Site History:			

The Proen Products Company facility operated from approximately 1952 to June 1990. Proen manufactured fertilizer tablets, lawn sprinklers, and lawn edgers at the Site. The fertilizer tablet manufacturing operation was separate from the metal parts manufacturing operation. The fertilizer process consisted of combining fertilizer ingredients (e.g., urea) in a mixer and baking the combined ingredients in an oven. Metal sprinkler parts were manufactured from zinc alloy in the die casting operation and the metal parts cut in the punch press were cut from brass, aluminum, or steel sheets of metal. Solvents used for degreasing metal parts included 1,1,1-trichloroethane (1,1,1-TCA, reportedly used from 1982 to 1990) and trichloroethene (TCE, reportedly used before 1982). Carbon tetrachloride was reportedly used for degreasing during the earlier years of the facility's operation. Additional chemicals used at the facility reportedly included isopropanol, petroleum naphtha, dipping enamels, copper sulfate, Hampene 200 (EDTA), manganese sulfate, zinc sulfate, and Houghto-Safe 620 (ethylene glycol). Wastes removed and disposed off site by licensed contractors included paint thinner, waste paints, and waste 1,1,1-TCA. Soil and groundwater investigations conducted in 1990 and 1991 revealed that elevated concentrations of

<b>Map Key</b>	<b>Number of Records</b>	<b>Direction</b>	<b>Distance (mi/ft)</b>	<b>Elev/Diff (ft)</b>	<b>Site</b>	<b>DB</b>
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

VOCs were present in collected soil samples. The highest concentrations of VOCs and TPH-g and BTEX were detected in the hand augered boring SB -1 near the sump:TCE up to 2.2 mg/kg in soil and up to 230 mg/l in GW sample. Five MWs installed along the site perimeter (corner of 9th and Grayson St) in August 1990 to monitor the VOCs plume; additional eight wells installed in 1992. The highest concentrations of TCE was detected in MW-2 located downgradient from the Site. 1.4 mg/l of TCE (April 1991). Add site investigation and removal of the sump, soil excavation and removal of approx.. 1,130 tons in May 1992; TCE was detected in soil up to 17 mg/kg and in water up to 230 mg/l. After the cleanup TCE concentrations were reduced to 0.68 mg/kg and 0.068 mg/l. Annual monitoring until 2009.

**Site History:**

The Proen Products Company facility operated from approximately 1952 to June 1990. Proen manufactured fertilizer tablets, lawn sprinklers, and lawn edgers at the Site. The fertilizer tablet manufacturing operation was separate from the metal parts manufacturing operation. The fertilizer process consisted of combining fertilizer ingredients (e.g., urea) in a mixer and baking the combined ingredients in an oven. Metal sprinkler parts were manufactured from zinc alloy in the die casting operation and the metal parts cut in the punch press were cut from brass, aluminum, or steel sheets of metal. Solvents used for degreasing metal parts included 1,1,1-trichloroethane (1,1,1-TCA, reportedly used from 1982 to 1990) and trichloroethene (TCE, reportedly used before 1982). Carbon tetrachloride was reportedly used for degreasing during the earlier years of the facility's operation. Additional chemicals used at the facility reportedly included isopropanol, petroleum naphtha, dipping enamels, copper sulfate, Hampene 200 (EDTA), manganese sulfate, zinc sulfate, and Houghto-Safe 620 (ethylene glycol). Wastes removed and disposed off site by licensed contractors included paint thinner, waste paints, and waste 1,1,1-TCA. Soil and groundwater investigations conducted in 1990 and 1991 revealed that elevated concentrations of VOCs were present in collected soil samples. The highest concentrations of VOCs and TPH-g and BTEX were detected in the hand augered boring SB -1 near the sump: TCE up to 2.2 mg/kg in soil and up to 230 mg/l in GW sample. Five MWs installed along the site perimeter (corner of 9th and Grayson St) in August 1990 to monitor the VOCs plume; additional eight wells installed in 1992. The highest concentrations of TCE was detected in MW-2 located downgradient from the Site. 1.4 mg/l of TCE (April 1991). Add site investigation and removal of the sump, soil excavation and removal of approx. 1,130 tons in May 1992; TCE was detected in soil up to 17 mg/kg and in water up to 230 mg/l. After the cleanup TCE concentrations were reduced to 0.68 mg/kg and 0.068 mg/l. Annual monitoring until 2009.

RB Case No: 01-2329 CUF Case: NO  
Local Case No: Case Worker: PF  
Begin Date: 7/8/1998 File Location: Local Agency  
Stop Method: Change Operating Procedures, Other Means  
Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2)  
Local Agency:  
Potential COC: Gasoline, Trichloroethylene (TCE)  
Potential Media of Concern: Other Groundwater (uses other than drinking water)  
How Discovered: Site Assessment/Site Investigation, Tank Closure  
How Discovered Description:  
Stop Description:  
Calwater Watershed Name: Bay Bridges - Berkeley (203.30)  
DWR GW Subbasin Name: Santa Clara Valley - East Bay Plain (2-009.04)  
Disadvantaged Community:  
Site History:

The Proen Products Company facility operated from approximately 1952 to June 1990, manufacturing fertilizer tablets, lawn sprinklers, and lawn edgers at the Site. The fertilizer process used ingredients including urea. Solvents used for degreasing metal parts included 1,1,1-trichloroethane (1,1,1-TCA, reportedly used from 1982 to 1990) and trichloroethene (TCE, reportedly used before 1982). Carbon tetrachloride was reportedly used for degreasing during the earlier years of the facility's operation. Additional chemicals used at the facility reportedly included isopropanol, petroleum naphtha, dipping enamels, copper sulfate, Hampene 200 (EDTA), manganese sulfate, zinc sulfate, and Houghto-Safe 620 (ethylene glycol). Soil and groundwater investigations conducted in 1990 and 1991 revealed that elevated concentrations of VOCs were present in collected soil samples. The highest concentrations of VOCs and TPH-g and BTEX were detected in the hand augered boring SB -1 near the sump:TCE up to 2.2 mg/kg in soil and up to 230 mg/l in GW sample. Five MWs installed along the site perimeter (corner of 9th and Grayson St) in August 1990 to monitor the VOCs plume; additional eight wells installed in 1992. The highest concentrations of TCE was detected in MW-2 located downgradient from the Site. 1.4 mg/l of TCE (April 1991). Add site investigation and removal of the sump, soil excavation and removal of approx.. 1,130 tons in May 1992; TCE was detected in soil up to 17 mg/kg and in water up to 230 mg/l. After the cleanup TCE concentrations were reduced to 0.68 mg/kg and 0.068 mg/l.

 CASEWORKER: PHYLLIS FLACK  
 BERKELEY, CITY OF - CASE #: 01-2329

**Site History:**

The Proen Products Company facility operated from approximately 1952 to June 1990, manufacturing fertilizer tablets, lawn sprinklers, and lawn edgers at the Site. The fertilizer process used ingredients including urea. Solvents used for degreasing metal parts included 1,1,1-trichloroethane (1,1,1-TCA, reportedly used from 1982 to 1990) and trichloroethene (TCE, reportedly used before 1982). Carbon tetrachloride was reportedly used for degreasing during the earlier years of the facility's operation. Additional chemicals used at the facility reportedly included isopropanol, petroleum naphtha, dipping enamels, copper sulfate, Hampene 200 (EDTA), manganese sulfate, zinc sulfate, and Houghto-Safe 620 (ethylene glycol).

Soil and groundwater investigations conducted in 1990 and 1991 revealed that elevated concentrations of VOCs were present in collected soil samples. The highest concentrations of VOCs and TPH-g and BTEX were detected in the hand augered boring SB -1 near the sump:TCE up to 2.2 mg/kg in soil and up to 230 mg/l in GW sample. Five MWs installed along the site perimeter (corner of 9th and Grayson St) in August 1990 to monitor the VOCs plume; additional eight wells installed in 1992. The highest concentrations of TCE was detected in MW-2 located downgradient from the Site. 1.4 mg/l of TCE (April 1991). Add site investigation and removal of the sump, soil excavation and removal of approx. 1,130 tons in May 1992; TCE was detected in soil up to 17 mg/kg and in water up to 230 mg/l. After the cleanup TCE concentrations were reduced to 0.68 mg/kg and 0.068 mg/l.

**Site History:**

The Hall-Scott Motor Car Company began manufacturing automobiles at the Berkeley Industrial Court/Temescal Business Center property in 1910. This same company overhauled and rebuilt large marine engines at the property during World War II in support of the war effort. Limited information is available regarding site uses between 1945 and 1967. In 1967, Airco purchased the property for storage of old equipment, spent dolomite, and neutralized chemical metal etching waste prior to disposal. In 1978, the site was divided into two properties: 2850 7th Street and 729 Heinz Avenue. The Berkeley Industrial Court, a multi-tenant rental complex, currently occupies the 729 Heinz Avenue property. The Temescal Business Center, a multi-tenant industrial complex, currently occupies the 2850 7th Street property.

From 1968 to 1990, solvent-based adhesives were manufactured at the National Starch and Chemical Company's 742 Grayson Street facility using toluene, hexane, acetone, and 1,1,1-TCA. Beginning in 1980, water-based adhesive was manufactured at the 800 Grayson Street property, which was previously used as a lumber distribution warehouse.

**Area Link:** [http://www.envirostor.dtsc.ca.gov/public/profile\\_report?global\\_id=60000399&ou\\_id=1000280&hideside=True&printerfriendly=True](http://www.envirostor.dtsc.ca.gov/public/profile_report?global_id=60000399&ou_id=1000280&hideside=True&printerfriendly=True)  
**Sub Area:**  
**Sub Area Link:**  
**Document Type:** Site Screening  
**Date Completed:** 2/15/2005  
**Comments:** Site screening determined that PCBs, lead, nickel, and petroleum hydrocarbons had previously been detected in soil samples collected from the Berkeley Industrial Court site. The City of Berkeley has overseen sampling at the site in an effort to characterize chlorinated solvent occurrence in area groundwater.

**Title:** Site Screening

METALS, POLYCHLORINATED BIPHENYLS (PCBS), UNCATEGORIZED, VOLATILE ORGANICS (8260B VOCS)

**Site History:**

The Hall-Scott Motor Car Company began manufacturing automobiles at the site in 1910. This same company overhauled and rebuilt large marine engines at the site during World War II in support of the war effort. Limited information is available regarding site uses between 1945 and 1967. In 1967, Airco purchased the property for storage of old equipment, spent dolomite, and neutralized chemical metal etching waste prior to disposal. In 1978, the site was divided into two properties: 2850 7th Street and 729 Heinz Avenue. The Berkeley Industrial Court, a multi-tenant rental complex, currently occupies the 729 Heinz Avenue site. This site is a part of the Heinz/Grayson Plume (EnviroStor ID 60000399).

<b>Comments:</b>	Site screening determined that PCBs, lead, nickel, and petroleum hydrocarbons had previously been detected in soil samples collected from the site. The City of Berkeley has overseen sampling at the site in an effort to characterize chlorinated solvent occurrence in area groundwater. See Heinz/Grayson Plume Site - Temescal Business Center for site screening dated 2/15/2005

<b>Site History:</b>			

Prior to 1978, this site was operated by Airco Inc, now referred to as Temescal Business Center. The portion of the site referred to as the Berkeley Industrial Complex was historically utilized as a storage area for old equipment, spent dolomite, and neutralized chemical etching waste before disposal. Prior to Airco's ownership of the site, Hall Scott Marine Engine Foundry occupied the site before and during World War II. They produced engines for naval ships during World War II; however, the exact scope of their activities is unknown. The site currently supports three buildings and a nursery on an approximately 1.5-acre parcel. Berkeley Industrial Complex is presently a multi-tenant industrial complex. The main tenants include Magic Garden Nursery, Goldberg Cabinets, and Artworks Foundry. Seventy-five percent of the property is utilized to grow, store and sell plants, shrubs, and trees. The site is bounded by Temescal Business Center to the east, and National Starch and Chemical to the north. A Southern Pacific rail spur forms the northwest boundary. Since 1978 there has been no chemical storage or heavy industrial practices that would lend to the potential for soil and/or groundwater impaction. Last updated: 1/21/2020

Talked to Berkeley Industrial Complex (BIC) RP, Piero Mussi. He is planning to have consultants work on the GW assessment workplan starting next month, and requested extension due to COVID-19 issues to deliver the workplan to the RWB in October. He is planning to utilize all the available GW wells at the property.

**Site History:**

The Hall-Scott Motor Car Company began manufacturing automobiles at the site in 1910. This same company overhauled and rebuilt large marine engines at the site during World War II in support of the war effort. Limited information is available regarding site uses between 1945 and 1967. In 1967, Airco purchased the property for storage of old equipment, spent dolomite, and neutralized chemical metal etching waste prior to disposal. In 1978, the site was divided into two properties: 2850 7th Street and 729 Heinz Avenue. The Berkeley Industrial Court, a multi-tenant rental complex, currently occupies the 729 Heinz Avenue site. This site is a part of the Heinz/Grayson Plume (EnviroStor ID 60000399).

**Area Link:**  
**Sub Area:**  
**Sub Area Link:**  
**Document Type:** \* Discovery  
**Date Completed:** 9/26/1981  
**Comments:** Facility identified from EPA Superfund list.

**Title:** Site Screening  
**Title Link:**

**Area Name:**  
**Area Link:**  
**Sub Area:**  
**Sub Area Link:**  
**Document Type:** Correspondence  
**Date Completed:** 2/15/2005  
**Comments:** Site screening determined that PCBs, lead, nickel, and petroleum hydrocarbons had previously been detected in soil samples collected from the site. The City of Berkeley has overseen sampling at the site in an effort to characterize chlorinated solvent occurrence in area groundwater. See Heinz/Grayson Plume Site - Temescal Business Center for site screening dated 2/15/2005

TPH-MOTOR OIL, TPH-DIESEL

**Site History:**

The property was occupied by a vegetable oil company from 1916 to 1984. In 1985, Wareham Development purchased the site and found tanks and sumps containing nickel, acids, oil and grease, and retrograde lab chemicals.

TPH-MOTOR OIL, TPH-DIESEL

#### Site History:

The property was occupied by a vegetable oil company from 1916 to 1984. In 1985, Wareham Development purchased the site and found tanks and sumps containing nickel, acids, oil and grease, and retrograde lab chemicals.

