## EXECUTIVE SUMMARY

SCS Engineers (SCS) was retained by WP West Acquisitions, L.L.C. (WP) to prepare a Phase I Environmental Site Assessment (Phase I ESA) of an approximately 6.2-acre site located at 12901 & 12939 Foothill Boulevard in Rancho Cucamonga, California (the "Property"). This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries, and in general conformance with ASTM E1527-13.

The Property is located at the southeastern corner of the intersection between East Foothill Boulevard and Etiwanda Avenue. It comprises approximately 6.2 acres of largely undeveloped land. Wild grasses like foxtail barley and other weeds cover much of the Property. A graded area without vegetation is located at the northeastern corner of the Property. There is a north-to-south running shallow swale on the eastern third of the Property.

The Property was undeveloped land in the late 1800s and early 1900s. In the 1930s and 1940s, the Property was mainly agricultural with a few rural farmhouse-type structures and some windbreak trees along its western edge. The structures were removed by 1949 and the Property has remained undeveloped ever since. The shallow earthen swale has been present on the eastern third of the Property since around 1959, when East Foothill Boulevard (Route 66) was expanded. The roadway expansion likely included construction of a drain under the roadway and onto the Property.

No areas of environmental concern were identified in the review of historical sources or during the site visit. Some windblown trash, two mattresses, and small pieces of concrete were observed during the site inspection, but there was no significant evidence of landfilled or illegally disposed materials.

Regulatory database information identified few known and suspected contamination sites in the area surrounding the Property. Based on the information reviewed, it is unlikely that any of these sites have negatively affected the environmental condition of the Property.

### Conclusions

In summary, SCS performed a Phase I Environmental Site Assessment of an undeveloped 6.2-acre site located at 12901 and 12939 Foothill Boulevard in Rancho Cucamonga, California, in conformance with the scope and limitations of 40 CFR 312 and ASTM E1527-13. Any exceptions to, or deletions from, this practice are described in Section 5 of this report.

In the opinion of the Environmental Professionals, this assessment has revealed no evidence of conditions indicative of recognized environmental conditions. Further investigation is not recommended.

# 1 INTRODUCTION

SCS Engineers (SCS) was retained by WP West Acquisitions L.L.C. (the “User”) to prepare a Phase I Environmental Site Assessment (Phase I ESA) of an approximately 6.2-acre site located at 12901 & 12939 Foothill Boulevard in Rancho Cucamonga, California (the “Property”). A location map for the Property is presented as **Figure 1** in **Appendix A**. This assessment was performed in conformance with 40 CFR 312, Standards for Conducting All Appropriate Inquiries (AAI), and in general conformance with ASTM E1527-13.

# 2 PURPOSE

This Phase I ESA is intended to constitute appropriate inquiry into the previous ownership and uses of the Property, as required to support the assertion of the innocent landowner, contiguous property owner, and/or bona fide prospective purchaser defenses to liability (collectively the landowner liability protections, or LLPs) under the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA a.k.a. Superfund), as amended by the Superfund Amendments and Reauthorization Act of 1986 (SARA), and the Small Business Liability Relief and Brownfields Revitalization Act of 2002.

The purpose of this investigation was to identify conditions indicative of releases or threatened releases of hazardous substances as defined in CERCLA Section 101, and petroleum products, on, at, in, or to the Property.

If known or suspected contamination is identified, Users seeking to maintain LLPs have responsibilities in addition to completion of an AAI-compliant Phase I ESA. These “continuing obligations” include taking “appropriate care” and “reasonable steps” with respect to known or suspected releases of hazardous substances during the term of property ownership. In addition to these requirements under federal law, there are different requirements under state law with respect to liability protections. On request, SCS can provide support for clients with continuing obligations, as appropriate.

# 3 SCOPE OF SERVICES

This Phase I ESA is based on:

- Interviews with past and/or present owners, operators, and/or occupants of the Property.
- Reviews of federal, tribal, state, and local government records.
- Visual inspections of the Property and adjoining properties performed on July 29, 2020.
- Review of historical Property use information (topographic maps, aerial photographs, fire insurance maps, existing reports, etc.).
- Commonly known or reasonably ascertainable information about the Property (e.g., interviews with appropriate regulatory agency personnel and review of agency files review of available documents, interviews with other knowledgeable persons).
- Degree of obviousness of the presence or likely presence of contamination at the Property, and the ability to detect the contamination by appropriate investigation.
- Information provided as a result of the additional inquiries conducted by the User.

## 4 SPECIAL TERMS AND CONDITIONS

This Phase I ESA for an approximately 6.2-acre site located in Rancho Cucamonga, California, has been prepared specifically for WP West Acquisitions L.L.C. The report has been prepared in accordance with the care and skill generally exercised by reputable professionals, under similar circumstances, in this or similar localities. No other warranty, express or implied, is made as to the professional opinions presented herein.

No other party, known or unknown to SCS, is intended as a beneficiary of this work product, its content, or information embedded therein. Third parties use this report at their own risk. Third party reliance letters may be issued on request to SCS subject to approval of WP West Acquisitions L.L.C. and payment to SCS of a fee for such letters.

## 5 LIMITATIONS AND ASSUMPTIONS

The investigation focuses on releases and threatened releases of hazardous substances or petroleum products that could be considered a recognized environmental condition (REC) and/or a liability due to their possible presence in significant concentrations (e.g., above acceptable limits set by the federal or state government) or due to the potential for contaminant migration through exposure pathways (e.g., soil vapor migration or groundwater ingestion). Materials that may contain substances which are not currently deemed hazardous by the U.S. Environmental Protection Agency (EPA) or California Environmental Protection Agency (CalEPA) were not considered as part of this study.

Unless specifically included in our scope of services, formal surveys for asbestos-containing materials, lead-based paints, fire safety, vapor intrusion, indoor air quality, mold, and similar matters were not part of this assessment. The Property was not evaluated for compliance with land use, zoning, wetlands, or similar laws. This report is not intended to be an environmental compliance audit.

Hazardous substances naturally occurring in plants, soils, and rocks (e.g., heavy metals, naturally occurring asbestos, or radon) are not typically considered in these investigations. Similarly, construction debris (e.g., discarded concrete, asphalt, etc.) is not considered to be of concern unless observations suggest that hazardous substances are likely to be present in significant concentrations.

Unless otherwise noted, sampling and laboratory analyses of soil, water, air, building materials, or other media, were not performed as part of this investigation. Positive identification of hazardous substances can only be accomplished through sampling and appropriate laboratory analysis.

SCS Engineers assumes no responsibility for the accuracy of information obtained from, compiled by, or provided by third-party sources, such as regulatory agency listings. Unless obviously inaccurate or if information exists to the contrary, SCS Engineers assumes that information collected during this environmental site assessment is accurate and correct. Unless warranted, information collected has not been independently validated as part of this assessment.

The following information is the responsibility of the User (40 CFR 312.22) and is addressed in a questionnaire provided to the User and attached to this report as **Appendix G**:

- Specialized knowledge or experience of the User.

- The relationship of the purchase price to the fair market value of the Property. The purchaser of a Property is required to consider whether any differential between the purchase price and the fair market value of the Property is due to the presence of releases or potential releases of hazardous substances at the Property.

Certain other limitations could affect the accuracy and completeness of this report, as follows:

- Site Access Limitations – None.
- Physical Obstructions to Observations – None.
- Outstanding Information Requests – None.
- Historical Data Sources Failure – None.
- Other Limitations – None.

## 6 GENERAL SITE CHARACTERISTICS

### SITE LOCATION

The Property is located at the southeastern corner of the intersection between East Foothill Boulevard and Etiwanda Avenue. It has been assigned San Bernardino County Tax Assessor Parcel Numbers (APNs) 0229-311-14 and -15. An APN map is provided as **Figure 2** in **Appendix A**.

### GENERAL SITE DESCRIPTION

According to an ALTA/ACSM Land Title Survey provided to SCS dated March 15, 2018, the Property comprises approximately 6.2 acres of largely undeveloped land. Wild grasses like foxtail barley and other weeds cover much of the Property. A hardpan graded area without vegetation is located at the northeastern corner of the Property. A few trees are present around its perimeter. There is a north-to-south running shallow swale on the eastern third of the Property.

### ADJOINING PROPERTY USE

- North – East Foothill Boulevard (historic Route 66) is located immediately to the north of the Property. Undeveloped fallow agricultural land with some dozens of small soil stockpiles is located directly across the street to the north. The Amador on Route 66 condominium residences are located across the street to the northeast.
- South – Single-family residences (12914 to 13004 Chestnut Avenue) adjoin the Property immediately to the south.
- East – Single-family residences (13014 and 13015 Vine Street) adjoin the Property immediately to the east.
- West – Etiwanda Avenue adjoins the Property immediately to the west. The Foothill Marketplace shopping center is located across the Street. Businesses in the shopping center nearest to the Property include a Food4Less grocery store (12879 Foothill Boulevard) and a Dunn Edwards Paints retail store (12899 Foothill Boulevard). Other tenants include restaurants, a fitness center, a nail salon, optometry and dentist businesses, etc.

