### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal CERCLIS list***

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/30/2020 has revealed that there is 1 SEMS site within approximately 0.625 miles of the target property.

#### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 2 RCRA-LQG sites within approximately 0.375 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 2 RCRA-SQG sites within approximately 0.375 miles of the target property.

### ***State- and tribal - equivalent CERCLIS***

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/26/2020 has revealed that there are 2 ENVIROSTOR sites within approximately 1.125 miles of the target property.

HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the HAZNET list, as provided by EDR, and dated 12/31/2019 has revealed that there are 10 HAZNET sites within approximately 0.125 miles of the target property.

CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CERS list, as provided by EDR, and dated 10/19/2020 has revealed that there are 12 CERS sites within approximately 0.125 miles of the target property.

LOS ANGELES CO LF METHANE: This data was created on April 30, 2012 to represent known disposal sites in Los Angeles County that may produce and emanate methane gas. The shapefile contains disposal sites within Los Angeles County that once accepted degradable refuse material. Information used to create this data was extracted from a landfill survey performed by County Engineers (Major Waste System Map, 1973) as well as historical records from CalRecycle, Regional Water Quality Control Board, and Los Angeles County Department of Public Health

A review of the LOS ANGELES CO LF METHANE list, as provided by EDR, and dated 04/30/2012 has revealed that there are 4 LOS ANGELES CO LF METHANE sites within approximately 0.625 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### **EDR Exclusive Records**

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there are 3 EDR Hist Auto sites within approximately 0.25 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System:**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Comments: Inspection conducted at the Sylmar Converter Station to verify if air sampling indoor summa canisters were placed at the locations accordingly to the DTSC approved Indoor Assessment Work Plan for VOCs and it sampling was following DTSC October 2011 Final Guidance for the Evaluation & Mitigation of Subsurface Vapor Intrusion to Indoor Air , and July 2015 Advisory Active Soil Gas Investigation. DTSC has noted that two outdoor sampling locations are near to Sepulveda Blvd and Freeway Interstate 5, therefore, ambient samples were located at potential source of VOCs. Also, wind direction is fluctuating over time, however, at the time that outdoor sampling locations were selected, wind direction was selected to determine the upwind and downwind directions. Kleinfelder indicated that 10 summa canisters had problems with the flow controller, therefore, they were replaced.

RB Case Number: 0245  
File Location: Regional Board  
Potential Media Affected: Aquifer used for drinking water supply, Contaminated Surface / Structure, Soil, Surface water  
Potential Contaminants of Concern: Benzene, Crude Oil, Diesel, Ethylbenzene, Gasoline, Heating Oil / Fuel Oil, Naphthalene, Other Petroleum, Stoddard solvent / Mineral Spruits / Distillates, Toluene, Total Petroleum Hydrocarbons (TPH), Waste Oil / Motor / Hydraulic / Lubricating, Xylene  
Site History: Petroleum production from oil wells on the site occurred from the early 1900s through 1991. The site refinery began operating in 1930, and was decommissioned in late 1989. Refinery operations utilized 44 of the 116 acres. Refinery products included leaded and unleaded gasoline, kerosene, naphtha, jet fuel, diesel fuel, gas oil, low sulfur oil, road oil, and related asphalt products. The refinery had a maximum capacity of 23,000 barrels (996,000 gallons) per day. Crude oil and refined product were stored at the site. Storage facilities included a 3,000,000 gallon crude oil storage tank and 25 additional tanks of various sizes. The bulk storage, refining, and distribution of crude oil and refined products at the former Newhall Refinery facility (Site) from the early 1900s through the early 1990s has resulted in the discharge of wastes, including gasoline-range and diesel-range petroleum hydrocarbons, benzene, toluene, ethylbenzene, and xylenes, and other waste constituents of concern to the environment.