1,2-DICHLOROETHYLENE (CIS), TETRACHLOROETHYLENE (PCE), TRICHLOROETHYLENE (TCE)

**Site History:**

The Hall-Scott Motor Car Company began manufacturing automobiles at the site in 1910. This same company overhauled and rebuilt large marine engines at the site during World War II in support of the war effort. Limited information is available regarding site uses between 1945 and 1967. In 1967, Aircro purchased the property for storage of old equipment, spent dolomite, and neutralized chemical metal etching waste prior to disposal. In 1978, the site was divided into two properties: 2850 7th Street and 729 Heinz Avenue. The Temescal Business Center, a multi-tenant industrial complex, currently occupies the 2850 7th Street site. This site is a part of the Heinz/Grayson Plume (EnviroStor ID 60000399).

**Site History:**

The Hall-Scott Motor Car Company began manufacturing automobiles at the site in 1910. This same company overhauled and rebuilt large marine engines at the site during World War II in support of the war effort. Limited information is available regarding site uses between 1945 and 1967. In 1967, Airco purchased the property for storage of old equipment, spent dolomite, and neutralized chemical metal etching waste prior to disposal. In 1978, the site was divided into two properties: 2850 7th Street and 729 Heinz Avenue. The Temescal Business Center, a multi-tenant industrial complex, currently occupies the 2850 7th Street site. This site is a part of the Heinz/Grayson Plume (EnviroStor ID 60000399).

Site. In May, 1992 a 550-gal underground storage tank (UST) was removed. The soil was screened for TPH-g (total petroleum hydrocarbons as gasoline) and benzene, a petroleum contaminant. No groundwater was tested. Subsequent soil testing found no TPH-g or related compounds above regulatory limits in on Site soil samples.

California. A single structure (Cooper Hawkins) sits in the western part of the parcel, while the fully asphalt-paved yard comprises the balance of the Site. In May, 1992 a 550-gal underground storage tank (UST) was removed. The soil was screened for TPH-g (total petroleum hydrocarbons as gasoline) and benzene, a petroleum contaminant. No groundwater was tested. Subsequent soil testing found no TPH-g or related compounds above regulatory limits in on Site soil samples.

**LUST Cleanup Sites from GeoTracker Cleanup Sites Data Download - Facilities Detail**

RB Case No: 01-0557 Potential COC: Acetone, Other Solvent or Non-Petroleum Hydrocarbon  
 Local Case No: 01-0557 How Discovered: Tank Closure  
 Begin Date: 4/18/1990 Stop Method: Close and Remove Tank  
 Lead Agency: SAN FRANCISCO BAY RWQCB (REGION 2) Stop Description: Close UST  
 Local Agency: BERKELEY, CITY OF Case Worker: UUU  
 CUF Case: NO File Location: Local Agency  
 Potential Media of Concern: Other Groundwater (uses other than drinking water), Soil  
 How Discovered Description: Tank Closure/removal  
 Calwater Watershed Name: Bay Bridges - Berkeley (203.30)  
 DWR GW Subbasin Name: Santa Clara Valley - East Bay Plain (2-009.04)  
 Disadvantaged Community:  
 Site History:

6,000-gal underground single walled tank was removed in October 1990. The UST consisted of two compartments: one contained ethyl alcohol, the other propanol. Soil samples contained small amounts of DCA and TCA; no petroleum hydrocarbons detected. A groundwater sample collected from the excavation contained up to 19 ug/l of TCE, 5,000 ug/l of TCA, and other VOCs. The groundwater was pumped out prior to backfilling the excavation. A soil and GW investigation conducted in June 1992 included installation of 3 monitoring wells. Only one soil sample contained 160,000 ug/l acetone. The source of the acetone was unknown. GW samples from the MWs revealed chlorinated solvent contamination and some TPH contamination in all wells. Two additional MWs installed in 1993 (one off-site); four soil borings advanced as well. TCE was reported in the grab water sample from B-4 up to 2,800 ug/l. The review of the environmental data for the neighboring properties may suggest that there are other additional off-site sources of the VOCs not associated w/the former Emerald Packaging onsite operations. Site Closure Summary dated July 17, 1999 approved by the Berkeley TMD and NFA letter from the Water Board dated October 19, 2000.

<b>Cleanup Oversight Agencies:</b>	SAN FRANCISCO BAY RWQCB (REGION 2) (LEAD) - CASE #: 01-0557 CASEWORKER: Regional Water Board BERKELEY, CITY OF - CASE #: 01-0557 CASEWORKER: GEOFFERY FIEDLER		
<b>Gndwater Monitoring Freque:</b>			
<b>Designated Beneficial Use Desc:</b>	Municipal and Domestic Supply, Agricultural Supply, Industrial Service Supply, Industrial Process Supply		
<b>Site History:</b>			

6,000-gal underground single walled tank was removed in October 1990. The UST consisted of two compartments: one contained ethyl alcohol, the other propanol. Soil samples contained small amounts of DCA and TCA; no petroleum hydrocarbons detected. A groundwater sample collected from the excavation contained up to 19 ug/l of TCE, 5,000 ug/l of TCA, and other VOCs. The groundwater was pumped out prior to backfilling the excavation. A soil and GW investigation conducted in June 1992 included installation of 3 monitoring wells. Only one soil sample contained 160,000 ug/l acetone. The source of the acetone was unknown. GW samples from the MWs revealed chlorinated solvent contamination and some TPH contamination in all wells. Two additional MWs installed in 1993 (one off-site); four soil borings advanced as well. TCE was reported in the grab water sample from B-4 up to 2,800 ug/l. The review of the environmental data for the neighboring properties may suggest that there are other additional off-site sources of the VOCs not associated w/the former Emerald Packaging onsite operations. Site Closure Summary dated July 17, 1999 approved by the Berkeley TMD and NFA letter from the Water Board dated October 19, 2000.

**CUF Case:** NO  
**Case Worker:** UUU  
**File Location:**

The Vegetable Oil Company, a subsidiary of the Stauffer Oil Company, began construction of the earliest known buildings to occupy the site in 1916-17. All that remains of these earliest structures are the Copra Building (currently owned by Garr Land & Resources, Inc.) And the smokestack of the recently demolished Boiler Room Building. Durkee Famous Foods (hereinafter referred to as Durkee), a subsidiary of Glidden Foods, purchased the site and buildings in 1929. Durkee expanded many of existing buildings and constructed the distinctive Art Deco "Durkee Building", 800 Heinz Avenue, on the northern boundary of the site. Additional expansion of the plant occurred following World War II when building permits were issued for the hydrogenation building, cooling tower deodorizer, storage/ office area, lighted electric sign, and the experimental kitchen. These developments allowed Durkee to describe the plant as the largest refinery of edible oil on the Pacific Coast. Durkee ceased refinery operations at the plant in 1974. The plant lay dormant until November 1976 when Agricom, Inc., an oil processing firm from San Francisco, purchased the property and buildings. Agricom continued to refine vegetable oil at the plant until declaring bankruptcy in 1984. During Agricom's occupation, small portions of the site were rented for other light industrial uses, small businesses, and live/work uses. This included the leasing of the 700 Heinz Avenue property to EBWRI in 1983. In 1985, Wareham Development (Seventh Street Properties II) purchased the site from Charles Duck, the bankruptcy trustee for Agricom, Inc. This purchase included hazardous waste and hazardous materials (caustic liquids) contained in open tanks and sumps on the site, as well as asbestos sidings and coverings on the old Warehouse Building. In June 1985, Wareham Development began the demolition of the buildings on the 2900 Fifth Street property, whereas the 700 Heinz Avenue property was still under lease to EBWRI, who continued to occupy the site until August 1986. In July 1985, the Environmental Health Division of the City of Berkeley, Department of Health and Human Services discovered a black-colored, caustic (pH = 12.6), oily liquid seeping into the drainage swale located on the adjacent SP right-of-way. After a more detailed inspection of the site, the City of Berkeley contacted the California Department of Health Services (DOHS) to further assist in site investigations. The DOHS issued an Order to Post and Fence the area (29 July 1985) and the City of Berkeley issued an Abatement Order (30 July 1985) requiring that the demolition of the site structures be delayed until contamination characterization work be implemented and a remedial action plan developed. The DOHS issued a Determination of Imminent or Substantial Endangerment and Remedial Action Order (August 1985) after inventorying waste products on the 2900 Fifth Street property and sampling the black liquid found in the drainage swale. The order required the removal of the black liquid, a detailed site characterization clean-up of the waste products identified on the 2900 Fifth Street property, and an investigation into the source of the black liquid. The black liquid was removed from the SP drainage swale in September 1985. However, within two weeks after removal of the liquid, the seepage reappeared in the drainage swale. In response to the DOHS orders, Wareham Development and EBWRI each retained consultants to perform site investigation studies, and clean-up of the 2900 Fifth Street property was initiated.

**Site History:**

Case history for Preliminary Endangerment Assessment can be found at DTSC, with electronic information captured in DTSC's EnviroStor database. Petroleum corrective actions assigned to the City of Berkeley, Toxics Management Division, by DTSC. Property has been used commercially or industrially as a paint formulator. Commercial/industrial activity at this site spans approximately 100 years. Corrective actions implemented to remove impacted soil. Added observation well in excavation area and added oxygen releasing material to soil/groundwater interface to enhance petroleum degradation in groundwater. Fourth quarter monitoring results due in July 2013. Continued improvement of groundwater suggests corrective action completion has met goals and should be considered for no further action.

**LUST Sites from GeoTracker Search - Cleanup Action Report (as of Feb 24, 2020)**

<b>Action Type:</b>	EXCAVATION	<b>Begin Date:</b>	1/10/2012
<b>Phase:</b>	Soil, Water	<b>End Date:</b>	6/21/2013
<b>Contaminant Mass Removed:</b>	4,720 Pounds		
<b>Description:</b>	Approximately 5900 tons of soil were excavated during corrective action implementation. The estimated pounds removed is based on an estimated average soil concentration of 400 mg/kg. Groundwater treated to enhance natural degradation through the addition of an oxygen-releasing material, thus determining amount of contaminant removed from groundwater is not possible.

**CUF Case:** NO  
**Potential Media of Concern:** Soil  
**How Discovered Description:**  
**Calwater Watershed Name:** Bay Bridges - Berkeley (203.30)  
**DWR GW Subbasin Name:** Santa Clara Valley - East Bay Plain (2-009.04)  
**Disadvantaged Community:**  
**Site History:**

**Potential COC:** Waste Oil / Motor / Hydraulic / Lubricating  
**How Discovered:** Tank Closure  
**Stop Method:** Close and Remove Tank  
**Case Worker:** BAC  
**File Location:** Regional Board

The Business Center is situated in the large, historic industrial building bounded by San Pablo Ave to the east, 9th to the west, Heinz Ave on the north, and Ashby Ave to the south. Originally built by H.W. Heinz in 1927-28 as a cannery for his now-famous ketchup and relish products. The facility had two (2) underground storage tanks (USTs) for refueling their trucks (15,000-gal each, diesel fuel). The USTs were located on the western / northern side of the parcel (see basic site map in SAMPLING RESULTS FROM TANK REMOVAL documents dated 12/11/1987, page 4 of 22). Location of former USTs has been paved over with asphalt for driveway and parking. The previous owner had converted the function of the building to a retail office center and has been used as such by the current owner since the change in ownership in 1984 when the Heinz company moved operations to Tracy, California. Tanks were removed in 1987, with soil excavation and off-site removal. In Sept 1993 TCE (Trichloroethene) was reported above (2,200 ug/L in MW-3) regulatory limits for drinking water (5 ug/L) and is suspect of an off-site source. With monitoring wells and analytical testing, request for case closure came in Jan 1995 based on non-detect levels of petroleum hydrocarbon compounds. Case Closure by the City of Berkeley, Toxics Management Division (TMD) in June of 2013 transferred the case to the Regional Water Board (SF Bay Region 2). There is a likely orphaned TCE groundwater plume at the Site whose source has not been defined as of 9/1/16. The nature and extent of this orphaned groundwater has not been defined to date. This TCE detection in the sole onsite monitoring well exceeds the drinking water MCL. The Berkeley Business Center waste oil tank is not known to be the source of this TCE contamination at the Site.

**Desc:**

**Site History:**

The Business Center is situated in the large, historic industrial building bounded by San Pablo Ave to the east, 9th to the west, Heinz Ave on the north, and Ashby Ave to the south. Originally built by H.W. Heinz in 1927-28 as a cannery for his now-famous ketchup and relish products. The facility had two (2) underground storage tanks (USTs) for refueling their trucks (15,000-gal each, diesel fuel). The USTs were located on the western / northern side of the parcel (see basic site map in SAMPLING RESULTS FROM TANK REMOVAL documents dated 12/11/1987, page 4 of 22). Location of former USTs has been paved over with asphalt for driveway and parking. The previous owner had converted the function of the building to a retail office center and has been used as such by the current owner since the change in ownership in 1984 when the Heinz company moved operations to Tracy, California. Tanks were removed in 1987, with soil excavation and off-site removal. In Sept 1993 TCE (Trichloroethene) was reported above (2,200 ug/L in MW-3) regulatory limits for drinking water (5 ug/L) and is suspect of an off-site source. With monitoring wells and analytical testing, request for case closure came in Jan 1995 based on non-detect levels of petroleum hydrocarbon compounds. Case Closure by the City of Berkeley, Toxics Management Division (TMD) in June of 2013 transferred the case to the Regional Water Board (SF Bay Region 2). There is a likely orphaned TCE groundwater plume at the Site whose source has not been defined as of 9/1/16. The nature and extent of this orphaned groundwater has not been defined to date. This TCE detection in the sole onsite monitoring well exceeds the drinking water MCL. The Berkeley Business Center waste oil tank is not known to be the source of this TCE contamination at the Site.

