Re: 'The Preserve' – 9712 Oak Pass Road, Los Angeles, California 90210

APNs 4382014012, 4383001025, 4383001024, 4383001023, 4383001022, 1383001021, 4383002008, 4383002009, 4383002005, and 4383004017, an additional approximate 12 acres, and 2534 Hutton Drive (associated with Residence 'A')

Dear Mr. Safady,

This letter summarizes our office's tree inventory conducted over approximately 32 acres at the Oak Pass Road property. It also provides a preliminary estimate of the tree removals that may be necessary for implementation of the development project known as 'The Preserve.'

Carlberg Associates (Carlberg) was retained to conduct an inventory of the trees considered protected by the City of Los Angeles (City) Tree Preservation Ordinance No. 177. 044 and those non-protected trees that meet the City Planning Department's criteria for 'significant trees.' Protected trees as set forth in the Ordinance are coast live oak, western sycamore, Southern California black walnut, and California bay laurel with trunk diameters (measured at 4.5 feet above grade) of four inches or greater. The Planning Department requires that any tree with a trunk diameter of eight inches or greater (measured at 4.5 feet above grade) be inventoried. Because site grading, property line walls, or construction equipment could potentially damage trees on contiguous properties, trees immediately adjacent to the ten parcels were also inventoried. We typically assessed those trees from the subject property and did not knowingly go onto neighboring properties.

We inventoried a total of **1,085** trees during multiple site visits between November 15, 2016 and February 1, 2017. Of the inventoried trees, **740 are native species considered protected by the ordinance and 345 trees meet the City's criteria for 'significant trees'**. The inventory includes 44 trees that appear to be located on contiguous properties, but whose canopies overhang hang the project property lines. There are no City of Los Angeles rights-of-way trees associated with the property.

Office: 626.428.5072

Since the inventory was conducted in the winter months, deciduous trees such as Southern California black walnut, western sycamore, and various ash species were mainly devoid of leaves. In order to arrive at a 'health' grade for deciduous trees, we assessed current and past seasons' twig elongation, new bud production, past fruit and leaf litter quantity, and presence, absence, and general percentage of dead twigs and branches. Almost all of the Southern California black walnut (SCBW) trees were found to be suffering from drought and a devastating canker disease called 'Thousand Canker Disease.' The SCBWs that exhibited very little or no live canopy growth, but had live epicormic shoots (also called 'suckers' or 'basal sprouts') arising from their root crown/basal trunk flare area were counted as 'live' trees, but given reduced health and structure grades. Dead trees (46) were noted on the map with a letter designation, but were not fully assessed and are not counted in the impact analysis. Conditions represented in this letter report are limited to the inventory date and time. For purposes of this report, risk assessments, formal or informal, were not performed. Ratings for health and structure do not constitute a health or structural guarantee beyond the date and time of the inventory.

An aerial representation of the density of the trees on the site is illustrated in **Exhibit 1** at the end of this letter. **Tables 1 and 2** summarize the tree inventory and preliminary impacts. The field data table, **Table 3**, is enclosed after the resumes of the Carlberg team. Health and structure definitions are provided before the resumes. Two, 60-scale maps, the **Protected Tree Location Exhibit** and **Protected Tree Impact Exhibit** are also attached. Both sets of color-coded maps illustrate the protected status of the trees, locations of the tree trunks, the tree canopies as measured in four or eight compass directions, and the tree identification number as it correlates to the numerically embossed metal tag affixed to the tree. Off-site trees were numbered on the map with an 'OS' designation, but were not physically tagged. Where feasible, tags for off-site trees were affixed to property line fencing¹. Since much of the site is comprised of steep hillsides, canyons, and thick brush, and boundaries are not continuously fenced, staked, or otherwise marked, we estimated property boundaries in some areas based on topographical features and nearby structures. Tree trunk locations were instrument-surveyed and incorporated into the tree base and civil drawings by Steve Opdahl Surveying and LC Engineering Group. Canopies were drawn to-scale and added to the tree base map in AutoCAD format by Carlberg Associates.

Preliminary analysis of the tree removals is based on the combination of the tree base map incorporated with the project's tentative tract map/grading plan. Impacts may change due to response to City comments, changes in project design, final engineering plans, or other unforeseen circumstances. A comprehensive Protected Tree Report with Tree Protection Plan and mitigation area identification will be prepared at a later date in the entitlement process.