## 7 PHYSICAL SETTING

### PHYSIOGRAPHIC SETTING

According to the U.S. Geological Survey (USGS), Guasti, California 7.5-minute topographic maps, the Property is located in the Upper Santa Ana Valley, a broad area bordered to the north by the Transverse Ranges (the San Gabriel and San Bernardino Mountains), to the south by the Jurupa Mountains and other ranges of the Perris Block, to the east by the San Jacinto Fault, and to the west by the Chino Fault. The Property is at an average elevation of about 1195 feet above mean sea level (MSL). Local topography slopes to the south. The nearest surface water is the East Etiwanda Creek/San Sevaine Creek flood control channel approximately 750 feet east of the Property.

### GEOLOGY AND SOILS

The surficial geological unit in the general area consists of Holocene Younger Alluvium, which is made up predominantly of sand- and silt-sized bedrock fragments derived from the San Gabriel Mountains and reworked Older Alluvium. Underlying the surficial unit is early Pleistocene-age Older alluvium consisting of sand, silty sand, and gravel. The alluvial units range in thickness from 350 to 700 feet below ground surface (bgs). Below these units is dense, non-water-bearing granitic bedrock.

### GROUNDWATER

The Property overlies the Upper Santa Ana Valley Groundwater Basin, Chino Subbasin. Regional information (Wildermuth 2016) has shown that groundwater in the area flows southwesterly and occurs at an elevation of approximately 700 feet MSL, or approximately 445 feet bgs. Groundwater at the former Kaiser Steel Mill site located a quarter mile south-southeast of the Property is known to be impacted by total dissolved solids, total organic carbon, and trace concentrations of volatile organic compounds (VOCs) such as trichloroethene (TCE) and 1,1-dichloroethene (1,1-DCE).

### RADON

According to the California Department of Public Health's February 2016 Radon Program report, screening in the area of the Property (91739 zip code) found no locations (out of 16 tested sites) where buildings had radon levels greater than or equal to 4 picocuries per liter (pCi/L), the EPA action level. The maximum radon result for the Property's zip code was 1 pCi/L. The alluvial geology of the Property area is not normally associated with elevated radon levels. Note that elevated radon levels may also be attributed to other radon sources such as leaking natural gas or numerous building products such as drywall, cinderblock, concrete floors, brick, or stone products. Based on the available information, elevated radon gas is not expected in the area of the Property.

## 8 SITE INSPECTION

Justin Rauzon of SCS conducted an inspection of the Property and surrounding area on July 29, 2020. Photographs of the Property are provided in **Appendix B**.

The Property is largely undeveloped land. Remnants of tractor furrows indicate the Property is fallow agricultural land. It is mostly covered with low vegetation. A shallow earthen swale is present on the eastern third of the Property. This appears to have been an area where stormwater historically flowed across the Property to an area between two residences offsite to the south.

## **HAZARDOUS SUBSTANCES**

No hazardous substances or hazardous wastes were observed at the Property.

## **NATURAL DRAINAGE**

Natural waterways are not currently located on the Property. A solid concrete block at the northern end of the earthen swale, at the edge of East Foothill Boulevard, appeared to be an area where stormwater historically flowed under the road and onto the Property. There was no longer an active pipe coming onto the Property. Stormwater at the Property infiltrates into the ground or flows overland to the south.

## **DISTURBED AREAS**

No obvious disturbed areas were noted. Some windblown trash, two mattresses, and small pieces of concrete were observed during the site inspection, but there was no significant evidence of disposed or landfilled materials.

## **ELEVATORS AND OTHER HYDRAULIC EQUIPMENT**

No elevators or other hydraulic equipment were observed on the Property.

## **WELLS**

No groundwater supply or monitoring wells were observed on the Property or immediately surrounding area. A cylindrical steel vault is present on the northern edge of the Property, near the northern end of the shallow swale. According to the ALTA survey, it is a Metropolitan Water District (MWD) vault. A previous Phase I ESA report identified this structure as a water well, although SCS could not independently verify this. A review of the GeoTracker GAMA website, which provides GIS mapping of domestic, municipal, and other water supply wells, does not show a well at this location.

## **ELECTRICAL EQUIPMENT**

Overhead electrical lines are present along the eastern, western, and southern boundaries of the Property. One pole-mounted SCE electrical transformer was noted along the southern edge of the Property. SCE has stated that they never specified the purchase of distribution transformers utilizing PCBs as the insulating/cooling fluid. SCE transformers utilize mineral oil exclusively. In a statistically valid test of over 20,000 SCE distribution transformers, SCE determined that the concentrations of PCBs in the mineral oils was less than 50 parts per million (ppm) in over 96 percent of the units. Based on the available information, no significant environmental impact to the Property is anticipated from this transformer.

## **WASTEWATER**

Sanitary and industrial wastewaters are not currently generated at the Property.

## **DRINKING WATER**

Drinking water is not currently supplied to the Property.

## STORAGE TANKS

No evidence (fill ports, vent lines, or dispensers) of underground storage tanks (USTs) was observed on the Property. No aboveground storage tanks (ASTs) were observed on the Property.

## VISUAL INSPECTION OF ADJOINING SITES

No obvious evidence of a REC or indications of contamination (e.g. remediation equipment, staining, USTs, etc.), were observed on adjoining sites during the site inspection.

## 9 INTERVIEWS

Alex Hanshaw, the current Property owner, provided answers to questions about the Property (**Appendix G**). Mr. Hanshaw provided two addresses for the Property, both 12901 and 12939 Foothill Boulevard. He indicated that the Property had never been developed and he had no knowledge of any previous environmental issues thereon.

## 10 SITE HISTORY

Site history was evaluated from the following sources:

- USGS topographic maps provided by Environmental Data Resources (EDR) (July 21, 2020).
- Historical aerial photographs provided by EDR (July 21, 2020).
- A search was made of EDR-Sanborn collection and no maps of the Property were found (July 21, 2020).
- A City Directory review report provided by EDR (July 21, 2020).

Copies of topographic maps, historical aerial photographs, city directories, and the Sanborn map report showing no coverage of the Property are included in **Appendix C**.

## HISTORICAL USE SUMMARY

The Property was undeveloped land in the late 1800s and early 1900s. In the 1930s and 1940s, the Property was mainly agricultural with a few rural farmhouse-type structures and some windbreak trees along its western edge. The structures were removed by 1949 and the Property has remained undeveloped ever since. The shallow earthen swale has been present on the eastern third of the Property since around 1959, when East Foothill Boulevard (Route 66) was expanded. The roadway expansion likely included construction of a drain under the roadway and onto the Property.

The existence of past agricultural activities on the Property and in adjacent areas indicates a potential for pesticide and/or heavy metal (associated with dusting powders) contamination. In SCS's experience, it is not uncommon to find trace levels of pesticides in soils at former agricultural areas in Southern California. However, these trace concentrations are rarely cause for environmental concern. It is our opinion that, without specific evidence of pesticide storage or mismanagement on the Property, past use for agricultural purposes is considered to be a *de minimis condition* and collection and analysis of soil samples for pesticides is unwarranted.

## HISTORICAL USE OF ADJOINING SITES

The adjoining sites were also undeveloped or agricultural land in the late 1800s and early 1900s. Structures were located across the street to the north between at least 1938 and 2005. These structures included a service station/garage, a residence, and a liquor store. These structures were all removed by 2009 and the area to the north has remained vacant and undeveloped. The formerly

agricultural areas to the east and south were developed with residential neighborhoods in the late 1950s and early 1960s. The shopping center to the west was developed in the early 1990s.

## 11 COMMONLY KNOWN OR REASONABLY ASCERTAINABLE INFORMATION

In order to identify commonly known or reasonably ascertainable information about the Property, SCS attempted to review previous environmental reports and various regulatory agency files and interviewed regulatory agency personnel. The following information was identified.

### PREVIOUS ENVIRONMENTAL REPORTS

The User provided to SCS a Phase I ESA report for the Property prepared by PIC Environmental Services (PIC) dated August 14, 2019. A copy of this report is included in **Appendix D**. PIC prepared the report on behalf of Grady Hanshaw. PIC described the water district vault on the northeastern portion of the Property as an “apparent water well,” but SCS disagrees with this conclusion. The ALTA survey provided to SCS indicates that this is a water district vault and SCS concurs with the surveyor’s opinion. PIC identified no RECs and recommended no additional investigation.

SCS was also provided a Geotechnical Investigaton report prepared by Sladden Engineering (April 10, 2007). This report was prepared in advance of a proposed retail development. Borings were conducted to a maximum depth of 51 feet bgs for geotechnical purposes only. No environmental issues (staining, contamination, etc.) were noted in the soil samples.

### REGULATORY AGENCY RECORDS

Local regulatory agencies and other sources were contacted in an effort to identify any known or suspected contamination sites or incidents of hazardous waste storage or disposal which might have resulted in soil and/or groundwater contamination, or VOC (volatile organic compound) vapor migration to the Property. Generally, this includes records for the Property and adjacent parcels, although relevant information for other sites of possible interest in the area (up to one mile) may also be included. Within the City of Rancho Cucamonga, the San Bernardino County Fire Department (SBCFD) generally acts as the lead enforcement agency for UST compliance. If a tank has leaked and groundwater contamination is suspected, the Santa Ana Regional Water Quality Control Board (SARWQCB) generally becomes the lead agency in supervising contaminant characterization and cleanup.

