

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect. (Continued from page 1)

Implementation of HAZ-1 would protect construction personnel and the surrounding environment from the potential adverse effects associated with encountering contaminated groundwater during construction. Implementation of HAZ-2 and HAZ-3 would require an Asbestos Compliance Plan and NESHAP notification. HAZ-4 would require an Aerially Deposited Lead Compliance Plan and HAZ-5 would mitigate impacts from lead based paint. Implementation of measure NOI-1 and NOI-2, impacts associated with vibration would be reduced to less than significant levels.