Typical cankers (areas of dead cambium tissue) under the bark of a Southern California black walnut emanating from the tunnels formed by an ambrosia beetle that vectors 1000 Canker Disease.

¹ Fencing that appeared in the field to correlate with the property lines on the topographic survey were assumed to be 'property line fencing' for the purposes of this inventory. Several trees that are actually located 'on-site' are in fenced areas that extend from adjacent lots. In those cases, those trees are not tagged.

TABLE 1 – SUMMARY OF PROTECTED TREES AND PRELIMINARY IMPACTS

Common Name	Botanical Name	Total Number of Trees	Total to be Removed	Total to be Preserved
Coast live oak	<i>Quercus agrifolia</i>	488	279	209
Southern California black walnut	<i>Juglans californica</i> var. <i>californica</i>	249	132	117
California sycamore	<i>Platanus racemosa</i>	3	3	0
Totals:		740	414	326

No California bay laurel trees (*Umbellularia californica*) were observed during the course of our inventory.

TABLE 2 – SUMMARY OF SIGNIFICANT TREES AND PRELIMINARY IMPACTS

Common Name	Botanical Name	Total Number of Trees	Total to be Removed	Total to be Preserved
Aleppo pine	<i>Pinus halepensis</i>	15	14	1
Apricot	<i>Prunus sp.</i>	1	1	0
Arroyo willow	<i>Salix lasiolepis</i>	11	9	2
Avocado	<i>Persea americana</i>	2	1	1
Black locust	<i>Robinia psuedoacacia</i>	2	0	2
Black walnut	<i>Juglans nigra</i>	1	1	0
Blue gum	<i>Eucalyptus globulus</i>	17	14	3
Brazilian pepper	<i>Schinus terebinthifolius</i>	10	7	3
California pepper	<i>Schinus molle</i>	2	1	1
Canary Island date palm	<i>Phoenix canariensis</i>	1	1	0
Canary Island pine	<i>Pinus canariensis</i>	18	17	1
Chinese elm	<i>Ulmus parvifolia</i>	2	0	2
Coastal redwood	<i>Sequoia sempervirens</i>	4	3	1
Coral tree	<i>Erythrina caffra</i>	2	0	2
Edible fig	<i>Ficus carica</i>	1	1	0
Edible loquat	<i>Eriobotrya japonica</i>	1	1	0
Ficus	<i>Ficus sp.</i>	1	1	0
Floss silk tree	<i>Ceiba speciosa</i>	1	1	0
Ginkgo	<i>Ginkgo biloba</i>	1	1	0
Indian laurel fig	<i>Ficus microcarpa</i>	1	1	0
Italian cypress	<i>Cupressus sempervirens</i> 'Stricta'	6	0	6
Jacaranda	<i>Jacaranda mimosifolia</i>	4	3	1
Lemon-scented gum	<i>Corymbia citriodora</i>	4	4	0

Common Name	Botanical Name	Total Number of Trees	Total to be Removed	Total to be Preserved
Mexican elderberry	<i>Sambucus mexicana</i>	22	8	14
Mexican fan palm	<i>Washingtonia robusta</i>	134	116	18
Mondell pine	<i>Pinus eldarica</i>	7	7	0
Nectarine	<i>Prunus sp.</i>	1	1	0
Olive	<i>Olea europaea</i>	5	1	4
Queen palm	<i>Syagrus romanzoffiana</i>	14	13	1
Red iron bark	<i>Eucalyptus sideroxylon</i>	5	5	0
Red river gum	<i>Eucalyptus camaldulensis</i>	6	3	3
Scrub oak	<i>Quercus berberidifolia</i>	9	3	6
Shamel ash	<i>Fraxinus uhdei</i>	19	14	5
Silk oak	<i>Grevillea robusta</i>	1	1	1
Silver dollar gum	<i>Eucalyptus polyanthemos</i>	6	3	3
Southern live oak	<i>Quercus virginiana</i>	1	1	0
Southern magnolia	<i>Magnolia grandiflora</i>	1	1	0
Spotted gum	<i>Corymbia maculata</i>	1	1	0
Umbrella tree	<i>Schefflera pueckleri</i>	1	1	0
Victorian box	<i>Pittosporum undulatum</i>	2	2	0
Weeping bottle brush	<i>Callistemon viminalis</i>	1	1	0
Weeping fig	<i>Ficus benjamina</i>	1	1	0
Totals:		345	265	80

Analysis of the trees in relation to proposed cut/fill grading, building footprints, hardscape, cart paths, retaining walls, and utilities reveals that a total of 414 protected trees and 265 significant trees will likely require removal for implementation of the project. A total of 326 protected trees and 80 significant trees will likely remain with varying degrees of encroachment or no impact at all. A comprehensive Protected Tree Report, with more detailed impact analysis, photographs of the trees, tree protection recommendations, and mitigation discussions will be prepared at a later date in the entitlement process.

