EXECUTIVE SUMMARY

Linscott, Law & Greenspan, Engineers (LLG) has prepared this study to assess the transportation impacts associated with the Sunrise of Oceanside project (“Project”). The Project proposes to develop 95 assisted living units. The site is located at 4700 Mesa Drive, north of Mesa Drive and east of College Boulevard in the City of Oceanside.

The Project is calculated to generate approximately 247 ADT with 11 inbound / 7 outbound trips during the AM peak hour and 10 inbound / 15 outbound trips during the PM peak hour.

The Local Transportation Assessment (LTA) study area includes three (3) intersections and four (4) street segments. The analysis determines the transportation impacts of the Project in existing and near-term cumulative conditions. Two (2) cumulative projects were identified and added to near-term cumulative conditions.

Per City of Oceanside criteria, the Project’s effects on the local roadway system do not require roadway improvements.

LOCAL TRANSPORTATION ASSESSMENT

SUNRISE OF OCEANSIDE

Oceanside, California

October 14, 2020

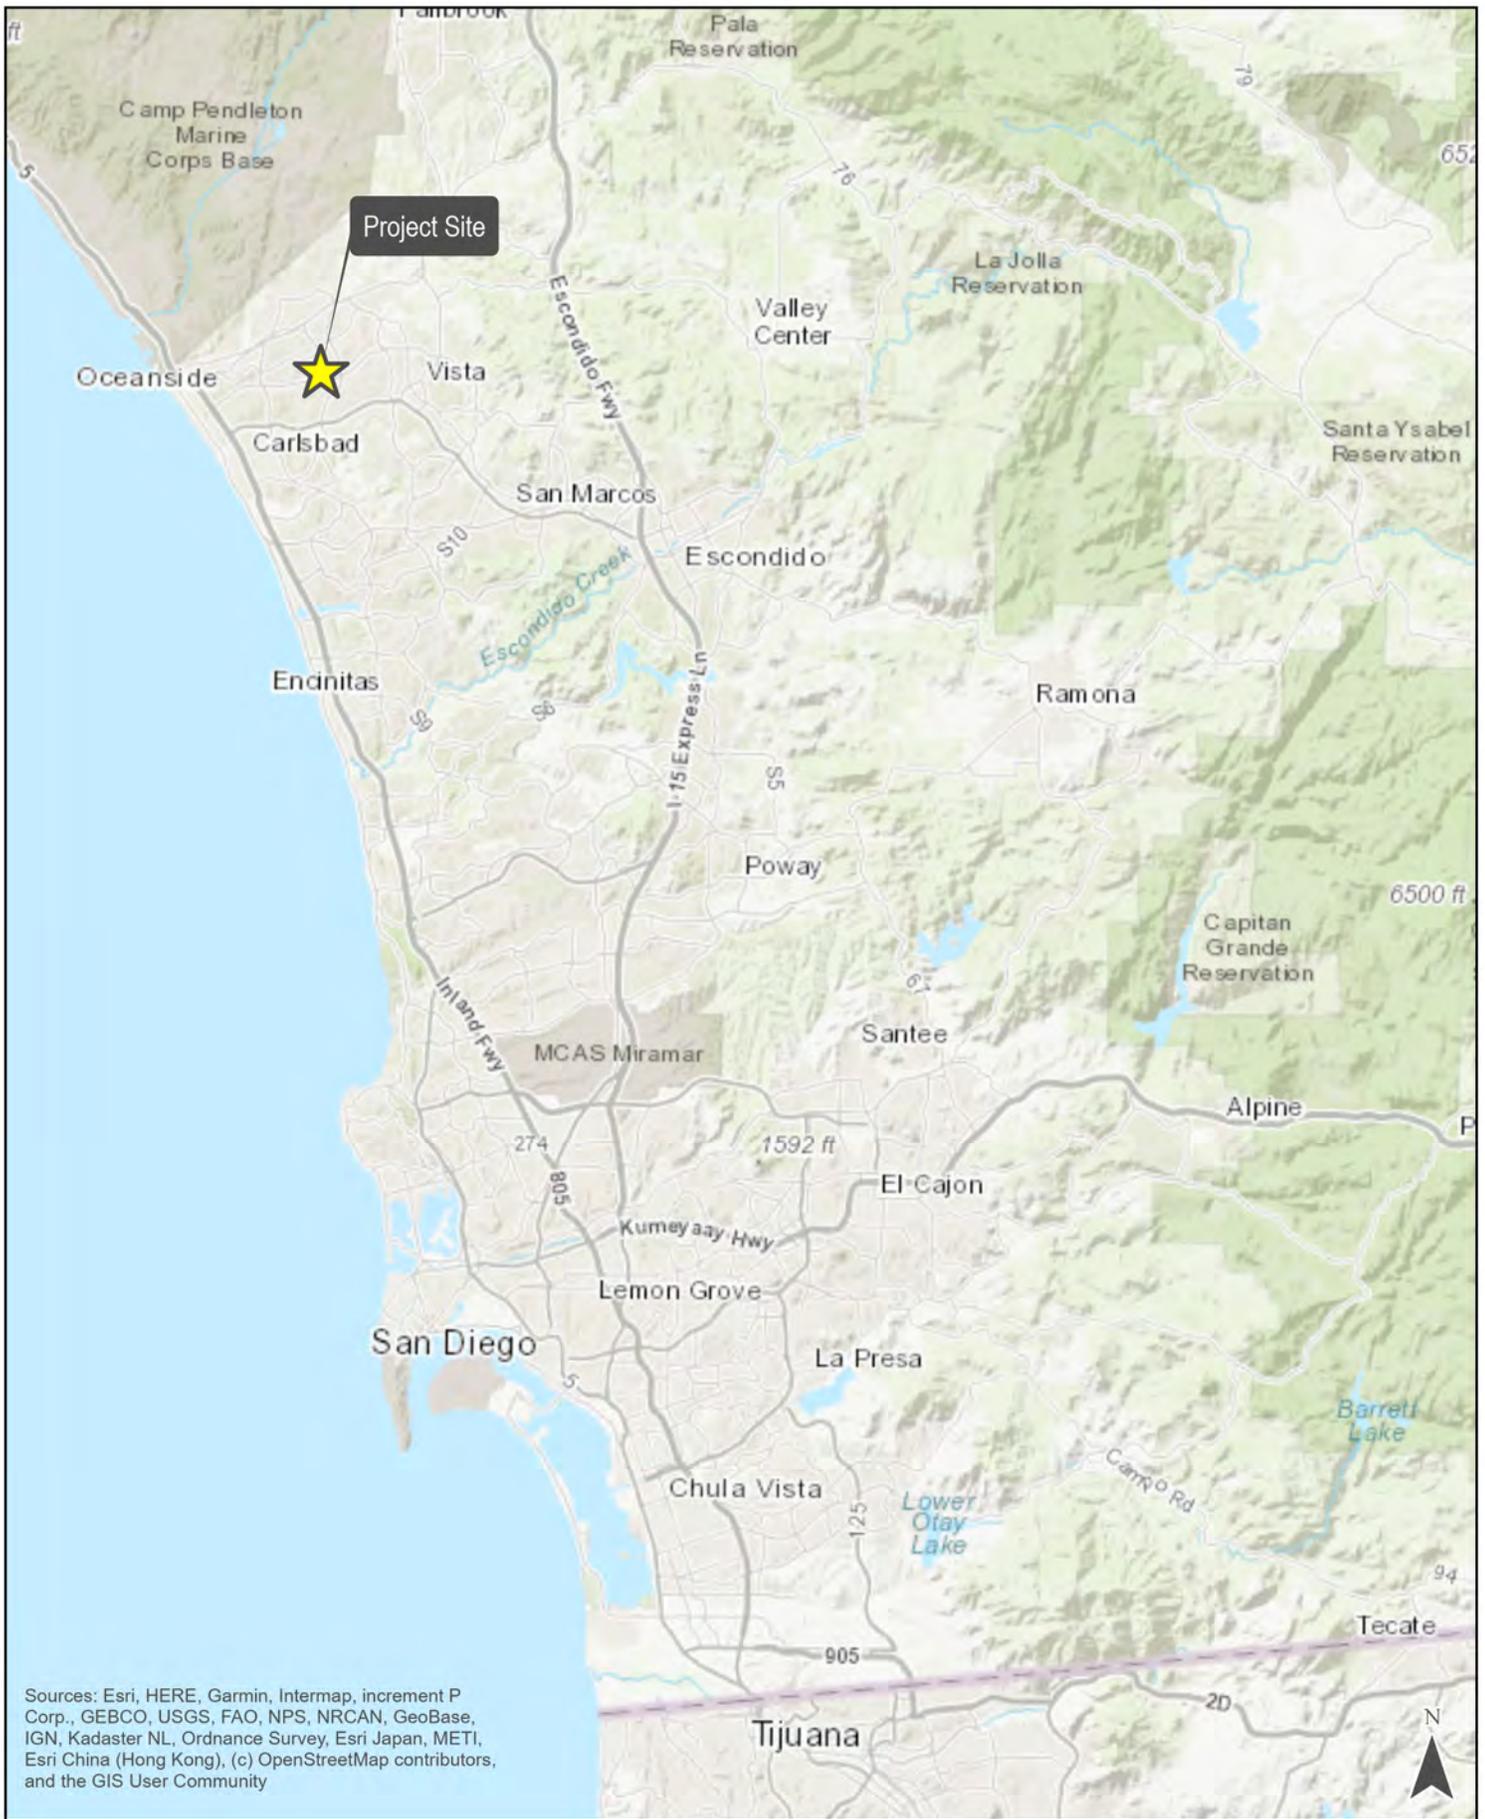

1.0 INTRODUCTION

Linscott, Law & Greenspan, Engineers (LLG) has prepared this Local Transportation Assessment (LTA) for the Sunrise of Oceanside project (hereby referred to as the “Project”). The Project proposes to develop 95 assisted-living housing units at a site located at 4700 Mesa Drive in the City of Oceanside.