<b>Site History:</b>			

The former Veriflo facility operated as a metals-finishing plant from 1968 to 1994. The metals finishing process included five sumps which stored acidic

<b>Map Key</b>	<b>Number of Records</b>	<b>Direction</b>	<b>Distance (mi/ft)</b>	<b>Elev/Diff (ft)</b>	<b>Site</b>	<b>DB</b>
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

solutions. Volatile organic compounds (VOCs) were also used at the Site and were stored in aboveground storage tanks (ASTs). After Veriflo discontinued operations in 1994, soil and groundwater investigations revealed chemical impacts to soil and groundwater beneath the Site. Results of the investigations indicated elevated concentrations of zinc, nickel, and chrome in shallow soils beneath the former chrome plating room. Elevated levels of VOCs, mostly TCE, were also detected in soil and groundwater sampled near the drain pipes, Sump F located in the pre-treatment room, and the sanitary sewer. In October and November 1996, soils were excavated to remove the heavy metals- and VOC-impacted soils outside the building. The plant building was demolished in 1999. Additional site investigation followed - 13 groundwater MWs were installed at and offsite. Onsite MWs decommissioned due to construction of a new building. There are four remaining offsite wells. Groundwater remediation 2000-2004: injections of potassium permanganate and later implementation of EISB to stimulate degradation of VOCs. Site redeveloped w/new building in 2005. The new building foundation is equipped with a vapor barrier. A passive vent system beneath the slab-on-grade foundation of the new building was installed as an additional mitigation measure to protect on-site occupants from potential intrusion by VOCs vapor. In July 2015 groundwater sampling event of the existing four offsite wells: MW-7, MW-8, MW-10, and MW-11. In general, concentrations of TCE and VC have decreased significantly.

**Site History:**

The former Veriflo facility operated as a metals-finishing plant from 1968 to 1994. The metals finishing process included five sumps which stored acidic solutions. Volatile organic compounds (VOCs) were also used at the Site and were stored in aboveground storage tanks (ASTs). After Veriflo discontinued operations in 1994, soil and groundwater investigations revealed chemical impacts to soil and groundwater beneath the Site. Results of the investigations indicated elevated concentrations of zinc, nickel, and chrome in shallow soils beneath the former chrome plating room. Elevated levels of VOCs, mostly TCE, were also detected in soil and groundwater sampled near the drain pipes, Sump F located in the pre-treatment room, and the sanitary sewer. In October and November 1996, soils were excavated to remove the heavy metals- and VOC-impacted soils outside the building. The plant building was demolished in 1999. Additional site investigation followed - 13 groundwater MWs were installed at and offsite. Onsite MWs decommissioned due to construction of a new building. There are four remaining offsite wells. Groundwater remediation 2000-2004: injections of potassium permanganate and later implementation of EISB to stimulate degradation of VOCs. Site redeveloped w/new building in 2005. The new building foundation is equipped with a vapor barrier. A passive vent system beneath the slab-on-grade foundation of the new building was installed as an additional mitigation measure to protect on-site occupants from potential intrusion by VOCs vapor. In July 2015 groundwater sampling event of the existing four offsite wells: MW-7, MW-8, MW-10, and MW-11. In general, concentrations of TCE and VC have decreased significantly.

Tel. conversation w/consultant TRC re WB comments on the 2015 Addendum to RBCA Report. The site does not meet the criteria for low-threat closure at this time. Although the Addendum follows our guidance document, the Assessment Tool for Closure of Low-Threat Chlorinated Solvent Sites (2009), it does not provide adequate responses to some criteria. An email w/summary of comments will be prepared shortly.

**Site History:**

The site is located between Channing Way to the north and Bancroft Way to the south on San Pablo Avenue. Julius Chase purchased the property in 1939 from Joe Long and operated an auto wrecking yard on site to approximately 1980. The property originally extended from San Pablo to 10th Street and consisted of a storage lot and a brick building used to support auto wrecking activities. The western half of the lot was sold and residential homes were built on 10th Street. In 1967 or 1968, most of the site was paved except, two small areas located west along the fence separating residential homes and this site. Soil contamination is located in an unpaved section of approximately ten (10) feet by forty (40) feet, along the property's western boundary adjacent to residential homes' backyards. An A&W Root Beer restaurant was built on the eastern portion of the lot and operated until 1980. In 1980, the restaurant closed, and the eastern parcel was divided into two lots, Ali Baba restaurant and Greg's Auto Repair (in the brick building) which occupied the northern and southern portion respectively. The auto repair shop operated under Greg's Auto Repair from 1980 to March 1983. Under different ownership, the shop operated from 1983 to 1988 under various names such as Mitchell's Auto Repair, Peter's Automotive Service, Peter Mitchell Imports and Berkeley Auto Repair. The property was sold in April 1999. Currently, there are no business activities at the site. The site is fenced.

**Site History:**

The former Berkeley Pump site is located in a commercial and industrial area in the city of Berkeley. The original building no longer exists. Presently, Bancroft Plaza, a commercial office complex at the corner of Bancroft way and Sixth Street is on the former Berkeley Pump site. The site included a former coal storage area, 2 pump test pits, a former chemical manufacturing area, a machine shop, an abandoned building formerly used as a macaroni factory and a former greenhouse area. A Phase II Environmental Site Assessment was conducted by Kennedy/Jenks/Chilton in 1988. As part of that assessment the excavation in the machine shop building was expanded. Approximately 35 cubic yards of soil was excavated. Following the excavation, five soil samples from walls and floor of the new excavation were collected. The samples were analyzed for petroleum hydrocarbon and volatile organic compounds (VOCs). No petroleum hydrocarbons or VOCs were detected in any of the five soil samples. The excavated soils were aerated onsite and one soil sample was collected. No VOCs or petroleum hydrocarbons were detected. 0.3 ug/l of kerosene was detected in a groundwater sample collected from a supply well in the machine shop. The San Francisco Bay Regional Water Quality Control Board's Environmental Screening Level (ESL) for kerosene is 100 ug/l. Two monitoring wells (MW-1, MW-2) were constructed and samples were collected in May and August 1988. No petroleum hydrocarbons or VOCs were detected. A year of quarterly groundwater sampling was conducted at the Berkeley Pump site starting in March 1989 to provide the City of Berkeley with data set to evaluate groundwater quality. Four monitoring events detected 0.36 mg/l to 2.3 mg/l of kerosene in MW-2. 1.2 to 1.3 mg/l of motor oil were detected in MW-1. Seven ug/l of xylene was detected in a well MW-2 in March 1989. However, no xylene has been found in subsequent monitoring. The City of Berkeley approved the site closure for 829 Bancroft Way in May 1990.

TETRACHLOROETHYLENE (PCE)

**Site History:**

The Site is approximately 4,617.47 square feet (0.106 acres) in size and is bordered by Chaucer Street and Channing Way. The property was formerly occupied by a dry-cleaning establishment between the 1970's and the 1990's. The property is currently developed with a mixed use residential/commercial building, garden/yard area, and a concrete paved walkway. The western-most portion of the building consisted of a newly remodeled occupied commercial space with an open floor plan and a bathroom. The eastern portion of the building is occupied as a two units family residence. To the east of the building is the garden/yard area. A concrete paved walkway is located along the northern side of the Property. This walkway overlies a sewer line which originates in the commercial space and runs to the north where it makes a 90 degree corner where it heads to the sewer main located under the sidewalk along San Pablo Avenue.

**Status:** ACTIVE

Site History:

The Navy used this site as a steel forge facility. Improvements consisted of administrative buildings, furnace control houses, water tank and tower, water cooling tower, electric crane, several oil tanks, transformer building, oil pump house, and forgings building. Site records show the presence of three 22,000 gallon above-ground tanks, and three 32,000 gallon underground tanks, which were supposedly removed in the early 1960s. Site was purchased by Barker Machinery in 1978, and two small USTs were installed, one for motor oil, and one for waste oil. Site was then purchased in 1987 by Mr. Tim Southwick for use as a car dealership. Soil samples were conducted in five areas, two of which are cause for concern. The area where the above ground tanks were situated shows very high levels of fuel contamination, and the southeast portion of the lot shows elevated levels of petroleum, PCBs and chromium.

<b>Disadvantaged Community:</b>			
<b>Site History:</b>			

The site is an active service station dispensing 76•-branded gasoline located on the northeast corner of the intersection of Ashby Avenue and 7th Street in Berkeley, Alameda County, California. The Alameda County Assessor's Parcel Number is 53•-1641•-9•5. The site is located on 0.18•-acre lot approximately 3,000 feet west of the San Francisco Bay. The service station is located at an elevation of approximately 30 feet above mean sea level. The site is located in a mixed commercial and industrial area and is bounded on the south by Ashby Avenue (State Highway 13), to the north by Potter Street, to the east by a commercial facility (tub makers), and to the west by 7th Street (beyond which is the former Whole Earth Access/West Marine facility). The station facilities include four 12,000•-gallon underground storage tanks (USTs) containing regular unleaded, mid•]grade unleaded, premium unleaded, and diesel fuels; three fuel dispenser islands; and a small cashier•fs kiosk located in the central portion of the site. Other site features include a treatment system compound containing an air•-sparging/dual-phase extraction system. A service station reportedly has occupied the site for at least 50 years. Southland Corporation (Southland) reportedly acquired the property in 1982, and installed the existing four 12,000•-gallon, single•]walled, fiberglass USTs at the site in 1983 for storage of regular, unleaded, premium unleaded, and diesel fuel and operated a Super 7 Service Station at the

site. It is not known if USTs were present on site during previous service station operations. In 1986, ownership of the property was transferred to Mr. Keet Neerhan, who subsequently sold the property to Mr. Marvin Goodwyn in 1987. Mr. Goodwyn then leased the property to Union Oil Company of California (Unocal) in 1987. Unocal operated a service station at the site until 1997. Tosco Marketing Company (now ConocoPhillips) assumed the existing site lease in 1997, and currently operates the 76 service station. In 2003, the property was sold to Mr. Ronald Siegel. Mark Bare will provide summarizing our current knowledge of the nature, extent, potential source of this orphaned groundwater and likely soil vapor plume.

<b>Disadvantaged Community:</b>			
<b>Site History:</b>			

The subject property (Site) is a commercially-zoned parcel situate in an area of longstanding commercial and industrial activity on Fourth Street, within West Berkeley, California. A large industrial warehouse resides on the Site, with access from Fourth Street. Neighboring warehouses about the Site and buildings such as a wine distributor and a specialized commercial coating company to the north. Various industrial metals businesses have used the Site including metal fabricators, machine shops, foundries, laboratories and paint manufacturing. Other previous business have included pesticide companies who used thinners (solvents) with their pesticide mixes. These solvents included Pentachlorophenol (PCP) mixed with kerosene (a petroleum distillate) and diesel fuel. Use of heavy metals, hydrocarbon fuels, oils, lubricant, degreasers, cutting fluids, solvents, acids, bases, and dyes / paint intermediates were found at previous on-Site business operations. Known and documented releases of these and other hydrocarbon compounds have been documented from the Site. Local soil and groundwater on Site has been impacted from vertical and lateral migration of these hydrocarbon and related contaminants. detected concentrations of hydrocarbons include total petroleum hydrocarbons as diesel (TPHd) up to 39,000 ug/L in groundwater (Environmental Screening Levels for TPHd in groundwater are 200 ug/L). PCP was identified up to 460 mg/kg in on-Site soil samples. TPH as kerosene (jet fuel) was found up to 6,000 mg/kg in soil and TPH up to 10,000 mg/kg in soil.

**Potential Media Affected:** OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER), SOIL  
**Potential Contamin of Concern:**

CHLORDANE, PENTACHLOROPHENOL, PESTICIDES - WASTES FROM PRODUCTION

**Site History:**

A succession of pesticide companies including, Able Termite Control Company, Able Termite Control, Inc., Terminix Norcal, and its successor Terminix International occupied this property. These companies mixed pesticides with thinners. Peerless Electric Company bought the property from Terminix in 1981. Soil investigation conducted in 1983 identified aldrin, heptachlor, and chlordane at hazardous levels and the underlying groundwater detected chlordane and heptachlor.

DTSC reviewed data reports and in February 2008, concurred with the RPs recommendation to cap the embankment on the west side of the property with concrete and requested a VCA for property owner to prepare and record deed restrictions for the areas of the site where contamination remains above residential standards. However, Proponent declined to enter into VCA.

**Status:** INACTIVE - ACTION REQUIRED  
**Program Type:** VOLUNTARY CLEANUP  
**CalEnviroScreen Score:** 76-80%  
**Summary Link:** [http://www.envirostor.dtsc.ca.gov/public/profile\\_report?global\\_id=01730067](http://www.envirostor.dtsc.ca.gov/public/profile_report?global_id=01730067)

<b>Comments:</b>		Decertified Site. Completed PEA. In 1994, the SF Regional Water Quality Control Board (RWQCB) and the City of Berkeley required additional soil and groundwater investigations. Soil and groundwater sampling report submitted to the City of Berkeley indicated that the soil was impacted by total petroleum extractable hydrocarbon (1 to 6,100 mg/kg), pentachlorophenol (PCB) (1,300 to 130,000 ug/kg), dieldrin (6 to 2,800 ug/kg), and chlordane (36 ug/kg). Levels of chlordane, dieldrin, and PCP in the soil exceed residential screening values. Groundwater samples collected detected PCP (130 to 52,000 ug/l), total petroleum extractable hydrocarbons (440 to 1,700,000 ug/l), chlordane (56 to 620 ug/l), dieldrin (2.5 ug/l), and heptachlor epoxide.

CHLORDANE, PENTACHLOROPHENOL, PESTICIDES - WASTES FROM PRODUCTION

#### Site History:

A succession of pesticide companies including, Able Termite Control Company, Able Termite Control, Inc., Terminix Norcal, and its successor Terminix International occupied this property. These companies mixed pesticides with thinners. Peerless Electric Company bought the property from Terminix in 1981. Soil investigation conducted in 1983 identified aldrin, heptachlor, and chlordane at hazardous levels and the underlying groundwater detected chlordane and heptachlor.

DTSC reviewed data reports and in February 2008, concurred with the RPs recommendation to cap the embankment on the west side of the property with concrete and requested a VCA for property owner to prepare and record deed restrictions for the areas of the site where contamination remains above residential standards. However, Proponent declined to enter into VCA.

**Status:** INACTIVE - ACTION REQUIRED  
**A2 Program Type:** VOLUNTARY CLEANUP

**Calwater Watershed Name:** Bay Bridges - Berkeley (203.30)  
**DWR GW Subbasin Name:** Santa Clara Valley - East Bay Plain (2-009.04)  
**Disadvantaged Community:**  
**Site History:**

This Site consists of 2.94 acres. The Department of Defense (DoD) owned the Site from 1942 to 1963. The property was utilized for heavy forging operations (I.e., American Forge Company 1942-1945). Ships and Power Equipment Corporation used the property for general storage from 1950 and 1958. American Tractor and Equipment Corp. occupied the site between 1958 and 1963 for forging productions. Ownership transferred from DoD to Leaner Investment Company in September 1963. The Site is currently occupied by Weatherford BMW as an automobile dealership. DTSC was lead agency for site cleanup case 80000154 (Envirostor database) and cleanup status is no further action as of November 27, 2013.