Please feel welcome to contact Cy Carlberg or me with questions. Thank you.

Respectfully submitted,

Christy Cuba

CERTIFICATION OF PERFORMANCE

I, *Christine Cuba*, certify:

- That I have personally inspected the tree(s) and/or the property referred to in this report, and have stated my findings accurately. The extent of the evaluation and appraisal (if appropriate) is stated in the attached report and the Terms of Assignment;
- That I have no current or prospective interest in the vegetation or the property that is the subject of this report and have no personal interest or bias with respect to the parties involved;
- That the analysis, opinions, and conclusions stated herein are my own;
- That my analysis, opinions, and conclusions were developed and this report has been prepared according to commonly accepted arboricultural practices;
- That no one provided significant professional assistance to the consultant, except as indicated within the report;
- That my compensation is not contingent upon the reporting of a predetermined conclusion that favors the cause of the client or any other party.

I further certify that I am an International Society of Arboriculture Certified Arborist, a Registered Consulting Arborist, a Qualified Tree Risk Assessor, and have been involved in the practice of arboriculture and the study of trees for over 25 years.

Signed:

Christine Cuba

Date: February 17, 2017

Qualified Tree Risk Assessor

ARBORIST DISCLOSURE STATEMENT

Arborists are tree specialists who use their education, knowledge, training and experience to examine trees, recommend measures to enhance the beauty and health of trees, and attempt to reduce the risk of living near trees. Clients may choose to accept or disregard the recommendations of the arborist, or to seek additional advice.

Arborists cannot detect every condition that could possibly lead to the structural failure of a tree. Trees are living organisms that fail in ways we do not fully understand. Conditions are often hidden within trees and below ground. Arborists cannot guarantee that a tree will be healthy or safe under all circumstances, or for a specified period of time. Likewise, remedial treatments, like any medicine, cannot be guaranteed.

Treatment, pruning and removal of trees may involve considerations beyond the scope of the arborist's services such as property boundaries, property ownership, site lines, disputes between neighbors, and other issues. Arborists cannot take such considerations into account unless complete and accurate information is disclosed to the arborist. An arborist should then be expected to reasonably rely upon the completeness and accuracy of the information provided.

Trees contribute greatly to our enjoyment and appreciation of life. Nonetheless, they are subject to the laws of gravity and physiological decline. Therefore, neither arborists nor tree owners can be reasonably expected to warrant unfailing predictability or elimination of risk.

Trees can be managed, but they cannot be controlled. To live near trees is to accept some degree of risk. The only way to eliminate all risk associated with trees is to eliminate all trees.

Risk assessments were neither requested nor performed on any of the trees for this project.

HEALTH AND STRUCTURE GRADE DEFINITIONS

Health and structure ratings of the trees are based on the archetype tree of the same species through a subjective evaluation of its physiological health, aesthetic quality, and structural integrity.

Overall physiological condition (health) and structural condition were rated A-F:

Health

- A) Outstanding – Exceptional trees of good growth form and vigor for their age class; exhibiting very good to excellent health as evidenced by normal to exceptional shoot growth during current season, good bud development and leaf color, lack of leaf, twig or branch dieback throughout the crown, and the absence of decay, bleeding, or cankers. Common leaf and/or twig pests may be noted at very minor levels.
- B) Above average – Good to very good trees that exhibit minor necrotic or physiological symptoms of stress and/or disease; shoot growth is less than reasonably expected, leaf color is less than optimal in some areas, the crown may be thinning, minor levels of leaf, twig, and branch dieback may be present, and minor areas of decay, bleeding, or cankers may be manifesting. Minor amounts of epicormic growth may be present. Minor amounts of fire damage or mechanical damage may be present. Still healthy, but with moderately diminished vigor and vitality. No significant decline noted.
- C) Average – Average, moderately good trees whose growth habit and physiological or fire-induced symptoms indicate an equal chance to either decline or continue with good health into the near future. Most of these trees exhibit moderate to significant small deadwood in outer crown areas, decreased shoot growth and diminished leaf color and mass. Some stem and branch dieback is usually present and epicormic growth may be moderate to extensive. Cavities, pockets of decay, relatively significant fire damage, bark exfoliation, or cracks may be present. Moderate to significant amounts of insect or disease symptoms may be present; the tree may be shaded or crowded in such a way that it is expected to negatively impact the lifespan of the tree. Tree may be in early decline.
- D) Below Average/Poor - trees whose growth habit and physiological or fire-induced symptoms indicate significant, irreversible decline. Most of these trees exhibit significant dieback of wood in the crown, possibly accompanied by significant epicormic sprouting. Shoot growth and leaf color and mass is either significantly diminished or nonexistent throughout the crown. Cavities, pockets of decay, significant fire damage, bark exfoliation, and/or cracks may be present. Significant amounts of insect or disease symptoms may be present; the tree may be shaded or crowded in such a way that it has negatively impacted the lifespan of the tree. Tree appears to be in irreversible decline.
- F) Dead or in spiral of decline – this tree exhibits very little to no signs of life.

Structure

- A) Outstanding – Trees with outstanding structure for their species exhibit trunk and branch arrangement and orientation that result in a sturdy form or architecture that resists failure under normal circumstances. The spacing, orientation, and size of the branches relative to the trunk are quintessential for the species and free from defects. No outward sign of decay or pathological disease is present. Some trees exhibit naturally inherent branching defects, like multiple, narrow points of attachment from one point on the trunk, which would preclude them from achieving an “A” grade.

- B) Above average - Trees with good to very good structure for their species. They exhibit trunk and branch arrangement and orientation that result in a relatively sturdy form or architecture that resists failure under normal circumstances, but may have some mechanical damage, over-pruning, or other minor structural defects. The spacing, orientation, and size of the branches relative to the trunk are still in the normal range for the species, but they exhibit a minor degree of defects. Minor, sub-critical levels of decay or pathological disease may be present, but the degree of damage is not yet structurally significant. Trees that exhibit naturally inherent branching defects, like multiple, narrow points of attachment from one point on the trunk, would generally fall in to this category. A small percentage of the canopy may be shaded or crowded, but not in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree.
- C) Average - Trees with moderately good structure for their species, but with obvious defects. They exhibit trunk and branch arrangement and orientation that result in a less than sturdy form or architecture, which reduces their resistance to failure under normal circumstances. Moderate levels of mechanical damage, over-pruning, or other structural defects may be present. The spacing, orientation, and size of some of the branches relative to the trunk are not in the normal range for the species. Moderate to significant levels of decay or pathological disease may be present that increase the likelihood of structural instability. Influences such as an excessive trunk lean, slope erosion, root pruning, or other growth-inhibiting factors may be present. A moderate to significant percentage of the canopy may be shaded or crowded in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree. Risk of full or partial failure in the near future appears to be moderately elevated.
- D) Well Below Average/Poor - Trees poor structure for their species and with obvious defects. They exhibit trunk and branch arrangement and orientation that result in a significantly less than sturdy form or architecture, significantly reducing their resistance to failure under normal circumstances. Significant levels of mechanical damage, over-pruning, or other structural defects may be present. The spacing, orientation, and size of many of the branches relative to the trunk are not in the normal range for the species. Significant levels of decay or pathological disease may be present that increase the likelihood of structural instability. Influences such as an excessive trunk lean, slope erosion, root pruning, or other growth-inhibiting factors may be present. A significant percentage of the canopy may be shaded or crowded in such a way that it is expected to negatively impact the structural integrity or lifespan of the tree. Risk of full or partial failure in the near future appears to be advanced.
- F) Severely Compromised – trees with very poor structure and numerous or severe defects due to growing conditions, historical or recent pruning, mechanical damage, history of limb or trunk failures, advanced and irreparable decay, disease, or severe fire damage. Trees with this rating are in severe, irreparable decline, or are barely alive. Risk of full or partial failures in the near future may be severe.