**Environmental Interest/Information System:**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## **STANDARD ENVIRONMENTAL RECORDS**

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

## ***Federal Delisted NPL site list***

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

### DEED: Deed Restriction Listing

## GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

## ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

## WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

## **EDR HIGH RISK HISTORICAL RECORDS**

### ***EDR Exclusive Records***

#### **EDR MGP: EDR Proprietary Manufactured Gas Plants**

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### **EDR Hist Auto: EDR Exclusive Historical Auto Stations**

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

## OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

### Soil Map ID: 1

Soil Component Name: Xerorthents

Soil Surface Texture: variable

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## LOCAL / REGIONAL WATER AGENCY RECORDS

### FEDERAL WATER WELLS

#### PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

#### PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

#### USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

## OTHER STATE DATABASE INFORMATION

### Groundwater Ambient Monitoring & Assessment Program

State Water Resources Control Board

Telephone: 916-341-5577

The GAMA Program is California's comprehensive groundwater quality monitoring program. GAMA collects data by testing the untreated, raw water in different types of wells for naturally-occurring and man-made chemicals. The GAMA data includes Domestic, Monitoring and Municipal well types from the following sources, Department of Water Resources, Department of Health Services, EDF, Agricultural Lands, Lawrence Livermore National Laboratory, Department of Pesticide Regulation, United States Geological Survey, Groundwater Ambient Monitoring and Assessment Program and Local Groundwater Projects.

### Water Well Database

Telephone: 916-651-9648

### California Drinking Water Quality Database

Source: Department of Public Health

Telephone: 916-324-2319

The database includes all drinking water compliance and special studies monitoring for the state of California since 1984. It consists of over 3,200,000 individual analyses along with well and water system information.

### California Oil and Gas Well Locations

Telephone: 916-323-1779

Oil and Gas well locations in the state.

### California Earthquake Fault Lines

Source: California Division of Mines and Geology

The fault lines displayed on EDR's Topographic map are digitized quaternary fault lines prepared in 1975 by the United State Geological Survey. Additional information (also from 1975) regarding activity at specific fault lines comes from California's Preliminary Fault Activity Map prepared by the California Division of Mines and Geology.

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal CERCLIS list***

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 12/30/2020 has revealed that there are 3 SEMS sites within approximately 0.625 miles of the target property.

## EXECUTIVE SUMMARY

### ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 12/30/2020 has revealed that there are 2 SEMS-ARCHIVE sites within approximately 0.625 miles of the target property.

### ***Federal RCRA CORRACTS facilities list***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 12/14/2020 has revealed that there are 2 CORRACTS sites within approximately 1.125 miles of the target property.

RCRA-TSDF: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 12/14/2020 has revealed that there is 1

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/14/2020 has revealed that there are 5 RCRA-SQG sites within approximately 0.375 miles of the target property.

### **State- and tribal - equivalent CERCLIS**

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 10/26/2020 has revealed that there are 15 CA ENVIROSTOR sites within approximately 1.125 miles of the target property.

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 12/14/2020 has revealed that there are 27 RCRA NonGen / NLR sites within approximately 0.375 miles of the target property.

CA HAZNET: The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000-1,000,000 annually, representing approximately 350,000-500,000 shipments. Data from non-California manifests & continuation sheets are not included at the present time. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, & disposal method. The source is the Department of Toxic Substance Control is the agency. This database begins with calendar year 1993.

A review of the CA HAZNET list, as provided by EDR, and dated 12/31/2019 has revealed that there are 16 CA HAZNET sites within approximately 0.125 miles of the target property.

CA CERS: The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

A review of the CA CERS list, as provided by EDR, and dated 10/19/2020 has revealed that there are 7 CA CERS sites within approximately 0.125 miles of the target property.

### EDR HIGH RISK HISTORICAL RECORDS

#### ***EDR Exclusive Records***

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.25 miles of the target property.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

not pose a threat to public health and/or the environment. Therefore, the Department concurs with the PEA recommendation that "No Further Action" is warranted at the site.