#### California Environmental Protection Agency Files

The Property is not a listed site on the California Environmental Protection Agency (CalEPA) Regulated Site Portal website (**Appendix D**).

#### Santa Ana Regional Water Quality Control Board Files

The Property does not appear in the State Water Resources Control Board’s GeoTracker website. Recent SARWQCB case files, if any, would be listed on this website (**Appendix D**).

#### Department of Toxic Substances Control Files

The Property does not appear in the California Department of Toxic Substances Control (DTSC) EnviroStor website. Recent DTSC case files, if any, would be listed on this website (**Appendix D**).

## South Coast Air Quality Management District Files

The Property does not appear as a listed facility on the South Coast Air Quality Management District (AQMD) online Facility Information Detail (FIND) website (**Appendix D**).

## San Bernardino County Fire Department Files

Since the Property has not previously been developed with operations that would require SBCFD permitting, a request to review records from this agency was unnecessary.

## 12 REVIEW OF FEDERAL, STATE, TRIBAL, AND LOCAL GOVERNMENT DATABASES

A database search for sites listed on various federal, state, tribal, and local databases in the area around the Property was obtained from EDR (July 21, 2020). A description of each of the databases searched is included in the report, which is attached as **Appendix E**. Among the databases included in the EDR report are NPL (federal, tribal, and state-equivalent), proposed and delisted NPL, CORRACTS (RCRA facilities subject to corrective actions), hazardous waste sites identified for investigation or remediation (SEMS [Superfund Enterprise Management System, formerly known as CERCLIS], State CERCLIS, VCP, Brownfields Calsites, etc.), LUST, sites with engineering controls, former CERCLIS (NFRAP), RCRA and state hazardous waste generators, ERNS, SWLF, USTs, and Toxic Pits.

Review of these records satisfies all requirements as set forth in 40 CFR Section 312.26 (b) and (c) with regard to the review of federal, tribal, and state government records of databases of such government records and local government records and databases of such records pertaining to both the Property and the nearby or adjoining properties. Further, the search distances for each particular database are as specified in 40 CFR 312.26 and ASTM E1527-13.

Any known or suspected contaminated sites included on these lists within 0.25 miles of the Property are discussed in the following text. As a general rule, sites beyond 0.25 miles are not anticipated to impact a site significantly. Any sites beyond 0.25 miles with a high potential to impact the Property are also discussed. (Please note: the distances and directions listed in this report have been field verified and might not always match those in the EDR report.)

Sites such as TSD facilities, hazardous waste generators, HAZNET, FINDS, SQGs, LQGs, USTs, HIST UST, RCRA violations, and TRIS facilities with toxic chemical releases (generally in accordance with permitting requirements - into the air, water, or land as reported under SARA Title III) use or store hazardous materials and thus may pose a potential problem in the event of a spill or leak. However, unless these sites also appear in an agency list of contaminated sites, there is no evidence of any problems at this time. Therefore, sites on these lists will not be discussed unless on or in close proximity to the Property.

Please refer to **Appendix E** for further information on these sites.

## PROPERTY LISTINGS

The Property is not listed in any of the databases searched by EDR.

## ADJACENT SITE LISTINGS

The following adjacent sites appear in the EDR database report:

**Meyers Duane**, 12912 Foothill Boulevard (adjacent to the north, upgradient) – EDR Hist Auto – This gasoline service station appears as a historical auto station for the years 1969 through 1976, although historical aerial photos indicate it was likely there as far back as 1938 and as late as 1990. The database report contains no information about releases at this site. Based on the available information, it is unlikely this site has negatively affected the environmental condition of the Property.

**Dunn Edwards Paints**, 12899 Foothill Boulevard (adjacent to the west, cross-gradient) – CERS HAZ WASTE, HAZNET, RCRA NonGen/NLR, San Bern. Co. Permit, CERS, and HWTS – This retail paint store reportedly stores between 1 and 3 types of hazardous materials and has manifested disposal of unspecified solvent mixture waste. The SBCFD has cited Dunn Edwards Paints for failing to submit a hazardous materials business plan (HMBP) and other administrative violations. Based on the information in the database report, there is no evidence of releases at this site that would negatively affect the environmental condition of the Property.

**Food 4 Less #328**, 12879 Foothill Boulevard (adjacent to the west) – San Bern. Co. Permit, CERS HAZ WASTE, HAZNET, CERS, HWTS, and RCRA NonGen/NLR – This grocery store is currently listed as a conditionally exempt small quantity hazardous waste generator. The company has manifested disposal of detergent waste, alkaline solution without metals  $\text{pH} \geq 12.5$ , empty containers less than 30 gallons, adhesives, other inorganic solid waste, off-specification organics, off-specification inorganics, pesticides, liquids with  $\text{pH} \leq 2$ , unspecified solvent mixture, etc. No violations were reported and this site is not anticipated to negatively affect the environmental condition of the Property.

None of the adjacent properties were identified in any of the standard environmental records sources within the EDR regulatory database report.

## OTHER DATABASE SITES

The EDR report provides a summary table of regulatory database sites within specified distances of the Property, including standard environmental records, additional environmental records, high risk historical records, and recovered governmental records. This summary table is provided beginning on Page 4 of the EDR report (**Appendix E**). In addition to the adjacent site listings discussed above, SCS identified the following sites of concern within 0.25 miles of the Property:

**Marketplace Cleaners**, 12859 Foothill Boulevard #B (Approximately 400 feet west, cross-gradient) – DRYCLEANERS, RCRA-SQG, FINDS, ECHO, HAZNET, HWTS, EDR Hist Cleaners, and San Bern. Co. Permit – This inactive drycleaners listing for the shopping center west of the Property did report using perchlorethylene (PCE) in its operations and disposed of halogenated solvent waste. It was listed as inactive in 2009, so may have operated for up to 19 years. Releases of chlorinated solvents at dry cleaners is a common environmental concern. However, based on distance and the absence of documented releases, this listing is not anticipated to negatively affect the environmental condition of the Property.

**Circle K Stores Inc./Cheers Liquor**, 12838 Foothill Boulevard (Approximately 250 feet northwest, cross-gradient) – EDR Hist Auto, San Bern. Co. Permit, RCRA-SQG, SWEEPS UST, HIST UST, FINDS, and ECHO – This former service station was located at the northwestern corner of the intersection

between Foothill Boulevard and Etiwanda Avenue. It had at least three motor vehicle fuel USTs. Releases from the USTs were first reported in 1995. Only soil was affected and the case received regulatory closure from the SBCFD on February 27, 1996. Based on regulatory case status and its relative cross gradient location, this site is not anticipated to negatively affect the environmental condition of the Property.

Other sites located within 0.25 miles of the Property with known releases of hazardous substances such as LUST and CHMIRS are located cross- or downgradient, or based on case status and/or distance, are not anticipated to negatively affect the environmental condition of the Property. Several sites located within 0.25 miles appear in databases not typically associated with documented releases, such as RCRA NonGen/NLR, RCRA-SQG, RCRA-LQG, SEEPS UST, HIST UST, FiNDS, ECHO, UST, EDR Hist Auto, CERS, San Bern. Co. Permit, HAZNET, CERS, HWTS, AST, CERS HAZ WASTE, and CERS TANKS. Based on a review of the database information, none of these sites are known to have any contamination at this time; therefore, none are anticipated to have negatively affected the environmental condition of the Property. Similarly, none of the sites situated beyond 0.25 miles are anticipated to have impacted the Property.

## **UNMAPPABLE OR ORPHAN SITES**

One unmappable site was identified in the EDR report. Unmappable sites cannot be plotted due to inaccurate or incomplete addresses. Based on review of the provided data, including the estimated locations of the unmappable sites in relation to the Property, it appears unlikely that the unmappable site has adversely affected the environmental condition of the Property.

## **LANDFILLS**

According to the EDR-provided review of the California Department of Resources Recycling and Recovery (CalRecycle) Solid Waste Information System, no active or inactive landfills were identified within 0.5 miles of the Property. Based on the available information, it is unlikely that landfills have adversely affected the environmental condition of the Property.

Available oil and gas well maps from the California Department of Conservation, Geologic Energy Management Division (CalGEM) were reviewed to identify oil and gas wells on the Property or in the nearby area. According to the CalGEM Well Finder online database, the Property is not located within the boundaries of a delineated oil and gas field.

## **NATIONAL PIPELINE MAPPING SYSTEM**

SCS reviewed the National Pipeline Mapping System (NPMS) website for the Property and surrounding area to identify any hazardous materials pipelines. The NPMS is a geographic information system (GIS) created by the U.S. Department of Transportation, Pipeline and Hazardous Materials Safety Administration (PHMSA), and Office of Pipeline Safety (OPS) in cooperation with other federal and state governmental agencies and the pipeline industry. The NPMS consists of geospatial data, attribute data, public contact information, and metadata pertaining to the interstate and intrastate hazardous liquid trunklines and hazardous liquid low-stress lines as well as gas transmission pipelines, liquefied natural gas (LNG) plants, and hazardous liquid breakout tanks (tanks that receive and store liquids transported by pipeline) jurisdictional to PHMSA. The nominal accuracy of geospatial data in the NPMS is +/-500 feet. The NPMS does not contain information on interconnects, pump and compressor stations, valves, direction of flow, capacity, throughput, or operating pressure. In addition, distribution and gathering pipelines are not included in the NPMS.