**Title Description Comments:**

I spoke again to Andy Lukachevski because no one had called last week to establish a person of contact. He informed me that Jenn Bishop would be our person that would fill that role. She was involved with the remodeling of the buildings and grounds. I added her to the Admin/contacts page and attached some photos.

TPH-DIESEL, TPH-GAS

**Site History:**

Davlin Coatings, Inc operates at the property which is located in an industrial and commercial area in Berkeley. The site is paved and consisted of two buildings a warehouse and building for manufacturing. The property is owned by Pervo Paint Company. There were two releases of chemical that occurred in 1988 during a removal of an underground storage tanks and during the Loma Prieta Quake. In April 1988 seven underground storage tanks (USTs) were removed from the site and replaced with one 10,000 gallon UST. The tanks had been used to store various solvents used in the manufacture of paint. During the removal of the tanks a small amount of water drained from the pipelines. This water was disposed of along with the sludge from the remaining tanks. After cleanup water samples were non-detect for xylene, TPH diesel, ethybenzene. 0.9 ppm of TPH gas was detected in water. The before cleanup soil samples were 40ppm for TPH gas, and 43 ppm for TPH diesel. No after cleanup soil samples were taken. The tanks excavation was over-excavated and backfilled with clean soil. During the 1989 Loma Prieta earthquake five cans containing a total of twenty gallons of paint containing toluene fell from a pallet and spilled open. The next day the spill was cleaned up. In April 2003 the 10,000 gallon underground storage tank was removed from the site. The tank contained methanol.

**Site History:**

In 1979, Aquatic Park Science Center, LLC acquired parcel 56-1952-2-1 parcel and leased it to various tenants including paint, forensic product testing and biotechnology companies. DTSC requested that a Preliminary Endangerment Assessment (PEA) be conducted for the parcel based on its use. The 8.2-acre parcel was divided into four areas (Area 1, 2, 3 and 4) during the PEA investigation. Areas 1,2 and 4 cover about 5.7 acres and Area 3 is about 2.5 acres. Based on the findings of the PEA, DTSC issued a no further action letter for Areas 1,2 and 3. Aquatic Park Science Center Site includes Areas 1,2 and 4 and has a separate EnviroStor entry.

Triangle Coatings Site includes Area 3 where TPH contamination was found during the PEA investigation. Triangle Coatings occupied Area 3 until 1984 and manufactured paints using solvents, pigments, and resin. The PEA report recommends removal of TPH contaminated soil at two locations in Area 3. The TPH contamination appears to be associated with the former underground storage tanks that were removed from this area in 1999 under City's oversight. DTSC referred the TPH contamination in Area 3 to the City of Berkeley, Toxics Management Division.

**Site History:**

Nady Systems currently assembles and customizes wireless communication systems at the site. The property is situated on 2.26 acres and houses a warehouse and two-story office building in a commercial and industrial area. The property was part of the San Francisco Bay until 1947, when it was gradually filled through the 1950's. Dymo Industries first operated at the site from 1963 until 1979, manufacturing label tape and label punchers. Dymo built an office and warehouse and also installed three underground storage tanks used for storing methyl isobutyl ketone (MIBK) and methyl ethyl ketone (MEK). In 1979, Mike Roberts Color Productions (MRCP) bought the property and used it for color printing, lithography, and off-set printing operations, until March 1990, when it sold the property to Nady Systems. MRCP stored waste printing ink, solvent cleaning compounds and color pigments in 55 gallon drums behind the warehouse without secondary containment. The drums subsequently leaked and contaminated surface run-off flowing out of the drum storage area and into a ditch along the west property boundary. In 1989, 2,700 gallons of waste materials were removed from 55 gallon drums on site. Contaminated soil was also excavated along the western side of the property and three leaking underground storage tanks (UST) were removed. Follow-up sampling revealed MIBK, benzene, 1,3 dichlorobenzene and 1,4-dichlorobenzene in soil. This suggested that contaminants such as heavy oil, grease and/or coal tar derivatives probably originated from the landfill, and that the MIBK may have acted as a solvent, dissolving the heavy hydrocarbons and transporting them to the groundwater. The Alameda County Health Agency, Department of Environmental Health (County), who remains the lead agency, oversaw the UST removal and remediation activities. Soil vapor and groundwater extraction systems were installed and operated from 1990 to 1991. Based upon sampling results obtained during the extraction treatment operations, it was recommended that Nady Systems be allowed to abandon the soil vapor extraction system and wells. A Work Plan and request for "No Further Action" Alternative Compliance Points Monitoring Program was submitted to the County in October 1994. Sampling analyses determined that the benzene was within the range of values detected at the site, and the chlorobenzene concentration was below the method detection limit. It was concluded that the contaminated plume had stabilized and that contaminant levels were within the guidelines set forth in the approved Work Plan. In January 1995, as a condition for "no further action status", a Deed Notice was recorded, that addressed conditions for excavated soil, groundwater and construction activities. In December 1996, The County notified Nady Systems that a case closure summary was being prepared for the site but that submittal of a modified Deed Notice was required. On September 23, 2003. The County confirmed the site is still active, pending the submittal of a revised Deed Notice that includes provisions for shallow groundwater and preparation of a Health & Safety Plan and Risk Assessment under certain conditions.

**Site History:**

The University of California Warehouse site consists of three multi-parcel properties in the area where the cities of Berkeley, Oakland and Emeryville meet. The warehouse property at 6701 San Pablo Avenue, Berkeley, houses a shipping and receiving warehouse, printing facilities, laboratories, offices and an art store. The other two properties are west of the warehouse. One of these is used for parking by workers at the warehouse. The other property is leased to other businesses. The University has owned and used the warehouse property since 1979. The property was formerly occupied by: the Smith-Corona Marchant Corporation (SCM) Data Processing Division; the Marchant Corporation, which manufactured calculating machines; storage and drayage businesses; metal fabrication operations; a neon sign factory; and a storage yard for painting contractors.

<b>Date Completed:</b>		2/21/2017				
<b>Comments:</b>		CEQA Notice of Preparation (NOP) for Marchant Corporation. DTSC determined that the proposed project would not conflict with the remedial design and previous indoor air investigations.				
		The remedy is in the basement boiler room and would not be affected by the proposed project, which consists of converting previous office spaces to Medical Practitioner use on "portions of the first and second floors, plus all of				

<b>Map Key</b>	<b>Number of Records</b>	<b>Direction</b>	<b>Distance (mi/ft)</b>	<b>Elev/Diff (ft)</b>	<b>Site</b>	<b>DB</b>
					<p>the third and fourth floors" (delineated in the Project Plans on the City of Berkeley website: <a href="http://www.ci.berkeley.ca.us/uploadedFiles/Planning_and_Development/Level_3_-_ZAB/2017-02-09_ZAB_ATT2_3100%20San%20Pablo_Project%20Plans.pdf">http://www.ci.berkeley.ca.us/uploadedFiles/Planning_and_Development/Level_3_-_ZAB/2017-02-09_ZAB_ATT2_3100%20San%20Pablo_Project%20Plans.pdf</a>).</p> <p>The NOP anticipates that the project will not have significant impacts related to Hazards and Hazardous Materials and, therefore, analysis of Hazards and Hazardous Materials will be included in the IS checklist as an appendix, but not studied and analyzed at length in the DEIR. However, the NOP anticipates that Air Quality will be analyzed in the DEIR.</p> <p>According to the State Clearinghouse memo, DTSC must respond to the Lead Agency if "review of the Notice of Preparation (NOP) indicates that DTSC has discretionary approval power over the project as a Responsible Agency". Based on review, DTSC does not need to act as a Responsible Agency and provide discretionary review/approval of the DEIR, so DTSC response to the NOP (due by 2/24/207) is not required.</p>

<b>Document Type:</b>					Removal Action Workplan w/ESD	
<b>Date Completed:</b>					2/12/2015	
<b>Comments:</b>					The Addendum to the Removal Action Workplan provides basic background information for the site, describes the findings of additional investigations conducted in 2012 and 2013, evaluates remedial alternatives based on the results of those investigations, and selects DPE and ISCO with ozone and hydrogen peroxide as the modified remedy for consideration. The DPE remediation activities will be conducted over the course of several years until CVOC mass removal rates become asymptotic.

**Cleanup Status:** CERTIFIED O&M - LAND USE RESTRICTIONS ONLY AS OF 2/17/2017

**Cleanup Oversight Agencies:** DTSC - SITE CLEANUP PROGRAM - LEAD AGENCY

**Site Type:** STATE RESPONSE OR NPL

**Office:** CLEANUP BERKELEY

**Past Use that Caused Contam:** RECYCLING - DRUM

**Potential Media Affected:** OTHER GROUNDWATER AFFECTED (USES OTHER THAN DRINKING WATER)

**Potential Contaminant of Concern:**

DIELDRIN, METALS, POLYCHLORINATED BIPHENYLS (PCBS), VOLATILE ORGANICS (8260B VOCS)

**Site History:**

A drum recycling facility operated at the site from 1939 to 1991. Drum recycling activities resulted in contamination of soil and groundwater with volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, polychlorinated biphenyls (PCBs), lead, and arsenic. A Remedial Action Plan (RAP) was prepared to clean up the site under the regulatory oversight of DTSC which was implemented by 2003. The elements of the RAP included 1) building demolition, decontamination and disposal, 2) excavation and off-site disposal of contaminated soils 3) backfilling the area with clean soils 4) groundwater treatment by pumping and in situ treatment of groundwater with hydrogen releasing compounds and excavation of a contaminant source area below the water table 5) groundwater monitoring and 6) placement of a Land Use Covenant on a small portion of the former Site to prohibit groundwater usage. In 2017, DTSC approved discontinuation of groundwater monitoring and terminated operations and maintenance requirements. Documentation is provided to DTSC on an annual basis which ensures that groundwater is not being used at the site in accordance with the Land Use Covenant. TP 8-21-18

**Status:** CERTIFIED O&M - LAND USE RESTRICTIONS ONLY - LAND USE RESTRICTIONS

**Program Type:** STATE RESPONSE

**CalEnviroScreen Score:** 66-70%

<b>Sub Area:</b>						
<b>Sub Area Link:</b>						
<b>Document Type:</b>					Monitoring Report	
<b>Date Completed:</b>					9/22/2011	
<b>Comments:</b>					The report included responses to DTSC's comment letter dated June 23, 2011. In response the those comments the report included information related to boring logs, monitoring well construction details, and groundwater elevation data and gradient evaluations; the responses that were provided were adequate. The results of the groundwater monitoring program were consistent with previous results which showed low levels of chlorinated volatile organic compounds (VOCs) in shallow groundwater; the groundwater data also showed that natural biodegradation of those chlorinated VOCs is occurring since breakdown compounds are present.

<b>Document Type:</b>					Monitoring Report	
<b>Date Completed:</b>					1/24/2013	
<b>Comments:</b>					The schedule for collection of groundwater samples has been reduced to bi-annual (once every other year). Two groundwater monitoring wells were sampled this period however DTSC recently approved decommissioning of one well (MW-10) so only one well will continue to be monitored. The samples were tested for chlorinated solvents and only vinyl chloride exceeded the drinking water Maximum Contaminant Level (MCL) of 0.5 micrograms per liter (ug/L). The next sampling event is scheduled to occur by January 31, 2013.

<b>Potential Contamin of Concern:</b>			

DIELDRIN, METALS, POLYCHLORINATED BIPHENYLS (PCBS), VOLATILE ORGANICS (8260B VOCS)

**Site History:**

A drum recycling facility operated at the site from 1939 to 1991. Drum recycling activities resulted in contamination of soil and groundwater with volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCs), pesticides, polychlorinated biphenyls (PCBs), lead, and arsenic. A Remedial Action Plan (RAP) was prepared to clean up the site under the regulatory oversight of DTSC which was implemented by 2003. The elements of the RAP included 1) building demolition, decontamination and disposal, 2) excavation and off-site disposal of contaminated soils 3) backfilling the area with clean soils 4) groundwater treatment by pumping and in situ treatment of groundwater with hydrogen releasing compounds and excavation of a contaminant source area below the water table 5) groundwater monitoring and 6) placement of a Land Use Covenant on a small portion of the former Site to prohibit groundwater usage. In 2017, DTSC approved discontinuation of groundwater monitoring and terminated operations and maintenance requirements. Documentation is provided to DTSC on an annual basis which ensures that groundwater is not being used at the site in accordance with the Land Use

<b>Document Type:</b>					Monitoring Report	
<b>Date Completed:</b>					1/24/2013	
<b>Comments:</b>					The schedule for collection of groundwater samples has been reduced to bi-annual (once every other year). Two groundwater monitoring wells were sampled this period however DTSC recently approved decommissioning of one well (MW-10) so only one well will continue to be monitored. The samples were tested for chlorinated solvents and only vinyl chloride exceeded the drinking water Maximum Contaminant Level (MCL) of 0.5 micrograms per liter (ug/L). The next sampling event is scheduled to occur by January 31, 2013.

<b>Sub Area:</b>						
<b>Sub Area Link:</b>						
<b>Document Type:</b>		Monitoring Report				
<b>Date Completed:</b>		9/22/2011				
<b>Comments:</b>		The report included responses to DTSC's comment letter dated June 23, 2011. In response the those comments the report included information related to boring logs, monitoring well construction details, and groundwater elevation data and gradient evaluations; the responses that were provided were adequate. The results of the groundwater monitoring program were consistent with previous results which showed low levels of chlorinated volatile organic compounds (VOCs) in shallow groundwater; the groundwater data also showed that natural biodegradation of those chlorinated VOCs is occurring since breakdown compounds are present.

<b>Document Type:</b>					Monitoring Report	
<b>Date Completed:</b>					6/23/2011	
<b>Comments:</b>					The monitoring results are consistent with historical results. DTSC's Geological Services Unit requested that copies of the monitoring wells borehole logs should be submitted and a compilation of all groundwater gradient evaluations should be completed. DTSC requested that information to be submitted in the next monitoring report.