<u>Education</u>	B.S., Landscape Architecture, California State Polytechnic University, Pomona, 1985 Graduate, Arboricultural Consulting Academy, American Society of Consulting Arborists, Chicago, Illinois, February 2002 Graduate, Municipal Forestry Institute, Lied, Nebraska, 2012
<u>Experience</u>	Consulting Arborist, Carlberg Associates, 1998-present Manager of Grounds Services, California Institute of Technology, Pasadena, 1992-1998 Director of Grounds, Scripps College, Claremont, 1988-1992
<u>Certificates</u>	Certified Arborist (#WE-0575A), International Society of Arboriculture, 1990 Registered Consulting Arborist (#405), American Society of Consulting Arborists, 2002 Certified Urban Forester (#013), California Urban Forests Council, 2004 Certified Tree Risk Assessor (#1028), International Society of Arboriculture, 2011

AREAS OF EXPERTISE

Ms. Carlberg is experienced in the following areas of tree management and preservation:

- Tree health and risk assessment
- Master Planning
- Tree inventories and reports to satisfy jurisdictional requirements
- Expert Testimony
- Post-fire assessment, valuation, and mitigation for trees and native plant communities
- Value assessments for native and non-native trees
- Pest and disease identification
- Guidelines for oak preservation
- Selection of appropriate tree species
- Planting, pruning, and maintenance specifications
- Tree and landscape resource mapping – GPS, GIS, and AutoCAD
- Planning Commission, City Council, and community meetings representation

PREVIOUS CONSULTING EXPERIENCE

Ms. Carlberg has overseen residential and commercial construction projects to prevent damage to protected and specimen trees. She has thirty-five years of experience in arboriculture and horticulture and has performed tree health evaluation, value and risk assessment, and expert testimony for private clients, government agencies, cities, school districts, and colleges. Representative clients include:

The Huntington Library and Botanical Gardens	The City of Claremont
The Los Angeles Zoo and Botanical Gardens	The City of Beverly Hills
The Rose Bowl and Brookside Golf Course, Pasadena	The City of Pasadena
Walt Disney Concert Hall and Gardens	The City of Los Angeles
The Art Center College of Design, Pasadena	The City of Santa Monica
Pepperdine University	Santa Monica/Malibu Unified School District
Loyola Marymount University	San Diego Gas & Electric
The Claremont Colleges (Pomona, Scripps, CMC, Harvey Mudd, Claremont Graduate University, Pitzer, Claremont University Center)	Los Angeles Department of Water and Power
Quinn, Emanuel, Urquhart and Sullivan (attorneys at law)	Rancho Santa Ana Botanic Garden, Claremont
	Latham & Watkins, LLP (attorneys at law)

AFFILIATIONS

Ms. Carlberg serves with the following national, state, and community professional organizations:

- California Urban Forests Council, Board Member, 1995-2006
- Street Tree Seminar, Past President, 2000-present
- American Society of Consulting Arborists Academy, Faculty Member, 2003-2005
- American Society of Consulting Arborists, Board of Directors, 2013-Present
- Member, Los Angeles Oak Woodland Habitat Conservation Strategic Alliance, 2010-present

DBH = diameter breast height; trunk diameter measured at 4.5 feet above natural grade.

Heights are estimated.