Figure 1–1 shows the Project vicinity and *Figure 1–2* illustrates, in more detail, the site location.

This report includes the following sections:

- Project Description
- CEQA VMT Screening
- LTA Study Area, Analysis Approach, Methodology, and Thresholds
- Existing Conditions Discussion
- Analysis of Existing Conditions
- Cumulative Projects Discussion
- Project Trip Generation, Distribution, and Assignment
- Analysis of Near-Term Scenarios
- Site Access and Circulation
- Pedestrian, Bicycle, and Transit Discussion
- Summary and Conclusions

Figure 1-2
Project Area Map

2.0 PROJECT DESCRIPTION

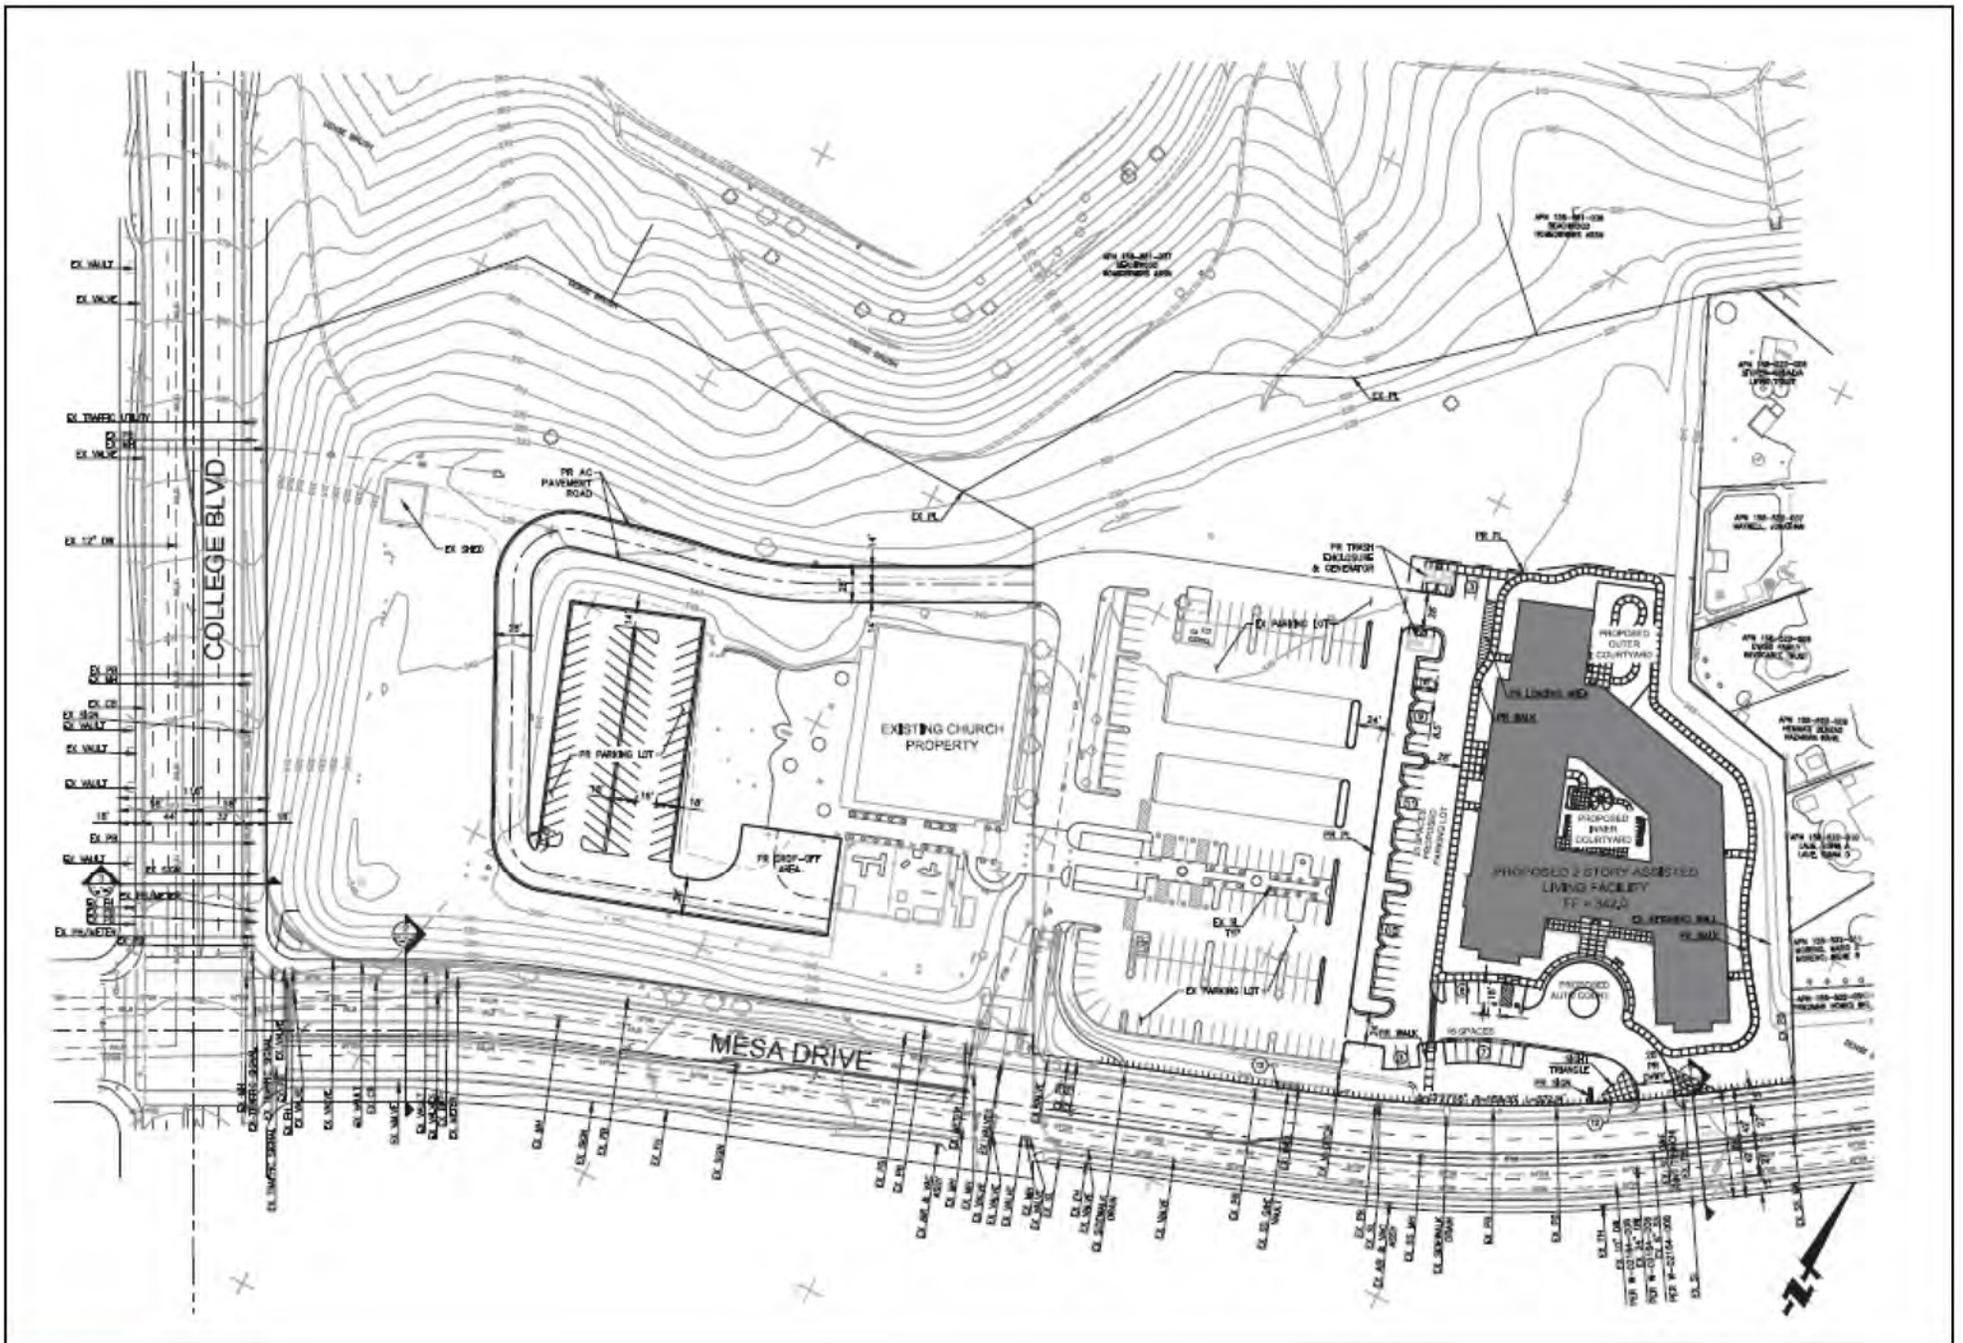

2.1 Project Location

The Project area is located in the north-eastern portion of the City of Oceanside. The site is located at 4700 Mesa Drive, north of Mesa Drive and east of College Boulevard. The site is located opposite Rancho Del Oro Park with other surrounding land uses largely residential.

2.2 Project Description

The Project proposes to develop the site with 95 assisted-living housing units. The site currently consists of a church, surface parking lot and undeveloped area. The church will remain on the west side of the site while the undeveloped area to the east will be the site of the proposed project. Project access will be via a single driveway on Mesa Drive located east of the intersection with Rancho Del Oro Park Drive. Access to the assisted living units will be shared with the church providing a secondary access point for church patrons.

