- APPENDIX F – SIGNAL WARRANTS

## 1 EXECUTIVE SUMMARY

This Traffic Impact Analysis (TIA) has been prepared by EPD Solutions, Inc. (EPD) to analyze the potential transportation-related impacts of the proposed Bloomington Business Park Specific Plan (SP; proposed SP). The proposed SP is the redevelopment of the approximately 213-acre Specific Plan Area, located south of Santa Ana Avenue, west of Linden Avenue, north of Jurupa Avenue, and east of Alder Avenue in the unincorporated area of Bloomington. The SP site is currently occupied by residential homes, nurseries, and a church. The SP would develop up to 3,235,836 square feet (sf) of industrial uses over three phases. Phase 1 and 2 comprises the Opening Year Development of Planning Area A Option 1 (OY 1; proposed OY 1), which includes a 383,000sf fulfillment center (Building 1/Site 1) and 1,251,640sf High-Cube Warehouse (Building 2/Site 2) for Phase 1, and a 479,000sf fulfillment center (Building 3/Site 3) and ancillary truck parking area (Site 4) for Phase 2. Phase 3 does not have any planned development at this time, therefore a split of 598,400sf of future fulfillment center use and 523,793sf of industrial park will be analyzed to account for the maximum FAR possible for the SP.

An Opening Year Development Option 2 (OY 2) was also analyzed as an alternative to the proposed OY 1. This would have the same phasing timeline as the OY 1, which includes a 710,400sf fulfillment center (Building 1, Site 1, 36.65 acres) and 1,251,640sf High-Cube Warehouse (Building 2, Site 2, 57.60 acres) for Phase 1, and a 750,000sf fulfillment center (Building 3, Site 3, 37.66 acres) and ancillary truck parking area (Site 4, 9.50 acres) for Phase 2. The total acres for the Maximum Reasonable Initial Development is 141.41 acres. The total SP acres and potential development square footage from full buildout (based on the floor area ratios) would remain the same.

For the purpose of this analysis, the impacts will be analyzed using the full SP impact, and a fair share for mitigation will be split from the total SP, OY 1 and OY 2. The proposed Total SP would generate approximately 8,555 new daily PCE trips which includes 621 new AM peak hour and 719 new PM peak hour PCE trips. The OY 1 would generate approximately 4,668 new daily PCE trips which includes 263 new AM peak hour and 335 new PM peak hour PCE trips. The OY 2 would generate approximately 6,315 new daily PCE trips which includes 355 new AM peak hour and 453 new PM peak hour PCE trips.

The following study area intersections were evaluated during the AM and PM peak hours, which are defined as the hours with the highest traffic volumes during the 6 AM to 9 AM and 3 PM to 6 PM peak commute periods.

1. Sierra Avenue/I-10 Ramps (50% City of Fontana, 50% Caltrans)
2. Sierra Avenue/Slover Avenue (100% City of Fontana)
3. Sierra Avenue/Technology Street (100% City of Fontana)
4. Sierra Avenue/Santa Ana Avenue (100% City of Fontana)
5. Laurel Avenue/Santa Ana Avenue (100% County of San Bernardino)
6. Locust Avenue/Santa Ana Avenue (100% County of San Bernardino)
7. Locust Avenue/Jurupa Avenue (50% County of San Bernardino, 50% City of Fontana)
8. Maple Avenue/Santa Ana Avenue (100% County of San Bernardino)
9. Maple Avenue/Jurupa Avenue (100% County of San Bernardino)

10. Linden Avenue/Jurupa Avenue (100% County of San Bernardino)
11. Cedar Avenue/I-10 WB Ramp (50% County of San Bernardino, 50% Caltrans)
12. Cedar Avenue/I-10 EB Ramp (50% County of San Bernardino, 50% Caltrans)
13. Cedar Avenue/Orange Street (100% County of San Bernardino)
14. Cedar Avenue/Slover Avenue (100% County of San Bernardino)
15. Cedar Avenue/Santa Ana Avenue (100% County of San Bernardino)
16. Cedar Avenue/Jurupa Avenue (100% County of San Bernardino)
17. Cedar Avenue/11<sup>th</sup> Street (100% County of San Bernardino)
18. Cedar Avenue/7<sup>th</sup> Street (100% County of San Bernardino)
19. Cedar Avenue/El Rivino Drive (100% City of Jurupa Valley)
20. Rubidoux Boulevard/Market Street (100% City of Jurupa Valley)
21. Agua Mansa Road/Market Street (100% City of Jurupa Valley)
22. Market Street/24<sup>th</sup> Street (100% City of Jurupa Valley)
23. Market Street/Rivera Street (100% City of Riverside)
24. Market Street/SR-60 WB Ramp (50% City of Riverside, 50% Caltrans)
25. Market Street/SR-60 EB Ramp (50% City of Riverside, 50% Caltrans)
26. Laurel Avenue/Driveway 1 (100% County of San Bernardino)
27. Laurel Avenue/Driveway 2 (100% County of San Bernardino)
28. Laurel Avenue/Driveway 3 (100% County of San Bernardino)
29. Locust Avenue/Driveway 4 (100% County of San Bernardino)
30. Locust Avenue/Driveway 5 (100% County of San Bernardino)
31. Locust Avenue/Driveway 6 (100% County of San Bernardino)
32. Driveway 7/Jurupa Avenue (50% County of San Bernardino, 50% City of Fontana)
33. Maple Avenue/Driveway 8 (100% County of San Bernardino)
34. Maple Avenue/Driveway 9 (100% County of San Bernardino)
35. Maple Avenue/Driveway 10 (100% County of San Bernardino)
36. Driveway 11/Jurupa Avenue (100% County of San Bernardino)
37. Linden Avenue/Driveway 12 (100% County of San Bernardino)
38. Linden Avenue/Driveway 13 (100% County of San Bernardino)

AM and PM peak hour traffic operations were evaluated for the following scenarios:

- Existing Condition
- Existing plus Total SP
- Opening Year Baseline
- Opening Year plus Total SP
- General Plan Buildout (Year 2040)
- General Plan Buildout (Year 2040) plus Total SP
- Baseline plus OY 1 for all impacted intersections
- Baseline plus OY 2 for all impacted intersections

### **Existing plus Specific Plan Intersection Analysis Results**

For the Existing plus Specific Plan analysis the following three intersections would have a significant impact with addition of the project.

- #6 – Locust Ave/Santa Ana Ave (PM Peak Hour) (100% County of San Bernardino)

- #7 – Locust Ave/Jurupa Ave (PM Peak Hour) (50% County of San Bernardino, 50% City of Fontana)
- #16 – Cedar Ave/Jurupa Ave (PM Peak Hour) (100% County of San Bernardino)

### **Opening Year plus Specific Plan Intersection Analysis Results**

For the Opening Year plus Specific Plan analysis, the following six intersections would have a significant impact with addition of the project.

- #6 – Locust Ave/Santa Ana Ave (PM Peak Hour) (100% County of San Bernardino)
- #7 - Locust Ave/Jurupa Ave (AM and PM Peak Hour) (50% County of San Bernardino, 50% City of Fontana)
- #10 – Linden Ave/Jurupa Ave (PM Peak Hour) (100% County of San Bernardino)
- #11 – Cedar Ave/I-10 WB Ramps (AM Peak Hour) (50% County of San Bernardino, 50% Caltrans)
- #14 – Cedar Ave/Slover Ave (PM Peak Hour) (100% County of San Bernardino)
- #16 – Cedar Ave/Jurupa Ave (AM and PM Peak Hour) (100% County of San Bernardino)
- #20 – Rubidoux Blvd/Market St (AM and PM Peak Hour) (100% City of Jurupa Valley)
- #22 – Market St/24<sup>th</sup> St (PM Peak Hour) (100% City of Jurupa Valley)

### **General Plan Buildout (Year 2040) plus Specific Plan Intersection Analysis Results**

In the General Plan Buildout (Year 2040) plus Specific Plan analysis the following 20 intersections would have a significant impact with addition of the project:

- #1 – Sierra Ave/I-10 WB Ramps (PM Peak Hour) (50% City of Fontana, 50% Caltrans)
- #2 – Sierra Ave/Slover Ave (PM Peak Hour) (100% City of Fontana)
- #4 – Sierra Ave/Santa Ana Ave (PM Peak Hour) (100% City of Fontana)
- #5 – Laurel Ave/Santa Ana Ave (PM Peak Hour) (100% County of San Bernardino)
- #6 – Locust Ave/Santa Ana Ave (AM and PM Peak Hour) (100% County of San Bernardino)
- #7 - Locust Ave/Jurupa Ave (PM Peak Hour) (50% County of San Bernardino, 50% City of Fontana)
- #8 – Maple Ave/Santa Ana Ave (PM Peak Hour) (100% County of San Bernardino)
- #9 – Maple Ave/Jurupa Ave (PM Peak Hour) (100% County of San Bernardino)
- #10 – Linden Ave/Jurupa Ave (PM Peak Hour) (100% County of San Bernardino)
- #11 – Cedar Ave/I-10 WB Ramps (PM Peak Hour) (50% County of San Bernardino, Caltrans)
- #12 – Cedar Ave/I-10 EB Ramps (PM Peak Hour) (50% County of San Bernardino, 50% Caltrans)
- #13 – Cedar Ave/Orange St (PM Peak Hour) (100% County of San Bernardino)
- #14 – Cedar Ave/Slover Ave (PM Peak Hour) (100% County of San Bernardino)
- #15 – Cedar Ave/Santa Ana Ave (PM Peak Hour) (100% County of San Bernardino)
- #16 – Cedar Ave/Jurupa Ave (AM and PM Peak Hour) (100% County of San Bernardino)
- #17 – Cedar Ave/11<sup>th</sup> St (PM Peak Hour) (100% County of San Bernardino)
- #18 – Cedar Ave/7<sup>th</sup> St (PM Peak Hour) (100% County of San Bernardino)

- #20 – Rubidoux Blvd/Market St (PM Peak Hour) (100% City of Jurupa Valley)
- #22 – Market St/24<sup>th</sup> St (PM Peak Hour) (100% City of Jurupa Valley)
- #25 – Market St/SR-60 EB Ramp (PM Peak Hour) (50% City of Riverside, 50% Caltrans)

In addition, the following driveways operate at LOS F in the 2040 plus Project Scenario:

- #29 – Locust Ave/Driveway 4 (PM Peak Hour) (100% County of San Bernardino)
- #31 – Locust Ave/Driveway 6 (PM Peak Hour) (100% County of San Bernardino)
- #32 – Driveway 7/Jurupa Ave (PM Peak Hour) (50% County of San Bernardino, 50% City of Fontana)

### Project Mitigation and Fair-Share Calculation

To mitigate the SP, OY 1, and OY 2 project impacts, the following improvements are recommended:

- #1 – Sierra Ave/I-10 WB Ramps (50% City of Fontana, 50% Caltrans): *Add 3<sup>rd</sup> eastbound left turn lane*
- #2 – Sierra Ave/Slover Ave (100% City of Fontana): *Convert eastbound right turn to eastbound thru-right*
- #4 – Sierra Ave/Santa Ana Ave (100% City of Fontana): *Convert northbound right turn to northbound thru-right*
- #5 – Laurel Ave/Santa Ana Ave (100% County of San Bernardino): *Add 2<sup>nd</sup> eastbound thru lane*
- #6 – Locust Ave/Santa Ana Ave (100% County of San Bernardino): *Add northbound left turn and eastbound thru lane*
- #7 – Locust Ave/Jurupa Ave (50% County of San Bernardino, 50% City of Fontana): *Add a Traffic Signal, southbound and westbound left turn lane*
- #8 – Maple Ave/Santa Ana Ave (100% County of San Bernardino): *Add 2<sup>nd</sup> eastbound thru lane*
- #9 – Maple Ave/Jurupa Ave (100% County of San Bernardino): *Add westbound thru lane and two stage gap acceptance*
- #10 – Linden Ave/Jurupa Ave (100% County of San Bernardino): *Convert eastbound right to shared eastbound thru-right lane*
- #11 – Cedar Ave/I-10 WB Ramps (50% County of San Bernardino, 50% Caltrans): *Convert a 3<sup>rd</sup> southbound thru to southbound thru-right and add northbound thru lane*
- #12 – Cedar Ave/I-10 EB Ramps (50% County of San Bernardino, 50% Caltrans): *Add eastbound right turn lane*
- #13 – Cedar Ave/Orange St (100% County of San Bernardino): *Change eastbound/westbound phasing to split phasing*
- #14 – Cedar Ave/Slover Ave (100% County of San Bernardino): *Add a 2<sup>nd</sup> eastbound left turn lane*
- #15 – Cedar Ave/Santa Ana Ave (100% County of San Bernardino): *Add eastbound and westbound left turn lane*
- #16 – Cedar Ave/Jurupa Ave (100% County of San Bernardino): *Add an eastbound left turn lane*

- #17 – Cedar Ave/11<sup>th</sup> St (100% County of San Bernardino): *Add an eastbound left turn lane*
- #18 – Cedar Ave/7<sup>th</sup> St (100% County of San Bernardino): *Add an eastbound left turn lane*
- #20 – Rubidoux Blvd/Market St (100% City of Jurupa Valley): *Add a 2<sup>nd</sup> southbound left turn lane*
- #22 – Market St/24<sup>th</sup> St (100% City of Jurupa Valley): *Add westbound left turn lane*
- #25 – Market St/SR-60 EB Ramp (Specific Plan project impact only) (50% City of Riverside, 50% Caltrans): *Add 2<sup>nd</sup> south bound left turn lane*
- #29 – Locust Ave/Driveway 4 (100% County of San Bernardino): *Add 2<sup>nd</sup> northbound and 2<sup>nd</sup> southbound thru lane*
- #31 – Locust Ave/Driveway 6 (100% County of San Bernardino): *Add 2<sup>nd</sup> northbound and 2<sup>nd</sup> southbound thru lane*
- #32 –Driveway 7/Jurupa Ave (50% County of San Bernardino, 50% City of Fontana): *Add 2<sup>nd</sup> eastbound and 2<sup>nd</sup> westbound thru lane*

Project impacts would be mitigated by payment of a fair-share of the planned improvements in the amount of \$1,535,473.70 for the SP, \$744,476.78 for the OY 1, and \$937,720.26 for the OY 2.

The California Manual of Uniform Traffic Control Devices (CA MUTCD) 2014 Revision 5 provides a total of eight types of signal warrant analyses to determine whether a traffic signal may be warranted at a given location. Warrant 3, Peak Hour was used based on the count data. By the project opening year, the total SP, OY 1, and OY 2 meet the signal warrant.

## 2 INTRODUCTION

This Traffic Impact Analysis (TIA) has been prepared by EPD Solutions, Inc. (EPD) to analyze the potential transportation-related impacts of the proposed Bloomington Business Park Specific Plan (SP; proposed SP). The TIA was prepared using methodologies and significance criteria consistent with the requirements of the San Bernardino Countywide Plan (also referred to herein as the General Plan, adopted October 2020) and applicable provisions of the California Environmental Quality Act (CEQA).

### 2.1 Project Description

The proposed Specific Plan (SP; proposed SP) is the redevelopment of the approximately 213-acre Specific Plan Area, located south of Santa Ana Avenue, west of Linden Avenue, north of Jurupa Avenue, and east of Alder Avenue in the unincorporated area of Bloomington. The SP site is currently occupied by residential homes, nurseries, and a church. The SP would develop up to 3,235,836 square feet (sf) of industrial uses over three phases. Phase 1 and 2 comprises the Opening Year Development of Planning Area A Option 1 (OY 1; proposed OY 1), which includes a 383,000sf fulfillment center (Building 1, Site 1) and 1,251,640sf High-Cube Warehouse (Building 2, Site 2) for Phase 1, and a 479,000sf fulfillment center (Building 3, Site 3) and ancillary truck parking area (Site 4) for Phase 2. Phase 3 does not have any planned development at this time, therefore a split of 598,400sf of future fulfillment center use and 523,793sf of industrial park will be analyzed to account for the maximum FAR possible for the SP. Table 1 shows the Phasing plan and land use breakdown.

**Table 1. Specific Plan Development Plan**

PD Area	Land (Acres)	Land Use	Operational Year	Proposed Development
Site 1	17.72	Fulfillment Center	2022	373,000 SF Warehouse
				10,000 SF Office
Site 2	57.60	High-Cube Warehouse	2022	1,231,640 SF Warehouse
				20,000 SF Office
Site 3	30.52	Fulfillment Center	2022	474,000 SF Warehouse
				5,000 SF Office
Site 4	9.5	Trailer Parking	2022	289 Truck Trailers Stalls
<b>Total</b>	<b>115.34 Acres</b>		<b>2022</b>	<b>2,113,640 SF</b>
Future Fulfillment Center		Fulfillment Center	2040	598,400 SF Warehouse
Future Industrial Park		Industrial Park	2040	523,796 SF Industrial Park
<b>Total Specific Plan</b>	<b>213 Acres</b>		<b>2040</b>	<b>3,235,836 SF</b>

An Opening Year Development Option 2 (OY 2) was also analyzed as an alternative to the proposed OY 1. OY 2 would have the 598,400SF of Future Fulfillment Center built by 2022, with

a 710,400sf fulfillment center (Building 1, Site 1, 36.65 acres) and 1,251,640sf High-Cube Warehouse (Building 2, Site 2, 57.60 acres) for Phase 1, and a 750,000sf fulfillment center (Building 3, Site 3, 37.66 acres) and ancillary truck parking area (Site 4, 9.50 acres) for Phase 2. The total acres for the OY 2 is 141.41 acres. The total SP acres and potential development square footage from full buildout (based on the floor area ratios) would remain the same.

