## ENVIRONMENTAL PROFESSIONALS' STATEMENT

We declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as established in Part 312.10 of Title 40 of the Code of Federal Regulations (40 CFR 312.10) and we have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR 312.

## EXECUTIVE SUMMARY

Farallon Consulting, L.L.C. (Farallon) has prepared this Phase I Environmental Site Assessment (Phase I ESA) Report for Parcels 1, 2, 3, and 4 on the Bayer U.S. LLC (Bayer) Campus property at 820 Parker Street in Berkeley, California (herein referred to as the Site and as the Bayer Campus). The Phase I ESA was conducted by Ms. Steffany Aguilar and Mr. Vincent Tilotta and was reviewed and approved by Mr. Richard Makdisi. Messrs. Tilotta and Makdisi are experienced Environmental Professionals in the field of Phase I ESAs and related environmental investigations.

This Phase I ESA Report was prepared for Bayer in accordance with the letter regarding Proposal for Phase I Environmental Site Assessment, Bayer Campus, Parcels 1, 2, and 3 dated August 17, 2020 from Ms. Aguilar and Mr. Makdisi of Farallon to Ms. Jessica Hays and Mr. David Wood of Bayer. The scope of work for this Phase I ESA is consistent with ASTM International Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13). ASTM E1527-13 is intended to assist the user in satisfying one of the requirements to qualify for protection from potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act as the innocent landowner, contiguous property owner, or bona fide prospective purchaser. ASTM E1527-13 constitutes “all appropriate inquiry” into the previous ownership, uses, and environmental conditions of a property consistent with good commercial or customary practice, as defined in Section 9601(35)(B) of Title 42 of the U.S. Code.

Farallon understands that the purpose of this Phase I ESA is to support the updating of the Development Agreement for the entire Bayer Campus, which includes annexing of the Bayer properties south of Carleton Street into the area governed by the Development Agreement. As part of the California Environmental Quality Act review for that project, the City of Berkeley has requested that Bayer complete this Phase I ESA for the entire Bayer campus.

The objective of the Phase I ESA was to identify, as practicable, recognized environmental conditions on the Site or proximate to the Site that have caused and/or may cause an adverse environmental condition. This Phase I ESA Report provides the results of investigation into past and present ownership and uses of the Site, consistent with good commercial and/or customary practice.

There were no deviations from ASTM E1527-13 during this Phase I ESA. Limiting conditions encountered during the Phase I ESA were the presence of vehicles parked on exterior portions of the Site that prevented Farallon from observing the entire ground surface of the Site, and the presence of furniture and equipment in the Site buildings that prevented Farallon from observing the entire interior floor surface. Farallon also was not provided access to all tenant spaces. Based on information obtained from the Site representative, these limiting conditions are not expected to hinder the conclusions of this report.

The Site is developed as the Bayer Campus with manufacturing, utility, storage, and administration buildings supporting production of pharmaceuticals. The Site is divided into the North Campus

and the South Campus and consists of four parcels totaling approximately 46 acres of land developed with 35 single- or multi-level buildings that were constructed between 1917 and 2020. The remaining areas of the Site consist of paved parking, parks, and landscaped areas. The North Campus is composed of Parcel 1 (Alameda County Assessor's Parcel No. [APN] 054-1773-3-4), Parcel 2 (Alameda County APN 054-1770-8-1), and Parcel 3 (Alameda County APN 54-1777-1). The North Campus is largely located between Dwight Way to the north, Seventh Street to the east, Carleton Street to the south, and the Southern Pacific railroad tracks on the west. The North Campus also includes the parking lot south of Dwight Way between Seventh Street and Eighth Street (Parcel 3). The South Campus consists of Parcel 4 (Alameda County APN 054-1748-2-1), which is located between Carleton Street to the north, Seventh Street to the east, Grayson Street to the south, and the Southern Pacific railroad tracks to the west. Access to the Site is gained from the security entrances at Dwight Way, north of the Site, at Seventh Street, east of the Site, and at Grayson Street, south of the Site. According to the Alameda County Assessor's Office, the Site owner is Bayer Healthcare, LLC.

At the time of the site reconnaissance, Farallon observed multiple aboveground storage tanks, including nine tanks used to store diesel for generators and various industrial process tanks used to store water, acids, bases, and gases. Minor amounts of hazardous materials, including industrial process supplies, janitorial cleaning supplies, dry cleaning chemicals, and maintenance-related products, were present on the exterior of the Site and in multiple Site buildings. The materials were observed to be properly labeled and stored in designated areas of the Site buildings. No evidence of releases was observed in or around the containers at the time of the site reconnaissance. According to the Site representative, a release of hydraulic fluid is known to have occurred at building B57 due to a leaking elevator. The release does not pose a significant risk to human health or the environment and is therefore considered a de minimis condition in connection with the Site. Farallon also observed de minimis petroleum staining throughout paved areas of the Site that appeared to be from parked vehicles on the Site.

Historically, the Site appeared to be undeveloped prior to 1911. A fire insurance map reviewed showed a building owned by Bryson Jackson Iron Works in between Parker Street and Carleton Street by 1911. According to city directory listings, the California State Water Resources Control Board online GeoTracker database (GeoTracker database), and information provided by Bayer, Cutter Laboratories, a manufacturer of penicillin, vaccines, and animal health medicines, was the owner of the Site and started operations in 1917. By 1931, the portion of the Site south of Parker Street was developed with various buildings (B56, B44, and B56) and a portion of the Site north of Parker Street was developed. Between 1956 and 1973, nine additional buildings (B83, B84, B85, B56B, SC-6, B56, B47, B28, and B28A) were constructed at the Site. Two of the buildings were apparent on the southeastern portion of the Site and used by Colgate-Palmolive, a former soap manufacturing company that occupied a portion of the Site from 1939 to 1980. Bayer acquired Cutter Laboratories in 1974. By 1980, the Site was developed with four additional buildings (B53, B54, B57, and B58) north of Parker Street. In 1992, building B59 was constructed, and in 1995, four additional buildings (B61, B62, B63, and B60) were apparent on the Site. Bayer also made purchases in 1992 and 1999 of contiguous land formerly occupied by various parties, including the Gary Steel Company, the City of Berkeley School Bus Yard, and Western Intermodals. In 2000, Bayer

purchased properties on Parcel 4 on the southern portion of the Site. From 2000 to 2020, buildings B64, B80, B81, B66, B62A, B88, B87, B68, and CCTO were developed on the Site. Several buildings have been demolished since 1911 and converted into parking lots for the Site.

Farallon was provided with multiple historical environmental reports, including site investigation and remediation reports, underground storage tank (UST) removal reports, and Phase I ESAs, for review.

According to the historical reports, a total of 26 USTs were present on the Bayer Campus: 20 USTs that were discovered on the North Campus and 6 USTs that were discovered on the South Campus. A total of 18 of the USTs were removed from the North Campus between 1986 and 1995, and the final 2 USTs were removed in 2012 and 2020. All 6 of the USTs were removed from the South Campus between 1984 and 1990. Groundwater monitoring on the Bayer Campus, up-gradient of the Site, was conducted from 1986 to 2009 using a network of 21 monitoring wells. All remaining monitoring wells were decommissioned in November 2009 as a requirement by the San Francisco Bay Regional Water Quality Control Board for case closure, which was issued in August 2016.

According to the Building 38 Report, the former building 38 area was used as a solvent mixing and storage area. Site soil near Building 38 was impacted with total petroleum hydrocarbons as diesel and lead. Approximately 230 cubic yards (CY) of soil was excavated from the area in 1991. An additional 72 CY of non-Resource Conservation and Recovery Act hazardous waste soil containing soluble lead at a concentration of 14 milligrams per liter and 540 CY of nonhazardous soil was removed from the Site in 1993. Confirmation samples in the remedial excavation indicated that total petroleum hydrocarbons, volatile organic compounds (VOCs), and lead were not present at concentrations exceeding the Tier 1 Environmental Screening Levels (ESLs). Groundwater samples collected from monitoring well MW-8 near building 38 from indicated that trichloroethene (TCE) was present at a concentration of 5 micrograms per liter ( $\mu\text{g/L}$ ), and likely came from an off-Site source. The Building 38 “Subsite” was granted closure by the San Francisco Regional Water Quality Control Board (RWQCB) in 1993. Based on post-remediation confirmation soil samples, which indicated that residual concentrations of lead and total petroleum hydrocarbons as diesel in soil were less than the Tier 1 ESLs, the building 38 Subsite is considered a historical recognized environmental condition in connection with the Site.

A UST case closure summary for Parcels 1 and 2 stated that 17 USTs were discovered and removed from the Bayer Campus between 1986 and 1993. Unauthorized Release Reports were filed with RWQCB, which opened leaking UST cases. Soil, soil gas, and groundwater contaminant investigations related to the leaking USTs at the Site began in 1986, and groundwater monitoring was conducted from 1986 to 2009 using a network of 21 monitoring wells. All remaining monitoring wells were decommissioned in November 2009 as a requirement by RWQCB for case closure. The former leaking USTs and USTs on Parcels 1 and 2 were granted case closure in August 2016 after meeting RWQCB low-threat closure criteria from the Low-Threat Underground Storage Tank Case Closure Policy. Based on post-remediation confirmation soil samples, which indicated that residual concentrations of total petroleum hydrocarbons as diesel remained that exceeded the commercial/industrial and/or residential direct exposure ESLs, soil contaminated by

releases from the former USTs on Parcels 1 and 2 is considered a controlled recognized environmental condition in connection with the Site.

A soil gas survey was conducted at a building on the Bayer Campus in June 2015 to evaluate vapor intrusion risk. Chlorinated and hydrocarbon-related VOCs were detected at trace or low concentrations; the detected concentrations did not exceed the RWQCB commercial ESLs in effect in 2015 and do not exceed the 2019 updated ESLs for commercial/industrial property. Soil profiling also was conducted. Analytical results indicated that the soil was suitable for either on-Site reuse, off-Site unclassified soil disposal, or Class II nonhazardous waste disposal.

Adjacent properties at the time of Farallon's site reconnaissance included multiple commercial buildings to the north, east, and south and Southern Pacific railroad tracks to the west. Adjacent properties appeared to be used for commercial purposes from the 1890s to the present. The north-adjacent properties have appeared to be used for a variety of commercial purposes since the 1890s. The east-adjacent properties appeared occupied by several small buildings and a parking lot by as early as 1939 and are currently developed with commercial buildings, including a medical cannabis growing operation. The south-adjacent property appeared relatively unchanged from 1931 to 2019; a building was apparent on the eastern portion of the property, and two small buildings and a grass field were apparent the western portion. The south-adjacent buildings were demolished in 2019, and a new building was constructed. The Southern Pacific railroad tracks west of the Site have been present since at least 1895. The west-adjacent Berkeley Aquatic Park was developed in the early 1930s from intertidal and subtidal areas as part of the construction of the Bayside Freeway farther to the west. City directory listings for adjacent properties included banks, State Farm Insurance, and various commercial stores.

The Environmental Risk Information Services (ERIS) *Database Reports* prepared for the Site dated August 11, 2020 and September 29, 2020 (ERIS Report) identified the Site address in several databases. The Site is listed on the GeoTracker database as containing multiple closed leaking UST sites, a closed cleanup program site, and an open cleanup program site. The Site was identified as a handler of hazardous materials, with no reported violations, and the Site was listed as having a hazardous materials business plan. Regulatory files for the Site were reviewed as part of this Phase I ESA Report.

According to the ERIS Report and previous historical documents, the area of west Berkeley up-gradient of the Site is associated with a regional chlorinated VOC groundwater plume originating from a variety of point and non-point sources. Low concentrations of VOCs, particularly TCE, have been detected on the Site in the plume at less than 30 µg/L for TCE, which exceeds the regulatory drinking water standard of 5 µg/L. Because the VOC concentrations at the Site are less than 2019 ESLs for vapor intrusion risk for commercial/industrial land use, the presence of VOCs in groundwater up-gradient of the Site is considered a de minimis condition in connection with the Site.

The Colgate-Palmolive Company plant, which operated at the Site from 1916 to 1981 and produced soaps and household cleaning projects, was identified in regulatory databases. The property consisted of 27 buildings, a tank farm, several individual storage tanks, and other

structures. A leaking 6,500-gallon UST was reported in 1989, and a site assessment followed. The facility was listed as “Completed Case Closed” in the ERIS Report by RWQCB in 1997. Soil and groundwater investigations at the property occurred from 1981 to 2020, and TCE, trichloroethane, lead, mercury, and nickel contamination was identified at the property. Conditional case closure from RWQCB dated November 18, 1992 stated that “there is strong evidence that the TCA and TCE pollution migrated from off-site source(s),” and confirmed that soil with high concentrations of metals was removed from the property, and soil with low concentrations of metals was left in-place. The configuration of the VOC plume indicates that the source of organic priority pollutants originates off of the Site to the east, and the plume moves westward across the property. The Site was listed as “case closed” in 2020 with a deed notice that includes a warning “to prevent breaching the asphalt cover in such a manner as to allow polluted soils to be carried to surface water by rain runoff to allow accelerated leaching of metals to groundwater.” Based on the information provided in the ERIS Report, the results of the 2015 soil gas survey, and the facility’s current regulatory status, groundwater in Parcel 4 impacted by a migrating plume off of the Site represents a de minimis environmental condition in connection with the Site. The soil remediation activities performed at the former Colgate-Palmolive facility in 1985, which left impacted soil in-place, are considered a controlled environmental condition in connection with the Site.

The ERIS Report identified several facilities adjacent or proximate to the Site in the regulatory databases. Two neighboring properties, including 2777 Ninth Avenue and the Heinz/Grayson plume, are up-gradient of the Site and are likely contributing VOCs to groundwater, which are migrating beneath the Site. The age of the off-Site plumes and concentrations of VOCs detected in Site soil gas and groundwater indicate these properties represent a de minimis environmental condition in connection with the Site.

Based on review of the Site history, interviews with persons knowledgeable about the Site, reconnaissance of the Site, and review of regulatory agency lists, this Phase I ESA did not identify evidence of recognized environmental conditions in connection with the Site.

The following controlled recognized environmental conditions were identified in connection with the Site:

- Soil contaminated by releases from the former USTs on Parcels 1 and 2; and
- Soil remediation activities performed at the former Colgate-Palmolive facility in 1985, which left impacted soil in-place.

The following historical recognized environmental condition was identified in connection with the Site:

- Soil remediation activities performed at the building B38 Subsite, which resulted in residual concentrations of lead and total petroleum hydrocarbons as diesel being reduced to less than the Tier 1 ESLs and were granted case closure by RWQCB.

## **1.0 INTRODUCTION**

This Phase I Environmental Site Assessment (Phase I ESA) Report was prepared by Farallon Consulting, L.L.C. (Farallon) for Parcels 1, 2, 3, and 4 on the Bayer Campus property at 820 Parker Street in Berkeley, California (herein referred to as the Site and as the Bayer Campus) (Figure 1). This section discusses the project authorization, and the qualifications of the Environmental Professionals conducting and reviewing the Phase I ESA work. Also included in this section are the project purpose, objective, scope of services, deviations, limiting conditions, and data gaps.

### **1.1 PROJECT AUTHORIZATION**

This Phase I ESA Report was prepared for Bayer in accordance with the letter regarding Proposal for Phase I Environmental Site Assessment, Bayer Campus, Parcels 1, 2 and 3 dated August 17, 2020 from Ms. Steffany Aguilar and Mr. Richard Makdisi of Farallon to Ms. Jessica Hays and Mr. David Wood of Bayer. The scope of work for this Phase I ESA is consistent with ASTM International Standard E1527-13, *Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process* (ASTM E1527-13).

### **1.2 PROFESSIONAL QUALIFICATIONS**

The Phase I ESA was conducted by Ms. Steffany Aguilar Loeb and Mr. Vince Tilotta and was reviewed and approved by Mr. Richard Makdisi. Mr. Makdisi has an understanding of surface and subsurface environmental conditions and the processes used to evaluate these conditions, and the ability to develop opinions regarding conditions indicative of a release or threatened release of hazardous substances and petroleum products. Mr. Makdisi is an Environmental Professional and has developed and performed all appropriate inquiry in conformance with the standards and practices set forth in Part 312 of Title 40 of the Code of Federal Regulations. The professional qualifications of Mr. Makdisi are provided in Appendix A.

### **1.3 PROJECT PURPOSE AND OBJECTIVE**

Farallon understands that the purpose of this Phase I ESA is to support the updating of the Development Agreement for the entire Bayer Campus, which includes annexing of the Bayer properties south of Carleton Street into the area governed by the Development Agreement. As part of the California Environmental Quality Act review for that project, the City of Berkeley has requested that Bayer complete this Phase I ESA for the entire Bayer campus.

The purpose of the Phase I ESA was to identify, as practicable, recognized environmental conditions on the Site and within the appropriate study area that have caused and/or may cause an adverse environmental impact. ASTM E1527-13 is intended to permit a user to satisfy one of the requirements to qualify for protection from potential liability under the Comprehensive Environmental Response, Compensation, and Liability Act as the innocent landowner, contiguous property owner, or bona fide prospective purchaser. ASTM E1527-13 constitutes “all appropriate inquiry” into the previous ownership, uses, and environmental conditions of a property consistent

with good commercial or customary practice, as defined in Section 9601(35)(B) of Title 42 of the U.S. Code. The Phase I ESA performs an appropriate inquiry into past and present ownership and uses of the Site, consistent with good commercial and/or customary practice. This Phase I ESA Report is to be used as a risk management tool to meet all appropriate inquiry requirements and the Comprehensive Environmental Response, Compensation, and Liability Act liability defense. The Phase I ESA does not guarantee that there are no impacts to the Site.

For the purpose of this Phase I ESA Report, the term “recognized environmental condition” is defined as the presence or likely presence of any hazardous substance or petroleum product in, on, or at the Site due to releases to the environment, under conditions indicative of a release to the environment, or under conditions that pose a material threat of a future release to the environment. The term is not intended to include “de minimis conditions” that generally do not present a threat to human health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of the applicable governmental agencies.

The term “controlled recognized environmental condition” is defined as a recognized environmental condition resulting from a past release of a hazardous substance or petroleum product in connection with the Site that has been addressed to the satisfaction of the applicable regulatory authority, with hazardous substances or petroleum products allowed to remain in-place subject to implementation of required controls.

The term “historical recognized environmental condition” is defined as a past release of any hazardous substance or petroleum product that has occurred in connection with the Site and has been addressed to the satisfaction of the applicable regulatory authority, without subjecting the Site to any required controls.

#### **1.4 PROJECT SCOPE OF SERVICES**

This Phase I ESA Report has been prepared in accordance with the scope of work presented in ASTM E1527-13 and the letter regarding Proposal for Phase I Environmental Site Assessment, Bayer Campus, Parcels 1, 2 and 3 dated August 17, 2020 from Ms. Aguilar and Mr. Makdisi of Farallon to Ms. Jessica Hays and Mr. David Wood of Bayer. The scope of work for this Phase I ESA included a records review, literature research and review, a site reconnaissance, interviews with individuals familiar with the Site, interviews with local governmental officials, and preparation of this report.

#### **1.5 DEVIATIONS**

There were no deviations from ASTM E1527-13 during this Phase I ESA.

#### **1.6 LIMITING CONDITIONS**

Limiting conditions encountered during this Phase I ESA were the presence of vehicles parked on exterior portions of the Site that prevented Farallon from observing the entire ground surface of the Site, and the presence of furniture and equipment in the Site buildings that prevented Farallon

from observing the entire interior floor surface. Farallon also was not provided access to all spaces, specifically laboratories that required additional clearance to enter. Based on information obtained from the Site representative, these limiting conditions are not expected to hinder the conclusions of this report.

## **1.7 DATA GAPS**

Data gaps may affect the ability to identify recognized environmental conditions and Farallon's ability to render opinions and conclusions for presentation in the Phase I ESA Report. Farallon did not identify significant data gaps during this Phase I ESA.

## 2.0 SITE OVERVIEW

This section includes an overview of the Site location, improvements, and operations. A description of adjacent and surrounding land use also is provided.

### 2.1 SITE LOCATION

The Site is located in Berkeley, Alameda County, California. The addresses for the Site include 820 Parker Street, 800 Dwight Way, and 2550 Seventh Street; however, the Bayer Campus-wide address is 820 Parker Street. The Site is located in a commercial and industrial area approximately 2.5 miles southwest of downtown Berkeley. The Site vicinity is shown on Figure 1.

### 2.2 SITE DESCRIPTION

The Site is developed as the Bayer Campus with manufacturing, utility, storage, and administration buildings supporting production of pharmaceuticals. The Site is divided into the North Campus and the South Campus and consists of four parcels totaling approximately 46 acres of land developed with 35 single- or multi-level buildings that were constructed between 1917 and 2020. The remaining areas of the Site consist of paved parking, parks, and landscaped areas. The North Campus is composed of Parcel 1 (Alameda County Assessor's Parcel No. [APN] 054-1773-3-4), Parcel 2 (Alameda County APN 054-1770-8-1), and Parcel 3 (Alameda County APN 54-1777-1). The North Campus is largely located between Dwight Way to the north, Seventh Street to the east, Carleton Street to the south, and the Southern Pacific railway tracks on the west. The North Campus also includes the parking lot south of Dwight Way between Seventh Street and Eighth Street (Parcel 3). The South Campus consists of Parcel 4 (Alameda County APN 054-1748-2-1), which is located between Carleton Street to the north, Seventh Street to the east, Grayson Street to the south, and the Southern Pacific railway tracks to the west. Access to the Site is gained from the security entrances at Dwight Way, north of the Site, at Seventh Street, east of the Site, and at Grayson Street, south of the Site.

Figure 2 presents a plan map of the Site. Additional details pertaining to the Site are provided in Section 8.2, Site Reconnaissance Observations. Site photographs are presented in Appendix B.

### 2.3 SITE OPERATIONS

The site is occupied by Bayer, a pharmaceutical manufacturing company. According to the Alameda County Assessor's Office, the Site owner is Bayer Healthcare, LLC. Bayer has owned the Site since 1972. The Bayer campus has six different land uses, including production space, manufacturing labs, warehouse space, administrative offices, utility facilities, and maintenance facilities.

A total of 35 buildings are present on the Site. The building numbers, names, and uses are listed below based on information gathered during Farallon's site reconnaissance and from documents provided by Bayer.