The Project site plan is shown on *Figure 2-1*.

3.0 CEQA VMT SCREENING PROCESS

A VMT analysis was prepared under sperate cover.

4.0 LOCAL TRANSPORTATION ASSESSMENT METHODOLOGY & THRESHOLDS

The proposed Project generates over 200 ADT but less than 1,000 ADT (see *Section 8.1*) and is consistent with the City's adopted General Plan. Therefore, a Local Transportation Assessment (LTA) was prepared consistent with City guidelines.

4.1 Analysis Approach

The Project proposes to develop the site with 95 assisted-living housing units and is calculated to generate 247 ADT (see *Section 8.1*). Based on the City's LTA guidelines, a project that generates between 200-500 ADT will be required to analyze existing conditions and existing conditions plus the project. As this study was initiated under the prior City guidelines and cumulative projects information was collected, Project traffic was analyzed on local area intersections and street segments under existing and near-term conditions in excess of the scenarios required by the guidelines.

An explanation of each scenario is provided below:

Existing conditions represent the existing on-the-ground network and traffic volume conditions at the time of data collection in December 2019 while schools were in session.

Existing + Project conditions represent the operations of the existing street network with the addition of the traffic generated by the complete development of the proposed Project.

Existing + Cumulative Projects conditions represent the time period in the near future when it would be expected that other nearby development or infrastructure projects would contribute to cumulative growth in the area which would increase the overall study area traffic volumes prior to the Project's anticipated opening year. *Section 7.0* of this report discusses the cumulative conditions in greater detail.

Existing + Cumulative Projects + Project conditions represent the time period in the near future when traffic generated by the total Project would be on the street system and when it would be expected that other nearby development or infrastructure projects would contribute to cumulative growth in the area which would increase the overall study area traffic volumes.

4.2 Study Area

The study area meets and exceeds the trip-based criteria from the City's guidelines, which state that:

- All signalized intersections and project driveways shall be analyzed if the project will add 50 or more new peak hour trips in either direction.
- All unsignalized intersections and project driveways shall be analyzed if the project will add 50 or more new peak hour trips in either direction.
- All freeway ramp intersections and signalized ramp meters shall be analyzed if the project all 20 or more new peak hour trips in either direction.

The following locations are included in the study area:

Intersections

1. Mesa Drive / College Boulevard
2. Mesa Drive / Avenida De La Plata
3. Mesa Drive / Rancho Del Oro Park Drive

Street Segments

College Boulevard

1. North of Mesa Drive
2. South of Mesa Drive

Mesa Drive

3. College Boulevard to Rancho Del Oro Park
4. West of College Boulevard

The Project generates a total of 18 AM trips during the AM peak hour and 25 trips during the peak hour (see *Section 8.1*) and as such, this study area exceeds City criteria.

4.3 Methodology

Level of service (LOS) is the term used to denote the different operating conditions which occur on a given roadway segment under various traffic volume loads. It is a qualitative measure used to describe a quantitative analysis taking into account factors such as roadway geometries, signal phasing, speed, travel delay, freedom to maneuver, and safety. Level of service provides an index to the operational qualities of a roadway segment or an intersection. Level of service designations range from A to F, with LOS A representing the best operating conditions and LOS F representing the worst operating conditions. Level of service designation is reported differently for signalized and unsignalized intersections, as well as for roadway segments.

4.3.1 Intersections

Signalized intersections were analyzed under AM and PM peak hour conditions. Average vehicle delay was determined utilizing the methodology found in Chapter 19 of the *Highway Capacity Manual 6th Edition (HCM 6)*, with the assistance of the *Synchro 10* computer software. The delay values (represented in seconds) were qualified with a corresponding intersection Level of Service (LOS).

Unsignalized intersections were analyzed under AM and PM peak hour conditions. Average vehicle delay and Levels of Service (LOS) was determined based upon the procedures found in Chapter 20 and Chapter 21 of the *HCM 6* with the assistance of the *Synchro 10* computer software.

4.3.2 Street Segments

Street segment analysis is based upon the comparison of daily traffic volumes (ADTs) to the City of Oceanside's *Circulation Element Roadway Classification LOS & Capacity* as shown in Table 11 of the City guidelines. This table provides segment capacities for different street classifications, based on traffic volumes and roadway characteristics. The roadway classification table is attached in ***Appendix A***.

4.4 Thresholds

Table 4-1 indicates when a project’s effect on the roadway system is considered to justify the need for roadway improvements. That is, if a project’s traffic effect causes the values in this table to be exceeded, roadway improvements should be considered as follows on a case by case basis:

- Improvements should be consistent with the General Plan.
- Improvements for transit, bike, and pedestrian facilities should be given priority in Transit Priority Areas or Smart Growth Opportunity Areas as identified by SANDAG.
- Projects in Transit Priority Areas or Smart Growth Opportunity Areas as identified by SANDAG, that are consistent with the General Plan at the time of project application, should not be denied due to the inability to provide roadway improvements (i.e., existing right of way is constrained, etc.)

**TABLE 4-1
CITY OF OCEANSIDE
DETERMINATION OF THE NEED FOR ROADWAY IMPROVEMENTS**

Level of Service with Project	Allowable Change Due to Project Effects	
	Roadway Segments	Intersections
	V/C	Delay (sec.)

Source: City of Oceanside. *Traffic Impact Analysis Guidelines for Vehicle Miles Traveled (VMT) and Level of Service Assessment*, Table 12. July 2020.

General Notes:

1. V/C = Volume to Capacity Ratio
2. Delay = Average stopped delay per vehicle measured in seconds for intersections.

5.0 EXISTING CONDITIONS

Effective evaluation of the traffic impacts associated with the proposed *Sunrise of Oceanside Project* requires an understanding of the existing transportation system within the Project area. *Figure 5-1* shows an existing conditions diagram.

5.1 Existing Street Network

The following is a description of the existing street network in the study area.

College Boulevard is classified as a Major Arterial on the City of Oceanside Master Transportation Roadway Plan. Within the Project study area, College Boulevard is constructed as a four-lane divided roadway that runs north/south. Class II bike lanes and bus stops are provided on both sides of the roadway. North County Transit District (NCTD) bus Route 315 travels along College Boulevard and has stops located on both the east and west side of the roadway. The posted speed limit is 50 mph. Curbside parking is prohibited along both sides of the roadway.

Mesa Drive is an east/west roadway classified as a four-lane Secondary Collector on the City of Oceanside Master Transportation Roadway Plan. It is currently built as a four-lane roadway that has a combination of a raised median, striped median, and Two-Way Left Turn Lane (TWLTL). Class II bike lanes are provided on both sides of the roadway. The posted speed limit is 45 mph. Curbside parking is prohibited along both sides of the roadway.

Avenida De La Plata is a north/south roadway that is classified as a two-lane Collector on the City of Oceanside Master Transportation Roadway Plan. It is constructed as a two-lane roadway. Bike lanes are not provided north of Mesa Drive, but Class II bike lanes are provided on both sides of the roadway along Avenida De La Plata, south of Mesa Drive. Bus stops are not provided within the study area. The posted speed limit is 25 mph. Curbside parking is permitted along both sides of the roadway.

5.2 Existing Pedestrian Conditions

Contiguous and non-contiguous sidewalks are provided along College Boulevard, Mesa Drive, Rancho Del Oro Park Drive and Avenida De La Plata, within the study area.

5.3 Existing Bicycle Network

There are Class II bike lanes in both directions on Mesa Drive and College Boulevard, within the study area. No other bicycle facilities provided along the street segments within the study area.

5.4 Existing Transit Conditions

Transit service is provided to the area by NCTD Route 315. Route 315 provides bus service to the area via College Boulevard. The nearest stops to the Project site are located at College Boulevard. Bus stops are located on both the east and west side of the roadway. The Route runs between 6:00 AM and 6:00 PM with a frequency of 60 minutes.

5.5 Existing Traffic Volumes

Weekday existing 7:00-9:00 AM and 4:00-6:00 PM peak hour traffic volumes at key area intersections and 24-hour street segment counts were collected on Tuesday, December 17, 2019 while schools were in session.

Figure 5–2 shows the existing Traffic Volumes. *Appendix B* contains the peak hour intersection and daily segment count sheets.