**Table 2. Specific Plan Development Plan (Opening Year Development Option 2)**

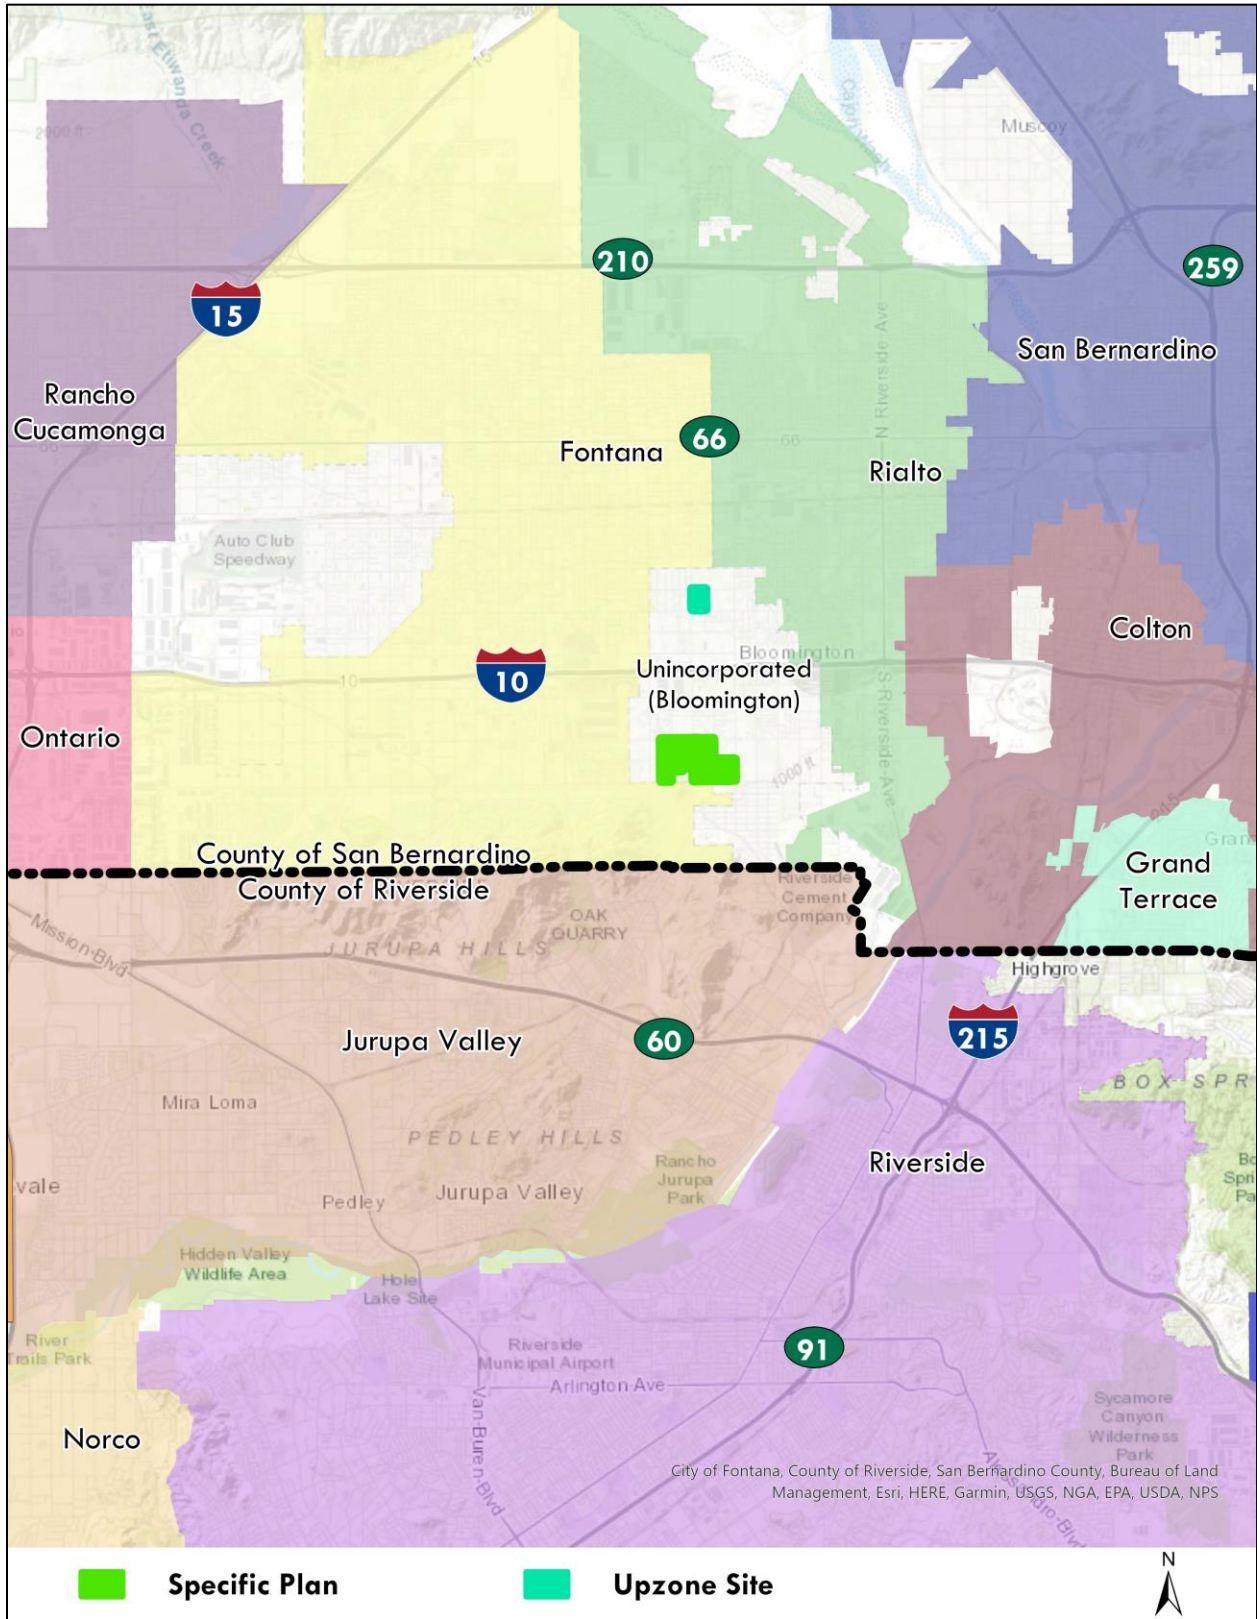

PD Area	Land (Acres)	Land Use	Operational Year	Proposed Development
Site 1	17.72	Fulfillment Center	2022	710,400 SF Warehouse
Site 2	57.60	High-Cube Warehouse	2022	1,231,640 SF Warehouse
Site 3	30.52	Fulfillment Center	2022	750,000 SF Warehouse
Site 4	9.5	Trailer Parking	2022	289 Truck Trailers Stalls
<b>Total</b>	<b>141.41 Acres</b>		<b>2022</b>	<b>2,113,640 SF</b>
Future Industrial Park		Industrial Park	2040	523,796 SF Industrial Park
<b>Total Specific Plan</b>	<b>213 Acres</b>		<b>2040</b>	<b>3,235,836 SF</b>

Access to the Specific Plan area site would be provided from driveways along Jurupa Avenue and Linden Avenue, and internal driveways along Laurel Avenue, Locust Avenue, and Maple Avenue will be accessed by Santa Ana Avenue or Jurupa Avenue (except for Laurel Avenue as it does not connect to Jurupa Ave). Truck access will be limited to Jurupa Avenue as only passenger vehicles will have access to Santa Ana Avenue.

The location of the SP is shown in Figure 1 - Project Location, and the SP/OY 1 site plan is shown in Figure 2 – Project (Specific Plan) Site Plan Opening Year Option 1. The OY 2 site plan can be found in Figure 3 – Project (Specific Plan Site Plan Opening Year Option 2).

## 2.2 Study Area and Analysis Scenarios

This TIA includes all signalized intersections where the project has the potential to add 50-trips or more. Based on this criterion, the following intersections were included in the analysis:

1. Sierra Avenue/I-10 Ramps (50% City of Fontana, 50% Caltrans)
2. Sierra Avenue/Slover Avenue (100% City of Fontana)
3. Sierra Avenue/Technology Street (100% City of Fontana)
4. Sierra Avenue/Santa Ana Avenue (100% City of Fontana)
5. Laurel Avenue/Santa Ana Avenue (100% County of San Bernardino)
6. Locust Avenue/Santa Ana Avenue (100% County of San Bernardino)
7. Locust Avenue/Jurupa Avenue (50% County of San Bernardino, 50% City of Fontana)
8. Maple Avenue/Santa Ana Avenue (100% County of San Bernardino)
9. Maple Avenue/Jurupa Avenue (100% County of San Bernardino)
10. Linden Avenue/Jurupa Avenue (100% County of San Bernardino)
11. Cedar Avenue/I-10 WB Ramp (50% County of San Bernardino, 50% Caltrans)
12. Cedar Avenue/I-10 EB Ramp (50% County of San Bernardino, 50% Caltrans)
13. Cedar Avenue/Orange Street (100% County of San Bernardino)
14. Cedar Avenue/Slover Avenue (100% County of San Bernardino)
15. Cedar Avenue/Santa Ana Avenue (100% County of San Bernardino)
16. Cedar Avenue/Jurupa Avenue (100% County of San Bernardino)
17. Cedar Avenue/11<sup>th</sup> Street (100% County of San Bernardino)
18. Cedar Avenue/7<sup>th</sup> Street (100% County of San Bernardino)
19. Cedar Avenue/El Rivino Drive (100% City of Jurupa Valley)
20. Rubidoux Boulevard/Market Street (100% City of Jurupa Valley)
21. Agua Mansa Road/Market Street (100% City of Jurupa Valley)
22. Market Street/24<sup>th</sup> Street (100% City of Jurupa Valley)
23. Market Street/Rivera Street (100% City of Riverside)
24. Market Street/SR-60 WB Ramp (50% City of Riverside, 50% Caltrans)
25. Market Street/SR-60 EB Ramp (50% City of Riverside, 50% Caltrans)
26. Laurel Avenue/Driveway 1 (100% County of San Bernardino)
27. Laurel Avenue/Driveway 2 (100% County of San Bernardino)
28. Laurel Avenue/Driveway 3 (100% County of San Bernardino)
29. Locust Avenue/Driveway 4 (100% County of San Bernardino)
30. Locust Avenue/Driveway 5 (100% County of San Bernardino)
31. Locust Avenue/Driveway 6 (100% County of San Bernardino)
32. Driveway 7/Jurupa Avenue (50% County of San Bernardino, 50% City of Fontana)
33. Maple Avenue/Driveway 8 (100% County of San Bernardino)
34. Maple Avenue/Driveway 9 (100% County of San Bernardino)
35. Maple Avenue/Driveway 10 (100% County of San Bernardino)
36. Driveway 11/Jurupa Avenue (100% County of San Bernardino)
37. Linden Avenue/Driveway 12 (100% County of San Bernardino)
38. Linden Avenue/Driveway 13 (100% County of San Bernardino)

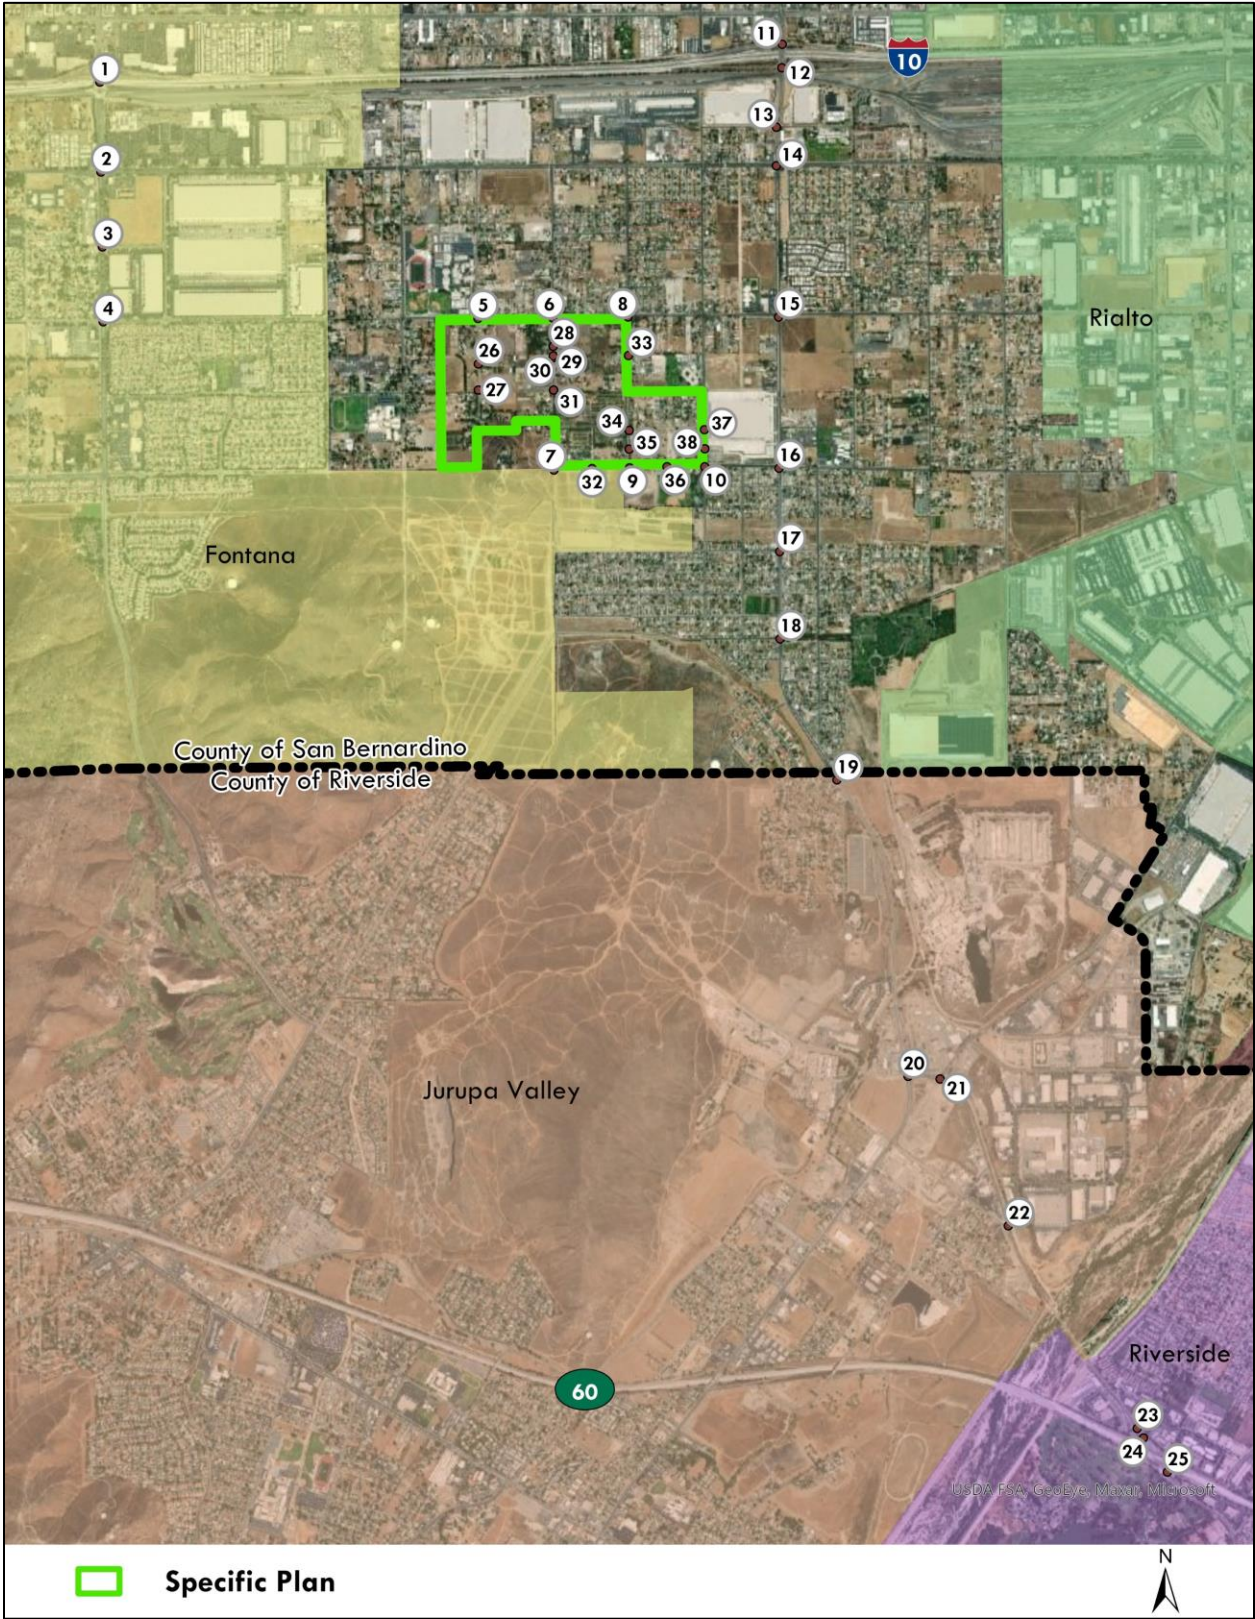

The locations of the study area intersections are shown on Figure 4 – Project Study Area.

Study area intersections were evaluated during the AM and PM peak hours, which are defined as the hour with the highest traffic volumes during the 6 AM to 9 AM and 3 PM to 6 PM peak commute periods. AM and PM peak hour traffic operations were evaluated for the following scenarios:

- Existing Condition
- Existing plus Total SP
- Opening Year Baseline
- Opening Year plus Total SP
- General Plan Buildout (Year 2040)
- General Plan Buildout (Year 2040) plus Total SP
- Baseline plus OY 1 for all impacted intersections
- Baseline plus OY 2 for all impacted intersections

Forecast traffic volumes for the Cumulative conditions were developed by taking counts and increasing the counts by a factor of 29% during the AM peak hour and 9% during the PM peak hour to account for the Covid-19 pandemic. The factor percentage was calculated comparing the counts taken in 2020 (during Covid-19) with counts taken prior to the Covid-19 pandemic. The Scoping Agreement with the County of San Bernardino can be found in Appendix A.

Figure 4: Project Study Area

*This page intentionally left blank.*

### 2.3 Methodology

Intersection operations are evaluated using Level of Service (LOS), which is a measure of the delay experienced by drivers on a roadway facility. LOS A indicates free-flow traffic conditions and is generally the best operating conditions. LOS F is an extremely congested condition and is the worst operating condition from the driver’s perspective. In this report, LOS at signalized and unsignalized intersections is calculated using the Highway Capacity Manual (HCM), 6<sup>th</sup> Edition methodology.

LOS at signalized intersections is defined in terms of the weighted average control delay for the intersection as a whole. Control delay is a measure of the increase in travel time that is experienced due to traffic signal control and is expressed in terms of average control delay per vehicle (in seconds). Control delay is determined based on the intersection geometry and volume, signal cycle length, phasing and coordination along the arterial corridor. Table 3 shows the relationship between control delay and LOS.