<b>Building No.</b>	<b>Building Name</b>	<b>Building Use</b>
B28	GBD Laboratory	Quality control laboratory
B28A	GBD/QC Labs	On-Site fire department and quality control laboratory
B44	Utilities	Water treatment system
B46	R&D Pathogen Safety Lab	Special access laboratory
B47	Warehouse	Spare parts warehouse
B48	Information Systems	Vacant; permitted for demolition in late 2020
B53	Office, Lab, and QA Documentation	Quality control laboratory
B54	Cold Storage	Refrigerated warehouse
B56	Engineering Offices	Engineering offices
B56A	Engineering Offices	Engineering offices
B56B	Engineering Offices	Engineering offices
B57	R&D Office and Labs	Analytical methodology laboratory
B58	Office and Auditorium	Administrative offices and auditorium
B59	Purified Water	Water treatment system
B60	rFVIII API Production	Production, biohazard storage, and biotech wastewater treatment
B61	Main Electrical Substation	Electrical equipment facility
B62	Refrigeration	Process cooling
B62A	Refrigeration	Process cooling
B63	Utilities Steam	Water treatment system
B64	Cafeteria/Administration	Administrative offices and cafeteria
B66	Clinical Manufacturing	Production and wastewater treatment
B67	Compressed Air Building	Clean, dry air supply
B68	Cell Culture Technology Center (Future)	Under construction; formerly occupied by buildings B5A, T5A, and T5B
B80	Warehouse	Product warehouse
B81	FPM Production	Sterile production and wastewater treatment
B82	Refrigeration	Process cooling

<b>Building No.</b>	<b>Building Name</b>	<b>Building Use</b>
B83	Colgate-Palmolive Tower	General storage
B84	Vacant	General storage
B85	Quality Control Labs	Quality control laboratory
B87	Hazmat Storage	Hazardous materials warehouse; identified as Class 1 – Division 2 Explosion Building
B88	QC Office and Lab	Quality control laboratory and offices
SC-6	R&D Offices	Administrative and research offices
T6A	Security	Security services
T50E	Security	Security services
T50F	Security	Security services

## 2.4 ADJACENT AND SURROUNDING LAND USE

Adjacent properties at the time of Farallon’s site reconnaissance included multi-story industrial, business, and residential properties to the north and south. Industrial properties to the east included the former Macaulay Foundry, David Brothers, and Electro Coatings. Southern Pacific railroad tracks border the Site to the west, and Berkeley Aquatic Park, a recreational park with three lagoons, wetlands, lawns, and trails, is farther to the west.

No visual evidence of recognized environmental conditions was observed on abutting or nearby properties during the site reconnaissance. However, transformers observed on the former Macaulay Foundry property from the northeastern portion of the Bayer Campus have the potential to contain polychlorinated biphenyls (PCBs). Observations were restricted to areas readily observable from the Site.

### **3.0 PHYSICAL SETTING**

The physical setting of the Site, including topography, geology, and hydrogeology, is described in this section. Farallon's assessment of sensitive receptors in the area also is discussed.

#### **3.1 TOPOGRAPHY**

Farallon reviewed the U.S. Geological Survey topographic map for Oakland West, California dated August 9, 2020 provided by Environmental Risk Information Services (ERIS). The map depicts the Site at an elevation of approximately 32 feet above mean sea level. Site topography is relatively flat. Regional topography is generally flat, with a slight slope down to the west.

#### **3.2 GEOLOGY AND HYDROGEOLOGY**

The Site is in the central portion of the Coast Ranges geomorphic province of California. The Site is in the East Bay Plain, a broad alluvial plain formed by streams flowing from the East Bay Hills on the east to San Francisco Bay on the west. The Site is located at the Bay margin at the western foot of the East Bay Hills, and is composed of broad alluvial fan deposits that have accumulated from erosion of the surrounding hills.

Structurally, the Site is on top of the eastern edge of the fault-bound Marin-San Francisco block. The block tilted eastward between the San Andreas and Hayward faults, creating a deep trough along the base of the uplifting East Bay Hills. This trough was filled with alluvial deposits of the Alameda formation during the Pleistocene epoch of geologic time (roughly 11,000 to 1.5 million years before the present). Uplift and erosion of the East Bay Hills produced large streams depositing broad fans along the Bay margin, including the San Antonio and Temescal formations.

Shallow soils consist of fine- to medium-grained alluvial, fluvial, and marginal marine clastic deposits of Holocene age (less than 11,000 years old). An upper 15- to 20-foot-thick clay unit is underlain by an approximately 5- to 8-foot-thick heterogeneous gravelly and clayey silt and sand unit, which grades locally into a sandy gravel unit. The base of this silt and sand unit is generally encountered at a depth of approximately 20 to 25 feet below ground surface (bgs), corresponding to the top of a clay unit, which is most likely Younger Bay Mud.

The Site is in the Santa Clara Valley Groundwater Basin and East Bay Plain Sub-Basin 2-9.04. Groundwater in this sub-basin is considered to have potential and existing beneficial use as a municipal drinking, process, industrial, and/or agricultural water source.

Soil and groundwater data for the property show that the lithology is composed of brown sandy silt to a depth of approximately 5 feet bgs, underlain by dark brown clay. Groundwater was encountered at a depth of approximately 10 feet bgs during underground storage tank (UST) closure activities and groundwater monitoring events at the Bayer Campus, which are discussed in Section 4.5, Previous Environmental Studies. Based on the topography of the Site and vicinity and the historical record of groundwater monitoring at the Site, groundwater flow is to the west toward San Francisco Bay.

### **3.3 OIL AND GAS RECORDS**

According to the California Department of Conservation, Geologic Energy Management Division Well Finder online database, there are no permitted oil or gas wells on the Site or adjacent properties.

### **3.4 SENSITIVE RECEPTORS**

Farallon conducted a limited assessment of sensitive receptors on or in the vicinity of the Site that was confined to visually apparent features such as surface water bodies (e.g., low-lying wet areas, streams, ponds) and residential and recreational areas. A day care center is east-adjacent to the Site at 921 Parker Street. Residential properties are also adjacent to the Site to the northeast. Farallon's assessment of sensitive receptors included a review of readily ascertainable information relating to the presence of private, semiprivate, public, and industrial water-supply wells.

According to the ERIS *Physical Setting Report* prepared for the Site dated August 8, 2020 (ERIS PSR), the Site is not within the limits of the 100- or 500-year flood zone. The nearest receiving water body was identified as the Berkeley Aquatic Park, a bermed section of San Francisco Bay approximately 750 feet west of the Site. San Francisco Bay is approximately 1,650 feet west of the Site.

## **4.0 USER-PROVIDED INFORMATION**

Farallon understands that the user of this report, Bayer, is seeking to follow the standards set forth in ASTM E1527-13 to complete an environmental assessment of the Site. The user has specific responsibilities for fulfilling ASTM E1527-13 requirements to help identify the possibility of recognized environmental conditions in connection with the Site. These responsibilities do not require the technical expertise of an Environmental Professional and were not performed by the Environmental Professional who conducted the Phase I ESA at the Site.

To facilitate fulfillment of the ASTM E1527-13 requirements identified below, Farallon provided Bayer with a copy of the *Phase I ESA User Questionnaire* (User Questionnaire) to complete. The User Questionnaire is provided in Appendix C of this Phase I ESA Report.

### **4.1 TITLE AND LIEN RECORDS**

Bayer indicated that it was not aware of environmental liens against the Site.

### **4.2 EXPERIENCE AND SPECIALIZED KNOWLEDGE**

Information and records that were provided by Bayer are summarized in Section 4.5, Previous Environmental Studies.

### **4.3 COMMONLY KNOWN INFORMATION**

The following information was provided by Bayer:

- Lead is present in topsoil, which is known to be a result of aerial deposition from the nearby freeway in the form of leaded fuel particulates. Several soil investigations at the Site detected lead in topsoil at concentrations less than the background level for lead in soil in the San Francisco Bay Area region. Additional information on this topic was identified on California State Water Resources Control Board online GeoTracker database (GeoTracker database) as discussed in Section 4.5, Previous Environmental Studies.
- Trace concentrations of chlorinated solvents are known to be present on the southern portion of the Site, which is a de minimis condition in connection with the Site. Additional information was identified on GeoTracker as discussed in Section 6.1, On-Site Listings.
- A release of hydraulic fluid is known to have occurred at building B57 due to a leaking elevator. The release does not pose a significant risk to human health or the environment and is therefore considered to be a de minimis condition in connection with the Site.

### **4.4 PHASE I ENVIRONMENTAL SITE ASSESSMENT REPORT USERS**

Bayer will rely on this Phase I ESA Report. Farallon understands that this Phase I ESA will be used to extend a Development Agreement with the City of Berkeley.

## 4.5 PREVIOUS ENVIRONMENTAL STUDIES

Farallon was provided with documentation of several studies pertaining to the Bayer Campus, which are summarized below. The following documentation provided by Bayer, the City of Berkeley Toxics Management Division, and/or the City of Berkeley Fire Department was reviewed by Farallon:

- Letter regarding Results of Soil Analyses and Inspection Related to Removal of Underground Fuel Oil Storage Tank at Colgate-Palmolive, Berkeley Plant dated November 30, 1984 from Thomas K. Wheeler of Brown and Caldwell to Mr. Ralph T. Tierney of Colgate-Palmolive Company (Palmolive UST Report);
- Letter regarding Report of Soil and Ground Water Investigation dated July 6, 1987 from Mr. Richard L. Morales of Riedel Environmental Services, Inc. to Cutter Laboratories attn: Mr. Wendell Parker;
- Letter regarding Report of Contaminated Soil Removal, Tank 12K1 Site dated February 17, 1988 from Ms. Margery A. Hulbert of Riedel Environmental Services, Inc. to Mr. Parker of Cutter Laboratories (UST-1 Report);
- *Draft Environmental Impact Report, Miles Inc./Cutter Biological, Long Range Plan, Volume II – Technical Appendix* dated June 1991, prepared by Planning Analysis & Development (Environmental Impact Report);
- *Closure of 350-Gallon Underground Fuel Storage Tank at Miles Inc.–Cutter Biological Laboratory Facility, Berkeley, California* dated September 1991, prepared for the Site by Engineering-Science, Inc. (UST-11 Closure Report);
- *Closure of Underground Storage Tanks at Building 49, Miles, Inc., Berkeley, California* dated August 1992, prepared for the Site by Engineering-Science, Inc. (1992 UST Closure Report);
- *Closure of Underground Storage Tank 6, Miles, Inc., Berkeley, California* dated September 1992, prepared for the Site by Engineering-Science, Inc. (UST-6 Closure Report);
- *Phase I Environmental Assessment of the Former Colgate-Palmolive Facility, 2700 Seventh Street, Berkeley, California* dated May 1993 prepared by Engineering-Science, Inc.;
- *Characterization and Remediation of Contaminated Soil at Miles, Inc. – Former Building 38 Sub-Site, Berkeley, California* dated November 30, 1993 prepared for the Site by Engineering-Science, Inc. (Building 38 Report);
- *Closure of Underground Storage Tanks and Associated Remedial Activities at Former Berkeley Unified School District Bus Maintenance Facility, Berkeley, California* dated February 7, 1994 prepared for the Site by Engineering-Science, Inc. (1994 UST Closure Report);
- Letter regarding Bayer Corporation Tank 18 Soil Investigation dated November 20, 1995 from Mr. Scott Emerson-Price of Roy F. Weston, Inc. to Mr. Lorenzo Perez of the City of Berkeley Toxics Program Division (UST-18 Report);

- Letter regarding Final Case Closure for Carleton Business Center, 2700 Seventh Street, Berkeley, Alameda County dated August 5, 1997 from Ms. Loretta Barsamian and MR. Stephen I. Morse of RWQCB to Mr. Russell J. Kirschenbaum of Carleton Center;
- *Underground Fuel Storage Tank Removal Report, Eighth Street and Dwight Way, Berkeley, California* dated February 2012 prepared by Stellar Environmental Solutions, Inc. (Stellar) (Eighth Street UST Report);
- Letter regarding Phase I Environmental Site Assessment, Proposed Bayer Manufacturing Quality Control Testing Facility Project, Berkeley, California dated July 2014 from Cem Atabek and Yane Nordhav of Baseline Environmental Consulting to Mr. Aaron Sage of the City of Berkeley Planning Department (2014 Phase I ESA Report);
- Letter regarding Completion of the Soil-Gas Survey to Meet the Requirements of Hazardous Waste Related [sic] Mitigation Measure 1 (Haz-1) per Use Permit UP20140033/Mitigation Monitoring and Reporting Program for Proposed New Construction at 801 Grayson Street, Berkeley, California dated June 16, 2015 from Messrs. Steve Bittman and Richard Makdisi of Stellar to Mr. Doug Donaldson and Ms. Fatema Crane of the City of Berkeley Land Use Planning Division (Soil Gas Survey Letter);
- Letter regarding Pre-Excavation Soil Profiling Report: Evaluation of Soil Chemistry Data Considerations in the Area of the XL Construction Bayer QC Lab Project Excavation Footprint Related to Construction Worker Health and Safety, and Soil Reuse or Disposal dated January 20, 2015 from Mr. Makdisi of Stellar to Mr. Kevin Ng of XL Construction Corporation (Pre-Excavation Soil Profiling Report);
- *Case Closure Summary, Case No. 01-0972 and 01S0045* dated August 11, 2016, prepared by San Francisco Bay Regional Water Quality Control Board (RWQCB) (Case Closure Summary);
- Letter regarding Results of Surficial Soil Profiling in Support of Potential Redevelopment of Building B5A-K038, Bayer Healthcare Campus, Berkeley, California dated March 31, 2020 from Messrs. Henry Pietropaoli and Makdisi of Farallon to Messrs. Nick Novales and Phil Dick and Ms. Sharon Hartman of Fluor Corporation (B5A Soil Profiling Letter); and
- *Underground Storage Tank Closure Report, Bayer Healthcare Campus, Berkeley, California* dated August 18, 2020 prepared for the Site by Farallon (2020 UST Closure Report).

Regulatory site closure letters issued as referenced are presented in Appendix D.

The Site was occupied by Cutter Laboratories from 1917 to 1974, when Cutter Laboratories was purchased by Bayer AG of Germany, which merged to become Miles Inc. In 1992, Miles Inc. purchased an additional 5.6-acre parcel that was occupied by the Gary Steel Company, the City of Berkeley, and Western Intermodals. The Miles Inc. facility became a nearly 30-acre property developed with various one- to three-story research laboratories, process and manufacturing facilities, storage and warehouse buildings, and administrative and office buildings. The parcel continued to expand to encompass current the full 46-acre Bayer Campus.

According to the 1992 UST Closure Report, the 1994 UST Closure Report, and the UST-18 Report, Parcels 1 and 2 of the Site historically featured one oil-water separator sump and 19 USTs, as shown in Figure 3 and Table 1. The USTs were used for storage of hazardous materials, including acetone, denatured alcohol, total petroleum hydrocarbons (TPH) as gasoline (TPHg), total petroleum hydrocarbons as diesel (TPHd), and waste oil. By 1992, 11 of the 12 USTs on the southern portion of Parcel 2 were removed from the Site; the twelfth UST was removed in 2020. By 1995, all seven USTs and the oil-water separator sump on the central portion of Parcel 1 were removed. A summary of the known former USTs on the Site is included in Table 1. There are currently no known USTs on the Site.

#### **4.5.1 Parcel 2 Underground Storage Tank Removal and Remediation History**

UST-1 through UST-3 were removed from Parcel 2 in 1986. According to the UST-1 Report, TPHd-impacted soil at concentrations exceeding 1,500 milligrams per kilogram (mg/kg) was encountered during removal of UST-1. A subsequent soil and groundwater investigation completed in 1987 found TPH impacts to soil extended to an approximately 425-square-foot area to the west of UST-1 and was largely confined to a 2- to 5-foot-thick lens of sand at approximately 15 feet bgs. TPHd was not detected at concentrations exceeding the Tier 1 ESL for groundwater. A remedial excavation to a depth of approximately 20 to 22 feet bgs to address TPH-impacted soil was completed in 1988. Approximately 900 cubic yards (CY) of TPHd-impacted soil was removed from the UST-1 excavation and disposed of off the Site. Confirmation soil samples indicated that soil containing TPHd at concentrations of up to 960 mg/kg, which exceeds the residential ESL, were left in-place at depths of 9 feet bgs or deeper.

According to the 1992 UST Closure Report, UST-4, UST-5, and UST-7 were removed from Parcel 2 in 1989; no significant signs of leakage were observed, and ethanol was reported non-detect in a confirmation soil sample collected from the UST-7 excavation. UST-8 and UST-9 were colocated in the UST-4 excavation, but were temporarily closed in-place because access was limited due to the presence of a cooling system. UST-10 was removed from the Site in 1990, and UST-8 and UST-9 were removed from the Site in 1991, along with approximately 160 CY of acetone-impacted soil. Confirmation soil samples collected in the UST-8 and UST-9 excavation contained acetone at a concentration of 420 mg/kg. Soil collected from borings in the vicinity of the UST-8 and UST-9 excavation contained acetone at a concentration of 1,100 mg/kg and TPHg at a concentration of 660 mg/kg; the latter exceeds the RWQCB ESLs for residential direct exposure but is below the ESL for industrial/commercial direct exposure. Acetone and TPHg were detected in groundwater at concentrations of 1,300,000 µg/L and 1,800 µg/L, respectively. Both the detected concentrations of acetone and TPHg exceed the priority maximum contaminant levels for direct exposure but do not exceed the ESLs for residential or commercial vapor intrusion. The regulatory Site closure letter is presented in Appendix D.

According to the UST-6 Closure Report, UST-6 was removed from Parcel 2 in 1989. Soil samples collected from the original UST excavation indicated that TPHd was present at a concentration of 220 mg/kg. Subsequent soil and groundwater investigations in the area occurred in 1990 and 1991, and a remedial excavation was completed in 1992. Approximately 1,400 CY of TPH-impacted soil

was removed from the Site. Confirmation soil samples collected from the excavation indicated that TPHd was not present in soil at concentrations exceeding the Tier 1 ESL.

According to the UST-11 Closure Report, UST-11 was removed from Parcel 2 of the Site in 1990. One soil sample collected from the original UST-11 excavation contained TPHd at a concentration of 9,200 mg/kg. A soil investigation was completed in the UST-11 area in 1991, and a follow-up remedial excavation was completed later in 1991. Approximately 330 CY of TPH-impacted soil was removed from the Site as part of the remediation. Some visually impacted soil was left in-place because of proximity to utilities and a building. Confirmation soil samples indicated that TPHd was present at concentrations of up to 2,000 mg/kg at a depth of 11 feet bgs in the central portion of the UST-11 excavation, which exceeds the commercial/industrial ESL. The regulatory Site closure letter is presented in Appendix D.

In May 2020, an additional UST was discovered at the building B49 project area of the Bayer Campus, east-adjacent to the Site. The UST was reportedly used for gasoline and was suspected to be present as UST-12 in the building B49 area. This UST had not been located in the early 1990s, and its disposition was listed as unknown until its discovery and removal, as documented in this report. The UST Closure Report was submitted to the City of Berkeley Toxics Division and Berkeley Fire Department on behalf of Fluor Corporation. The report documented the removal of the UST and surrounding TPH-impacted soil at the building B49 site. Approximately 65.3 tons of TPH-impacted soil was removed from the UST excavation and disposed of off the Site. TPHg and TPHd were not detected at concentrations exceeding the residential or commercial/industrial ESLs in the final UST excavation confirmation sample collected. The 2020 UST Closure Report is currently under review by RWQCB.

#### **4.5.2 Parcel 1 Underground Storage Tank Removal and Remediation History**

According to the 1994 UST Closure Report, UST-13 through UST-17 and an oil-water separator sump were removed from Parcel 1 in 1993. TPH impacts were observed in the UST removal excavations for UST-17, the waste oil UST, and the combined excavation for UST-13 through UST-16. TPH-impacted soil was also observed in the oil-water separator sump removal excavation near building 62. A total of approximately 1,845 CY of TPH-impacted soil and 2,700 gallons of groundwater were removed from the Site during post-UST removal remediation of the combined UST-13 through UST-16 excavation. An additional 18 CY of TPH-impacted soil from the UST-17 excavation and 15 CY of TPH-impacted soil from the oil-water separator sump excavation were removed from the Site. Confirmation samples collected from the UST-17 and oil-water separator sump excavations indicated that TPH was not present in soil at concentrations exceeding the Tier 1 ESLs. Confirmation samples collected from the combined UST-13 through UST-16 excavation sidewalls above the saturation zone contained TPHg and TPHd at concentrations of 130 mg/kg and 370 mg/kg, respectively. The TPHg concentration in the excavation sidewall was less than the residential and commercial/industrial ESLs for direct exposure. The TPHd concentration in the excavation sidewall exceeded the residential ESL but was less than the commercial/industrial ESL. Approximately 7,500 square feet of TPH-impacted soil in an area west of the UST excavation was left in-place due to cost constraints. Grab groundwater samples collected from the excavation

indicated that TPHg and TPHd were present in concentrations that did not exceed the Tier 1 ESLs. The regulatory Site closure letter is presented in Appendix D.

According to the UST-18 Report, UST-18 was removed from Parcel 1 in 1986 and UST-19 was removed from Parcel 1 in 1995. During removal of UST-19, evidence of a leak from the former UST-18 was observed. Approximately 60 CY of TPHg-impacted soil was removed from the Site. Confirmation samples collected in the excavation indicated that TPHg and lead were not detected at concentrations exceeding the Tier 1 ESLs. The regulatory Site closure letter is presented in Appendix D.

#### **4.5.3 Regulatory Closure of Parcels 1 and 2 Leaking Underground Storage Tank Case**

The Case Closure Summary stated that 17 USTs were discovered and removed from the Bayer Campus between 1986 and 1993. Unauthorized Release Reports were filed with RWQCB, which opened leaking UST cases. Soil, soil gas, and groundwater contaminant investigations related to the leaking USTs at the Site began in 1986, and groundwater monitoring was conducted from 1986 to 2009 using a network of 21 monitoring wells. All remaining monitoring wells were decommissioned in November 2009 as a requirement by RWQCB for case closure. The former leaking USTs and USTs on the Site were granted case closure in August 2016 after meeting RWQCB low-threat closure criteria from the Low-Threat Underground Storage Tank Case Closure Policy. Based on post-remediation confirmation soil samples, which indicated that residual concentrations of total petroleum hydrocarbons as diesel remained that exceeded the commercial/industrial and/or residential direct exposure ESLs, soil contaminated by releases from the former USTs on Parcels 1 and 2 is considered a controlled recognized environmental condition in connection with the Site. The regulatory Site closure letter is presented in Appendix D.

#### **4.5.4 Parcel 3 Underground Storage Tank Removal and Building 38 Subsite**

According to the Eighth Street UST Report, A 1,000-gallon diesel UST was discovered on Parcel 3 during construction activities in December 2011. The UST was removed from the Site, along with approximately 15 CY of TPHd-impacted soil, in January 2012. Confirmation soil samples collected at the base of the UST excavation after removal of the visibly stained soil indicated that TPH was not present at concentrations exceeding the Tier 1 ESLs. The regulatory Site closure letter is presented in Appendix D.

According to the Building 38 Report, the former building 38 area was used as a solvent mixing and storage area. Site soil near Building 38 was impacted with TPHd and lead. Approximately 230 CY of soil was excavated from the area in 1991. An additional 72 CY of non-Resource Conservation and Recovery Act hazardous waste soil containing soluble lead at a concentration of 14 milligrams per liter and 540 CY of nonhazardous soil was removed from the Site in 1993. Confirmation samples in the remedial excavation indicated that TPH, VOCs, and lead were not present at concentrations exceeding the Tier 1 ESLs. Groundwater samples collected from monitoring well MW-8 near building 38 from indicated that trichloroethene (TCE) was present at a concentration of 5 µg/L, and likely came from an off-Site source. The Building 38 “Subsite” was granted closure by RWQCB in 1993. Based on post-remediation confirmation soil samples, which indicated that residual concentrations of lead and total petroleum hydrocarbons as diesel in

soil were less than the Tier 1 ESLs, the building 38 Subsite is considered a historical recognized environmental condition in connection with the Site. The Building 38 Report is presented in Appendix D.