The NPMS is built from data submitted by pipeline, LNG plant, and breakout tank facility operators. Since 2002, transmission pipeline and LNG plant facility operators are required to submit mapping information to the NPMS and to update their submissions annually. Breakout tank operators are able to submit data to the NPMS on a voluntary basis.

Based on review of the NPMS website, there are no hazardous materials pipelines within 700 feet of the Property. Natural gas pipelines located along the flood control channel 750 feet east of the Property. No negative environmental affects to the Property are anticipated from these pipelines.

### **13 USER PROVIDED INFORMATION**

A User Questionnaire was completed by Joe Gambill of WP West Acquisitions, LLP and is included in **Appendix G**. The provided information is discussed below.

#### **TITLE RECORDS**

No title report was provided to SCS for review.

#### **ENVIRONMENTAL LIENS OR ACTIVITY AND USE LIMITATIONS**

No information regarding environmental liens or activity and use limitations was provided to SCS. No environmental liens or activity/use limitations were identified by SCS during the course of this assessment.

#### **SPECIALIZED KNOWLEDGE**

No specialized knowledge regarding the Property was provided to SCS by the User.

#### **VALUATION REDUCTION FOR ENVIRONMENTAL ISSUES**

The purchase price being paid for the Property reasonable reflects the fair market value.

### **14 DEGREE OF OBVIOUSNESS OF THE PRESENCE/LIKELY PRESENCE OF CONTAMINATION ON THE PROPERTY**

As discussed above, the Property has mostly been undeveloped agricultural land since the early 1900s. In the 1930s and 1940s, a few rural farmhouse-type structures were located on the western edge of the Property. This Phase I ESA did not identify the likely presence of contamination on the Property.

### **15 DATA GAPS**

A data gap represents an inability on the part of the environmental professional to obtain information required by the standards and practices of 40 CFR 312 to fully identify conditions indicative of releases or threatened releases of hazardous substances on, at, in, or to the Property.

No data gaps were identified during the preparation of this Phase I ESA.

### **16 FINDINGS AND OPINIONS**

Based on the scope of work performed, SCS finds the following:

The Property is located at the southeastern corner of the intersection between East Foothill Boulevard and Etiwanda Avenue. It comprises approximately 6.2 acres of largely undeveloped land. Wild grasses like foxtail barley and other weeds cover much of the Property. A graded area without vegetation is located at the northeastern corner of the Property. There is a north-to-south running shallow swale on the eastern third of the Property.

The Property was undeveloped land in the late 1800s and early 1900s. In the 1930s and 1940s, the Property was mainly agricultural with a few rural farmhouse-type structures and some windbreak trees along its western edge. The structures were removed by 1949 and the Property has remained undeveloped ever since. The shallow earthen swale has been present on the eastern third of the Property since around 1959, when East Foothill Boulevard (Route 66) was widened. The roadway expansion likely included construction of a drain under the roadway and onto the Property.

No areas of environmental concern were identified in the review of historical sources or during the site visit. Some windblown trash, two mattresses, and small pieces of concrete were observed during the site inspection, but there was no evidence of landfilled materials.

Regulatory database information identified few known and suspected contamination sites in the area surrounding the Property. Based on the information reviewed, it is unlikely that any of these sites has negatively affected the environmental condition of the Property.

In summary, SCS performed a Phase I Environmental Site Assessment of an undeveloped 6.2-acre site located at 12901 and 12939 Foothill Boulevard in Rancho Cucamonga, California, in conformance with the scope and limitations of 40 CFR 312 and ASTM E1527-13. Any exceptions to, or deletions from, this practice are described in Section 5 of this report.

In the opinion of the Environmental Professionals, this assessment has revealed no evidence of conditions indicative of recognized environmental conditions. Further investigation is not recommended.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. ## INTRODUCTION

PIC Environmental Services (PIC) was contracted by Grady Hanshaw, on behalf of Cucamonga Center, LLC to perform a Phase I Environmental Site Assessment (PESA) at undeveloped property located in Rancho Cucamonga, California (see Figure 1). The purpose of this investigation was to determine if environmental impairments existed at the site. This document represents the PESA report prepared in accordance with customary industry practices and current ASTM (2013) Standards. This document also intends to satisfy the "All Appropriate Inquiries" guidelines established by the Federal Environmental Protection Agency (EPA).

The following sources were used to prepare this report:

1. Site Inspection
2. California Regional Water Quality Control Board (RWQCB) records
3. California Department of Toxic Substances Control (DTSC), Site Mitigation Division records
4. United States Environmental Protection Agency (EPA) and Geological Society (USGS) records
5. California Department of Natural Resources (CDNR),  
Division of Oil, Gas, and Geothermal Resources (DOGGR) records
6. San Bernardino County Waste Discharge Systems records of active and inactive landfills
7. EDR collection of historic aerial photographs
8. San Bernardino County UST and Hazardous Materials Permit Records
9. San Bernardino County Title Records
10. Historic Telephone Directories
11. City of Rancho Cucamonga Permits

## SCOPE OF INVESTIGATION

The scope of this investigation included: site inspection, survey of adjacent properties, review of the above listed government records, review of historical aerial photographs, and geologic and hydro-geologic information search.

## SITE INSPECTION

On August 8, 2019, PIC Project Manager, Ethan Hersch, conducted site inspections at the subject property and adjacent/nearby properties. Jeff Wimberly assisted PIC with the inspections and provided historical information.

## **SITE DESCRIPTION**

The subject property includes about 5.6 acres of undeveloped property located south of Foothill Blvd. and east of Etiwanda Avenue in Rancho Cucamonga, CA.

Historic onsite addresses appear to include 12901 through 12951 Foothill Blvd. and 8101 through 8199 Etiwanda Avenue, Rancho Cucamonga, CA 91739. The San Bernardino County Assessor Parcel Numbers are 0229-311-14 and 0229-311-15. Additional title information is attached in Appendix A.

Property boundaries are indicated by public streets to the north and west, and residential properties to the south and east (see Figure 2).

The subject property is unpaved and contains no structural improvements. An apparent water well is located in the northeast portion of the property in close proximity to Foothill Blvd. (see Figure 2 and Appendix B). The property was vacant at the time of PIC's inspection. Telephone directory listings confirm a lack of historic onsite occupants (see Appendix E). Figure 2 and site photos in Appendix B illustrate onsite features.

During PIC's inspection, no underground storage tanks, industrial waste interceptors (clarifiers), drains, or significant surface stains were observed.

No onsite buildings exist. As a result, asbestos containing construction materials (ACM) should not be present. A reference diagram of common ACM in older commercial structures is illustrated on Figure 5.

PIC's review of existing site conditions did not identify any Recognized Environmental Conditions (RECs).

## **SITE HISTORY**

Based on a review of regulatory permit records, County title records, historic telephone directories, historic topographic maps, and historic aerial photos, it appears the subject property has never been used for commercial purposes. Potential residential buildings are evident along Etiwanda Avenue in the northwest portion of the property in the 1936/1941 topographic map in Appendix C and the 1938 aerial photo in Appendix D.

Based on PIC's review of historic records summarized above, PIC discovered no historic Recognized Environmental Conditions (RECs).

## **SURVEY OF ADJACENT PROPERTIES**

Residential developments were observed on most adjoining properties. A retail commercial center is located west of the property.

None of the adjacent properties exhibited obvious evidence of petroleum or hazardous materials contamination problems. In addition, the EDR Report in Appendix G did not identify any known contaminated properties adjacent to the subject property. A former gasoline station was located north of the property at 12912 Foothill Blvd from 1965 until 1985 (see Appendix E). However, there is no evidence the former gas station sustained any subsurface contamination. Another gasoline station located northwest of

the subject property at 12852 Foothill Blvd. is known to have sustained historic contamination from a leaking underground storage tank (UST). After completing required remedial actions, the site was awarded regulatory closure in 1996. PIC concludes the subject property has not been impacted by historic contamination released at nearby properties.

Surface runoff at all surrounding properties appeared to be southerly.

No evidence of historic or improper waste disposal was observed by PIC in any storm drain at the site.

## **HISTORICAL AERIAL PHOTOGRAPH REVIEW**

Historical aerial photographs provided by EDR were reviewed by PIC (see copies in Appendix D). Available photographs were dated 1938, 1949, 1953, 1959, 1966, 1975, 1985, 1990, 1994, 2005, 2009, 2012, 2016, and 2018.

All photos indicate the subject property is undeveloped and unpaved. Foothill Blvd. and Etiwanda Ave. are evident adjacent to the property in all photos.

The 1938 and 1949 photos exhibit some Eucalyptus trees along the east property boundary and a possible former residential building in the 1938 photo.

A recent (2018) photo has been enlarged and reproduced as Figure 2 for reference.

The aerial photo study indicates no obvious environmental impairments on the subject property or from adjacent properties. The aerial photo search did not indicate any historic oil well drilling or landfill activity on the site.

## **GOVERNMENT RECORDS REVIEW**

The following federal, state, and local public records and associated lists were searched to determine the potential for or existence of onsite and/or offsite unauthorized releases of hazardous materials (i.e., contamination) related to onsite and/or offsite aboveground or underground storage tanks, or any other potential sources:

All of the above records were examined for up to a one-mile radius by EDR (see Appendix F). The subject property does not appear on any of the lists.