**Table 3. Relationship between Control Delay and LOS at a Signalized Intersection**

LOS	Delay (Seconds per Vehicle)
A	≤ 10
B	>10 – 20
C	>20 – 35
D	>35 – 55
E	>55 – 80
F	>80

Unsignalized intersections are categorized as either all-way stop control (AWSC) or two-way stop control (TWSC). LOS at AWSC intersections is determined by the weighted average control delay of the overall intersection. The HCM TWSC intersection methodology calculates LOS based on the delay experienced by drivers on the minor (stop-controlled) approaches to the intersection. For TWSC intersections, LOS is determined for each minor-street movement, as well as the major-street left-turns. The relationship between delay and LOS at Unsignalized intersections is shown in Table 4.

**Table 4. Relationship between Delay and LOS an Unsignalized Intersection**

LOS	Delay (seconds)
A	0-10
B	>10 – 15
C	>15 – 25
D	>25 – 35
E	>35 – 50
F	>50

Intersection signal and saturation requirements will be specified to the jurisdiction the intersection is under, deferring to the more conservative analysis method. These requirements were found in the County of San Bernardino, City of Fontana, City of Jurupa (County of Riverside), and City of Riverside respective transportation analysis guidelines.

## 2.4 Significance Criteria

### County of San Bernardino

The County of San Bernardino Traffic Impact Study Guidelines provides the following criteria for the determination of traffic impacts. It should be noted that the project is located in the Valley region.

#### Signalized Intersections

“Any study intersection that is operating at a LOS A, B, C or D for any study scenario without project traffic in which the addition of project traffic causes the intersection to degrade to a LOS E or F shall mitigate the impact to bring the intersection back to at least LOS D.

Any study intersection that is operating at a LOS E or F for any study scenario without project traffic shall mitigate any impacts so as to bring the intersection back to the overall level of delay established prior to project traffic being added.

For scenarios which include the addition of Cumulative Project Traffic (i.e. shared impacts), study intersections shall be mitigated to LOS D or better in the Valley and Mountain regions and LOS C or better in the Desert regions of the County.”

#### Unsignalized Intersections

“An impact is considered significant if the study determines that either section a) or both sections b) and c) occur.

- a) The addition of project related traffic causes the intersection to move from a LOS D or better to a LOS E or worse

OR

- b) The project contributes additional traffic to an intersection that is already projected to operate at an LOS E or F with background traffic

AND

- c) One or both of the following conditions are met:
  - 1) The project adds ten (10) or more trips to any approach
  - 2) The intersection meets the peak hour traffic signal warrant after the addition of project traffic”

“Once a significant impact has been identified, mitigation shall be provided as follows:

1. For scenarios involving project traffic but not Cumulative Project Traffic, the LOS shall be mitigated to either LOS D or better for case a) above or to pre-project LOS and delay for case b) above.
2. For scenarios that include Cumulative Project Traffic study intersections shall be mitigated to LOS D or better in the Valley and Mountain regions and LOS C or better in the Desert regions of the County.”

**City of Fontana**

The City of Fontana Traffic Impact Analysis Guidelines provides the following criteria for the determination of traffic impacts.

The City’s General Plan recommends a LOS standard of C, and intersections which are forecast to operate at unsatisfactory conditions shall be identified as cumulatively significant impacts. Table 5 below shows the thresholds that would cause an impact.

**Table 5. Thresholds of Significant Impact for Fontana Intersections**

With Project LOS	Significant Impact Threshold
A/B	+10.0 Seconds
C	+8.0 Seconds
D	+5.0 Seconds
E	+3.0 Seconds
F	+1.0 Seconds

**City of Jurupa Valley**

The City of Jurupa Valley General Plan defines the minimum acceptable intersection LOS as LOS D. Intersections which worsen from an acceptable LOS (D or better) to an unacceptable LOS (E or F) shall identify improvements to improve operations to LOS D or better. A project adds 3 or more seconds of delay to an intersection that already operates at an unacceptable LOS shall identify improvements to off-set the increase in delay.

**City of Riverside**

The City of Riverside Traffic Impact Analysis Preparation Guide provides the following criteria for the determination of traffic impacts.

The City’s General Plan recommends a LOS standard of D for roadways of Collector or higher classifications. LOS C is to be maintained on all street intersections. Table 6 below shows the thresholds that would cause an impact.

**Table 6. Thresholds of Significant Impact for Riverside Intersections**

With Project LOS	Significant Impact Threshold
A/B	+10.0 Seconds
C	+8.0 Seconds
D	+5.0 Seconds
E	+2.0 Seconds
F	+1.0 Seconds

**San Bernardino County Congestion Management Program (CMP)**

The San Bernardino County CMP sets a LOS standard of E for intersections or roadway segments on the CMP system of roadways. LOS E would apply as the standard at the following intersections:

1. Sierra Avenue/I-10 Ramps (50% City of Fontana, 50% Caltrans)
2. Sierra Avenue/Slover Avenue (100% City of Fontana)
11. Cedar Avenue/I-10 WB Ramp (50% County of San Bernardino, 50% Caltrans)
12. Cedar Avenue/I-10 EB Ramp (50% County of San Bernardino, 50% Caltrans)

**California Department of Transportation (Caltrans)**

The Caltrans *Guide for the Preparation of Traffic Impact Studies* (December 2002) required that State Highway facilities be analyzed when project traffic was added to the facility. These guidelines were superseded by the Caltrans *Vehicle Miles Traveled-Focused Transportation Impact Study Guide* in May 2020. As noted in the updated guidelines, Caltrans is now focused on vehicle miles traveled (VMT) as a metric for transportation analysis and states the following: “With this guidance, the Department will transition away from requesting LOS or other vehicle operations analyses of land use projects”.

EPD prepared a VMT screening analysis using the screening criteria included in the County’s Transportation Impact Study guidelines. The project is located in two low-VMT generating traffic analysis zones (TAZ’s) and would therefore would not be required to prepare a VMT analysis, per the County’s screening threshold.

### 3 BASELINE CONDITIONS

This section discusses the baseline (without project) conditions. Baseline conditions are those conditions that exist within the study area in the existing condition and that are forecast to occur in the future, without the proposed project.

#### 3.1 Existing Transportation System

Access to the Specific Plan Area site would be provided from Jurupa Avenue and Linden Avenue, and internal driveways to the development sites along Laurel Avenue, Locust Avenue, and Maple Avenue. Truck access will be limited to Jurupa Avenue as only passenger vehicles have access to Santa Ana Avenue. Other major streets analyzed are Sierra Avenue, Cedar Avenue, Rubidoux Boulevard, and Market Street. Jurupa Avenue east of Maple Avenue and Cedar Avenue are classified as Major Highways, while Santa Ana Avenue is classified as Secondary Highway in the County of San Bernardino General Plan Circulation Element. Sierra Avenue is classified as a Major Highway, and Santa Ana Avenue and Jurupa Valley west of Maple are classified as Secondary Highways in the City of Fontana General Plan Community Mobility Circulation Element. Finally, Rubidoux Boulevard and Market Street are classified as Major Highways as per the City of Jurupa Valley General Plan Mobility Element. Cedar Avenue and Sierra Avenue are roadways designated in the Congestion Management Plan Road system. Table 7 Shows the roadway characteristics that are observed within the project study area.

**Table 7. Existing Roadway Characteristics within Study Area**

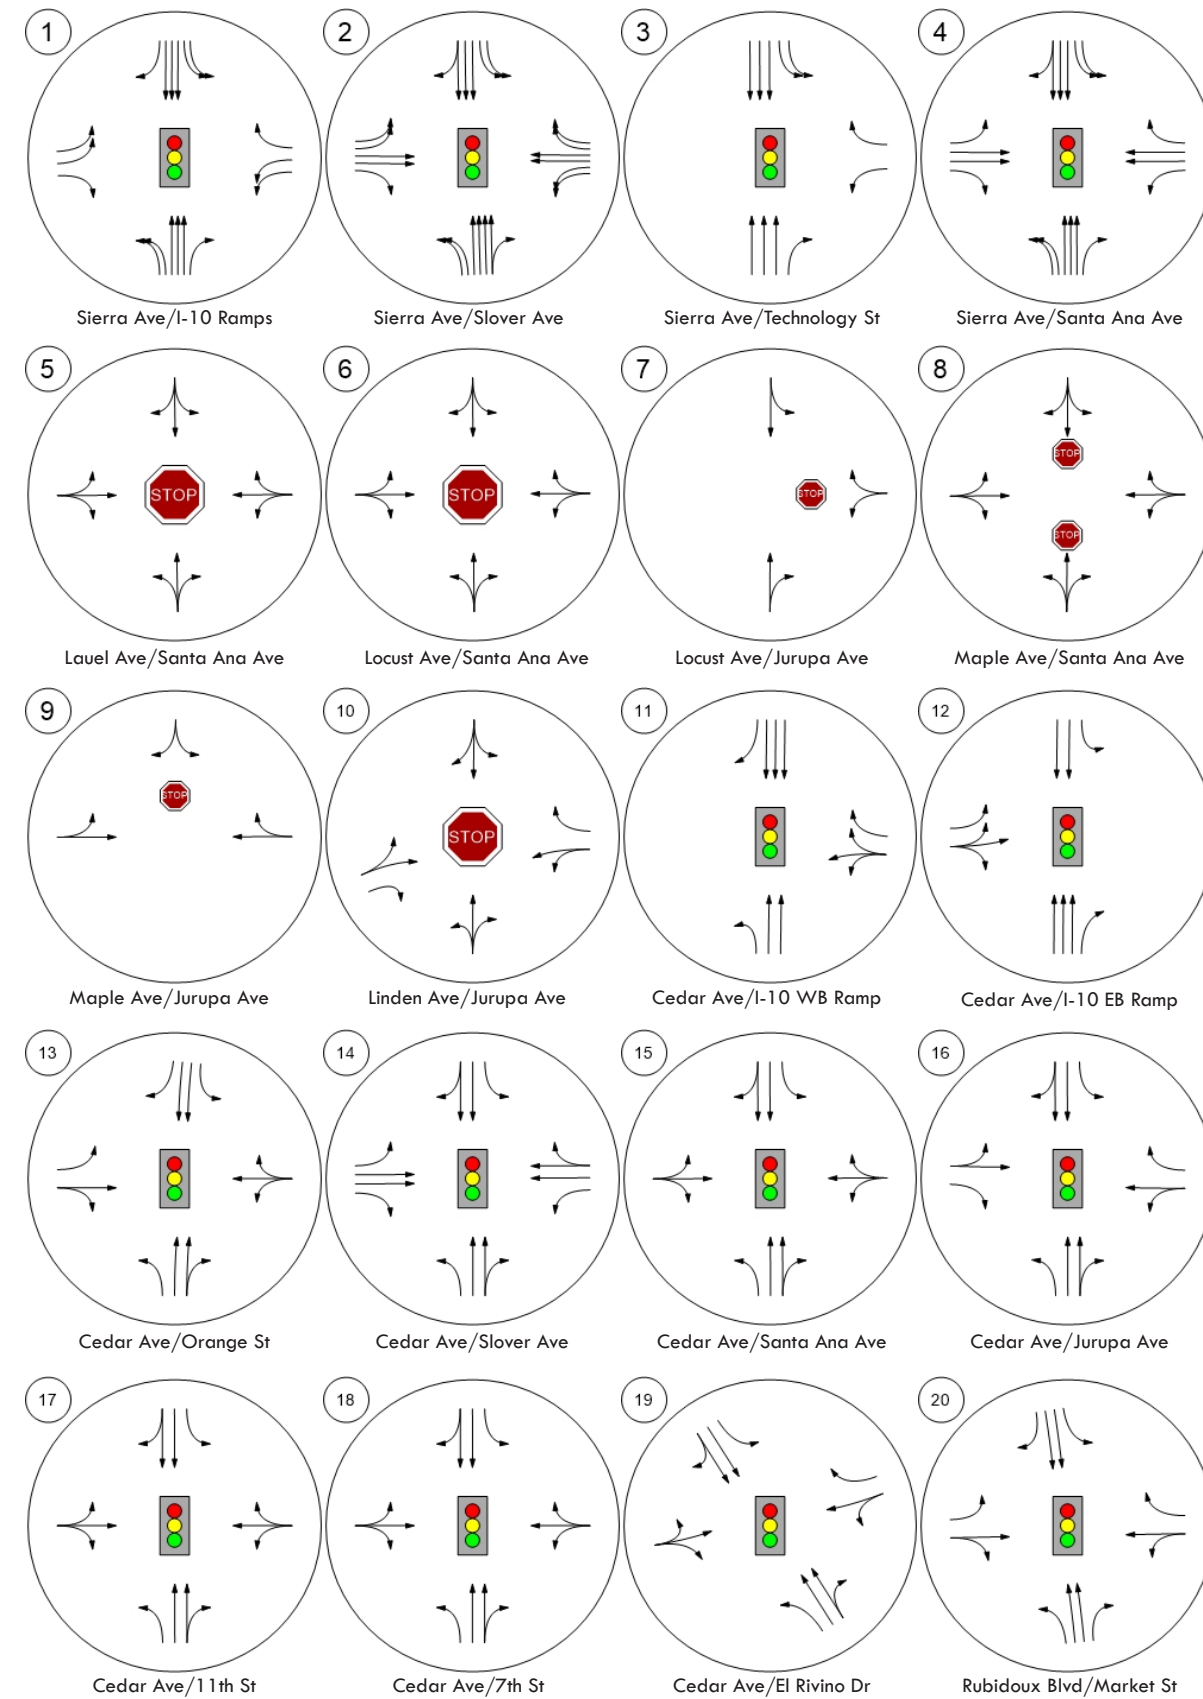

Roadway	Number of Lanes	Sidewalks?	Bike Lane?
Cedar Avenue (N/S)	4-Lane Divided. Solid median south of Slover Avenue, painted median north of Slover Avenue	West Side: Intermittently East Side: Yes north of Santa Ana Avenue, Intermittently south of Santa Ana Avenue	No
Santa Ana Avenue (E/W)	4-Lane Divided within City of Fontana, 2-Lane divided in County.	North Side: Yes within City of Fontana, Intermittently within County South Side No within County	No
Jurupa Avenue (E/W)	2-Lane Divided	North Side: Yes east of Linden Avenue South Side: No	No
Sierra Avenue (N/S)	7-Lane Divided north of Slover, 6-Lane Divided south of Slover	Yes	Yes on east side between Santa Ana Avenue and Technology Street
Rubidoux Boulevard (N/S)	4-Lane Divided	No	No
Market Street (N/S)	2-Lane Divided north of Rivera Street, 4-Lane Divided south of Rivera Street	West Side: No East Side: No North of Rivera Street, Yes South of Rivera Street	No

OmniTrans route 29 services the SP area and has stops along Slover Avenue, Laurel Avenue, Santa Ana Avenue, Locust Avenue, 11<sup>th</sup> Street, and Cedar Avenue.

The existing traffic control and intersection geometrics at study area intersections are shown in Figure 5.

