Subject: Tree Inventory Report for the Bridge Point Rancho Cucamonga Project at 12434 4th Street, Rancho Cucamonga, California

Dear Ms. Andersen:

Psomas is pleased to provide the following tree inventory report for the Bridge Point Rancho Cucamonga Project site located at 12434 4th Street in Rancho Cucamonga, California. The survey area for this tree inventory consists of the Project site (Assessor's Parcel Numbers 022-928-350 and 022-928-351) as well as the area surrounding a potential at-grade railroad crossing at 6th Street, located approximately 300 feet northwest of the Project site (Exhibits 1 and 2).

The Project site is bound by 6th Street to the north, a water treatment plant and detention center to the east, 4th Street to the south, and commercial buildings with associated parking areas to the west. Psomas Certified Arborist Trevor Bristle visited the Project site on April 17 and 20, 2020 to document the type, quantity, and condition of heritage trees. A follow-up survey was conducted on November 11, 2020 to document non-heritage trees on the Project site and all trees at the at-grade railroad crossing site. Each tree was assigned a unique number and the following data were recorded: tree species, number of trunks, trunk diameter at breast height (dbh), tree height, canopy diameter, and qualitative assessment ratings on aesthetics and health. Health and aesthetic qualities of the trees were rated as follows: 5=excellent, 4=good, 3=fair, 2=poor, and 1=very poor.

REGULATORY AUTHORITY

Trees in the City of Rancho Cucamonga are regulated by the Development Code (Chapter 17.16.080 of the Rancho Cucamonga Municipal Code). A tree removal permit is required prior to removing any "heritage tree", which is defined as:

- 1) All eucalyptus windrows;
- 2) Any tree greater than 30 feet tall with a minimum trunk diameter of 20 inches;
- 3) Any multi-trunk tree whose combined trunk diameter is at least 30 inches;
- 4) A stand of trees the nature of which makes each dependent upon the others for survival;
- 5) Any tree determined to be historically or culturally significant.

EXISTING CONDITIONS

The Project site currently contains two structures including a large warehouse with adjacent truck lots and small office complex with adjacent parking area. A former vineyard is present in the northern portion of the site, south of 6th Street.

Tree species that occur on the Project site include: tree-of-heaven (*Ailanthus altissima*), white alder (*Alnus rhombifolia*), silk floss tree (*Ceiba speciosa*), carrotwood (*Cupaniopsis anacardioides*), red ironbark (*Eucalyptus sideroxylon*), shamel ash (*Fraxinus uhdei*), sweet gum (*Liquidambar styraciflua*), white mulberry (*Morus alba*), Canary Island pine (*Pinus canariensis*), Italian stone pine (*Pinus pinea*), western sycamore (*Platanus racemosa*), black willow (*Salix gooddingii*), arroyo willow (*Salix lasiolepis*), Peruvian peppertree (*Schinus molle*), Brazilian peppertree (*Schinus terebinthifolius*), African sumac (*Searsia lancea*), Chinese elm (*Ulmus parviflora*), and Mexican fan palm (*Washingtonia robusta*). Generally, trees are scattered along the boundaries of buildings, roads and parking areas throughout the Project site.

Tree species that occur in the vicinity of the railroad crossing site include jacaranda (*Jacaranda mimosifolia*), goldenrain tree (*Koelreuteria paniculata*), southern magnolia (*Magnolia grandiflora*), and Peruvian peppertree.

RESULTS

The field survey identified a total of 125 trees on the Project site that meet the minimum requirements for inclusion as a heritage tree with an additional 464 non-heritage trees. The locations of all heritage trees on the Project site are presented in Exhibit 3, while the locations of trees that are too small to be considered heritage trees are indicated by polygons.

Trees in the vicinity of the railroad crossing site include 1 heritage tree, a Peruvian peppertree, along with 11 other non-heritage trees. Trees that are near the railroad crossing site are shown on Exhibit 4.

A summary of all trees on the Project site and the railroad crossing site is provided in Table 1. All collected tree data are included in Attachment A.

Impacts to trees on the Project site and the railroad crossing site will be determined based on final project design.

