOT be granted.

**Response No. IND 233-3**

This comment is the same as Comment No. FORM 4-7. Refer to Response No. FORM 4-7.

**Comment No. IND 233-4**

It's shocking that Harvard-Westlake would consider spending \$100 million on a sports complex for a privileged few, when hundreds of thousands of students citywide are lacking the most basic tools needed to succeed. Therefore, we urge Harvard-Westlake to move its proposed complex to a more cost-effective alternative site, like the nearby Los Angeles Valley College, which the School has previously used for its tennis operations – even recently refurbishing the College's tennis courts. With this good neighbor gesture, Harvard-Westlake would not destroy a beloved community asset, but rather, provide for the community and service a much wider area by improving facilities at Los Angeles Valley College.

**Response No. IND 233-4**

This comment is the same as Comment No. FORM 4-8. Refer to Response No. FORM 4-8.

**Comment No. IND 233-5**

Finally, please note that more than 14,000 community members have signed a petition supporting the preservation of the 16-acre Weddington property in its entirety. These individuals are counting on you to subscribe to a higher standard, support the public's interests, stand firm against Harvard- Westlake's lobbyists and moneyed special interests, and deny approval of the CUP and certification of the DEIR.

Thank you for your time and consideration of this most important matter.

## **Response No. IND 233-5**

### **Comment No. IND 234-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

### **Response to Comment No. IND 234-1**

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the content and adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 234-1**

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to: traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 234-1**

This comment provides the same comments presented in Comment Nos. Form 3-3 to FORM 3-5. Please refer to Response Nos. FORM 3-3 to 3-5.

### **Comment No. IND 234-2**

**\*\*PLEASE DO NOT LET THEM DESTROY THIS!** This is truly A COMMUNITY SPACE — neighbors running into neighbors, kids, grandparents, everyone uses it. There is so little like Weddington left in this world, and especially in this city — please don't let these rich people who don't even live in the area take this away from us. Our kids have grown up playing tennis here and spending the summer with their friends hitting the golf ball

around the course. You let them destroy this, it erodes the entire character of the neighborhood.

### **Response No. IND 234-2**

The comment expresses general opposition to the Project due to the loss of the Weddington Golf & Tennis facility. Please refer to Topical Response No. 3, Enforcement of Public Access, and Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for discussions regarding public access and recreational uses available to the public under the Project.

### **Comment No. IND 235-1**

By way of introduction I am on the Board of Directors of my homeowners' association, Brentwood Hills Homeowners' Association ("BHHA"), the BHHA Representative for the Hillside Federation, a founding member of BACH and the BHHA alternate representative for the Brentwood Community Council. In addition, I have held leadership positions on numerous UCLA alumni and local organizations' boards. I am a licensed real estate broker, Associate Broker with Coldwell Banker Realty.

Early in my career, I worked in my hometown, Palo Alto, Congressman's Washington D.C. office as a staff member assigned to the area of Energy and the Environment. My Congressman chaired the Merchant Marine and Fisheries Committee, the Finance Committee and much more. Following working in Washington, D.C., I worked as a reporter for two major news outlets covering local, political and financial news stories. I have lived in both Pacific Palisades and Brentwood for many years. I moved to LA when I was 17 to attend UCLA. I attended graduate school at Pepperdine in Malibu. My knowledge of Los Angeles City and County coupled with my political and real estate knowledge work together to enhance my ability to comment on the Harvard Westlake River Project.

Weddington Golf and Tennis has been a fixture in the lives of many who have grown up in the San Fernando Valley and on the Westside of Los Angeles. The facility has enabled countless children through adults to learn, practice and perfect their golf skills in a beautiful environment. The environmental and health benefits of a facility [sic] such as the Weddington Golf and Tennis club in its current form are numerous. The facility proposed by Harvard Westlake is merely a gym on steroids, [sic] totally lacking in the benefits currently offered by the bucolic setting provided by the Weddington Golf Course.

### **Response No. IND 235-1**

The comment expresses general opposition to the Project due to the loss of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment No. IND 235-2

My thoughts and comments align with Joan D'Antonio's letter copied below. I endorse Joanne D'Antonio's letter copied below and incorporated herein:

RE: Case Number: ENV-2020-1512-EIR  
 Council District: 4 - Raman  
 State Clearinghouse Number: 2020090536  
 Harvard Westlake River Project Draft EIR  
 Comment period March 10 - May 10, 2022

Dear Kimberly Henry and Councilmember Raman,

Please note that the comment period for this draft EIR, even at two months, was short to get through both document analysis and go through the process of neighborhood council committee agenda/vote to full board agenda/vote for most neighborhood councils.

The individual comments I am making in this email are informed by my having spent the last 8 years studying and understanding the tree and tree canopy environmental issues in the City of Los Angeles. I serve on the Community Forest Advisory Committee (at the Board of Public Works); I am the Founder and Chair of the Neighborhood Council Sustainability Alliance Trees Committee (since 2016) which has over 100 members from throughout the city of Los Angeles. I am the Sustainability Representative for the Greater Valley Glen neighborhood council. I also served on the Working Group for First Step Developing an Urban Forest Management Plan for the City of Los Angeles "the Dudek Report": [https://www.cityplants.org/wpcontent/uploads/2018/12/10939\\_LA-City-Plants\\_FirstStep\\_Report\\_FINAL\\_rev12-7-18.pdf](https://www.cityplants.org/wpcontent/uploads/2018/12/10939_LA-City-Plants_FirstStep_Report_FINAL_rev12-7-18.pdf)

I have observed truly great concern for the preservation of our City's trees by our stakeholders. Our challenge in the City of Los Angeles is holding on to the existing tree canopy provided by large mature trees, 90% of which are on private property (Dudek Report p. 10). Our canopy is diminishing as the state is requiring the building of housing under SB9 and SB10. And there is very little municipal code to preserve private property trees, though there are council file motions that have passed awaiting report back to protect non-native significant trees. These are CF 03-1459-S3 and CF 20-0720. I have been participating in these report backs, and soon municipal code will be created for the retention of such important trees.

My specific comments are below. The text from the Harvard Westlake River Park Project Draft EIR is cited in italics, and my comments follow without italics:

*2. Reasons Why the Project is Being Proposed, Notwithstanding Significant Unavoidable Impacts p. 5/12 (1) the Project would convert a former private golf and tennis club to provide access to landscaped open space, trails, and recreational opportunities to the public and the School in an area with a shortage of neighborhood parks;*

**Comment:**

The existing golf course, though privately-owned, is not private insofar as it is and has always been open to anyone for walk-in use. It is in fact utilized by the public, and it provides very inexpensive recreation in a park-like green setting. Yes, the San Fernando Valley is quite park poor, and this large open space is of value to the quality of life. Anyone can come in and enjoy it. Substituting a much more narrow walkway with slow-growing saplings along on a paved river does not have the same feel as the current open space setting that is home to what Assemblyman Adrin Nazarian described to me as some of the oldest trees in the San Fernando Valley: valuable tall trees that date back over a hundred years to when this site was the Weddington Estate. These trees were vetted as Historic Cultural Monuments by the HCM commission . . . even though former City Councilman for this District for whatever reasons did not support the HCM designation and pushed the City Council to support his amendment to eliminate the trees and golf area from the designation received by the clubhouse and golf ball stanchions.

The City Open Space Element has not been updated since the era of Richard Nixon. The San Fernando Valley has been losing its open space, which is important for the wellbeing of the community, and this is important open space that should not be filled with huge heat-attracting elements like a football stadium with lifeless heat-attracting artificial turf, that hardly fulfills the definition of open space according to the EPA's definition: "Open space is any open piece of land that is undeveloped (has no buildings or other built structures) and is accessible to the public. Open space can include:

Green space (land that is partly or completely covered with grass, trees, shrubs, or other vegetation). Green space includes parks, community gardens, and cemeteries.

- Schoolyards
- Playgrounds
- Public seating areas
- Public plazas
- Vacant lots

Open space provides recreational areas for residents and helps to enhance the beauty and environmental quality of neighborhoods. But with this broad range of recreational sites comes an equally broad range of environmental issues. Just as in any other land uses, the way parks are managed can have good or bad environmental impacts, from pesticide runoff, siltation from overused hiking and logging trails, and destruction of habitat. Lack of community and public access to safe open and green space is a critical area of concern for urban residents" <https://www3.epa.gov/region1/eco/uep/openspace.html>

Ten San Fernando Valley neighborhood councils voted to support this golf course as a designated Historic Cultural Monument because its loss would be the disappearance of a longstanding community amenity. Disadvantaged kids learn to play golf here and then

play on teams at schools like North Hollywood High School. Knowledge of golf helps youth become upwardly mobile later in life when knowing how to play will get them included in circles they might not otherwise easily enter. If the owners do not want to run the facility, it should be purchased by the city and operated as a public park. Funds could be raised to do this -- just as the land near the Hollywood sign was purchased and turned into parkland. The community need amenities that are open throughout daylight hours, and the Harvard Westlake sports complex would be limited in its public use since the school would have priority for usage times.

The riverside walkway would not be a haven for birds as they would be frightened by the lighting and crowds at the football stadium. Birds don't like to fly over lighted areas. Yet the new oak trees would attract the birds, so the result would be a harmful situation for birds trying to get sustenance from the oaks and scared away when crowds arrive.