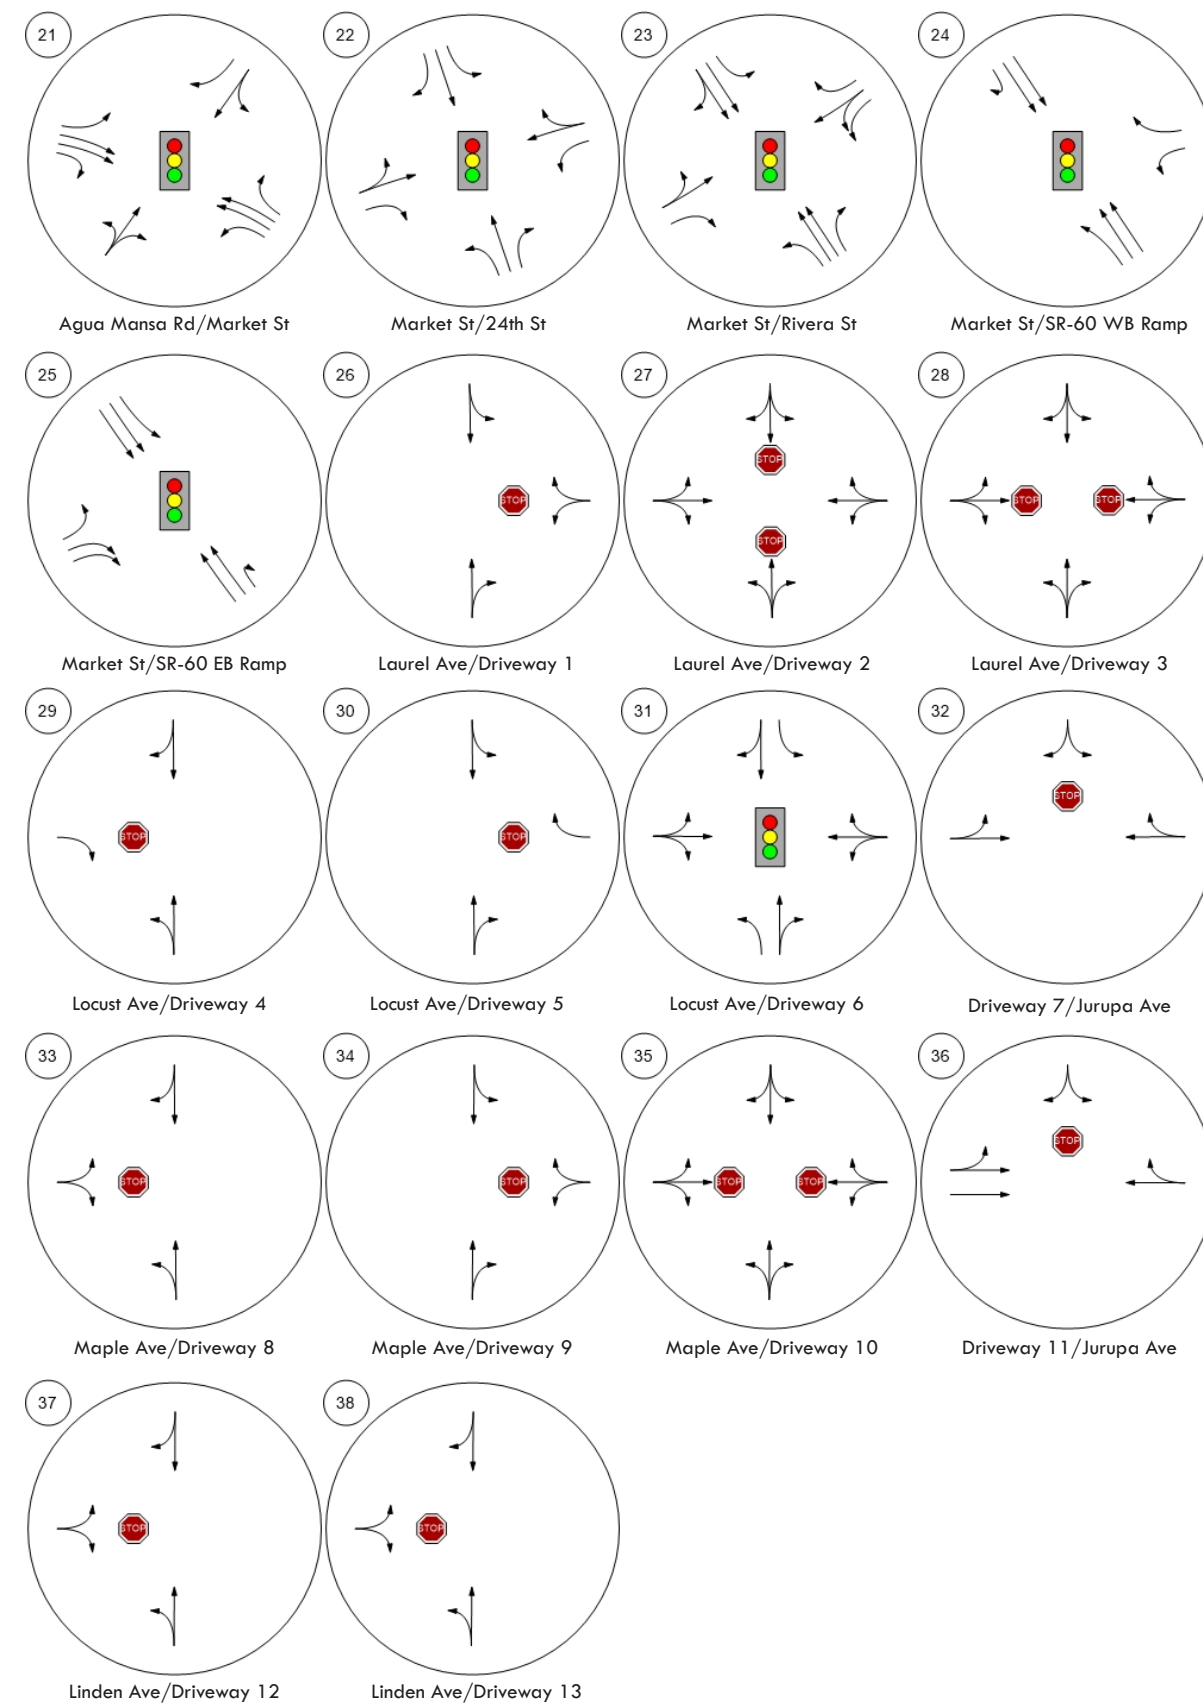

Figure 5a: Existing Traffic Control and Intersection Geometrics

*This page intentionally left blank.*

Figure 5b: Existing Traffic Control and Intersection Geometric

*This page intentionally left blank.*

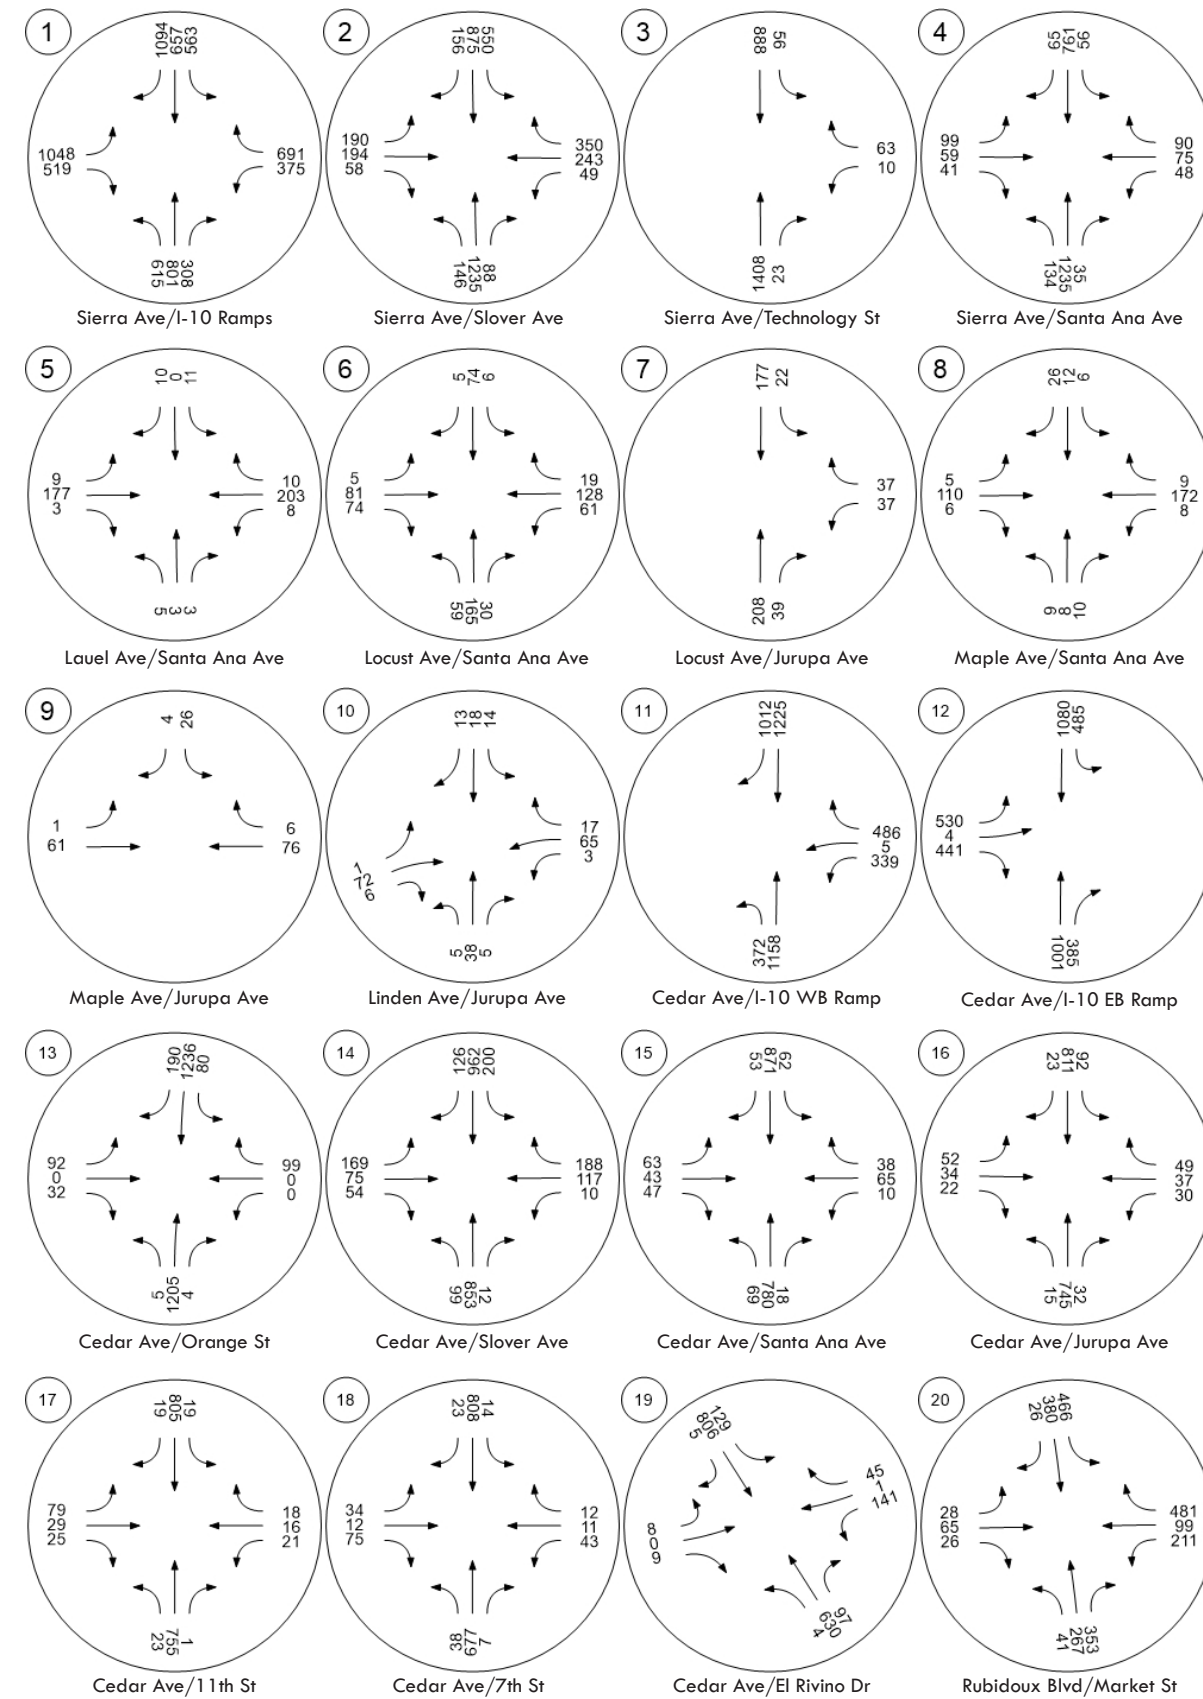

### 3.2 Existing Traffic Volumes and Intersection Operations

Existing AM and PM peak hour traffic volumes at the study area intersections are shown in Figures 6 and 7. The existing traffic volumes were collected on Tuesday, September 29<sup>th</sup>, 2020. Because many schools and business were closed due to the Covid-19 pandemic, the existing counts were adjusted to represent typical weekday traffic volumes. Adjustment factors were determined by examining traffic volumes at study area intersections from 2015, 2016, 2017 and 2019. The traffic counts were increased by 29% during the AM peak hour and 9% during the PM peak hour. All traffic count data and the calculation of the Covid-19 factor are provided in Appendix B.

The existing Levels of Service at the study area intersections were determined using the HCM methodology, described previously in section 2.3. Table 8 shows the existing AM and PM peak hour levels of service at study intersections. All LOS calculations are provided in Appendix C. As shown in Table 8, one of the study intersections, Locust Avenue/Santa Ana Avenue (100% County of San Bernardino), currently operates at LOS E during the PM peak hour.

### 3.3 Opening Year Traffic Volumes and Intersection Operations

Opening Year Baseline (2022) traffic volumes were developed by applying a growth rate of one percent per year to the existing (2020) traffic volumes and adding traffic generated by other approved and pending development projects. Twelve cumulative development projects in the County of San Bernardino, and the Cities of Fontana and Jurupa Valley were included in the Opening Year Baseline traffic volumes. The locations of the cumulative projects are shown in Figure 8. The project trip generation for each cumulative project was calculated using trip rates from the Institute of Transportation Engineers, *Trip Generation*, 10<sup>th</sup> Edition, or taken from each project's respective traffic study. Table 9 shows the trip generation for each cumulative project, and the cumulative detailed assignment can be found in Appendix D. The Opening Year (2022) Baseline traffic volumes are illustrated in Figures 9 and 10. Table 10 shows the Opening Year AM and PM peak hour levels of service at study intersections. As shown in Table 10, the following 6 intersections would operate with unsatisfactory LOS in the Opening Year (2022) Baseline condition.

- #6 – Locust Ave/Santa Ana Ave (100% County of San Bernardino)
- #7 - Locust Ave/Jurupa Ave (50% County of San Bernardino, 50% City of Fontana)
- #16 – Cedar Ave/Jurupa Ave (100% County of San Bernardino)
- #19 – Cedar Ave/El Rivino Dr (100% Jurupa Valley)
- #20 – Rubidoux Blvd/Market St (100% City of Jurupa Valley)
- #22 – Market St/ 24<sup>th</sup> St (100% City of Jurupa Valley)

### 3.4 General Plan Buildout Traffic Volumes and Intersection Operations

Year 2040 traffic volumes were forecast using the San Bernardino County Transportation Analysis Model (SBTAM). Year 2040 traffic volumes were post-processed using the methodology outlined in NCHRP Report 765 *Analytical Travel Forecasting Approaches for Project-Level Planning and Design*. The Year 2040 Baseline traffic volumes are illustrated in Figures 11 and 12. Table 11 shows the Year 2040 AM and PM peak hour levels of service at study intersections. As shown in Table 11, the following intersections would operate with unsatisfactory LOS in the General Plan Buildout condition. The post processing sheets can be found in Appendix D