<b>Sub Area:</b>						
<b>Sub Area Link:</b>						
<b>Document Type:</b>					Monitoring Report	
<b>Date Completed:</b>					5/1/2013	
<b>Comments:</b>					The groundwater monitoring is conducted on a biennial schedule (one sampling event every 2 years). There is only 1 monitoring well that is sampled and tested; a low concentration of vinyl chloride was detected. The vinyl chloride is a biodegradation breakdown product of the former chlorinated solvent plume in groundwater at the Site.

<b>Date Completed:</b>		10/26/2011				
<b>Comments:</b>		Approval of the Removal Action Completion and Third Quarter 2010 Groundwater Monitoring Report for the site located at 1171 Ocean Avenue in Oakland, California. The report documents the implementation of the Removal Action Workplan, which was approved by the Department of Toxic Substance Control in June 2010. The remedy entailed the injection of the in-situ Regeneration compounds RegenOx™ and HRC™. These compounds were advanced into separate areas of the trichloroethylene-dominated plume underlying the site. Following a year of quarterly post injection monitoring a workplan will be developed to propose the additional injections along with additional wells and monitoring analytes indicated by the data reviewed.

<b>Comments:</b>		Based on groundwater, soil, soil gas, and indoor air sampling data collected at the Site, DTSC will not require restrictions on the use of the Site as part of the cleanup. Since in-situ groundwater cleanup is the proposed remedy in the Draft Removal Action Workplan (Draft RAW), access must be provided for implementation (injections) and monitoring of the wells. If conditions at the site change, (i.e. groundwater concentrations rise significantly) DTSC would need to re-evaluate the potential for indoor air effects.

**Site History:**

The Transo/Lacoste Site was the former location of the Transo Envelope Company (Transo) and the Lacoste Meat Company (Lacoste). Transo occupied 1600 64th Street and was an envelope manufacturing facility in the early 1900s. Lacoste occupied 6401 Bay Street and was a slaughter house and meat packing facility in the early 1900s. The City of Emeryville purchased both properties in 1990 as part of the Bay Street-Shellmound Street Extension Project. Both facilities were located at the corner of 64th Street and Bay Street in Emeryville. The two buildings were demolished in February and March 1990 by the City of Emeryville Redevelopment Agency. The City redeveloped the Site as the EmeryBay II Apartments.

<b>Potential Contamin of Concern:</b>			

METALS, PETROLEUM, VOLATILE ORGANICS (8260B VOCS)

**Site History:**

The Site is bounded by the Bay Center Apartments on the north across 64th Street, a theater on the east, a parking lot for the Emery Bay Marketplace on the south, and the Avenue64 multi-family residential development on the west across Christie Avenue. The Site is approximately 1.2 acres and is located in a neighborhood consisting of commercial and residential properties. An approximately 14,400-square foot commercial building and parking lot is located on the 6340 Christie parcel, and an approximately 12,000-square foot commercial building and parking lot is located on the 6390 Christie parcel.

The Site is currently owned by Rockwood Christie LLC and the development manager is TMG Partners. Previous occupants of 6340 Christie Avenue included industrial machinery warehousing in the 1960s and Lerer Brothers Transmission Service from 1980 through 1998. In 1988, a 2,000-gallon gasoline underground storage tank was removed from the southeast corner of the parcel. The former tank is under the jurisdiction of the Alameda County Department of Environmental Health.

Previous occupants in the western portion of the building at 6390 Christie Avenue included a tool warehouse (dates unknown), Sybase (1989 to 1994), and Inter-Tel Technologies (1994 to present). Previous occupants in the eastern portion of the building included a photo lab, an advertising firm, Dictaphone, and a software developer.

Redevelopment plans consist of demolition of the existing structures and removal of all existing pavement, and construction of a new five-story wood-framed building that will cover nearly the total area of the Site. The lowest level will be a subgrade parking garage. The ground level will consist of additional parking, a leasing office, and residential units. Ground-level units will be situated above the subgrade parking level; no residential areas will be situated directly on soil. There will be four levels of residential units above the ground-level floor.

Map Key	Number of Records	Direction	Distance (mi/ft)	Elev/Diff (ft)	Site	DB
---------	-------------------	-----------	------------------	----------------	------	----

Excavation of soil to depths ranging from 11 to 15 feet bgs will be required to construct the subgrade parking garage. The floor of the subgrade parking level will be at approximately 10 feet bgs. The footprint of the subgrade parking level encompasses the majority of the Site. Based on the proposed depth of development and shallow groundwater conditions, the concrete floor slab and subgrade basement walls will have a water-proofing barrier. The lower garage level will be mechanically ventilated.

DTSC provided review and concurrence based on a Memorandum of Agreement with the City of Emeryville.

**Sub Area Link:**  
**Document Type:** Removal Action Completion Report  
**Date Completed:** 6/26/2015  
**Comments:** A total of approximately 42,580 tons of soil and debris fill was disposed off-site. Approximately 17,967 tons of soil and debris excavated from cells designated as Class I were loaded into licensed hazardous waste trucks for transport to and disposal at the Clean Harbors Buttonwillow Landfill in Buttonwillow, California. Approximately 24,613 tons of Class II material was transported to the Waste Management Altamont Landfill facility in Livermore, California for disposal. Soil containing constituents that exceeded the remedial goals was excavated and disposed off-site. Constituents in verification samples collected from soil at the bottom of the excavation and from soil remaining on the perimeter of the Site did not exceed the remedial goals. DTSC concurs with the Conditional No Further Action Issued by the City.

LEAD

**Site History:**

K and S Management Company managed 32 units in a four-plex building located between Hearst and Delaware Street. On June 1983, an inspection of the 32 units was conducted in response to a citizen complaint. Paint chips (lead-based) from water blasting operation prior to repainting had accumulated around the bases of the building. The blasting company removed from all areas where paint chips were present and a few inches of soil to an appropriate landfill. All visible evidence of the blasting was removed.

**Status:** CERTIFIED  
**Program Type:** STATE RESPONSE  
**CalEnviroScreen Score:** 51-55%

LEAD

**Site History:**

K and S Management Company managed 32 units in a four-plex building located between Hearst and Delaware Street. On June 1983, an inspection of the 32 units was conducted in response to a citizen complaint. Paint chips (lead-based) from water blasting operation prior to repainting had accumulated around the bases of the building. The blasting company removed from all areas where paint chips were present and a few inches of soil to an appropriate landfill. All visible evidence of the blasting was removed.

LEAD

**Site History:**

The site was a roadway construction and resurfacing project undertaken by the City of Emeryville as part of the Shellmound/40th Street Overhead project. A new city street was constructed from 64th Street to what is now called Shellmound Way. Historically, the project area was tideland and marshland that was eventually filled in with soil mixed with industrial wastes and various debris.

**Status:** CERTIFIED / OPERATION & MAINTENANCE - LAND USE RESTRICTIONS

<b>Date Completed:</b>			5/2/2018			
<b>Comments:</b>			DTSC staff performed a Site visit on April 18, 2018. There was construction activity on Shellmound Street south of 64th Street related to the Emeryville Marketplace development. The construction activities were being implemented in accordance with a DTSC-approved Soil Management Plan. Minor cracking was observed and the roadway, medians, and sidewalks were in generally good condition. A portion of Shellmound Street has been abandoned and replaced with a section of street that has been realigned to the west. There was no evidence of any activities prohibited by the Land Use Covenant.

<b>Comments:</b>					The Department of Toxic Substances Control (DTSC) has completed a Five-Year Review of the cleanup of contaminated soil at the Bay Street Extension (Site) located at 64TH and Powell in Emeryville, California. DTSC has prepared this five-year report and determined that the cap and land use restrictions continue to be an effective barrier to the contaminated soil and protective of human health and the environment. The public notice is published in Oakland Tribune 9/11/2009.

<b>Document Type:</b>					Land Use Restriction - Site Inspection/Visit	
<b>Date Completed:</b>					4/3/2014	
<b>Comments:</b>					DTSC performed an inspection to verify compliance with the restrictions of the Land Use Covenant that is in place for the site and to check the surface conditions of the roadway the comprises the site. Based on the current site conditions, DTSC concluded that the remedial action remains protective of human health and the environment. Impacted soil remains under the concrete surface, which remains undisturbed. There was no evidence of any activities prohibited by the Land Use Covenant.

**Site History:**

<i>Map Key</i>	<i>Number of Records</i>	<i>Direction</i>	<i>Distance (mi/ft)</i>	<i>Elev/Diff (ft)</i>	<i>Site</i>	<i>DB</i>
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

The approximately 1.2-acre site is bounded by 62nd Street to the north, Doyle Street to the east, 61st Street to the south, and Hollis Street to the west. Most of the site was covered with a building and concrete slab. The rectangular parcel contained one approximately 32,000-square-foot warehouse. Based on the Phase I Environmental Site Assessment (ESA), the site appeared to have been occupied by residential structures in the early 1900s and subsequently was used to manufacture concrete water meter boxes in the mid-1900s. From 1979 to 2000, the site was occupied by the Dutro Company and various other businesses. The Dutro Company used the site for the manufacturing and assembling of hand trucks and dollies. The City took possession of the site in January 2004. In the Phase I ESA, Ninyo & Moore (2002) identified the following areas of environmental concern: a spray booth, compressor and oil storage location, former truck bay, and two former 1,000-gallon underground storage tanks containing gasoline and diesel.

The Phase I ESA reported that both underground tanks were removed from the site in 1990, and received regulatory closure from the Alameda County Department of Environmental Health (Alameda County) in 1998. The Alameda County closure document indicated that trichloroethene (TCE) impacted groundwater was identified within the site boundaries (although no sampling information or analytical data were found during document review, and that further evaluation should be performed to confirm TCE in the groundwater.

DTSC provided review and concurrence based on a Memorandum of Agreement with the City of Emeryville.

The site will be developed into a park; the conceptual design for the park includes a multiuse lawn area in the park center, a basketball court in the northwest corner, an amphitheater in the southwest corner, and a children's play area in the southeast corner.

**Sub Area Link:**  
**Document Type:** Removal Action Completion Report  
**Date Completed:** 1/18/2011  
**Comments:** The remedial plan consisted of excavation and off-site disposal of soil containing constituents of concern exceeding the remedial goals. Several pre-remediation activities were conducted prior to soil excavation, including demolition of site buildings and other infrastructure, additional soil sampling to further refine the areas and depths of soil to be excavated, permitting, and locating utilities.

A total of approximately 1,800 cubic yards of soil classified as Class I non-RCRA hazardous waste were transported to and disposed at WMI's Kettleman Hills Facility located in Kettleman City, California. Approximately 3,400 cubic yards of soil designated as Class II waste was transported to and disposed at the West Contra Costa Sanitary Landfill in Richmond, California.

A total of 225 confirmation samples were collected to verify that cleanup goals were met. Confirmation soil sample results and locations are presented in Tables 8 and 14 and on Figures 4 through 7 of the Completion Report, respectively. Concentrations of constituents of concern were below cleanup goals in all of the final confirmation samples collected on the Site.

**Sub Area Link:**  
**Document Type:** Site Screening  
**Date Completed:** 3/18/1993  
**Comments:** Demolition of this former manufacturer/foundry (reportedly food packaging and historically, steel ball maker\*) was observed. Dismantling of the corrugated steel warehouse with cutting torches left burning pieces on the black ground. However, the contractor's representative Terry Lohman, who reported the above history, claimed there were "no toxics or asbestos" and showed the City demolition permit. She also said a tank had been removed previously under Mr. Krenz. Jennifer Krebs, of Berkeley's Environmental Health group, the responsible agency, was notified of the site visit. The site is roughly 1 acre and is to be used as a parking lot. It is bordered by a BMW car dealership and Whole Earth Access, a retail department store. The domolition is nearly finished, though the lack of sampling of the stained ground raises questions about the adequacy of the cleanup. PNAs, oil and grease, gasoline, and heavy metals should all be sampled for. Berkeley Environmental Health is overseeing the site.

<b>Description of Incident:</b> CALLER STATED THAT THERE WAS A CHEMICAL PROCESS THAT TOOK PLACE DURING 1964-1967 THAT RELEASED HEAVILY CONTAMINATED RINSEWATER HEXAVALENT CHROMIUM. MOST PEOPLE DURING THAT TIME WERE UNAWARE OF THE TOXICITY OF THIS PRODUCT. THE MATERIAL LEFT THE PLANT (WHICH THEN WAS LOCATED IN BERKELEY, CA NEAR THE SAN FRANCISCO BAY) AND INTO A STORM DRAIN AND INTO THE SAN FRANCISCO BAY. IN 1967 THE PLANT CLOSED AND TRANSFERRED TO GRAHAM, TX. THEY WERE THEN ADVISED THAT THEY COULD NOT RELEASE THIS PRODUCT INTO THE WATER ANY LONGER. THEY BUILT A TREATMENT PLANT TO ALLEVIATE THIS RELEASE. THERE WAS A PERIOD DURING THE 1970'S THAT THE TREATMENT SYSTEM FAILED AND THE MATERIAL MADE IT'S WAY INTO THE BRAZOS RIVER IN SAN ANTONIO, TX.

# Appendix: Database Descriptions

Environmental Risk Information Services (ERIS) can search the following databases. The extent of historical information varies with each database and current information is determined by what is publicly available to ERIS at the time of update. ERIS updates databases as set out in ASTM Standard E1527-13, Section 8.1.8 Sources of Standard Source Information:

"Government information from nongovernmental sources may be considered current if the source updates the information at least every 90 days, or, for information that is updated less frequently than quarterly by the government agency, within 90 days of the date the government agency makes the information available to the public."

## Standard Environmental Record Sources

### Federal

#### Facility Response Plan:

FRP

List of facilities that have submitted Facility Response Plans (FRP) to EPA. Facilities that could reasonably be expected to cause "substantial harm" to the environment by discharging oil into or on navigable waters are required to prepare and submit Facility Response Plans (FRPs). Harm is determined based on total oil storage capacity, secondary containment and age of tanks, oil transfer activities, history of discharges, proximity to a public drinking water intake or sensitive environments.

**Government Publication Date: Mar 26, 2020**

#### National Priority List:

NPL

National Priorities List (Superfund)-NPL: EPA's (United States Environmental Protection Agency) list of the most serious uncontrolled or abandoned hazardous waste sites identified for possible long-term remedial action under the Superfund program. The NPL, which EPA is required to update at least once a year, is based primarily on the score a site receives from EPA's Hazard Ranking System. A site must be on the NPL to receive money from the Superfund Trust Fund for remedial action.