#### **4.5.5 Parcel 4 Underground Storage Tank Removal and Remediation History**

According to the Palmolive UST Report, a 12,000-gallon fuel oil UST was present on the southern portion of Parcel 4 and removed from the Site in 1984. Confirmation soil samples were collected from the excavation and analyzed for oil and grease. Oil and grease were detected at a concentration of 690 mg/kg. No other documents regarding USTs on Parcel 4 could be identified.

#### **4.5.6 2014 Phase I Environmental Site Assessment**

According to the 2014 Phase I ESA Report, the Parcel 4 layout and use at the time of the 2014 Phase I ESA were similar to the present. The 2014 Phase I ESA identified several historical recognized environmental conditions and one recognized environmental condition in connection with the Site. The Site formerly operated as part of the Colgate-Palmolive facility from at least 1939 to 1980; environmental investigation cleanup activities were performed from 1983 to 1986. The soil remediation activities performed at the former Colgate-Palmolive facility in 1985, which left impacted soil in-place, are considered a controlled recognized environmental condition in connection with the Site. During the soil and groundwater investigations and remediation at the Site, chlorinated solvents were detected in groundwater samples. These impacts were attributed to an off-Site source. Based on these findings, the 2014 Phase I ESA identified the impacted groundwater as a recognized environmental condition in connection with the Site and a potential vapor encroachment concern in connection with the Site. By 1988, the California Department of Toxic Substances Control indicated that shallow soil remediation had been adequately completed, and soil potentially impacted by metals had been covered by parking lots.

#### **4.5.7 Soil Gas Survey**

The soil gas survey conducted on the southwestern portion of the Site in June 2015 met the specific data required by Hazardous Waste-Related Mitigation Measure 1, which called for soil vapor testing requirements at the Site based on Baseline Environmental Consulting's conclusion that a regional chlorinated VOC plume was present in the area and could extend to the Bayer Campus. Chlorinated- and hydrocarbon-related VOCs were detected at trace or low concentrations; the detected concentrations did not exceed the ESLs for potential risk of vapor intrusion. The soil gas survey results indicated vapor intrusion mitigation was not required based on the lack of significant risk.

The Pre-Excavation Soil Profiling Report described soil profiling conducted on the southwestern portion the Site in June 2015. Exploratory bores, cone penetration drilling, and test pits were used to profile the soil in preparation for construction at the property. The soil analytical results indicated that the soil was largely suitable for both on-Site reuse and off-Site unclassified disposal, although some soil segregation of the horizons that contained elevated hydrocarbons was planned during excavation.

As discussed in the B5A Soil Profiling Letter, since 2019, Farallon has conducted surficial soil profiling in support of the planned redevelopment on the Site and at the east-adjacent property. The concentrations of contaminants detected in all soil samples collected at the Site were less than RWQCB ESLs for commercial land use and the construction worker exposure scenario.

According to a chemical and radioactive material usage report for Miles Inc./Cuter Biological, the analytical laboratory listed several chemicals, carcinogens, and radioactive materials used for lab purposes. The 1989 inventory contains approximately 500 chemicals for the site. The chemicals listed are similar to Bayer's inventory of chemicals.

## 5.0 SITE BACKGROUND AND HISTORY

Farallon reviewed the following historical sources as part of this Phase I ESA:

- Aerial photographs of the Berkeley, California area dated 1931, 1939, 1946, 1952, 1958, 1968, 1974, 1980, 1991, 1993, 2005, 2009, 2010, 2012, 2014, 2016, and 2018 obtained from ERIS; and dated 1993 and 2002 through 2019 obtained from Google Earth;
- City directories of Berkeley, California dated 1943, 1946, 1956, 1961, 1968, 1975, 1980, 1987, 1991, 1996, 2001, 2006, 2010, 2014, and 2018 obtained from ERIS;
- U.S. Geological Survey topographic maps of Oakland West dated 1895, 1899, 1915, 1949, 1959, 1968, 1973, 1980, 1996, and 2015 obtained from ERIS; and
- Fire insurance maps for the Site dated 1911, 1950, and 1954 obtained from ERIS.

Farallon is not responsible for the accuracy or completeness of the historical sources reviewed. The historical sources documented were reasonably ascertainable and practically reviewable during this Phase I ESA.

### 5.1 SITE

The Site appeared to be undeveloped prior to 1911. A fire insurance map reviewed showed a building owned by Bryson Jackson Iron Works in between Parker Street and Carleton Street by 1911. According to city directory listings, the California State Water Resources Control Board online GeoTracker database (GeoTracker database), and information provided by Bayer Cutter Laboratories, a manufacturer of penicillin, vaccines, and animal health medicines, was the owner of the Site and started operations in 1917. By 1918, the first building (B82) on the Site was developed by Cutter Laboratories. By 1931, the portion of the Site south of Parker Street was developed with various buildings (B56, B44, and B56) and a portion of the Site north of Parker Street was developed. Between 1956 and 1973, nine additional buildings (B83, B84, B85, B56B, SC-6, B56, B47, B28, and B28A) were constructed at the Site. Two of the buildings were apparent on the southeastern portion of the Site and used by Colgate-Palmolive, a former soap manufacturing company that occupied a portion of the Site from 1939 to 1980. Bayer acquired Cutter Laboratories in 1974. By 1980, the Site was developed with four additional buildings (B53, B54, B57, and B58) north of Parker Street. In 1992, building B59 was constructed, and in 1995, four additional buildings (B61, B62, B63, and B60) were apparent on the Site. Bayer also made purchases in 1992 and 1999 of contiguous land formerly occupied by various parties, including the Gary Steel Company, the City of Berkeley School Bus Yard, and Western Intermodals. In 2000, Bayer purchased properties on Parcel 4 on the southern portion of the Site. From 2000 to 2020, buildings B64, B80, B81, B66, B62A, B88, B87, B68, and CCTO were developed on the Site. Several buildings have been demolished since 1911 and converted into parking lots for the Site. Additional information regarding the Site history is provided in Section 4.5, Previous Environmental Studies, and Section 6.1, On-Site Listings.

## 5.2 ADJACENT PROPERTIES

Adjacent properties at the time of Farallon's site reconnaissance included multiple commercial buildings to the north, east, and south and Southern Pacific railroad tracks to the west. Adjacent properties appeared to be used for commercial purposes from the 1890s to the present. The north-adjacent properties have appeared to be used for a variety of commercial purposes since the 1890s. The east-adjacent properties appeared occupied by several small buildings and a parking lot by as early as 1939 and are currently developed with commercial buildings, including a medical cannabis growing operation. The south-adjacent property appeared relatively unchanged from 1931 to 2019; a building was apparent on the eastern portion of the property, and two small buildings and a grass field were apparent the western portion. The south-adjacent buildings were demolished in 2019, and a new building was constructed. The Southern Pacific railroad tracks west of the Site have been present since at least 1895. The west-adjacent Berkeley Aquatic Park was developed in the early 1930s from intertidal and subtidal areas as part of the construction of the Bayside Freeway farther to the west.

City directory listings for adjacent properties included banks, State Farm Insurance, and various commercial stores. Additional information regarding adjacent properties is provided in Section 6.2, Adjacent and Other Facility Listings.

## 6.0 REGULATORY REVIEW

ERIS conducted a review of environmental regulatory agency database listings to identify reported environmental issues related to the Site and facilities in the Site vicinity. Farallon used the greater of each approximate minimum search distance from the Site for each of the referenced federal and state environmental databases, as specified in ASTM E1527-13.

Farallon reviewed the results from the ERIS *Database Reports* prepared for the Site dated August 11, 2020 and September 29, 2020 (ERIS Report) to note reported facilities in the vicinity of the Site that were considered to have a potential to adversely impact the Site (i.e., are known to have resulted in or are expected to result in a recognized environmental condition). Reported facilities identified in the ERIS Report were evaluated with respect to the nature and extent of a given release, the distance of the reported facility from the Site, the stratigraphy of soil, the expected soil permeability, and the location of a reported facility with respect to known or expected local and/or regional groundwater flow direction.

The descriptions of the databases searched, the complete database names for the abbreviations used in this Phase I ESA Report, and the associated search distances from the Site are provided in the ERIS Report presented in Appendix E.

### 6.1 ON-SITE LISTINGS

- **Bayer Healthcare**, at 800 Dwight Way, was listed in the RCRA LQG, FINDS/FRS, LUST, AST, CHIRMS, HHSS, HIST TANK, HAZNET, BERKELEY CUPA, CERS TANK, EMISSIONS, TRIS, RCRA SQG databases. Bayer was listed as a hazardous waste generator, construction waste generator, and transporter of hazardous waste with no active violations. The listing under the LUST database is an extension of the LUST listing for the Former Berkeley Unified School District/Miles Lab/Cutter Lab below. Based on the information provided in the ERIS Report and environmental reports and its current regulatory status, this facility does not represent a recognized environmental condition in connection with the Site.
- **Former Berkeley Unified School District/Miles Lab/Cutter Lab** at 800 Dwight Way, 2550 Seventh Street, and 801 Parker Street, was identified in the LUST, RCRA SQG, FINDS/FRS, ENVIROSTOR, HHSS, HIST TANK, HAZNET, CLEANUP SITES databases. The Cutter Laboratories began operations in 1917 and was purchased by Bayer AG of Germany in 1974. In 1983, Cutter Laboratories was merged into Miles Inc., which purchased the 5.6-acre parcel in 1992, then occupied by the Gary Steel Company, the City of Berkeley School Bus Yard, and Western Intermodals. The Miles Inc. facility then became a nearly 30-acre property. The facility has historically used numerous USTs for vehicle and bus maintenance at the facility. A total of 16 USTs were removed between 1986 and 1993. Two of the USTs were discovered to have leaked, and Unauthorized Release Reports were filed with RWQCB, which opened two leaking UST cases for the facility. Soil and groundwater contaminant investigations related to the leaking USTs at the Bayer Campus began in 1986, and campus-wide groundwater monitoring was

conducted from 1986 to 2009 using a network of 21 monitoring wells. All remaining monitoring wells were decommissioned in November 2009 as a requirement for case closure, which was issued by RWQCB in August 2016. The facility was listed as “Completed Case Closed” in the ERIS Report. Based on the information provided in the ERIS Report and its current regulatory status, this facility does not represent a recognized environmental condition in connection with the Site.

- **PQ Corporation**, at 801 Grayson Street, was identified in the LUST and FINDS/FRS database. The property is listed as a small and large quantity generator of hazardous waste with no violations as of May 2020. The leaking UST was reported in 1986, and excavation of remaining contaminated soil occurred in 2000. In 2003, the facility was listed as “Completed Case Closed” in the ERIS Report. Based on the information provided in the ERIS Report and its current regulatory status, this facility does not represent a recognized environmental condition in connection with the Site.
- **Carleton Business Center/Colgate-Palmolive** at 2700 Seventh Street, was identified in the LUST, ENVIROSTOR, HIST TANK, RCRA LQG, FINDS/FRS, HHSS, HAZNET database. The Colgate-Palmolive Company plant operated from 1916 to 1981, producing soaps and household cleaning projects. The property consisted of 27 buildings, a tank farm, several individual storage tanks, and other structures. A leaking 6,500-gallon UST was reported in 1989, and a site assessment followed. The facility was listed as “Completed Case Closed” in the ERIS Report by RWQCB in 1997. Soil and groundwater investigations at the property occurred from 1981 to 2020, and TCE, trichloroethane, lead, mercury, and nickel contamination was identified at the property. Conditional case closure from RWQCB dated November 18, 1992 stated that “there is strong evidence that the TCA and TCE pollution migrated from off-site source(s),” and confirmed that soil with high concentrations of metals was removed from the property, and soil with low concentrations of metals was left in-place. The configuration of the VOC plume indicates that the source of organic priority pollutants originates off of the Site to the east, and the plume moves westward across the property. The Site was listed as “case closed” in 2020 with a deed notice that includes a warning “to prevent breaching the asphalt cover in such a manner as to allow polluted soils to be carried to surface water by rain runoff to allow accelerated leaching of metals to groundwater.” Based on the information provided in the ERIS Report, the 2015 soil gas survey results, and the facility’s current regulatory status, the impacted groundwater at the Site from a migrating plume off of the Site represents a de minimis environmental condition in connection with the Site. The soil remediation activities performed at the former Colgate-Palmolive facility in 1985, which left impacted soil in-place, are considered a controlled recognized environmental condition in connection with the Site.
- **Gary Steel Company**, at 2560 Seventh Street, was identified in the BERKELEY CUPA, LUST, and CERS HAZ databases. According to the ERIS Report, a 10,000-gallon diesel UST was removed in 1995, and the Site was granted closure by RWQCB in 1999. Based on the information provided in the ERIS Report and its lack of violations, this facility does not represent a recognized environmental condition in connection with the Site.

According to the ERIS Report and previous historical documents, the area of west Berkeley up-gradient of the Site is associated with a regional chlorinated VOC groundwater plume originating from a variety of point and non-point sources. Low concentrations of VOCs, particularly TCE, have been detected on the Site in the plume at less than 30 µg/L for TCE, which exceeds the regulatory drinking water standard of 5 µg/L. Because the VOC concentrations at the Site are less than 2019 ESLs for vapor intrusion risk for commercial/industrial land use, the presence of VOCs in groundwater up-gradient of the Site is considered a de minimis condition in connection with the Site.

Farallon searched the GeoTracker database and the California Department of Toxic Substances Control online EnviroStor database (EnviroStor database) for records related to the Site and found the listings above. Additional information regarding the Site is provided in Section 4.5, Previous Environmental Studies.

## 6.2 ADJACENT AND OTHER FACILITY LISTINGS

Reported facilities within 0.25 mile up-gradient, 0.125 mile cross-gradient, or adjacent down-gradient of the Site with respect to the assumed groundwater flow direction are considered to have a potential to have impacted the Site. Facilities that were listed in the ERIS Report but not identified as a reported facility (e.g., a facility listed as a hazardous waste generator but not as having had a release), and facilities that were listed as “Closed” were not considered to have a potential to have impacted the Site.

- **Mosswood Distillers**, at 2619 Seventh Street, 0.21 mile east of the Site and cross- to up-gradient of the Site with respect to the assumed groundwater flow direction, was identified in the BERKELEY CUPA, CERS HAZ, HAZNET, and HIST MANIFEST databases. According to the ERIS Report, Mosswood Distillers, a spirits facility, generates hazardous waste and stores hazardous materials related to the distilling process. Based on the information provided in the ERIS Report and the GeoTracker database, its distance from the Site, and its lack of violations, this facility does not represent a recognized environmental condition in connection with the Site.
- **Ellison Technologies, Swerve Co., and EnChroma, Inc.**, at 2629 Seventh Street, 0.21 mile east and up-gradient of the Site with respect to the assumed groundwater flow direction, was identified in the BERKELEY CUPA, CERS HAZ, DELISTED HAZ, FINDS/FRS, HAZNET, and RCRA NON GEN databases. The facility is involved in patented lens technology operations. According to the ERIS Report, the facility generates hazardous waste and has had no reported violations. Based on the information provided in the ERIS Report and its lack of violations, this facility does not represent a recognized environmental condition in connection with the Site.
- **Macaulay Foundry Inc**, at 811 Carleton Street, approximately 0.12 mile east and up-gradient of the Site with respect to the assumed groundwater flow direction, was identified in the BERKELEY CUPA, CLEANUP SITES, DRYCLEANER, HHSS, HIST TANK, and LUST databases. According to the ERIS Report, a leaking UST was discovered at the facility in 1987, and the facility has historically stored hazardous materials. It is uncertain

whether a dry cleaning facility ever occupied the property; the code explaining its listing in the DRYCLEANERS database was “maybe has the word Dry.” RWQCB issued UST case closure to the facility on August 24, 1994. Based on the information provided in the ERIS Report and the GeoTracker database and its current regulatory status, this facility does not represent a recognized environmental condition in connection with the Site.

- **Electro-coatings of California**, at 893 Carleton Street, approximately 0.19 mile east and up-gradient of the Site with respect to the assumed groundwater flow direction, was identified in the BERKELEY CUPA, CERCLIS, CERCLIS NFRAP, CERS HAZ, CLEANUP SITES, EMISSIONS, ENVIROSTOR, HIST TANK, PFAS, RCRA LQG and SEMS ARCHIVE databases. The facility has operated as a coating and plating facility since the 1960s. According to the GeoTracker database, groundwater and soil was contaminated with total and hexavalent chromium due to plating operations that involved historical spills and leaks. Remediation at the Site began in 1998 via in-situ reduction. As of September 2020, the property was in the process of site closure. Several soil, groundwater, and soil gas investigations have been conducted on the Bayer Campus down-gradient of this property since 1991; chromium has not been detected at a concentration exceeding RWQCB commercial or industrial ESLs. Based on the information provided in the ERIS Report and the GeoTracker database and its current regulatory status, this facility does not represent a recognized environmental condition in connection with the Site.
- **David Brothers**, at 845 Carleton Street, approximately 0.17 mile east and up-gradient of the Site with respect to the assumed groundwater flow direction, was identified in the BERKELEY CUPA, HAZNET, FINDS/FRS, and CERS HAZ databases. According to the ERIS Report, the facility is an auto body shop listed as a hazardous waste generator with no violations as of 2017. Based on the information provided in the ERIS Report and its lack of violations, this facility does not represent a recognized environmental condition in connection with the Site.
- **Heinz/Grayson Plume**, at Seventh Street and Grayson Street, south adjacent and up-gradient of the Site with respect to the assumed groundwater flow direction, was identified in the FINDS/FRS AND RESPONSE databases. According to the ERIS Report, the Hall-Scott Motor Car Company began manufacturing automobiles and rebuilt large marine engines at the property in 1910. In 1967, Airco purchased the property for storage of old equipment and neutralized chemical metal etching waste prior to disposal. From 1968 to 1990, solvent-based adhesives were manufactured at the National Starch and Chemical Company’s 742 Grayson Street facility using toluene, hexane, acetone, and 1,1,1-trichloroethane. Beginning in 1980, water-based adhesive was manufactured at the 800 Grayson Street property, which was previously used as a lumber distribution warehouse. According to the ERIS Report and the GeoTracker database, chlorinated solvents, PCBs, lead, nickel, and petroleum hydrocarbons are present in groundwater beneath the property. Based on the age of the plume and VOC concentrations detected in soil and groundwater on the Site, this facility represents a de minimis environmental condition in connection with the Site.

- **2800 Seventh Street**, located south-adjacent of the Site, was identified in the BERKELEY CUPA, CERS HAZ, HAZNET, HIST MANIFEST, FINDS/FRS, ERNS, and NRC databases. The property is a biomaterials manufacturer. According to the ERIS Report, the facility a hazardous waste generator with no violations as of 2019. A 45-gallon drum containing a water-based aqueous (coating) solution fell off of a pallet, resulting in a spill to the ground and some of the substance entering the storm drain. Per the City of Berkley Toxics Management Division, the substance was diluted and contained in the storm drain. The outfall was checked, and there was no evidence of substance reaching receiving waters; a vacuum truck cleaned up the spill. Based on the information provided in the ERIS Report and its lack of violations, this facility does not represent a recognized environmental condition in connection with the Site.
- **2777 Ninth Street**, located 0.15 mile up-gradient of the Bayer Campus, was identified in the Cleanup Sites, CERCLIS, and RCRA SQG databases]. The Proen Products Company facility operated at the Site from approximately 1952 to June 1990, manufacturing fertilizer tablets, lawn sprinklers, and lawn edgers. The fertilizer manufacturing process used ingredients that included urea. Solvents used for degreasing metal parts included 1,1,1-trichloroethane, reportedly used from 1982 to 1990, and TCE, reportedly used before 1982. The source area of VOCs was substantially remediated by excavation, although an off-Site VOC groundwater plume remains. Concentrations of VOCs detected in Site groundwater monitoring wells during the last 2019 sampling event showed a significant overall downward concentration trend; however, TCE concentration in the down-gradient groundwater at monitoring well LF-13 at Seventh Street was at 43 µg/l in 2019, exceeding the RWQCB ESL of 5 µg/l for TCE and contributing to the VOC plume migrating onto the Bayer Campus. Because the VOC concentrations at the Site are less than 2019 ESLs for vapor intrusion risk for commercial/industrial land use, the presence of VOCs in groundwater up-gradient of the Site is considered a de minimis condition in connection with the Site.

### 6.3 UNMAPPABLE LISTINGS

ERIS identified nine facilities as “unplottable” that ERIS was unable to map due to inaccurate or inadequate address information. Farallon located these unplottable facilities and, according to the addresses provided by ERIS, the facilities are not located within the respective search radii. The unplottable facilities located do not represent a recognized environmental condition in connection with the Site.

## 7.0 INTERVIEWS

Farallon conducted interviews with individuals familiar with the Site and contacted relevant local governmental agencies to obtain additional Site information. The responses from the parties contacted are provided below.

### 7.1 INTERVIEW WITH SITE REPRESENTATIVE

During the site reconnaissance, Farallon interviewed Mr. Jeffrey Bowman, a representative of Bayer, owner of the Site, on September 22, 2020. The following information was obtained from this interview:

- Utilities are provided by the local municipality.
- A total of 14 hydraulic elevators service the Site buildings.
- The Site historically had hydraulic lifts for three elevators at buildings B5A and B55. The hydraulic oil was pumped out by U.S. Ecology (formerly NRC Environmental) and Fluor Corporation.
- Asbestos and lead paint are known to be present in buildings built before 1977 that have not been remodeled.
- No known USTs are present on the Site.
- PCB-containing transformers were formerly present on the Site; all were removed approximately 10 years ago.
- Multiple aboveground storage tanks (ASTs) are present on the Site, including nine tanks used to store diesel for generators and various industrial process tanks used to store water, acids, bases, and gases.
- All Site buildings have clean air systems and ventilation.
- The neutralization of wastewater occurs on Site, with no reported spills or violations. Wastewater discharges into the sanitary sewer after neutralization.
- Stormwater that falls on the Site flows to two holding ponds southwest of the Site.
- Minor releases of hazardous material have occurred on Site; all were remediated.
- Approximately 800 Hazardous and Toxic Substances chemicals are stored and used on Site.
- Sumps are present in Site buildings, but no chemicals drain to sumps.
- All monitoring wells formerly on the Site were approved to be decommissioned by RWQCB.
- The Site has all appropriate environmental permits for its operations.

Mr. Bowman stated that he had not been made aware of any pending, threatened, or past:

- Litigation relevant to hazardous substances or petroleum products in, on, or from the Site;
- Administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the Site; or
- Notices from a governmental entity regarding violations of environmental laws or liability relating to hazardous substances or petroleum products.

## **7.2 INTERVIEW WITH FIRE DEPARTMENT**

Farallon contacted the City of Berkeley Fire Department on August 7, 2020 regarding previous and current ASTs and USTs at 800 Dwight Way. The City of Berkeley Fire Department responded with incident records, permit history, and parcel information from its electronic sources. A City of Berkeley Fire Department report for August 16, 2018 documented a response to a diesel fuel leak at 800 Dwight Way. On arrival, the City of Berkeley Fire Department stated that the leak had already been contained and cleaned up by the Emergency Response Team at Bayer.

A representative of the City of Berkeley Fire Department informed Farallon that numerous physical documents exist. However, due to COVID-19 restrictions, the City of Berkeley Fire Department could not inspect records in person at the time of the inquiry.

Farallon contacted the City of Berkeley Fire Department on October 12, 2020 regarding previous and current ASTs and USTs at 2550 Seventh Street and 820 Parker Street. A representative of the City of Berkeley Fire Department informed Farallon that numerous physical documents exist. However, due to COVID-19 restrictions, the City of Berkeley Fire Department could not inspect records in person at the time of the inquiry; this is not considered a significant data gap.

