943 BARHAM DRIVE  
SAN MARCOS, CALIFORNIA

Dear Ms. Mariana McGrain

In accordance with your request and our Proposal No. LE-20069 dated February 10, 2020, we have performed a Phase I Environmental Site Assessment (ESA) of an approximate 10-acre property at 943 Barham Drive (the Site) in San Marcos, California.

The Phase I ESA was performed to provide information regarding the potential for existing hazardous substances and/or petroleum product impacts at the Site as part of Hall Land Company, Inc.'s due diligence prior to purchasing the Site. Based on the findings of our Phase I ESA, we also performed a Phase II ESA to assess the potential presence of contaminants of concern at the Site. The accompanying report presents the details of our Phase I and Phase II ESA.

We appreciate the opportunity to have performed this Phase I and II ESA for Hall Land Company, Inc. Please contact us if you have any questions concerning this report or if we may be of further service.

Very truly yours,

# PHASE I AND II ENVIRONMENTAL SITE ASSESSMENT REPORT

## 1. INTRODUCTION

We have performed a Phase I and Phase II Environmental Site Assessment (ESA) of the property at 943 Barham Drive (the Site) in San Marcos, California. Hall Land Company, Inc. (the Client) requested the Phase I ESA to provide information regarding the potential for existing hazardous substances and/or petroleum product impacts at the Site as part of their due diligence prior to purchasing the Site. We completed the Phase I ESA and subsequently performed a Phase II ESA to assess environmental concerns that we identified at the Site during the Phase I ESA. This report describes the methodology and procedures and presents the findings of the Phase I and Phase II ESA.

### 1.1 Purpose and Objectives

The purpose of the Phase I ESA was to identify evidence or indications of ‘recognized environmental conditions’ (RECs) as defined by the American Society for Testing and Materials (ASTM) *Designation E 1527-13 Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process*. Section 1.1.1 of *ASTM Designation E 1527-13* defines an REC as “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment. De minimis conditions are not recognized environmental conditions.” De minimis conditions are those that generally do not present a threat to human health or the environment and that generally would not be the subject of enforcement action if brought to the attention of appropriate governmental agencies.

*ASTM Designation E 1527-13* also defines ‘Historical’ and ‘Controlled’ RECs. They define an ‘Historical REC’ (HREC) as “A past release of any hazardous substances or petroleum products that has occurred in connection with the property and has been addressed to the satisfaction of the applicable regulatory authority or meeting unrestricted use criteria established by a regulatory authority, without subjecting the property to any required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).” ASTM defines a ‘Controlled REC’ (CREC) as “a recognized environmental condition resulting from a past release of hazardous substances or petroleum products that has been addressed to the satisfaction of the applicable regulatory authority (for example, as evidenced by the issuance of a no further action letter or equivalent, or meeting risk-based criteria established by regulatory authority), with hazardous substances or petroleum products allowed to remain in place subject to the implementation of required controls (for example, property use restrictions, activity and use limitations, institutional controls, or engineering controls).” An HREC is not an REC if a property meets current standards for unrestricted residential use. A CREC remains an REC by definition when the property does not meet the unrestricted residential use requirements unconditionally.

We also conducted the Phase I ESA in general accordance with the requirements of 40 Code of Federal Regulations (CFR) Part 312 titled *Standards and Practices for All Appropriate Inquiries*, as required under Sections 101(35)(B)(ii) and (iii) of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The purpose of conducting an all appropriate inquiries investigation into the previous ownership and uses of a property is to meet the provisions necessary for the landowner, contiguous property owner, and/or bona fide prospective purchaser to qualify for certain landowner liability protections under CERCLA.