*2. Reasons Why the Project is Being Proposed, Notwithstanding Significant Unavoidable Impacts p. VI-5*

*(5) the Project would install a 1-million-gallon stormwater capture and reuse system that would help conserve the City's potable water supply and improve water quality received by the Los Angeles River from VI. Other CEQA Considerations Harvard-Westlake River Park Project City of Los Angeles Draft Environmental Impact Report March 2022 VI-6 the Project Site and a 39-acre, off-site drainage area consisting of single- and multi-family residential uses to the north of the Project Site*

**Comment:**

Mature trees provide hydrology as delineated by the forest service: [https://www.fs.fed.us/nrs/pubs/jrnl/2020/nrs\\_2020\\_coville\\_001.pdf](https://www.fs.fed.us/nrs/pubs/jrnl/2020/nrs_2020_coville_001.pdf) Robert Coville, Ted Endreny, and David J. Nowak In fact, as they point out in this white paper, if the new sports artificial turf facility did not install stormwater capture, the result would be flooding, or at best runoff into the river to the ocean. This is the result from the removal of this large number of trees and greenway that absorb rainwater as groundwater. So there really is no benefit to the stormwater capture, just the removal of mature trees that not only already produce hydrology, but according to this paper, also remove air pollution and produce shade.

*p. VI-6 reduce water demand and the use of pesticides by eliminating ornamental turfgrass in favor of artificial grass*

**Comment:**

“Artificial turf has a negative impact on invertebrates as it cuts off the supply of nutrients into the ground below, effectively creating a desert devoid of worms, centipedes and all the other soil dwellers.” We are making a deadzone with artificial turf. The existing golf course is habitat for wildlife and can be converted to be irrigated with non-potable water

similar to the Griffith Park golf course. This wildlife will die during construction because it will have no open natural space to re-locate to.

This EIR assumes pesticides are necessary at the golf course, but the City of Los Angeles does not allow pesticide weedkiller and still manages a successful golf course at Griffith Park.

*p. VI -6*

*The Project would promote compatibility with the surrounding neighborhood through a design that includes mature trees and extensive landscaping along the northern edge of the Project Site; reduces off-site noise effects through placement of recreational facilities internal to the Project Site; installs landscaped walls and berms, and use of canopy structures.*

**Comment:**

The surrounding residential neighborhood does not want the impact of construction – the noise and traffic that will continue once the project is operational. Walls and berms just create heat, and landscape has a harder time surviving in the Valley when it is next to hardscape.

*p. VI-7*

*The No Project/No Build Alternative would avoid the Project's significant and unavoidable construction noise impact, but would result in a dormant site and not achieve any of the Project Objectives, including public access.*

**Comment:**

This is not a dormant site as long it continues to operate as a community golf and tennis facility. The current owners have done nothing to promote and attract clientele, yet it is the preferred usage of the community. There are already public swimming pools at Valley College and Van Nuys/Sherman Oaks Recreational Center, and the usage time for the public at Harvard Westlake would be limited hours, likely not at the time people desire since the school has first rights to it. Not sure what the public would do with the football stadium except pay money to Harvard Westlake to hold high school football games. Do we need such a big complex to have a rock climbing wall for the community? Harvard Westlake already has swimming pools, a football field, and parking on its campuses. That should satisfy their need without overbuilding away from their campus.

*pp VI-7,8*

*The Project would necessarily consume limited, slowly renewable and non-renewable resources. This consumption would occur during the construction phase of the Project and would continue throughout its operational lifetime. Project development would require*

*a commitment of resources that would include: (1) building materials, (2) fuel and operational materials/resources, and (3) the transportation of goods and people to and from the Project Site. Project construction would require the consumption of resources that are nonreplenishable or may renew so slowly as to be considered non-renewable. These resources would include the following construction supplies: certain types of lumber and other forest products; aggregate materials used in concrete and asphalt such as sand, VI. Other CEQA Considerations Harvard-Westlake River Park Project City of Los Angeles Draft Environmental Impact Report March 2022 VI-8 gravel and stone; metals such as steel, copper, and lead; petrochemical construction materials such as plastics and water. Furthermore, nonrenewable fossil fuels such as gasoline and oil would also be consumed in the use of construction vehicles and equipment, as well as the transportation of goods and people to and from the Project Site.*

**Comment:**

The world is having a building sand shortage because as this article explains desert sand is not usable for building, only beach sand. <https://www.bbc.com/future/article/20191108-why-the-world-is-running-out-of-sand> Sand is needed for building cement, and we should reserve it for needed housing, not discretionary building. We cannot sacrifice beaches and allow oceans to rise so kids can have an extra football stadium and swimming pool. We as citizens of the world have to live within our means, environmentally.

*p. VI-8*

*At the same time, as a result of the School's mandatory student and employee shuttle bus program, and use of shuttle buses for large gatherings that would potentially exceed on-site parking, the Project would reduce reliance on private automobiles, vehicle miles traveled, and the consumption of non-renewable resources when considered in a larger context. Most notably, the Project would reduce the vehicle miles generated by the existing golf and tennis club and, thus, reduce the related consumption of renewable resources, among other goals.*

**Comment:**

Soon all future vehicles sold in California will be electric and the City is on its way to 100% renewable energy, private cars will have not the same sort of impact in coming years. Plus the patronage at the golf and tennis facility will be far fewer than the number of people that attend a sporting event.

*pp. VI-10, 11*

*b) Biological Resources Mitigation Measures BIO-MM-1 through BIO-MM-3 require the restoration or protection of sensitive plant and animal species and habitat, including nesting birds, the western yellow bat, and City-protected and non-protected significant trees and shrubs. These VI. Other CEQA Considerations Harvard-Westlake River Park Project City of Los Angeles Draft Environmental Impact Report March 2022 VI-11*

*mitigation measures would reduce impacts on species to a level of less than significant. Because these requirements would apply only to plant and animal habitat and trees within the Project Site, within the public street right-of-way adjacent to the Project Site, or adjacent to the Zev Greenway, the implementation of these mitigation measures would not result in secondary environmental effects at neighboring residential properties or within the broader community.*

**Comment:**

Construction will scare the existing wildlife and it will not have anywhere to go during construction. Tall trees attract raptors and these larger birds do not nest in the smaller trees. Two other nearby construction projects at the Sportsman's Lodge and the Sunkist Building have removed hundreds of very tall trees. This project adds a nail to the coffin of these species for this area. Three billion birds have been lost in North America between 1970 and 2019, much of it due to habitat loss <https://www.nationalgeographic.com/animals/article/three-billion-birds-lost-north-america> This project would make a new contribution.

In conclusion, this project is not what the community needs but what a privileged private school wants to impose. They are trying to mitigate by planting trees at the river in a plan questioned by horticultural environmental planting experts and LA Audubon board members. Does purchasing land, not even adjacent to one's existing facility, allow whatever development they choose? This is a residential community that saw the golf and tennis as more of a playground with welcome open space. They did not envision a monster facility that draws heat, traffic and noise, plus removed the existing trees and vegetation that were cleaning the air, providing wildlife habitat and mitigating heat island effect. Even after the trauma of building, what the community will be left with is far worse than what was sacrificed. A successful realtor once told me that people want to come home to peace and quiet. Would you want a big walled sports complex built next to you, or would you prefer to have trees growing in a relatively quiet golf course with a few tennis courts that you knew were there when you moved to the neighborhood? This draft EIR misses a lot of import issues. Let's do the right thing for the environment and not approve this unnecessary detrimental project.

Joanne D'Antonio

Community Forest Advisory Committee (CFAC) Representative

Neighborhood Council Sustainability Alliance (NCSA) Trees Committee Founder and Chair

NCSA Representative - Urban Forestry Management Plan Working Group

Sustainability Representative, Planning and Land Use Committee Member and former Chair - Greater Valley Glen neighborhood council

### **Response No. IND 235-2**

The comment refers to the comments provided by Joanne D'Antonio in Comment Letter No. ORG 14. The commenter is referred to Response Nos. ORG 14A-1 to ORG 14A-17.

### **Comment No. IND 235-3**

I endorse Joanne D'Antonio's letter in its entirety.

### **Response No. IND 235-3**

The comment endorses the D'Antonio letter. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 236**

Carrie Henderson  
Received May 10, 2022

### **Comment No. IND 236-1**

The community of Studio City and farther have long enjoyed the natural healthful atmosphere the Weddington sport complex has provided.

To destroy this oasis would tragically contribute pollution, noise, traffic for the immediate residents.

### **Response No. IND 236-1**

The comment expresses opposition to the Project based on the location of the Project within a natural, healthful environment and expresses concerns regarding pollution, noise, and traffic. However, the commenter does not provide any substantive facts or support for these concerns or opinions.

The Draft EIR addressed air quality impacts in Section IV.A, *Air Quality*, with supporting data provided in Appendix B, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant after mitigation, where applicable.

Please also refer to Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of construction and operational noise impacts.

Also, see Topical Response No. 9 - Transportation and Parking During Construction and Operations. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. Section IV.M, *Transportation*, of the Draft EIR determined that all CEQA-required transportation impacts would be less than significant without mitigation.

### **Comment No. IND 236-2**

At a time when health appears of highest concern the entire community must be considered not just the students of Harvard Westlake.

It is difficult to understand the need to destroy what is essential to the large community when there is a present campus available at Harvard Westlake. Duplication is not necessary.

Thank you for your attention.

## **Response No. IND 236-2**

The comment expresses general opposition to the Project and questions the need for the Project by Harvard Westlake. The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 237**

Cory Blothenburg  
Received May 10, 2022

### **Comment No. IND 237-1**

I am a long time resident of Studio City. I have never written a public comment to a city council member before. A part of me is afraid, feels it's probably pointless — but here I am, involved, for the first time.

I think that is evidence of the magnitude of how much Weddington Golf & Tennis means to the community and the positive impact it has. It would be an absolute travesty if Harvard Westlake is allowed to destroy it. And I'm speaking for the many people who feel similarly but are also too passive to say something.

