

# Summary Form for Electronic Document Submittal

**Form F**

Lead agencies may include 15 hardcopies of this document when submitting electronic copies of Environmental Impact Reports, Negative Declarations, Mitigated Negative Declarations, or Notices of Preparation to the State Clearinghouse (SCH). The SCH also accepts other summaries, such as EIR Executive Summaries prepared pursuant to CEQA Guidelines Section 15123. Please include one copy of the Notice of Completion Form (NOC) with your submission and attach the summary to each electronic copy of the document.

Project Title: Cabrillo High School Baseball Lighting

Lead Agency: Lompoc Unified School District

Contact Name: Douglas Sorum, Assistant Superintendent, Business Services

Email: sorum.douglas@lUSD.org Phone Number: (805) 742-3200

Project Location: Vandenberg Village Santa Barbara  
*City* *County*

Project Description (Proposed actions, location, and/or consequences).

The proposed Project involves the installation and operation of an exterior lighting system for the existing baseball field at the southeastern corner of the Cabrillo High School Campus. Cabrillo High School is located at 4350 Constellation Road, in the Vandenberg Village area of unincorporated Santa Barbara County. Eight (8) light poles are proposed to be between 70 and 80 feet in height, and each would support multiple luminaires (light fixtures). The lights would be used to illuminate the baseball field for practices and games that extend beyond dusk.

Identify the project's significant or potentially significant effects and briefly describe any proposed mitigation measures that would reduce or avoid that effect.

Excavation for electrical conduit installation could potentially encounter archaeological resources. Mitigation measures require worker awareness training prior to construction commencement and retention of a professional archaeologist for spot monitoring during trenching as well as for assessment of any resources encountered. Excavation also has the potential to result in erosion of soil materials if construction is performed during the rainy season. A mitigation measure requires preparation of an erosion control plan and implementation of best management practices during construction to prevent erosion of soil. Lighting of the baseball field late at night could result in annoyance for the immediately adjacent residences. Mitigation measures require testing of the installed system to ensure installation is compliant with specifications that prevent light spill onto adjacent properties, dimming of the lights within 15 minutes of activity ending at the baseball field, and extinguishment of the lights not later than 10 p.m.

If applicable, describe any of the project's areas of controversy known to the Lead Agency, including issues raised by agencies and the public.

No areas of known controversy.

Provide a list of the responsible or trustee agencies for the project.

Division of State Architect has building code and site plan life safety issue review authority for the improvement plans, as the facility is a public school.