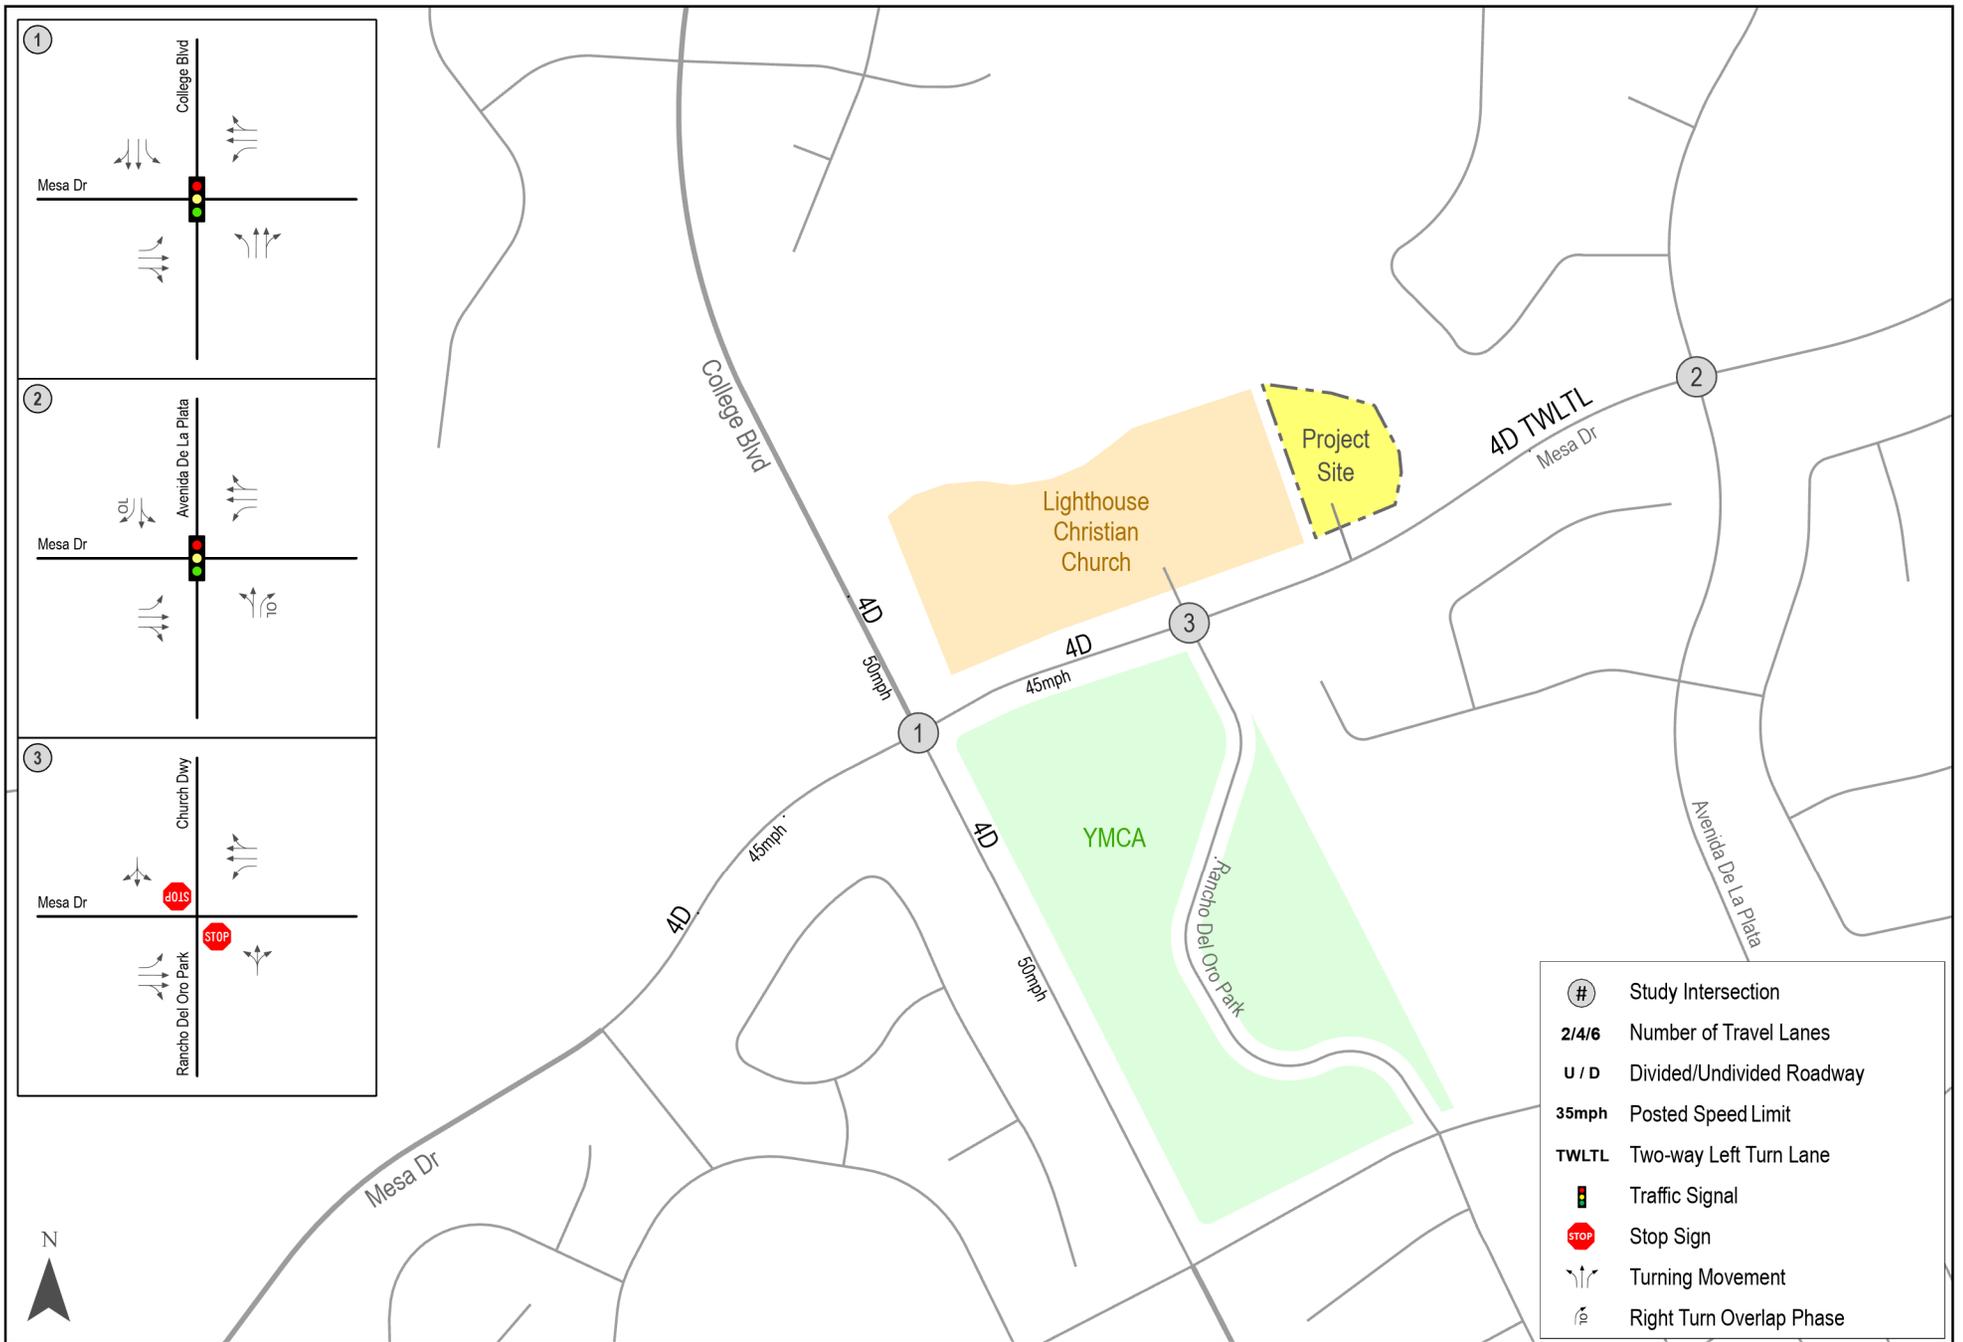

Figure 5-1
Existing Conditions Diagram

Figure 5-2
Existing Traffic Volumes

6.0 ANALYSIS OF EXISTING CONDITIONS

The following section presents the analysis of existing study area locations.

6.1 Peak Hour Intersection Levels of Service

Table 6-1 summarizes the existing intersections LOS. As seen in *Table 6-1*, all intersections are calculated to currently operate at LOS D or better during AM/PM peak hours.

Appendix C contains the existing intersection analysis worksheets.

**TABLE 6-1
EXISTING INTERSECTION OPERATIONS**

Intersection	Control Type	Peak Hour	Existing	
			Delay ^a	LOS ^b
1. Mesa Dr / College Blvd	Signal	AM	52.2	D
		PM	49.8	D
2. Mesa Dr / Avenida De La Plata	Signal	AM	10.9	B
		PM	10.1	B
3. Mesa Dr / Rancho Del Oro Park Dr	TWSC ^c	AM	17.6	C
		PM	29.2	D

Footnotes:

- a. Average delay expressed in seconds per vehicle.

55.1 to 80.0	E	35.1 to 50.0	E
≥ 80.1	F	≥ 50.1	F

6.2 Daily Street Segment Levels of Service

Table 6–2 summarizes the existing roadway segment operations. As seen in Table 6–2, the study area segments are calculated to currently operate at LOS C or better on a daily basis.

**TABLE 6–2
EXISTING STREET SEGMENT OPERATIONS**

Street Segment	Classification	Capacity (LOS E) ^a	ADT ^b	LOS ^c	V/C ^d
College Boulevard					
North of Mesa Dr	4-lane Major Arterial	40,000	29,102	C	0.728
South of Mesa Dr	4-lane Major Arterial	40,000	27,782	C	0.695
Mesa Drive					
College Blvd to Rancho Del Oro Park	Secondary Collector	25,000	10,784	B	0.431
West of College Blvd	Secondary Collector	25,000	11,041	B	0.442

Footnotes:

- a. Capacities based on Oceanside Roadway Classification Table.
- b. Average Daily Traffic Volumes.
- c. Level of Service.
- d. Volume to Capacity.

7.0 CUMULATIVE PROJECTS

Cumulative project are other projects in the study area that will add traffic to the local circulation system in the near future. Based on research conducted, two (2) cumulative projects are planned for the area that would add traffic to the study area street system. Traffic generated by these projects was added to the existing traffic volumes to develop the Existing + Near-Term Cumulative Project conditions. Project traffic was added to the near-term traffic to arrive at the Existing + Near-Term Cumulative Projects + Project conditions. The following is a brief description of each of the cumulative projects.