The EDR record search also revealed that one site exists within a one-half mile radius of the subject property which has sustained soil and/or groundwater contamination as a result of an underground storage tank leak. Please refer to the Executive Summary in Appendix F for the Leaking Underground Storage Tanks (LUST) list. PIC has confirmed that the LUST site has received regulatory closure. As a result, it is not likely the property has been impacted by offsite LUST sources.

Finally, the EDR record search revealed the following concerning properties located within a one mile radius of the subject site:

### **Historic Oil and Gas Drilling Activity**

Based on a review of State Division of Oil, Gas, and Geothermal Resources (DOGGR) records, it appears that no historic oil production or exploratory oil well drilling activity has ever occurred on or within one mile of the subject site. Figure 4 illustrates a lack of historic oil well drilling activity near the subject property. PIC concludes the property has not been impacted by historic oil well drilling activity.

### **Solid Waste Disposal Sites**

The San Bernardino County Solid Waste Management Department does provide a public index of Solid Waste and Liquid Industrial Waste Disposal Sites (see Figure 6). The EDR Report in Appendix F also includes a review of listings concerning landfills. Both Figure 6 and the EDR report indicate that no landfills have been located on or near the subject property.

It appears the subject property has not been impacted historically by landfill activity.

## **GEOLOGY AND HYDROGEOLOGY**

The elevation of the site is approximately 1193 feet above sea level. The surrounding topography generally slopes southerly toward the Santa Ana River (see Figure 1: Topographic Map and Appendix C).

A regional groundwater contour map published by the U.S. Geological Survey indicates that depth to the first groundwater aquifer is more than 400 feet below surface. The groundwater flow is southerly.

## **CONCLUSIONS AND RECOMMENDATIONS**

Based upon the results of this Phase I Environmental Assessment, PIC offers the following:

1. No documented, significant, historic occurrences of petroleum or hazardous materials contamination were discovered at the subject property.
2. No significant existing or historic onsite sources of petroleum or hazardous materials contamination were discovered.
3. PIC concludes the site lacks significant environmental impairments (Recognized Environmental Conditions).
4. PIC recommends no additional investigation.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

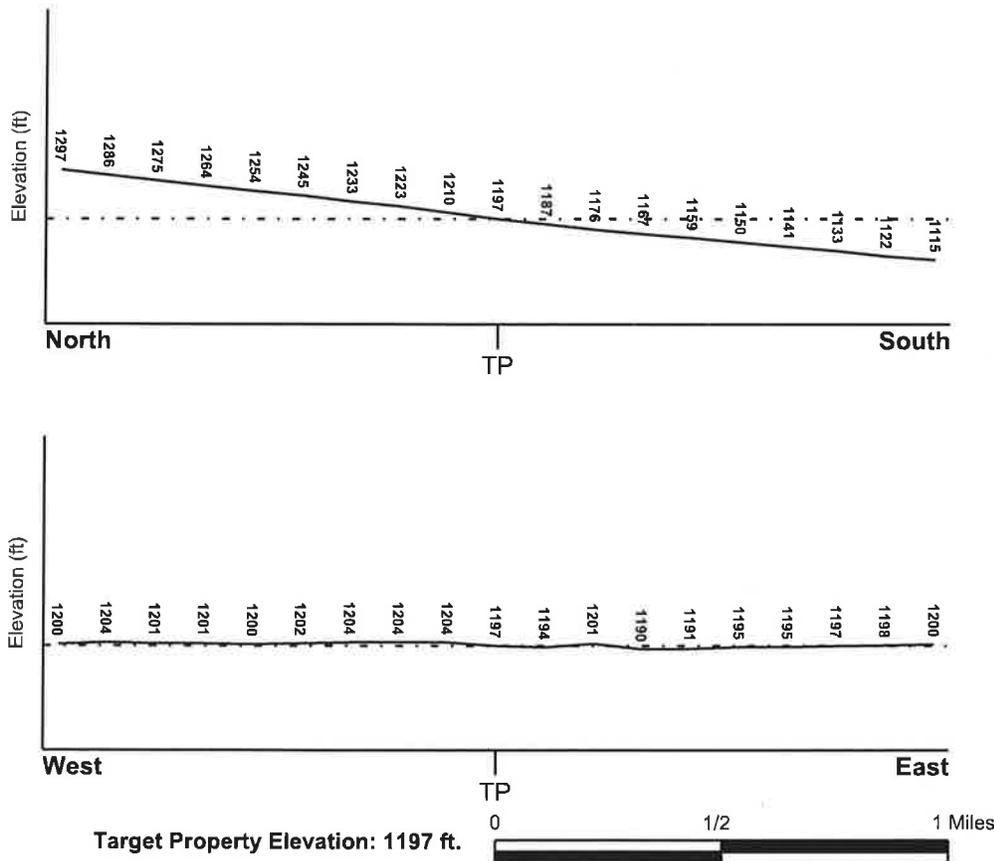

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General South

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## **AQUIFLOW®**

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

## HYDROGEOLOGIC INFORMATION

AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

### SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

## EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/23/2020 has revealed that there is 1 RCRA-LQG site within approximately 0.25 miles of the target property.

Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 04/27/2020 has revealed that there are 7 ENVIROSTOR sites within approximately 1 mile of the target property.

## EXECUTIVE SUMMARY

EDR Hist Cleaner: EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Cleaner list, as provided by EDR, has revealed that there is 1 EDR Hist Cleaner site within approximately 0.125 miles of the target property.

- Waste code: D001
- Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKEY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

**Environmental Interest/Information System:**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

**OSHA ESTABLISHMENT**

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

**RISK AND TECHNOLOGY REVIEW**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

## STANDARD ENVIRONMENTAL RECORDS

### ***Federal NPL site list***

#### NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

### **Local Brownfield lists**

#### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

## DEED: Deed Restriction Listing

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

## HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

## UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

## EDR HIGH RISK HISTORICAL RECORDS

### *EDR Exclusive Records*

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

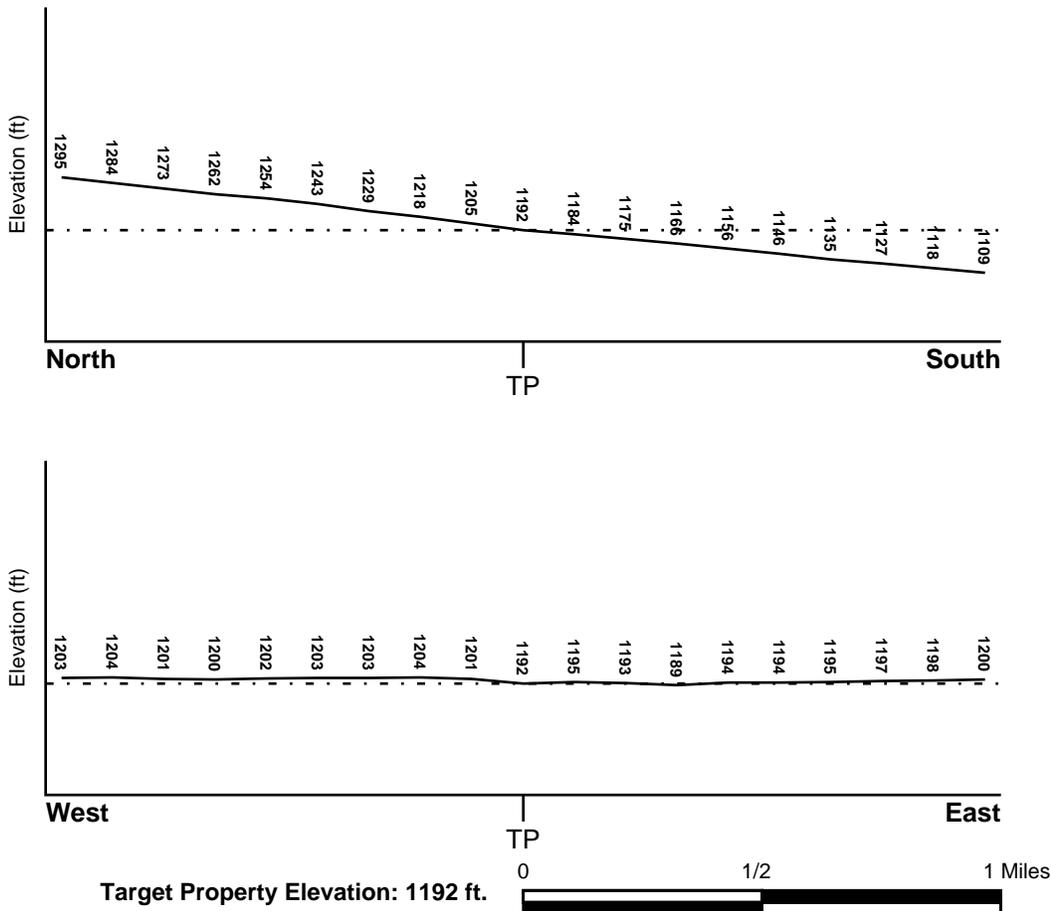

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SSE

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## AQUIFLOW®

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

## TOPOGRAPHIC INFORMATION

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

## HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.

## HYDROGEOLOGIC INFORMATION

### AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

## GEOLOGIC INFORMATION

### Geologic Age and Rock Stratigraphic Unit

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

The CalEPA Regulated Site Portal database combines data about environmentally regulated sites and facilities in California into a single database. It combines data from a variety of state and federal databases, and provides an overview of regulated activities across the spectrum of environmental programs for any given location in California. These activities include hazardous materials and waste, state and federal cleanups, impacted ground and surface waters, and toxic materials

#### CA HWTS: Hazardous Waste Tracking System

Source: Department of Toxic Substances Control  
Telephone: 916-324-2444

DTSC maintains the Hazardous Waste Tracking System that stores ID number information since the early 1980s and manifest data since 1993. The system collects both manifest copies from the generator and destination facility.