The following principles are an integral part of ASTM *Designation E1527-13*:

- **“Uncertainty Not Eliminated** - No environmental site assessment can wholly eliminate uncertainty regarding the potential for recognized environmental conditions in connection with a property. Performance of this practice is intended to reduce, but not eliminate, uncertainty regarding the potential for recognized environmental conditions in connection with a property, and this practice recognizes reasonable limits of time and cost.”
- **“Not Exhaustive** - All Appropriate Inquiries does not mean an exhaustive assessment of a property. There is a point at which the cost of information obtained or the time required to gather it outweighs the usefulness of the information and, in fact, may be a material detriment to the orderly completion of transactions. One of the purposes of this practice is to identify a balance between the competing goals of limiting the costs and time demands inherent in performing an environmental site assessment and the reduction of uncertainty about unknown conditions resulting from additional information.”
- **“Level of Inquiry is Variable** - Not every property will warrant the same level of assessment. Consistent with good commercial and customary practice, the appropriate level of environmental site assessment will be guided by the type of property subject to assessment, the expertise and risk tolerance of the user, and the information developed in the course of the inquiry.”

## 1.2 Scope of Services

We performed the scope of services outlined in our Proposal No. LE-20069 dated February 20, 2020, with the exception that we did not review Sanborn fire insurance maps, as Environmental Data Resources, Inc. (EDR) indicated that there are none available for the Site or surrounding vicinity. The main components of the Phase I ESA and their objectives, as specified by the referenced standards, include the following:

- **Physical Setting Review:** we reviewed physical setting references for information concerning the topographic, geologic, and hydrogeologic characteristics of the Site and vicinity. Such information may be indicative of pathways (i.e., direction and/or extent) that a contaminant could migrate along in the event of a spill or release.
- **Regulatory Agency Records Review:** we reviewed publicly available Federal, State, and local regulatory agency records for information regarding the use, storage, and disposal of

hazardous substances and/or petroleum products at the Site and facilities and properties adjoining or within ¼ mile of the Site. Such records may identify RECs at or potentially affecting the Site.

- **Site History Review:** we reviewed information regarding the historical uses of the Site and adjoining and nearby facilities and properties back to the Site's and other properties' first use or 1940, whichever is earlier, that could have led to RECs on or near the Site. Historical sources reviewed included aerial photographs, topographic maps, and city directories. In addition, we conducted interviews with persons who were expected to be reasonably knowledgeable about historical and/or current conditions at and uses of the Site.
- **Site Reconnaissance:** we performed a site reconnaissance to observe site conditions and activities for evidence of RECs. The site reconnaissance was for the Site only. We viewed offsite properties and features solely from the vantage of the Site and public thoroughfares.

### 1.3 Report Limitations

We prepared this Phase I ESA report exclusively for the Client. The information obtained is only relevant for the dates of the records reviewed and the latest site visit. Therefore, the information contained herein is only valid as of the date of the report and will require an update after 180 days to reflect updated records and another reconnaissance to assess current site conditions.

The Client should recognize that a Phase I ESA is not a comprehensive site characterization and should not be construed as such. The findings and conclusions presented in this report are predicated on the site reconnaissance, information in the specified regulatory records, and information regarding the historical usage of the Site, as presented in this report. The Client should also understand that wetlands, asbestos-containing building materials, lead-containing paint, lead in drinking water, radon, mercury related to mining activities, methane, and mold surveys were not included in the scope of services for this Phase I ESA. Assessment for potential naturally occurring hazards such as asbestos and arsenic was also not included.

Therefore, the report should only be deemed conclusive with respect to the information obtained. No guarantee or warranty of the results of the Phase I ESA is implied within this report or any subsequent reports, correspondence or consultation, either express or implied. We strived to conduct the services summarized herein in accordance with the local standard of care in the geographic region at the time the services were rendered.

### 1.4 Data Gaps

A data gap is defined by ASTM *Designation E 1527-13* as “a lack of or inability to obtain information required by this practice despite good faith efforts by the environmental professional to gather such information.” Data gaps could include such things as insufficient historical information, the inability to interview persons with direct site knowledge (e.g., the owner(s), past owner(s), tenants, workers, etc.) or

the lack of access to all parts of a site during the site reconnaissance. As indicated in Section 1.2, we did not review Sanborn fire insurance maps for the Site and surrounding vicinity because there are none for the Site and vicinity. We do not consider this a significant data gap however, because of other available historical information we reviewed.