**Government Publication Date: Apr 27, 2020**

#### National Priority List - Proposed:

PROPOSED NPL

Includes sites proposed (by the EPA, the state, or concerned citizens) for addition to the NPL due to contamination by hazardous waste and identified by the Environmental Protection Agency (EPA) as a candidate for cleanup because it poses a risk to human health and/or the environment.

**Government Publication Date: Apr 27, 2020**

#### Deleted NPL:

DELETED NPL

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

**Government Publication Date: Apr 27, 2020**

#### SEMS List 8R Active Site Inventory:

SEMS

The Superfund Program has deployed the Superfund Enterprise Management System (SEMS), which integrates multiple legacy systems into a comprehensive tracking and reporting tool. This inventory contains active sites evaluated by the Superfund program that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The Active Site Inventory Report displays site and location information at active SEMS sites. An active site is one at which site assessment, removal, remedial, enforcement, cost recovery, or oversight activities are being planned or conducted.

**Government Publication Date: May 22, 2020**

#### SEMS List 8R Archive Sites:

SEMS ARCHIVE

The Superfund Enterprise Management System (SEMS) Archived Site Inventory displays site and location information at sites archived from SEMS. An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time.

**Government Publication Date: May 22, 2020**

**Inventory of Open Dumps, June 1985:**

ODI

The Resource Conservation and Recovery Act (RCRA) provides for publication of an inventory of open dumps. The Act defines "open dumps" as facilities which do not comply with EPA's "Criteria for Classification of Solid Waste Disposal Facilities and Practices" (40 CFR 257).

**Government Publication Date: Jun 1985**

**Comprehensive Environmental Response, Compensation and Liability Information System -**

CERCLIS

**CERCLIS:**

Superfund is a program administered by the United States Environmental Protection Agency (EPA) to locate, investigate, and clean up the worst hazardous waste sites throughout the United States. CERCLIS is a database of potential and confirmed hazardous waste sites at which the EPA Superfund program has some involvement. It contains sites that are either proposed to be or are on the National Priorities List (NPL) as well as sites that are in the screening and assessment phase for possible inclusion on the NPL. The EPA administers the Superfund program in cooperation with individual states and tribal governments; this database is made available by the EPA.

**Government Publication Date: Oct 25, 2013**

**EPA Report on the Status of Open Dumps on Indian Lands:**

IODI

Public Law 103-399, The Indian Lands Open Dump Cleanup Act of 1994, enacted October 22, 1994, identified congressional concerns that solid waste open dump sites located on American Indian or Alaska Native (AI/AN) lands threaten the health and safety of residents of those lands and contiguous areas. The purpose of the Act is to identify the location of open dumps on Indian lands, assess the relative health and environment hazards posed by those sites, and provide financial and technical assistance to Indian tribal governments to close such dumps in compliance with Federal standards and regulations or standards promulgated by Indian Tribal governments or Alaska Native entities.

**Government Publication Date: Dec 31, 1998**

**CERCLIS - No Further Remedial Action Planned:**

CERCLIS NFRAP

An archived site is one at which EPA has determined that assessment has been completed and no further remedial action is planned under the Superfund program at this time. The Archive designation means that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL). This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

**Government Publication Date: Oct 25, 2013**

**CERCLIS Liens:**

CERCLIS LIENS

A Federal Superfund lien exists at any property where EPA has incurred Superfund costs to address contamination ("Superfund site") and has provided notice of liability to the property owner. A Federal CERCLA ("Superfund") lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date: Jan 30, 2014**

**RCRA CORRACTS-Corrective Action:**

RCRA CORRACTS

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. At these sites, the Corrective Action Program ensures that cleanups occur. EPA and state regulators work with facilities and communities to design remedies based on the contamination, geology, and anticipated use unique to each site.

**Government Publication Date: May 4, 2020**

**RCRA non-CORRACTS TSD Facilities:**

RCRA TSD

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. This database includes Non-Corrective Action sites listed as treatment, storage and/or disposal facilities of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA).

**Government Publication Date: May 4, 2020**

**RCRA Generator List:**

RCRA LQG

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Large Quantity Generators (LQGs) generate 1,000 kilograms per month or more of hazardous waste or more than one kilogram per month of acutely hazardous waste.

**Government Publication Date: May 4, 2020**

**RCRA Small Quantity Generators List:**

[RCRA SQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Small Quantity Generators (SQGs) generate more than 100 kilograms, but less than 1,000 kilograms, of hazardous waste per month.

**Government Publication Date: May 4, 2020**

**RCRA Conditionally Exempt and Very Small Quantity Generators List:**

[RCRA CESQG](#)

RCRA Info is the EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Conditionally Exempt and Very Small Quantity Generators (VSQG and CESQG) generate 100 kilograms or less per month of hazardous waste, or one kilogram or less per month of acutely hazardous waste. Additionally, VSQG and CESQG may not accumulate more than 1,000 kilograms of hazardous waste at any time.

**Government Publication Date: May 4, 2020**

**RCRA Non-Generators:**

[RCRA NON GEN](#)

RCRA Info is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRA Info replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS) and the Biennial Reporting System (BRS). A hazardous waste generator is any person or site whose processes and actions create hazardous waste (see 40 CFR 260.10). Non-Generators do not presently generate hazardous waste.

**Government Publication Date: May 4, 2020**

**Federal Engineering Controls-ECs:**

[FED ENG](#)

Engineering controls (ECs) encompass a variety of engineered and constructed physical barriers (e.g., soil capping, sub-surface venting systems, mitigation barriers, fences) to contain and/or prevent exposure to contamination on a property. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date: Feb 26, 2020**

**Federal Institutional Controls- ICs:**

[FED INST](#)

Institutional controls are non-engineered instruments, such as administrative and legal controls, that help minimize the potential for human exposure to contamination and/or protect the integrity of the remedy. Although it is EPA's (United States Environmental Protection Agency) expectation that treatment or engineering controls will be used to address principal threat wastes and that groundwater will be returned to its beneficial use whenever practicable, ICs play an important role in site remedies because they reduce exposure to contamination by limiting land or resource use and guide human behavior at a site.

**Government Publication Date: Feb 26, 2020**

**Emergency Response Notification System:**

[ERNS 1982 TO 1986](#)

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

**Government Publication Date: 1982-1986**

**Emergency Response Notification System:**

[ERNS 1987 TO 1989](#)

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories.

**Government Publication Date: 1987-1989**

**Emergency Response Notification System:**

[ERNS](#)

Database of oil and hazardous substances spill reports controlled by the National Response Center. The primary function of the National Response Center is to serve as the sole national point of contact for reporting oil, chemical, radiological, biological, and etiological discharges into the environment anywhere in the United States and its territories. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date: Nov 25, 2019**

**The Assessment, Cleanup and Redevelopment Exchange System (ACRES) Brownfield Database:**

[FED BROWNFIELDS](#)

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties protects the environment, reduces blight, and takes development pressures off greenspaces and working lands. This database is made available by the United States Environmental Protection Agency (EPA).

**Government Publication Date: Sep 3, 2019**

**FEMA Underground Storage Tank Listing:**

[FEMA UST](#)

The Federal Emergency Management Agency (FEMA) of the Department of Homeland Security maintains a list of FEMA owned underground storage tanks.

**Government Publication Date: Dec 31, 2017**

**Petroleum Refineries:**

[REFN](#)

List of petroleum refineries from the U.S. Energy Information Administration (EIA) Refinery Capacity Report. Includes operating and idle petroleum refineries (including new refineries under construction) and refineries shut down during the previous year located in the 50 States, the District of Columbia, Puerto Rico, the Virgin Islands, Guam, and other U.S. possessions. Survey locations adjusted using public data.

**Government Publication Date: Oct 8, 2019**

**Petroleum Product and Crude Oil Rail Terminals:**

[BULK TERMINAL](#)

List of petroleum product and crude oil rail terminals made available by the U.S. Energy Information Administration (EIA). Includes operable bulk petroleum product terminals located in the 50 States and the District of Columbia with a total bulk shell storage capacity of 50,000 barrels or more, and/or the ability to receive volumes from tanker, barge, or pipeline; also rail terminals handling the loading and unloading of crude oil that were active between 2017 and 2018. Petroleum product terminals comes from the EIA-815 Bulk Terminal and Blender Report, which includes working, shell in operation, and shell idle for several major product groupings. Survey locations adjusted using public data.

**Government Publication Date: Jan 13, 2020**

**LIEN on Property:**

[SEMS LIEN](#)

The EPA Superfund Enterprise Management System (SEMS) provides LIEN information on properties under the EPA Superfund Program.

**Government Publication Date: May 22, 2020**

**Superfund Decision Documents:**

[SUPERFUND ROD](#)

This database contains a listing of decision documents for Superfund sites. Decision documents serve to provide the reasoning for the choice of (or) changes to a Superfund Site cleanup plan. The decision documents include Records of Decision (ROD), ROD Amendments, Explanations of Significant Differences (ESD), along with other associated memos and files. This information is maintained and made available by the US EPA (Environmental Protection Agency).

**Government Publication Date: Apr 27, 2020**

**State**

**State Response Sites:**

[RESPONSE](#)

A list of identified confirmed release sites where the Department of Toxic Substances Control (DTSC) is involved in remediation, either in a lead or oversight capacity. These confirmed release sites are generally high-priority and high potential risk. This database is state equivalent NPL.

**Government Publication Date: Jul 14, 2020**

**EnviroStor Database:**

[ENVIROSTOR](#)

The EnviroStor Data Management System is made available by the Department of Toxic Substances Control (DTSC). Includes Corrective Action sites, Tiered Permit sites, Historical Sites and Evaluation/Investigation sites. This database is state equivalent CERCLIS.

**Government Publication Date: Jul 14, 2020**

**Delisted State Response Sites:**

[DELISTED ENVS](#)

Sites removed from the list of State Response Sites made available by the EnviroStor Data Management System, Department of Toxic Substances Control (DTSC).

**Government Publication Date: Jul 14, 2020**

**Solid Waste Information System (SWIS):**

[SWF/LF](#)

The Solid Waste Information System (SWIS) database made available by the Department of Resources Recycling and Recovery (CalRecycle) contains information on solid waste facilities, operations, and disposal sites throughout the State of California. The types of facilities found in this database include landfills, transfer stations, material recovery facilities, composting sites, transformation facilities, waste tire sites, and closed disposal sites.

**Government Publication Date: May 1, 2020**

**EnviroStor Hazardous Waste Facilities:**

HWP

A list of hazardous waste facilities including permitted, post-closure and historical facilities found in the Department of Toxic Substances Control (DTSC) EnviroStor database.

**Government Publication Date: Jul 14, 2020**

**Sites Listed in the Solid Waste Assessment Test (SWAT) Program Report:**

SWAT

In a 1993 Memorandum of Understanding, the State Water Resources Control Board (SWRCB) agreed to submit a comprehensive report on the Solid Waste Assessment Test (SWAT) Program to the California Integrated Waste Management Board (CIWMB). This report summarizes the work completed to date on the SWAT Program, and addresses both the impacts that leakage from solid waste disposal sites (SWDS) may have upon waters of the State and the actions taken to address such leakage.

**Government Publication Date: Dec 31, 1995**

**Land Disposal Sites:**

LDS

Land Disposal Sites in GeoTracker, the State Water Resources Control Board (SWRCB)'s data management system. The Land Disposal program regulates of waste discharge to land for treatment, storage and disposal in waste management units. Waste management units include waste piles, surface impoundments, and landfills.

**Government Publication Date: Jul 15, 2020**

**Leaking Underground Fuel Tank Reports:**

LUST

List of Leaking Underground Storage Tanks within the Cleanup Sites data in GeoTracker database. GeoTracker is the State Water Resources Control Board's (SWRCB) data management system for managing sites that impact groundwater, especially those that require groundwater cleanup (Underground Storage Tanks, Department of Defense and Site Cleanup Program) as well as permitted facilities such as operating Underground Storage Tanks. The Leak Prevention Program that overlooks LUST sites is the SWRCB in California's Environmental Protection Agency.

**Government Publication Date: Jul 15, 2020**

**Delisted Leaking Storage Tanks:**

DELISTED LST

List of Leaking Underground Storage Tanks (LUST) cleanup sites removed from GeoTracker, the State Water Resources Control Board (SWRCB)'s database system, as well as sites removed from the SWRCB's list of UST Case closures.

**Government Publication Date: Jul 15, 2020**

**Solid Waste Disposal Sites with Waste Constituents Above Hazardous Waste Levels:**

SWRCB SWF

This is a list of solid waste disposal sites identified by California State Water Resources Control Board with waste constituents above hazardous waste levels outside the waste management unit.

**Government Publication Date: Sep 20, 2006**

**Permitted Underground Storage Tank (UST) in GeoTracker:**

UST

List of Permitted Underground Storage Tank (UST) sites made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA).

**Government Publication Date: Jul 12, 2020**

**Proposed Closure of Underground Storage Tank Cases:**

UST CLOSURE

List of UST cases that are being considered for closure by either the California Environmental Protection Agency, State Water Resources Control Board or the Executive Director that have been posted for a 60-day public comment period.

**Government Publication Date: Jul 7, 2020**

**Historical Hazardous Substance Storage Information Database:**

HHSS

The Historical Hazardous Substance Storage database contains information collected in the 1980s from facilities that stored hazardous substances. The information was originally collected on paper forms, was later transferred to microfiche, and recently indexed as a searchable database. When using this database, please be aware that it is based upon self-reported information submitted by facilities which has not been independently verified. It is unlikely that every facility responded to the survey and the database should not be expected to be a complete inventory of all facilities that were operating at that time. This database is maintained by the California State Water Resources Control Board's (SWRCB) Geotracker.

**Government Publication Date: Aug 27, 2015**

**Aboveground Storage Tanks:**

AST

A statewide list from 2009 of aboveground storage tanks (ASTs) made available by the Cal FIRE Office of the State Fire Marshal (OSFM). This list is no longer maintained or updated by the Cal FIRE OSFM.

**Government Publication Date: Aug 31, 2009**

**Oil and Gas Facility Tanks:**

TANK OIL GAS

Locations of oil and gas tanks that fall under the jurisdiction of the Geologic Energy Management Division of the California Department of Conservation (CalGEM) (CCR 1760). CalGEM was formerly the Division of Oil, Gas, and Geothermal Resources (DOGGR).