7.1 Description of Projects

1. **Pacific Coast Business Park** proposes to construct 1,100,000 SF of industrial use, 518,000 SF of general office, and 80,500 SF of medical office located south of Old Grove Road and west of College Boulevard in the City of Oceanside. The proposed project is calculated to generate 21,597 ADT with 2,213 inbound and 273 outbound trips during the AM peak hour and 575 inbound and 2,080 outbound trips during the PM peak hour. Trips were assigned to the street system based on the *Pacific Coast Business Park Traffic Impact Study*, prepared by Kimley-Horn and Associates, Inc. and dated April 2009.
2. **Rancho Del Oro Village XII (Terraza at Rancho Del Oro)** proposes to develop approximately 303 residential dwelling units consisting of a variety of multi-family product types. The project is located at the northwest quadrant of the College Boulevard and Old Grove Road intersection in the City of Oceanside. The proposed project is calculated to generate 2,424 ADT with 39 inbound and 154 outbound trips during the AM peak hour and 169 inbound and 73 outbound trips during the PM peak hour. Trips were assigned to the street system based on the *Rancho Del Oro Village XII Traffic Impact Study*, prepared by RBF and dated September 2010.

7.2 Summary of Cumulative Projects Trips

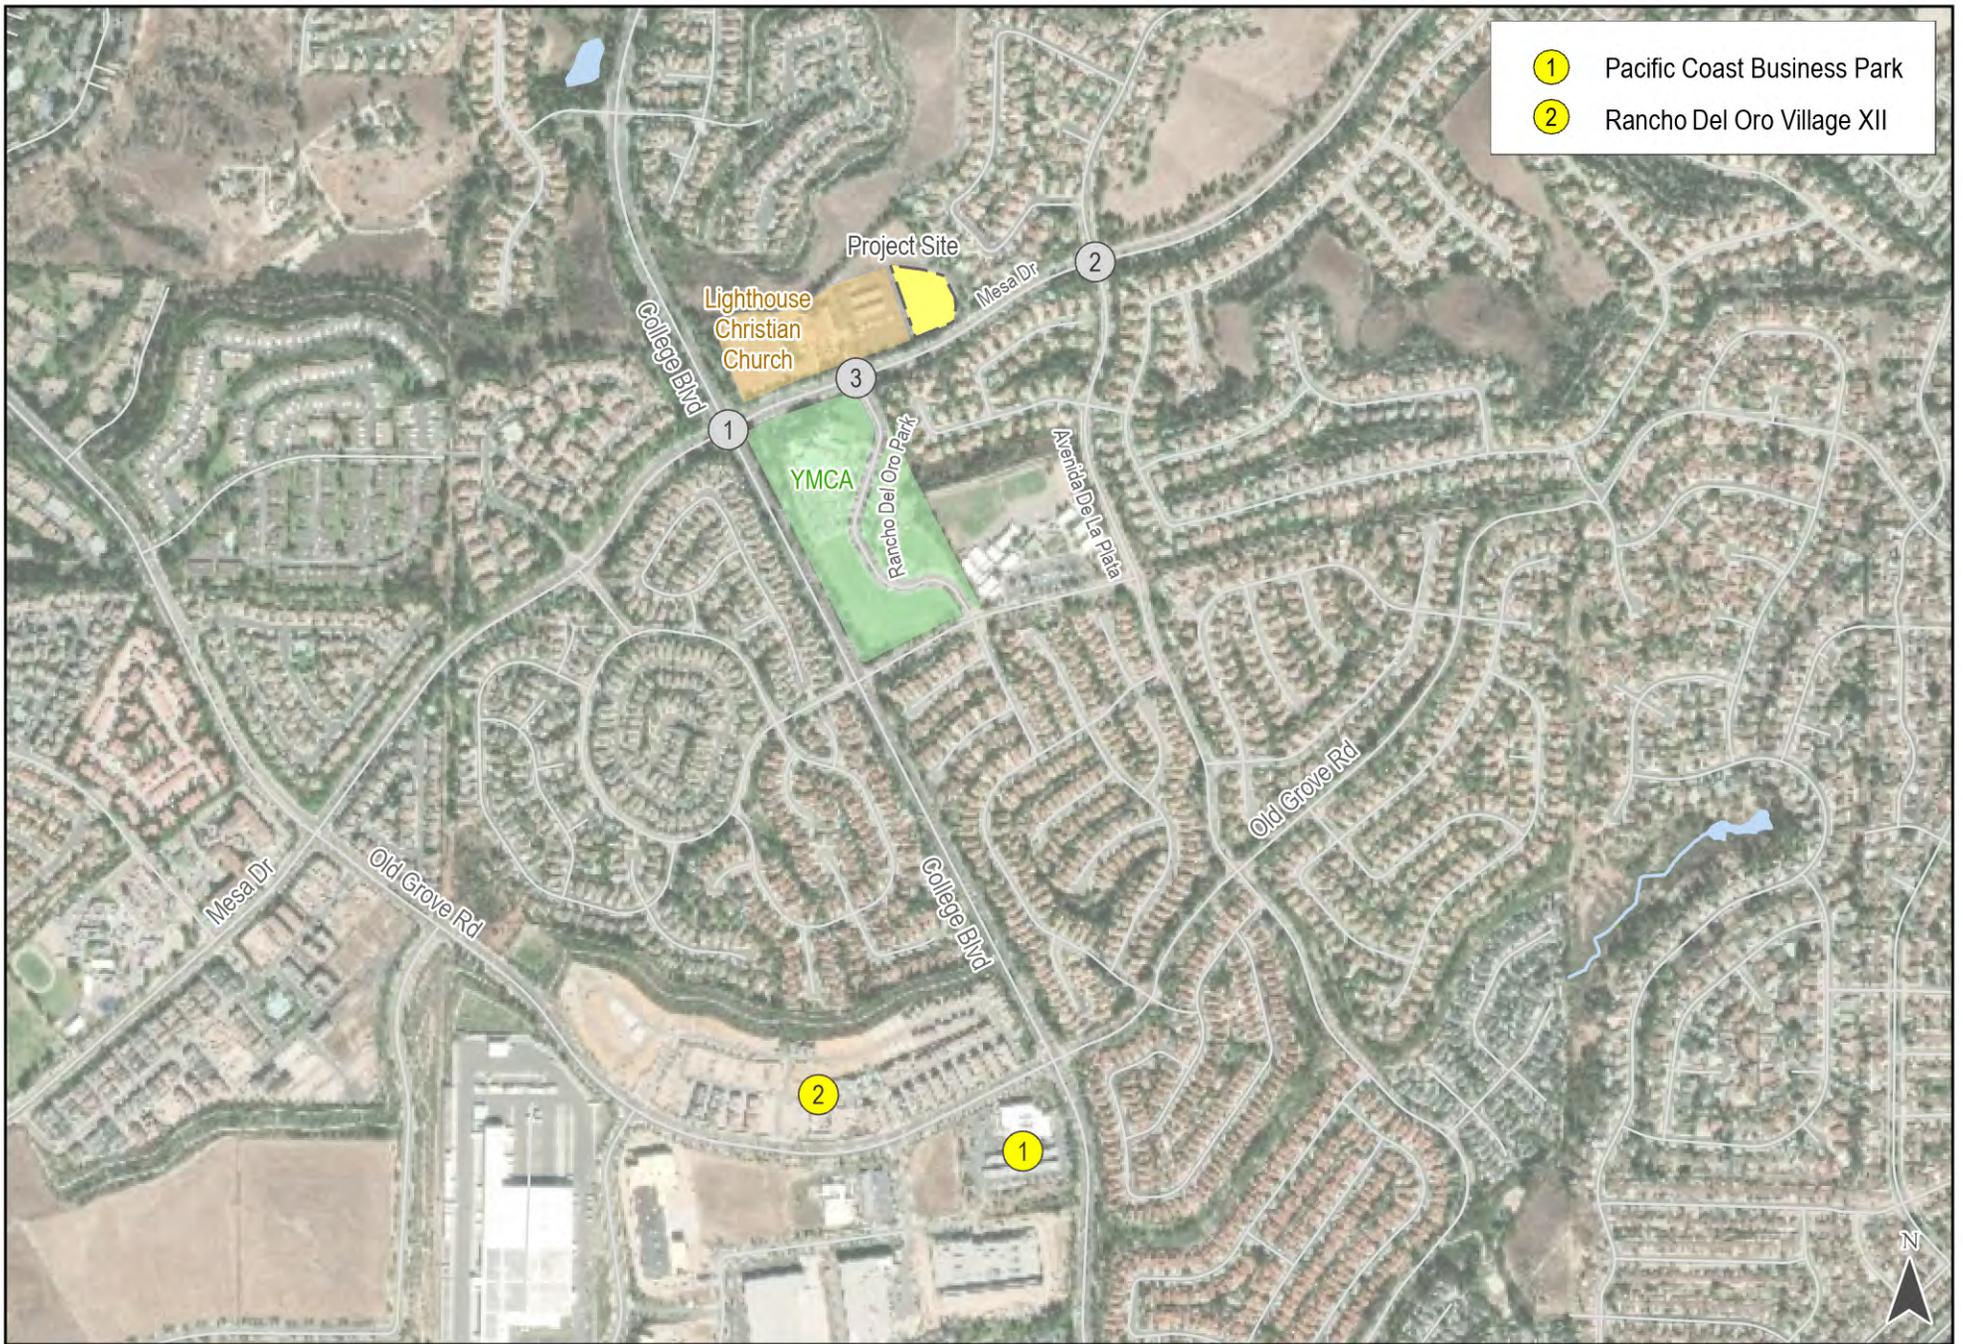

Table 7-1 summarizes the cumulative projects trip generation. As shown in *Table 7-1*, the two cumulative projects are calculated to generate a total of 24,021 ADT.

Figure 7-1 shows the location of the cumulative projects. *Figure 7-2* depicts the Existing + Cumulative Projects traffic volumes.

Appendix D contains the individual cumulative project assignments.