Date of Government Version: 04/08/2020  
Database Release Frequency: Varies

Date of Last EDR Contact: 08/02/2020  
Date of Next Scheduled Update: 10/18/2020

#### CA HAZNET: Facility and Manifest Data

Source: California Environmental Protection Agency  
Telephone: 916-255-1136

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method. This database begins with calendar year 1993.

### Environmental Management

**Due diligence assessments of properties prior to real estate transfer of properties in California, Arizona, New Jersey, Mexico, Puerto Rico, and the Dominican Republic.** Mr. Rauzon has completed numerous due diligence assessments of properties prior to acquisition, disposition, or loan financing by investment banks, insurance companies, corporations, non-profit entities, real estate developers, and private parties. Projects have included Phase I assessments that meet federal All Appropriate Investigation (AAI) regulations, American Society for Testing and Materials

(ASTM) standards, and client-specific guidelines; inspections for asbestos and lead-based paint; Phase II investigations; preparation of abatement and remediation cost estimates; and regulatory agency coordination. These projects frequently involve review of previous environmental reports and investigation of current and past on-site operations, regulatory agency records searches, evaluation of historical property use information, identification of nearby potentially contaminated sites, and development of appropriate conclusions about environmental risks. Investigations involve preparation of work plans, soil boring and subsequent sampling, groundwater well installation and sampling, soil gas probe installation and sampling, precision mapping, evaluation of contaminants in accordance with regulatory requirements or generally accepted guidelines, preparation of investigation report, and analysis of applicable remedial alternatives. Mr. Rauzon has served as the Project Manager for sites that have received regulatory closure from various regulatory agencies.

**Planning, coordinating, and supervising remedial actions that included excavation, transport, and disposal of contaminated soils and water.** Investigations involve preparation of Remedial Action Plans (RAPs), direction of fieldwork, oversight of confirmatory sampling, and interfacing with regulatory agencies.

**The characterization of hazardous waste materials.** These projects include collection of soil and/or liquid samples to profile the waste materials, interpretation of laboratory results, and evaluation of disposal/recycling options to minimize the costs and liabilities to clients associated with the removal of wastes.

**Assessment and certification of hazardous waste tank systems.** These investigations involve working with a Professional Engineer to complete field inspections of hazardous waste tanks, associated ancillary equipment, leak-detection systems, and secondary containment devices, as well as interfacing with regulatory agencies.

## Project Management

**Project Manager for due diligence investigation of a portfolio with more than 300 industrial sites throughout Mexico.** SCS services included conducting Phase I and Phase II environmental assessments within the strict timeline of the \$1.2 billion industrial real estate transaction. Subsequent to the closing of the deal, SCS provided ongoing consulting services to facilitate integration and management of various facilities with ongoing environmental issues.

**Project Manager for hazardous materials consulting services in support of the State Route 91 Corridor Improvement Project in Orange and Riverside Counties, CA.** SCS services included sampling and inventory of potentially hazardous materials associated with more than 25 bridges along the SR-91 and I-15 freeways; environmental assessments on properties within the proposed freeway expansion area; and soil testing for herbicides, pesticides, and fungicides on several land parcels.

**Project Manager for investigation and remediation of industrial facility located in Fontana, CA.** SCS conducted a series of environmental assessments, investigations, and remedial activities that provided sufficient information to identify environmental issues and business risks, and facilitate the client's successful purchase of property. A number of recognized environmental conditions, including releases of coal tar, solvents, heavy metals, and total petroleum hydrocarbons, were identified. Project activities conducted during the acquisition and redevelopment of the property included shallow and deep soil and soil vapor investigations; installation of groundwater monitoring wells and subsequent groundwater sampling; subsequent remedial excavation under San Bernardino County Fire Department (SBCFD) oversight to obtain closure; and excavation and off-site disposition of contaminated soil.

## Professional Experience

Mr. Nuno has over 37 years of environmental services experience, all with SCS, and extensive expertise in property evaluation and due diligence; site assessment, investigation, and remediation; underground storage tank (UST) assessment, upgrading, removal, and leakage cleanup; and hazardous waste management. He works extensively with regulatory agencies, fully understands regulations pertaining to petroleum hydrocarbons and hazardous waste, and has worked on numerous projects associated with real estate transactions to assess the potential for releases, characterize releases of contaminants to soil, soil vapor, and groundwater, implement remedial measures, and develop cost estimates for assessing and mitigating impacts. As SCS Senior Vice President responsible for Environmental Services in Southern California, Arizona, and Nevada, Mr. Nuno has directed SCS's contributions to a number of major projects, including construction of the Staples Center and the Phoenix Award-winning Chesterfield Square project, both in Los Angeles, CA.

## Hazardous Waste/Materials Management

**Project Manager for closure of an ordnance production and ramjet test facility, Van Nuys, CA.** The project involved closure of a facility containing Resource Conservation and Recovery Act (RCRA) hazardous waste management units. Closure activities included implementing a plan approved by the California Environmental Protection Agency (CEPA) and Department of Toxic Substances Control (DTSC), conducting inventory while sampling various containers of hazardous materials, preparing a preliminary site assessment, conducting an investigation of former underground tanks and hazardous materials storage areas, providing asbestos management services, installing/monitoring groundwater wells, and remediating impacted areas. Mr. Nuno served as the primary contact for the DTSC and SCS's client.

**Managed a 2-year multiple assignment contract to provide environmental services to the Port of Los Angeles, CA.** Projects completed under this contract included preliminary site assessments of numerous properties scheduled for acquisition by the Port of Los Angeles (Port), the implementation

of subsurface investigations for two closed shipyards, development of a sampling plan and collection of surface soil samples from the property storing various hazardous materials, collection and analysis of samples from building materials for asbestos, and collection and analysis of samples from creosote wharf pilings to evaluate disposal options. Mr. Nuno's responsibilities included coordinating site activities, interfacing with Port personnel, reviewing project submittals, preparing monthly progress reports, managing subcontractors, and interfacing with regulatory agencies.

**Regulatory compliance assessment of a manufacturing facility, Bell, CA.** This project included conducting facility operations to determine compliance with environmental regulations, including materials management, permitting, and maintenance of records. A report was prepared summarizing the applicable regulations while providing recommendations.

**Managed a multi-year contract for environmental services at the Long Beach Naval Shipyard and Terminal Island Naval Complex.** Projects completed under this contract included the preparation of a hazardous materials Spill Prevention, Control, and Countermeasures (SPCC) Plan, evaluation of wastewater discharges from industrial sources, preparation of a closure plan for a permitted hazardous waste storage facility, the design of three hazardous waste staging facilities, and the implementation of a site closure investigation.

**Project to determine whether impoundment ponds used for the treatment of wastewater generated during operations involved in explosives formulation and packing should be permitted as hazardous waste treatment facilities, Naval Weapons Center, China Lake, CA.** The objective for this project was to determine whether the impoundment ponds, used for the treatment of wastewater generated during operations, were exposed to explosive formulations, which required permitting the Naval Weapons Center as a hazardous waste treatment facility. The project was completed on site at the military facility and involved interviewing personnel familiar with the operations. Per regulatory requirements, the collection of wastewater and sediment from the impoundments was used for subsequent analysis, which was presented in a final written report submitted to the client.

**Hazardous waste/materials management program for the Nevada Department of Transportation.** Visits were made to each field maintenance station and major maintenance stations located throughout the state to determine the types of hazardous materials used, along with observing the methods of handling and disposal. The final report contained (1) suggestions for improving hazardous waste/materials management practices; (2) a policy document for the hazardous materials; and (3) a training program for personnel involved in hazardous waste management.

**Guidance to the California Department of Health Services in performing and implementing an audit program for facilities generating hazardous wastes.** The audits were conducted to evaluate present waste/materials management practices and to propose recommendations to reduce the volume of wastes being generated. Recommendations were evaluated on the basis of cost effectiveness and ease of implementation. Audit programs were developed for three industries: the paint and body segment of the automotive repair industry, the marine shipyard maintenance and repair industry, and the precious metals recovery industry. Mr. Nuno participated in many of the facility audits and prepared portions of the reports submitted to the client.

**Inventory of oil-filled electrical equipment at properties owned by the State of California to determine if this equipment contained polychlorinated biphenyl (PCB).** State of California-owned properties were evaluated in a housing inventory of oil-filled electrical equipment that potentially contained PCB. To determine the outcome in an event of equipment failure, SCS assessed potential pathways and receptors that could contribute to the failure. Mr. Nuno's role on this project was to

visit facilities throughout the state, identify electrical equipment that could contain PCBs, and inventory the equipment.