## **7.3 INTERVIEW WITH CITY**

Farallon contacted the City of Berkeley on August 7, 2020 to inquire whether notices of violations and/or reported hazardous spills at the Site were on file, and regarding previous and current ASTs and USTs at the Site. A representative of the City of Berkeley responded by extending its response period by 14 calendar days to August 31, 2020, based on the need to search for, collect, and appropriately examine a voluminous amount of separate and distinct records, and the need for consultation with two or more components of the agency with substantial interest in the subject matter. No response from the City of Berkeley was received prior to completion of this Phase I ESA Report.

Farallon contacted the City of Berkeley on September 29, 2020 regarding previous and current ASTs and USTs at 2550 Seventh Street and 820 Parker Street. No response from the City of Berkeley was received prior to completion of this Phase I ESA Report. However, this is not considered a significant data gap.

## 7.4 INTERVIEW WITH HEALTH DEPARTMENT

Farallon contacted the City of Berkeley Toxics Management Division to inquire whether notices of violations and/or reported hazardous spills at the Site were on file. On August 11, 2020, a representative of the City of Berkeley Toxics Management Division stated that the Site is an active facility with a large number of files that needed to be reviewed for confidentiality reasons. Due to limited staffing, the department anticipated that a minimum of 2 weeks was needed before files could be made available. A representative of the City of Berkeley Toxics Management Division provided documents pertaining to USTs on the Site and supporting documents for Site closure. These records are discussed in Section 4.5, Previous Environmental Studies.

A report was provided by the City of Berkeley Toxics Management detailing the asbestos-containing material and lead-containing paint found on the Site. Lead-containing paint and asbestos-containing material was found at multiple locations in multiple Site buildings. The presence of lead-based paint and asbestos-containing material is considered a de minimis condition in connection with the Site.

Farallon contacted the City of Berkeley Toxics Management Division on September 29, 2020 regarding previous and current ASTs and USTs at 2550 Seventh Street and 820 Parker Street. No response from the City of Berkeley Toxics Management Division was received prior to completion of this Phase I ESA Report. However, this is not considered a significant data gap.

## **8.0 SITE RECONNAISSANCE**

Farallon conducted a site reconnaissance on September 22, 2020 to observe the Site for physical evidence of recognized environmental conditions. The methodology used for the site reconnaissance and the observations made during the reconnaissance are discussed below. A description of the Site is provided in Section 2.2, Site Description. Photographs taken during the site reconnaissance are presented in Appendix B.

### **8.1 SITE RECONNAISSANCE METHODOLOGY**

Farallon completed a walk around the entire perimeter of the Site and inspected accessible interior portions of the Site buildings. There were no deviations from ASTM E1527-13 during the Phase I ESA. Limiting conditions encountered during the Phase I ESA were the presence of vehicles parked on exterior portions of the Site that prevented Farallon from observing the entire ground surface of the Site, and the presence of furniture and equipment in the Site buildings that prevented Farallon from observing the entire interior floor surface. Farallon also was not provided access to all tenant spaces. Based on information obtained from the Site representative, these limiting conditions are not expected to hinder the conclusions of this report.

### **8.2 SITE RECONNAISSANCE OBSERVATIONS**

Weather conditions at the time of the reconnaissance were sunny, with a temperature of approximately 85 degrees Fahrenheit. No weather-related Site-access restrictions were encountered during the reconnaissance.

Site is developed as the Bayer Campus with manufacturing, utility, storage, and administration buildings supporting production of pharmaceuticals. The Site is divided into the North Campus and the South Campus and consists of four parcels totaling approximately 46 acres of land developed with 35 single- or multi-level buildings that were constructed between 1917 and 2020. The remaining areas of the Site consist of paved parking, parks, and landscaped areas. The North Campus is composed of Parcel 1 (Alameda County Assessor's Parcel No. [APN] 054-1773-3-4), Parcel 2 (Alameda County APN 054-1770-8-1), and Parcel 3 (Alameda County APN 54-1777-1). The North Campus is largely located between Dwight Way to the north, Seventh Street to the east, Carleton Street to the south, and the Southern Pacific railway tracks on the west. The North Campus also includes the parking lot south of Dwight Way between Seventh Street and Eighth Street (Parcel 3). The South Campus consists of Parcel 4 (Alameda County APN 054-1748-2-1), which is located between Carleton Street to the north, Seventh Street to the east, Grayson Street to the south, and the Southern Pacific railway tracks to the west. Access to the Site is gained from the security entrances at Dwight Way, north of the Site, at Seventh Street, east of the Site, and at Grayson Street, south of the Site.

### 8.2.1 Interior Observations

Farallon’s observations of the interior of the Site buildings during the site reconnaissance are documented in the table below. Comments pertaining to notable interior observations follow in Section 8.2.2. Photographs taken during the site reconnaissance are provided in Appendix B.

INTERIOR OBSERVATIONS	YES	NO
Odor		X
Heating/Cooling System	X	
Drain(s) and/or Sump(s)	X	
Staining and/or Corrosion	X	
Storage Tank(s), Vent Pipe(s), Fuel Port(s), and/or Fill Pipes	X	
Clarifier(s)		X
Discharge Area		X
Drum(s) and/or Other Container(s)	X	
Pool(s) of Liquid		X
Automobile Lift(s)		X
Monitoring Well(s)		X
Hazardous Material(s) and/or Petroleum Product(s)	X	
Hazardous Waste		X
Transformers	X	

### 8.2.2 Interior Observation Comments

#### Heating/Cooling System

The Site buildings were heated with electrical, natural gas, and steam heating systems.

#### Drain(s) and/or Sump(s)

Farallon observed several floor drains in all of the Site buildings. According to the Site representative, the floor drains are connected through a system and discharged into the storm drain.

#### Staining and/or Corrosion

Farallon observed minor staining and mold in buildings B83 and B84. The Site representative informed Farallon that this is a result of saltwater use in the buildings’ former soap manufacturing operations.

### **Storage Tank(s), Vent Pipe(s), and/or Fuel Port(s)**

Farallon observed several storage tanks throughout the Site. Farallon observed two waste treatment tanks in building B66 that are part of an agreement with the City of Berkeley for discharge of the water. Cooling towers are present in buildings B53 and B61 as part of the water cooling treatment system. Storage tanks used for mixing as part of the reverse osmosis water system are present in Building B59. Building B67 houses air compressors. Several ASTs are present across the Site used to store diesel for generators and water cooling treatment. Farallon observed nine ASTs proximate to building B44, one AST proximate to building B54, and one AST proximate to building B28A. Building B63 uses boilers as part of the water treatment system; the boilers range from 350 to 900 horsepower. Several tanks are present in the buildings that are used to store gasses and water. According to the Site representative, no reported spills or releases have occurred in connection with storage tanks on Site.

### **Drum(s) and/or Other Container(s)**

Farallon observed several drums and containers used to store hazardous materials in various buildings. The containers were situated in secondary containment or on the concrete floor surface and appeared to be properly sealed. Pallets of 25-pound bags of crystal, used as a water softener, were present in buildings B59, B63, and B81.

### **Hazardous Material(s) and/or Petroleum Product(s)**

The following table lists hazardous materials and petroleum products observed during the site reconnaissance and from the Hazardous Materials and Wastes Inventory Matrix Report provided by Bayer. The quantity of the materials and products varied. Hazardous materials and petroleum products were identified in buildings B28, B28A, B44, B46, B47, B48, B53, B56A, B57, B58, B59, B60, B61, B63, B64, B66, B67, B80, B81, B82, B83, B85, B87 (Hazmat Storage), and B88.

2-propanol	hydrogen peroxide solution
acetic acid	isopropanol
acetone	lacquer thinner
acetylene	lead and sealed lead acid
adhesive	linoleic acid
aerosols (various)	LoVo primer
ammonium hydroxide	metals (various liquids and solids)
ammonium thiocyanate	methanol
argon (gas and liquid)	methyl ethyl ketone
arsenic	methylamine hydrochloride
batteries	motor cleaner
boiler treatment	nitric acid
boric acid	nitrogen (gas and liquid)
buffer solutions and combined acid buffer	nitrous oxide
calcium chloride	oil
carbon dioxide (gas and liquid)	oil-based paints

Chemtreat BL-1770 and others	oxygen (gas and liquid)
chlorodifluoromethane	phosphoric acid
chloroform	potassium hydroxide
cleaners (various)	propane gas
cobalt nitrate	pump oil
degreaser	silicone oil
diesel fuel	sodium acetate
diethanolamine	sodium borohydride
dimethylformamide	sodium carbonate
ethyl alcohol	sodium chloride
ethylene glycol	sodium hydroxide (solid and solution)
gasoline	sodium nitrate
gasket remover	STERI-PEROX
glycine	sulfosalicylic acid
grease	sulfuric acid
helium gas	trichloroacetic acid
hydraulic oil	trifluoroacetic acid
hydrochloric acid	Trizma base
hydrogen gas	

## Transformers

Farallon observed transformers as part of compressed air building system in building B67.

### 8.2.3 Exterior Observations

Farallon's observations of the exterior of the Site during the site reconnaissance are documented in the table below. Comments pertaining to notable exterior observations follow in Section 8.2.4. Photographs taken during the site reconnaissance are provided in Appendix B.

EXTERIOR OBSERVATIONS	YES	NO
Odor		X
Staining and/or Corrosion	X	
Storage Tank(s), Vent Pipe(s), and/or Fuel Port(s)	X	
Drum(s) and/or Other Container(s)	X	
Pool(s) of Liquid		X
Hazardous Material(s) and/or Petroleum Product(s)	X	
Hazardous Waste	X	
Pit(s), Pond(s), and/or Lagoon(s)		X

<b>EXTERIOR OBSERVATIONS</b>	<b>YES</b>	<b>NO</b>
Stressed Vegetation		X
Solid (Non-Hazardous) Waste—Evidence of Dumping		X
Wastewater	X	
Domestic Water	X	
Water Well(s)		X
Septic/Sewer System	X	
Stormwater	X	
Transformer(s)	X	
Significant Amount of Fill Material		X

#### **8.2.4 Exterior Observation Comments**

##### **Staining and/or Corrosion**

Farallon observed minor staining at the Site, including staining and corrosion in the secondary containment sump of the water treatment system on the exterior of building B81. The Site representative informed Farallon that a leak occurred from an acid line and corroded the concrete over 17 years ago. Farallon also observed de minimis petroleum staining throughout paved areas of the Site that appeared to be from parked vehicles on the Site.

##### **Storage Tank(s), Vent Pipe(s), and/or Fuel Port(s)**

Farallon observed a total of six diesel engines used for a generator system, ranging from 115 to 2,848 horsepower. The diesel engines were observed to be in good condition with no visible leaks or staining. Farallon observed a total of three natural gas-fired boilers ranging from 14,700 British Thermal Units per hour to 33,000,000 British Thermal Units per hour. The boilers were observed to be in good condition with no visible leaks or staining.

##### **Drums and Other Container(s)**

Farallon observed drums and other chemical storage containers used for industrial processes throughout the Site. All observed containers were in good condition and stored in secondary containment.

##### **Hazardous Material(s) and/or Petroleum Product(s)**

Farallon observed a biohazard storage unit as part of production at building B60. According to a Bayer representative, approximately 150,000 pounds of medical waste is generated per year. A hazardous waste storage area is present on the Site. Hazardous waste is stored in a covered outdoor area in drums on pallets.

### **Hazardous Waste**

Farallon observed a temporary hazardous waste storage area on the exterior of building 84. All hazardous materials were stored in properly labeled drums that were in good condition. The storage area was covered and drums were kept in secondary containment.

### **Wastewater**

Farallon observed a treated wastewater system used to discharge water into the storm drain system.

### **Domestic Water**

Domestic water is supplied to the Site buildings by the East Bay Municipal Utility District.

### **Septic/Sewer System**

Sanitary sewage generated at the Site discharges to the municipal sanitary sewer system.

### **Stormwater**

Stormwater on the Site is directed into stormwater drains west of the Site, which discharge into two holding ponds southwest of the Site. More than 200 storm drains are present on the Site. Bayer continuously monitors the quality of surface water runoff, as required by the Industrial General Permit issued by the California State Water Resources Control Board.

### **Transformers**

Farallon observed an electrical substation with transformers on the Site. The transformers were in good condition and did not appear to contain PCBs.

## 9.0 FINDINGS AND OPINIONS

According to the Site representative, a release of hydraulic fluid is known to have occurred at building B57 due to a leaking elevator. The release does not pose a significant risk to human health or the environment and is therefore considered a de minimis condition in connection with the Site. Farallon also observed de minimis petroleum staining throughout paved areas of the Site that appeared to be from parked vehicles on the Site.

Farallon was provided with multiple historical environmental reports, including site investigation and remediation reports, UST removal reports, and Phase I ESAs, for review. According to the Building 38 Report, the former building 38 area was used as a solvent mixing and storage area. Site soil near Building 38 was impacted with TPHd and lead. Approximately 230 CY of soil was excavated from the area in 1991. An additional 72 CY of non-Resource Conservation and Recovery Act hazardous waste soil containing soluble lead at a concentration of 14 milligrams per liter and 540 CY of nonhazardous soil was removed from the Site in 1993. Confirmation samples in the remedial excavation indicated that TPH, VOCs, and lead were not present at concentrations exceeding the Tier 1 ESLs. Groundwater samples collected from monitoring well MW-8 near building 38 from indicated that TCE was present at a concentration of 5 µg/L, and likely came from an off-Site source. The Building 38 “Subsite” was granted closure by RWQCB in 1993. Based on post-remediation confirmation soil samples, which indicated that residual concentrations of lead and total petroleum hydrocarbons as diesel in soil were less than the Tier 1 ESLs, the building 38 Subsite is considered a historical recognized environmental condition in connection with the Site.

The Case Closure Summary for Parcels 1 and 2 stated that 17 USTs were discovered and removed from the Bayer Campus between 1986 and 1993. Unauthorized Release Reports were filed with RWQCB, which opened leaking UST cases. Soil, soil gas, and groundwater contaminant investigations related to the leaking USTs at the Site began in 1986, and groundwater monitoring was conducted from 1986 to 2009 using a network of 21 monitoring wells. All remaining monitoring wells were decommissioned in November 2009 as a requirement by RWQCB for case closure. The former leaking USTs and USTs on Parcels 1 and 2 were granted case closure in August 2016 after meeting RWQCB low-threat closure criteria from the Low-Threat Underground Storage Tank Case Closure Policy. Based on post-remediation confirmation soil samples, which indicated that residual concentrations of total petroleum hydrocarbons as diesel remained that exceeded the commercial/industrial and/or residential direct exposure ESLs, soil contaminated by releases from the former USTs on Parcels 1 and 2 is considered a controlled recognized environmental condition in connection with the Site.

The ERIS Report identified the Site address in several databases. The Site is listed on the GeoTracker database as containing multiple closed leaking UST sites, a closed cleanup program site, and an open cleanup program site. The Site was identified as a handler of hazardous materials, with no reported violations, and the Site was listed as having a hazardous materials business plan. Regulatory files for the Site were reviewed as part of this Phase I ESA Report.

According to the ERIS Report and previous historical documents, the area of west Berkeley up-gradient of the Site is associated with a regional chlorinated VOC groundwater plume originating from a variety of point and non-point sources. Low concentrations of VOCs, particularly TCE, have been detected on the Site in the plume at less than 30 µg/L for TCE, which exceeds the regulatory drinking water standard of 5 µg/L. Because the VOC concentrations at the Site are less than 2019 ESLs for vapor intrusion risk for commercial/industrial land use, the presence of VOCs in groundwater up-gradient of the Site is considered a de minimis condition in connection with the Site.

The Colgate-Palmolive Company plant, which operated at the Site from 1916 to 1981 and produced soaps and household cleaning projects, was identified in regulatory databases. The property consisted of 27 buildings, a tank farm, several individual storage tanks, and other structures. A leaking 6,500-gallon UST was reported in 1989, and a site assessment followed. The facility was listed as “Completed Case Closed” in the ERIS Report by RWQCB in 1997. Soil and groundwater investigations at the property occurred from 1981 to 2020, and TCE, trichloroethane, lead, mercury, and nickel contamination was identified at the property. Conditional case closure from RWQCB dated November 18, 1992 stated that “there is strong evidence that the TCA and TCE pollution migrated from off-site source(s),” and confirmed that soil with high concentrations of metals was removed from the property, and soil with low concentrations of metals was left in-place. The configuration of the VOC plume indicates that the source of organic priority pollutants originates off of the Site to the east, and the plume moves westward across the property. The Site was listed as “case closed” in 2020 with a deed notice that includes a warning “to prevent breaching the asphalt cover in such a manner as to allow polluted soils to be carried to surface water by rain runoff to allow accelerated leaching of metals to groundwater.” Based on the information provided in the ERIS Report, the results of the 2015 soil gas survey, and the facility’s current regulatory status, groundwater in Parcel 4 impacted by a migrating plume off of the Site represents a de minimis environmental condition in connection with the Site. The soil remediation activities performed at the former Colgate-Palmolive facility in 1985, which left impacted soil in-place, are considered a controlled environmental condition in connection with the Site.

## 10.0 CONCLUSIONS

Farallon conducted a Phase I ESA for Parcels 1, 2, 3, and 4 on the Bayer Campus property at 820 Parker Street in Berkeley, California in conformance with the scope and limitations of ASTM E1527-13. Any exceptions to or deletions from this practice are described in Section 1.5, Deviations.

This assessment identified no evidence of recognized environmental conditions in connection with the Site.

The following controlled recognized environmental conditions were identified in connection with the Site:

- Soil contaminated by releases from the former USTs on Parcels 1 and 2; and
- Soil remediation activities performed at the former Colgate-Palmolive facility in 1985, which left impacted soil in-place.

## 12.0 LIMITATIONS

### 12.1 GENERAL LIMITATIONS

The conclusions contained in this report/assessment are based on professional opinions with regard to the subject matter. These opinions have been arrived at in accordance with currently accepted hydrogeologic and engineering standards and practices applicable to this location. The conclusions contained herein are subject to the following inherent limitations:

- **Accuracy of Information.** Farallon obtained, reviewed, and evaluated certain information used in this report/assessment from sources that were believed to be reliable. Farallon's conclusions, opinions, and recommendations are based in part on such information. Farallon's services did not include verification of its accuracy or authenticity. Should the information upon which Farallon relied prove to be inaccurate or unreliable, Farallon reserves the right to amend or revise its conclusions, opinions, and/or recommendations.
- **Reconnaissance and/or Characterization.** Farallon performed a reconnaissance and/or characterization of the Site that is the subject of this report/assessment to document current conditions. Farallon focused on areas deemed more likely to exhibit hazardous materials conditions. Contamination may exist in other areas of the Site that were not investigated or were inaccessible. Site activities beyond Farallon's control could change at any time after the completion of this report/assessment.

For the foregoing reasons, Farallon cannot and does not warrant or guarantee that the Site is free of hazardous or potentially hazardous substances or conditions, or that latent or undiscovered conditions will not become evident in the future. Farallon's observations, findings, and opinions can be considered valid only as of the date of the report.

This report/assessment has been prepared in accordance with the contract for services between Farallon and Bayer U.S. LLC and currently accepted industry standards. No other warranties, representations, or certifications are made.

