Project Title: Centennial M1 Property Clean-Up Remedial Action Plan

Location of Project: 10344 Centennial Drive, Grass Valley, CA 95945

Project Description: The proposed plan includes implementation of the following Remedial Actions (RAs):

- Soil Vapor Extraction (SVE) for treatment of volatile organic compounds (VOCs) in soil/soil vapor;
- In Situ Chemical Oxidation (ISCO) using sodium permanganate for treatment of VOCs in groundwater;
- Monitored Natural Attenuation (MNA) for treatment of remaining VOC-impacted groundwater following ISCO (if necessary); and
- Containment (capping/ sub-slab depressurization [SSD]).

The purpose of the project is to mitigate chemicals of concern (COCs) in soil, soil vapor, and groundwater at the site. The Focused Feasibility Study (FFS) and Remedial Action Plan (RAP) for the former Engineering Plating Corporation (EPC) project site identified VOCs as COCs at the site. In addition, VOC-impacted groundwater has moved offsite toward the southwest to an adjacent commercial property. DTSC will be providing oversight for the implementation of the RAs recommended in the FFS/RAP.

Any Significant Effects on the Environment: None

Public Hearing: Consideration of adoption of the Mitigated Negative Declaration by DTSC is scheduled to take place virtually via Zoom. Community members who wish to participate in the call can register for the meeting at <https://bit.ly/3jazEeU>