**TABLE 7-1
NEAR-TERM CUMULATIVE PROJECTS SUMMARY**

No.	Name	Project	ADT	AM		PM	
				In	Out	In	Out
1	Pacific Coast Business Park	1,100 KSF industrial, 518 KSF general office, 80.5 KSF medical office	21,597	2,213	273	575	2,080
2	Rancho Del Oro Village XII	303 residential multi-family units	2,424	39	154	169	73
Total Cumulative Projects			24,021	2,252	427	744	2,153

- ① Pacific Coast Business Park

8.0 TRIP GENERATION/DISTRIBUTION/ASSIGNMENT

The following is a discussion of the Project trip generation calculations and the Project traffic distribution and assignment through the local street system.

8.1 Trip Generation

The Project traffic generation calculations were conducted using the trip generation rates published in the Institute of Transportation Engineers *Trip Generation Manual*, 10th edition for the “assisted living” land use (Land Use Code 254). The typical trip generation rates used in the City of Oceanside are the regional SANDAG “Brief Guide” rates (2002). However, these rates do not include a land use similar to the proposed assisted living.

Table 8-1 tabulates the total Project traffic generation. The total Project is calculated to generate approximately 247 ADT with 11 inbound / 7 outbound trips during the AM peak hour and 10 inbound / 15 outbound trips during the PM peak hour.

**TABLE 8-1
PROJECT TRIP GENERATION**

Land Use	Size	Daily Trip Ends (ADTs) ^b		AM Peak Hour					PM Peak Hour				
		Rate ^a	Volume	% of ADT	In:Out Split	Volume			% of ADT	In:Out Split	Volume		
						In	Out	Total			In	Out	Total
Assisted Living	95 DU	2.6 / Bed	247	0.19	63:37	11	7	18	0.26	38:62	10	15	25

Footnotes:

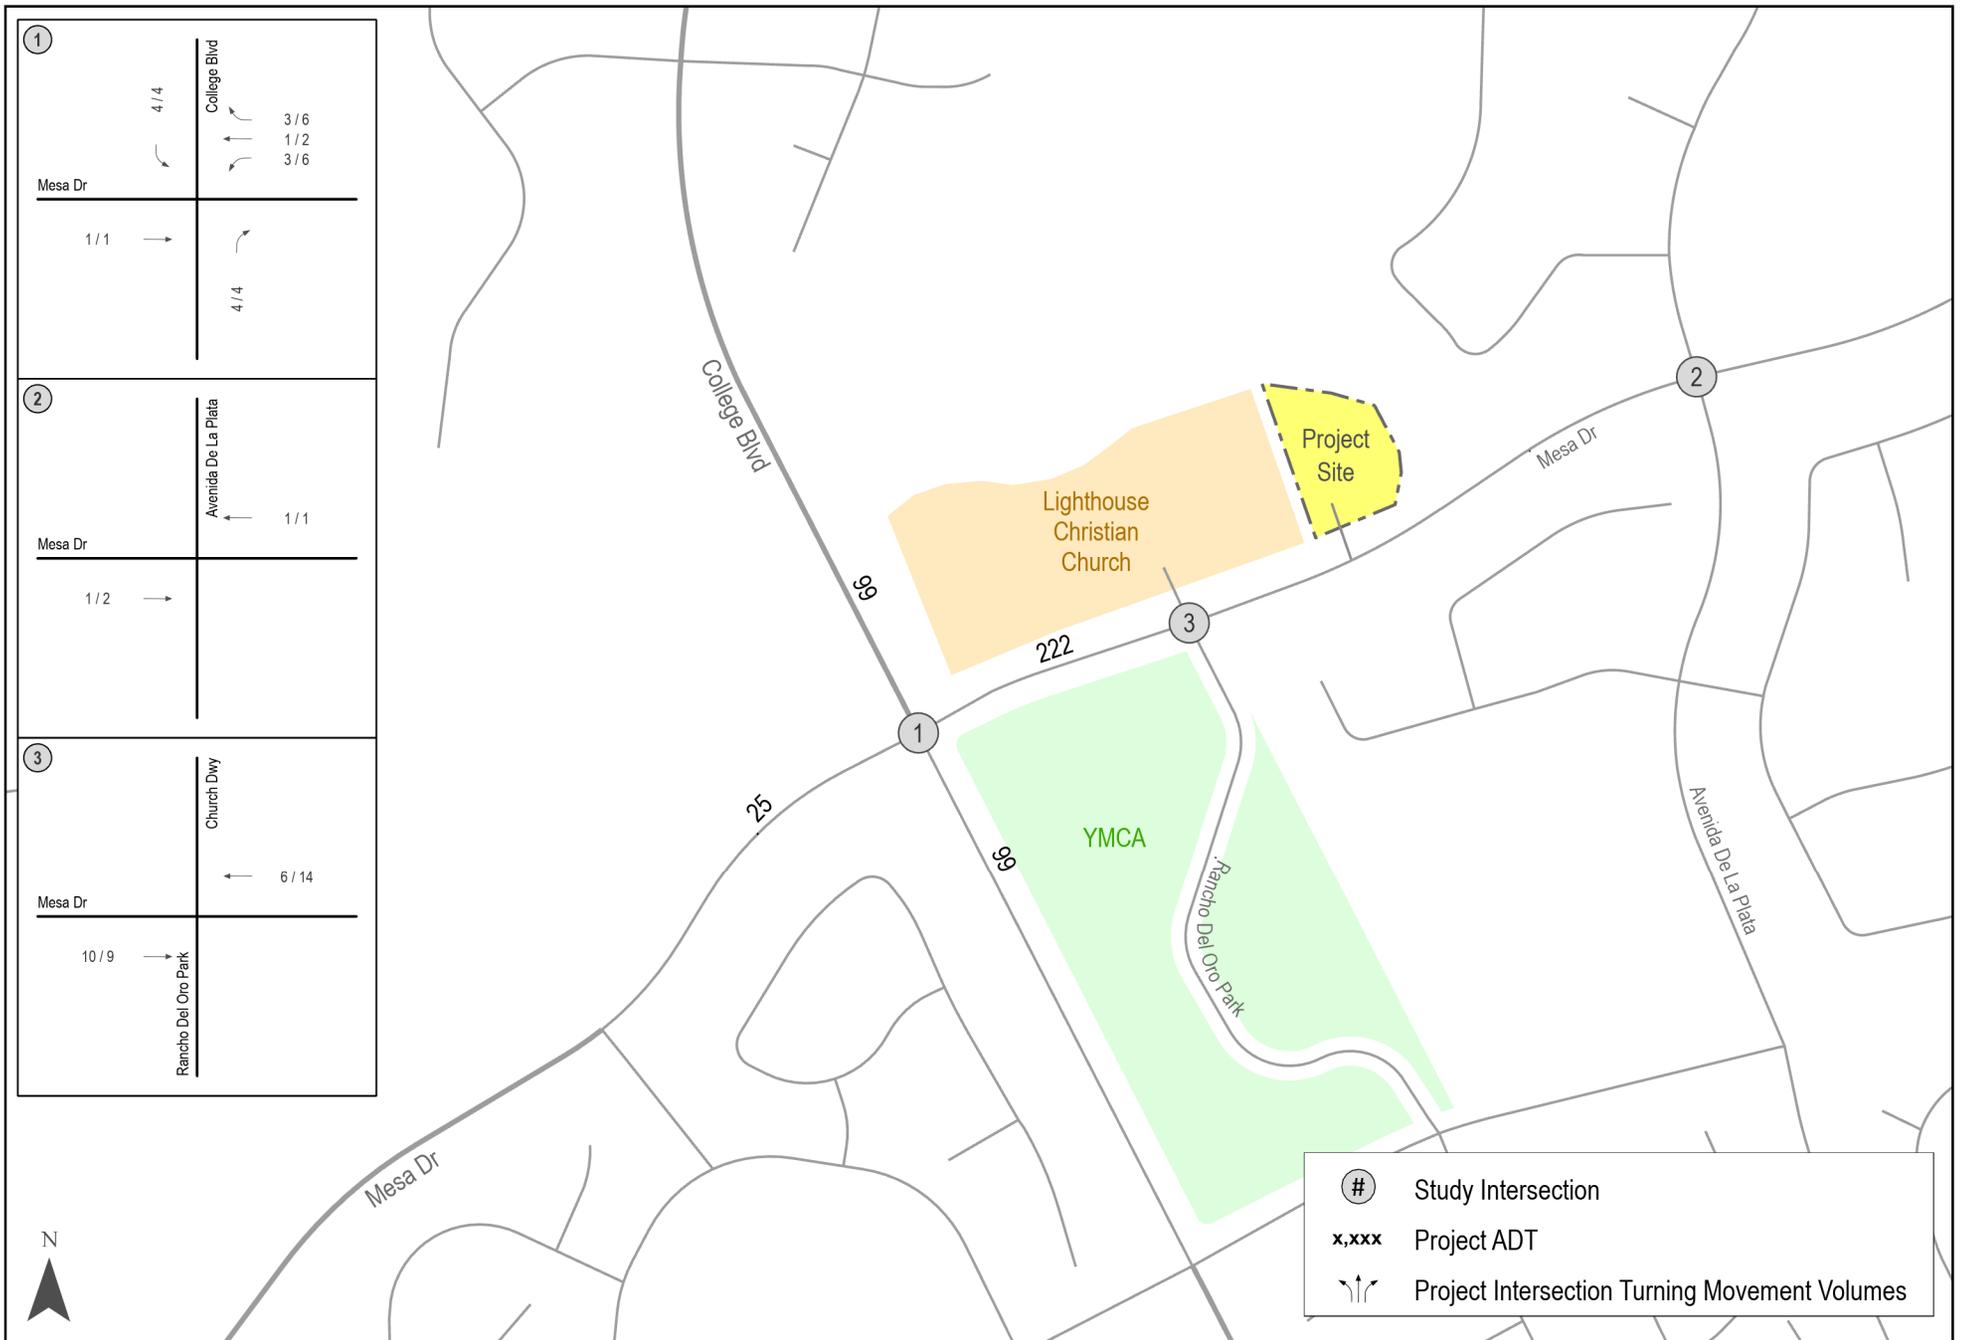

- a. Rates based on the Institute of Transportation Engineers, Trip Generation Manual, 10th Edition, September 2017, Land Use 254.
- b. ADT = Average daily traffic

8.2 Trip Distribution/Assignment

Project trip distribution was developed using professional engineering judgment based on the available local and regional access as well as existing traffic patterns and flows observed from existing traffic count data at study area intersections.