## **2. SITE DESCRIPTION**

This section provides information regarding the location and physical characteristics of the Site including its size, topography, geologic, soil, and hydrogeologic conditions.

### **2.1 Location and Legal Description**

The Site is located at 943 Barham Drive in San Marcos, California (Figure 1). The Site is approximately 100 feet south of State Route (SR) 78. The Site is further identified by the San Diego County assessor's parcel number (APN) 228-310-01. A copy of the parcel map is in Appendix A.

The Site is depicted in the northeastern quarter of Section 18 of Township 12 South, Range 2 West, San Bernardino Base and Meridian on the United States Geological Survey's (USGS) *San Marcos, California*, 7.5-minute topographic map (USGS, 2012).

### **2.2 Site and Vicinity General Characteristics**

The approximate 10-acre Site consists of undeveloped land. The surrounding vicinity includes single- and multi-family residential, institutional, recreational, commercial, and transportation uses. Undeveloped land is south of the Site. Figure 2 depicts the site boundaries and features and surrounding properties. Further site description is provided in Sections 2.4 and 6.

#### **2.2.1 Topography**

The topography of the site vicinity is characterized by hills incised by canyons and ravines with moderate to steep slopes. The southern portion of the Site is situated on the north slope of an approximate 100-foot-high hill that peaks to the south of the Site. An approximate 50-foot-high hill in the northeastern portion of the Site gently slopes to the west and converges with an approximate northwest-southeast oriented ravine in the central portion of the Site. The USGS *San Marcos, California*, 7.5-minute topographic map (USGS, 2012), depicts site elevations as ranging from approximately 650 to 750 feet above mean sea level.

### **2.2.2 Geologic and Soil Conditions**

The Site is located in the Peninsular Ranges geomorphic province of Southern California (Norris and Webb, 1990). This geomorphic province extends approximately 900 miles from its northern terminus against the Transverse Ranges and Los Angeles Basin, south to the tip of Baja California. In general, the province is characterized by rugged mountains in Mesozoic igneous and metamorphic rocks to the east, with a dissected coastal plain on Cenozoic sediments to the west. The Peninsular Ranges vary in width from approximately 30 to 100 miles, and are traversed fault zones trending roughly northwest-southeast.

Information concerning the surficial geologic conditions at and in proximity to the Site from the *Geologic Map of the Oceanside 30' X 60' Quadrangle, San Diego County, California* (USGS, 2005) indicates that the Site is underlain by Mesozoic metasedimentary and metavolcanic rocks which are typically volcaniclastic breccia and metaandesitic flows, tuffs and tuff-breccia.

Information concerning the soil conditions at and in proximity to the Site from the United States Department of Agriculture, Natural Resources Conservation Service, Web Soil Survey (<http://websoilsurvey.nrcs.usda.gov/app/HomePage.htm>) indicates that site soil is Vista coarse sandy loam, which is well drained and has moderate to high infiltration rates.

### **2.2.3 Hydrologic and Hydrogeologic Conditions**

Groundwater quality and occurrence information available from the California Department of Water Resources and the California State Water Resources Control Board (SWRCB) indicates that the Site is located in the San Marcos Hydrologic Area (904.50) of the Carlsbad Hydrologic Unit (904.00). Groundwater in the San Marcos Hydrologic Area has existing beneficial use designations for municipal, agricultural, and industrial supply purposes (SWRCB, 2020).

In an effort to assess local groundwater conditions, we reviewed reports available on the SWRCB's GeoTracker online database (<http://geotracker.waterboards.ca.gov>) for nearby facilities with a groundwater monitoring well array. Four groundwater monitoring wells were installed at 1312 Barham Drive (approximately ½ mile east of the Site) in 1995 related to San Diego Department of Environmental Health (DEH) Leaking Underground Storage Tank (LUST) case H03771-001. The depth to groundwater in these wells was reported to range from 6 feet to 10.9 feet with groundwater flow to the north. However, groundwater conditions at that facility may not be representative of those beneath the Site. Groundwater depths at the Site are likely greater than 20 feet and flow direction likely follows topography to the north.