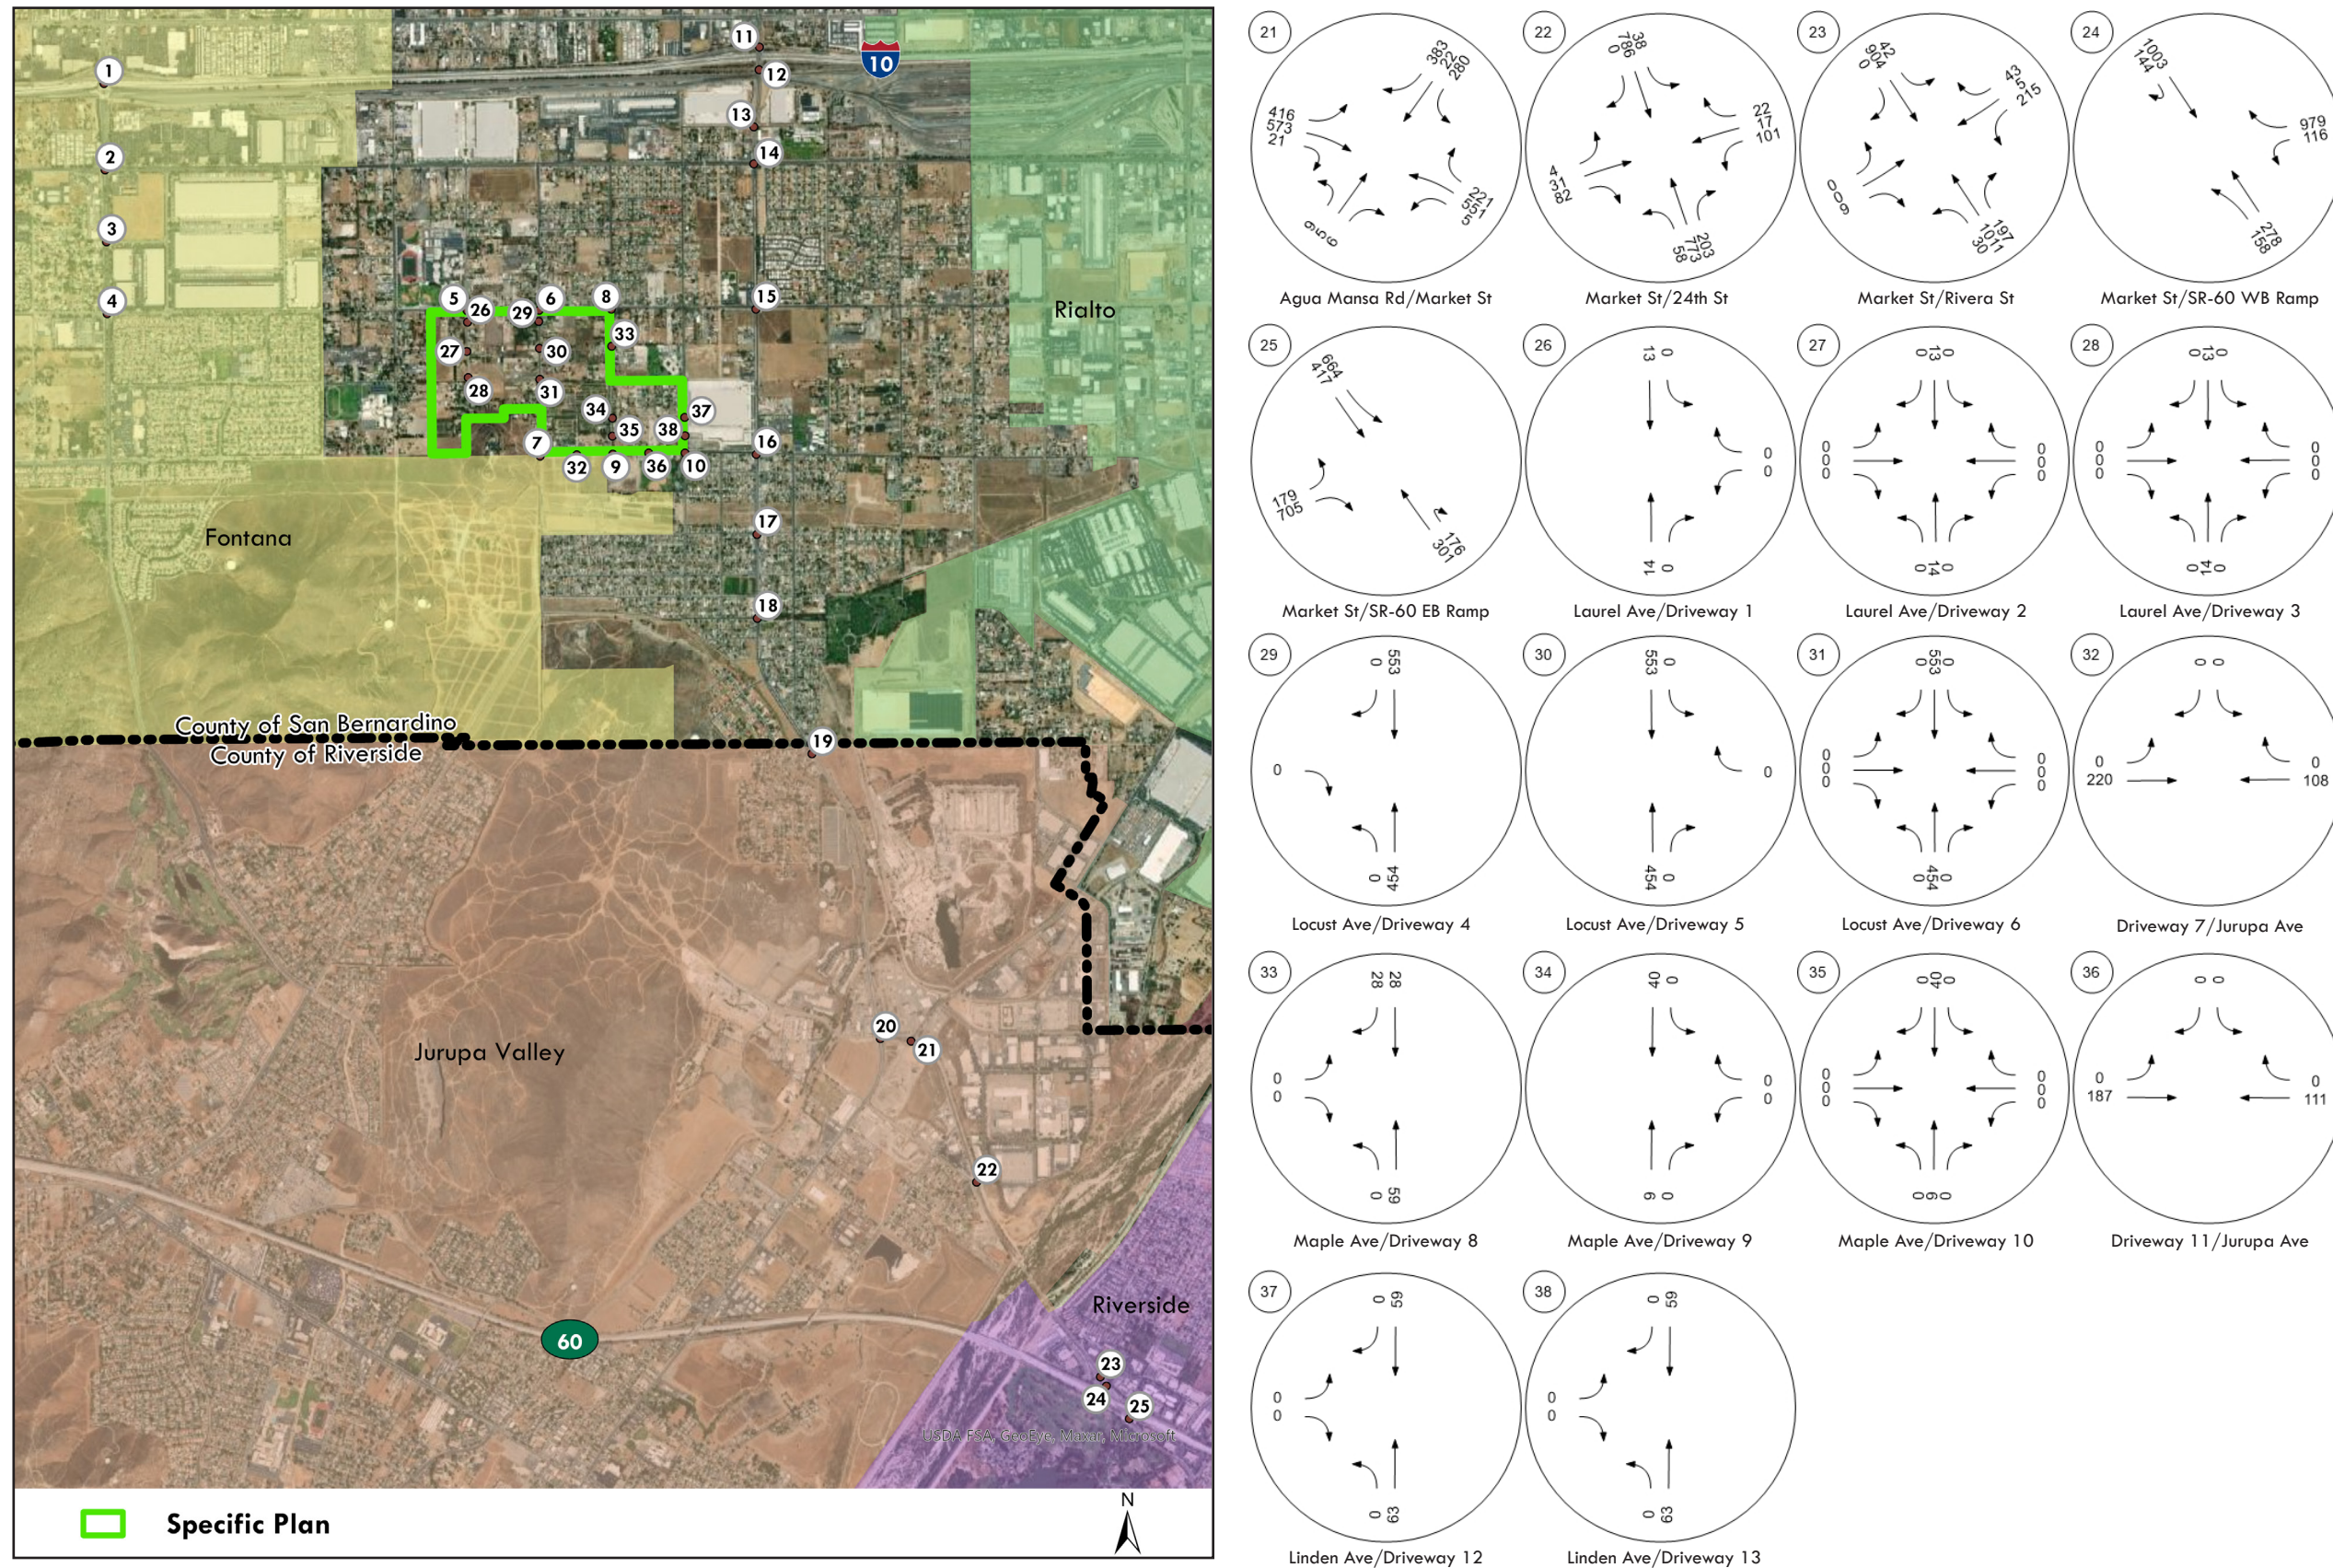

- #1 – Sierra Ave/I-10 WB Ramps (50% City of Fontana, 50% Caltrans)
- #2 – Sierra Ave/Slover Ave (100% City of Fontana)
- #4 – Sierra Ave/Santa Ana Ave (100% City of Fontana)

## 4 PROPOSED PROJECT

### 4.1 Project Description and Project Access

As Described in Section 2.1 – Project Description, the proposed SP is the redevelopment of the approximately 213-acre Specific Plan Area, located south of Santa Ana Avenue, west of Linden Avenue, north of Jurupa Avenue, and east of Alder Avenue in the unincorporated area of Bloomington. The SP site is currently occupied by residential homes, nurseries, and a church.

The SP would develop up to 3,235,836 square feet (sf) of industrial uses over three phases. Phase 1 and 2 comprises the Opening Year Development of Planning Area A Option 1 (OY 1; proposed OY 1), which includes a 383,000sf fulfillment center (Building 1, Site 1) and 1,251,640sf High-Cube Warehouse (Building 2, Site 2) for Phase 1, and a 479,000sf fulfillment center (Building 3, Site 3) and ancillary truck parking area (Site 4) for Phase 2. Phase 3 does not have any planned development at this time, therefore a split of 598,400sf of future fulfillment center use and 523,793sf of industrial park will be analyzed to account for the maximum FAR possible for the SP. Phase 1 and 2 are expected to be operational by year 2022, and Phase 3 is expected by General Plan Buildout year 2040.

An Opening Year Option 2 (OY 2) was also analyzed as an alternative to the proposed OY 1. OY 2 would have the 598,400SF of Future Fulfillment Center built by 2022, with a 710,400sf fulfillment center (Building 1, Site 1) and 1,251,640sf High-Cube Warehouse (Building 2, Site 2) for Phase 1, and a 750,000sf fulfillment center (Building 3, Site 3) and ancillary truck parking area (Site 4) for Phase 2. The total SP acres and square feet would remain the same, with the only change being the Fulfillment Center (598,400 SF) being built by 2022.

For the purpose of this analysis, the impacts will be analyzed using the full SP impact, and a fair share for mitigation will be split from the total SP and Phase 1 and 2 (OY 1). A fair share for mitigation will also be calculated for the OY 2 scenario.

Access to the SP site would be provided from driveways along Jurupa Avenue and Linden Avenue, and internal driveways along Laurel Avenue, Locust Avenue, and Maple Avenue will be accessed by Santa Ana Avenue or Jurupa Avenue (except for Laurel Avenue as it does not connect to Jurupa Ave). A signalized intersection will be constructed on Locust Avenue at Driveway #6 to provide access to development sites on the east and west sides of Locust Avenue. Truck access will be limited to Jurupa Avenue as only passenger vehicles will have access to Santa Ana Avenue. The SP circulation is shown in Figure 13.

### 4.2 Project Trip Generation

Vehicle trips were generated for the project using trip rates from the Institute of Transportation Engineers (ITE) *Trip Generation* (10th Edition, 2017) and the TUMF High-Cube Warehouse Trip Generation Study, (WSP, 2019). The trip generation is broken out by vehicle type and passenger car equivalent (PCE) factors are applied to the truck trips to determine the PCE trip generation. Passenger car equivalent factors account for the additional roadway capacity utilized by trucks due to their larger size, slower acceleration and reduced maneuverability when compared to passenger cars. The project trip generation is shown in Table 12. The proposed Total SP would generate approximately 8,555 new daily PCE trips which includes 621 new AM peak hour and

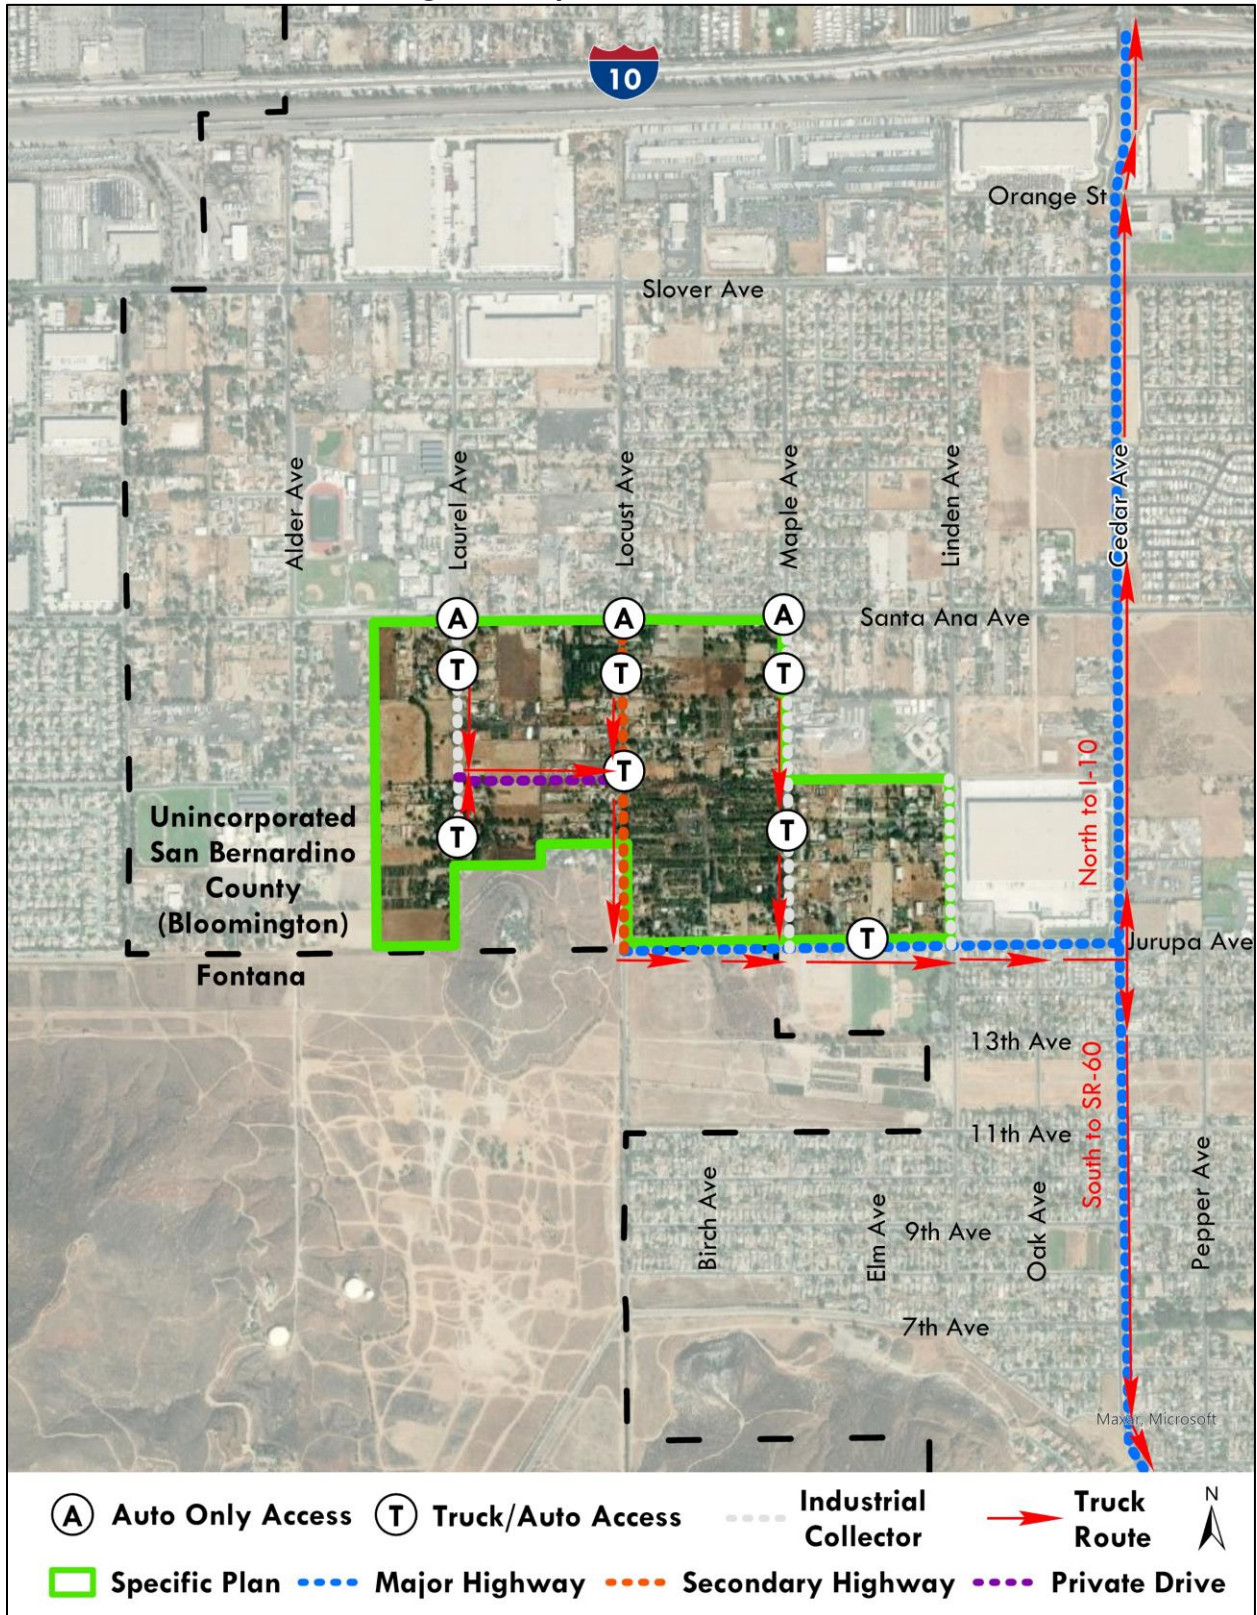

719 new PM peak hour PCE trips. The OY 1 would generate approximately 4,668 new daily PCE trips which includes 263 new AM peak hour and 335 new PM peak hour PCE trips. The OY 2 would generate approximately 6,315 new daily PCE trips which includes 355 new AM peak hour and 453 new PM peak hour PCE trips.

### 4.3 Project Trips

Two different distributions were developed for automobile trips and for truck trips. Automobile trips would travel to and from the site using both Santa Ana Avenue and Jurupa Avenue, with a majority using the I-10 and SR-60 Freeways. All truck trips would travel using Jurupa Avenue to Cedar Avenue to travel to the I-10 and SR-60 Freeways. The project trip distribution and total project trip assignment for the SP and OY 1 are shown in Figures 14, 15, 16, 17, and 18. The detailed trip distribution and assignment for passenger car and truck trips for the SP, OY 1, and OY 2, as well as the total assignment for the OY 2, are provided in Appendix E.

## 5 PROJECT IMPACTS

### 5.1 Existing Plus Specific Plan Traffic Volumes and Intersection Operations

The Existing plus Specific Plan volumes were developed by adding the specific plan trip assignment to the existing traffic volumes. The Existing plus Specific Plan traffic volumes are shown in Figures 19 and 20. Levels of Service at the study area intersections were determined using the HCM methodology, described previously in section 2.3. Table 13 shows the Existing plus Specific Plan AM and PM peak hour levels of service at study intersections. All LOS calculations are provided in Appendix D. As shown in Table 13, the following three intersections would have a significant impact with addition of the project.