### 12.2 LIMITATION ON RELIANCE BY THIRD PARTIES

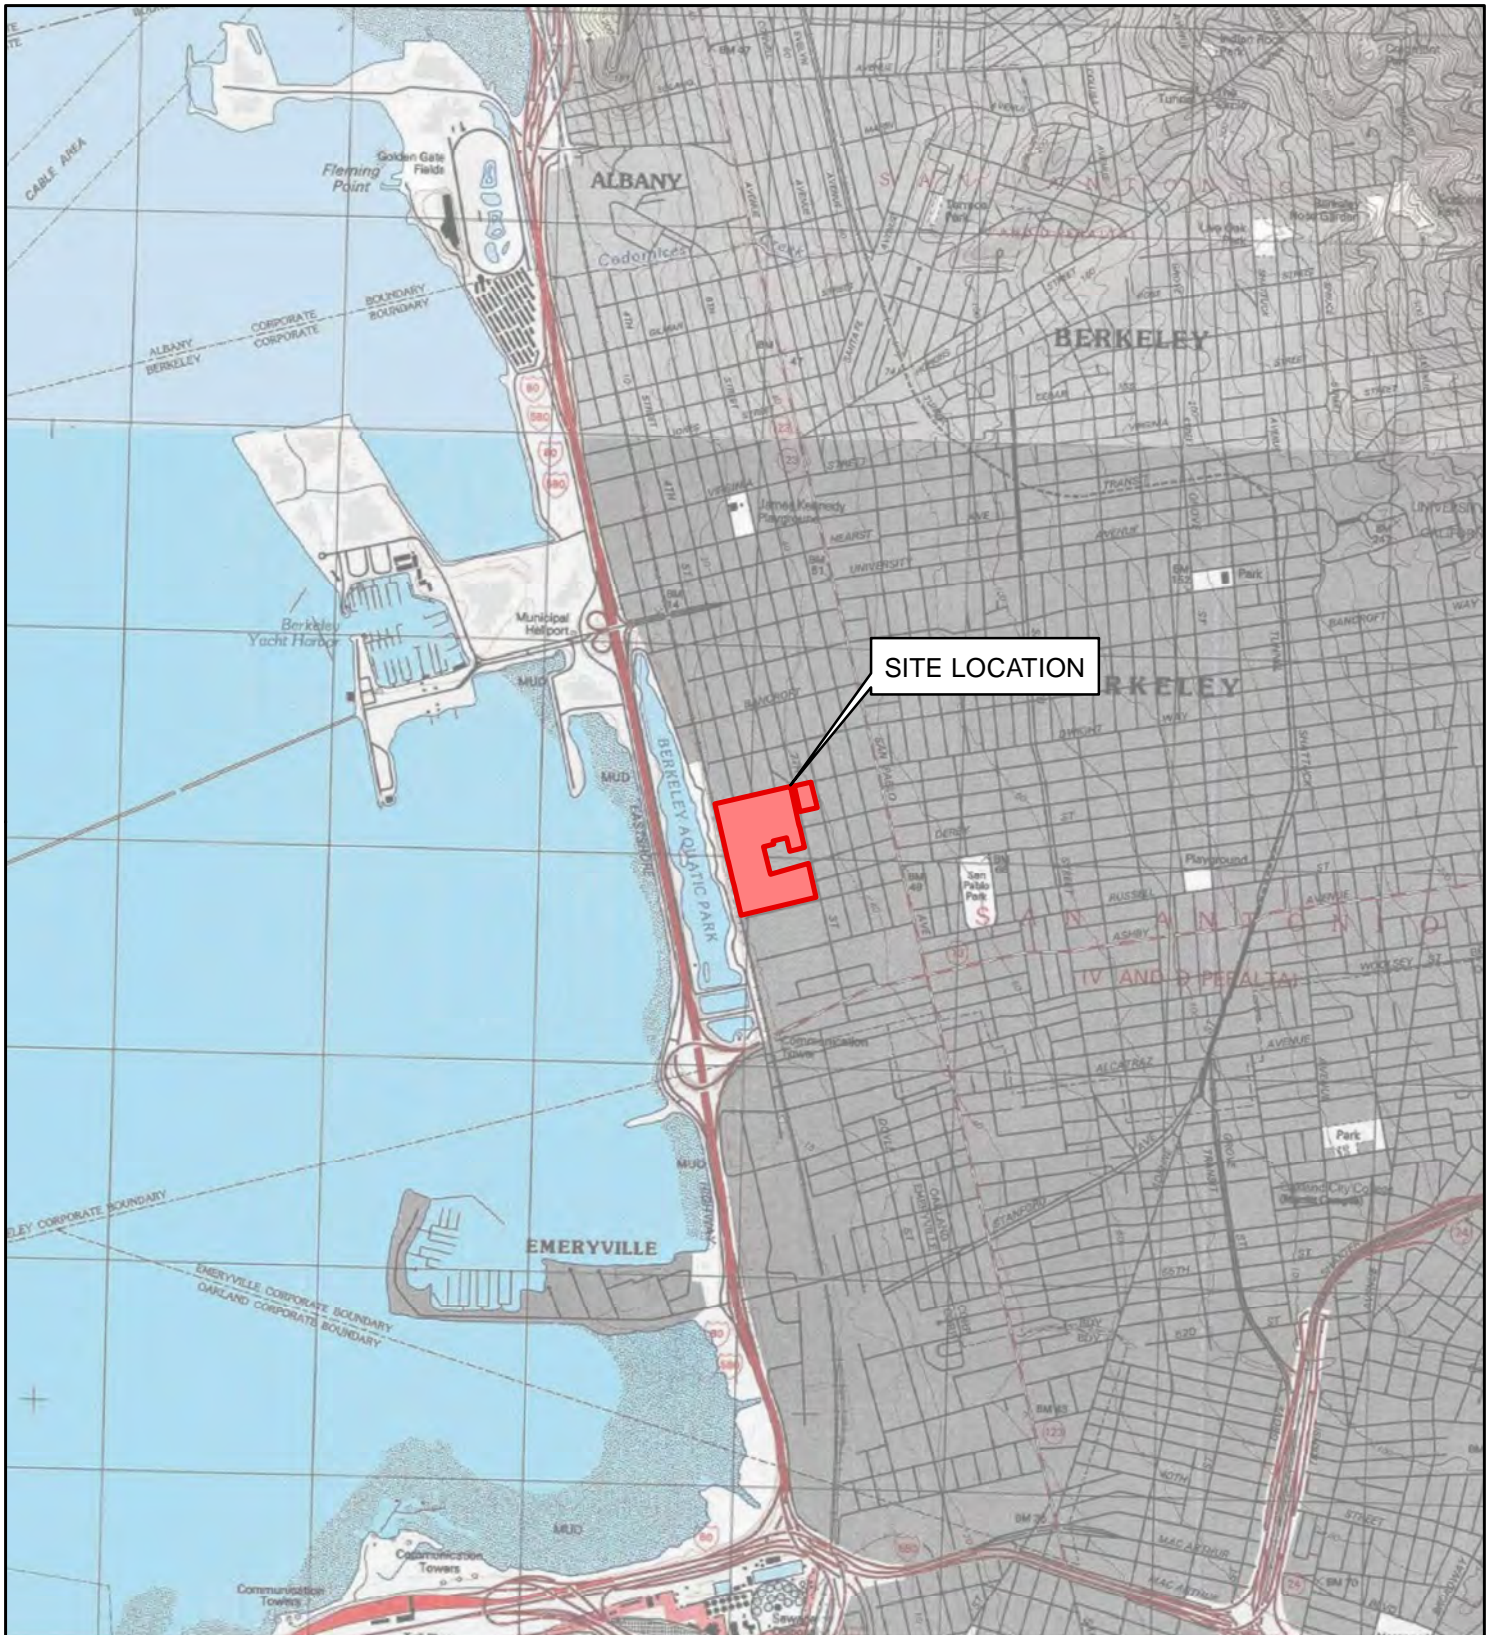

**Reliance by third parties is prohibited.** This report/assessment has been prepared for the exclusive use of Bayer U.S. LLC to address the unique needs of Bayer U.S. LLC at the Site at a specific point in time.

This is not a general grant of reliance. No one other than Bayer U.S. LLC may rely on this report unless Farallon agrees in advance to such reliance in writing. Any unauthorized use, interpretation, or reliance on this report/assessment is at the sole risk of that party, and Farallon will have no liability for such unauthorized use, interpretation, or reliance.

UST No. or Feature	Date Installed	Date Removed	Capacity (gallons)	Contents	Known or Suspected Leakage	Extent of Impacts	Free Product	Soil (cubic yards)	Notes on Removal, Cleanup, and Closure	REC, CREC, HREC, or De Minimis	Resource Documents
<b>Miles Inc./Cutter Biological (Parcel 2)</b>											
1	Unknown	October 1986	12,000	#2 Fuel Oil	Yes	Soil and groundwater excavated to clear potential contamination	No	900	Also known as 12K1. The UST was removed in October 1986. Contaminated soil was removed on December 7, 1987. No groundwater was encountered during excavation. Confirmation sampling of soil and groundwater was conducted in the vicinity of the former tank. Soil, soil gas, and groundwater contaminant investigations related to the leaking USTs at the Site began in 1986, and groundwater monitoring was conducted from 1986 to 2009 using a network of 21 monitoring wells. All remaining monitoring wells were destroyed in November 2009 as a requirement by the San Francisco Bay Regional Water Quality Control Board (RWQCB) for case closure. The former leaking underground storage tanks (USTs) and USTs on the Site were granted case closure in August 2016 after meeting the RWQCB low-threat closure criteria from the Low-Threat Underground Storage Tank Case Closure Policy.	CREC	Letter regarding Report of Contaminated Soil Removal, Tank 12K1 Site dated February 17, 1988 from Ms. Margery A. Hulbert of Riedel Environmental Services, Inc. to Mr. Parker of Cutter Laboratories
2	Unknown	1986 and 1987	12,000	#2 Fuel Oil	Unknown	Unknown	No	Unknown	Also known as 12K2. No UST removal report was identified. Soil, soil gas, and groundwater contaminant investigations related to the leaking USTs at the Site began in 1986, and groundwater monitoring was conducted from 1986 to 2009 using a network of 21 monitoring wells. All remaining monitoring wells were destroyed in November 2009 as a requirement by RWQCB for case closure. The former leaking USTs and USTs on the Site were granted case closure in August 2016 after meeting the RWQCB low-threat closure criteria from the Low-Threat Underground Storage Tank Case Closure Policy.	CREC	Letter regarding Petition for "No Further Action" Letter, Bayer Corporation, Berkeley, California dated May 15, 2002 from Mr. Richard Makdisi of Stellar Environmental Solutions, Inc. to Mr. Geoffrey Fiedler of the City of Berkeley Toxics Management Division
3	Unknown	1986 and 1987	12,000	#2 Fuel Oil	Unknown	Unknown	No	Unknown	Also known as 12K3. No UST removal report was identified. Soil, soil gas, and groundwater contaminant investigations related to the leaking USTs at the Site began in 1986, and groundwater monitoring was conducted from 1986 to 2009 using a network of 21 monitoring wells. All remaining monitoring wells were destroyed in November 2009 as a requirement by RWQCB for case closure. The former leaking USTs and USTs on the Site were granted case closure in August 2016 after meeting the RWQCB low-threat closure criteria from the Low-Threat Underground Storage Tank Case Closure Policy.	CREC	
4	1967	November 1989	6,000	Acetone	Yes	Soil contaminated with acetone (1,100 mg/kg max measured concentration)	No	Unknown	Also known as Tank D or T6, located immediately east of the southern exterior of building B49. The UST was removed in November 1989. Contaminated soil was not removed due to risk of undermining building B49. Soil, soil gas, and groundwater contaminant investigations related to the leaking USTs at the Site began in 1986, and groundwater monitoring was conducted from 1986 to 2009 using a network of 21 monitoring wells. All remaining monitoring wells were destroyed in November 2009 as a requirement by RWQCB for case closure. The former leaking USTs and USTs on the Site were granted case closure in August 2016 after meeting the RWQCB low-threat closure criteria from the Low-Threat Underground Storage Tank Case Closure Policy.	CREC	<i>Closure of Underground Storage Tanks at Building 49, Miles, Inc., Berkeley, California</i> dated August 1992, prepared for the Site by Engineering-Science, Inc.
5	1967	1989	6,000	Acetone	No	None	No	Unknown	Also known as Tank A or T17. The UST was removed in 1989. Confirmation soil samples (Uriah, Inc. sample ID nos. 1 and 2) contained no detectable acetone, ethanol, or methanol. Soil, soil gas, and groundwater contaminant investigations related to the leaking USTs at the Site began in 1986, and groundwater monitoring was conducted from 1986 to 2009 using a network of 21 monitoring wells. All remaining monitoring wells were destroyed in November 2009 as a requirement by RWQCB for case closure. The former leaking USTs and USTs on the Site were granted case closure in August 2016 after meeting the RWQCB low-threat closure criteria from the Low-Threat Underground Storage Tank Case Closure Policy.	CREC	
6	Unknown	November 1989	650	Diesel and/or Gasoline	Yes	Soil beneath UST contaminated (220 mg/kg diesel)	No	1,400	Also known as Tank F or T18. No records exist at Miles Inc. related to this UST prior to its discovery. The UST was removed in November 1989. All soil encountered above groundwater was excavated in 1992. The excavation was 45 feet wide by 60 feet long by 14 feet deep. Lab analysis indicated the UST contained gasoline and diesel. Soil, soil gas, and groundwater contaminant investigations related to the leaking USTs at the Site began in 1986, and groundwater monitoring was conducted from 1986 to 2009 using a network of 21 monitoring wells. All remaining monitoring wells were destroyed in November 2009 as a requirement by RWQCB for case closure. The former leaking USTs and USTs on the Site were granted case closure in August 2016 after meeting the RWQCB low-threat closure criteria from the Low-Threat Underground Storage Tank Case Closure Policy.	HREC	<i>Closure of Underground Storage Tank 6, Miles, Inc., Berkeley, California</i> dated September 1992, prepared for the Site by Engineering-Science, Inc.
7	Unknown	1989	1,500	Ethanol	No	None	No	Unknown	Also known as Tank E or T19. The UST was removed in 1989. Acetone and methanol were reported non-detect in confirmation soil samples and groundwater samples. Soil, soil gas, and groundwater contaminant investigations related to the leaking USTs at the Site began in 1986, and groundwater monitoring was conducted from 1986 to 2009 using a network of 21 monitoring wells. All remaining monitoring wells were destroyed in November 2009 as a requirement by RWQCB for case closure. The former leaking USTs and USTs on the Site were granted case closure in August 2016 after meeting the RWQCB low-threat closure criteria from the Low-Threat Underground Storage Tank Case Closure Policy. 9	1967	1991	6,000	Waste Acetone	Yes	Soil contaminated with acetone (1,100 mg/kg max measured concentration)	No		Also known as Tank C or T6, located immediately east of the southern exterior of building B49. In November 1989, the UST was emptied, cleaned, and closed in-place, and excavations were backfilled with clean soil. The UST was removed in 1991. Contaminated soil was not removed due to risk of undermining building B49. Soil, soil gas, and groundwater contaminant investigations related to the leaking USTs at the Site began in 1986, and groundwater monitoring was conducted from 1986 to 2009 using a network of 21 monitoring wells. All remaining monitoring wells were destroyed in November 2009 as a requirement by RWQCB for case closure. The former leaking USTs and USTs on the Site were granted case closure in August 2016 after meeting the RWQCB low-threat closure criteria from the Low-Threat Underground Storage Tank Case Closure Policy.	CREC	Closure of Underground Storage Tanks at Building 49, Miles, Inc., Berkeley, California dated August 1992, prepared for the Site by Engineering-Science, Inc.
10	1967	1990	6,000	Denatured Alcohol	No	None	No	Unknown	Also known as Tank G or T14, located immediately east of the southern exterior of building B49. In November 1989, the UST was emptied, cleaned, and closed in-place, and excavations were backfilled with clean soil. The UST was removed in 1990. Soil, soil gas, and groundwater contaminant investigations related to the leaking USTs at the Site began in 1986, and groundwater monitoring was conducted from 1986 to 2009 using a network of 21 monitoring wells. All remaining monitoring wells were destroyed in November 2009 as a requirement by RWQCB for case closure. The former leaking USTs and USTs on the Site were granted case closure in August 2016 after meeting the RWQCB low-threat closure criteria from the Low-Threat Underground Storage Tank Case Closure Policy.	CREC	Closure of Underground Storage Tanks at Building 49, Miles, Inc., Berkeley, California dated August 1992, prepared for the Site by Engineering-Science, Inc.
11	Prior to 1944	9/9/1990	340 or 350	Diesel	Yes	Soil contaminated with diesel (9,200 mg/kg max measured concentration); sheen seen on groundwater.	No	330	The UST was removed on September 9, 1990, and confirmation soil samples were collected. Soil excavation was conducted in two stages and totaled 330 cubic yards. Contaminated soil encountered at depths of approximately 13 to 17 feet below ground surface. An estimated 48 cubic yards of diesel-contaminated soil was left in-place due to the presence of active utilities and facility constraints. The excavation was backfilled with clean soil. Groundwater was encountered at a depth of 14 feet below ground surface. Petroleum sheen was seen in groundwater. Soil was remediated in July 1990. Soil, soil gas, and groundwater contaminant investigations related to the leaking USTs at the Site began in 1986, and groundwater monitoring was conducted from 1986 to 2009 using a network of 21 monitoring wells. All remaining monitoring wells were destroyed in November 2009 as a requirement by RWQCB for case closure. The former leaking USTs and USTs on the Site were granted case closure in August 2016 after meeting the RWQCB low-threat closure criteria from the Low-Threat Underground Storage Tank Case Closure Policy.	CREC	Closure of 350-Gallon Underground Fuel Storage Tank at Miles Inc.-Cutter Biological Laboratory Facility, Berkeley, California dated September 1991, prepared for the Site by Engineering-Science, Inc.
12	Prior to 1966	7/8/2020	375	Gasoline	Yes	Soil contaminated with gasoline (660 mg/kg max measured concentration)	No	75	The UST was not located until it was unearthed in 2020. The UST was removed on July 8, 2020. Approximately 75 cubic yards of TPH-impacted soil was removed from the UST excavation and disposed of off the site. TPH as gasoline and diesel were not detected at concentrations exceeding the residential or commercial/industrial Environmental Screening Levels in the final UST excavation confirmation sample. The UST is pending case closure by the City of Berkeley Toxics Management Division.	HREC	Underground Storage Tank Closure Report, Bayer Healthcare Campus, Berkeley, California dated August 18, 2020 prepared for the Site by Farallon

<b>Berkeley Unified School District (Miles Inc. Property Owner at the Time of Tank Removal) (Parcel 1)</b>											
13	1971	1993	7,500	Gasoline	Yes	Soil and groundwater excavated to clear potential contamination	No	1845	Also known as F. In 1991, three exploratory boreholes were advanced in the vicinity of the USTs, and low levels of gasoline, benzene, toluene, ethylbenzene, xylenes, and volatile organic compounds (VOCs) were detected. The USTs were removed in October 1993, and excavation of impacted soil occurred in November and December 1993. Approximately 1,850 cubic yards of soil was removed from the common UST excavation, which measured approximately 110 feet long by 90 feet wide. Approximately 2,700 gallons of water was pumped from the excavation to facilitate soil excavation below the top of the water table. Eleven confirmation soil samples were collected to evaluate residual soil contamination. Maximum residual soil concentrations included 130 mg/kg of gasoline; 370 mg/kg of diesel; 0.74 mg/kg of benzene; and approximately 3mg/kg each of ethylbenzene and xylenes. Neither semivolatile organic compounds nor VOCs (including toluene) were detected. Metals (including lead) were all detected at background concentration levels. Soil, soil gas, and groundwater contaminant investigations related to the leaking USTs at the Site began in 1986, and groundwater monitoring was conducted from 1986 to 2009 using a network of 21 monitoring wells. All remaining monitoring wells were destroyed in November 2009 as a requirement by RWQCB for case closure. The former leaking USTs and USTs on the Site were granted case closure in August 2016 after meeting the RWQCB low-threat closure criteria from the Low-Threat Underground Storage Tank Case Closure Policy. <b>Gary Steel (Parcel 1)</b>											
18	Prior to 1959	May 30, 1986	550	Diesel and/or Gasoline	Yes	Initial soil contamination up to 2,000 mg/kg TPH detected during tank removal.	No	1,460	Also known as G. The UST was removed on May 30, 1986. During removal of UST 19 in 1995, overexcavation of the UST pit revealed gasoline contamination in the northeastern corner of the pit. Gasoline contamination believed have originated from improper closure of Tank 18. All visibly stained soil was excavated from around UST 18 in 1995; the excavation was 10.5 feet deep by 16 feet long by 10 feet wide. Constituents of concern were reported non-detect in four confirmation soil samples and one grab groundwater sample collected in 1995.	CREC	<i>Closure of Underground Storage Tanks and Associated Remedial Activities at Former Berkeley Unified School District Bus Maintenance Facility, Berkeley, California</i> dated February 7, 1994 prepared for the Site by Engineering-Science, Inc.
19	1971	April 17, 1995	10,000	Diesel	No	None	No	Unknown	Also known as A. The UST was removed in 1971, and there were no reported releases.	HREC	<i>Closure of Underground Storage Tanks and Associated Remedial Activities at Former Berkeley Unified School District Bus Maintenance Facility, Berkeley, California</i> dated February 7, 1994 prepared for the Site by Engineering-Science, Inc. and letter regarding Bayer Corporation Tank 18 Soil Investigation dated November 20, 1995 from Mr. Scott Emerson-Price of Roy F. **VINCENT TILOTTA, P.E., QISP**  
Associate Engineer

BS Civil and Environmental Engineering  
MS Civil and Environmental Engineering  
10 years experience

Mr. Tilotta is a Professional Civil Engineer, registered in California and Washington State, with over 10 years of environmental engineering experience. His experience includes project management and design for small- and large-scale investigations, site remediation, Brownfield redevelopment, property transaction due diligence and negotiations, construction management and oversight, stormwater compliance and design, and detailed data analysis using databases and geographic information systems. He specializes in environmental due-diligence investigations for residential, commercial, and industrial properties; site remediation; regulatory closure of post-remediation properties; and post-remediation compliance.

**RICHARD MAKDISI, P.G.**  
Principal Geochemist

MS Geochemistry  
BA Geology  
36 years experience

Mr. Makdisi has more than 36 years of experience in hazardous management, geoscience engineering, geochemistry, and geohydrology. He has hands-on experience managing regional and site facility-scale projects for a wide range of issues, from immediate response assessments to long-term planning studies. He has worked closely with the U.S. Environmental Protection Agency; the California Environmental Protection Agency; California Water Boards; and county and city agencies on Resource Conservation and Recovery Act and Comprehensive Environmental Response, Compensation, and Liability Act sites to design and implement remedies to achieve regulatory closure for commercial and government clients. He has extensive experience in evaluating pathways of exposure to identify and design remediation systems and oversee their implementation.

Berkeley, California

Farallon PN: 2483-001

## PHASE I ENVIRONMENTAL SITE ASSESSMENT USER QUESTIONNAIRE

To qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001, the Phase I Environmental Site Assessment (Phase I ESA) Report user must provide the following information (if available) to the environmental professional (Farallon Consulting, L.L.C.). Failure to provide this information could result in the determination that "all appropriate inquiry" has not been completed.

Date: 9/9/2020

### ■ PROJECT/SITE INFORMATION

Client Name: Bayer US LLC Client Telephone: (510) 705-5000

Client Address: 800 Dwight Way

Asset #: Project/Site Name:

Project Street Address: 800 Dwight Way

City: Berkeley County: Alameda State: CA Zip: 94710

Why is this Phase I ESA required?

Property Transaction:

Sale  Purchase  Exchange  Other

Comments:

To extend a Development Agreement with the City of Berkeley

### ■ PROPERTY USE & SPECIFICATIONS

Single-Family Residential  Vacant or Undeveloped Land  
 Multi-Family Residential #Units:  Agricultural (Specify type):  
 Commercial Office  Industrial (Specify type): Biotech, light industrial, office  
 Commercial Retail  Other (Specify type):

Provide a general Site description: Biotechnology site that has production suites, quality control laboratories, research & development, utilities, warehousing, engineering, and administration buildings.

Legal description/plat plan/boundary survey available?  Yes  No  Already provided

Current Property Status:  Vacant  Occupied  Improved  Unimproved

Total Property Size: 45 acres + or - Original Construction Date: 1903

Total # of Buildings: Approx 35 Was Construction Phased?  Yes  No  Unknown

Total Sq. Ft. of Buildings: Date(s) of Renovation(s)/Phases: Multiple

Does Site have an undeveloped area equal to 1 acre or more?  Yes  No

Are any bodies of water on or immediately adjacent to the Site?  Yes  No If Yes, describe:

Comments:

Aquatic Park to the West which connects to the SF Bay

Potable water source at Site?  On-Site well  Utility (Specify provider) EBMUD

Wastewater discharge at Site?  Septic Tank/Drainfield  Sanitary Sewer  Other (Specify):

Building plans available at the Site?  Yes  No  Unknown  Already provided

**■ OWNERS**

Current Owner(s): Bayer

Previous Owner(s): Miles (Bayer), Cutter Laboratories.

**■ OCCUPANTS/TENANTS**

Current Occupant(s)/Tenant(s) and operations: Biotech operations.

Previous Occupant(s)/Tenant(s) and operations: Pharmaceutical operations, vaccines for animals and humans, blood plasma operations.

**■ PREVIOUS PROPERTY USES**

Describe previous use(s) of the Site: As above

**■ PREVIOUS INVESTIGATIONS**

Has any previous environmental investigation been conducted at Site?  Yes  No  Unknown

If Yes, note type and describe:  Phase I ESA  Asbestos  Lead Paint  Lead in Water

Radon  Wetlands  Indoor Air  UST/AST  Other (*Specify type below*)

Comments:

Long history with Farallon / Stellar Environmental.

**■ ON-SITE ENVIRONMENTAL CONDITIONS**

Are you aware of any of the following environmental conditions at the Site, either current or former?

Environmental Condition/Issue	Response	Comment if Yes Response
Aboveground Storage Tank	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Acids and Bases, some wastewater neutralization.
Underground Storage Tank	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Hazardous/Toxic Substance	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	See HMBP, approximately 800 chemicals.
Stored Chemical	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
Chemical Spill/Release	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Minor releases, all remediated.
Dump Area/Landfill	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Waste Treatment System	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Neutralization of wastewater.
Wastewater Discharge	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
Air Stack/Vent/Odor	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Lots of air handlers, clean air systems
Indoor Air Quality Complaint	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	

Floor Drain/Sump	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Some sumps in buildings, no chemicals to these sumps.
Pit, Pond, Lagoon	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Stained Soil/Vegetation Impact	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	

Other specialized knowledge of an environmental condition or issue at the Site?

**■ ADDITIONAL ON-SITE ENVIRONMENTAL CONDITIONS**

Are you aware of any of the following environmental conditions on the Site, either current or former?