### **Response No. IND 237-1**

The comment expresses general opposition to the Project due to the loss of the Weddington Golf & Tennis facility. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

 Received May 10, 2022

### Comment No. IND 238-1

I am concerned that Harvard-Westlake's planned sports complex will not benefit the community as promised. I have been told that public use of the area will be extremely limited. Is the below accurate? What does this mean, when not in use by the school? Could the school easily end up using all these resources with such frequency that the community may not have any real access to these? Especially use of the swimming pool seems exceedingly limited. As it stands Weddington golf and tennis serves our local community, and I currently do not have sufficient reassurance that this new sports complex would be a real community resource.

**Table 3-2, Public Use Days and Hours**, outlines the anticipated days and hours for access to facilities available to the public, recognizing that public use of the tennis courts and other athletic facilities would be by reservation when they are not in use by the School.

**TABLE 3-2  
 PUBLIC USE DAYS AND HOURS**

<b>Clubhouse, café, and putting green</b>	
Daily	7:00 a.m. to 9:00 p.m.
<b>Tennis Courts (when not in use by school)</b>	
Daily	7:00 a.m. to 9:00 p.m.
<b>Park Areas – Pedestrian paths, landscaped areas, water features</b>	
Daily	7:00 a.m. to 9:00 p.m.
<b>Gymnasium Community Room</b>	
Daily (for pre-approved Studio City-based organizations)	7:00 a.m. to 9:00 p.m.
<b>Gymnasium Courts (when not in use by school)</b>	
Daily (for pre-approved Studio City-based organizations)	7:00 a.m. to 9:00 p.m.
<b>Swimming Pool (when not in use by school)</b>	
Weekdays (for pre-approved swim program members)	7:00 a.m. to 9:00 a.m.
<b>Athletic Fields (when not in use by school)</b>	
Daily (for pre-approved Studio City-based organizations)	9:00 a.m. to 8:00 p.m.

SOURCE: Harvard Westlake School, 2020

Providing a greater variety and more accessible recreational opportunities than the existing golf and tennis uses, the Project would support field, pool, and gym-based sports by pre-approved community groups or swim program members when not in use by the School, as well as regular access to 5.4 acres (235,224 square feet) of passive open space and a three-quarter mile long pedestrian path with a new connection to the Zev Greenway for casual exercise by individuals or families. The multi-purpose gymnasium would include a community room that could be used for meetings and gatherings by Studio City-based organizations. The School would make available such uses via a reservation system that would support an enjoyable and safe experience.

## **Response No. IND 238-1**

The comment expresses concern over potential restrictions on public access. Refer to comment to Topical 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School’s commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also, see Topical Response No. 11 - Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 239

Eric and Caren Liberman  
Received May 10, 2022

### Comment No. IND 239-1

I am a neighbor and real estate agent writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis on behalf of myself and many of my clients in the Studio City area.

I own 2 homes on Bellaire Ave, at 4326 Bellaire Ave (owned since 1994) and also 4342 Bellaire Ave, 2 blocks from the proposed Harvard Westlake Sports Complex, and I am against the project as described in the DEIR.

### Response No. IND 239-1

The comment expresses general opposition to the Project and described the commenter's proximity to the Project Site. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### Comment No. IND 239-2

#### BULLET POINTS:

- Massively out of scale and inappropriate for the neighborhood
- Harvard Westlake paid experts do not make their case that the sound from the Sports Complex and during construction can be mitigated to an acceptable level.
- Two to three years of construction is too long and an undue burden on the neighborhood. Show stopper.
- The applicant purchased the Weddington property knowing it's not zoned for what they wish to build.
- The neighborhood does not want the "public benefit" ADA ramp to Coldwater (see the petition in DEIR)
- Too many large scale projects that potentially overlap.
- Obvious major environmental issues - Haul route, destruction of trees (which is the most important issue), creating a heat island, wildlife.

#### SIZE:

Massively over scale for this residential neighborhood. Harvard Westlake provided misleading artist renderings that use the trick of forced perspective to make the project appear smaller than it is in reality. If Harvard Westlake truly believes this

project is a win for all, they should not be hiding behind unrealistic artist representations. Why does the school “need” two olympic sized pools? It’s so large it spills over into county property on the LA River. City Planning should require the applicant to put up story poles (not balloons) for all structures proposed. Gym, Pool, spectator bleachers, 80-foot tall light poles, location of speakers, scoreboards, or any other structures not currently part of Weddington Golf and Tennis.

### **LACK OF PUBLIC BENEFIT:**

Councilman Krekorian asked to build a ramp from Coldwater to the north side of the LA River as a public benefit. There was no discussion with the adjacent residents on this item. Adding a ramp at this location may allow overflow parking from the recently opened Sportsmen's Lodge Mall to park on Alcove and Valley Spring. Parking at the new Mall is already showing signs of nearing capacity. The Mall is not fully operational, and many stores are not yet open, including one of the anchor tenants, Equinox gym.

After reviewing the DEIR, I find I have more questions than answers. This document of 6,503 pages is conspicuously lacking in detail. One of those areas is sound, where I know sound engineers that have made their living for many years and have explained to me how the sound travels.

For example, if tasked with setting up a sound system on the proposed site to the specifications cited in the DEIR, I would have lots of wiggle room. There is no specificity in the speaker system's coverage area (vertical or horizontal). There is a specification for a maximum noise level of 92 dBA (Leq) at a distance of 50 feet from the amplified sound system that doesn't state if that measurement is on-axis or off-axis. Suppose the goal is to protect the surrounding neighborhood from amplified noise from the "special event" located on the north side of Field A. In that case, the height of the stage is a critical factor in reducing the spill of sound into the surrounding neighborhood. Harvard Westlake provided vague technical specifications with no specificity of the proposed events.

Once sound arrives at its intended target from the PA system, it doesn't just stop. It continues.

Wind, temperature, and nearby reflective surfaces like the large proposed gym, structures to the south behind Ventura blvd, etc., may act as points of reflection, as does the LA River. I have first-hand knowledge that sound travels unpredictably near the LA River. I can hear the crowd reactions from games at the Coldwater Harvard Westlake Campus at my house. A few years ago, the Sportsmen's Lodge Hotel had a lucrative business hosting tour buses. These buses had onboard generators that would run all night. I could hear these generators parked on the east side of the property loud and clear inside my house, specifically when I was lying on my den's couch.

The neighborhood to the north is a mixture of old and new construction, and it's a collection of single-story 1940-era homes adjacent to modern two-story McMansions.

Some residents will experience significantly different levels of sonic irritation depending on home construction and where the errant sound from the proposed site decides to land.

My point is that the math necessary to predict how sound will travel on and around the proposed project is too complicated to quantify. With the current use as golf and tennis, in 35 years, I have never heard a sound from the Weddington property walking past it on Valley Spring except for occasional wildlife up close. The idea that Harvard Westlake wants to radically change the current site usage and replace nearly all of the soft natural sound-absorbent surfaces with plastic turf and concrete, stating the adjacent neighborhood will be protected simply by making vague claims with some technical sound jargon that few understand is postposterous.

On pages IV.K-46 and IV.K-49, when the DEIR says off-site noise for residential uses would be designated to not exceed 92 dBA", but dBA does not reflect the annoyance from the sub-bass (boom boom) content. Page IV.K-47 does not consider the varying sound levels from activities - the intermittent nature of crowd noise, and the sound system is annoying and a nuisance.

### **CONSTRUCTION AND THE BURDEN ON THE NEIGHBORHOOD - DESTROYING OUR QUALITY OF LIFE:**

There are many large-scale construction projects in the planning stages within 1,000 feet or so of the proposed Harvard Westlake Sports Complex. Sportsmen's Lodge Apartments/Mixed Use on the Sportsmen's Lodge hotel site. The Sportsmen's Mall isn't fully open for business yet. The Sunswept Place Mix use project on the south side of Ventura Blvd. The Pinz Bowling Property on Ventura Blvd, to name a few.

Harvard Westlake has shared with the neighborhood they plan on starting construction in 2022-2023. The DEIR appears to be missing the complete haul route and realistic amount of truck trips for the project. Work has just started on Ventura Blvd. Mainline Improvement Project. <https://files.constantcontact.com/f20e008b001/272c5fd5-0d3d-49ad-849e-c79af0203a08.pdf>

The Mainline Improvement project is scheduled to be completed in 13 months. This is a recipe for how to destroy a community.

Two to three years of construction is too much of a burden on the neighborhood for a project that belongs in a more appropriate location.

### **Response No. IND 239-2**

The comment includes the same comments provided in Comment Letter No. IND 193. The commenter is referred to Response Nos. IND 193-2 to IND 193-9.

## **Comment Letter No. IND 240**

Esra Hudson

Received May 10, 2022

### **Comment No. IND 240-1**

I am writing in opposition of Harvard Westlake's proposed project at Weddington Golf and Tennis, and to offer a compromise. As it stands, this huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

### **Response No. IND 240-1**

The comment expresses opposition to the Project based on degraded integrity and character of Studio City and detriment to quality of life, property values and access to recreational open space. This comment is similar to Comment No. FORM 3-3. Please refer to Response No. FORM 3-3 which discusses the issues raised in this comment.

### **Comment No. IND 240-2**

The studies included in the recently released, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate.

### **Response No. IND 240-2**

This comment is similar to Comment No. FORM 3-4 in that it raises concerns regarding traffic, noise, construction, and climate. Please refer to Response No. FORM 3-4 which addresses these concerns.

### **Comment No. IND 240-3**

Short of blocking the project altogether, it has always been my contention that a reduction in the scope of this project could satisfy the community and meet the needs of the school.

### **Response No. IND 240-3**

The comment supports an alternative that would reduce the scope of the Project. Such an alternative is discussed in Comment No. IND 240-5. Refer to Response No. IND 240-5 which discusses the alternative suggested by the commenter.