Figure 8-1 depicts the Project trip distribution percentages. *Figure 8-2* shows the assigned Project traffic volumes and *Figure 8-3* shows the Existing + Project traffic volumes. *Figure 8-4* shows Existing + Cumulative Projects + Project traffic volumes.

9.0 ANALYSIS OF NEAR-TERM SCENARIOS

The following section presents the near-term analysis of existing study area locations without and with Project traffic.

9.1 Existing + Project

9.1.1 Intersection Analysis

Table 9-1 summarizes the peak hour intersection operations for the Existing + Project condition. As seen in *Table 9-1*, with the addition of Project traffic, all study area intersections are calculated to continue to operate at LOS D or better during AM/PM peak hours.

Appendix E contains the Existing + Project intersection analysis worksheets.

9.1.2 Segment Analysis

Table 9-2 summarizes the peak hour intersection operations for the Existing + Project condition. As seen in *Table 9-2*, with the addition of project traffic, all study area intersections are calculated to continue to operate at LOS C or better during AM/PM peak hours.

9.2 Existing + Cumulative Projects

9.2.1 Intersection Analysis

Table 9-1 summarizes the peak hour intersection operations for the Existing + Cumulative Projects condition. As seen in *Table 9-1*, with the addition of cumulative projects traffic, all study area intersections are calculated to continue to operate at LOS D or better during AM/PM peak hours with the exception of the Mesa Drive / College Boulevard intersection which operates at LOS E during the AM peak hour.

Appendix F contains the Existing + Cumulative Projects intersection analysis worksheets.

9.2.2 Segment Operations

Table 9-2 summarizes the key segment operations in the study area for the Existing + Cumulative Projects condition. As seen in *Table 9-2*, with the addition of cumulative projects traffic, all study area street segments are calculated to operate at LOS D or better.

9.3 Existing + Cumulative Projects + Project

9.3.1 Intersection Analysis

Table 9-1 summarizes the peak hour intersection operations for Existing + Cumulative Projects + Project conditions. As seen in *Table 9-1*, with the addition of cumulative projects and Project traffic, all study area intersections are calculated to continue to operate at LOS D or better during AM/PM peak hours with the exception of the Mesa Drive / College Boulevard intersection which continues to operate at LOS E during the AM peak hour.

The project results in only a 0.2 seconds of delay increase and therefore no improvements are necessary.

Appendix G contains the Existing + Cumulative Projects + Project intersection analysis worksheets.

9.3.2 Segment Operations

Table 9–2 summarizes the key segment operations in the study area for the Existing + Near-Term Cumulative Projects + Project conditions. As seen in *Table 9–2*, with the addition of cumulative projects and Project traffic, all study area street segments are calculated to continue to operate at LOS D or better.

**TABLE 9-1
NEAR-TERM INTERSECTION OPERATIONS**

Intersection	Control Type	Peak Hour	Existing		Existing + Project			Existing + Cumulative Projects		Existing + Cumulative Projects + Project		
			Delay ^a	LOS ^b	Delay	LOS	Δ ^c	Delay	LOS	Delay	LOS	Δ ^c
1. Mesa Dr / College Blvd	Signal	AM	52.2	D	52.5	D	0.3	58.0	E	58.2	E	0.2

- d. Level of Service
- e. Δ denotes a Project-induced increase in the Volume to Capacity ratio

10.0 SITE ACCESS AND CIRCULATION

Access is proposed via a single full access driveway east of the existing church driveway on Mesa Drive with Rancho Del Oro Park Drive. With the development of the site, the current secondary church access driveway on the easternmost portion of the site will be vacated and redeveloped with the proposed Project. The new driveway serving the Project will also become the secondary access for the church property.

In order to maintain efficient access into the Project site, it is recommended that the TWLTL along Mesa Drive be extended to the western property line where there is currently a striped median. Left-turns into the site from the west and southbound left-turns exiting the site to the east will be provided a refuge from the through traffic along Mesa Drive.

11.0 PEDESTRIAN, BICYCLE, AND TRANSIT DISCUSSION

11.1 Pedestrian Infrastructure

As discussed in *Section 5.2*, contiguous and non-contiguous sidewalks are provided along College Boulevard, Mesa Drive, Rancho Del Oro Park Drive and Avenida De La Plata, within the study area.

No deficiencies such as obstructions or missing sidewalk were identified on Mesa Drive, in either direction from the Project access point, nor College Boulevard, which provides connections to the transit stops (discussed below) located near the Project site.

11.2 Bicycle Infrastructure

As discussed in *Section 5.3*, there are Class II bike lanes in both directions on Mesa Drive and College Boulevard, within the study area. No other bicycle facilities provided along the street segments within the study area.

Per the current City of Oceanside Circulation Element, there are no additional new or upgraded bicycle facilities planned within the Project vicinity.

11.3 Transit Stops & Routes

As noted in *Section 5.4*, transit service is provided to the area by NCTD Route 315 which traverses College Boulevard and provides stops near the Project site at the intersection of College Boulevard / Mesa Drive. There are no other existing transit lines or stops within ½ mile of the Project site and no planned new services were identified.

The following amenities are provided at the bus stops nearest to the project site:

- NE of College Blvd / Mesa Dr (Route 315 northbound) – Bus Stop/Route Signage
- SW of College Blvd / Mesa Dr (Route 315 southbound) – Bus Stop/Route Signage

12.0 SUMMARY AND CONCLUSIONS

12.1 LTA Summary

12.1.1 *Vehicle Improvements*

Per the City of Oceanside thresholds and the analysis methodology presented in this report, the effects of Project-related traffic do not indicate the need for roadway improvements within the study area. No roadway improvements are required or proposed.

12.1.2 *Pedestrian, Bicycle, or Transit Improvements*

No pedestrian or bicycle deficiencies were identified in the Project area. The nearby transit stops in both directions of travel provide for bus stop and route signage. No other amenities are provided.

TRANSPORTATION VMT ANALYSIS

SUNRISE OF OCEANSIDE

Oceanside, California

October 14, 2020

1.0 INTRODUCTION

Linscott, Law & Greenspan, Engineers (LLG) has prepared this Transportation Vehicle Miles Travelled (VMT) analysis for the Sunrise of Oceanside project (hereby referred to as the “Project”). The Project proposes to develop 95 assisted-living housing units at a site located at 4700 Mesa Drive in the City of Oceanside.

Figure 1-1 shows the Project vicinity and *Figure 1-2* illustrates, in more detail, the site location.

2.0 CEQA VMT SCREENING PROCESS

2.1 VMT Background

In compliance with Senate Bill 743 (SB 743) and the City of Oceanside draft *Traffic Impact Analysis Guidelines for Vehicle Miles Traveled (VMT) and Level of Service Assessment* (July 2020), a project is required to evaluate transportation impacts under the California Environmental Quality Act (CEQA) using a Vehicle Miles Traveled (VMT) metric, pursuant to guidance from the Governor's Office of Planning and Research (OPR) in December 2018 (*Technical Advisory on Evaluating Transportation Impacts in CEQA*).

VMT refers to the distance a vehicle travels from each origin to destination.

2.2 Technical Methodology

SB 743 allows for some projects that support VMT reduction to qualify as screened out. If a project is screened out it has VMT reducing characteristics and is assumed to decrease VMT. Screened out projects do not have to complete a VMT analysis under CEQA.

The projects listed in *Table 2-1*, on the following page, are presumed to be VMT-reducing projects. The projects listed, from the City's guidelines (Table 2), are either locally serving or considered to be VMT-reducing based on substantial evidence provided by the OPR Technical Advisory Committee supporting SB 743 implementation.

2.3 VMT Assessment

The City screening criteria presented in *Table 2-1* show that screened out land uses include Assisted Living Facilities, such as the Project, which proposes a 95-unit assisted living facility.

Based on the Project's characteristics it is presumed to have a less than significant VMT impact and is screened out from performing VMT analysis.

**TABLE 2-1
SCREENED OUT PROJECTS**

Project Type
Projects located in a Transit Priority Areas (TPA) or Smart Growth Opportunity Area as identified in the most recent SANDAG San Diego Forward Regional Plan and is consistent with the General Plan at the time of project application. ^{a, b}
Projects located in a low-VMT generating area identified on the most recent SANDAG SB 743 VMT Screening map
Locally serving K-12 schools
Day care centers
Local parks
Locally serving retail uses less than 50,000 square feet, including: gas stations, banks, restaurants, grocery stores, and shopping centers
Community institutions (Public libraries, fire stations, local government)
Locally serving hotels (e.g. non-destination hotels, non-regionally serving)
Student housing projects on or adjacent to college campuses
Local serving community colleges that are consistent with the assumptions noted in the most recent SANDAG Regional Transportation Plan/Sustainable Communities Strategy
Affordable housing projects ^c
Assisted living facilities
Senior housing (as defined by HUD)
Transit projects
Bike projects
Pedestrian projects
Safety improvement projects (e.g. RRFBs and high visibility crosswalks at uncontrolled locations, pedestrian count down timers, additionally projects identified through the Highway Safety Improvement Program)
Safe Routes to School
Projects generating less than 110 daily vehicle trips (if consistent or inconsistent with adopted General Plan)

Source: City of Oceanside. *Traffic Impact Analysis Guidelines for Vehicle Miles Traveled (VMT) and Level of Service Assessment*, Table 2. July 2020.