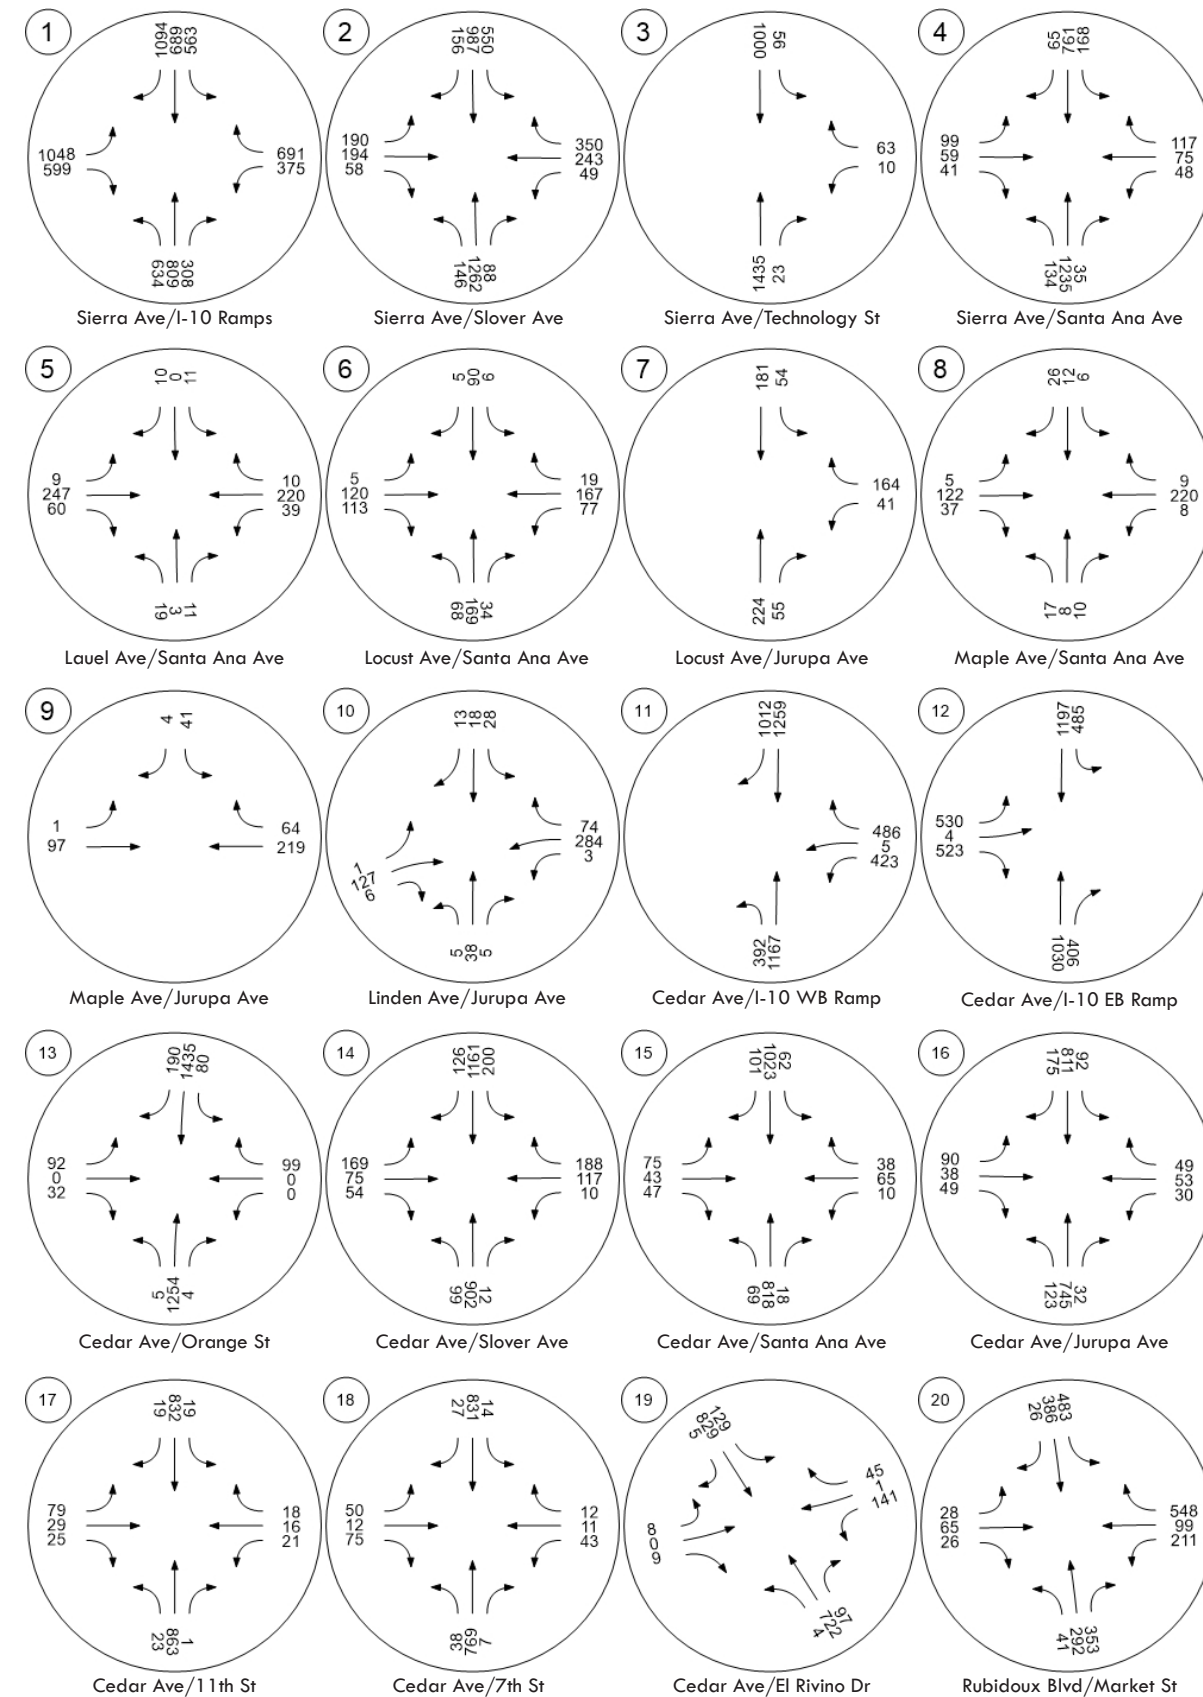

- #6 – Locust Ave/Santa Ana Ave (PM Peak Hour) (100% County of San Bernardino)
- #7 – Locust Ave/Jurupa Ave (PM Peak Hour) (50% County of San Bernardino, 50% City of Fontana)
- #16 – Cedar Ave/Jurupa Ave (PM Peak Hour) (100% County of San Bernardino)

Mitigation for the impacted intersections is discussed in Section 6 Project Mitigation and Fair Share.

<sup>1</sup> Delay in Seconds

<sup>2</sup> Level of Service

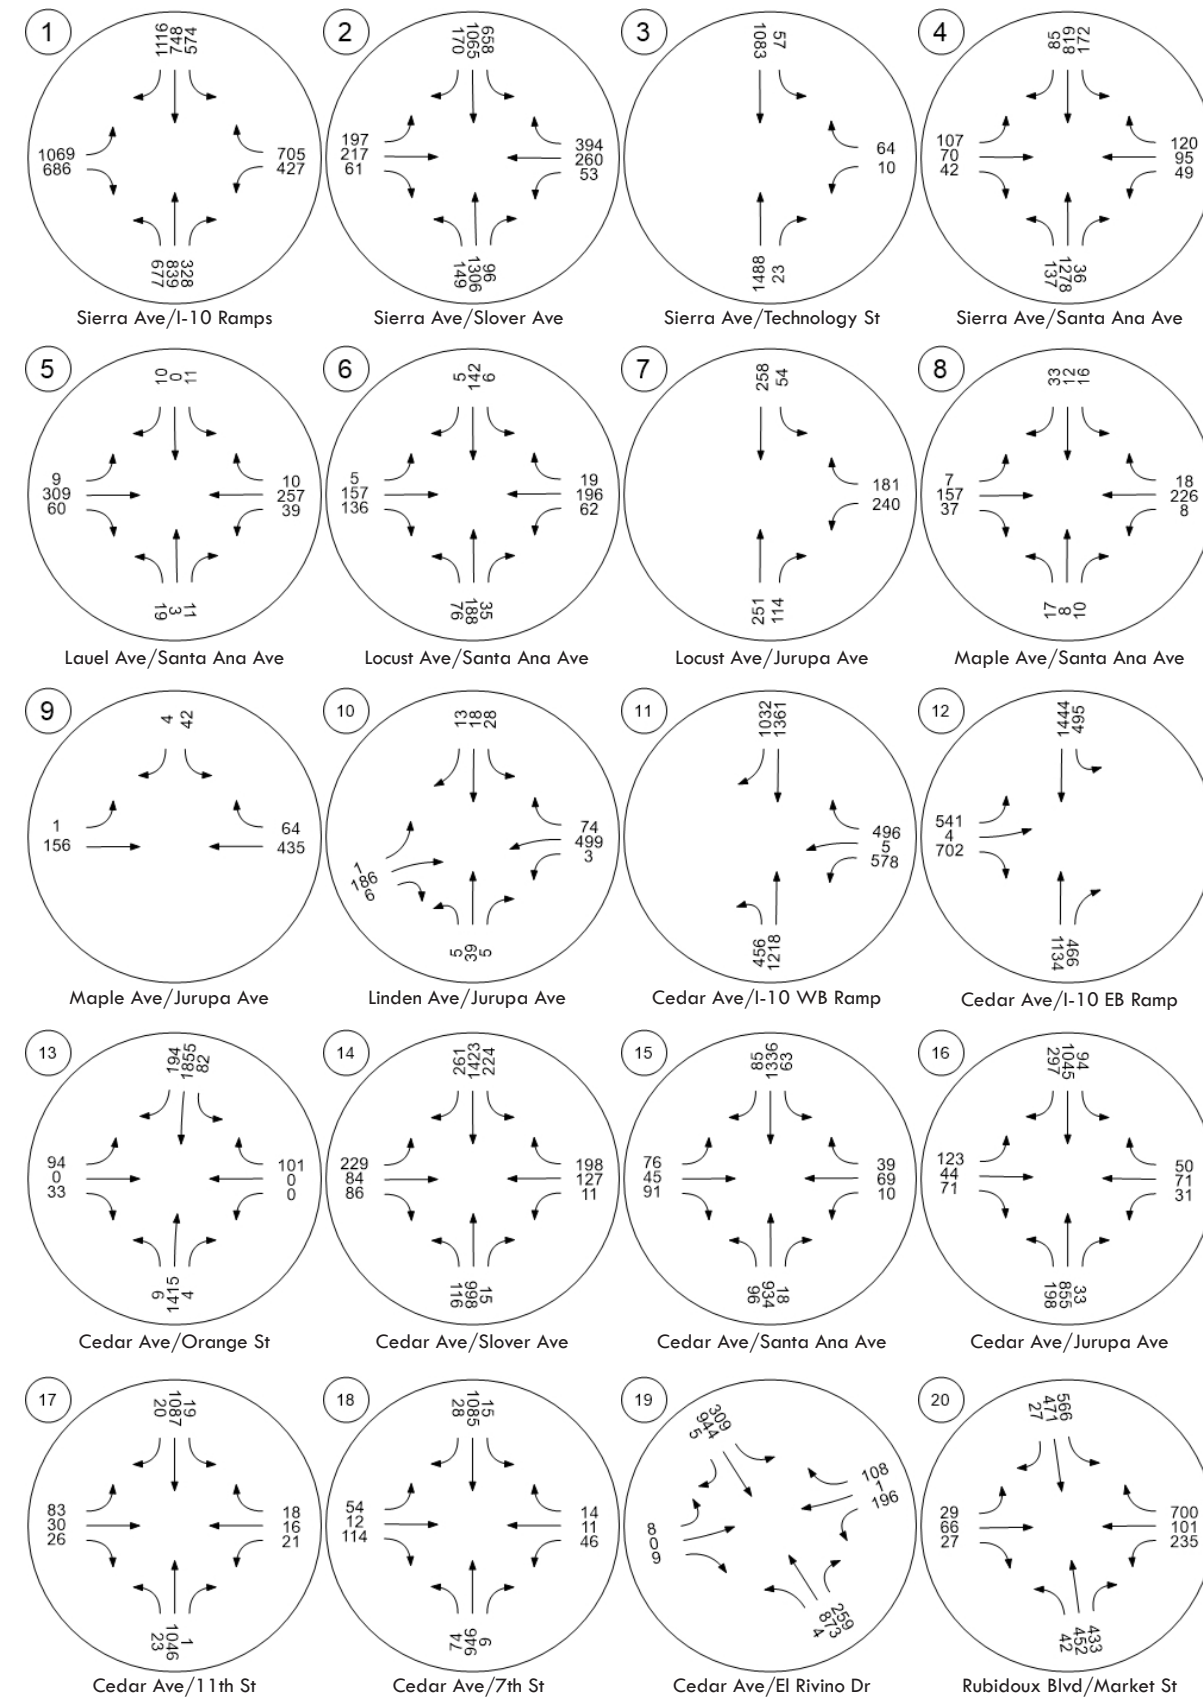

## 5.2 Opening Year plus Specific Plan Traffic Volumes and Intersection Operations

The Opening Year plus Specific Plan traffic volumes were developed by adding the project trip assignment (total Specific Plan) to the Opening Year traffic volumes. The Opening Year plus Specific Plan traffic volumes are shown in Figures 21 and 22. Levels of Service at the study area intersections were determined using the HCM methodology, described previously in section 2.3. Table 14 shows the Opening Year plus Specific Plan AM and PM peak hour levels of service at study intersections. All LOS calculations are provided in Appendix D. As shown in Table 14, the following six intersections would have a significant impact with addition of the project.

- #6 – Locust Ave/Santa Ana Ave (PM Peak Hour) (100% County of San Bernardino)
- #7 - Locust Ave/Jurupa Ave (AM and PM Peak Hour) (50% County of San Bernardino, 50% City of Fontana)
- #10 – Linden Ave/Jurupa Ave (PM Peak Hour) (100% County of San Bernardino)
- #11 – Cedar Ave/I-10 WB Ramps (AM Peak Hour) (50% County of San Bernardino, 50% Caltrans)
- #14 – Cedar Ave/Slover Ave (PM Peak Hour) (100% County of San Bernardino)
- #16 – Cedar Ave/Jurupa Ave (AM and PM Peak Hour) (100% County of San Bernardino)
- #20 – Rubidoux Blvd/Market St (AM and PM Peak Hour) (100% City of Jurupa Valley)
- #22 – Market St/24<sup>th</sup> St (PM Peak Hour) (100% City of Jurupa Valley)