### **Comment No. IND 240-4**

Two large fields with stadium seating, sound and lighting, a competitive pool with the same, and a gym, will create an excessive and unsustainable amount of activity, noise and traffic on this patch of land. It will destroy the peace of this neighborhood and

irrevocably alter the nature of this historic property and the neighborhood. There is simply no equivalent facility in any residential neighborhood in the city.

### **Response No. IND 240-4**

The comment expresses concerns regarding traffic, noise, lighting and historic resources. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project’s parking, traffic patterns, effects on local streets, and consistency with CEQA threshold levels; Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of construction and operational noise impacts; Topical Response No. 4 – Aesthetics, regarding the impact of the Project’s field lights and other outdoor lighting, and Topical Response No. 6 – Historic Resources, for a discussion of direct and indirect impacts on historical resources resulting from the Project, including project design features that would preserve historic character-defining features of the Project Site.

Note that current updates to the Project would reduce the overall number of seats provided by the Project from 2,217 seats to 2,005 seats, which is a reduction of 212 seats. The changes to seating include: 1) pool area bleacher seats reduced from 348 to 214; 2) Field B bleacher seats reduced from 255 to 109; 3) Field A bleacher seats increased from 488 to 542; 5) gymnasium seats increased from 1,026 to 1,056; and 6) tennis bleacher seats reduced from 100 to 84. Also, the overall parking capacity has been reduced from 532 spaces to 403 spaces. Specifically, the parking capacity of the underground structure has been reduced from 503 spaces to 386 spaces and the capacity of the above grade surface parking lot has been reduced from 29 spaces to 17 spaces. See Topical Response No. 2 – Modifications to the Project Design, and Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, which provides these Project updates.

This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 240-5**

Narrowing the scope of the project could be accomplished by eliminating one of the fields and moving all outside sports activity close to the Whitsett side of the property, where ambient traffic noise is already present, and retaining a broader piece of land adjacent to the neighborhood as green space, which could also potentially preserve the driving range. This would also leave more of the property available for public use, rather than the small path that is currently contemplated. Harvard Westlake can still have a sports facility, but share more space with the community in a way that would satisfy many stakeholders, including myself.

## **Response No. IND 240-5**

The comment suggests reducing the scope of the Project through elimination of one of the fields and relocating outside sports activity to the Whitsett side of the property. The suggestions are intended to provide additional public use of the Project Site.

The Alternatives evaluated in the Draft EIR, in accordance with CEQA requirements were designed to reduce the Project's significant construction noise and vibration impacts. The Project would not result in air pollution, greenhouse gas emissions, traffic, or operational noise impacts that would require the relocation of outdoor sports activities within the Site or a reduction in the scope of development. Also, the Draft EIR evaluates a reasonable range of alternatives consistent with the requirements of the State CEQA *Guidelines* Section 15126.6(a), which states an EIR need not consider every conceivable alternative to a project. For additional discussion of the Project's adequacy of alternatives in the Draft EIR, refer to Response Nos. ORG 1B-105, ORG 1B-106, and ORG 7A-146 to ORG 7A-176. Refer also to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also, refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

## **Comment No. IND 240-6**

Unfortunately the school has rebuffed any suggestions to modify the scope of the project. I sincerely hope that as our new representative, you can facilitate a win-win here.

Thank you for your time and consideration.

## **Response No. IND 240-6**

Please refer to Response No. IND 42D-19 which addresses the scope of the Project evaluated within the Initial Study, Draft EIR and this Final EIR as part of the CEQA process. Also, please refer to Response No. IND 240-5 regarding the absence of need with respect to environmental effects to reduce the scope of the Project per the comment. However, refer to Topical Response No. 2 - Modifications to the Project Design, which discusses the revisions and reductions to the scope of the Project. Nonetheless, the comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## Comment Letter No. IND 241

Heidi MacKay  
Received May 10, 2022

### Comment No. IND 241-1

Several years ago this same applicant had proposed Harvard-Westlake Parking Improvement Plan in Coldwater Canyon. They were going to carve out a hillside adjacent to conservancy land and a wildlife corridor to build a 231,000+ sq ft parking garage/sports field with a connecting bridge. After 4 years of the community fighting back against this egregious and extremely dangerous plan that would ONLY benefit HW, they stated that they listened to the community and shelved the project.

Shortly thereafter, they announced that they announced that they purchased Weddington Golf & Tennis, a Los Angeles Historical Cultural Landmark and green open space. Councilman Krekorian assured our community that Harvard-Westlake had made a promise of "maintaining the tranquility of Weddington and preserving as much open space as possible"

I vehemently oppose the proposed Harvard-Westlake River Park Project because their proposal is anything BUT tranquil and would negatively transform Weddington Golf & Tennis into another egregious and massive Sports Event Facility. The Project does not conform to the General or Community Plan and in fact, divides the Community, in both a physical and socioeconomic sense. Open space is irreparably lost.

With two full-size sports fields, an Olympic-size pool, and an 80,249-square foot gym, and a total of 45 light poles (up to 80 feet in height), there is simply no room left for a park.

### Response No. IND 241-2

The comment expresses opposition to the Project, stating that the Project does not conform to the General Plan or Community Plan, divides the community in both a physical and socioeconomic sense and does not include adequate open space for a park. However, the commenter does not provide any substantive facts or support for these concerns or opinions.

The Draft EIR evaluated the Project's consistency with relevant plans, policies and regulations, including those within the General Plan and the Sherman Oaks-Studio City-Toluca Lake-Cahuenga Pass Community Plan, adopted for the purpose of avoiding or mitigating an environmental effect, as applicable in Section IV. J, *Land Use and Planning*, of the Draft EIR. As analyzed therein, the Project would not conflict with applicable objectives and policies of the applicable plans adopted to avoid or mitigate an environmental effect; as such, impacts with respect to land use and planning would be less than significant. Additionally, economic and social effects of a project are not treated as significant effects on the environment under CEQA unless they would lead to a

physical impact on the environment. See CEQA Guidelines Section 15131. No such impacts are relevant to the Project.

To clarify the existing property rights and on-site uses, the Project Site is not public open space. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion. However, upon completion of the Project, public access to the various recreational amenities onsite would be provided. Refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also, refer to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

### **Comment No. IND 241-3**

The excavation of 250,000 cubic yards of largely undisturbed soil would not only leave a 21-foot-deep pit, but would expose the neighborhood (and surrounding neighborhoods with any wind) to dangerous dust which increases the potential for coccidioidomycosis, otherwise known as valley fever, or cocci, a disease caused by inhaling the microscopic spores of *Coccidioides immitis*, a soil-dwelling fungus, which is prevalent in Arizona and California. After the earthquake of 1994, and multiple aftershocks, there was an upsurge in cases of Valley Fever. It exists right here in the Valley.

### **Response No. IND 241-3**

The comment expresses concern over the excavation of soil and dust exposure to the surrounding neighborhoods, including exposure to diseases such as Valley Fever from dust exposure. However, the commenter does not provide any substantive facts or support for these concerns or opinions related to Valley Fever. The Project would not leave a long-term pit and during the temporary construction activities, the Project would implement dust and particulate controls as described in Section IV.B *Air Quality*, in the Draft EIR. Such controls would comply with applicable South Coast Air Quality Management District (SCAQMD) regulations, such as Rule 403 for controlling fugitive dust. These controls are common construction practices implemented throughout the City on similar construction sites, which would minimize dust exposure to the neighborhood.

The Draft EIR addressed air quality impacts in Section IV.B, *Air Quality*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical

Documentation, of the Draft EIR. As analyzed therein, air quality impacts would be less than significant. Also, refer to Response Nos. ORG 1B-77 to 1B-79 for a discussion of health risks associated with construction activities, and Response No. ORG 1B-185 for a discussion of Valley Fever as it relates to Project grading activities. As discussed therein, toxic air contaminants (TACs) emissions from construction activities would not expose sensitive receptors to substantial TAC concentrations, nor would Project grading result in exposure to Valley Fever.

Also, updates to the Project would reduce the parking capacity of the underground structure from 503 spaces to 386 spaces. With this reduction, the amount of grading would be reduced from 250,000 cubic yards to 197,000 cubic yards, a reduction of approximately 53,000 cubic yards. This reduction in grading would reduce the duration of grading from approximately 7 months to 5.5 months, and reduce the number of grading truck trips from 35,714 trips to 28,142 trips. See Topical Response No. 2 – Modifications to the Project Design, and Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, which provides these Project updates. The excavated area would be temporary, until the Project's parking structure and underground water treatment are constructed. As such, there would be no long-term barren pit from Project implementation.

#### **Comment No. IND 241-4**

Surrounding neighborhoods will also be exposed to harmful GHGs, particulates and contaminants, along with constant noise and vibration during the 30-plus month construction period.

#### **Response No. IND 241-4**

The comment expresses concern over construction emissions including GHGs, particulates and contaminants, and noise/vibration. However, the commenter does not provide any substantive facts or support for these concerns or opinions. See Response No. IND 241-3 which discusses temporary air quality impacts from construction activities. In addition, the Draft EIR addressed GHG impacts in Section IV.G, *Greenhouse Gas Emissions*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, GHG impacts would be less than significant. With regard to construction noise impacts, see Response No. IND 6-3 and Topical Response No. 8 – Noise: Construction and Operation Impacts.

#### **Comment No. IND 241-5**

The environmental loss is dramatic. Removing 240 mature trees (some of the oldest in the Valley) would displace or destroy any wildlife currently living on the property. Excessive light hurts wildlife by interfering with migration patterns and interrupts connectivity.

## Response No. IND 241-5

The comment expresses concerns regarding tree removal and impacts to wildlife, including lighting impacts. Please refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project’s tree replacement program. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years.