Completed Area Name: PROJECT WIDE  
 Completed Sub Area Name: Not reported  
 Completed Document Type: Site Screening  
 Completed Date: 05/11/1994  
 Comments: On May 9, 1994, the Department received a Nonemergency Hazardous Substance Release Report. The report indicates that a release of hydraulic fluid into the soil occurred at the school district's transportation service building. It was occurred at the underground hydraulic hoist in the service garage. Approximately 30 cubic yards of impacted soil was excavated and disposed off-site. Detectable levels of TPH and Toluene are still present in the site's soil. The Department recommends a PEA due to the evidence of onsite contamination.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Citation: HSC 6.5 25123.3(h)(1) - California Health and Safety Code, Chapter 6.5, Section(s) 25123.3(h)(1)

Violation Description: Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms. (2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f). (3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

Violation Notes: Returned to compliance on 12/04/2018. OBSERVATION: Owner/Operator is a small quantity generator and failed to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles), or has failed to comply with the conditions of CCR 66262.34(d) and has stored hazardous waste over 90 days. CORRECTIVE ACTION: Dispose of hazardous waste that has been stored over the applicable time limit and provide documentation that the violation has been corrected. There are two blue 55 gallon drums in trash enclosure which appear to be in use (they feel full or almost full and have a gasoline odor) and are not labelled with hazardous waste stickers or any other identification. Have the contents of the two steel drums disposed of also and provide documentation. Call or text 213 507-1339 or email documentation.

Comments: The following comments were sent via email on 3/10/2017: The Department of Toxic Substances Control has reviewed the 2016 Fourth Quarter SVE Progress Report (Report) dated January 18, 2017 and has the following comments: Revisions to the Report are not required and the Report is approved as presented. The Report includes recommendations for the first quarter 2017 SVE operations to re-activate VE-1 through VE-6, and GW-8, and initially shut down GW-1, GW-9, and GW-10 and may reactivate if concentrations decrease significantly. DTSC recommends continuing extractions from GW-1, GW-9, and GW-10 to have high mass removal rate as concentrations of VOCs in these wells are much higher than the ones to be activated.

Comments: The following comments provided by GSU were also part of the Supplemental Groundwater Investigation comment that were provided to CS Snider and the Source Group Groundwater Contours and Groundwater Flow Calculating groundwater contours from the groundwater elevations appears to indicate two different groundwater flow patterns. The groundwater contour map presented in the report has groundwater contours that have been smoothed. When calculating the groundwater contours well by well the patterns are more apparent. Wells on the western side of the site, wells GW-7, GW-12, and GW-13, show a groundwater flow direction towards the west at a relatively flat gradient. Wells the east of these show a groundwater flow directions towards the northeast and south east at a steeper gradient. These two flow patterns may be indicative of the wells being screened in two different formations and groundwater flow systems. The western wells are probably screened in alluvium while the eastern wells are

screened in the Saugus formation bedrock. This would account for the difference in the groundwater gradients. The Saugus formation is less permeable than the alluvium, and in general less permeable material maintains steeper groundwater gradients. This pattern has been present in previous groundwater monitoring reports. Nature and Extent of Contamination The nature and distribution of groundwater contamination is similar to that shown in previous groundwater monitoring reports. The 1,2-DCA and vinyl chloride plumes are restricted to the eastern portion of the site in the little valley that contains the former process area. The TCE plume extends westward, offsite, towards production well Saugus 1. It appears that the TCE has migrated to the alluvial aquifer, while the 1-2-DCA and vinyl chloride are contained within the Saugus Aquifer. In addition, based on the detections of TCE within deeper portions of the alluvial aquifer at well GW-13B, it appears that the TCE is migrating downward into deeper portions of the aquifer. The difference in groundwater elevations between wells GW-13A, which is a water table well, and GW-13 B, which is screened deeper in the aquifer, indicate that a downward vertical gradient exists at the location of these wells. This downward vertical gradient is most likely facilitating the downward migration of the TCE. Future Groundwater Delineation Future work for the site needs to include additional wells installed within the lower portions of the alluvial aquifer. The wells are necessary to evaluate the distribution of contamination in the lower portion of the alluvial aquifer because it appears that TCE has migrated offsite and may have migrated as far as sentinel well AS-12B with is adjacent to groundwater production well Saugus 1. In addition, a minimum of three wells installed in the lower portion of the alluvial aquifer are required to determine the ground water flow direction in this section of the aquifer. I have spoken briefly with Craig Snider regarding the necessity of these wells and we have discussed potential well locations. Craig informed me that he is working on work plan for well installation and that we should be receiving it shortly. Groundwater levels have been dropping and the water table elevation is below 1095 feet above mean sea level. Due to the low water table elevation several wells have gone dry. Wells GW-1, GW-2, GW-3, GW-4 and GW-5 do not contain enough water to get an accurate groundwater elevation measurement, or to collect groundwater samples. If groundwater elevations do not rise enough after the rainy season to allow groundwater sample collection in some of these wells, then it will probably be necessary to replace them with deeper wells

