

# Summary Form for Electronic Document Submittal

**Form F**

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Title: JRWSS Crown Valley Water Pipeline Relocation

Lead Agency: South Coast Water District

Contact Name: Roman Obzejta

Email: Robzejta@scwd.org Phone Number: 949-499-4555

Project Location: Laguna Niguel, Orange County  
*City* *County*

Project Description (Proposed actions, location, and/or consequences).

The Joint Regional Water Supply System (JRWSS) transmission main is a water pipeline that was constructed in 1961. Approximately 2,000 linear feet of the JRWSS in the City of Laguna Niguel ("City") is within a 25-foot easement in a residential area. The section of the JRWSS 36-inch diameter concrete cylinder pipe (CCP) being abandoned needs upgrading and is difficult to access for maintenance or repair. The intent of this project is to construct a replacement segment in Crown Valley Parkway and safely abandon the existing pipeline segment in place.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

Construction of the project has the potential for impacts to traffic on local roadways, interference with emergency or evacuation routes for some residences, temporary noise impacts to residences, and surface runoff water quality. An Initial Study has been prepared that describes the potential environmental effects of the proposed project and it has been determined that the project would not result in any significant adverse environmental effects if mitigation measures are implemented.

Mitigation Measure TRAFFIC-1: The construction contractor will prepare a traffic plan and will be responsible for installation, inspection, and continual maintenance of traffic controls. Specific roadways were further addressed in the mitigation measure.

Mitigation Measure WATER-1. The construction contractor will be responsible for installation, inspection, continual maintenance, and removal of sedimentation control devices in accordance with temporary erosion and sedimentation control plan that will be prepared by the construction contractor. Specific additional details were further addressed in the mitigation measure.

Mitigation Measure: AQ-1. The District must include in the construction contract standard specifications requiring the General Contractor to limit vehicle idling as much as possible. Specific additional details were further addressed in the mitigation measure.

Mitigation Measure: AQ-2. The District must include in the construction contract standard specifications that, in compliance with SCAQMD Rule 403, excessive fugitive dust emissions must be controlled by regular watering or other dust preventive measures, as specified in the South Coast Air Quality Management District's Rules and Regulations. Specific additional details were further addressed in the mitigation measure.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

No known controversys.

Provide a list of the responsible or trustee agencies for the project.

Regional Water Quality Control Board- San Diego