Environmental Condition/Issue	Response	Comment if Yes Response
Pesticide/Herbicide Use	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Gardeners use weed killers.
Polychlorinated Biphenyls	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	No known contamination.
Electrical Transformer	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	No PCBs
Hydraulic Lift	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Had lifts in the past
Elevator	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	Around 14 elevators
Drycleaner Business	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Asbestos	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
Lead Paint	<input type="checkbox"/> Yes <input type="checkbox"/> No	
Lead Piping/Lead in Water	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Elevated Radon Level	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Fluorescent Light Fixture	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	
Wetland, Flooding	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Unique Wildlife Species	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Archeological Resource	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Historic/National Landmark	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Oil/Gas Well	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Water Well	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Environmental Cleanup	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	We had monitoring wells in the past, all closed legally.
Environmental Permit	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No	We have all appropriate permits to operate

**■ OFF-SITE ENVIRONMENTAL CONDITIONS**

On adjoining property, are there any: Gasoline Stations?  Yes  No Drycleaners?  Yes  No

Are you aware of any other environmental conditions or concerns on adjacent or nearby properties?

Yes  No

Comments

A nearby electroplater has a chromic acid plume under its property and the property next door.

**(1) Environmental cleanup liens that have been filed or recorded against the Site (Part 312.25 of Title 40 of the Code of Federal Regulations [40 CFR 312.25])**

Are you aware of any environmental cleanup liens against the Site that have been filed or recorded under federal, tribal, state, or local law?

No

**(2) Activity and land use limitations that are in place at the Site or that have been filed or recorded in a registry (40 CFR 312.26)**

Are you aware of any activity and land use limitation (such as engineering controls, land use restrictions, or institutional controls) that are in place at the Site and/or have been filed or recorded in a registry under federal, tribal, state, or local law?

We have known low level chlorinated solvent in the groundwater on the south portion of the site. Not our material, from off site.

**(3) Specialized knowledge or experience of the person seeking to qualify for the LLP (40 CFR 312.28)**

As the user of the Phase I ESA Report, do you have any specialized knowledge or experience related to the Site or nearby properties? For example, are you involved in the same line of business as the current or former occupant(s) of the Site or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business?

Yes.

**(4) Relationship of the purchase price to the fair market value of the Site if it were not contaminated (40 CFR 312.29)**

Does the purchase price being paid for this Site reasonably reflect the fair market value of the Site? If you conclude that there is a difference between the purchase price and the fair market value, have you considered whether the lower purchase price is because contamination is known or believed to be present at the Site?

N/A

**(5) Commonly known or reasonably ascertainable information about the property (40 CFR 312.30)**

Are you aware of commonly known or reasonably ascertainable information about the Site that would help Farallon Consulting, L.L.C. to identify conditions indicative of a chemical or other release or threatened release? For example, as user of the Phase I ESA Report:

Do you know the past use(s) of the Site? (If yes, please specify.) Yes, Bayer has owned since 1972

Do you know of a specific chemical(s) present at the Site, or present at one time? (If yes, please specify.) Trace amounts of chlorinated solvents on south portion of the site

Do you know of a chemical and/or other spill(s) or release(s) that have taken place at the Site? (If yes, please specify.) Lead in top soil from nearby freeway (leaded fuel)

Do you know of any environmental cleanup(s) that have taken place at the Site? (If yes, please specify.) Past clean ups from underground tank removals.

**(6) The degree of obviousness of the presence or likely presence of contamination at the Site, and the ability to detect the contamination by appropriate investigation (40 CFR 312.31)**

As the user of the Phase I ESA Report, based on your knowledge and experience related to the Site, is there any obvious indicator(s) that point to the presence or likely presence of contamination at the Site? (If yes, please specify.)

Only known contamination - oil from elevator under B57, trace chlorinated solvents on the south property.

**Identify all parties who will rely on the Phase I ESA Report, including:**

Name of Business: Bayer

Name of Contact: Jeffrey Bowman / Jessica Hayes

Address: 800 Dwight Way Berkeley CA 94710

Telephone Number: 510 705 5000

E-mail Address: jeffrey.bowman@bayer.com / Jessica.hates@bayer.com

**Has any party that will rely on the Phase I ESA Report required services beyond the standard ASTM E1527-05? (For example, an asbestos, lead-based paint, lead in drinking water, or wetlands investigation) (If yes, please specify.)** No

**Who is the Site contact, and how can the contact be reached?**

Name of Business: Bayer

Name of Contact: As above

Address: As above

Telephone Number: As above

E-mail Address: As above

**Are there any special terms and conditions that must be agreed upon by Farallon Consulting, L.L.C.?**  
(If yes, please specify.)

No

**San Francisco Bay Regional Water Quality Control Board**

June 30, 2017  
File No. 01-0972 (KEB)

Bayer HealthCare LLC  
Attn.: Mr. Jeffrey Bowman  
800 Dwight Way, P.O. Box 1986  
Berkeley, California 94710  
Sent Via Email: [Jeffrey.Bowman@bayer.com](mailto:Jeffrey.Bowman@bayer.com)

**SUBJECT: Closure Letter – Former Petroleum USTs on Bayer, Former Miles/Cutter/Berkeley Unified School District Parcels - 800 Dwight Way, Berkeley, Alameda County**

Dear Mr. Bowman:

This letter confirms the completion of a site investigation and corrective action for the underground storage tank(s) formerly located at the above-described location. Thank you for your cooperation throughout this investigation. Your willingness and promptness in responding to our inquiries concerning the former underground storage tank(s) are greatly appreciated.

Based on information in the above-referenced file and with the provision that the information provided to this agency was accurate and representative of site conditions, this agency finds that the site investigation and corrective action carried out at your underground storage tank(s) site is in compliance with the requirements of subdivisions (a) and (b) of Section 25296.10 of the Health and Safety Code and with corrective action regulations adopted pursuant to Section 25299.3 of the Health and Safety Code and that no further action related to the petroleum release(s) at the site is required.

This notice is issued pursuant to subdivision (g) of Section 25296.10 of the Health and Safety Code.

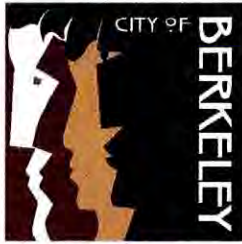

Please be aware that claims for reimbursement of corrective action costs submitted to the Underground Storage Tank Cleanup Fund more than 365 days after the date of this letter or issuance or activation of the Fund's Letter of Commitment, whichever occurs later, will not be reimbursed unless one of the following exceptions applies:

- Claims are submitted pursuant to Section 25299.57, subdivision (k) (reopened UST case); or
- Submission within the time-frame was beyond the claimant's reasonable control, ongoing work is required for closure that will result in the submission of claims beyond that time period, or that under the circumstances of the case, it would be unreasonable or inequitable to impose the 365-day time period.

Please contact our office if you have any questions regarding this matter.

Sincerely,

Bruce H. Wolfe  
Executive Officer

Planning and Development Department  
Toxics Management Division

1515 Clay Street, Suite 1400  
Oakland, California 94612

**Subject: Site Closure Request  
Former Miles/Cutter Laboratory  
731 Carleton Street**

Dear Ms. McCaulou:

The City of Berkeley, Toxics Management Division (TMD), has concluded the site investigation, remedial actions, and groundwater monitoring for this project. The TMD recommends that the case be considered for no further action. The attached Site Closure Summary (SCS) was prepared by TMD and includes a summary history of the underground tank systems that have been investigated at the site. Attached to the SCS is a copy of Stellar Environmental Solutions' (Stellar), "Petition for "No Further Action" Letter" dated May 15, 2002. The Stellar report summarizes the site environmental history with respect to the investigation of 17 underground storage tanks. These tanks sites have been acquired by Bayer HealthCare, LLC, Biological Products Division (Bayer) during the development of their Berkeley facility. The tank contents and closure histories are included in attachments to the SCS. The Stellar report provides an accurate summary of the investigation, corrective actions, and groundwater monitoring used to develop the site conceptual model and rationale for a determination of no significant potential for human or environmental impacts.

Groundwater quality data suggest stable, decreasing, or non-detected concentrations of the primary constituents of concern in soil and groundwater. Primary constituents include diesel, gasoline, used oil, ethanol, denatured alcohol, and acetone. Chlorinated compounds (VOCs) were detected during various site investigations at the site. Residual concentrations of TCE, 8 micrograms per liter (ug/L), DCE – 11 ug/L, and vinyl chloride – 79 ug/L are representative of sampling efforts conducted prior to 2002. The TMD concurs with Stellar's conclusion that these constituents are not related to a known activity, process, or release.

June 5, 2009

The VOC constituents appear primarily as degradation products and further degradation of these constituents is anticipated to continue to insignificant levels in the future. The distribution of constituents does not suggest a source for these constituents. Furthermore, the VOC constituents are located within the property boundaries of Bayer are not evident in downgradient monitoring well locations.

The Regional Board, July 6, 1993, (attached to SCS) offered a letter concluding an investigation of VOCs at that the Building 38 Sub-Site. The Board found that "...further investigation and/or cleanup of the soil and groundwater is not ...are not necessary. The Building 38 Sub-Site and Bayer property VOC concentrations are limited to on-site areas with no significant potential for off-site migration.

The existing residual concentrations in soil and groundwater associated with releases from the referenced underground storage tanks (USTs) has been shown to be of limited extent, with no significant potential for migration to sensitive surface waters (Aquatic Park Lagoon) or to significant groundwater resources. Furthermore, residual, diffuse, and degraded chlorinated compounds, alcohols, gasoline, diesel, and BTEX are relatively absent in groundwater and do not represent a significant vapor intrusion concern for the continued industrial use of the property.

The TMD is satisfied that the known potential sources of contamination have been appropriately investigated and that the residual soil and groundwater contamination resulting from leaks from the former historic fuel use represents a low to insignificant potential to impact human health or the environment. The TMD has placed a notice (flag) in the City of Berkeley's building permit system to indicate there is residual contamination in the subsurface. The tank locations and investigations referenced in this report have been acquired by Bayer Healthcare, LLC. For this reason, the flag will be recorded in the address location, 800 Dwight Way. The flag consists of a notice requiring building permits to be routed through the TMD for review and approval prior to issuing building, construction, or other permits for the property. Future construction activity will be evaluated for soil or groundwater concerns related grading and excavation activities. Work proposed for these areas will require a TMD-approved plan of action for disposal and/or treatment of soil or discharges of groundwater.

The TMD determination of no further action is based on the subsurface conditions as presented in the reports characterizing the site conditions and on TMD's observations during site visits and inspections. The determination is further based on existing site use and an understanding that the site will remain in industrial use for the foreseeable future. Significant changes in the site conditions, site development, or changes in zoning designation are required to be reported to the TMD to allow review of this no further action recommendation.

June 5, 2009

The SCS and attachments provide a synopsis of the characterization and remediation processes conducted for the project. Complete copies of the summarized reports and this letter have been uploaded to GeoTracker. The complete record of the case history is maintained in the TMD library. Please give me a call if you have questions. *Find them*

Sincerely,

Geoffery A. Fiedler

File No. 2198.17

Mr. Hugh Beattie  
Safety and Environmental Manager  
Miles Inc.  
4th and Parker Streets  
P. O. Box 1986  
Berkeley, CA 94701

Dear Mr. Beattie:

SUBJECT: Case Closure for Miles, Inc. Building 38 Sub-Site,  
Berkeley, Alameda County

Engineering-Science, Inc. (ES), consultants for Miles Inc., has submitted reports dated February 10, 1993 and May 14, 1993 which summarized the investigation and the cleanup of soil pollution resulting from spills in an open area near Building 38 that contained the mixing and solvent storage area for veterinary pharmaceutical research between the mid-1940s and early 1950s. ES recommends that this sub-site be closed. Regional Board staff have reviewed these reports and concurs with ES's recommendation. Therefore, based on the available information for the above site, it appears that further investigation and/or cleanup of the soil and groundwater pertaining to the subject mixing and storage area are not necessary. Further work could be required if conditions change or a water quality threat is discovered at the site.

If you have any questions, please call John Jang of my staff at (510) 286-0554.

Sincerely,

Steven R. Ritchie  
Executive Officer

**V. Closure**

<b>Does completed corrective action protect existing beneficial uses per the Basin Plan?</b> Yes		
<b>Does completed corrective action protect potential beneficial uses per the Basin Plan?</b> Yes		
<b>Does corrective action protect public health for current land use?</b> Yes		
<b>Site Management Requirements:</b> The City of Berkeley Toxics Management Division has placed a note in the City of Berkeley building permit application system. Building permit applications will be reviewed for underground work, excavation, and dewatering activities. Additional project costs for mitigations may be incurred as a result of regulatory oversight.		
<b>Should corrective action be reevaluated if the land use changes?</b> Yes		
<b>Monitoring Wells Destroyed?</b> Yes	<b>Number Destroyed:</b> 21 (See Attached Figures 2 and 3)	<b>Number Retained:</b> 0
<b>Enforcement Actions Taken:</b> None		
<b>Enforcement Actions Rescinded:</b> None		

**VI. Additional Comments**

This case meets the low-threat closure criteria in the State Water Board’s Low-Threat Underground Storage Tank Case Closure Policy, as shown below.

**General Criteria**

- a. The unauthorized release is located within the service area of a public water system;
- b. The unauthorized release consists only of petroleum;
- c. The unauthorized (“primary”) release from the UST systems has been stopped;
- d. Free product has been removed to the maximum extent practicable;
- e. A conceptual site model that assesses the nature, extent, and mobility of the release has been developed;
- f. Secondary source has been removed to the extent practicable;
- g. Soil or groundwater has been tested for methyl tert-butyl ether (MTBE) and results reported in accordance with Health and Safety Code section 25296.15; and
- h. Nuisance as defined by Water Code section 13050 does not exist at the site.

**Media-Specific Criteria**

- 1. Groundwater. This Site fits best into Specific Criterion No. 1 because historical Site groundwater monitoring and grab-groundwater sampling showed no detection of any hydrocarbon contamination or VOCs above levels of regulatory concern. The existing residual concentrations groundwater associated with releases from the referenced underground storage tanks (USTs) has been shown to be of limited extent, with no significant potential for migration to sensitive surface waters (Aquatic Park Lagoon) or to groundwater resources.
- 2. Petroleum Vapor Intrusion to Indoor Air. The site meet criteria No. 2a and 2b being under the jurisdiction of building permitting restrictions enforced by the city of Berkeley. In addition, a soil-gas study was conducted in June 11, 2015 in accordance with the City of Berkeley Mitigation Monitoring and Reporting Program (Section VIII Hazards) that requires evaluation of potential vapor intrusion risk associated with soil gas at proposed new building site. The soil-gas survey was conducted in the footprint of the Bayer QC building (B83) and showed a few chlorinated and hydrocarbons related VOCs were detected but that the compounds were all at trace or low levels below any of the ESL values for potential risk of vapor intrusion. A post-development indoor air survey at Bayer’s 921 Parker Street facility showed no contaminants above regulatory thresholds.
- 3. Direct Contact and Outdoor Air Exposure. The Site meets criteria No. 3a because the existing residual concentrations in soil associated with releases from the referenced underground storage tanks (USTs) has been shown to be of limited extent, with no significant potential for migration to groundwater. In addition, historical site specific soil and groundwater data indicate de-minimus to non-detectable region-wide CVOC concentrations in site soil and groundwater.

The only onsite direct exposure pathway that is potentially complete is exposure risk to a construction or trench worker excavating into the residual soil contamination. The construction worker could be temporarily exposed to the soil via dermal contact or inhalation of hydrocarbon vapors released from freshly disturbed contaminated soil. The City of Berkeley Toxics Management Division has placed a note in the building permit application system under which building permit applications are reviewed for underground work, excavation, and dewatering activities.

Mr. Russell J. Kirschenbaum  
Carleton Center  
2700 Seventh Street  
Berkeley, CA 94710

August 5, 1997  
File No. 2198.17(gal)  
01SD107

*Pete Wilson  
Governor*

Subject: Final Case Closure for Carleton Business Center, 2700 Seventh Street, Berkeley, Alameda County.

Dear Mr. Kirschenbaum,

Board staff have reviewed your July 10, 1997, submittal requesting Board staff review your consultants "Third Party Review" and reassess our previous Conditional Case Closure dated November 18, 1992.

Our review of the submitted material has given us a more thorough understanding of the case. Given our review of your submittal and that both the City of Berkeley and the California Department of Health Services has issued "no further action" letters for the subject site, we can rescind our November 18, 1992, Conditional Case Closure and issue Final Case Closure for the subject site.

Based upon the available information, including the current land use, and with the provision that the information provided to this agency was accurate and representative of site conditions, no further action is required for the subject property, the case is closed. The deed notice as previously required by our November 18, 1992 letter no longer applies.

Please contact George Lincoln at (510) 286-3815 if you have any questions regarding this matter.

Sincerely,

Loretta K. Barsamian  
Executive Officer

Stephen I. Morse, Chief  
Toxics Cleanup Division

## **Notice: IMPORTANT LIMITATIONS and YOUR LIABILITY**

**Reliance on information in Report:** This report DOES NOT replace a full Phase I Environmental Site Assessment but is solely intended to be used as database review of environmental records.

**License for use of information in Report:** No page of this report can be used without this cover page, this notice and the project property identifier. The information in Report(s) may not be modified or re-sold.

**Your Liability for misuse:** Using this Service and/or its reports in a manner contrary to this Notice or your agreement will be in breach of copyright and contract and ERIS may obtain damages for such mis-use, including damages caused to third parties, and gives ERIS the right to terminate your account, rescind your license to any previous reports and to bar you from future use of the Service.

**No warranty of Accuracy or Liability for ERIS:** The information contained in this report has been produced by ERIS Information Inc. ("ERIS") using various sources of information, including information provided by Federal and State government departments. The report applies only to the address and up to the date specified on the cover of this report, and any alterations or deviation from this description will require a new report. This report and the data contained herein does not purport to be and does not constitute a guarantee of the accuracy of the information contained herein and does not constitute a legal opinion nor medical advice. Although ERIS has endeavored to present you with information that is accurate, ERIS disclaims, any and all liability for any errors, omissions, or inaccuracies in such information and data, whether attributable to inadvertence, negligence or otherwise, and for any consequences arising therefrom. Liability on the part of ERIS is limited to the monetary value paid for this report.

**Trademark and Copyright:** You may not use the ERIS trademarks or attribute any work to ERIS other than as outlined above. This Service and Report (s) are protected by copyright owned by ERIS Information Inc. Copyright in data used in the Service or Report(s) (the "Data") is owned by ERIS or its licensors. The Service, Report(s) and Data may not be copied or reproduced in whole or in any substantial part without prior written consent of ERIS.

**RB Case No:** 01-0972  
**Local Case No:** TT01-0972  
**Begin Date:** 1/13/1987  
**Lead Agency:** SAN FRANCISCO BAY RWQCB (REGION 2)  
**Local Agency:** BERKELEY, CITY OF  
**CUF Case:** NO  
**Potential Media of Concern:** Other Groundwater (uses other than drinking water)  
**How Discovered Description:** Primarily during UST closures and investigations  
**Calwater Watershed Name:** Bay Bridges - Berkeley (203.30)  
**DWR GW Subbasin Name:** Santa Clara Valley - East Bay Plain (2-009.04)  
**Disadvantaged Community:**  
**Site History:**

**Potential COC:** Alcohols, Acetone, Trichloroethylene (TCE), Diesel, Gasoline, Kerosene  
**How Discovered:** Tank Closure  
**Stop Method:** Close and Remove Tank  
**Stop Description:** Closed tanks by removal and In-place closure  
**Case Worker:** KEB  
**File Location:** Local Agency

The Site has operated as a bus maintenance facility for the Berkeley Unified School District (BUSD) from 1971 to 1994, when the property was sold to Miles in 1992. Prior to 1971 it was used by a storage tank and rail car manufacturer. The current Site is a portion of the Miles facility with two (2) buildings, one a vehicle maintenance structure, and the other an office. Four (4) underground fuel storage tanks (UFSTs) and one (1) underground storage tank (UST) and one (1) oil-water separator were removed from the Site in 1993. Approx. 1,850 cubic yards of soil were also removed, along with 2,700 gallons of groundwater in order to help in the excavation process.

**Regulatory Activity**

**Action Type:** ENFORCEMENT  
**Date :** 6/30/2017  
**Action:** Closure/No Further Action Letter  
**Action Type:** ENFORCEMENT

Returned to compliance on 07/11/2019. Table 2: Cross-Reference to SPCC Contingency Requirements in Bayer's Integrated Contingency Plan indicates the contact list and phone numbers are included in Section II attachment C of the Integrated Contingency Plan. The list in attachment C is an Internal Notifications list and does not include the National Response Center, cleanup contractors, and all Federal, State and local agencies who must be contacted in the case of a discharge as described in 112.1(b). Table 2 indicates that the discharge reporting information is found in Section II attachment E and Section III-Annex 2, but these sections do not include the information and procedures that would enable a person reporting an oil discharge to relate all information as described in 40 CFR 112.7(a)(4), including estimates of the total quantity discharged, source of the discharge, cause of the discharge, actions being used to stop, remove, and mitigate the effects of the discharge, and whether an evacuation may be [Truncated]

**Violation Description:**

Failure to include in the SPCC Plan:

1. A contact list and phone numbers for the facility response coordinator, National Response Center, cleanup contractors with an agreement for response, and all Federal, State, and local agencies who must be contacted in case of a discharge
2. Information and procedures that would enable a person reporting an oil discharge to relate all information as described in 40 CFR 112.7(a)(4), unless facility submitted a Facility Response Plan.

<b>Violation Notes:</b>						

Returned to compliance on 07/11/2019. The SPCC plan does not either 1) identify the industry standard or 2) provide the reason for deviation from an industry standard and explanation of how it achieves equivalent environmental protection, for the inspection/testing program of the aboveground tanks/containers. Corrective action: Identify the industry standard or provide environmental equivalence in SPCC Plan. 6/13/2019 - RTC extension approved to 7/11/2019

**Violation Description:**

Failure to discuss in the SPCC Plan procedures to test or inspect each aboveground container for integrity in accordance with industry standards:

1. On a regular schedule.
2. After material repairs are made.
3. By qualified personnel.
4. The frequency and type of testing and inspections based on container size, configuration, and design.

Returned to compliance on 07/11/2019. Observed the following: B50, Room 9: Hazardous waste container collecting hazardous waste from HPLC machine is not closed. B50, Room 18A, hood 7099H35: silver staining reagent hazardous waste container does not have an accumulation start date. B50, Room 18A: Hazardous waste container collecting hazardous waste from HPLC machine is not labeled properly. B53, Room 109: Hydranal hazardous waste container does not have accumulation start date, physical state, composition or hazard. B57, Room 223/223A: Cedex Trypan blue solution container in tote near sink is not labeled properly. B57, Room 251: The ethidium bromide container has an accumulation start date of December 7, 2016. B57, Room 333/335: IPA waste bottle is not closed B57, Room 341: Hazardous waste bottles are not closed. Corrective action: Obtain lids or bottles for hazardous waste that meet the closed container requirements and ensure that hazardous waste containers are closed. 6/13/2019 - RTC extension [Truncated]

**Violation Description:**

- Failure to meet the following conditions of satellite accumulation regulations,
- Accumulate up to 55 gallons of hazardous waste or one quart of acute hazardous waste at or near the initial point of accumulation which was under the control of the operator
  - Total time hazardous waste can be accumulated onsite in any generator accumulation area is one year, i.e., the combined accumulation time at a satellite accumulation point and at a 90/180/270 accumulation area (depending on size of generator and distance transported), whichever comes first.
  - The generator complies with sections 66265.171, 66264.172, and 66265.173(a).
  - The container must be clearly marked with the initial date that hazardous waste is first placed in the container and labelled with the words "Hazardous Waste" including specified information
  - Container must be labelled with the date the satellite accumulation limit is reached and moved within three days after reaching the 55 gallon (or one quart) limit to a "90 day" accumulation area
  - 55 gallons (or one quart of acute hazardous waste) of waste per process may be accumulated

**Eval Notes:**

Inspected the handheld monitors and the ammonia system at building 62. No violations observed.; Note: data in [EVAL Notes] field for some records is truncated from the source.