**Government Publication Date: Jul 21, 2020**

**Delisted Storage Tanks:**

DELISTED TNK

This database contains a list of storage tank sites that were removed by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency (EPA) and the Cal FIRE Office of State Fire Marshal (OSFM).

**Government Publication Date: Jul 21, 2020**

**California Environmental Reporting System (CERS) Tanks:**

CERS TANK

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the Aboveground Petroleum Storage and Underground Storage Tank regulatory programs. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

**Government Publication Date: May 12, 2020**

**Site Mitigation and Brownfields Reuse Program Facility Sites with Land Use Restrictions:**

LUR

The Department of Toxic Substances Control (DTSC) Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents land use restrictions that are active. Some sites have multiple land use restrictions.

**Government Publication Date: Jul 14, 2020**

**Hazardous Waste Management Program Facility Sites with Deed / Land Use Restrictions:**

HLUR

The Department of Toxic Substances Control (DTSC) Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

**Government Publication Date: Apr 8, 2020**

**Deed Restrictions and Land Use Restrictions:**

DEED

List of Deed Restrictions, Land Use Restrictions and Covenants in GeoTracker made available by the State Water Resources Control Board (SWRCB) in California's Environmental Protection Agency. A deed restriction (land use covenant) may be required to facilitate the remediation of past environmental contamination and to protect human health and the environment by reducing the risk of exposure to residual hazardous materials.

**Government Publication Date: Jul 15, 2020**

**Voluntary Cleanup Program:**

VCP

List of sites in the Voluntary Cleanup Program made available by the Department of Toxic Substances and Control (DTSC). The Voluntary Cleanup Program was designed to respond to lower priority sites. Under the Voluntary Cleanup Program, DTSC enters site-specific agreements with project proponents for DTSC oversight of site assessment, investigation, and/or removal or remediation activities, and the project proponents agree to pay DTSC's reasonable costs for those services.

**Government Publication Date: Jul 14, 2020**

**GeoTracker Cleanup Program Sites:**

CLEANUP SITES

A list of Cleanup Program sites in the state of California made available by The State Water Resources Control Board (SWRCB) of the California Environmental Protection Agency (EPA). SWRCB tracks leaking underground storage tank cleanups as well as other water board cleanups.

**Government Publication Date: Jul 15, 2020**

**Delisted County Records:**

DELISTED COUNTY

Records removed from county or CUPA databases. Records may be removed from the county lists made available by the respective county departments because they are inactive, or because they have been deemed to be below reportable thresholds.

**Government Publication Date: Jul 27, 2020**

**Delisted California Environmental Reporting System (CERS) Tanks:**

[DELISTED CTNK](#)

This database contains a list of Aboveground Petroleum Storage and Underground Storage Tank sites that were removed from in the California Environmental Protection Agency (CalEPA) Regulated Site Portal.

**Government Publication Date: May 12, 2020**

**Historical Hazardous Substance Storage Container Information - Facility Summary:**

[HIST TANK](#)

The State Water Resources Control Board maintained the Hazardous Substance Storage Containers listing and inventory in the 1980s. This facility summary lists historic tank sites where the following container types were present: farm motor vehicle fuel tanks; waste tanks; sumps; pits, ponds, lagoons, and others; and all other product tanks. This set, published in May 1988, lists facility and owner information, as well as the number of containers. This data is historic and will not be updated.

**Government Publication Date: May 27, 1988**

**Tribal**

**Leaking Underground Storage Tanks (LUSTs) on Indian Lands:**

[INDIAN LUST](#)

LUSTs on Tribal/Indian Lands in Region 9, which includes California.

**Government Publication Date: Apr 8, 2020**

**Underground Storage Tanks (USTs) on Indian Lands:**

[INDIAN UST](#)

USTs on Tribal/Indian Lands in Region 9, which includes California.

**Government Publication Date: Apr 8, 2020**

**Delisted Tribal Leaking Storage Tanks:**

[DELISTED ILST](#)

Leaking Underground Storage Tank facilities which have been removed from the Regional Tribal LUST lists made available by the EPA.

**Government Publication Date: Apr 14, 2020**

**Delisted Tribal Underground Storage Tanks:**

[DELISTED IUST](#)

Underground Storage Tank facilities which have been removed from the Regional Tribal UST lists made available by the EPA.

**Government Publication Date: Apr 14, 2020**

**County**

**Alameda County - LOP Sites List:**

[ALAMEDA LOP](#)

List of sites in the Alameda County Department of Environmental Health's (ACDEH) Local Oversight Program (LOP). The ACDEH LOP program oversees the investigation and cleanup of hazardous materials releases to the environment under two programs. The Leaking Underground Fuel Tank (LUFT) program is specific to unauthorized releases associated with petroleum underground storage tank systems. The Site Cleanup Program (SCP) oversees the investigation and cleanup of releases from hazardous materials, including but not limited to releases of pesticides, heavy metals, dry cleaner solvents, etc., including redevelopment of sites with residual contamination from historic uses.

**Government Publication Date: Jan 16, 2019**

**Alameda County - UST List:**

[UST ALAMEDA](#)

A list of registered Underground Storage Tanks (USTs) in the County of Alameda. The list is made available by Alameda County Department of Environmental Health.

**Government Publication Date: Jul 9, 2019**

**Alameda County - City of Berkeley CUPA Facilities:**

[BERKELEY CUPA](#)

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs at the City of Berkeley in Alameda County. This list is maintained by the Toxics Management Division at the City of Berkeley.

**Government Publication Date: May 12, 2020**

**Alameda County - Hayward City CUPA List:**

[HAYWARD CUPA](#)

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in Hayward City. This list is maintained by the Hayward City Fire Department.

**Government Publication Date: Jul 16, 2019**

**Alameda County - San Leandro City CUPA Facilities List:**

[SANLEANDRO CUPA](#)

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in San Leandro City, Alameda County. This list is made available by San Leandro City Environmental Services Section.

**Government Publication Date: Apr 11, 2019**

**Alameda County - Union City USTs:**

[UNION UST](#)

A list of Underground Storage Tanks (USTs) in the city of Union in Alameda County. This data is made available by the Environmental Programs Division of Economic & Community Development, Union City.

**Government Publication Date: Jan 21, 2020**

**Alameda County - Union City CERS CUPA List:**

[UNION CUPA](#)

A list of CERS registered facilities associated with various Certified Unified Program Agency (CUPA) programs in the City of Union. This list is made available by the City of Union Economic and Community Development Department.

**Government Publication Date: Jan 21, 2020**

**Alameda County - Union City CUPA Facilities:**

[UNION CUPA](#)

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in the City of Union. Includes facilities with active and inactive statuses. This list is made available by the City of Union Economic and Community Development Department.

**Government Publication Date: Jan 21, 2020**

**Alameda County - City of Livermore and Pleasanton UST List:**

[LIVERMORE UST](#)

A list of registered Underground Storage Tank (UST) in City of Livermore and City of Pleasanton, Alameda County. This list is maintained by the Livermore-Pleasanton Fire Department.

**Government Publication Date: May 1, 2019**

**Alameda County - City of Livermore and Pleasanton AST List:**

[LIVERMORE AST](#)

A list of registered Aboveground Storage Tank (AST) in City of Livermore and City of Pleasanton, Alameda County. This list is maintained by the Livermore-Pleasanton Fire Department.

**Government Publication Date: May 1, 2019**

**Alameda County - City of Livermore and Pleasanton CUPA Facilities:**

[LIVERMORE CUPA](#)

A list of facilities associated with various Certified Unified Program Agency (CUPA) programs in City of Livermore and City of Pleasanton in Alameda County. This list is maintained by the Livermore-Pleasanton Fire Department.

**Government Publication Date: May 1, 2019**

## **Additional Environmental Record Sources**

### **Federal**

**PFOA/PFOS Contaminated Sites:**

[PFAS NPL](#)

List of sites where PFOA or PFOS contaminants have been found in drinking water or soil. Made available by the Federal Environmental Protection Agency (EPA).

**Government Publication Date: Jul 7, 2020**

**Facility Registry Service/Facility Index:**

[FINDS/FRS](#)

The Facility Registry Service (FRS) is a centrally managed database that identifies facilities, sites, or places subject to environmental regulations or of environmental interest. FRS creates high-quality, accurate, and authoritative facility identification records through rigorous verification and management procedures that incorporate information from program national systems, state master facility records, and data collected from EPA's Central Data Exchange registrations and data management personnel. This list is made available by the Environmental Protection Agency (US EPA).

**Government Publication Date: Mar 25, 2020**

**Toxics Release Inventory (TRI) Program:**

[TRIS](#)

The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U. S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment. One of TRI's primary purposes is to inform communities about toxic chemical releases to the environment.

Government Publication Date: Feb 19, 2020

**Perfluorinated Alkyl Substances (PFAS) Releases:**

[PFAS TRI](#)

List of Toxics Release Inventory (TRI) facilities at which the reported chemical is a Per- or polyfluorinated alkyl substance (PFAS) included in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances. The EPA's Toxics Release Inventory (TRI) is a database containing data on disposal or other releases of over 650 toxic chemicals from thousands of U.S. facilities and information about how facilities manage those chemicals through recycling, energy recovery, and treatment.

Government Publication Date: Feb 19, 2020

**Perfluorinated Alkyl Substances (PFAS) Water Quality:**

[PFAS WATER](#)

The Water Quality Portal (WQP) is a cooperative service sponsored by the United States Geological Survey (USGS), the Environmental Protection Agency (EPA), and the National Water Quality Monitoring Council (NWQMC). This listing includes records from the Water Quality Portal where the characteristic (environmental measurement) is in the Environmental Protection Agency (EPA)'s consolidated PFAS Master List of PFAS Substances.

Government Publication Date: Dec 20, 2019

**Hazardous Materials Information Reporting System:**

[HMIRS](#)

US DOT - Department of Transportation Pipeline and Hazardous Materials Safety Administration (PHMSA) Incidents Reports Database taken from Hazmat Intelligence Portal, U.S. Department of Transportation.

Government Publication Date: Jan 8, 2020

**National Clandestine Drug Labs:**

[NCDL](#)

The U.S. Department of Justice ("the Department") provides this data as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy.

Government Publication Date: Mar 19, 2020

**Toxic Substances Control Act:**

[TSCA](#)

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The CDR enables EPA to collect and publish information on the manufacturing, processing, and use of commercial chemical substances and mixtures (referred to hereafter as chemical substances) on the TSCA Chemical Substance Inventory (TSCA Inventory). This includes current information on chemical substance production volumes, manufacturing sites, and how the chemical substances are used. This information helps the Agency determine whether people or the environment are potentially exposed to reported chemical substances. EPA publishes submitted CDR data that is not Confidential Business Information (CBI).

Government Publication Date: Apr 11, 2019

**Hist TSCA:**

[HIST TSCA](#)

The Environmental Protection Agency (EPA) is amending the Toxic Substances Control Act (TSCA) section 8(a) Inventory Update Reporting (IUR) rule and changing its name to the Chemical Data Reporting (CDR) rule.

The 2006 IUR data summary report includes information about chemicals manufactured or imported in quantities of 25,000 pounds or more at a single site during calendar year 2005. In addition to the basic manufacturing information collected in previous reporting cycles, the 2006 cycle is the first time EPA collected information to characterize exposure during manufacturing, processing and use of organic chemicals. The 2006 cycle also is the first time manufacturers of inorganic chemicals were required to report basic manufacturing information.

Government Publication Date: Dec 31, 2006

**FTTS Administrative Case Listing:**

[FTTS ADMIN](#)

An administrative case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

**FTTS Inspection Case Listing:**

[FTTS INSP](#)

An inspection case listing from the Federal Insecticide, Fungicide, & Rodenticide Act (FIFRA) and Toxic Substances Control Act (TSCA), together known as FTTS. This database was obtained from the Environmental Protection Agency's (EPA) National Compliance Database (NCDB). The FTTS and NCDB was shut down in 2006.

Government Publication Date: Jan 19, 2007

**Potentially Responsible Parties List:**

[PRP](#)

Early in the cleanup process, the Environmental Protection Agency (EPA) conducts a search to find the potentially responsible parties (PRPs). EPA looks for evidence to determine liability by matching wastes found at the site with parties that may have contributed wastes to the site.

**Government Publication Date: May 22, 2020**

**State Coalition for Remediation of Drycleaners Listing:**

[SCRD DRYCLEANER](#)

The State Coalition for Remediation of Drycleaners (SCRD) was established in 1998, with support from the U.S. Environmental Protection Agency (EPA) Office of Superfund Remediation and Technology Innovation. Coalition members are states with mandated programs and funding for drycleaner site remediation. Current members are Alabama, Connecticut, Florida, Illinois, Kansas, Minnesota, Missouri, North Carolina, Oregon, South Carolina, Tennessee, Texas, and Wisconsin.

**Government Publication Date: Nov 08, 2017**

**Integrated Compliance Information System (ICIS):**

[ICIS](#)

The Integrated Compliance Information System (ICIS) is a system that provides information for the Federal Enforcement and Compliance (FE&C) and the National Pollutant Discharge Elimination System (NPDES) programs. The FE&C component supports the Environmental Protection Agency's (EPA) Civil Enforcement and Compliance program activities. These activities include Compliance Assistance, Compliance Monitoring and Enforcement. The NPDES program supports tracking of NPDES permits, limits, discharge monitoring data and other program reports.

**Government Publication Date: Nov 18, 2016**

**Drycleaner Facilities:**

[FED DRYCLEANERS](#)

A list of drycleaner facilities from the Integrated Compliance Information System (ICIS). The Environmental Protection Agency (EPA) tracks facilities that possess NAIC and SIC codes that classify businesses as drycleaner establishments.

**Government Publication Date: Jan 20, 2020**

**Delisted Drycleaner Facilities:**

[DELISTED FED DRY](#)

List of sites removed from the list of Drycleaner Facilities (sites in the EPA's Integrated Compliance Information System (ICIS) with NAIC or SIC codes identifying the business as a drycleaner establishment).

**Government Publication Date: Jan 20, 2020**

**Formerly Used Defense Sites:**

[FUDS](#)

Formerly Used Defense Sites (FUDS) are properties that were formerly owned by, leased to, or otherwise possessed by and under the jurisdiction of the Secretary of Defense prior to October 1986, where the Department of Defense (DoD) is responsible for an environmental restoration. This list is published by the U.S. Army Corps of Engineers.

