Project Title: Variance TWW-2021-LG-00343 to Allow the Generation, Accumulation, and Transport of Treated Wood Waste under Alternate Procedures by Recology Blossom Valley Organics North

Project Location: 6133 Hammett Court, Modesto, CA 95358; 3909 Gaffery Road, Vernalis, CA 95385

County: Stanislaus County, San Joaquin County

Project Applicant: Bryan T. Clarkson, Group Environmental Manager, Recology Blossom Valley Organics North

Approval Action Under Consideration by DTSC: Variance

Statutory/Regulatory Authority: California Health and Safety Code, Section 25143; CCR Title 22, Section 66260.210

Project Description: The Department of Toxic Substances Control (DTSC) has issued a variance to Recology Blossom Valley Organics North (Facility 1 (Vernalis): CAL000358774 , Facility 2 (Modesto): CAL000358773) to generate and accumulate treated wood waste on-site. The applicant may transport the treated wood waste generated on-site to an authorized handler or disposal facility. The treated wood waste is generated as a result of Load check waste from composting & chip and grind operations. The variance allows treated wood waste to be managed under procedures different from, but equally protective to human health and the environment to, the provisions of California Health and Safety Code (HSC) Articles 6, 6.5 and 9 of Chapter 6.5 and California Code of Regulations (CCR), Title 22, Division 4.5, Chapters 12, 13, 14, 15, 16, 18, and/or 20. Under the terms and conditions of Variance TWW-2021-LG-00343, Recology Blossom Valley Organics North will ensure the treated wood waste will be appropriately managed.

Background: Treated wood waste is a fully regulated California-only hazardous waste because it exhibits the hazardous waste characteristic of toxicity. From 2007 to December 31, 2020, treated wood waste was managed under alternative management standards, established in 22 CCR 67386. The legislation that authorized the alternative management standards for treated wood waste expired on December 31, 2020. Without the issuance of the variance, Recology Blossom Valley Organics North would be required to register as a hazardous waste transporter with DTSC and manifest treated wood waste as a hazardous waste prior to disposal at a hazardous waste disposal facility.

Recology Blossom Valley Organics North is a composting facility that previously conducted treated wood waste management activities under the now expired alternative management standards established at 22 CCR 67386.

Project Activities: Under the variance, the authorized large quantity generator may generate, accumulate, treated wood waste on-site. The generator may transport the treated wood waste generated on site to authorized handler and/or disposal facilities. Operations generally include loading and unloading operations and shipping treated wood waste along existing transportation routes. Accumulation and transport of treated wood waste includes taking appropriate precautions to prevent unauthorized access to and prevent leaching to the environment of the treated wood waste. The variance will expire on October 16, 2021 with possibility of extension for an additional six months.

Name of Public Agency Approving Project: Department of Toxic Substances Control

Name of Person or Agency Carrying Out Project: Recology Blossom Valley Organics North

Exempt Status: Minor Actions to Prevent, Minimize, Stabilize, Mitigate or Eliminate the Release or Threat of Release of Hazardous Waste or Hazardous Substances [CCR Title 14, Sec. 15330]

Reasons Why Project is Exempt: All analysis conducted included the potential extension of the variance for an additional six months. DTSC has determined none of the exceptions to the categorical exemptions apply to this project, as described in Public Resources Code Section 21084(c), (d), and (e), and 14 CCR Section 15300.2. The project activities are consistent with minor cleanup actions taken to prevent, minimize, stabilize, mitigate, or eliminate the threat of release of a hazardous waste or substance into the environment. Treated wood waste removal activities are estimated to cost approximately Less than \$250,000. The approval of this variance will ensure the treated wood waste generated will be contained from release during accumulation and storage to an authorized site or disposal facility.

The administrative record for this project is available to the public by appointment at the following location:
