The District proposes to install solar energy array on an elevated carport-like structure (Structure A) at Palms ES. Structure A would be comprised of metal columns and beams supporting array panels and installed on the multipurpose field next to the playground. Structure A be a minimum of 10-foot high and consists of 258 photovoltaic (PV) modules tilted at a 7-degree angle. The solar system would have the direct current (DC) system size of 108.360 kilowatts (kW). Approximately 309 feet of conduit would be installed by directional borings from the solar array through paved lots and grass area to an existing electrical equipment box adjacent to the school buildings at the southern portion of the campus. The project would also provide underground conduit for installation of car chargers in the future. However, Installation of car chargers require additional funding and would not be installed at this time. The District and general community will benefit from a reduction in energy consumption and reduced energy costs.