Comments: GSU staff provided the following comments on the Report via email: Data in the report show that on-site conditions and trends in groundwater flow directions are fairly constant. Water levels are dropping and several wells have gone dry. I hope we have a rainy winter and the groundwater rises enough so we can get a complete sample set. I reviewed the report in conjunction with data from Whittaker Bermite groundwater monitoring reports. I have been looking for similarities in data that can indicate how closely groundwater conditions between Saugus industrial, offsite well GW-3 and sentinel well AL-12B are linked. As I mentioned in a previous email regarding Whittaker Bermite I have one relationship that seems to apply to TCE concentrations in well AL-12B. When the vertical gradient increases in the area TCE concentrations seem to decrease in well AL-12B. We have a decent well network in that there are dual screened wells, one in the shallow aquifer, and one deeper in the aquifer, at the AL-12 and GW-13 locations. This allows us to compare groundwater levels at the top and bottom of the aquifers and determine if water flowing from the top to lower portions of the aquifer, or vice versa. When the water is flowing downward into the aquifer, a negative vertical gradient, the TCE concentrations in well AL-12B tend to decrease. I think this indicates that TCE is moving into the AL-12 area in groundwater from the deeper portions of the aquifer. This is because water moving from the upper aquifer into the lower portions of the aquifer is not contaminated and dilutes the TCE at AL-12B.

Comments: Document accepted GSU reviewed and provided the following comments to PM; "I have reviewed The Saugus Industrial Center Groundwater Monitoring and Sampling Report, Second Quarter 2014 (April June 2014), dated July 1, 2014. The groundwater elevation and contaminant concentration data presented in the report indicate that site conditions are fairly stable. Water levels have been falling over the course of the last few years and about half of the sites wells are still dry. The groundwater samples were collected April 22 which is prior to the vapor extraction pilot test starting. The next monitoring report, the third quarter of 2014, should include groundwater samples collected during the operation period of the vapor extraction pilot test, so it will be interesting to see if the vapor extraction effort has any effects on groundwater concentrations. I expect vapor concentrations to drop rapidly, but I don't think we will see any effects on groundwater concentrations until the fourth quarter sampling effort. I don't have any comments on the Groundwater Monitoring Report, I think we can accept it as final".

We did want to give you some feedback so it can be incorporated in the final pilot test report: The Report presents detailed data regarding the amount of fluid recovered during operation of the soil vapor extraction (SVE) system, type of fluid, whether it was water or product, and chemical composition of