### **2.3 Current and Planned Uses of the Site**

The Site is not currently used for any specific purpose. The Client reported that they plan to develop the majority of the Site for residential use. Further description of the Site is provided in Section 6.

### **2.4 Descriptions of Structures, Roads, Other Improvements on the Site**

No structures, roads, or other improvements are present on the Site.

### **2.5 Current Uses of Adjoining Properties**

Current uses of adjoining properties ae primarily consist of single- and multi-family residential to the east and west of the southern portion, institutional (Grace Church) to the west, transportation (Barham Drive and SR-78) to the north and undeveloped land to the south of the Site. Further information regarding adjoining properties is provided in Section 6.4.

## **3. USER-PROVIDED INFORMATION**

This section summarizes site information provided by the Client – the “user” of this Phase I ESA. Also provided are responses to inquiries to the Client via a “user” questionnaire for information pertaining to the Site. Mariana McGrain with Hall Land Company, Inc. completed the questionnaire (Appendix B).

### **3.1 Title, Appraisal and Sale Agreement Records**

Ms. McGrain did not provide a title, appraisal or sales agreement.

### **3.2 Environmental Liens or Activity and Use Limitations**

Ms. McGrain indicated that she has no knowledge of environmental liens on or activity and use limitations for the Site.

### **3.3 Specialized Knowledge**

Ms. McGrain indicated she has no specialized knowledge of the Site.

### **3.4 Commonly Known or Reasonably Ascertainable Information**

Ms. McGrain indicated that the site is currently undeveloped land.

### **3.5 Owner, Property Manager, and Occupant Information**

Ms. McGrain indicated the Site is owned by the Karen Schreiber Trust.

### **3.6 Valuation Reduction for Environmental Issues**

According to Ms. McGrain, the monetary value of the Site has not been reduced due to environmental issues.

### **3.7 Reason for Performing the Phase I ESA**

The Phase I ESA was requested to provide information regarding the potential for existing hazardous substance and/or petroleum product impacts at the Site for pre-acquisition due diligence purposes.

### **3.8 Client Provided Documents and Reports**

The Client did not provide additional documents pertaining to the Site.

## **4. RECORDS REVIEW**

This section summarizes information we obtained from readily available agency records for the Site and properties and facilities in the surrounding vicinity.

### **4.1 Standard Environmental Record Sources**

EDR searched federal, state, and local databases regarding the use, storage, disposal, or release of hazardous substances and/or petroleum products for the Site and area within one mile of the Site. The databases that list the Site and/or properties/facilities within one mile of the Site and the number of properties/facilities listed are summarized in the table below. <sup>1</sup> "Release" refers to an unauthorized release of a petroleum product or hazardous substance to the environment - i.e. the ground surface, soil, soil vapor, groundwater, or surface water on a property. "Release-related database" refers to those which provide information regarding an unauthorized release. "Non-release-related database" refers to those that may report use, storage, or disposal of hazardous substances and/or petroleum products or other environmental conditions, but do not report releases of such.

### **4.1.3 Orphan Summary**

EDR's Orphan Summary identifies properties with incomplete address information and therefore cannot be accurately plotted. One property is listed but because it is greater than ¼ mile from the Site, it is not suspected of having caused an REC at the Site.

## **4.2 Additional Environmental Record Sources**

This section summarizes information from additional, readily available environmental record sources regarding the Site and properties/facilities within one mile from the Site.

### **4.2.1 GeoTracker and EnviroStor Databases**

We reviewed GeoTracker and the California Department of Toxic Substance Control's (DTSC) EnviroStor (<http://www.envirostor.dtsc.ca.gov/public/>) online databases for information regarding the Site and nearby properties/facilities that are within ¼ mile of the Site. GeoTracker and EnviroStor do not have information pertaining to the Site or any properties/facilities within ¼ mile of the Site.

### **4.2.2 State of California Department of Conservation, Division of Oil, Gas and Geothermal Resources**

We reviewed the California Division of Oil, Gas, and Geothermal Resources' (DOGGR) website (<http://maps.conservation.ca.gov/doggr/index.html>) to evaluate the potential for existing/former oil, gas, or geothermal wells on the Site or properties proximal to the Site. DOGGR information indicates that no former or current wells are or were located within one mile of the Site.

### **4.2.3 County of San Diego Department of Agriculture, Weights and Measures**

We submitted a request to the County of San Diego, Department of Agriculture, Weights and Measures (DAWM), Pesticide Use Enforcement Division regarding possible use of restricted pesticides/herbicides at the Site. That office maintains such records for approximately 4 years. The DAWM indicated that no record of restricted pesticide/herbicide use was reported for the site APNs for the period of 2016 through 2019.

### **4.2.4 San Diego Air Pollution Control District**

We submitted a request to the San Diego Air Pollution Control District (APCD) for records pertaining to the Site. The APCD indicated that no records are on file for the site APNs.

#### **4.2.5 County of San Diego Department of Environmental Health**

We submitted a request to the DEH for records pertaining to the Site. The DEH indicated that no records are on file for the site APNs.

#### **4.2.6 San Diego Gas and Electric Company**

No transformers were observed onsite or were likely on the Site previously. Therefore, San Diego Gas & Electric Company was not contacted as part of this assessment.

### **5. HISTORICAL USE**

This section summarizes information obtained from a variety of sources regarding the historical uses of the Site in an effort to identify those uses that could have led to RECs. The sources of information included historical aerial photographs, historical topographic maps, and an abstract of city directories provided by EDR.

#### **5.1 Aerial Photographs**

We reviewed historical aerial photographs for the years 1939, 1946, 1953, 1964, 1967, 1970, 1979, 1985, 1989, 1990, 1994, 2005, 2009, 2012 and 2016 (Appendix E) for indications of past land uses that had the potential to have impacted the Site through the use, storage or disposal of hazardous substances and/or petroleum products. The following table summarizes our observations of the Site and adjacent properties.

Year	Observations	
	Site	Adjacent Properties
1939 (1" = 500')	The Site appears to have been used for agriculture, as row crops appear to have been present across the majority of the Site. An orchard and a rural-residence appear to have been in the northeastern portion of the Site.	Adjacent properties to the east, west, and north appear to have been used for agriculture. The property to the south appears to have been undeveloped land. Present-day Barham Drive was parallel to the northern boundary of the Site.
1946 (1" = 500')	Conditions appear to have been similar to those observed on the 1939 aerial photograph.	Conditions appear to have been similar to those observed on the 1939 aerial photograph.
1953 (1" = 500')	Conditions appear to have been similar to those observed on the 1946 aerial photograph except three rectangular structures, possibly barns or greenhouses, were present in the northeastern portion of the Site.	Conditions appear to have been similar to the 1946 photograph except the property adjacent to the east appears to have been developed with a single-family residence.
1964 (1" = 500')	Conditions appear to have been similar to those observed on the 1953 aerial photograph except additional elongated rectangular structures, possibly barns or greenhouses, were in the northern portion of the Site. Unimproved roads extended across the northern portion of the Site. The orchards are no longer present in the northeastern portion of the Site.	Conditions appear to have been similar to those observed on the 1953 aerial photograph except SR-78 was present to the north of the Site.
1967 (1" = 500')	Conditions appear to have been similar to those observed on the 1964 aerial photograph except the elongated rectangular structures in the northern portion of the Site are no longer present.	Conditions appear to have been similar to those observed on the 1964 aerial photograph.
1970 (1" = 500')	Conditions appear to have been similar to those on the 1967 aerial photograph except a small agricultural plot appears to have been in the northeastern portion of the Site. The remainder of the Site no longer appears to be used for agriculture.	Conditions appear to have been similar to those of the 1967 aerial photograph.
1979 (1" = 500')	Conditions appear to have been similar to those observed on the 1970 aerial photograph except all agricultural use of the land appears to have ceased. The agricultural plot is no longer distinguishable from the surrounding undeveloped land.	Conditions appear to have been similar to those on the 1970 aerial photograph except the property to the west was graded and presumably developed with the present-day Grace Church. Roads and parking lots were paved adjacent to the west of the Site.