Refer to Response No. ORG 14A-15 for a discussion of impacts to common wildlife during construction. Also, construction activity would comply with Project Design Feature BIO-PDF-1 that includes protective measures for nesting habitat of raptors or songbirds, which would support reproduction activity during construction. Refer to Response No. IND 209-20 for a discussion of the Project’s lighting impacts on wildlife. The commenter is also referred to Section IV.C, *Biological Resources*, of the Draft EIR, with supporting data provided in Appendix D, Biological Resources Technical Report, of the Draft EIR. As analyzed therein, biological resources impacts would be less than significant with mitigation, where applicable.

In addition, please refer to Topical Response No. 2 – Modifications to the Project Design, and Chapter 3, *Revisions, Clarifications, and Corrections*, of this Final EIR, which provides updates to the Project’s light poles and bleacher seats. As evaluated in Section IV.A, *Aesthetics*, of the Draft EIR, light and glare impacts would not exceed existing ambient light and glare levels in the off-site area or exceed RIO standards within the Project Site. The Project’s lighting program has been revised to reduce the number of field and tennis court lights. The revised Lighting Study is attached as Appendix B.1 to this Final EIR and, as further evaluated in Topical Response No. 4 – Aesthetics, the reduction in lighting would further reduce the Project’s light and glare levels. Consistent with the analysis in Section IV.A of the Draft EIR, light and glare impacts would be less than significant.

## Comment No. IND 241-6

The impacts to Hillside Residents living in the foothills, south of the project would experience light and glare from 45 light poles, of which many are directed toward the hillsides.

## Response No. IND 241-6

The comment expresses concern over light and glare impacts to nearby hillside residents. Hillside residents are separated from the Project Site by the channelized Los Angeles River and the high-glare Ventura Boulevard, and depending on the location, separated by the intervening hillsides. No lights from the project would be directed toward the hillsides, as they would be directed downward to the Project Site with shielding.

See Topical Response No. 4 – Aesthetics, regarding the impact of the Project’s field lights and other outdoor lighting, as well as impacts relating to scenic resources and visual character of surrounding land uses. As discussed in Topical Response No. 4, the Project’s light and glare impacts were fully analyzed in the Draft EIR’s Section IV.A, *Aesthetics*, which were based on the Lighting Technical Study contained in Appendix B of the Draft EIR. As discussed therein, the Project would not exceed CEQA threshold standards at any of the nearby residential uses nor would it exceed lighting standards of the Los Angeles River Improvement Overlay (RIO) District Ordinance pertinent to locations near the Los Angeles River. Moreover, the Project’s lighting system would generally represent an improvement for surrounding residential uses, with less off-site glare and spillover, than existing conditions. The analysis in Section IV.A, *Aesthetics*, of the Draft EIR, concluded that the Project’s light and glare impacts would be less than significant. Also, see Response No. IND 241-5 which discusses revisions to the Project’s lighting program that would result in a reduction in lighting, which would further reduce the Project’s light and glare levels.

### **Comment No. IND 241-7**

Amplified noise would result in exacerbated impacts to hillside residents, due to noise effects in hillside terrain, including echo, reflection and reverberation. The Public Address system and bleachers would be directed toward southern hillside residents.

### **Response No. IND 241-7**

The comment expresses concern over noise impacts to hillside residents. Please refer to Response No. ORG No. 9-8 for a discussion of noise impacts to hillside residents.

### **Comment No. IND 241-8**

To clear up any confusion from their current renderings of the actual footprint of this project it is an absolute must that they be required to hire a professional company to **install story poles**, unlike the balloons on strings blowing in the wind that they provided for the Parking Improvement Plan they shelved on Coldwater Canyon. The story poles must tell the WHOLE STORY, and describe ALL aspects of the project (light poles, scoreboards, both fields, all bleachers, perimeter walls and all structures). They should also be required to stay in place for at least 30 days.

### **Response No. IND 241-8**

The comment requests that the School hire a professional company to install “story poles” prior to construction. The proposed “story poles” could be required at the discretion of the Project’s decision makers but are not a part of the Project evaluated in the Draft EIR, nor are they required by or related to any impacts evaluated in the Draft EIR. The comment does not raise any issues with respect to the content and adequacy of the Draft EIR. As such, no further response is necessary.

### **Comment No. IND 241-9**

There should NOT be an additional switchback ramp on the north side of the river. The entire neighborhood is overwhelmingly opposed to it. There is already a ramp on the south side. Why open up access to the neighborhood on the north side to additional pedestrian traffic, parking and other disturbances.

### **Response No. IND 241-9**

The comment expresses opposition to the Project's proposed ramp to the Zev Greenway at Coldwater Canyon Avenue. This comment does not raise any issues with respect to the adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 241-10**

This project is indefensibly disruptive and must be rejected.

### **Response No. IND 241-10**

The comment expresses general opposition to the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 242**

Jason Martinez

Received May 10, 2022

### **Comment No. IND 242-1**

I am writing you to let you know how alarmed I am at the Harvard Westlake (HW) project to convert Weddington Golf and Tennis Center into another one of their sports complexes. As I am sure you know, the Weddington family had the golf and tennis center zoned as light agricultural and open green space a long time ago. In order for HW to proceed with their massive construction project they need the Los Angeles City Council to provide a Conditional Use Permit.

### **Response No. IND 242-1**

The comment expresses general opposition to the Project based on a school use in an Agricultural (A) zone. Please refer to Response No. FORM 3-5 which addresses the Project's consistency with the site's zoning designation and the Project's application for a Conditional Use Permit (CUP).

### **Comment No. IND 242-2**

I am hoping you will vote to not grant them the permit, because of the environmental impact, loss of a historical landmark and the audacity of the privileged classes to take away low-cost athletic facilities from everyday Angelenos.

Harvard Westlake state this will be better for the environment, but that seems far from the truth.

### **Response No. IND 242-2**

The comment expresses opposition to the Project based on environmental loss of an historical landmark and the loss of low-cost athletic facilities. The commenter is referred to Topical Response No. 6 – Historic Resources, for a discussion of direct and indirect impacts on historical resources resulting from the Project, including project design features that would preserve historic character-defining features of the Project Site. In addition, please refer to Topical Response No. 3 - Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR; and Topical Response No. 11 - Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 242-3**

First, they will remove over 240 mature trees. They argue they will replace them, but during their public presentation they confirmed the new trees would be 10 ft to 15 ft starter trees. It will take decades before these new trees they can provide the same animal habitat, shade, CO2 removal and climate fighting capabilities.

### **Response No. IND 242-3**

The comment states that the Project's tree replacement program will take decades before the new trees can provide the same animal habitat, shade, CO2 removal and climate fighting capabilities. However, the commenter does not provide any substantive facts or support for these concerns or opinions. Please refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project's tree replacement program. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Also, refer to Response No. 6B-2 which discusses the long-term carbon sequestration increase with the Project compared to existing conditions. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase. The commenter is also referred to Section IV.C, *Biological Resources*, of the Draft EIR, with supporting data provided in Appendix D, Biological Resources Technical Report, of the Draft EIR. As analyzed therein, biological resources impacts would be less than significant with mitigation, where applicable.

### **Comment No. IND 242-4**

Second, they plan on removing all the grass and replacing it with artificial turf. A BYU study found that “The surface temperature of the synthetic turf was 37° F higher than asphalt and 86.5° F hotter than natural turf.” (source: <https://www.nrpa.org/parksrecreation-magazine/2019/may/synthetic-sports-fields-and-the-heat-island-effect/>) With rising temperatures due to climate change, it wouldn't be smart to remove acres of natural turf in the middle of an urban area.

### **Response No. IND 242-4**

The comment also expresses concern regarding the impact of artificial turf and associated heat island effects. See Topical Response No. 7 - Artificial Turf and Effects on Localized Heat and Health, which addresses the potential health-related and urban heat island effects due to the Project's use of artificial turf fields. In addition, the Draft EIR addressed greenhouse gas emissions (GHG) impacts in Section IV.G, *Greenhouse Gas Emissions*, with supporting data provided in Appendix C, Air Quality/Greenhouse Gas Emissions Technical Documentation, of the Draft EIR. As analyzed therein, GHG impacts would be less than significant.

### **Comment No. IND 242-5**

As someone who lives in the adjacent neighborhood, I appreciate the beauty and historical nature of the Weddington Golf and Tennis Center. Since 1956 people from all across Los Angeles have had the opportunity to learn how to play golf and tennis at an extremely low cost. Just walking the facility, you can sense its historical nature and I am not just talking about the building. The land and its landscaping have defined this neighborhood for years. In April 2021 the Cultural-Heritage Commission nominated Weddington as a Historic-Cultural Monument. It is not unusual for both a building and its surrounding green space to be considered historic. In 2020 the L.A. City Council approved a historic land mark designation for Union Bank Square's Plaza (the building's green space) and that was built in 11 years after Weddington. If the 3-acre Union Bank Square in the middle of downtown can be protected, why not 17.2-acres of greenspace in a residential neighborhood?

