

Summary Form for Electronic Document Submittal

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Title: Failsafe Outfall and Emergency Bypass Pipeline Phase II Project

Lead Agency: Vallecitos Water District

Contact Name: Ryan Morgan, PE

Email: rmorgan@vwd.org Phone Number: (760) 752-7132

Project Location: Carlsbad *City* San Diego County *County*

Project Description (Proposed actions, location, and/or consequences).

The proposed project is located between Melrose Drive and Paseo Privado in the City of Carlsbad in San Diego County, California. The location is further described as being within Sections 19 and 20 of Township 12 South, Range 3 West on the U.S. Geological Survey Rancho Santa Fe quadrangle.

The Vallecitos Water District is proposing to rehabilitate approximately 1,060 feet of existing 16-inch reinforced plastic mortar sewer pipeline with a cured-in-place pipe liner, replace necessary control valves and appurtenances to operate the line, and provide new access locations at incremental lengths along the alignment. The pipeline would be accessed by digging two access pits: one within Melrose Drive and the adjacent parking lot, and one within the District easement approximately 65 feet east of Melrose Drive. Equipment, vehicles, and personnel would access the work area from Melrose Drive and the existing paved access road that runs from Melrose Drive to Paseo Privado. Equipment staging would occur within the graded access road south of the District easement. Minor grading may be required to reach the eastern access pit from the graded access road. Any spoils would be stored within existing disturbed or developed areas, or within the District easement, uphill from the access pits.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

The project would include potentially significant unless mitigated impacts to Biological Resources. Mitigation Measure BIO-1 would mitigate Group F vegetation community (disturbed habitat) at a ratio of 1:1 through revegetation with a native sage scrub seed mix. Mitigation Measure BIO-2 would reduce impacts through implementation of construction measures.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.