Year	Observations	
	Site	Adjacent Properties
1985 (1" = 500')	Conditions appear to have been similar to those on the 1979 aerial photograph except unpaved roads and trails were present extending across the majority of the Site. 2016 (1" = 500')	Conditions appear similar to the 2012 aerial photograph.	Conditions appear similar to the 2012 aerial photograph.

The past agricultural use of the Site from sometime prior to 1939 up until approximately 1970 suggests that pesticides may have been used on the Site. If so, persistent pesticides and associated metals (arsenic) may be present in soil on the Site. Given the planned residential redevelopment of the Site the former agricultural use of the Site is considered an REC. It would be prudent to assess the surface soil at the Site for the potential presence of organochlorine pesticides (OCPs) and arsenic. The

nature and extent of OCPs and arsenic in soil (if present) would be used to determine if a potential health risk for future site residents exists and if further action to mitigate that risk is warranted.

## 5.2 Topographic Maps

We reviewed historical topographic maps for the years 1893, 1901, 1947, 1948, 1949, 1968, 1983, 1996 and 2012 (Appendix E). The following table summarizes observations of the Site and adjacent properties on the historical topographic maps.

Year	Observations	
	Site	Adjacent Properties
1893 (1:62,500)	A structure is depicted in the northeastern portion of the Site.	No structures or land use is depicted on the adjacent properties, except for a light duty road paralleling the northern boundary of the Site.
1901 (1:62,500)	Conditions are similar to those depicted on the 1893 topographic map.	Conditions are similar to those depicted on the 1893 topographic map except a light duty road is depicted extending roughly parallel to the eastern border of the Site. The light duty road paralleling the northern boundary of the Site is depicted as a secondary highway.
1947 (1:50,000)	Conditions are similar to those depicted on the 1901 topographic map.	Conditions are similar to those depicted on the 1901 topographic map except that the roads depicted to the north and east of the Site are depicted as light duty roads.
1948 (1:24,000)	Conditions are similar to those depicted on the 1947 topographic map, except the northwestern portion of the Site is shaded green indicating agricultural use.	Conditions are similar to those depicted on the 1947 topographic map except that the unimproved roads to the north and east of the Site are depicted as a secondary highways.
1949 (1:24,000)	Conditions are similar to those depicted on the 1948 topographic map.	Conditions are similar to those depicted on the 1948 topographic map.
1968 (1:24,000)	Conditions are similar to those depicted on the 1949 topographic map except a structure is depicted in the northwestern portion of the Site. The northwestern portion of the Site is no longer shaded green.	Conditions are similar to those depicted on the 1949 topographic map except a structure is depicted adjacent to the east of the Site. SR-78 is depicted to the north of the Site. The property adjacent to the south is now stippled green indicating shrubland or other natural vegetation.
1983 (1:24,000)	Conditions are similar to those depicted on the 1968 topographic map.	Conditions are similar to those depicted on the 1968 topographic map except three structures are depicted to the west of the Site.

2012 (1:24,000)	No shading or structures are depicted.	No shading or structures are depicted.

Depiction of past agricultural use of the Site suggests the potential impacts described in Section 5.1.

### **5.3 City Directories**

EDR prepared an abstract of city directories including city, cross-reference, and telephone directories summarized in the *EDR-City Directory Image Report* dated February 20, 2020. The directories were reviewed at approximately 5-year intervals, if available, from 1971 to 2014. A copy of the EDR city directory abstract including information regarding offsite facilities is in Appendix F.

The Site was not listed in the city directories reviewed. Grace Church is listed adjacent to the east of the Site at 855 Barham Drive from 1992 to 2010. The directory also lists the names and addresses of residents further to the east of the Site. No significant adverse impact to the Site is expected from these properties based on the nature of the listings. None of the properties identified in the city directories for offsite properties suggest uses that would have caused an REC at the Site.