### **Response No. IND 242-5**

The comment states that the Project Site should be preserved in its existing condition due to its historic qualities. Please refer to Chapter II, *Project Description*, in the Draft EIR regarding the scope of the Project. Also, the commenter is referred to Topical Response No. 6 – Historic Resources, for a discussion of direct and indirect impacts on historical resources resulting from the Project, including project design features that would preserve historic character-defining features of the Project Site. As discussed therein, the Weddington Golf & Tennis clubhouse, including its café, the putting green to the northeast of the clubhouse, six existing golf ball-shaped light standards and poles, and the low brick retaining wall along the northeastern edge of the Property would remain under the Project.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 242-6**

As for why Harvard Westlake needs this complex, they say their students, who participate in sports, are burdened with having to stay late at school, because HW does not have enough fields, gyms and pools for their practices and meets. Comparing HW to the public high schools that support this area, HW has roughly 1600 students, North Hollywood High School's (NHHS) roughly 2600 students and Ulysses S. Grant High School's roughly 2100 students. HW, without demolishing Weddington, already has more facilities than these 2 schools. I am sure the students and coaches at NHHS and Grant would love to have the facilities that HW currently has. As HW says on their website, they have "first-rate athletic facilities," from their Taper Gymnasium, TedSlavin NFL-caliber football field and track, Copses Family Pool, to their recently renovated "state-of-the-art" O'Malley Family baseball field. For a school that charges \$44,500 in tuition, it seems like the overly privileged believe they have the right to destroy a local, low-cost, athletic facility.

## **Response No. IND 242-6**

The comment expresses opposition to the Project based on the need for the Project and the loss of a community, low-cost, athletic facility. The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment No. IND 242-7**

They say the public will have some access, but they are really referring to the path around the outside of the facility.

## **Response No. IND 242-7**

The comment is concerned that public access would be limited to the path around the outside of the facility. The commenter is referred to Topical Response No. 3 - Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also, see Topical Response No. 11 - Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

## **Comment No. IND 242-8**

Also, from a security stand point, can you imagine any school allowing random people from the public coming on to their property throughout the day or at night when they are having school events?

## **Response No. IND 242-8**

The comment expresses concern that the School would not allow the general public access the Project Site during school events due to security issues. Regarding security at the Project Site, as provided in Project Design Feature POL-PDF-2 (see page IV.L.2-15 of the Draft EIR), the Project would incorporate a 24-hour security program to ensure the safety of its students, employees, and spectators, as well as public users of the Project Site. The Project's security features would help reduce the potential for on-site crimes and would reduce demand for LAPD services. Also, see page pages II-33 to II-35 in Chapter II, *Project Description*, of the Draft EIR, which discussed public access to the Project Site. Public access to the Project Site would be available during school events as described therein. The commenter is also referred to Topical Response No. 3 - Enforcement of Public Access, for additional details regarding public access and use of

the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 242-9**

In closing, I hope you agree with our neighborhood residents and not approve the conditional use permit, because of the impact on the environment, the loss of a cultural landmark and the loss of a low cost athletic facility that is completely open to the public.

### **Response No. IND 242-9**

The comment expresses opposition to the Project based on impacts to the environment, the loss of a cultural landmark and the loss of a public low-cost athletic facility. Each of these issues are addressed in the responses above. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 243**

Judith Wiggins

Received May 10, 2022

### **Comment No. IND 243-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 243-1**

The comments are the same as included Letter No. FORM 3. Please refer to Response Nos. FORM 3-1, FORM 3-2, FORM 3-4, and FORM 3-5.

### **Comment No. IND 243-2**

Added:

We've watched as the Studio City and Sherman Oaks area have become very different than the beautiful community many of us have moved to. Most of us have sought to leave the cities in which one is surrounded by cement, buildings, businesses, parking lots and homes and make our homes in areas in which we can live our lives closer to nature and green spaces in which one can escape the manic lifestyles and find peace and a semblance of solitude . We've watched as, in spite of this desire, our green spaces have been developed into the very types of developments we've wanted to get away from.

We've watched as hundreds of beautiful, mature trees have been destroyed, including the wildlife that has made their home's [sic] in those trees. They plant tiny trees to replace those huge, lush, shade producing trees and never, is there any comparison to what they've destroyed. After many years, those trees that were replacements, are still small and stick like, offering no shade nor homes to any wildlife.

It's important to try to find a balance in our cities, between growth and progress and beautiful green spaces that help us to enjoy nature, with beautiful mature trees and landscaping, filled with many types of birds and wildlife.

Weddington is such a place. Not only a wonderful historical landmark, but a rare gem that stands alone in a city that has gone too far in forgetting the importance of achieving a balance between progress and those unique and valuable green spaces that help to make life worthwhile.

We need to save Weddington, as we've already allowed way to many of our beautiful, green spaces, lush mature trees, and homes to wildlife and nature to be destroyed in our cities. This is the last public property left, standing next to the LA River, in which there are hundreds of birds and wildlife living. Even migrating birds are attracted to this property and there is just nowhere for the wildlife to go, if this property is destroyed.

## **Response No. IND 243-2**

The comment expresses general opposition to the Project based on the loss of a historic landmark, green space and trees, as well as impacts to wildlife living on the last remaining public property next to the LA River.

To clarify the existing property rights and on-site uses, the Project Site is not public open space. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

The commenter is referred to Topical Response No. 6 – Historic Resources, for a discussion of direct and indirect impacts on historical resources resulting from the Project, including project design features that would preserve historic character-defining features of the Project Site. As discussed therein, the Weddington Golf & Tennis clubhouse, including its café, the putting green to the northeast of the clubhouse, six existing golf ball-shaped light standards and poles, and the low brick retaining wall along the northeastern edge of the Property would remain under the Project.

Please refer to Topical Response No. 5 – Biological Resources/Trees, for a discussion of impacts to trees and the Project's tree replacement program. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase. In addition, please refer to Response No. ORG 14A-15 for a discussion

of impacts to wildlife, and to Response No. ORG 7A-39 for a discussion of impacts to migratory birds.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 244**

Justine Lieberman  
Received May 10, 2022

### **Comment No. IND 244-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis. I grew up just down the street from this location and it is a neighborhood staple. To destroy this golf course and replace it with something that kills so much nature is awful. This neighborhood is not Harvard Westlake's arena to build a ridiculously large complex. The only thing taking up this much space in a residential neighborhood should be a golf course.

### **Response No. IND 244-1**

The comment expresses general opposition to the Project based on the loss of the Weddington Golf & Tennis facility. The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 244-2**

Here are some important points:

- Massively out of scale and inappropriate for the neighborhood
- Harvard Westlake paid experts do not make their case that the sound from the Sports Complex and during construction can be mitigated to an acceptable level.
- Two to three years of construction is too long and an undue burden on the neighborhood. Show stopper.
- The applicant purchased the Weddington property knowing it's not zoned for what they wish to build.
- The neighborhood does not want the "public benefit" ADA ramp to Coldwater (see the petition in DEIR)
- Too many large scale projects that potentially overlap.
- Obvious major environmental issues - Haul route, destruction of trees (which is the most important issue), creating a heat island, wildlife.

### **Response No. IND 244-2**

The comment consists of a list of bullet points that assert specific issues with the Project. The same bullet points were previously addressed in Letter No. IND 193. Please refer to Response Nos. IND 193-2 to IND 193-9.

### **Comment No. IND 244-3**

This is a residential neighborhood and we would like it to stay that way. Please oppose their want to ruin such a beautiful space and place. It would be a terrible addition with no thought or consideration for the homeowners and people who live nearby.

Thank you for your time. It breaks my heart that this is even a thought. Seeing a rendering of what they want to build is shocking and terrible. Those of us who grew up and live in Studio City are terrified of what they're trying to do.

### **Response No. IND 244-3**

The comment expresses general opposition to the Project based on the loss of the Weddington Golf & Tennis facility. The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 245**

Katherine Kato

Received May 10, 2022

### **Comment No. IND 245-1**

First, I am writing to request that the public comment period for DEIR case number ENV-2020-1512-EIR (aka Weddington Golf & Tennis) be extended from 45 days to 90 days, with the end date being June 9, 2022.

### **Response No. IND 245-1**

The comment requests the City to extend the Project's Draft EIR public review period. Refer to Topical Response No. 1 – Public Participation and Review, which discusses public participation and CEQA public review requirements and steps undertaken by the City to facilitate public participation in association with the Draft EIR. Also, refer to Response Nos. FORM 1-1 and FORM 1-2 regarding public review of the Draft EIR.

### **Comment No. IND 245-2**

More importantly, I am requesting an in-person hearing after the comment period closes.

### **Response No. IND 245-2**

The comment requests an in-person hearing following the end of the public review period. Public hearings would be in person if not dictated, otherwise, by Covid restrictions.

The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. The comment is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 245-3**

Some points that I am writing about is the lack of details in the DEIR that must be worked out.

Environmental Factors Potentially Affected:

#### **1. Aesthetics:**

The proposed name of "Harvard-Westlake River Park" is disingenuous. It removes the open park like facility and covers it with concrete and plastic. Perhaps a less objectionable name could be Harvard-Westlake Athletics or Sports.

### **Response No. IND 245-4**

The comment states the Project title misrepresents the nature of the Project. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 245-5**

Trees: Please consider a requirement that trees will be replaced with a species that will grow to the same height to the ones being removed. A towering 100 foot tree should be replaced with another tree that grows that height, not replaced by a species that only grows to 30 ft when mature. I would like to see very tall trees [sic] along the LA River and tying together with the LA River Master Plan is essential. O & M for the landscaped trails open to the public shall be provided by Harvard-Westlake.

### **Response No. IND 245-5**

The comment requests that the Project require that trees removed be replaced with a species that would grow to the same height as the trees being removed. Please refer to Topical Response No. 5 – Biological Resources/Trees, and Response No. ORG 14A-1 for a discussion of impacts to trees and the Project's tree replacement program. Please also refer to Response No. ORG 6A-1, which discusses how the Project would result in an increased tree canopy in less than 10 years. Note that the majority of the trees to be removed, 75 percent (179 trees), are not compliant with the Los Angeles River Improvement Overlay (RIO) District Ordinance (including 122 Mexican fan palms which are considered invasive species by the U.S. National Park Service and/or the California Invasive Plant Council). While some trees could ultimately be shorter than the current on-site trees, the new trees being planted would be RIO-compliant trees. Further, the Project's landscaping program is consistent with the Los Angeles River Master Plan Landscaping Guidelines and Plant Palettes, and would consist entirely of native trees that would require significantly less water as compared to the ornamental or invasive species that currently exist on the Project Site.