recovered fluids. Based on the amount of product recovered it appears that the SVE system is quite effective in removing contamination from the subsurface. The Report does not include the following data regarding extraction wells: which vapor extraction wells were used during the pilot test vacuum readings at the active wells vacuum reading at surrounding wells and soil vapor probes vapor concentration readings from active and surrounding wells. Interpretations of subsurface vacuum distribution The Report is a Status Summary and not a pilot test report, so including these data may be outside the scope of the subject report. We assume a pilot test report will be compiled and the data will be included in that report. The Report states that a soil gas rebound survey will be conducted after the system has been shut down for about 3 months. This survey should include soil gas probes in the area of previous soil gas probes SVS-68, SVS-69 and SVS-73. During the June, 2014 soil gas investigation this area, particularly SVS-73, contained elevated concentrations of TCE, and the vertical extent of TCE in soil gas was not delineated. Drilling was difficult in this area and refusal was encountered in several borings. Consequently, when doing the rebound survey heavier duty equipment should be used so soil gas probes can be set at depths of 15 feet and greater.

Comments: All of the shallow wells except GW-11, at the far east end of the site, have gone dry, so there is not much to report. Diffusion bag samplers were left in the wells in December and retrieved and sampled, but since the wells were dry the results cannot be considered representative. The deeper wells, GW-4B, GW-13B, and GW-14, did have water and results from these wells were similar to previous sampling events.

Completed Document Type: Monitoring Report  
Completed Date: 10/10/2017  
Comments: GSU reviewed the Saugus Industrial Center Monitoring and Reporting Program Report (MRP Report) for the Second Quarter of 2017. The purpose of the MRP Report is to fulfill monitoring requirements the Water Board put in place because of emulsified vegetable oil (EVO) injections into the aquifer. EVO was injected into four wells in the west-central portion of the site to produce anaerobic conditions that would induce biological degradation of VOCs. Data presented in the MRP Report indicate that anaerobic conditions have been established in the injection area, but do not extend beyond injection area. Data presented in the report indicated two issues that seem to be out of the ordinary: TCE concentrations in well VE-6 have increased since the EVO injections. At the time of the injection in January 2017 the TCE concentration in groundwater well VE-6 was 330 ug/L. Since January TCE concentrations have been on the rise, and in the concentration in the most recent sample, from June 2017, was 690 ug/L. Well VE-6 is located about 100 feet west of the injection area; it appears that the injections may have pushed contamination towards the west. Groundwater elevations appear to be uncharacteristically low in the injection area, especially in injection wells VE-4 and VE-2. This is somewhat counter intuitive; it would be expected that if injections had an effect on groundwater elevations, the effect would be to increase elevations at injection wells rather than decrease them. Perhaps operation of the vapor extraction system has distorted groundwater elevations, applying a vacuum onto the water table could raise groundwater elevations in the immediate area of the vapor extraction well. This could make other groundwater elevations appear abnormally low.

Comments: DTSC accepted the report; requested that future reports include the following information: Figure 5 needs to be revised to show the contaminant concentrations at Well GW-13B Data from the substrate injections wells, along with a discussion of operation and sampling of these wells should be included in the quarterly groundwater reports. Table 1 should be expanded to include well gauging information for these wells. An ongoing summary of gauging data and groundwater analytical results from these wells should be include in tables 3 and 4, respectively. Monitoring Report text should include a discussion of injections, and sampling that was conducted at the substrate injections wells during the reporting period.

Comments: The following comments were sent via email on 3/10/2017: The Department of Toxic Substances Control has reviewed the 2016 Fourth Quarter SVE Progress Report (Report) dated January 18, 2017 and has the following comments: Revisions to the Report are not required and the Report is approved as presented. The Report includes recommendations for the first quarter 2017 SVE operations to re-activate VE-1 through VE-6, and GW-8, and initially shut down GW-1, GW-9, and GW-10 and may reactivate if concentrations decrease significantly. DTSC recommends continuing extractions from GW-1, GW-9, and GW-10 to have high mass removal rate as concentrations of VOCs in these wells are much higher than the ones to be activated.

