The District proposes to install solar energy array on an elevated carport-like structure (Structure A) at Willow ES. Structure A will be installed on the multipurpose field near the basketball courts and would consist of 267 photo-voltaic (PV) modules tilted at a 7-degree angle. Structure A would be a minimum of 10-foot high and comprised of metal columns and beams supporting array panels. The solar system would have the direct current (DC) system size of 112.140 kilowatts (kW). Approximately 366 feet of conduit would be installed by directional borings from the solar array through paved lots and grass area to an existing electrical equipment box adjacent to the school buildings next to the drop-off/pickup zone. The project would also provide underground conduit for installation of car chargers in the future. However, installation of car chargers require additional funding and would not be installed at this time. The District and general community will benefit from a reduction in energy consumption and reduced energy costs.