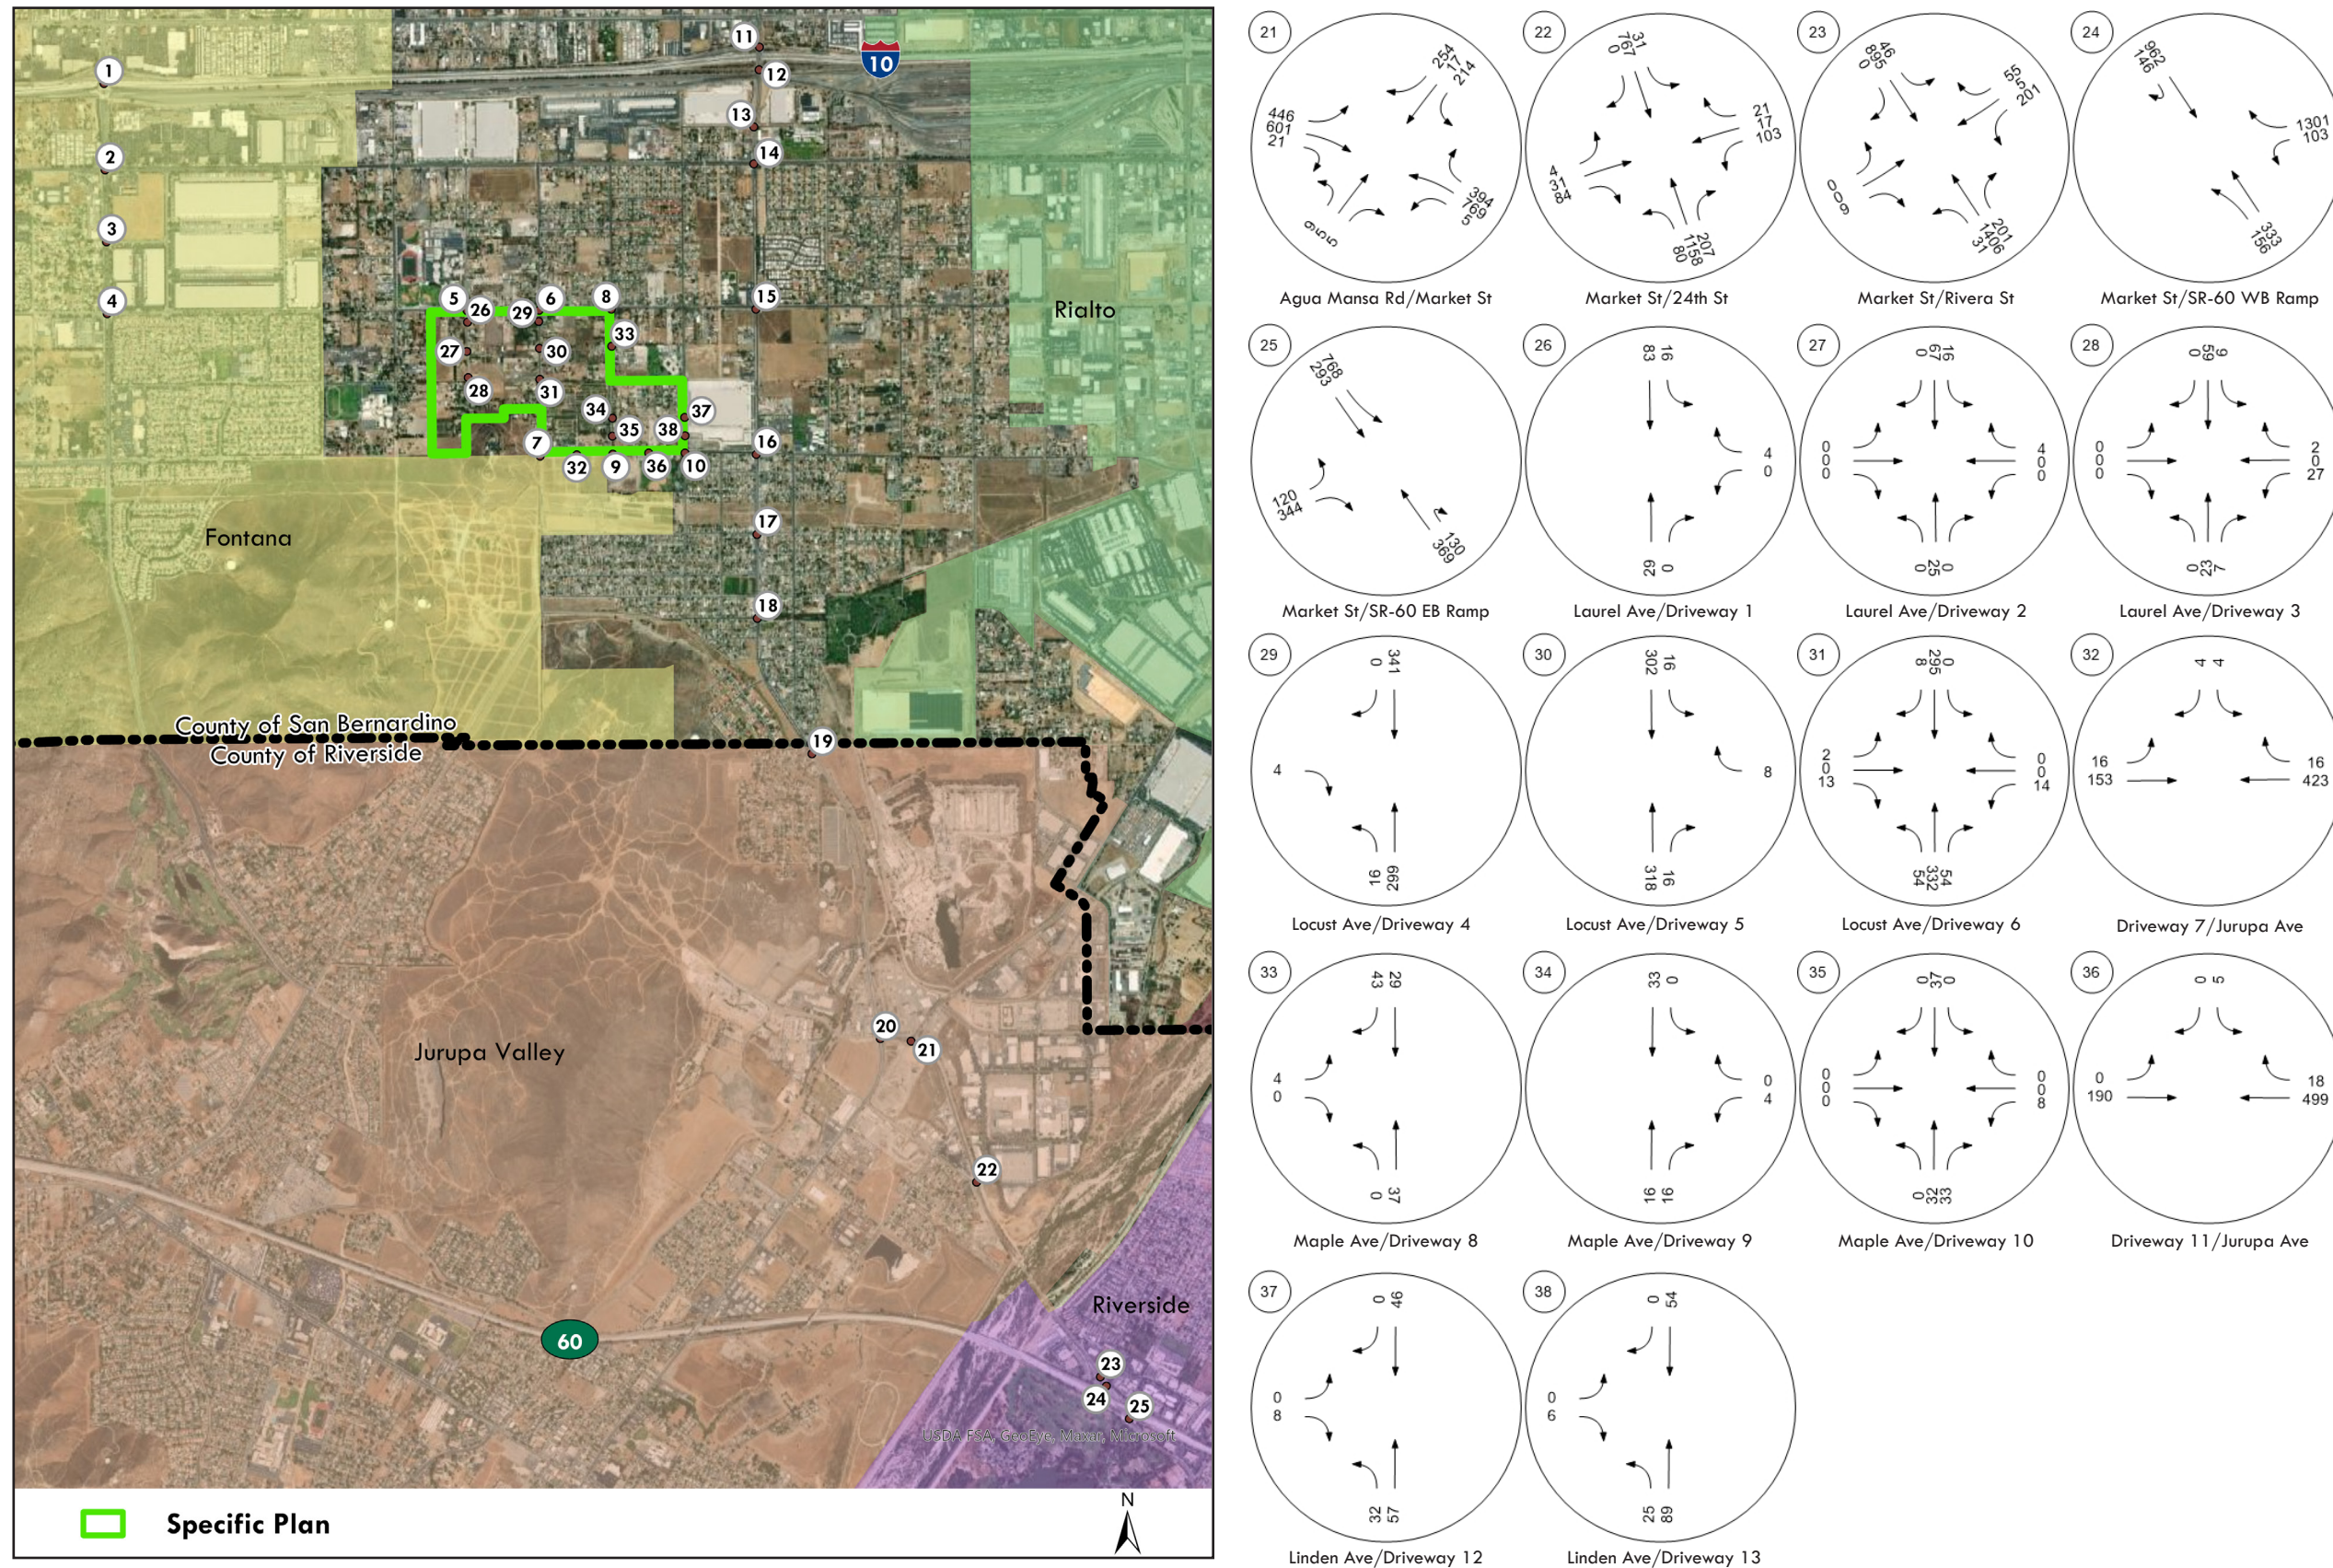

While intersection #19 Cedar Ave/El Rivino operates at unacceptable LOS F in the baseline and plus project conditions, the increase in delay is less than 3 seconds and is within the Jurisdiction of Jurupa Valley, so the impact is less than significant. Mitigation for the impacted intersections is discussed in Section 6 Project Mitigation and Fair Share.

<sup>1</sup> Delay in Seconds

<sup>2</sup> Level of Service

### 5.3 General Plan Buildout Plus Specific Plan Traffic Volumes and Intersection Operations

General Plan Buildout (Year 2040) plus Specific Plan traffic volumes were determined by adding the Specific Plan trips to Year 2040 traffic volumes. The General Plan Buildout plus Specific Plan traffic volumes are shown in Figures 23 and 24. Levels of Service at the study area intersections were determined using the HCM methodology, described previously in section 2.3. Table 15 shows the General Plan Buildout plus Specific Plan AM and PM peak hour levels of service at study intersections. All LOS calculations are provided in Appendix D. As shown in Table 15, the following 20 intersections would have a significant impact with addition of the project:

- #1 – Sierra Ave/I-10 WB Ramps (PM Peak Hour) (50% City of Fontana, 50% Caltrans)
- #2 – Sierra Ave/Slover Ave (PM Peak Hour) (100% City of Fontana)
- #4 – Sierra Ave/Santa Ana Ave (PM Peak Hour) (100% City of Fontana)
- #5 – Laurel Ave/Santa Ana Ave (PM Peak Hour) (100% County of San Bernardino)
- #6 – Locust Ave/Santa Ana Ave (AM and PM Peak Hour) (100% County of San Bernardino)
- #7 - Locust Ave/Jurupa Ave (PM Peak Hour) (50% County of San Bernardino, 50% City of Fontana)
- #8 – Maple Ave/Santa Ana Ave (PM Peak Hour) (100% County of San Bernardino)
- #9 – Maple Ave/Jurupa Ave (PM Peak Hour) (100% County of San Bernardino)
- #10 – Linden Ave/Jurupa Ave (PM Peak Hour) (100% County of San Bernardino)
- #11 – Cedar Ave/I-10 WB Ramps (PM Peak Hour) (50% County of San Bernardino, 50% Caltrans)
- #12 – Cedar Ave/I-10 EB Ramps (PM Peak Hour) (50% County of San Bernardino, 50% Caltrans)
- #13 – Cedar Ave/Orange St (PM Peak Hour) (100% County of San Bernardino)
- #14 – Cedar Ave/Slover Ave (PM Peak Hour) (100% County of San Bernardino)
- #15 – Cedar Ave/Santa Ana Ave (PM Peak Hour) (100% County of San Bernardino)
- #16 – Cedar Ave/Jurupa Ave (AM and PM Peak Hour) (100% County of San Bernardino)
- #17 – Cedar Ave/11<sup>th</sup> St (PM Peak Hour) (100% County of San Bernardino)
- #18 – Cedar Ave/7<sup>th</sup> St (PM Peak Hour) (100% County of San Bernardino)
- #20 – Rubidoux Blvd/Market St (PM Peak Hour) (100% City of Jurupa Valley)
- #22 – Market St/24<sup>th</sup> St (PM Peak Hour) (100% City of Jurupa Valley)
- #25 – Market St/SR-60 EB Ramp (PM Peak Hour) (50% City of Riverside, 50% Caltrans)

In addition, Table 15 shows the following driveways operate at LOS F in the 2040 plus Project Scenario:

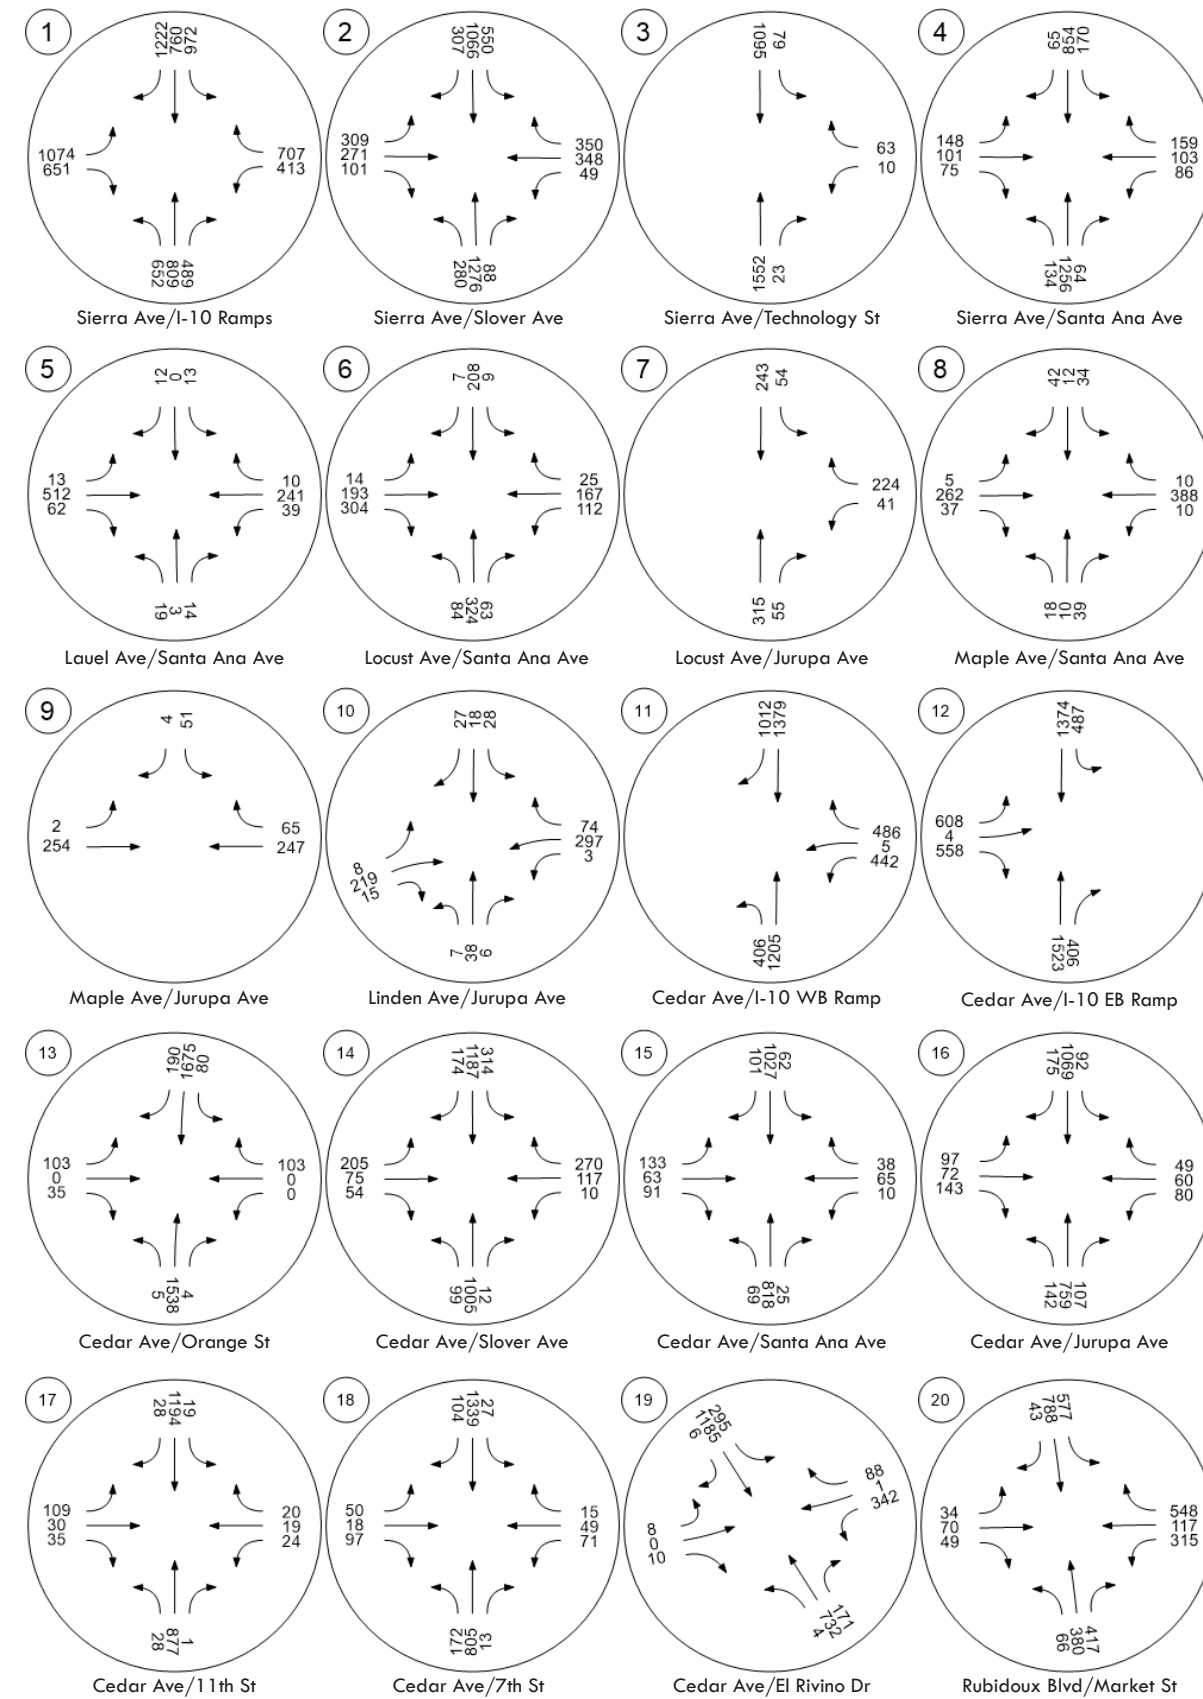

- #29 – Locust Ave/Driveway 4 (PM Peak Hour) (100% County of San Bernardino)
- #31 – Locust Ave/Driveway 6 (PM Peak Hour) (100% County of San Bernardino)
- #32 – Driveway 7/Jurupa Ave (PM Peak Hour) (50% County of San Bernardino, 50% City of Fontana)

While intersection #19 Cedar Ave/El Rivino and #21 Agua Mansa Road/Market Street operate at unacceptable LOS F in the baseline and plus project conditions, the increase in delay is less than

3 seconds and they are within the Jurisdiction of Jurupa Valley, so the impact is less than significant. Mitigation for the impacted intersections is discussed in Section 6 Project Mitigation and Fair Share.

## 6 PROJECT MITIGATION AND FAIR SHARE

### 6.1 Specific Plan Mitigation

#### Existing Plus Specific Plan

As stated in section 5.1, development of the Specific Plan would result in significant impacts at three intersections. Table 16 below shows the following improvements at the impacted intersections:

**Table 16. Existing Plus Specific Plan Mitigation Summary**

Intersection		Location %	Proposed Improvemnts
6.	Locust Ave/Santa Ana Ave	100SB	Add a NB left-turn and an EB thru lane.
7.	Locust Ave/Jurupa Ave	50SB/50F	Add a Traffic Signal.
16.	Cedar Ave/Jurupa Ave	100SB	Add an EB left-turn lane

SB: County of San Bernardino

F: City of Fontana

Table 19 shows the LOS at each affected intersection with implementation of the proposed improvements. As seen in Table 19, all impacted intersections are mitigated to a less than significant impact.

#### Opening Year Plus Specific Plan

Development of the Specific Plan would result in significant impacts at 6 intersections in the Opening Year plus Project condition. Table 17 below shows the following improvements at the impacted intersections:

**Table 17. Opening Year Plus Specific Plan Mitigation Summary**

Intersection		Location %	Proposed Improvemnts
6.	Locust Ave/Santa Ana Ave	100 SB	Add a NB left-turn and an EB thru lane
7.	Locust Ave/Jurupa Ave	50 SB/50 F	Add a Traffic Signal
10.	Linden Ave/Jurupa Ave	100 SB	Convert the EB right-turn lane to a shared EB thru-right lane
11.	Cedar Ave/ I-10 WB Ramps	50 SB/50 C	Convert the 3rd SB thru lante to a SB thru-right lane
14.	Cedar Ave/Slover Ave	100 SB	Add a 2nd EB left-turn lane
16.	Cedar Ave/Jurupa Ave	100 SB	Add an EB left-turn lane
20.	Rubidoux Blvd/Market St	100 JV	Add a 2nd SB left-turn lane
22.	Market St/24 <sup>th</sup> St	100 JV	Add a 2nd WB left-turn lane

SB: County of San Bernardino

F: City of Fontana

C: Caltrans

JV: City of Jurupa Valley

Table 20 shows the LOS at each affected intersection with implementation of the proposed improvements. As seen in Table 20, all impacted intersections are mitigated to a less than significant impact.