Overall, the Project would plant 393 new trees, resulting in an overall net increase of 153 trees as compared to existing conditions – a 36 percent increase.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 245-6**

Fencing: 75% of the fencing on the outside perimeter should be required to have vegetation growing on them.

## Response No. IND 245-6

The comment requests that 75 percent of fencing should be required to be planted. As shown in Chapter II, *Project Description*, Figures II-15 to II-20, the walls around the perimeter of the Project Site would be designed and constructed of an organic stacked stone material and heavily landscaped. Vegetation growing on and around the fences and walls would help mask the built elements, complement the trees that would be maintained and planted on-site, and deter graffiti. Figures II-15 to II-19 have been updated in Chapter 3, *Revisions, Clarifications, and Corrections to the Draft EIR*, of this Final EIR, which include updates to light pole heights and numbers. However, the landscaping is the same as that shown in the Draft EIR figures.

## Comment No. IND 245-7

2. Land Use / Planning:

"Special allowances for schools" Do the needs of the school require this extent of the fields and facilities? Are special school zoning and building allowances carefully vetted when a private school uses it's facilities for rental? A private school should not be treated the same as a public school when it is used as a for profit rental or charitable facility.

## Response No. IND 245-7

The comment questions the need for the Project, and whether special school zoning or building allowances are vetted for renting of the School's private facilities. The commenter is referred to Topical Response No. 13 – Need for Project (Non-CEQA), for a discussion of the rationale as to why the School is proposing the Project at the Project Site location.

It is unclear what the comment is referring to with regard to zoning. However, it is noted that the Project Site is zoned A1-1XL-RIO. The "A1" zone, which allows one-family dwellings, parks, golf courses, and farming among other uses, also permits a school use with a conditional use permit.<sup>13</sup> LAMC Section 12.24.T.3(b) explicitly permits schools and school-related facilities within an agricultural (A) zone and in all residential (R) zones under a conditional use permit (CUP). Most private schools in the City operate under a CUP (public schools are not subject to the City's zoning code). Therefore, the Project's application for a CUP to operate its athletic and recreational facilities is not an unusual circumstance that indicates a conflict with the Project Site's existing zoning or the City's Zoning Code. Also, Harvard-Westlake will thoroughly vet and review organizations and community groups wanting to use the on-site recreational facilities to ensure use by families, school clubs, and other public groups for which they are intended. See Response No. ORG7A-13 for additional discussion of the use of the Project's recreational facilities by pre-approved organizations.

<sup>13</sup> Los Angeles Municipal Code (LAMC) Section 12.05.A (A1 Zone defined uses).

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 245-8**

The four times per year events proposed must be specified as four DAYS per year and have a parking lot with shuttle identified in this proposal. If the parking lot reaches capacity at any time, a overflow lot must be provided. This will mitigate the burden on the surrounding neighborhood.

### **Response No. IND 245-8**

The maximum number of School-related and public-related special events would occur as daily events as described in the Project Description of the Draft EIR. During any special event and during daily use of the Project Site, all parking for the Project would be provided on-site. No off-site parking would be permitted. Thus, an overflow lot is not required. Please see Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project’s parking program.

### **Comment No. IND 245-9**

3. Noise: Noise from all the facilities should be designed to contain it away from the residential areas.

### **Response No. IND 245-9**

This comment expresses concern regarding noise impacts. With regard to noise impacts, see Response No. IND 6-3 and Topical Response No. 8 – Noise: Construction and Operation Impacts. Operational noise impacts, including a conservative analysis of all athletic facilities being used simultaneously (and including spectators) and a simultaneous 500-person Special Event, would not exceed noise impact standards established by the City and would be less than significant.

### **Comment No. IND 245-10**

4. Recreation:

“No potentially significant impact” for “Recreation” seems misleading. Reducing or eliminating the recreation for the public and replacing with student recreation is a loss for the community. In addition, spectators should not be considered “recreation” in the same category as actual golf / tennis recreation.

### **Response No. IND 245-10**

The comment states that the evaluation of recreation impacts is misleading with the implication that the Project would reduce or eliminate community recreation uses. Under

Appendix G of the CEQA Guidelines, the analysis of recreation impacts is based on whether a project would: increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated; and/or, whether a project includes recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment. Based on these thresholds, the Draft EIR correctly determined that the Project would not cause the substantial or accelerated physical deterioration of public park and recreational facilities or require the construction or expansion of recreational facilities that might have an adverse physical effect on the environment. A change in the recreational use of the Project Site is not alone a significant impact on the environment under CEQA. Thus, the Draft EIR correctly identified recreation impacts as less than significant. In no way do “spectators” affect the recreational impact conclusions in the Draft EIR.

### **Comment No. IND 245-11**

I'd like to see guaranteed public access. I can see the school may say it is in use by Harvard-Westlake for maintenance or rental to other schools or organizations and the public times will gradually will be eliminated. As a suggestion, it would be great to have all of the facilities open to the public on Sundays.

### **Response No. IND 245-11**

The comment requests a commitment that public access be provided. Please refer to Topical Response No. 3 – Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Finally, as noted on page II-47 in Chapter II, *Project Description*, of the Draft EIR, no School athletic activities would take place on Sundays, thereby leaving those facilities available for non-School uses as suggested by the commenter.

## Comment Letter No. IND 246

Kurt Gulsvig  
Received May 10, 2022

### Comment No. IND 246-1

I am writing you this email in hope that you consider an alternate location for this project.

Weddington is an historic golf facility that provides an inclusive green space for the public.

It would be a mistake to pursue the project in this location. Please find a solution other than the one proposed.

Many thanks for your time and consideration. On a personal note, I was golfing at Weddington when I found out a dear friend of mine had passed away from cancer. We were both golfers, and I can't help but think he guided me to the course that day. This course, and its facilities, are very dear to me and so many others you've heard from already. Harvard Westlake has the means to find alternate accommodations. Do the right thing here!

### Response No. IND 246-1

The comment requests an alternate location for the Project. The comment, however, does not suggest or recommend an alternative site(s). Alternative site locations were evaluated in Chapter V, *Alternatives*, of the Draft EIR. The reasons that alternatives sites were considered and rejected is provided in Section V, page V-6, of the Draft EIR. In addition to a site with the size to accommodate the Project Objectives, the other criteria for the Project include proximity to the existing Harvard-Westlake's Upper School campus on Coldwater Canyon Avenue and a site with level topography to allow for the development of the contemplated recreational facilities. Proximity is a criteria factor because of the need for daily commuting from the Upper School campus, as it relates to higher daily vehicle miles. As concluded in Section V, no other location with adequate acreage and topography exists within proximity to the Upper School campus.

Also, to clarify the existing property rights and on-site uses, the Project Site is not public open space. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

## **Comment Letter No. IND 247**

Michaela O'Toole

Received May 10, 2022

### **Comment No. IND 247-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis. I have lived in my house which overlooks the golf course on Sunswept Dr. since 1984. Over the years I have seen many changes but this would be a disastrous change with increased noise and negative environmental results.

### **Response No. IND 247-1**

The comment expresses general opposition to the Project and expresses concern over increased noise and environmental impacts. Please refer to Topical Response No. 8 – Noise: Construction and Operation Impacts, for a discussion of construction and operational noise impacts.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 247-2**

I brought my children up in this house and we all used the golf course and have enjoyed the trees and expanse of green still left in Studio City. This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space. The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans. This property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

### **Response No. IND 247-2**

Carl

Received May 11, 2022

### **Comment No. IND 248-1**

I am a resident of Los Angeles County since 1976. In that year the tennis in Los Angeles was abundantly supported in most communities. On the weekends especially, I would play in Studio City, Century City, Fairfax, Griffith Park, Rancho Cienega and other locations all in one weekend. I met many friends and a beautiful tennis culture existed. It was like a family. We all enjoyed the company and the environment. It was a great way to get out after the end of a heavy work week.

Over the years I continued to play tennis. I became a USPTA Certified Professional Coach and a USTA Certified Umpire. I was former tennis coach at Penmar Recreation Center for the City of Los Angeles. But I've also seen the tennis community that I loved vanish.

The public park tennis clubs had a severe decline in membership, as the public courts became pay courts. In addition, kids could no longer go out on a tennis court and learn the game from their older siblings, a parent or a nice guy like myself, due to the concession permits that established business monopolies (on giving tennis instruction) on public taxpayer courts, to the benefit of a few. You can still take a kid out and teach them baseball or basketball after school or on a weekend in a public space, but not tennis.

Weddington Golf & Tennis is the only tennis facility that I know of where I can teach tennis as an independent coach. That is, not as an employee of a monopoly concession permit holder (LA Tennis, iTennis, etc.) I have been teaching music composition for orchestra to kids 5 and older for ten years at the City of Los Angeles Public Libraries (Silver Lake and Baldwin Hills). All of the classes are year-round and free. It's impossible to reach kids like this anywhere except Weddington Golf & Tennis. They permit all coaches to coach without exception. I am in full support of all of the following:

### **Response No. IND 248-2**

The comment provides the personal experiences regarding existing court availability from a tennis teaching pro that uses the site's existing tennis facilities. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

The commenter is referred to Topical Response No. 11 – Recreation: Golf and Tennis Facilities, for a discussion of impacts related to the Project's provision of tennis facilities for public use. As discussed therein, the existing tennis courts are not fully booked each day and the Project would accommodate the same number of weekly sessions that actually take place under existing conditions, including existing and future student use.

