## ***PATTERSON AVENUE ACCIDENT ANALYSIS: GALILEO APARTMENT PROJECT, COUNTY OF SANTA BARBARA***

Associated Transportation Engineers (ATE) has prepared the following accident analysis requested by Santa Barbara County staff for the Galileo Apartment Project (Project), proposed in the Goleta area of Santa Barbara County. The analysis evaluates accident rates at the key intersections within the Patterson Avenue corridor adjacent to the Project site, which include Patterson Avenue/Calle Real, Patterson Avenue/US 101 NB Ramps, and Patterson Avenue/US 101 SB Ramps.

### **ACCIDENT ANALYSIS**

Accident data was obtained from the California Highway Patrol (CHP) for the most current 3-year period of accident records available, which encompass the June 1, 2017-June 1, 2020 time period (copy of accident data is attached).

It is important to note that accident data is used as a screening tool to identify potential safety problems. The rate of accidents was calculated for each intersection and then compared to California statewide averages for similar facilities to identify potential safety issues. By nature, accident rates experienced on a facility are often higher than the statewide average rate for similar facilities since the statewide averages are comprised of lower-than-average rates + higher-than-average rates (lower + higher = average).

If the accident rate experienced on a facility is higher than the statewide average, the Caltrans significance test is performed to determine if the number of accidents that occurred on the facility is statistically significant. If the number of accidents experienced is statistically significant, more detailed safety investigations are performed to determine if there are accident patterns that can be corrected by changing design features of the facility (e.g. widen traffic lanes, widen roadway shoulders, change roadway curvatures, add signs, install traffic signals, etc.).

Accident rates were calculated for the each of the Patterson Avenue intersections using the 3-year accident histories. The "area of influence" for each intersection is defined as within 250 feet of the intersection. The rate of accidents was calculated and then compared to California statewide average for similar facilities. Table 1 lists the actual rate of accidents for the 3-year period and compares the rates to the California statewide averages for similar intersections (see attached accident rate calculations for more details).

**Table 1**  
**Patterson Avenue Intersections - Accident Rates**

Location	# Accidents	Accident Rate(a)	Statewide Average Rate(a)
Patterson Ave/Calle Real	10 Accidents	0.29 per mev	0.29 per mev
Patterson Ave/US 101 NB Ramps	13 Accidents	0.38 per mev	0.42 per mev
Patterson Ave/US 101 SB Ramps	9 Accidents	0.26 per mev	0.42 per mev

(a) Accident rates per million entering vehicles (mev).

Patterson Avenue/Calle Real. As shown in Table 1, there were 10 accidents at this intersection within the 3-year period. The rate of accidents was 0.29 accidents per million entering vehicles and the California statewide average for similar intersections is 0.29 accidents per million entering vehicles. Thus, the rate of accidents is equal to the statewide average.

The Caltrans significance test was performed to determine if the number of accidents that occurred is statically significant (a worksheet showing the Caltrans formula and the significance test is included in the Technical Appendix). The results show that the number of accidents required to be statistically significant is 17 accidents within the 3-year period. The number of accidents that occurred during the 3-year period was 10, which is statistically insignificant. Thus, further investigation of the accident history is not warranted.

Patterson Avenue/US 101 NB Ramps. As shown in Table 1, there were 13 accidents at this intersection within the 3-year period. The rate of accidents was 0.38 accidents per million entering vehicles and the California statewide average for similar intersections is 0.42 accidents per million entering vehicles. Thus, the rate of accidents is below the statewide average and further investigation is not required.

Patterson Avenue/US 101 SB Ramps. As shown in Table 1, there were 9 accidents at this intersection within the 3-year period. The rate of accidents was 0.26 accidents per million entering vehicles and the California statewide average for similar intersections is 0.42 accidents per million entering vehicles. Thus, the rate of accidents is below the statewide average and further investigation is not required.

This concludes our accident analysis for the key intersections within the Patterson Avenue corridor adjacent to the Project site.

## ACCIDENT RATE CALCULATION SHEET - FOR INTERSECTIONS

**Project:** Galileo Apartments  
**Project #:** 019061  
**Analyst:** DLD  
**Date:** 8/14/2020

**File Name:** Accident Rate Worksheet 3 Year

**N/S Street:** Patterson Avenue  
**E/W Street:** Calle Real

**Weekday:**

**PM Peak Hour Entering Volume:** 2826  
**Peak Hour Factor:** 10.84

-----OR-----

**Total Approach ADT:** N/A

**Weekend:**

**PM Peak Hour Entering Volume OR ADT:** 70% (as a percentage of Weekday PM Peak Hour Entering Volume OR ADT)

**Period Analyzed (years):** 3

**Number of Accidents:** 10

**Million Entering Vehicle Miles:** 30.68 million entering vehicle miles (mevm)

**Accident Rate:** .33 accidents per million entering vehicle miles (mevm)

**Intersection Rate Group:** 124  
**California State Average Collision Rate:** 0.29

**DEFINITIONS**

$$\text{Number Expected} = \frac{\text{ADT} \times \text{Time}}{1000000} \times \frac{\text{Rate Expected}}{\text{Length}}$$

$$\text{Number Significant} = \text{Number Expected} + (2.576 \times (\text{Number Expected})^{1/2}) + 1.329$$

NOTES: Number Significant using 99.5% confidence level.  
 For intersections, use annual number of entering vehicles in place of ADT and delete length. The NR is the same as for roadway segments.

**CALCULATIONS - PATTERSON AVENUE/CALLE REAL INTERSECTION (June 1, 2017 through June 1, 2020)**

$$\text{Number Expected} = \frac{9,433,333 \times 3 \times 0.29}{1000000} \times \frac{1}{1} = 8.207$$

$$\text{Number Significant} = 16.91569$$