## **6. SITE RECONNAISSANCE**

This section summarizes observations of the Site and surrounding properties made during the site reconnaissance.

### **6.1 Methodology and Limiting Conditions**

Mitchell Wagner, Staff Scientist with Geocon performed the site reconnaissance on February 24, 2020, by walking the Site. Mr. Wagner performed the offsite survey by observing adjacent properties from the Site and adjacent public streets. Weather on the day of the site reconnaissance was clear with temperatures in the mid-70s. Photographs of various site features and offsite properties are appended. Figure 2 is a Site Plan illustrating selected site features.

### **6.2 General Site Setting**

The Site is located in area of single- and multi-family residential, institutional (Grace Church) and commercial uses. Barham Drive is located to the north and undeveloped land is to the south of the Site.

### **6.3 Onsite Survey**

The Site consists of undeveloped and hilly terrain. The topography is dominated by two hills; one that peaks to the south and the other that gently slopes to the west and northwest (Photograph Nos. 1 through 6). We observed three former building foundations located in the northeastern portion of the Site (Photograph Nos. 7 through 9) that included crushed concrete and what appeared to be cages used

for raising chickens (Photograph 10). An abandoned irrigation line was also observed in the central northern portion of the Site (Photograph 11).

We observed no odors, pools of liquid, stained soil or distressed vegetation on the Site. We observed no evidence of RECs at the Site.

#### **6.4 Offsite Survey**

Properties within the site vicinity include:

- **North:** Barham Drive, beyond which is SR-78. (Photograph No. 12);
- **South:** Undeveloped land (Photograph No. 13);
- **East:** Single-family residences (Photograph No. 14); and
- **West:** Grace Church, a park, and single-family residences (Photograph Nos. 15 and 16).

We observed no evidence of RECs on the surrounding properties.

## **7. INTERVIEWS**

The current property owner representative, Karen Schreiber, reported via a site owner/occupant questionnaire (Appendix B) that the Site is vacant land. Ms. Schreiber reported that she has no knowledge of other previous uses. The owner/occupant questionnaire identifies no environmental concerns.

## 8. SUMMARY OF FINDINGS

The following table summarizes our findings and opinions regarding the Site, including known or suspect RECs, CRECs, HRECs, and de minimis environmental conditions.

**Recommended Action:**

AA = Additional action recommended.

NFA = No further action required at this time.

DM = De minimis condition where additional activities do not appear warranted at this time.

The past agricultural use of the Site from sometime prior to 1939 up until approximately 1970 suggests that pesticides may have been used on the Site. If so, persistent pesticides and associated metals may be present in soil on the Site. Given the planned residential redevelopment of the Site the former agricultural use of the Site is considered an REC.

## **9. PHASE II ESA**

We performed a Phase II ESA to assess the potential presence of OCPs and arsenic in soil related to the former agricultural use of the Site.

### **9.1 Scope of Investigation**

The scope of the Phase II ESA consisted of the following tasks:

- Pre-field Activities: Retained Enthalpy Analytical, LLC (EA), a state-certified laboratory, to perform laboratory analysis of soil samples and planned soil sample locations;
- Field Activities: collected soil samples from the planned locations;
- Laboratory analysis of soil samples; and
- Prepared this report describing the assessment and its findings.

### **9.2 Field Activities**

On February 24, 2020, we collected 20 discrete surface samples (S1 to S20) from the locations shown on Figure 3. The samples were collected using a decontaminated trowel and then transferred into laboratory-provided 4-ounce jars. The jars were capped with Teflon-lined lids and placed in a chilled cooler for transport to the laboratory under chain-of-custody protocol. We instructed the laboratory to make 4-part composite samples to be analyzed for OCPs, and to retain a portion of one of the discrete samples from each composite sample for arsenic analysis.

### **9.3 Analytical Testing**

EA analyzed each composite sample for OCPs by United States Environmental Protection Agency (USEPA) Test Method 8081A. Samples S2, S6, S10, S14 and S18 were analyzed for arsenic by USEPA Test Method 6010B. Laboratory analysis results are in Appendix G.