**Preparation of SPCC Plans.** Mr. Nuno has directed and managed several projects involving preparation of SPCC Plans, including several container facilities within the Port of Long Beach, an airship operation in Carson, a printing operation, and an aerospace facility at the Van Nuys Airport. Plans met or exceeded federal regulations.

**Second-Party Review of Environmental Impact Report (EIR) for Proposed Intermodal Facility.** As part of a review prior to submittal for public evaluation, Mr. Nuno reviewed sections of the EIR pertaining to Hazards and Hazardous Materials. A detailed review was conducted, with comments provided for consideration as part of the final draft document.

**Independent Review of Reports, Various Locations.** Mr. Nuno is continuously requested to review documents and provide his professional opinion regarding complex cases. Clients include the City of El Monte, City of Buena Park, Retirement Housing Foundation, Doerken Properties, and Olive Branch Development.

**Porter Ranch Dust Monitoring.** During grading activities for a major residential development, notices of violation were issued to the grading contractor by the South Coast Air Quality Management District (SCAQMD). Mr. Nuno's role on this project consisted of attending meetings with the SCAQMD, preparing a dust mitigation plan, and coordinating staff to provide dust monitoring during grading.

### Due Diligence for Property Transfers

Mr. Nuno has completed and has been involved in several hundred due diligence assessments of properties prior to acquisition by real estate developers, City Redevelopment Agencies, corporations, non-profit entities, and private parties. Projects have included Phase I assessments meeting federal All Appropriate Investigation (AAI) regulations and the American Society for Testing and Materials (ASTM) standards, inspections for asbestos and lead-based paint, Phase II investigations, preparation of abatement and remediation cost estimates, and regulatory agency coordination.

On behalf of the City of Pico Rivera, Mr. Nuno served as the Project Manager for the first closure issued by the Los Angeles Regional Water Quality Control Board (RWQCB) under the Polanco Bill.

**Former Boeing C-17 Facility.** Mr. Nuno served as leader of a team that assessed the former Boeing C-17 facility in Long Beach. The assessment included evaluation of several comprehensive documents completed as part of the assessment and closure of the former military aircraft manufacturing facility. The efforts resulted in the successful transfer of real estate to our client.

**Former Landfill Sites.** Mr. Nuno has completed Phase I Environmental Site Assessments (ESAs) of properties used in the past for disposal of waste materials and operated as landfills. These facilities have been located throughout Southern California.

### Site Assessment and Remediation

**For Staples Center/LA Live in Los Angeles, served as Project Director for assessment and cleanup of properties acquired as part of the support area (parking lots, future hotels, and other support operations).** This project included Phase I ESAs of properties on several blocks surrounding the Staples Center, implementation of subsurface investigations to assess potential contaminants from past on-site operations to soil and groundwater, risk evaluation and negotiation of cleanup levels with regulatory agencies, and implementation and oversight during remediation. Due to the Staples Center's construction schedule, SCS's work was completed on an expedited basis.

**Former Refinery, Santa Fe Springs, CA.** Mr. Nuno was the principal investigator prior to a real estate transaction involving a former refinery. Mr. Nuno was responsible for reviewing previous investigative reports, including a Remedial Action Plan (RAP) for completeness, and for providing remediation recommendations based on available data, which were implemented in cost estimates for the site development.

**City of Irwindale, CA.** A residential development was proposed for a parcel of land associated with historical uses resulting in potential hazardous material releases. SCS conducted a Phase II investigation with an approach developed by Mr. Nuno assessing soil and soil vapor at the site. Wipe samples were also collected in a building on site that was reported as a clandestine drug laboratory.

**Due Diligence and Permitting for a Nationwide Building Materials Manufacturer, various locations in the U.S. and Canada.** Mr. Nuno has served as the primary interface between clients and SCS staff within several SCS offices conducting Phase I ESAs on manufacturing facilities throughout the U.S. and Canada. He has developed project budgets, coordinated SCS staff efforts, submitted investigations, and served as Principal Reviewer for deliverables.

**City of El Monte Gateway project, El Monte, CA.** The City of El Monte planned to expand its Public Works Yard on 14 acres of what used to be a former burn dump. In preparation for this development, Mr. Nuno reviewed previous environmental investigations while collaborating with site developers and regulatory agencies to obtain necessary approvals for the proposed development. Regulatory agency involvement included the DTSC, Los Angeles County Local Enforcement Agency (LEA), CalRecycle, and South Coast Air Quality Control Management District (AQCMD). As Project Director, Mr. Nuno prepared a work plan for an additional investigation and implementation, which included a cap for lead-impacted soils. During development, he reviewed analytical data from soil samples collected during excavation, and provided consulting services to site developers while interfacing with the DTSC. As a result, a Remedial Action Completion Report (RACR) was prepared and submitted to DTSC for approval, which later granted development of the site for residential and commercial uses.

**Preparation of a Remedial Action Plan (RAP) and Remedial Design Documents for the Los Angeles Unified School District (LAUSD) South Region Elementary School No. 6.** Mr. Nuno served as the Principal Contact for the preparation of a RAP and remedial design documents. The documents were completed to meet DTSC requirements and approved for implementation. The design included excavation of soils impacted by pesticides, petroleum hydrocarbons, and volatile organic compounds (VOCs), and in-situ remediation of VOC-impacted soil using vapor extraction.

**Malibu Civic Center, Limited Phase I ESA for Proposed Wastewater Treatment Facility, Malibu, CA.** Mr. Nuno served as Project Director for the assessment of a proposed wastewater treatment facility in Malibu, CA. The assessed area consisted of approximately 1.15 by 2.13 miles of proposed project area with a Wastewater Treatment Plant (WTP), two injection well areas, six pump stations, and numerous piping runs within city streets. For the Limited Phase I ESA, the WTP, injection well areas, and pump station areas were inspected to identify possible Recognized Environmental Conditions (RECs). Historical review was conducted for each of the project areas. In addition, a database search of known sites with reported releases was conducted. Potential RECs within the project area (i.e., leaking USTs, solvent use, dry cleaners, and other release sites) were identified and reported.

**Market Street Development, Long Beach, CA.** As part of a pre-acquisition evaluation, Mr. Nuno was involved in the preparation of a Phase I ESA and Phase II investigations to assess potential impacts associated with past oil extraction activities on the site and in the vicinity. In addition, available information indicated that releases from a nearby former service station and dry cleaning facility may have impacted the site. Mr. Nuno developed an investigation approach to assess impacts to the

property, which included collection of soil and soil vapor samples. He also provided recommendations for evaluation and re-abandonment of former oil wells occupying the property.

**Due Diligence associated with acquisitions of the Los Angeles Dodgers baseball organization, Los Angeles, CA, and Vero Beach, FL.** Mr. Nuno was responsible for coordinating assessments of Dodger Stadium in Los Angeles and the training facility in Vero Beach, FL, initially as part of the acquisition by Fox Entertainment Group and again when acquired by Frank McCourt. The assessments included Phase I ESAs, lead-based paint surveys, and inspections for asbestos-containing materials. Subsurface investigations of certain areas of both facilities were also completed under his direction.

**Investigations and remediation of former dry cleaning facilities, Torrance, Stanton, and La Verne, CA.** Investigations at numerous active and former dry cleaning facilities have been completed to assess the potential for releases of solvents. These investigations consisted of soil vapor assessments, collection of bulk soil samples, and groundwater monitoring. Additional evaluations have been completed to define the extent of the plume to obtain information used in evaluating remedial alternatives. Implemented remedial measures have included excavation, vapor extraction, in situ chemical oxidation, biological enhancement, monitored natural attenuation, and risk management. Permanent overlying structures contributed to the complexity of the remediation efforts. The contractors retained to implement portions of the remediation collaborated with Mr. Nuno, utilizing his expertise to review submitted bids and ensure that work performed was in accordance with bid requirements.

**Remedial investigation, groundwater well installation and monitoring, and evaluation of mitigation measures for a former refinery in Central California.** Mr. Nuno served as Project Manager for the site investigation, which included coordination of site activities, interpretation of analytical data, and interfacing with SCS's client and regulatory agency personnel.

**Naval Assessment and Control of Installation Pollutants program conducted at 16 Navy and Marine Corps facilities, San Diego, CA.** As part of the Department of Defense (DOD) installation restoration program, 16 facilities were identified as potentially contaminated sites resulting from the past use, storage, handling, and disposal of hazardous materials. The project consisted of the review of archival and base records, interviews with long-term or retired base personnel, on-site inspections/surveys, and the submission of a final report.

**Former Miller Way Landfill closure and removal of soil stockpile from former gun range, South Gate, CA.** On behalf of the City of South Gate, Mr. Nuno assisted with the closure of a former inert refuse landfill, which included preparation of a grading plan for the facility, quality assurance as part of the grading process, and installation of drainage structures while maintaining communication with the Los Angeles RWQCB. Following an inspection by the DTSC, an enforcement order was issued to remove a stockpile of soil contaminated with lead. Under Mr. Nuno's direction, the soil was characterized and disposed of in a cost-effective manner. He interfaced with DTSC personnel throughout the duration of the program. A final report was submitted to DTSC, leading to issuance of a no further action letter regarding the soils.