Wound wood development = P – poor, A – average, and E – excellent

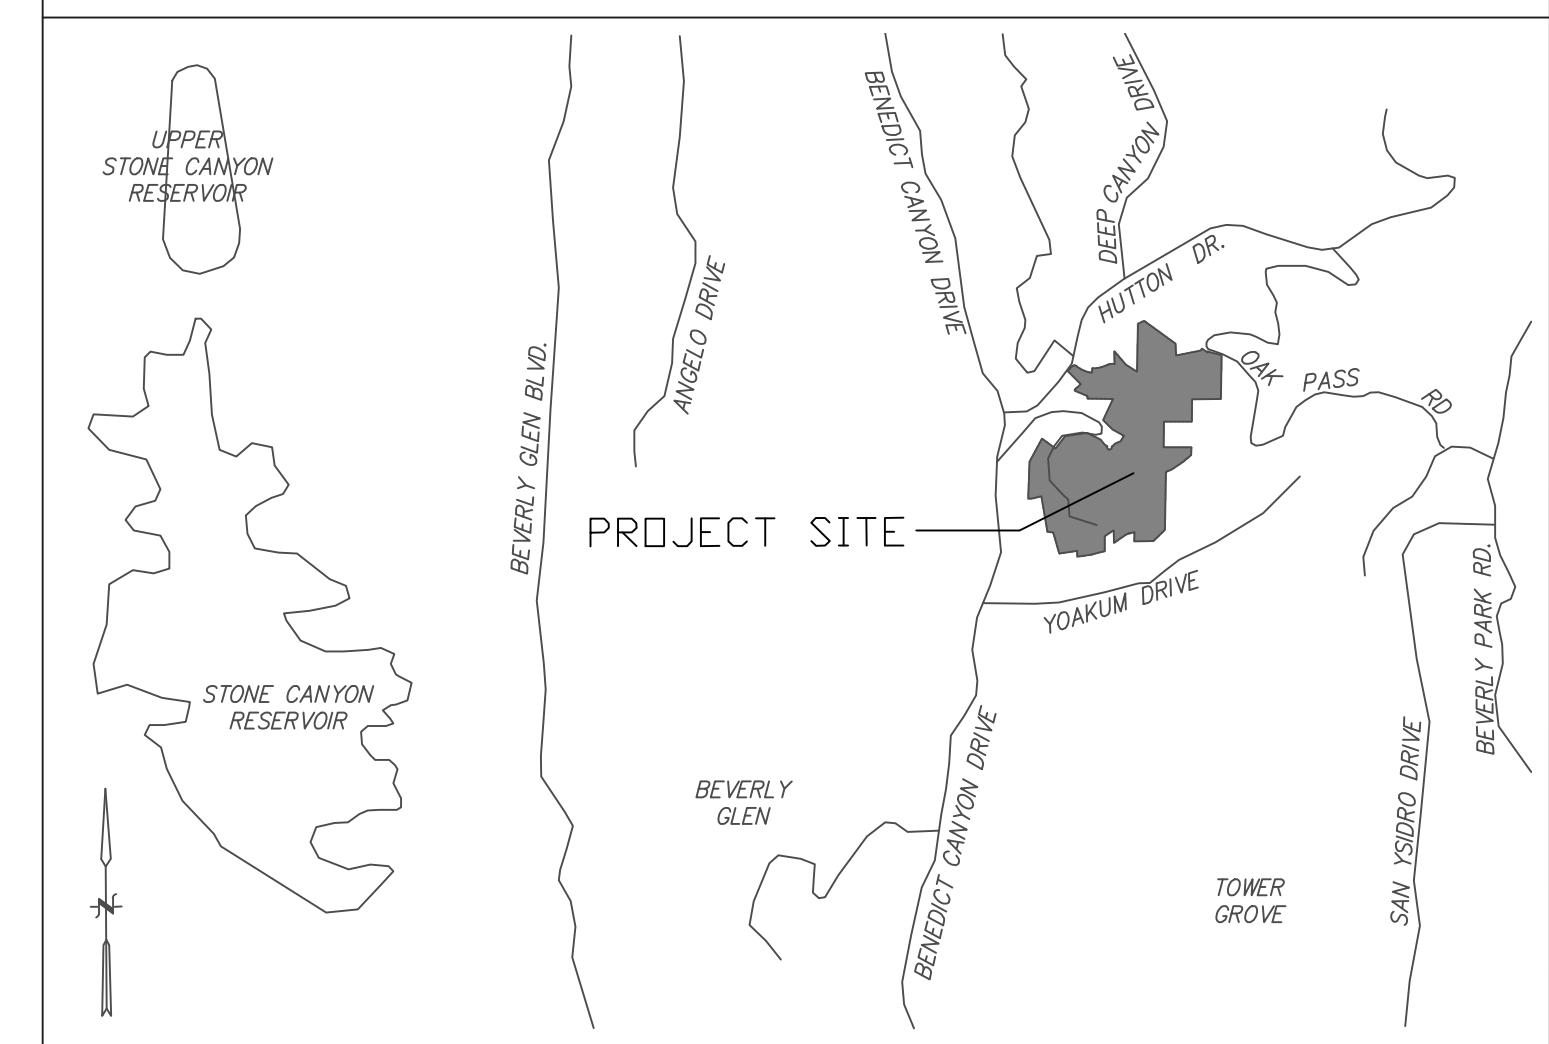

Dieback = Mi – minor, Mo – moderate, Ex - excellent