**Eval Date:** 06/19/2018  
**Violations Found:** Yes  
**Eval General Type:** Compliance Evaluation Inspection  
**Eval Type:** Routine done by local agency  
**Eval Division:** Berkeley City Toxics Management Division  
**Eval Program:** HWLQG  
**Eval Source:** CERS  
**Eval Notes:**

Met with Jeffrey Bowman to review site operations. Reviewed hazardous waste storage area and operations at B55, B18 and B88. The secondary containment tray for the universal waste drums in the hazardous waste storage area has standing liquid, which Jeff indicates is rainwater. Remove the liquid and manage properly. Bayer has moved out of TC-1, at 921 Parker Street. Jeff provided a document with closure steps and I reviewed the hazardous waste manifests. The HVAC system and the compressed air system were removed from the facility. The equipment and hazardous materials were transferred to the main campus; Note: data in [EVAL Notes] field for some records is truncated from the source.

**Eval Date:** 08/09/2016

Met onsite May 9, 2019 to conduct hazardous materials release response plan and inventory, hazardous waste, aboveground petroleum storage, stormwater and to begin review of the CalARP Program with USEPA - Don Nixon, Robert Lucas, and Kimberly Burckle, and Bayer - Michael Gravink, Dan Rivers, Kingsley Chigbu, Jeffrey Bowan. Additional inspection dates: May 16 & 17, 2019. RMP contact changed November 2018. The RMP is being reviewed and updated as part of the 5 year update. TMD will complete the inspection following receipt of the updated RMP and additional documents. TMD has requested documents for review and completion of the inspection. The CalARP inspection will be completed once those documents have been received and reviewed.; Note: data in [EVAL Notes] field for some records is truncated from the source.

**Eval Notes:**

The SPCC Plan was reviewed and amended January 2019. The Facility Site Plan has been updated (Section 1.1.1) and the berms for 9098X17, 9098X09, and 0908X01 have been corrected to provide adequate secondary containment (Table 1) per Jeff Bowman. The building TC-1 is referenced

<b>Map Key</b>	<b>Number of Records</b>	<b>Direction</b>	<b>Distance (mi/ft)</b>	<b>Elev/Diff (ft)</b>	<b>Site</b>	<b>DB</b>
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

in the Facility Layout section of the SPCC Plan but is no longer a Bayer building. Met with Nicholas Joachim, Principal Electrical Engineer, to discuss AST inspections. Spoke with Mark Geiser, California Generator Services, who conducts the generator tests. All employees review the LMS training for environmental awareness, HESS 140-WBT, annually and the training includes a slide on the SPCC plan. TMD does not believe that this slide is adequate to assure that oil handling personnel have adequate understanding of the Plan and discharge prevention procedures annually.; Note: data in [EVAL Notes] field for some records is truncated from the source.

Completed Activities

**Title:** Site Screening  
**Title Link:**  
**Area Name:**  
**Area Link:**  
**Sub Area:**  
**Sub Area Link:**  
**Document Type:** Site Screening  
**Date Completed:** 3/18/1991  
**Comments:** SITE SCREENING DONE SITE WAS VETERINARY PHARMACEUTICAL RE-SEARCH AND DEVELOPMENT FACILITY FROM MID 1940'S TO 1950'S. A SCREWORM REPELLENT WAS DEVELOPED & TESTED; IT WAS THEN BLENDED WITH A SOLVENT AND COAL TAR BASE FOR APPLICATION TO ANIMAL WOUNDS. SURFACE SOIL SAMPLES HAD CARBON TETRA-CHLORIDE (18 MG/KG), CHLOROFORM 994 MG/ KG) AND OTHER PURGEABLE ORGANICS. ONE AREA HAD TOTAL PETROLEUM HYDROCARBON 2,000 PPM @ 30 INCHES BELOW GROUND SURFACE, AND POLYNUCLEAR AROMATICS 410 MG/ KG @ 12 INCHES BELOW THE GROUND SURFACE. A GRAB WATER SAMPLE WAS ANALYZED AND DID NOT HAVE TPH. PEAK MEDIUM. THE RP IS WORKING W/CITY HEALTH SERVICES DEPT. IN REMEDIATION

**Regulated Programs**

**EI ID:** 10825561      **EI Description:** Chemical Storage Facilities

**Violations**

**Violation Date:** 08/29/2019      **Violation Source:** CERS  
**Violation Program:** HMRRP      **Violation Division:** Berkeley City Toxics Management Division  
**Citation:** HSC 6.95 25508(a)(1) - California Health and Safety Code, Chapter 6.95, Section(s) 25508(a)(1)  
**Violation Notes:**

Returned to compliance on 09/25/2019. Facility failed to establish and adequately implement a Hazardous Materials Business Plan (HMBP). The facility exceeds the specified thresholds of hazardous materials required to submit a HMBP in accordance with BMC 15.12.050. Therefore, the facility meets the requirements to report hazardous materials inventory and submit a HMBP. Corrective Action: Please establish a Hazardous Materials Business Plan (HMBP) within 30 days, by September 28th. To complete a HMBP, please go to [cers.calepa.ca.gov](http://cers.calepa.ca.gov) and create an account. Report complete list of HazMat inventory, Site Map, and Emergency Response/Training Plans.

**Violation Description:**

Failure to complete and electronically submit a business plan when storing/handling a hazardous material at or above reportable quantities.

**Evaluations**

**Eval Date:** 08/29/2019  
**Violations Found:** Yes  
**Eval General Type:** Other/Unknown  
**Eval Type:** Other, not routine, done by local agency  
**Eval Division:** Berkeley City Toxics Management Division  
**Eval Program:** HMRRP  
**Eval Source:** CERS  
**Eval Notes:**

Conducted a screening for hazardous materials and hazardous waste. At any one time during a year, if a facility uses, handles, stores, or generates combined (aggregate) quantities of hazardous materials and hazardous waste in amounts = 55 gallons for liquids, 500 pounds for solids, and/or 200 cubic feet of compressed gases, the facility must submit a Hazardous Materials Business Plan (HMBP), and must submit a Hazardous Waste Generator form for any amount of waste. Facility is small scale a whiskey distillery. They receive chemicals/components for whiskey, then barrel it for sale. The whiskey and chemicals storage room is closed, secure, indoors, and not a threat to storm water. Outdoor area is clear and has seating; dumpster is shared with property next door. No apparent stormwater threats. All fire extinguishers are up to date. Facility operator was able to produce SDSs immediately upon request. Observed -10x 55 gallon drums of ethyl alcohol = 550 gallons -1x 1000 [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

<b>Local Case No:</b>		<b>Case Worker:</b>	CH
<b>Begin Date:</b>	3/8/2001	<b>File Location:</b>	All Files are on GeoTracker or in the Local Agency Database

**Stop Method:**

**Lead Agency:** SAN FRANCISCO BAY RWQCB (REGION 2)

**Local Agency:**

**Potential COC:**

**Potential Media of Concern:** Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water)

**How Discovered:** \* GOV

**How Discovered Description:**

**Stop Description:**

**Calwater Watershed Name:** Bay Bridges - Berkeley (203.30)

**DWR GW Subbasin Name:** Santa Clara Valley - East Bay Plain (2-009.04)

**Disadvantaged Community:**

**Site History:**

Groundwater contamination due to a plating shop operations since 1960's; historical spills and leaks around tanks with chromic acid. Groundwater and soil contaminated with total and hexavalent chromium. Soil and groundwater chromium contamination has been found on- and offsite. In 1991 the City of Berkeley TMD required the RP to prepare a work plan for chromium 6 contamination delineation in soil and GW, a feasibility study for corrective actions to remove chromium from soil and GW, risk assessment, and evaluation of the facility storm water pollution prevention plan. Implementation of the in-situ reduction of Cr 6 to Cr 3 as proposed in the 3/1998 Arcadis Gerathy & Miller revised CAP; installation of 12 injection points on- and offsite and injections of an enriched carbohydrate solution into the saturated and vadose zones in 12/1998 and 4/1999. Site closure requested from the TMD in April 2005 by Tamalpais Environmental Consultants (TEC) based on low concentrations in GW. Additional subsurface treatments in 11/2008 to address residual Cr 6 at the site based on results from well MW-1 downgradient of the former source area. Temporary injection points installed to inject a remediation mixture w/whey and an emulsified soybean oil. An additional round of groundwater remediation injections performed in four locations in June 2013 to address chromium 6 detected in well MW-1. The concentration of chromium 6 in MW-1 was below 10 ug/L during the groundwater monitoring events conducted in 12/2014 and 12/2015 by TEC .

 Future Land Use:  
 Cleanup Oversight Agencies: SAN FRANCISCO BAY RWQCB (REGION 2) (LEAD) - CASE #: 01S0742  
 CASEWORKER: CELINA HERNANDEZ  
 BERKELEY, CITY OF

**Site History:**

Groundwater contamination due to a plating shop operations since 1960's; historical spills and leaks around tanks with chromic acid. Groundwater and soil contaminated with total and hexavalent chromium. Soil and groundwater chromium contamination has been found on- and offsite. In 1991 the City of Berkeley TMD required the RP to prepare a work plan for chromium 6 contamination delineation in soil and GW, a feasibility study for corrective actions to remove chromium from soil and GW, risk assessment, and evaluation of the facility storm water pollution prevention plan. Implementation of the in-situ reduction of Cr 6 to Cr 3 as proposed in the 3/1998 Arcadis Gerathy & Miller revised CAP; installation of 12 injection points on- and offsite and injections of an enriched carbohydrate solution into the saturated and vadose zones in 12/1998 and 4/1999. Site closure requested from the TMD in April 2005 by Tamalpais Environmental Consultants (TEC) based on low concentrations in GW. Additional subsurface treatments in 11/2008 to address residual Cr 6 at the site based on results from well MW-1 downgradient of the former source area. Temporary injection points installed to inject a remediation mixture w/whey and an emulsified soybean oil. An additional round of groundwater remediation injections performed in four locations in June 2013 to address chromium 6 detected in well MW-1. The concentration of chromium 6 in MW-1 was below 10 ug/L during the groundwater monitoring events conducted in 12/2014 and 12/2015 by TEC .

ACID SOLUTION 2->PH WITH METALS, HALOGENATED SOLVENTS, METALS - SLUDGE, SLUDGE - DEGREASING

**Site History:**

Electro-Coatings, Inc. (ECI) has been operating on the northwest corner of 7th and Carleton Streets in Berkeley, Alameda County since May 1964. The Site is located 18,000 feet east of Aquatic Park and is approximately 1/2 mile east of San Francisco Bay. The surrounding area is zoned for manufacturing and the nearest residential area is approximately 1,000 feet from the site. The property is currently owned by Electro-Coatings, Inc., which is located in Texas. Electro Coatings, Inc., a wholly owned subsidiary of Electro-Coatings Industries Inc. purchased the property in 1984 from the Mechanics Bank of Richmond, who acted as Trustee under the will fo Dannie C. Harrington, who died in 1975. Harrington Investment Corporation had purchased the property in 1960. In May 1986, ECI filed for bankruptcy under Chapter 11. U.S. Bankruptcy Code. ECI conducted machining and electroplating operations, which involves the use of re-circulating plating baths (currently triple contained concrete vaults lined with polypropylene). 50/50 mix of chromic acid and water were spilled. On October 7, 1981 rains filled a catch panel on the scrubber unit and released chromic acid to the street gutters and storm drain. Subsequent groundwater monitoring revealed chromium and hexavalent chromium in on-site and off-site monitoring wells. In March 1998, a Corrective Action Plan (CAP) was submitted to the City of Berkeley, Toxics Managment Division ("City"). Following approval of the revised CAP, groundwater remediation was initiated, using the application of a molasses mixture to subsurface via injection or monitoring wells. Subsequently, the molasses was swithed to a proprietary In-situ Reductive Zone Technology (IRZ) remediation solution (cheese whey). Injection events into eight onsite injection points were completed in December '98 and April '99, with an additional limited event following in December 2002. Remediation has significantly decreased, and in some cases, eliminated chromium and hexavalent chromium in on-site and off-site monitoring wells. Concentrations of hexavalent chromium dropped in an on-site monitoring well, from 46,000 ppb in February 1999, to 150 ppb in December 2002, and in another well, from 620,000 ppb in November 1999 to < 10 ppb in December 2002. Most recently, a proposed installation of an additional monitoring well downgradient of the ECI facility, as requested by the City. AS of September 2003, Electro-Coatings is in the process of obtaining a well permit for the installation of this additional well.

**Sub Area:**  
**Sub Area Link:**  
**Document Type:** Site Screening  
**Date Completed:** 3/26/1993  
**Comments:** This facility is a possible source for the Cr(VI) found in groundwater below a neighboring facility (Macauley Foundry, 811 Carleton, Berkeley). There is no on-site data available Chromium was found at up to 60ppm in soil and 30 ppm in groundwater at the Macauley facility. The site appears to have no exposed soil, all areas not covered by the building appear to be paved. This facility has a sister facility in Emeryville at 1401 Park St., which has soil and groundwater contaminated with chromium and TCE. A former employee of the city of Berkeley said he believed that in the past the facility disposed of wastes into the ground. The only known use of groundwater in the immediate vicinity is for industrial purposes, according to the well inventory provided the Alameda County Public Works Dept. A hazard ranking package will be prepared.

**Citation:** 22 CCR 15 66265.16 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.16  
**Violation Notes:**

Returned to compliance on 06/05/2015. The hazardous waste training was last conducted 12/2013. Refresher training is to be conducted on an annual basis. Generator did not provide refresher training for employees. Corrective action: Conduct training and provide a copy of the training record to TMD.

**Violation Description:**

Failure to provide employees within the first six months after the date of their employment, or assignment to the facility, or to work unsupervised, or to a new position at a facility with hazardous waste training to ensure employees are competent in the following areas: hazardous waste management procedures (including contingency plan implementation) relevant to the positions in which they are employed, emergency response and emergency equipment, and procedures for using, inspecting, repairing, and replacing facility emergency and monitoring equipment. In addition, the owner/operator shall ensure facility personnel take part in an annual review of the initial training and training records training records on current personnel shall be kept until closure of the facility. Training records on former employees shall be kept for at least three years from the date the employee last worked at the facility. The records shall include the following: the job title for each position at the facility related to hazardous waste management, and the name of the employee filling each job; a written job description for each position, duties of facility personnel assigned to each position, and a written description of the

**Violation Notes:**

Returned to compliance on 05/20/2015. Generator did not contact the TSDf and did not file an exception report with DTSC after not receiving the TSDf signed copy of 013193084JJK, 6/10/2014. Corrective action: Contact the TSDf to obtain a copy and make a copy of the manifest and send to DTSC stating you have not received confirmation of delivery.

**Violation Description:**

Failure to complete the uniform hazardous waste manifest exception requirements.

**Violations**

**Violation Date:** 04/09/2015 **Violation Source:** CERS  
**Violation Program:** HWLQG **Violation Division:** Berkeley City Toxics Management Division  
**Citation:** HSC 6.5 25143.9 - California Health and Safety Code, Chapter 6.5, Section(s) 25143.9  
**Violation Notes:**

Returned to compliance on 05/20/2015. At the Mesta grinder, Cimtech 46C, a metal working fluid is conveyed from the grinder through a filter and into a tray below that captures the liquid and returns it to the machine. The sludge and filter are transferred to a hazardous waste container and managed as non-RCRA hazardous waste (grinding sludge). This material meets the recycling exemption of HSC 25143.9. However, the facility has not complied with the requirements of HSC 25143.9 in that the tank/tray is not labeled in accordance with generator requirements except that the tank shall be labeled with the words "Excluded Recyclable Material" instead of the words hazardous waste.

**Violation Description:**

Failure to meet the following requirements of excluded recyclable materials:

- 1) Used or reused as an ingredient in an industrial process to make a product if the material is not being reclaimed,
- 2) Used or reused as a safe and effective substitute for commercial products if the material is not being reclaimed,
- 3) Returned to the original process from which the material was generated, without first being reclaimed, if the material is returned as a substitute for raw material feedstock, and the process uses raw materials as principal feedstocks,
- 4) The material is recycled and used at the same facility at which the material was generated, or by the same corporate entity,
- 5) The material is recycled within the applicable generator accumulation time,
- 6) The material is managed in accordance with all applicable requirements for generators of hazardous wastes,
- 7) If the material is held in a container or tank, the container or tank is labeled, marked, and placarded in accordance with the department's hazardous waste labeling, marking, and placarding requirements which are applicable to generators, except that the container or tank shall be labeled or marked clearly with the words "Excluded Recyclable Material" instead of the words "Hazardous Waste,"
- 8) If the material is used oil, the containers, aboveground tanks, and fill pipes used to transfer oil into underground storage tanks shall also be labeled and clearly marked with the words "Used Oil",
- 9) The owner or operator of the business location where the material is located has a business plan that meets the following minimal requirements: emergency response plans and procedures, which specifically address the material or that meets the emergency response and contingency requirements which are applicable to generators of hazardous waste, and
- 10) The material shall be stored and handled in accordance with all local ordinances and codes.

**Violation Program:** HWLQG **Violation Division:** Berkeley City Toxics Management Division  
**Citation:** 22 CCR 15 66265.31 - California Code of Regulations, Title 22, Chapter 15, Section(s) 66265.31  
**Violation Notes:**

Returned to compliance on 05/20/2015. TMD observed, during the inspection, blasting media on ground around sand blast room and out to the loading area of the building. TMD observed square holes in the side of the sand blast room through which a hose runs through. These holes are larger than the hose, and the accumulation of sand blast media below the hole appears to indicate this is a source of release of media from the room. The blasting media is collected and managed as hazardous waste, non-RCRA hazardous waste (hopper dust). Generator failed to maintain and operate facility in a manner to protect against/prevent any unplanned release to air, soil or surface water. Corrective action: Immediately clean up the area around the sand blast room and manage in accordance with hazardous waste regulations. Provide TMD with a plan outlining how the facility will change its operation to minimize the possibility of the release of blasting media.

**Violation Description:**

Failure to maintain and operate the facility to minimize the possibility of a fire, explosion, or any unplanned sudden or non-sudden release of hazardous waste or hazardous waste constituents to the air, soil, or surface water which could threaten human health or the environment.

**Violation Division:** Berkeley City Toxics Management Division

Returned to compliance on 05/20/2015. At the Landis grinder, solids accumulate in the reservoir of the machine. Facility has an open tray that sits below the opening of this reservoir to catch the overflow and allow the operator to shovel out the sludge. The sludge in this tray is transferred to a hazardous waste drum a couple times per month, according to Aaron. Sludge in process equipment is not considered to be generated until the waste is removed from the equipment. TMD does not consider the open tray part of the equipment and considers the tray an in-process container, which would not need to be closed during working hours. The hazardous waste should be transferred to a closed and properly labeled hazardous waste container at the end of working hours, or the tray can be managed as the hazardous waste container and be labeled and closed, along with compliance for accumulation time limits.

**Violation Description:**

Failure to properly close hazardous waste containers when not in active use.

Onsite to confirm information in 2/24/2016 CERS submittal and proper management of hazardous waste. Hazardous waste management training completed 6/4/15 and hazard communication completed 4/2/15. Aaron indicates the hazard communication training will be completed soon. Provide TMD with a copy of the training confirming completion of the annual refresher training, including emergency response procedures. Inventory and site map are consistent with what was observed this date.; Note: data in [EVAL Notes] field for some records is truncated from the source.

**Eval Date:** 04/17/2017  
**Violations Found:** No  
**Eval General Type:** Compliance Evaluation Inspection  
**Eval Type:** Routine done by local agency

**Violations Found:** Yes  
**Eval General Type:** Compliance Evaluation Inspection  
**Eval Type:** Routine done by local agency  
**Eval Division:** Berkeley City Toxics Management Division  
**Eval Program:** HWLQG  
**Eval Source:** CERS  
**Eval Notes:**

Hazardous waste containers are in good condition, kept closed when not adding or removing waste, properly labeled. Hazardous wastes are accounted for in inventory and shipment records. Hazardous Waste manifests were reviewed for 2018-2019. Wastes shipped off are consistent with waste reported on CERS inventory. Fire extinguishers are properly serviced and inspected about monthly. Emergency eyewash stations are available throughout the facility and are inspected monthly. Emergency phone numbers and facility map are posted in office area, near a phone. Weekly hazardous waste inspections are conducted to account for hazardous waste and verify proper containment. Hazardous waste management training was provided to 9 employees 6/2018. Training will need to be conducted by 6/2019. Note that the person signing the manifests is required to have training. ; Note: data in [EVAL Notes] field for some records is truncated from the source.

**Eval Division:** Berkeley City Toxics Management Division  
**Eval Program:** HWLQG  
**Eval Source:** CERS  
**Eval Notes:**

Onsite for routine hazardous waste inspection at facility. Operations at this facility include hard chrome plating, copper plating, electroless nickel plating, sandblasting and various machining. Met with Aaron Plechaty, Production Manager, for inspection. Aaron indicates they do not conduct cyanide solution plating. They had a clean out of lab chemicals in 2014. Reviewed hazardous waste manifests. Manifest 013193084JJK, dated 6/10/14 does not have a designated facility to generator copy. Aaron indicates they do not have a process for ensuring receipt of these copies, and has not submitted an exception report to DTSC. Aaron indicates they do send a copy of the manifest to DTSC. Reviewed training program and records. One employee has hazwoper training. Confirmed that facility completes and submits as appropriate biennial report and SB 14 reports. Walkthrough - Aaron conducts weekly inspections of hazardous waste containers/areas. confirmed that eyewash stations, [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

<b>Calwater Watershed Name:</b>	Bay Bridges - Berkeley (203.30)		
<b>DWR GW Subbasin Name:</b>	Santa Clara Valley - East Bay Plain (2-009.04)		
<b>Disadvantaged Community:</b>			
<b>Site History:</b>			

Groundwater contamination due to a plating shop operations since 1960's; historical spills and leaks around tanks with chromic acid. Groundwater and soil contaminated with total and hexavalent chromium. Soil and groundwater chromium contamination has been found on- and offsite. In 1991 the City of Berkeley TMD required the RP to prepare a work plan for chromium 6 contamination delineation in soil and GW, a feasibility study for corrective actions to remove chromium from soil and GW, risk assessment, and evaluation of the facility storm water pollution prevention plan. Implementation of the in-situ reduction of Cr 6 to Cr 3 as proposed in the 3/1998 Arcadis Gerathy & Miller revised CAP; installation of 12 injection points on- and offsite and injections of an enriched carbohydrate solution into the saturated and vadose zones in 12/1998 and 4/1999. Site closure requested from the TMD in April 2005 by Tamalpais Environmental Consultants (TEC) based on low concentrations in GW. Additional subsurface treatments in 11/2008 to address residual Cr 6 at the site based on results from well MW-1 downgradient of the former source area. Temporary injection points installed to inject a

remediation mixture w/whey and an emulsified soybean oil. An additional round of groundwater remediation injections performed in four locations in June 2013 to address chromium 6 detected in well MW-1. The concentration of chromium 6 in MW-1 was below 10 ug/L during the groundwater monitoring events conducted in 12/2014 and 12/2015 by TEC .