Tennis would be available to the public under a reservation system that allows concurrent use with students (who use the courts in the late afternoons) when courts are available.

### **Comment No. IND 248-3**

I strongly oppose Harvard-Westlake School's planned destruction of Weddington Golf & Tennis. The proposed conversion of the Weddington Golf & Tennis property into a private high school sports complex is concerning for a number of reasons.

1. With LA's green open space disappearing, Harvard-Westlake plans to service a privileged, select few by replacing 16 irreplaceable acres with artificial turf and concrete buildings, as well as by exerting their influence to secure variances to Weddington Golf & Tennis' A1 Agricultural Open Space zone allowances from the City.

2. By destroying the property's significant existing urban tree canopy along the LA River and replacing it with 12-foot walls, artificial turf, saplings, and towering light poles, the end result allows practices, games, and special events that will generate increased noise and traffic, which does not conform to the surrounding community.

3. Weddington Golf & Tennis is often referred to as "the gem of Studio City" and considered a local landmark for nearly 70 years. The LA Cultural Heritage Commission (CHC) supported Historic-Cultural Monument (HCM) designation for the ENTIRE 16-acre Weddington Golf & Tennis subject property. For that reason, we strongly support the mysterious, last-minute revisions be reversed and the designation restored to the CHC's original recommendation: preserving the subject property, which encompasses the golf course, driving range, and a majority of the site's green open space and tree canopy.

4. Millions of Angelenos from all over the City and San Fernando Valley have experienced Weddington Golf & Tennis since its opening in 1956. It is incumbent upon the City to protect precious affordable public spaces from developers and special interests, like Harvard-Westlake, who only serve a privileged few.

5. Traffic and congestion continue to grow at an alarming rate in LA. If allowed to proceed, Harvard-Westlake will spend the next four to five years building a massive \$100 million dollar sports complex for its students, while the rest of the community grapples with the plan's significant impact on our roads, traffic, and commutes to work and school.

This project hinges on the granting of a Conditional Use Permit (CUP) and since the proposed plan does not satisfy the necessary conditions, a CUP should absolutely NOT be granted.

It's shocking that Harvard-Westlake would consider spending \$100 million on a sports complex for a privileged few, when hundreds of thousands of students citywide are lacking the most basic tools needed to succeed. Therefore, we urge Harvard-Westlake to move its proposed complex to a more cost effective alternative site, like the nearby Los Angeles Valley College, which the School has previously used for its tennis operations –

even recently refurbishing the College's tennis courts. With this good neighbor gesture, Harvard-Westlake would not destroy a beloved community asset, but rather, provide for the community and service a much wider area by improving facilities at Los Angeles Valley College.

Finally, please note that more than 14,000 community members have signed a petition supporting the preservation of the 16-acre Weddington property in its entirety. These individuals are counting on you to subscribe to a higher standard, support the public's interests, stand firm against Harvard-Westlake's lobbyists and moneyed special interests, and deny approval of the CUP and certification of the DEIR.

Thank you for your time and consideration of this most important matter

## **Comment Letter No. IND 249**

Carolyn Seeman  
Received May 11, 2022

### **Comment No. IND 249-1**

Please do not approve this project. It will destroy the character of the neighborhood and create a traffic nightmare.

### **Response No. IND 249-1**

The comment expresses general opposition to the Project and expresses concern over changes to community character and traffic. The commenter is referred to Topical Response No. 4 – Aesthetics, for a discussion of the visual impacts of the Project. The commenter is also referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project’s traffic patterns, effects on local streets, and consistency with CEQA threshold levels.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

### **Comment No. IND 250-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis.

This huge project will degrade the integrity and character of Studio City and will be detrimental to the quality of life, property values, and access to recreational open space.

### **Response No. IND 250-1**

This comment provides the same comments presented in Form Letter 3. Please refer to Response Nos. FORM 3-1 and FORM 3-3.

### **Comment No. IND 250-2**

Furthermore, the additional traffic adjacent to Coldwater Cyn and Ventura Blvd. created by this massive project, will increase dramatically—and it's already listed as one of the three worst intersections in the valley.

### **Response No. IND 250-2**

This commenter expresses concerns regarding traffic impacts adjacent to Coldwater Canyon Avenue and Ventura Boulevard. The commenter is referred to Topical Response No. 9 – Transportation and Parking During Construction and Operations, for a discussion of the Project's traffic patterns, effects on local streets, and consistency with CEQA threshold levels. As discussed in Topical Response No. 9, the Project's construction and operation transportation/traffic impacts were fully evaluated in Section IV.M, *Transportation*, of the Draft EIR. As determined therein, all CEQA-required transportation impacts would be less than significant without mitigation. Also see the LOS analysis of the Ventura/Coldwater intersection in the Transportation Assessment (TA) in Appendix M of the Draft EIR. As evaluated therein, the Project would not adversely impact existing or future service levels.

### **Comment No. IND 250-3**

The studies included in the recently released DEIR paid for by Harvard Westlake, do not adequately address the most serious impacts including, but not limited to; traffic, noise, construction, and climate. The mandatory "alternative plans" suggested are disingenuous and lacking in a realistic effort to offer alternate sites or plans.

**Response No. IND 250-3**

This comment provides the same comment as presented in Form Letter 3. Please refer to Response No. FORM 3-4.

**Comment No. IND 250-4**

In addition to all of the above, I was part of a Fryman Canyon neighborhood group, which worked for several years to save 200+ acres of native land, which was under the threat of destruction by a developer who planned to build around 200+ new homes on this land. Yet, our group attended hearings, we each stood-up and spoke to the committee, and Nancy Pohl--for whom the the [sic] lookout on Mulholland (between Laurel Cyn and Coldwater) was named, eventually partnered with The Santa Monica Mountain Conservancy, which eventually saved our native trees, plants, and wildlife from total destruction.

**Response No. IND 250-4**

The comment provides reference to the commenter's affiliation with the Fryman Canyon neighborhood group. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

**Comment No. IND 250-5**

Lastly, this property is zoned agricultural/open space and requires "special entitlements" and a "conditional use permit". Both would need your approval to be granted. You are the only councilmember who has a master's degree in urban planning. It is arguable that you know more about this subject than any other councilmember. Please use your unique skills to speak for over 100,000 Angelenos who enjoy this beloved facility annual and deny permission to build this project.

**Response No. IND 250-5**

## **Comment Letter No. IND 251**

Marty Fortney

Received May 11, 2022

### **Comment No. IND 251-1**

I am writing in opposition to Harvard Westlake's destruction of Weddington Golf and Tennis. This is simply a case of a rich and powerful institution aggressively trying to change the character of an inclusive public space.

Weddington Golf and Tennis is an affordable recreational space for the community. For a private school to transform this space would be a gross misuse of power.

### **Response No. IND 251-1**

The comment expresses general opposition to the Project based on the loss of the existing Weddington Golf & Tennis facility.

To clarify the existing property rights and on-site uses, the Project Site is not public open space. The land that currently comprises Weddington Golf & Tennis, which was first purchased by the Weddington/Becker families and then sold to Harvard-Westlake in late 2017, has been privately owned since the late 1800s. No public access to the Project Site is allowed, except for fee-based tennis or golf uses, as well as access to the café. Thus, the ability to use the golf and tennis facilities on the Project Site has been controlled by the private property owners and is not generally considered a public facility open to the public as implied by the comment. Further, unlike a public property, the Project Site may be closed at the property owner's sole discretion. However, upon completion of the Project, public access to the various recreational amenities onsite would be provided.

The commenter is referred to Topical Response No. 3 - Enforcement of Public Access, for additional details regarding public access and use of the Project Site, and a discussion of the School's commitment to public access and shared use of recreational facilities as set forth in the Draft EIR. Also, see Topical Response No. 11 - Recreation: Golf and Tennis Facilities, for a discussion of recreational opportunities available to the public with Project implementation.

This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.

Can you please notify me when the public hearings will be for this Case Number on the Harvard-Westlake River Park Project as I'm interested in attending the hearings.

### **Response No. IND 253-1**

The City of Los Angeles Department of City Planning Case Planner: "Thank you for your email regarding the proposed Harvard-Westlake River Park Project. Yes, I have included you on City Planning's Interested Parties list to receive future correspondence regarding the proposed Harvard-Westlake River Park Project, which will include notifications for public hearings regarding the Project."

The response above was provided by the Los Angeles Department of City Planning via email communication with Mr. Stevens. The numbered comment from Mr. Stevens is derived from email communication between Mr. Stevens and the Department of City Planning. This email communication is considered a comment for the purposes of this Final EIR and has been made part of the administrative record. The comment does not raise any issues with respect to the content or adequacy of the Draft EIR. As such, no further response is necessary.

## **Comment Letter No. IND 254**

Harold Brody  
Received May 16, 2022

### **Comment No. IND 254-1**

I write to advise you of my enthusiastic support for Harvard-Westlake's River Park proposal. As background, I live in Sherman Oaks and am an avid recreational tennis player who, at present, plays once a week at Weddington. In addition our daughter graduated from Harvard-Westlake several years ago and I think very highly of the school.

I believe the proposal balances HW's justifiable need to build a gymnasium with the community's many objections. The proposal will still permit public use of the tennis courts (hardly a pressing need in light of the large number of courts in the vicinity) and addresses the community's concerns re noise and traffic. In addition, the proposal will add to available public parkland and permit greater public access to the property than is currently permitted.

Thank you for your consideration.

### **Response No. IND 254-1**

The comment expresses support for the Project based on the provision of publicly accessible recreational facilities. This comment does not raise any issues with respect to the content or adequacy of the Draft EIR. Therefore, it is noted for the record and will be forwarded to the decision-makers for their review and consideration.