### 2040 Plus Project

Development of the Specific Plan would result in significant impacts at 20 intersections in the 2040 plus Project condition. Table 18 below shows the following improvements at the impacted intersections:

**Table 18. 2040 Plus Specific Plan Mitigation Summary**

Intersection		Location %	Proposed Improvements
1.	Sierra Ave/I-10 Ramps	50 F/50 C	Add a 3rd EB left-turn lane
2.	Sierra Ave/Slover Ave	100 F	Convert the EB right-turn lane to a shared EB thru-right lane
4.	Sierra Ave/Santa Ana Ave	100 F	Convert the NB right-turn to a shared NB thru-right lane
5.	Laurel Ave/Santa Ana Ave	100 SB	Add a 2nd EB thru lane
6.	Locust Ave/Santa Ana Ave	100 SB	Add a NB left-turn and a EB thru lane
7.	Locust Ave/Jurupa Ave	50 SB/50 F	Add a Traffic Signal and add SB and WB left-turn lanes
8.	Maple Ave/Santa Ana Ave	100 SB	Add a 2nd EB thru lane
9.	Maple Ave/Jurupa Ave	100 SB	Add a WB thru lane and two-stage gap acceptance
10.	Linden Ave/Jurupa Ave	100 SB	Convert the EB right-turn lane to a shared EB thru-right lane
11.	Cedar Ave/ I-10 WB Ramps	50 SB/50 C	Convert the 3rd SB thru lane to a SB thru-right lane and add a NB thru lane
12.	Cedar Ave/ I-10 EB Ramps	50 SB/50 C	Add an EB right turn lane

13.	Cedar Ave/Orange Street	100 SB	Change the EB/WB phasing to split phasing
14.	Cedar Ave/Slover Ave	100 SB	Add a 2nd EB left turn lane
15.	Cedar Ave/Santa Ana Ave	100 SB	Add an EB and a WB left-turn lane
16.	Cedar Ave/Jurupa Ave	100 SB	Add an EB left-turn lane
17.	Cedar Ave/11th St	100 SB	Add an EB left-turn lane
18.	Cedar Ave/7th St	100 SB	Add an EB left-turn lane
20.	Rubidoux Blvd/Market St	100 JV	Add a 2nd SB left-turn lane
22.	Market St/24th Street	100 JB	Add a 2nd WB left-turn lane
25.	Market St/SR-60 EB Ramp	50 R/50 C	Add a SB left-turn lane

SB: County of San Bernardino

F: City of Fontana

C: Caltrans

JV: City of Jurupa Valley

R: City of Riverside

Table 21 shows the LOS at each affected intersection with implementation of the proposed improvements and Table 22 shows the project driveways after the widening Locust Avenue to its ultimate width (4-lanes). As seen in Table 21, all impacted intersections are mitigated to a less than significant impact and in Table 22, the project driveways operate at an acceptable LOS.

## 6.2 Project Level Development and Maximum Reasonable Initial Development Difference in Mitigation

Implementation of the Specific Plan in a short-term timeline is not feasible and therefore the impacts shown in the Existing and Opening Year conditions with the Specific Plan would likely not occur. The OY 1 that is currently proposed and the OY 2 would be implemented starting in the existing condition and would be completed in the Opening Year condition. The following analysis identifies the mitigation measures that would be required to mitigate the traffic generated by the OY 1 and OY 2.

### **Existing Plus Project**

As seen in Table 23 only one intersection would be impacted in the Existing plus OY 1 scenario, compared to 3 intersections with the SP. The same improvements identified to mitigate the SP impacts would mitigate the OY 1 impact. Table 24 shows that the OY 2 scenario would also impact only one intersection, and the mitigation measures from the SP impacts would mitigate the OY 2 impact.

### **Opening Year Plus Project**

As seen in Table 25, all of the impacted intersections in the SP plus Project, except for Linden Ave/Jurupa Ave and Cedar Ave/Slover Ave, are impacted in the OY 1 plus Project. Cedar Ave/Jurupa Ave would be a cumulative impact with the OY 1. The same improvements identified to mitigate the SP impacts would mitigate OY 1 impacts. Table 26 shows the OY 2 plus Project scenario has a direct impact to Linden Ave/Jurupa Ave and Cedar Ave/Slover Ave. Cedar Ave/Jurupa Ave is a cumulative impact like it is in the OY 1 plus Project. The SP mitigation mitigates the OY 2 impacts.

### **2040 Plus Project**

As seen in Table 27, the impacted intersections with the OY 1 are the same as the SP plus Project except for intersection 25 Market Street/SR-60 EB Ramps, which operates with an acceptable LOS D in the 2040 Plus Project PM peak hour and would not be impacted by the OY 1. The same improvements identified to mitigate the SP impacts would mitigate impacts of the OY 1. Table 24 shows the same results for the OY 2, with intersection 25 Market Street/SR-60 EB Ramps operating at LOS D in the 2040 Plus Project PM peak hour. The improvements for the SP impacts would also mitigate the impacts for the OY 2.

**Table 23. Opening Year Development of Planning Area A Option 1 Existing Plus Project Levels of Service**

<b>Total Fair Share</b>									\$	937,720.26

Project impacts would be mitigated by payment of a fair-share of the planned improvements in the amount of \$1,535,473.70 for the SP, \$744,476.78 for the OY 1, and \$937,720.26 for the OY 2.

### 6.4 Signal Warrant

The California Manual of Uniform Traffic Control Devices (CA MUTCD) 2014 Revision 5 provides a total of eight types of signal warrant analyses to determine whether a traffic signal may be warranted at a given location. Warrant 3, Peak Hour was evaluated as count data is unavailable to evaluate the other 7 warrants. Section 4.C.04 of the CA MUTCD notes that “traffic conditions are such that for a minimum of 1 hour of an average day, the minor-street traffic suffers undue delay when entering or crossing the major street.” Intersection #7 Locust Avenue/Jurupa Avenue was analyzed to substantiate the proposed signal for mitigation. The analysis can be found in Appendix F. As seen in Table 32, by the project opening year, the traffic volume at the intersection with either the SP, PD, or MD would meet the signal warrant.

**Table 32. Traffic Signal Warrant Analysis Summary**

## SCOPE FOR TRAFFIC STUDY

<b>Project Name:</b>	Bloomington Business Park
----------------------	---------------------------

This Scope for Traffic Study acknowledges San Bernardino County Department of Public Works, Traffic Division requirements of traffic impact analysis for the project and is subject to change:

<b>Project Address:</b>	APNs: 0256-091-03, 04, 06, 07, 23, 24, 29, 30, 32, 33, 43, 44; 0256-101-02, 03, 4, 5, 6, 7, 10, 11, 12, 14, 15, 16, 17, 18, 19, 20, 30, 32, 33, 34, 35, 36, 38, 45, 48, 49, 55, 56, 57, 58, 59, 60; 0256-111-02, 06, 07, 08, 09, 10, 11, 18, 19, 22, 23, 26, 27, 28, 29, 31, 32, 34, 35, 37, 38, 39, 40, 41, 42, 43, 44, 45, 48, 49, 50, 51, 52, 53, 55, 56, 58, 59, 60, 61; 0256-121-37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48; 0256-241-01, 02, 03, 04, 05, 06, 07, 08, 09, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19.		
<b>Project Description:</b>	The Project proposes creating a specific plan area with the potential of developing 2,678,940 SF, with an initial phase constructing three industrial buildings totaling 2,085,640 SF. Two buildings (totaling 834,000 SF) are Fulfillment Center Warehouses, and the third building (1,251,640 SF) is a High Cube Transload and Short-Term Storage Warehouse.		
<b>City:</b>	Unincorporated County of San Bernardino

## SCOPE FOR TRAFFIC STUDY

<b>Project Name:</b>	Bloomington Business Park
----------------------	---------------------------

---

**Print Name:** Meghan Macias

---

**Print Name:**

---

**Consultant/Developer's  
Representative**

---

**Date:**  
7/16/2020

---

**Traffic Division Representative      Date**

## SCOPE FOR TRAFFIC STUDY

<b>Project Name:</b>	Bloomington Business Park
----------------------	---------------------------

**1. Traffic Distribution:** Please insert or attach Figure(s) illustrating project trip distribution in percentages and volumes at the study intersections analyzed.

See Figures attached.

**2. Trip Credit:** Exact amount of credit subject to approval by Traffic Division pending comments and findings of City of Rialto.

<b>Transportation Demand Management (TDM)</b>	Yes/ <b>no</b>	
<b>Existing Active Land Use</b>	Yes/ <b>no</b>	
<b>Previous Land Use</b>	Yes/ <b>no</b>	
<b>Internal Trip Reduction</b>	Yes/ <b>no</b>	
<b>Pass-by Trip Reduction</b>	Yes/ <b>no</b>	

**3. Related Projects:** Consultant should check with Planning in the San Bernardino County Department of Land Use Services and planning departments of adjoining Cities. Documentation of the consultation from these agencies shall be included in the traffic study. Related projects list shall be submitted to Traffic Division for review and approval before being incorporated in the study.

EPD will contact the Planning Department of the Cities of Fontana, Jurupa, and Riverside as well as the County of San Bernardino for cumulative projects. A preliminary list of projects that were publicly available were gathered and are listed below.

- County of San Bernardino
  - Agua Mansa High Cube Warehouse
  - Alder Ave Industrial
  - Bloomington Affordable Housing Project
  - Bloomington Business Center
  - Bloomington High Cube Warehouse
  - Bloomington Industrial Facility
  - Cedar Ave Technology Center
  - Chevron Slover-Cedar
  - Slover High Cube Warehouse
  - Slover-Cactus Warehouse
  - West Valley Logistics Center
- Fontana
  - Fontana Foothills Commerce Center
  - Goodman Industrial Park
- Jurupa Valley
  - 12340 Agua Mansa Road
  - Highland Park
  - Market Street Commercial
- Rialto
  - Valley Spruce

## SCOPE FOR TRAFFIC STUDY

<b>Project Name:</b>	Bloomington Business Park
----------------------	---------------------------

**4. Freeway Analysis:** The potential traffic impact on the following Freeway(s) must be considered.

The project would evaluate the off-ramp queues at Sierra Avenue and Cedar Avenue and freeway Mainline segments on I-215 from west of Sierra Avenue to east of Cedar Avenue, and on SR-60 east of Market Street.

---

The applicant shall consult with the State of California Department of Transportation (Caltrans) to determine the California Environmental Quality Act levels of significance with regard to traffic impacts on Caltrans' freeway facilities. This consultation shall also include a determination of Caltrans requirements for the study of traffic impacts to its facilities and the mitigation of any such impacts. This analysis must follow the most current Caltrans' Guide for the Preparation of Traffic Impact Studies (December 2002) and can be obtained from [http://www.dot.ca.gov/hq/tpp/offices/ocp/igr\\_ceqa\\_files/tisguide.pdf](http://www.dot.ca.gov/hq/tpp/offices/ocp/igr_ceqa_files/tisguide.pdf). If Caltrans finds that the project has a significant impact on the freeway, Caltrans shall be requested to include the basis for this finding in their response. If fees are proposed to mitigate the freeway impact, Caltrans shall be requested to identify the specific project to which the fees will apply. These written comments from Caltrans shall be included with the traffic study and submitted to Public Works for review and approval. If a documented good faith effort is made to consult with Caltrans and written comments cannot be obtained from within a reasonable amount of time, an analysis of the freeway impact shall be made using HCM procedures. Appendix A of the SANBAG CMP outlines allowable modifications to these procedures. The SANBAG CMP can be viewed online at: <https://www.gosbcta.com/plans-projects/plans-traffic-mitigation.html>

## SCOPE FOR TRAFFIC STUDY

<b>Project Name:</b>	Bloomington Business Park
----------------------	---------------------------

### 5. Trip Generation (See Attached Trip Generation Table)

<b>Trip Generation Rate(s) Source:</b> ITE Trip Generation, TUMF High-Cube Warehouse Trip Generation Study			<b>I – Institute of Transportation Engineers; S – San Diego Traffic Generators; C – County; O – Other:</b>					<b>Edition:</b>		10th	
Land Use Code	Land Use	Rate Based on	Qty	*AVTE vs	ADT	Weekday a.m. peak		Weekday p.m. peak		Weekend peak hour	
						In	Out	In	Out	In	Out
154	High Cube Transload and Short-Term Storage Warehouse	I	1,251.64 TSF	LU 154 – High Cube Transload and Short-Term Storage Warehouse	1,752	77	23	35	90		
	Fulfillment Center	O	839 TSF		1,786	83	19	54	84

\* - Average Vehicle Trip Ends.  
For ITE Land Uses provide number and name of Land Use. e.g. LU 814 - Variety Store

## SCOPE FOR TRAFFIC STUDY

<b>Project Name:</b>	Bloomington Business Park
----------------------	---------------------------

**6. Study Intersections:** At minimum, the study shall include the following intersections. The list is subject to change based on the determination of related projects, trip generation and distribution, and/or other sensitive intersections are identified based on study findings and/or concurrent development. Consultant should check with adjoining Cities regarding their requirements in addition to the following County/City intersections. Documentation of the consultation from these agencies shall be included in the traffic study.

Please see Figures attached showing proposed trip distribution and assignment at study intersections.

Cities to be consulted: Fontana, Jurupa Valley, Riverside

**7. Scenarios to be Studied:** The study shall analyze the Project in the following scenarios listed below.

1. Existing Baseline
2. Existing Baseline + Project
3. Opening Year Baseline (1% Growth per year from Existing to Opening Year)
4. Opening Year Baseline + Project
5. Horizon Year Baseline
6. Horizon Year Baseline + Project

## SCOPE FOR TRAFFIC STUDY

<b>Project Name:</b>	Bloomington Business Park
----------------------	---------------------------

### 8. Other:

Because traffic counts can not be conducted due to the statewide stay-at-home order, traffic counts from other traffic studies in the area are proposed to be used. As shown below, more than one set of traffic counts are available at 8 of the 12 proposed off-site intersections. The available traffic counts will be evaluated to determine consistency of the counts and to identify a growth rate in the area. Existing count data will be escalated accordingly to account for 2020 conditions. Existing traffic volumes at Maple Avenue/Jurupa Avenue and Linden Avenue/Jurupa Avenue will be estimated based on the count data at adjacent intersections. This scope proposes a growth rate of 1 percent per year to escalate counts to existing and project opening year conditions, however if the count data analysis warrants a higher rate, then that would be disclosed and discussed with County staff.

<sup>1</sup> Arco volumes from I-10 Cedar Avenue Interchange Supplemental Traffic Operations Report (May 11, 2016). Counts Collected in 2015

## SCOPE FOR TRAFFIC STUDY

<b>Project Name:</b>	Bloomington Business Park
----------------------	---------------------------

Traffic counts may be conducted immediately per the following:
<ul style="list-style-type: none"><li>• Must be taken on Tuesdays, Wednesdays or Thursdays.</li></ul>
<ul style="list-style-type: none"><li>• Counts in “tourist” and/or along travel corridors shall have counts on Fridays and Sundays.</li></ul>
<ul style="list-style-type: none"><li>• Must exclude holidays, and the first weekdays before and after the holiday.</li></ul>
<ul style="list-style-type: none"><li>• Must be taken on days when local schools or colleges are in session.</li></ul>
<ul style="list-style-type: none"><li>• Must be taken on days of good weather, and avoid atypical conditions (e.g., road construction, detours, or major traffic incidents).</li></ul>
<ul style="list-style-type: none"><li>• Traffic counts used for other traffic studies in the area shall <b>NOT</b> be reused again, unless 25% of the counts conducted for that particular traffic study are validated with new counts. The difference in volumes between the old and new counts at each corresponding movement should not be more than 10%.</li></ul>
<ul style="list-style-type: none"><li>• New traffic counts shall be checked to ensure the difference in volumes at corresponding approaches, if applicable, between two adjacent intersections is no more than 10% unless the difference can be justified.</li></ul>
<ul style="list-style-type: none"><li>• For all proposed mitigation measures, a conceptual plan for the improvements shall be submitted to our Traffic Studies section for review and approval prior to the approval of the Traffic Impact Analysis. All proposed improvements shall be within the right-of-way.</li></ul>
<ul style="list-style-type: none"><li>• For all cumulative mitigation measures, a cost estimate for the improvement shall be submitted.</li></ul>

This analysis must follow the most current Traffic Impact Study Guidelines for the County as stated in the County’s Road Planning and Design Standards.

### 9. Fees

The County charges on an actual cost basis for review of traffic studies. An initial deposit of \$2000 is required at the time that the Traffic Impact study is a land use application is filed with the Department of Land Use Services. If the review costs exceed the initial deposit, the applicant will be expected to provide additional funds and the review will be suspended until the additional funds are deposited.

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

**Intersection Level Of Service Report  
Intersection 1: Sierra Ave/I-10 Ramps**

Control Type:	Signalized	Delay (sec / veh):	35.1
Analysis Method:	HCM 6th Edition	Level Of Service:	D
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.702

**Intersection Setup**

Name	Northbound			Southbound			Eastbound			Westbound		
Approach	Northbound			Southbound			Eastbound			Westbound

**Intersection Level Of Service Report**  
**Intersection 14: Cedar Ave/Slover Ave**

Control Type: Signalized  
 Analysis Method: HCM 6th Edition  
 Analysis Period: 15 minutes

Delay (sec / veh): 38.1  
 Level Of Service: D  
 Volume to Capacity (v/c): 0.719

38	Linden Ave/Driveway 13	Two-way stop	HCM 6th Edition	EB Right	0.004	8.5	A

V/C, Delay, LOS: For two-way stop, these values are taken from the movement with the worst (highest) delay value. For all other control types, they are taken for the whole intersection.

**Intersection Level Of Service Report  
Intersection 1: Sierra Ave/I-10 Ramps**

Control Type:	Signalized	Delay (sec / veh):	36.0
Analysis Method:	HCM 6th Edition	Level Of Service:	D
Analysis Period:	15 minutes	Volume to Capacity (v/c):	0.645

Presence of On-Street Parking	No		No	No		No				No		No
On-Street Parking Maneuver Rate [/h]	0	0	0	0	0	0	0	0	0	0	0	0
Local Bus Stopping Rate [/h]	0	0	0	0	0	0	0	0	0	0	0	0
v_do, Outbound Pedestrian Volume crossing		0			0					0		
v_di, Inbound Pedestrian Volume crossing in		0			0					0		
v_co, Outbound Pedestrian Volume crossing		0			0					0		
v_ci, Inbound Pedestrian Volume crossing mi		0			0					0		
v_ab, Corner Pedestrian Volume [ped/h]		0			0					0		
Bicycle Volume [bicycles/h]		0			0					0		

**Intersection Settings**

Located in CBD	No
Signal Coordination Group	-
Cycle Length [s]	60
Coordination Type	Time of Day Pattern Coordinated
Actuation Type	Fully actuated
Offset [s]	0.0
Offset Reference	Lead Green - Beginning of First Green
Permissive Mode	SingleBand
Lost time [s]	0.00

**Phasing & Timing**