Footnotes:

- a. Projects located in a TPA must be able to access the transit station within a ½ mile walking distance or 6 minute walk continuously without discontinuity of sidewalk or obstructions to the route. Qualifying transit stops means a site containing an existing rail transit station served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods (OPR, 2017). A high-quality transit corridor may also be considered if a corridor with fixed route bus service has service intervals no longer than 15 minutes during peak commute hours (OPR, 2017).
- b. Smart Growth Opportunity Area Map is provided in Appendix B of the City’s guidelines. The most recent version available shall be used.
- c. If a project is a mix of affordable housing and market rate housing or unscreened use, only the affordable housing component would qualify as screened out. Additionally, any removal of affordable housing automatically requires CEQA VMT analysis.

CITY OF OCEANSIDE ROADWAY CLASSIFICATION TABLE

**TABLE 3-3
CIRCULATION ELEMENT ROADWAY CLASSIFICATION LOS & CAPACITY**

Class	Lanes	Cross Section ¹	Level of Service				
			A	B	C	D	E
Expressway	6	102/160 122/200	30,000	42,000	60,000	70,000	80,000
Expressway	4	102/160 122/200	25,000	35,000	50,000	55,000	60,000
Prime Arterial	6	104/124	25,000	35,000	50,000	55,000	60,000
6-Lane Major Arterial	6	104/124	20,000	28,000	40,000	45,000	50,000
5-Lane Major Arterial ²	5	102/122	17,500	24,500	35,000	40,000	45,000
4-Lane Major Arterial	4	80/100	15,000	21,000	30,000	35,000	40,000
Secondary Collector (4 lanes with 2-way left-turn lane)	4	64/84	10,000	14,000	20,000	25,000	30,000
Secondary Collector (4 lanes without 2-way left-turn lane, with left turn pockets)	4	54/74, 60/80	9,000	13,000	18,000	22,000	25,000
Collector (commercial fronting, 2-lanes with 2-way left-turn lane) ³	2	50/70	5,000	7,000	10,000	13,000	15,000
Collector (residential streets in the Circulation Element or industrial fronting)	2	40/60, 50/70	4,000	5,500	7,500	9,000	10,000
Local Street (residential streets NOT in the Circulation Element)	2	36/56, 40/60	—	—	2,200	—	—

Footnotes:

1. Cross sections are listed as curb-to-curb width/total right-of-way width, in feet.
2. Vandegrift Boulevard and El Camino Real are the only Circulation Element roadways designated as a 5-lane Major Arterial. It is not intended that other roadways be built to 5-lane Major Arterial standards.
3. This capacity will also be assumed for a two-lane one-way collector.

HCM 6th Ctrl Delay	52.2
HCM 6th LOS	D

Notes

- User approved pedestrian interval to be less than phase max green.
- * HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.

APPENDIX D

INDIVIDUAL CUMULATIVE PROJECTS ASSIGNMENTS

PROPOSED PROJECT

The proposed Rancho Del Oro Village XII project consists of approximately 303 residential dwelling units consisting of a variety of multi-family product types. The project is located at the northwest quadrant of the College Boulevard and Old Grove Road, in the City of Oceanside.

Project Trip Generation

To determine the trips forecast to be generated by the proposed project, *April 2002 SANDAG Trip Generation* rates were utilized in accordance with the City of Oceanside and SANTEC/ITE Traffic Study Guidelines. The SANDAG (*Not So*) *Brief Guide of Vehicular Traffic Generation Rates for the San Diego Region* (April 2002) showing the trip generation rate for the proposed land use is provided in Appendix D. Table 6 summarizes the project trip generation rates and forecast project generated trips.

As summarized in Table 6, the proposed project is forecast to generate approximately 2,424 trips per day, which includes approximately 193 a.m. peak hour trips and approximately 242 p.m. peak hour trips.

**Table 6
Proposed Project Trip Generation Rates**

Land Use	Daily Rate	AM Peak Hour			PM Peak Hour		
		Total (% of Daily)	In (% AM)	Out (% AM)	Total (% of Daily)	In (% PM)	Out (% PM)
Trip Generation Rates							
Residential- Condominium (6-20 DU/acre)	8/DU	8%	20%	80%	10%	70%	30%
Forecast Project Generated Trips							
Residential- Condominium (303 DU)	2,424	193	39	154	242	169	73

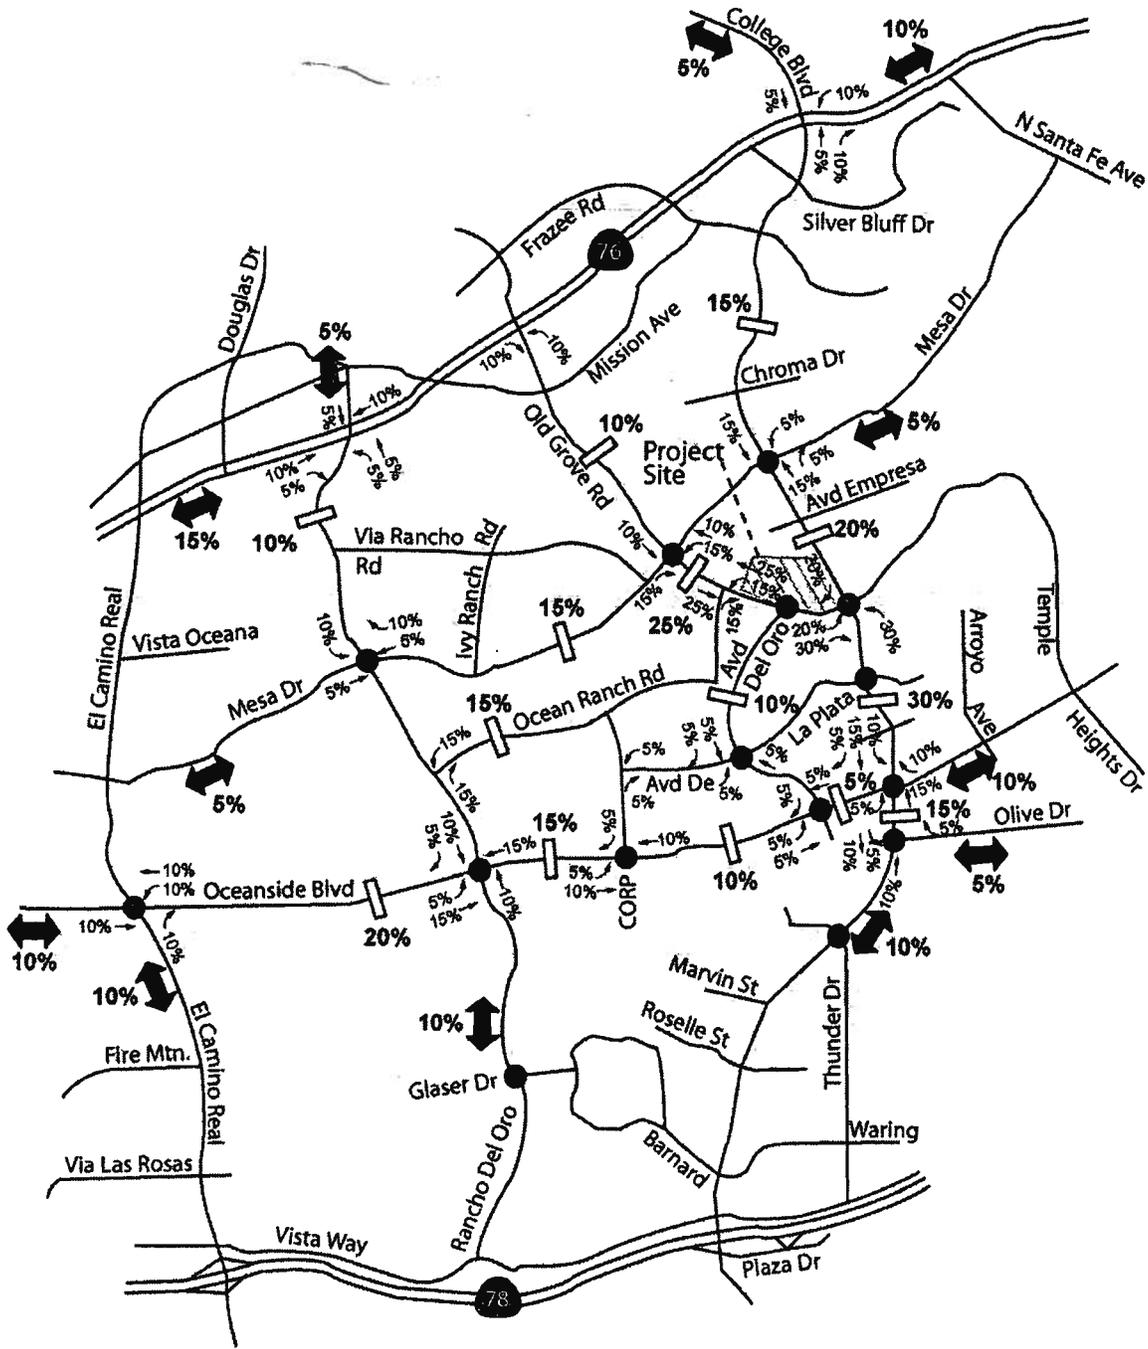

Source: SANDAG, "Not So Brief Guide", April 2002.

Note: DU = dwelling unit.

Project Trip Distribution

Project traffic was distributed on the roadway network based on discussions with City staff and a Select Zone Assignment model run conducted by SANDAG for the proposed project, using the SANDAG Year 2030 North County Subarea Model (Series 11).

The Select Zone Assignment model used for this project was run under Horizon Year 2030 forecast conditions, which assumes that Rancho Del Oro Drive (RDO)/SR-78 interchange is in place. Exhibit 6 illustrates the forecast trip distribution for the proposed project.

Intersection Summary

HCM 6th Ctrl Delay	10.0
HCM 6th LOS	B

Notes

* HCM 6th computational engine requires equal clearance times for the phases crossing the barrier.