Comments: The following comments provided by GSU were also part of the Supplemental Groundwater Investigation comment that were provided to CS Snider and the Source Group Groundwater Contours and Groundwater Flow Calculating groundwater contours from the groundwater elevations appears to indicate two different groundwater flow patterns. The groundwater contour map presented in the report has groundwater contours that have been smoothed. When calculating the groundwater contours well by well the patterns are more apparent. Wells on the western side of the site, wells GW-7, GW-12, and GW-13, show a groundwater flow direction towards the west at a relatively flat gradient. Wells the east of these show a groundwater flow directions towards the northeast and south east at a steeper gradient. These two flow patterns may be indicative of the wells being screened in two different formations and groundwater flow systems. The western wells are probably screened in alluvium while the eastern wells are screened in the Saugus formation bedrock. This would account for the difference in the groundwater gradients. The Saugus formation is less permeable than the alluvium, and in general less permeable material maintains steeper groundwater gradients. This pattern has been present in previous groundwater monitoring reports. Nature and Extent of Contamination The nature and distribution of groundwater

contamination is similar to that shown in previous groundwater monitoring reports. The 1,2-DCA and vinyl chloride plumes are restricted to the eastern portion of the site in the little valley that contains the former process area. The TCE plume extends westward, offsite, towards production well Saugus 1. It appears that the TCE has migrated to the alluvial aquifer, while the 1-2-DCA and vinyl chloride are contained within the Saugus Aquifer. In addition, based on the detections of TCE within deeper portions of the alluvial aquifer at well GW-13B, it appears that the TCE is migrating downward into deeper portions of the aquifer. The difference in groundwater elevations between wells GW-13A, which is a water table well, and GW-13 B, which is screened deeper in the aquifer, indicate that a downward vertical gradient exists at the location of these wells. This downward vertical gradient is most likely facilitating the downward migration of the TCE. Future Groundwater Delineation Future work for the site needs to include additional wells installed within the lower portions of the alluvial aquifer. The wells are necessary to evaluate the distribution of contamination in the lower portion of the alluvial aquifer because it appears that TCE has migrated offsite and may have migrated as far as sentinel well AS-12B with is adjacent to groundwater production well Saugus 1. In addition, a minimum of three wells installed in the lower portion of the alluvial aquifer are required to determine the ground water flow direction in this section of the aquifer. I have spoken briefly with Craig Snider regarding the necessity of these wells and we have discussed potential well locations. Craig informed me that he is working on work plan for well installation and that we should be receiving it shortly. Groundwater levels have been dropping and the water table elevation is below 1095 feet above mean sea level. Due to the low water table elevation several wells have gone dry. Wells GW-1, GW-2, GW-3, GW-4 and GW-5 do not contain enough water to get an accurate groundwater elevation measurement, or to collect groundwater samples. If groundwater elevations do not rise enough after the rainy season to allow groundwater sample collection in some of these wells, then it will probably be necessary to replace them with deeper wells

Comments: GSU staff provided the following comments on the Report via email: Data in the report show that on-site conditions and trends in groundwater flow directions are fairly constant. Water levels are dropping and several wells have gone dry. I hope we have a rainy winter and the groundwater rises enough so we can get a complete sample set. I reviewed the report in conjunction with data from Whittaker Bermite groundwater monitoring reports. I have been looking for similarities in data that can indicate how closely groundwater conditions between Saugus industrial, offsite well GW-3 and sentinel well AL-12B are linked. As I mentioned in a previous email regarding Whittaker Bermite I have one relationship that seems to apply to TCE concentrations in well AL-12B. When the vertical gradient increases in the area TCE concentrations seem to decrease in well AL1-2B. We have a decent well network in that there are dual screened wells, one in the shallow aquifer, and one deeper in the aquifer, at the AL-12 and GW-13 locations. This allows us to compare groundwater levels at the top and bottom of the aquifers and determine if water flowing from the top to lower portions of the aquifer, or vice versa. When the water is flowing downward into the aquifer, a negative vertical gradient, the TCE concentrations in well AL-12B tend to decrease. I think this indicates that TCE is moving into the AL-12 area in groundwater from the deeper portions of the aquifer. This is because water moving from the upper aquifer into the lower portions of the aquifer is not contaminated and dilutes the TCE at AL12-B.