**Supplemental site investigation and preparation of a health risk assessment for former industrial zinc plating facility, Long Beach, CA.** A removal action was issued by the U.S. Environmental Protection Agency (EPA) for an abandoned facility. SCS reviewed available reports associated with the facility, initiated discussions with the DTSC, prepared a work plan for additional investigation in accordance with the corrective action agreement, and implemented the investigation that included collection and analysis of soil, soil vapor (sub-slab and subsoil), indoor air, and groundwater

samples. Data collected was used to prepare a health risk assessment submitted to the DTSC, which resulted in the commercial redevelopment approval.

**Investigation and Abatement of Pesticide-Impacted Soil, Oxnard, CA.** In response to recommendations within a Phase I Environmental Assessment and Soil Sampling report prepared by another consultant for a property proposed for residential development, Mr. Nuno worked with the Ventura County Environmental Health Department (EHD) to develop an abatement approach for elevated concentrations of toxaphene detected in the soil. Based on the information provided, closure was issued by the EHD.

**Methane Gas Assessments – Los Angeles, Signal Hill, Long Beach, and Santa Fe Springs, CA.** In order to assess potential hazards associated with development within former and existing oil field areas, investigations were conducted to address local requirements to determine protection measures potentially required as part of existing or proposed developments. Investigations consisted of installing several wells, monitoring to assess concentrations of combustible gases, and preparing reports to provide conclusions and recommendations analyzed from the data.

**Proposed Redevelopment, Vermont Avenue, Los Angeles, CA.** In order to evaluate a property proposed for subterranean construction, Mr. Nuno developed an approach to investigate potential concerns associated with past on- and off-site uses, which included former automotive repair. The investigations also included surveys for asbestos-containing materials and a methane gas investigation in accordance with City of Los Angeles requirements. In addition, a soil management plan was prepared to provide contingencies for the impacted soil in the event of exposure during construction. Based on the results of the investigation, regulatory concurrence was received from the Los Angeles County Fire Department, Site Mitigation Unit.

**Phase I ESA and Site Characterization, Canoga Park, CA.** Available documentation indicated that a portion of a building was used as a dry cleaner. A soil vapor investigation revealed the presence of tetrachloroethylene (PCE) in soil. Assessments of soil vapor, soil, and groundwater were conducted to fully characterize the extent of the release. In addition, indoor air sampling was conducted to assess the potential for PCE migration into the building.

**Site Assessments, Oil and Gas Industry, Central Coast and Bakersfield, CA.** Mr. Nuno has been involved in conducting initial assessments and subsurface investigations of oil fields in the Central Coast and Bakersfield areas. The initial assessments included a site inspection and evaluation of background information, including historical aerial photographs to identify potential release areas. Investigations were conducted to assess possible releases.

## Storage Tanks

**Assessment of Storage Tanks Containing Hazardous Waste.** Mr. Nuno has been involved in several dozen projects to assess the condition of aboveground tanks used for storing hazardous wastes, including oil and other petroleum wastes, acids, and caustics. These assessments were completed in accordance with regulatory requirements under Title 22 California Code of Regulations 66265.190 through 66265.202.

**University of California, Los Angeles (UCLA).** For several years, Mr. Nuno has assisted UCLA in complying with applicable federal, state, and local regulations for USTs throughout the campus located in Los Angeles, CA. Services provided have included inspections, reviews of existing as-built drawings, coordination of testing, preparation of plans for upgrades or modifications, assistance with plan checks, interfacing with regulatory agencies, sample collection, preparation of work plans and closure reports, and construction quality assurance (CQA).

**City of Buena Park Auto Center, Buena Park, CA.** As part of the acquisition of properties that would comprise the Auto Center, SCS completed several Phase I Assessments and Phase II Investigations. One of the properties assessed was determined to have been a former gasoline service station that had impacted both soil and groundwater. Investigations of soil and groundwater were completed under Mr. Nuno's direction, and a RAP was submitted for the mitigation of fuel hydrocarbons. Groundwater monitoring was conducted on a semi-annual basis through cleanup. Based on the investigations, a transaction was structured for the purchase of the property.

**City of South Gate Department of Public Works, South Gate, CA.** Following failed Senate Bill 989 (SB 989) highlighting fueling system tests and emergency USTs, SCS performed evaluations of existing installations to identify the necessary upgrades. As Project Manager, Mr. Nuno interfaced with SCS's client and regulatory agency personnel for several projects providing recommendations for upgrading underground tank installations, preparing and reviewing plans and specifications, providing assistance during the bidding process, conducting oversight during installation, collecting soil samples as part of closures, and preparing closure reports.

**Retirement Housing Foundation, Angelus Plaza, Los Angeles.** As follow-up to a Phase I ESA completed on this property, an investigation was completed to assess the potential for releases of fuel from underground tank systems. Borings were drilled adjacent to the underground tanks and pipelines, subsequently assisting in the evaluation of alternatives for replacing one of the underground tanks.

**Investigation and remediation of soil and groundwater impacted as a result of release from a UST, Santa Fe Springs, CA.** This project consisted of characterizing soil and groundwater with the oversight of the Los Angeles County Department of Public Works and RWQCB. A vapor extraction remediation system was installed to mitigate gasoline-impacted soil. Groundwater monitoring was conducted throughout the duration of remediation efforts. Costs were reimbursed under the California Underground Tank Cleanup Fund, requiring review of all work and associated costs by fund personnel.

**Evaluation of alternatives for mitigation of soil contamination from leaking USTs at Los Angeles International Airport (LAX), CA.** The evaluated alternatives included excavation and on-site treatment, excavation and hauling to a disposal site, vapor extraction, and no action. Alternatives were evaluated in terms of ease of implementation, regulatory constraints, costs, duration of treatment, and other applicable factors.

**RHF Bixby Tower investigation and closure, Long Beach, CA.** Available information indicated a portion of the property occupied by Bixby Tower was a former service station with USTs. A subsurface investigation indicated the presence of low concentrations of petroleum hydrocarbons. Data were submitted to the Long Beach Health Department for review. Based on the data, no further action was issued by the Health Department.

**Aboveground Storage Tank Evaluation.** Mr. Nuno has been involved in several projects involving the evaluation of aboveground storage tanks used to contain hazardous wastes. The evaluation was conducted in accordance with the California Code of Regulations and included the evaluation of construction materials, compatibility of the tank with materials stored in the tank, corrosion protection, and whether adequate spill protection is available.

## Expert Witness/Litigation Support

Mr. Nuno has provided litigation support on various projects, a representative sampling of which is provided below.

- In support of an eminent domain action to gain access to a property for investigation, Mr. Nuno provided court testimony that included an explanation of the rationale for the investigation, a description of what would be done on site, the amount of time required for the investigation, and how the results would be used. As part of this project, Mr. Nuno appeared in court on four separate occasions.
- Mr. Nuno served as an expert witness and provided deposition testimony regarding investigation and remedial activities conducted on a property in Los Angeles County. Soil and groundwater on a property taken through eminent domain by a redevelopment agency had been impacted by a release of fuel hydrocarbons. He provided testimony regarding the investigation that had been conducted by SCS, and the applicability of regulatory requirements to the site. He also critiqued reports prepared by the plaintiff's expert witness.
- Mr. Nuno served as an expert witness for a partnership involved in reorganization. His involvement regarded mitigation of contaminants on a developed property owned by the partnership, which was formerly utilized for oil production. He reviewed investigations conducted on the site by others, and provided realistic cost estimates for mitigating petroleum hydrocarbons identified in soil on the site.
- On behalf of a defendant that sold several properties throughout Southern California that contained USTs, Mr. Nuno reviewed investigation reports and provided a separate assessment of remedial measures that would be required at each site. Based on this evaluation, a settlement was negotiated.
- For a major manufacturing facility in Silicon Valley, Mr. Nuno evaluated information for a remedial investigation and cleanup action conducted as a result of a release from an aboveground tank containing chlorinated solvents. An opinion was provided regarding the appropriateness of measures taken to investigate and prevent the off-site migration of contaminants.
- Mr. Nuno served as Project Manager for an investigation conducted on a property that had been impacted by oil field operations. He interfaced with legal counsel and assisted SCS's expert witness in preparation for deposition and trial testimony.
- As part of litigation between a property owner and former tenant, Mr. Nuno was named as an expert witness to opine regarding investigations and adequacy of cleanup conducted to investigate a release from a former dry cleaning facility.
- Mr. Nuno has managed numerous preliminary site assessments and investigations conducted on behalf of law firms. In many cases, the work conducted by SCS formed the basis for negotiating the sale of real property. He has been involved in meetings with legal counsel of sellers and purchasers to discuss findings and provide opinions of potential liabilities associated with properties.

These inquiries must also be conducted by USEPA Brownfield Assessment and Characterization grantees. The user should provide the following information to the Environmental Professional overseeing this Phase I ESA. Failure to conduct these inquiries could result in a determination that “all appropriate inquiries” is not complete.

**(1) Environmental Cleanup Liens (40 CFR 312.25).** Did a search of recorded land title records (or judicial records where appropriate) identify any environmental liens filed or recorded against the property under federal, tribal, state or local law?