**TABLE 1
 SUMMARY OF ON-SITE TREES**

Tree Species	Quantity		
	Heritage Trees ¹	Non-Heritage Trees	Total
Trees on the Project Site			
tree-of-heaven <i>Ailanthus altissima</i>	0	1	1
white alder ² <i>Alnus rhombifolia</i>	2	2	4
silk floss tree <i>Ceiba speciosa</i>	9	18	27
carrotwood <i>Cupianopsis anacardiodes</i>	0	58	58
red ironbark <i>Eucalyptus sideroxylon</i>	51	25	76
shamel ash <i>Fraxinus uhdei</i>	0	3	3
sweet gum <i>Liquidambar styraciflua</i>	6	38	44
white mulberry <i>Morus alba</i>	0	4	4
Canary Island pine <i>Pinus canariensis</i>	6	56	62
Italian stone pine <i>Pinus pinea</i>	5	1	6
western sycamore ² <i>Platanus racemosa</i>	33	110	143
black willow ² <i>Salix gooddingii</i>	0	1	1
arroyo willow ² <i>Salix lasiolepis</i>	0	4	4
Peruvian peppertree <i>Schinus molle</i>	13	53	66
Brazilian peppertree <i>Schinus terebinthifolius</i>	0	65	65
African sumac <i>Searsia lancea</i>	0	19	19
Chinese elm <i>Ulmus parviflora</i>	0	2	2
Mexican fan palm <i>Washingtonia robusta</i>	0	4	4
Project Site Trees Subtotal	125	464	589
Trees Near Railroad Crossing Site			
jacaranda <i>Jacaranda mimosifolia</i>	0	1	1
goldenrain tree <i>Koelreuteria paniculata</i>	0	1	1
southern magnolia <i>Magnolia grandiflora</i>	0	6	6

**TABLE 1
 SUMMARY OF ON-SITE TREES**

Tree Species	Quantity		
	Heritage Trees ¹	Non-Heritage Trees	Total
Peruvian peppertree <i>Schinus molle</i>	1	3	4
Railroad Crossing Trees Subtotal	1	11	12
GRAND TOTAL	126	475	601
¹ For the Project site, heritage trees consist of single trunk trees with a diameter at breast height of at least 20 inches, or multi-trunk trees whose trunks are at least 30 inches diameter at breast height cumulatively. ² Native tree species.			

DISCUSSION

The trees on the Project site are generally in good health with no conspicuous signs of decay (e.g., trunk cavities, bleeding sap, broken limbs, or fungi). Trees were consistently maintained within the past year, prior to closing of the site. Evaluation of these trees was based on a visual assessment from the ground.

Eucalyptus trees that occur as part of a windrow are the most common heritage tree and consist of red ironbark trees located to the north and west of the large warehouse facility. Eucalyptus windrows are comprised of planted, mature individuals that are greater than nine inches in trunk diameter. Additional volunteer eucalyptus saplings are interspersed throughout these windrows. These saplings are less than five inches in trunk diameter and were not documented as they are not considered to be part of the original windrow.

Western sycamores comprise the second most common heritage tree species and are concentrated mainly along the northeast and southeast portions of the Project site. The sycamores are all mature specimens with evidence of anthracnose and minor leaf and limb dieback. While the anthracnose has only a minor negative effect on the health of these trees, it has resulted in a moderate decline of their aesthetics.

The remaining heritage tree species on the Project site consist of white alder, silk floss tree, sweet gum, Canary Island pine, Italian stone pine, and Peruvian peppertree. Nearly all these trees were rated as having good health. These trees are scattered to the north and south of the large warehouse complex. Notably, two white alders are located in the southwest corner of the site. This species is water-loving and require more care in a landscaped environment. With no ongoing maintenance, the health and aesthetics of these trees are likely to decline.

Other tree species on the Project site that did not qualify as heritage trees are mainly located within the parking lot areas and along their borders. Most of these trees are either carrotwood or Brazilian peppertrees. An employee picnic area to the north of the warehouse has a surrounding garden containing Mexican fan palm, white mulberry, and shamel ash trees.

Many of the trees on the Project site are planted near pavement, structures, or within basins that likely have limited root development. Minor damage and upheaval are expected to occur as the roots continue to develop. Stress in the form of reflected heat from nearby structures and pavement is expected to affect trees on the Project site.