concentration data presented in the report indicate that site conditions are fairly stable. Water levels have been falling over the course of the last few years and about half of the sites wells are still dry. The groundwater samples were collected April 22 which is prior to the vapor extraction pilot test starting. The next monitoring report, the third quarter of 2014, should include groundwater samples collected during the operation period of the vapor extraction pilot test, so it will be interesting to see if the vapor extraction effort has any effects on groundwater concentrations. I expect vapor concentrations to drop rapidly, but I don't think we will see any effects on groundwater concentrations until the fourth quarter sampling effort. I don't have any comments on the Groundwater Monitoring Report, I think we can accept it as final".

Comments: Document accepted. The following comments were sent via email on 11/20/2014: DTSC has reviewed the subject report and accepts it as presented. We did want to give you some feedback so it can be incorporated in the final pilot test report: The Report presents detailed data regarding the amount of fluid recovered during operation of the soil vapor extraction (SVE) system, type of fluid, whether it was water or product, and chemical composition of recovered fluids. Based on the amount of product recovered it appears that the SVE system is quite effective in removing contamination from the subsurface. The Report does not include the following data regarding extraction wells: which vapor extraction wells were used during the pilot test vacuum readings at the active wells vacuum reading at surrounding wells and soil vapor probes vapor concentration readings from active and surrounding wells.

Interpretations of subsurface vacuum distribution The Report is a Status Summary and not a pilot test report, so including these data may be outside the scope of the subject report. We assume a pilot test report will be compiled and the data will be included in that report. The Report states that a soil gas rebound survey will be conducted after the system has been shut down for about 3 months. This survey should include soil gas probes in the area of previous soil gas probes SVS-68, SVS-69 and SVS-73. During the June, 2014 soil gas investigation this area, particularly SVS-73, contained elevated concentrations of TCE, and the vertical extent of TCE in soil gas was not delineated. Drilling was difficult in this area and refusal was encountered in several borings. Consequently, when doing the rebound survey heavier duty equipment should be used so soil gas probes can be set at depths of 15 feet and greater.

 Comments: All of the shallow wells except GW-11, at the far east end of the site, have gone dry, so there is not much to report. Diffusion bag samplers were left in the wells in December and retrieved and sampled, but since the wells were dry the results cannot be considered representative. The deeper wells, GW-4B, GW-13B, and GW-14, did have water and results from these wells were similar to previous sampling events.

Program Report (MRP Report) for the Second Quarter of 2017. The purpose of the MRP Report is to fulfill monitoring requirements the Water Board put in place because of emulsified vegetable oil (EVO) injections into the aquifer. EVO was injected into four wells in the west-central portion of the site to produce anaerobic conditions that would induce biological degradation of VOCs. Data presented in the MRP Report indicate that anaerobic conditions have been established in the injection area, but do not extend beyond injection area. Data presented in the report indicated two issues that seem to be out of the ordinary: TCE concentrations in well VE-6 have increased since the EVO injections. At the time of the injection in January 2017 the TCE concentration in groundwater well VE-6 was 330 ug/L. Since January TCE concentrations have been on the rise, and in the concentration in the most recent sample, from June 2017, was 690 ug/L. Well VE-6 is located about 100 feet west of the injection area; it appears that the injections may have pushed contamination towards the west. Groundwater elevations appear to be uncharacteristically low in the injection area, especially in injection wells VE-4 and VE-2. This is somewhat counter intuitive; it would be expected that if injections had an effect on groundwater elevations, the effect would be to increase elevations at injection wells rather than decrease them. Perhaps operation of the vapor extraction system has distorted groundwater elevations, applying a vacuum onto the water table could raise groundwater elevations in the immediate area of the vapor extraction well. This could make other groundwater elevations appear abnormally low.