**Government Publication Date: Jan 28, 2020**

**PHMSA Pipeline Safety Flagged Incidents:**

[PIPELINE INCIDENT](#)

A list of flagged pipeline incidents made available by the U.S. Department of Transportation (US DOT) Pipeline and Hazardous Materials Safety Administration (PHMSA). PHMSA regulations require incident and accident reports for five different pipeline system types.

**Government Publication Date: Oct 31, 2019**

**Material Licensing Tracking System (MLTS):**

[MLTS](#)

A list of sites that store radioactive material subject to the Nuclear Regulatory Commission (NRC) licensing requirements. This list is maintained by the NRC. As of September 2016, the NRC no longer releases location information for sites. Site locations were last received in July 2016.

**Government Publication Date: Oct 31, 2019**

**Historic Material Licensing Tracking System (MLTS) sites:**

[HIST MLTS](#)

A historic list of sites that have inactive licenses and/or removed from the Material Licensing Tracking System (MLTS). In some cases, a site is removed from the MLTS when the state becomes an "Agreement State". An Agreement State is a State that has signed an agreement with the Nuclear Regulatory Commission (NRC) authorizing the State to regulate certain uses of radioactive materials within the State.

**Government Publication Date: Jan 31, 2010**

**Mines Master Index File:**

[MINES](#)

The Master Index File (MIF) contains mine identification numbers issued by the Department of Labor Mine Safety and Health Administration (MSHA) for mines active or opened since 1971. Note that addresses may or may not correspond with the physical location of the mine itself.

**Government Publication Date: May 1, 2020**

**Alternative Fueling Stations:**

[ALT FUELS](#)

List of alternative fueling stations made available by the US Department of Energy's Office of Energy Efficiency & Renewable Energy. Includes Biodiesel stations, Ethanol (E85) stations, Liquefied Petroleum Gas (Propane) stations, Ethanol (E85) stations, Natural Gas stations, Hydrogen stations, and Electric Vehicle Supply Equipment (EVSE). The National Renewable Energy Laboratory (NREL) obtains information about new stations from trade media, Clean Cities coordinators, a Submit New Station form on the Station Locator website, and through collaborating with infrastructure equipment and fuel providers, original equipment manufacturers (OEMs), and industry groups.

**Government Publication Date: Jun 22, 2020**

**Registered Pesticide Establishments:**

[SSTS](#)

List of active EPA-registered foreign and domestic pesticide-producing and device-producing establishments based on data from the Section Seven Tracking System (SSTS). The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) Section 7 requires that facilities producing pesticides, active ingredients, or devices be registered. The list of establishments is made available by the EPA.

**Government Publication Date: Mar 31, 2020**

**Polychlorinated Biphenyl (PCB) Notifiers:**

[PCB](#)

Facilities included in the national list of facilities that have notified the United States Environmental Protection Agency (EPA) of Polychlorinated Biphenyl (PCB) activities. Any company or person storing, transporting or disposing of PCBs or conducting PCB research and development must notify the EPA and receive an identification number.

**Government Publication Date: Oct 9, 2019**

**State**

**Dry Cleaning Facilities:**

[DRYCLEANERS](#)

A list of drycleaner related facilities that have EPA ID numbers. These are facilities with certain SIC codes: power laundries, family and commercial, linen supply, commercial laundry, dry cleaning and pressing machines - Coin Operated Laundry and Dry Cleaning. This is provided by the Department of Toxic Substance Control.

**Government Publication Date: May 5, 2020**

**Delisted Drycleaners:**

[DELISTED DRYCLEANERS](#)

Sites removed from the list of drycleaner related facilities that have EPA ID numbers, made available by the California Department of Toxic Substance Control.

**Government Publication Date: May 5, 2020**

**Non-Toxic Dry Cleaning Incentive Program:**

[DRYC GRANT](#)

A list of grant recipients of the Non-Toxic Dry Cleaning Incentive Program made available by the California Air Resources Board (CARB). The program provides grants to eligible dry cleaning businesses to assist them in transitioning away from PERC machines to alternative non-toxic and non-smog forming technologies.

**Government Publication Date: Feb 28, 2018**

**Per- and Polyfluoroalkyl Substances (PFAS):**

[PFAS](#)

List of sites from the State Water Resources Control Board (SWRCB)'s GeoTracker at which one or more of the potential contaminants of concern are in the PFAS Master List of PFAS Substances made available by the Environmental Protection Agency (US EPA).

**Government Publication Date: Jul 15, 2020**

**PFOA/PFOS Groundwater:**

[PFAS GW](#)

A list of water wells from the Groundwater Ambient Monitoring and Assessment Program (GAMA) Groundwater Information System with the groundwater chemical perfluorooctanoic acid (PFOA) (NL = 0.014 UG/L) or perfluorooctanoic sulfonate (PFOS) (NL = 0.013 UG/L). The GAMA Groundwater Information System search is made available by California Water Boards.Y

**Government Publication Date: Apr 16, 2020**

**Hazardous Waste and Substances Site List - Site Cleanup:**

[HWSS CLEANUP](#)

The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements in providing information about the location of hazardous materials release sites. This list is published by California Department of Toxic Substance Control.

**Government Publication Date: May 26, 2020**

**List of Hazardous Waste Facilities Subject to Corrective Action:**

[DTSC HWF](#)

This is a list of hazardous waste facilities identified in Health and Safety Code (HSC) § 25187.5. These facilities are those where Department of Toxic Substances Control (DTSC) has taken or contracted for corrective action because a facility owner/operator has failed to comply with a date for taking corrective action in an order issued under HSC § 25187, or because DTSC determined that immediate corrective action was necessary to abate an imminent or substantial endangerment.

**Government Publication Date: Jul 18, 2016**

**EnviroStor Inspection, Compliance, and Enforcement:**

**INSP COMP ENF**

A list of permitted facilities with inspections and enforcements tracked in the Department of Toxic Substance Control (DTSC) EnviroStor.

**Government Publication Date: Jul 20, 2020**

**School Property Evaluation Program Sites:**

**SCH**

A list of sites registered with The Department of Toxic Substances Control (DTSC) School Property Evaluation and Cleanup (SPEC) Division. SPEC is responsible for assessing, investigating and cleaning up proposed school sites. The Division ensures that selected properties are free of contamination or, if the properties were previously contaminated, that they have been cleaned up to a level that protects the students and staff who will occupy the new school.

**Government Publication Date: Jul 14, 2020**

**California Hazardous Material Incident Report System (CHMIRS):**

**CHMIRS**

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS). This list has been made available by the California Office of Emergency Services (OES).

**Government Publication Date: Apr 20, 2020**

**Hazardous Waste Manifest Data:**

**HAZNET**

A list of hazardous waste manifests received each year by Department of Toxic Substances Control (DTSC). The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

**Government Publication Date: Oct 24, 2016**

**Historical California Hazardous Material Incident Report System (CHMIRS):**

**HIST CHMIRS**

A list of reported hazardous material incidents, spills, and releases from the California Hazardous Material Incident Report System (CHMIRS) prior to 1993. This list has been made available by the California Office of Emergency Services (OES).

**Government Publication Date: Jan 1, 1993**

**Historical Hazardous Waste Manifest Data:**

**HIST MANIFEST**

A list of historic hazardous waste manifests received by the Department of Toxic Substances Control (DTSC) from year the 1980 to 1992. The volume of manifests is typically 900,000 - 1,000,000 annually, representing approximately 450,000 - 500,000 shipments.

**Government Publication Date: Dec 31, 1992**

**Historical Cortese List:**

**HIST CORTESE**

List of sites which were once included on the Cortese list. The Hazardous Waste and Substances Sites (Cortese) List is a planning document used by the State, local agencies and developers to comply with the California Environmental Quality Act requirements for providing information about the location of hazardous sites.

**Government Publication Date: Nov 13, 2008**

**Cease and Desist Orders and Cleanup and Abatement Orders:**

**CDO/CAO**

The California Environment Protection Agency "Cortese List" of active Cease and Desist Orders (CDO) and Cleanup and Abatement Orders (CAO). This list contains many CDOs and CAOs that do NOT concern the discharge of wastes that are hazardous materials. Many of the listed orders concern, as examples, discharges of domestic sewage, food processing wastes, or sediment that do not contain hazardous materials, but the Water Boards' database does not distinguish between these types of orders.

**Government Publication Date: Feb 16, 2012**

**California Environmental Reporting System (CERS) Hazardous Waste Sites:**

**CERS HAZ**

List of sites in the California Environmental Protection Agency (CalEPA) Regulated Site Portal which fall under the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator. The CalEPA oversees the statewide implementation of the Unified Program which applies regulatory standards to protect Californians from hazardous waste and materials.

**Government Publication Date: May 12, 2020**

**Delisted Environmental Reporting System (CERS) Hazardous Waste Sites:**

[DELISTED HAZ](#)

This database contains a list of sites that were removed from the California Environmental Protection Agency (CalEPA) in the following regulatory programs: Hazardous Chemical Management, Hazardous Waste Onsite Treatment, Household Hazardous Waste Collection, Hazardous Waste Generator, RCRA LQ HW Generator.

**Government Publication Date: Nov 29, 2018**

**Sites in GeoTracker:**

[GEOTRACKER](#)

GeoTracker is the State Water Resource Control Boards' data management system for sites that impact, or have the potential to impact, water quality in California, with emphasis on groundwater. This is a list of sites in GeoTracker that aren't otherwise categorized as LUST, Land Disposal Sites (LDS), Cleanup Sites, or sites having Waste Discharge Requirements (WDR). This listing includes program types such as Underground Injection Control (UIC), Confined Animal Facilities (CAF), Irrigated Lands Regulatory Program, plans, and non-case information.

**Government Publication Date: Jul 15, 2020**

**Waste Discharge Requirements:**

[WASTE DISCHG](#)

List of sites in California State Water Resources Control Board (SWRCB) Waste Discharge Requirements (WDRs) Program in California, made available by the SWRCB via GeoTracker. The WDR program regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

**Government Publication Date: Jul 15, 2020**

**Toxic Pollutant Emissions Facilities:**

[EMISSIONS](#)

A list of criteria and toxic pollutant emissions data for facilities in California made available by the California Environmental Protection Agency - Air Resources Board (ARB). Risk data may be based on previous inventory submittals. The toxics data are submitted to the ARB by the local air districts as requirement of the Air Toxics "Hot Spots" Program. This program requires emission inventory updates every four years.

**Government Publication Date: Dec 31, 2017**

**Clandestine Drug Lab Sites:**

[CDL](#)

The Department of Toxic Substances Control (DTSC) maintains a listing of drug lab sites. DTSC is responsible for removal and disposal of hazardous substances discovered by law enforcement officials while investigating illegal/ clandestine drug laboratories.

**Government Publication Date: Jun 30, 2018**

**Tribal**

**No Tribal additional environmental record sources available for this State.**

**County**

**No County additional environmental databases were selected to be included in the search.**

# Definitions

**Database Descriptions:** This section provides a detailed explanation for each database including: source, information available, time coverage, and acronyms used. They are listed in alphabetic order.

**Detail Report:** This is the section of the report which provides the most detail for each individual record. Records are summarized by location, starting with the project property followed by records in closest proximity.

**Distance:** The distance value is the distance between plotted points, not necessarily the distance between the sites' boundaries. All values are an approximation.

**Direction:** The direction value is the compass direction of the site in respect to the project property and/or center point of the report.

**Elevation:** The elevation value is taken from the location at which the records for the site address have been plotted. All values are an approximation. Source: Google Elevation API.

**Executive Summary:** This portion of the report is divided into 3 sections:

'Report Summary'- Displays a chart indicating how many records fall on the project property and, within the report search radii.

'Site Report Summary'-Project Property'- This section lists all the records which fall on the project property. For more details, see the 'Detail Report' section.

'Site Report Summary-Surrounding Properties'- This section summarizes all records on adjacent properties, listing them in order of proximity from the project property. For more details, see the 'Detail Report' section.

**Map Key:** The map key number is assigned according to closest proximity from the project property. Map Key numbers always start at #1. The project property will always have a map key of '1' if records are available. If there is a number in brackets beside the main number, this will indicate the number of records on that specific property. If there is no number in brackets, there is only one record for that property.

The symbol and colour used indicates 'elevation': the red inverted triangle will dictate 'ERIS Sites with Lower Elevation', the yellow triangle will dictate 'ERIS Sites with Higher Elevation' and the orange square will dictate 'ERIS Sites with Same Elevation.'

**Unplottables:** These are records that could not be mapped due to various reasons, including limited geographic information. These records may or may not be in your study area, and are included as reference.

## **Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY**

**Reliance on information in Report:** This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

**License for use of information in Report:** No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

**Your Liability for misuse:** Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

**No warranty of Accuracy or Liability for ERIS:** The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

**Trademark and Copyright:** You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

<b>Site History:</b>			

The Cutter Laboratory began operations at its present west Berkeley site in 1917. In 1974, Cutter Laboratories was purchased by Bayer AG of Germany and in 1983, was merged into Miles, Inc. In 1992, Miles, Inc. purchased the 5.6 acre parcel then occupied by the Gary Steel Company, the City of

Berkeley School Bus Yard, and Western Intermodals. The Miles facility became a nearly 30-acre site located in the industrially zoned flatlands area west of San Pablo Avenue. The project site contains various one-to three-story research laboratories, process/manufacturing facilities, storage/warehouse buildings and administrative/office buildings. The facility has historically used numerous underground storage tanks (USTs) for storage of hazardous materials, all of which have been removed; contamination has been encountered and documented for these USTs.

<b>Cleanup Oversight Agencies:</b>		SAN FRANCISCO BAY RWQCB (REGION 2) (LEAD) - CASE #: 01S0045				
		CASEWORKER: KEVIN BROWN				
		BERKELEY, CITY OF				

**Site History:**

The Cutter Laboratory began operations at its present west Berkeley site in 1917. In 1974, Cutter Laboratories was purchased by Bayer AG of Germany and in 1983, was merged into Miles, Inc. In 1992, Miles, Inc. purchased the 5.6 acre parcel then occupied by the Gary Steel Company, the City of Berkeley School Bus Yard, and Western Intermodals. The Miles facility became a nearly 30-acre site located in the industrially zoned flatlands area west of San Pablo Avenue. The project site contains various one-to three-story research laboratories, process/manufacturing facilities, storage/warehouse buildings and administrative/office buildings. The facility has historically used numerous underground storage tanks (USTs) for storage of hazardous materials, all of which have been removed; contamination has been encountered and documented for these USTs.
