Project Location: _____ **Sonoma County**
County

City

Project Description (Proposed actions, location, and/or consequences).

The Fort Ross State Historic Park Kashia Loop Trail (Project) is a proposed Class I pedestrian interpretive trail route totaling approximately 1.66 miles. The project encompasses the integration of new trail construction (approximately 1.26 miles), and existing road and trail routes (approximately 0.4 mile). Together, the combined routes will link many existing park features with areas of interest previously unidentified to the general public.

Overall design will include interpretation at selected points to bring together stories from the indigenous Kashia Band of Pomo Indians; Alaska Natives; the Call Ranch Period; and others in the international community once associated with the Russian American Company's Ross Settlement. The project will create an interpretive multimedia experience encouraging park visitors to explore the deep and complex layered cultural landscape of the park.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

Aesthetic, Air Quality, Archeological/Historical, Biological, Coastal, Noise, Recreation, vegetation, water quality, wetland/riparian. The project includes Project Specific Requirements that will reduce all impacts to a less than significant level. No mitigation necessary.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

None known at this time.

Provide a list of the responsible or trustee agencies for the project.