**Eval Date:** 07/11/2017  
**Violations Found:** No  
**Eval General Type:** Compliance Evaluation Inspection  
**Eval Type:** Routine done by local agency  
**Eval Division:** Berkeley City Toxics Management Division  
**Eval Program:** HMRRP  
**Eval Source:** CERS  
**Eval Notes:**

Routine Hazardous Materials Business Plan, Hazardous waste and Storm Water facility compliance inspection. The 2017 CERS submission was done on 2.24.27 by Daniel David. Bike repair, storage and mostly personal vehicle storage. The auto repair operation has not been in active for several years according to Daniel David. There is a used car selling operation at the site. There were a number of old cars in various state of repairs mainly stored inside and a number of disassembled/junk cars stored outside along with various junk car parts. While the exterior and interior were messy & unkempt, there was no spilled liquids or oil noted on the grounds. Several 55-gallon drums were on the property and were noted to be empty or containing water. The two 1/4 full drums of oil were reported as being moved from the foundry and were in the process of being used. Daniel David stated he has a car dealers license for selling used cars. The electric bicycle shop and small quantity used car [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

**Eval Type:** Routine done by local agency  
**Eval Division:** Berkeley City Toxics Management Division  
**Eval Program:** HMRRP  
**Eval Source:** CERS  
**Eval Notes:**

Onsite for routine inspection. Walk through obs: Nitrogen generator with small holding capacity. CO2 quantities need to be updated. Map is accurate. Glycol chiller on roof. Training records not available at time of inspection.; Note: data in [EVAL Notes] field for some records is truncated from the source.

**Eval Date:** 08/19/2014  
**Violations Found:** Yes  
**Eval General Type:** Other/Unknown  
**Eval Type:** Other, not routine, done by local agency  
**Eval Division:** Berkeley City Toxics Management Division  
**Eval Program:** HMRRP  
**Eval Source:** CERS  
**Eval Notes:**

This was not an inspection, only a written notice of violation.; Note: data in [EVAL Notes] field for some records is truncated from the source.

**Eval Date:** 10/08/2014  
**Violations Found:** Yes  
**Eval General Type:** Compliance Evaluation Inspection  
**Eval Type:** Routine done by local agency  
**Eval Division:** Berkeley City Toxics Management Division  
**Eval Program:** HMRRP  
**Eval Source:** CERS  
**Eval Notes:**

Onsite for routine compliance inspection to confirm information in the HMBP. The Rare Barrel produces sour beer and packages and provides tasting of the beer at the site. Met with Jay. Fire extinguishers at the site were last serviced Dec. 17, 2012. Contact company to have all fire extinguishers serviced. Fire extinguisher label on post near office, but no fire extinguisher. Either remove the label or add an extinguisher. Electrical panel does not have three foot clearance. Provide clearance in front of panel. Suggest taping out the area. Compressor used to supply compressed air, not in cylinders, 80 gallon tank, 175 psi. TMD to provide guidance on possible permit requirements. The Rare Barrel also uses a nitrogen generator. Hazardous Materials storage area - 250 cf oxygen cylinder in the fermentation area. Cylinder is not chained. Small 20 cf cylinders are also in area. Provide a cart for the cylinder or chain as required by fire code. TMD can provide guidance. [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

EI ID:	10196377	EI Description:	Chemical Storage Facilities

**Violations**

Violation Date: 01/12/2017 Violation Source: CERS  
 Violation Program: HW Violation Division: Berkeley City Toxics Management Division  
 Citation: 40 CFR 1 262.34(d)(5)(iii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(iii)  
 Violation Notes:

Returned to compliance on 02/07/2017. Owner/Operator has not properly trained all employees on waste handling and emergency procedures. Corrective Action: Complete the haz waste handling training within 30 days.

**Violation Description:**

Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.

**Violations**

**Violation Date:** 01/12/2017  
**Violation Program:** HW  
**Citation:** 22 CCR 12 66262.34(f) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(f)  
**Violation Source:** CERS  
**Violation Division:** Berkeley City Toxics Management Division  
**Violation Notes:**

Returned to compliance on 01/28/2017. Generator did not properly label all containers containing hazardous waste in that the accumulation start dates were absent and buckets of waste did not have names of waste. Corrective Action: For the 55-gal waste drums, always mark accumulation start dates when accumulation begins. For the 3-gal waste buckets, properly label like the 55-gal drums. If waste is transferred to drums as soon as it is generated, then the accumulation start dates is not necessary on buckets.

**Violation Description:**

Failure to properly label hazardous waste accumulation containers and portable tanks with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

**Violations**

**Violation Date:** 01/12/2017

**Violation Division:** Berkeley City Toxics Management Division  
**Violation Notes:**

Returned to compliance on 01/27/2017. Owner/Operator did not maintain signed copies of manifests from the designated facility. Corrective action: Obtain copies of TSDF-to\_Generator manifest and keep records for 3 years. If TSDF-to-Generator manifest is not available, please complete a manifest exception report.

**Violation Description:**

Failure to keep a copy of each properly signed manifest for at least three years from the date the waste was accepted by the initial transporter. The manifest signed at the time the waste was accepted for transport shall be kept until receiving a signed copy from the designated facility which received the waste.

**Violation Program:** HW **Violation Division:** Berkeley City Toxics Management Division  
**Citation:** 40 CFR 1 262.34(d)(5)(ii) - U.S. Code of Federal Regulations, Title 40, Chapter 1, Section(s) 262.34(d)(5)(ii)  
**Violation Notes:**

Returned to compliance on 02/08/2017. Corrective Action: Complete emergency postings template provided by TMD and post.

**Violation Description:**

Failure to post the following information next to the telephone:  
(A) The name and telephone number of the emergency coordinator;  
(B) Location of fire extinguishers and spill control material, and, if present, fire alarm; and  
(C) The telephone number of the fire department, unless the facility has a direct alarm.

**Citation:** HSC 6.95 25505(a)(4) - California Health and Safety Code, Chapter 6.95, Section(s) 25505(a)(4)  
**Violation Notes:**

Returned to compliance on 02/07/2017.

**Violation Description:**

Failure to provide initial and annual training to all employees in safety procedures in the event of a release or threatened release of a hazardous material or failure to document and maintain training records for a minimum of three years.

**Violations**

**Violation Date:** 11/20/2013 **Violation Source:** CERS  
**Violation Program:** HW **Violation Division:** Berkeley City Toxics Management Division  
**Citation:** HSC 6.5 25189.5(a) - California Health and Safety Code, Chapter 6.5, Section(s) 25189.5(a)  
**Violation Notes:**

Returned to compliance on 12/17/2013. Off-spec inks in 5 gallon drums, est'd 50, marked 'waste' are being held. Allowed option to determine a recycling option, if available, with documentation.

**Violation Description:**

Failure to properly dispose of hazardous waste at an authorized location.

**Violations**

**Violation Date:** 01/12/2017 **Violation Source:** CERS  
**Violation Program:** HW **Violation Division:** Berkeley City Toxics Management Division  
**Citation:** 22 CCR 12 66262.34(d) - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.34(d)  
**Violation Notes:**

Returned to compliance on 02/22/2017. Corrective action: Ship out all waste that began accumulating over 180 days ago. If the accumulation start date is unknown, ship out the waste.

**Violation Description:**

Failure to send hazardous waste offsite for treatment, storage, or disposal within 180 days (or 270 days if waste is transported over 200 miles) for a generator who generates less than 1000 kilogram per month if all of the following conditions are met: (1) The quantity of hazardous waste accumulated onsite never exceeds 6,000 kilograms.  
(2) The generator complies with the requirements of 40 Code of Federal Regulations section 262.34(d), (e) and (f).

<i>Map Key</i>	<i>Number of Records</i>	<i>Direction</i>	<i>Distance (mi/ft)</i>	<i>Elev/Diff (ft)</i>	<i>Site</i>	<i>DB</i>
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

(3) The generator does not hold acutely hazardous waste or extremely hazardous waste in an amount greater than one kilogram for more than 90 days.

**Enf Action Notes:**

**Evaluations**

**Eval Date:** 01/12/2017  
**Violations Found:** Yes  
**Eval General Type:** Compliance Evaluation Inspection  
**Eval Type:** Routine done by local agency  
**Eval Division:** Berkeley City Toxics Management Division  
**Eval Program:** HMRRP  
**Eval Source:** CERS  
**Eval Notes:**

Haz Mat: Hazardous materials are kept in the chemical storage room and also throughout the facility, as needed for certain projects. Hazardous materials are consistent with the inventory provided on CERS and are properly labeled. Safety: Fire extinguishers are up to date and will be due for servicing in March 2017. Emergency station with phone numbers and phone was not available. Records: Complete training records were not available. Only the 2015 training records were available, the content of that training were compliant. Manifests were not properly maintained in that only the generator initial copy was kept. There were no records for any shipment of hazardous waste within the last 180 days - the last manifest available was from 9-7-14. Property owner is aware of the presence of hazardous materials, but no formal notification of compliance with the HMBP requirements was provided. Storm Water: The only outside activity is loading and unloading- which is sometimes done [Truncated]; Note: data in [EVAL Notes] field for some records is truncated from the source.

**Eval Date:** 01/07/2014  
**Violations Found:** No

**Eval Notes:**

Facility inventory is consistent with the reported quantities.; Note: data in [EVAL Notes] field for some records is truncated from the source.

**Eval Date:** 12/11/2019  
**Violations Found:** No  
**Eval General Type:** Compliance Evaluation Inspection  
**Eval Type:** Routine done by local agency  
**Eval Division:** Berkeley City Toxics Management Division  
**Eval Program:** HMRRP  
**Eval Source:** CERS  
**Eval Notes:**

Reviewed the HMBP submitted in CERS on 2/27/2019. Updated the Emergency Response plan to the updated template.; Note: data in [EVAL Notes] field for some records is truncated from the source.

**Eval Date:** 12/11/2019  
**Violations Found:** No  
**Eval General Type:** Compliance Evaluation Inspection  
**Eval Type:** Routine done by local agency  
**Eval Division:** Berkeley City Toxics Management Division  
**Eval Program:** HW  
**Eval Source:** CERS  
**Eval Notes:**

Observed fluorescent bulbs stored against wall near maintenance shop. Roberto indicates the hazardous waste contractor takes these for recycling. TMD recommends storing these in a box to prevent breakage.; Note: data in [EVAL Notes] field for some records is truncated from the source.

**Eval Date:** 01/12/2017  
**Violations Found:** Yes  
**Eval General Type:** Compliance Evaluation Inspection  
**Eval Type:** Routine done by local agency  
**Eval Division:** Berkeley City Toxics Management Division  
**Eval Program:** HW  
**Eval Source:** CERS  
**Eval Notes:**

Business is regulated by BAAQMD for the solvents used in cleaning process. EPA ID, CAD983625138, is currently inactive. Haz waste: rags used to wipe ink and oil are collected in covered, metal bins and are picked up by aramark about once a week, depending on how busy the business gets. Used oil drum in 32" Press Area is kept in a flammable cabinet. Accumulation start date is 9-17-14. Waste fountain solution drum in 32" Press Area did not have accumulation start date. Used Oil drum in Are of 32" 4 Unit Press is kept in a flammable cabinet. Accumulation start date is 4-30-16. 3-gallon buckets are filled with hazardous waste before being transfered into 55-gallon drums and shipped out. The buckets were found in the 32 " Press Area and in the Bailing Room. The buckets were not properly labeled. The amount of time they have been stored is unknown.; Note: data in [EVAL Notes] field for some records is truncated from the source.

**Eval Date:** 04/14/2016  
**Violations Found:** Yes  
**Eval General Type:** Other/Unknown

**RB Case No:** 01S0045  
**Local Case No:**  
**Begin Date:** 2/15/1985  
**Stop Method:**  
**Lead Agency:** SAN FRANCISCO BAY RWQCB (REGION 2)  
**Local Agency:**  
**Potential COC:** Dichloroethene (DCE), Trichloroethylene (TCE), Vinyl chloride, Diesel, Gasoline, Total Petroleum Hydrocarbons (TPH)  
**Potential Media of Concern:** Other Groundwater (uses other than drinking water), Soil  
**How Discovered:** Tank Closure  
**How Discovered Description:**  
**Stop Description:**  
**Calwater Watershed Name:** Bay Bridges - Berkeley (203.30)  
**DWR GW Subbasin Name:** Santa Clara Valley - East Bay Plain (2-009.04)  
**Disadvantaged Community:**  
**Site History:**

The Cutter Laboratory began operations at its present west Berkeley site in 1917. In 1974, Cutter Laboratories was purchased by Bayer AG of Germany and in 1983, was merged into Miles, Inc. In 1992, Miles, Inc. purchased the 5.6 acre parcel then occupied by the Gary Steel Company, the City of Berkeley School Bus Yard, and Western Intermodals. The Miles facility became a nearly 30-acre site located in the industrially zoned flatlands area west of San Pablo Avenue. The project site contains various one-to three-story research laboratories, process/manufacturing facilities, storage/warehouse buildings and administrative/office buildings. The facility has historically used numerous underground storage tanks (USTs) for storage of hazardous materials, all of which have been removed; contamination has been encountered and documented for these USTs.

CASEWORKER: KEVIN BROWN  
BERKELEY, CITY OF

**Site History:**

The Cutter Laboratory began operations at its present west Berkeley site in 1917. In 1974, Cutter Laboratories was purchased by Bayer AG of Germany and in 1983, was merged into Miles, Inc. In 1992, Miles, Inc. purchased the 5.6 acre parcel then occupied by the Gary Steel Company, the City of Berkeley School Bus Yard, and Western Intermodals. The Miles facility became a nearly 30-acre site located in the industrially zoned flatlands area west of San Pablo Avenue. The project site contains various one-to three-story research laboratories, process/manufacturing facilities, storage/warehouse buildings and administrative/office buildings. The facility has historically used numerous underground storage tanks (USTs) for storage of hazardous materials, all of which have been removed; contamination has been encountered and documented for these USTs.

The Colgate-Palmolive Company plant in Berkeley, produced soaps, and personal and household cleaning products from 1916 until 1981. It consisted of 27 buildings, a tank farm, several individual storage tanks, and other structures. In October 1981 the Colgate-Palmolive plant ceased operation at the site.

**Enf Action Description:** Notice of Violation Issued by the Inspector at the Time of Inspection  
**Enf Action Notes:**

**Evaluations**

**Eval Date:** 07/06/2017  
**Violations Found:** Yes  
**Eval General Type:** Compliance Evaluation Inspection  
**Eval Type:** Routine done by local agency  
**Eval Division:** Berkeley City Toxics Management Division  
**Eval Program:** HW  
**Eval Source:** CERS  
**Eval Notes:**

EPA ID # is inactive, however shipments have not been made since 2015. Assure that when a hazardous waste is shipped off, the EPA ID, CAL 000 336 391, is active. Universal waste is stored in boxes and shipped off about every two months. visual inspections of haz waste and haz mat areas are conducted. Fire extinguishers are up to date. Hazardous waste drum is 30 gal max capacity. Had about 7 gallons of liquid or less at time of inspection. Once 27 gallons is reached, generator must ship off within 180 days. Drum had non-RCRA waste, solid(oily debris, absorbents), last pick up 8/25/15. Onsite 8/9/17 to complete SW and Green Business inspections.; Note: data in [EVAL Notes] field for some records is truncated from the source.

**Eval Date:** 03/15/2017  
**Violations Found:** Yes  
**Eval General Type:** Other/Unknown  
**Eval Type:** Other, not routine, done by local agency  
**Eval Division:** Berkeley City Toxics Management Division  
**Eval Program:** HMRRP  
**Eval Source:** CERS  
**Eval Notes:**

**Eval Date:** 08/18/2015

Meeting to discuss 10/16/2018 Soil Remediation Workplan Meeting was held to discuss the soil remediation workplan for source area soil excavation and pre-excavation soil sampling and contingency step-out soil sampling. Discharger proposes to initiate pre-excavation soil sampling on October 25-25 and excavate/backfill from November 12-26. I indicated that I would provide an email response to the workplan prior to the proposed sampling date.

Meeting to discuss Water Board staff concerns following review of 10/18/2017 Updated Phase II ESA Report Meeting with Amy Breckenridge (consultant) and John Blain (discharger rep) to discuss Updated Phase II Investigation Report. Focus of discussions was on issues that need to be						

<b>Map Key</b>	<b>Number of Records</b>	<b>Direction</b>	<b>Distance (mi/ft)</b>	<b>Elev/Diff (ft)</b>	<b>Site</b>	<b>DB</b>
----------------	--------------------------	------------------	-------------------------	-----------------------	-------------	-----------

resolved in order for the western area of the site impacted with petroleum hydrocarbons (AOC-1) to qualify for low threat closure. Data indicate that the eastern area of the site(AOC-2)appears to be impacted with chlorinated solvents form the Temescal Business Center and Berkeley Industrial Complex located to the south. I indicated my intent to draft a letter in November specifying our position regarding these two issues.

**Title Description Comments:**

Meeting with discharger representative to discuss site investigation results The meeting with Amy Breckinridge was held to discuss the results of site investigations of petroleum hydrocarbons in AOC-1 and VOC pollutants in AOC. We also discussed the tentative scope of work in order to further define and to remediate pollutants in AOC-1 and to identify pollutant sources in AOC-2. We agreed that Henkel would modify the tentative scope of work and present the modified scope of work in a meeting in the following week.

**Action Date:** 1/22/2016  
**Received Issue Date:** 1/22/2016  
**Action:** Technical Correspondence / Assistance / Other  
**Doc Link:**  
**Title Description Comments:**

Technical discussion regarding site history, status, and discharger's intent to conduct additional investigations. Amy Grayson initiated contact regarding discharger's intent to conduct additional investigations. I indicated that I would likely provide active oversight due to the site being listed among SB445 inactive cases and the discharger's willingness to move forward.

#### Site History:

The Hall-Scott Motor Car Company began manufacturing automobiles at the Berkeley Industrial Court/Temescal Business Center property in 1910. This same company overhauled and rebuilt large marine engines at the property during World War II in support of the war effort. Limited information is available regarding site uses between 1945 and 1967. In 1967, Airco purchased the property for storage of old equipment, spent dolomite, and neutralized chemical metal etching waste prior to disposal. In 1978, the site was divided into two properties: 2850 7th Street and 729 Heinz Avenue. The Berkeley Industrial Court, a multi-tenant rental complex, currently occupies the 729 Heinz Avenue property. The Temescal Business Center, a multi-tenant industrial complex, currently occupies the 2850 7th Street property.

From 1968 to 1990, solvent-based adhesives were manufactured at the National Starch and Chemical Company's 742 Grayson Street facility using toluene, hexane, acetone, and 1,1,1-TCA. Beginning in 1980, water-based adhesive was manufactured at the 800 Grayson Street property, which was previously used as a lumber distribution warehouse.

The source of contaminants in groundwater beneath the sites has not been determined.

**Area Link:** [http://www.envirostor.dtsc.ca.gov/public/profile\\_report?global\\_id=60000399&ou\\_id=1000279&hideside=True&printerfriendly=True](http://www.envirostor.dtsc.ca.gov/public/profile_report?global_id=60000399&ou_id=1000279&hideside=True&printerfriendly=True)

**Sub Area:**  
**Sub Area Link:**  
**Document Type:** Site Screening  
**Date Completed:** 11/12/2004  
**Comments:** Site screening concluded that chlorinated solvents were present in groundwater beneath the National Starch site. The City of Berkeley has overseen sampling at the site in an effort to characterize the occurrence of chlorinated solvents in area groundwater.

**Title:** Site Screening  
**Title Link:** [http://www.envirostor.dtsc.ca.gov/public/final\\_documents2?global\\_id=60000399&doc\\_id=6012976](http://www.envirostor.dtsc.ca.gov/public/final_documents2?global_id=60000399&doc_id=6012976)

**Sub Area:**  
**Sub Area Link:**  
**Document Type:** Site Screening  
**Date Completed:** 2/15/2005  
**Comments:** Site screening determined that historic site uses had included automobile manufacturing, rebuilding of marine engines, and storage of chemical metal etching waste. The City of Berkeley has overseen sampling at the site in an effort to characterize the occurrence of chlorinated solvents in area groundwater.

**Receive Date:** 20120328  
**Handler Name:** DSM BIOMEDICAL INC.  
**Federal Waste Generator Code:** 1  
**Generator Code Description:** Large Quantity Generator  
**Source Type:** Annual/Biennial Report update with Notification

**Waste Code Details**

**Hazardous Waste Code:** 122  
**Waste Code Description:** Alkaline solution without metals (pH > 12.5)

**Hazardous Waste Code:** 133  
**Waste Code Description:** Aqueous solution with 10% or more total organic residues

**Hazardous Waste Code:** 181  
**Waste Code Description:** Other inorganic solid waste

**Hazardous Waste Code:** 212  
**Waste Code Description:** Oxygenated solvents (acetone, butanol, ethyl acetate, etc.)

**Hazardous Waste Code:** 213  
**Waste Code Description:** Hydrocarbon solvents (benzene, hexane, Stoddard, etc.)

**Hazardous Waste Code:** 214  
**Waste Code Description:** Unspecified solvent mixture

**Hazardous Waste Code:** 331  
**Waste Code Description:** Off-specification, aged, or surplus organics

**Hazardous Waste Code:** 352  
**Waste Code Description:** Other organic solids

**Hazardous Waste Code:** D001  
**Waste Code Description:** IGNITABLE WASTE

**Hazardous Waste Code:** D002  
**Waste Code Description:** CORROSIVE WASTE

**Hazardous Waste Code:** D022  
**Waste Code Description:** CHLOROFORM

**Hazardous Waste Code:** D035  
**Waste Code Description:** METHYL ETHYL KETONE

**Hazardous Waste Code:** F002  
**Waste Code Description:** THE FOLLOWING SPENT HALOGENATED SOLVENTS: TETRACHLOROETHYLENE, METHYLENE CHLORIDE, TRICHLOROETHYLENE, 1,1,1-TRICHLOROETHANE, CHLOROETHYLENE, 1,1,2-TRICHLORO-1,2,2-TRIFLUOROETHANE, ORTHO-DICHLOROBENZENE, TRICHLOROFLUOROMETHANE, AND 1,1,2, TRICHLOROETHANE; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, A TOTAL OF TEN PERCENT OR MORE (BY VOLUME) OF ONE OR MORE OF THE ABOVE HALOGENATED SOLVENTS OR THOSE SOLVENTS LISTED IN F001, F004, AND F005; AND STILL BOTTOMS FROM THE RECOVERY OF THESE SPENT SOLVENTS AND SPENT SOLVENT MIXTURES.

**Hazardous Waste Code:** F003  
**Waste Code Description:** THE FOLLOWING SPENT NONHALOGENATED SOLVENTS: XYLENE, ACETONE, ETHYL ACETATE, ETHYL BENZENE, ETHYL ETHER, METHYL ISOBUTYL KETONE, N-BUTYL ALCOHOL, CYCLOHEXANONE, AND METHANOL; ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING, BEFORE USE, ONLY THE ABOVE SPENT NONHALOGENATED SOLVENTS; AND ALL SPENT SOLVENT MIXTURES/BLENDS CONTAINING,
