Project Title: Oakland International Airport Terminal Modernization and Development Project
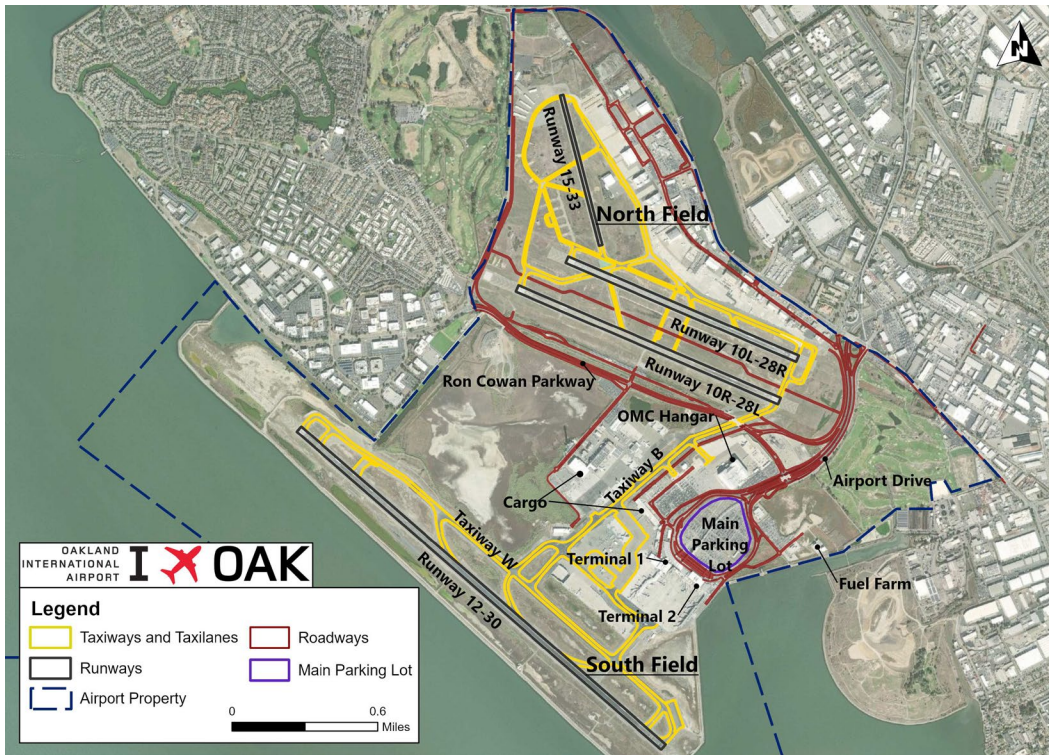

Project Sponsor: Port of Oakland

Project Location: Oakland International Airport

Background: Oakland International Airport (OAK or Airport) is a primary commercial service airport owned and operated by the Port of Oakland (Port). OAK is on 2,600 acres and is located in the City of Oakland, about 6.5 miles southeast of downtown Oakland in Alameda County along San Francisco Bay. Cities in the immediate vicinity of OAK include Alameda (to the northwest), Oakland (to the north), and San Leandro (to the southeast). Access to OAK is primarily by Interstate Highway 880, Hegenberger Road, and 98th Avenue to Airport Drive/Bessie Coleman Drive. Other major roadways serving OAK include Doolittle Drive/State Route 61, Harbor Bay Parkway, Ron Cowan Parkway, and Davis Street/State Route 61.

OAK includes South Field, which accommodates the commercial passenger and cargo activity, and North Field, which was the original airport and now accommodates corporate and general aviation purposes and other supporting facilities (see **Figure 1**). OAK has four runways: one primary air carrier runway at South Field (Runway 12-30) and three runways at North Field (Runway 10R-28L, Runway 10L-28R, and Runway 15-33). The Airport is served by several passenger and cargo airlines. In calendar year 2019, OAK accommodated approximately 13.4 million annual passengers (total includes both arriving and departing passengers). The Airport currently has 29 aircraft gates in two terminals located in South Field: Terminal 1 and Terminal 2. In calendar year 2019, OAK accommodated approximately 0.64 million annual tons of air cargo (freight plus mail). In 2019, OAK had about 242,000 total aircraft operations (takeoffs and landings).

Project Description: The OAK Terminal Modernization and Development Project (Proposed Project) is located primarily in South Field. The Proposed Project addresses facility safety, efficiency, and modernization needs, by modernizing Terminals 1 and 2, consolidating passenger processing functions (e.g., ticketing, baggage check-in, baggage claim, security screening), constructing expanded international arrivals facilities, constructing a new terminal, relocating existing cargo and support facilities, and improving the terminal area roadway, parking areas (including some relocation), and support facilities (see **Figure 2**).
Figure 1
Existing Facilities at OAK

The New Terminal would be an approximately 830,000-square-foot building north of the existing Terminal 1 with a connector building between the existing terminals and the New Terminal. The New Terminal would include additional aircraft gates, holdrooms, concessions, ticketing/check-in, baggage claim, passenger security screening, baggage screening, public restrooms, public circulation, and other support functions.

The Proposed Project would result in modernized and expanded facilities and up to 16 net additional gates at OAK.

The California Environmental Quality Act (CEQA) requires that the Port, as the Lead Agency with the principal responsibility for approving the project, conduct an environmental review of the project. Per Sections 15162 and 15163 of the CEQA Guidelines, a Draft EIR has been prepared as the CEQA document for the Proposed Project. The Draft EIR identifies potential effects of the Proposed Project related to Aesthetics, Air Quality, Biological Resources, Cultural and Tribal Resources, Geology and Soils, Greenhouse Gas Emissions, Hazards and Hazardous Materials, Hydrology and Water Quality, Land Use and Planning, Noise and Vibration, Public Services, Transportation, and Energy, Utilities and Service Systems.