### **9.4 Findings**

#### **9.4.1 Observations**

Surface soil at the Site was predominately moist, dark brown, silty sand. We observed no obvious indications of contamination such as odors or soil discoloration during sampling for this Phase II ESA.

## **9.4.2 Laboratory Analysis Results**

### **OCPs**

OCPs were not detected in the five composite samples at concentrations exceeding the laboratory reporting detection limits (RDLs). All RDLs were less than the RSLs for residential soil, where established.

### **Arsenic**

Arsenic was not detected in the five discrete samples analyzed at concentrations exceeding the laboratory RDL.

## **10. CONCLUSIONS AND RECOMMENDATIONS**

We have performed a Phase I ESA, in general conformance with the scope and limitations of ASTM E 1527-13, of the approximate 10-acre property located at 943 Barham Drive in San Marcos, California. The San Diego County APN for the Site is 228-310-01.

The Phase I ESA identified the former agricultural use of the Site as an REC. Therefore, we performed a Phase II ESA to assess the potential presence of OCPs and arsenic in soil at the Site. OCPs and arsenic were not detected at concentrations exceeding the laboratory detection limits in the soil samples. This suggests that further investigation of impacts to the Site from the historical agricultural use of the Site does not appear warranted at this time.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

## EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

#### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 3 RCRA-LQG sites within approximately 0.25 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 12/16/2019 has revealed that there are 10 RCRA-SQG sites within approximately 0.25 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 10/28/2019 has revealed that there are 6 ENVIROSTOR sites within approximately 1 mile of the target property.

**Environmental Interest/Information System**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Last Biennial Reporting Year: 2017

Annual Waste Handled:

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
- Amount (Lbs): 129
  
- Waste code: D002
- Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Potential Contaminants of Concern: Dichloroethene (DCE), Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE)  
Site History: The DTSC Recommended Values for Industrial Air Screening were exceeded in all three indoor air samples collected on November 4, 2015. The highest detected PCE concentration from indoor air samples collected on November 4, 2015 was 18 "g/m3. The detected TCE concentration did not exceed these action levels. The consultant has requested through DTSC that San Diego Water Board act as lead agency for this case. They need to prepare a Vapor Intrusion Mitigation Plan to diminish indoor air contaminant vapors at the site.

Site History: On February 26, 2002, approximately 300 gallons of jet fuel was released to the ground surface from a fueling truck at the northwest corner of the fence-enclosed area that contains the helicopter landing pad. Fuel-impacted soil and gravel were excavated from the ground surface and placed into five 55-gallon drums that were left on

the site by the Countys HIRT Team. A contractor conducted additional soil excavation at the site. Four confirmation samples were collected from the floor of the excavation. Approximately 14.5 cubic yards of soil was removed from the site. The laboratory results indicated that four of the confirmation samples contained TPH C18-C22 concentrations ranging from 213 to 1,120 ppm. All other analytes were reported below laboratory detection limits. Documentation regarding the location of the excavation activities and the disposal of the excavated soil is not available in any documents. The consultant estimated the approximate location of the former remedial excavation based on pictures of the excavation and an interview with the Countys HIRT Team. In October 2009, five soil borings were advanced around the parameter of the former excavation and one soil boring was advanced near the center of the former excavation. The extent of the former excavation was determined using geophysical techniques. A total of 20 soil samples were collected and analyzed. In addition, one groundwater sample was collected from a temporary well and analyzed. All soil and groundwater sample analytes were reported below laboratory detection limits.

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General North

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u>	<u>NWI Electronic Data Coverage</u>

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

### **Site-Specific Hydrogeological Data\*:**

Search Radius:	1.25 miles
Status:	Not found

## AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

<u>MAP ID</u>	<u>LOCATION FROM TP</u>	<u>GENERAL DIRECTION GROUNDWATER FLOW</u>

For additional site information, refer to Physical Setting Source Map Findings.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
