VILLA SERENA VEHICLE MILES TRAVELED (VMT) SCREENING EVALUATION

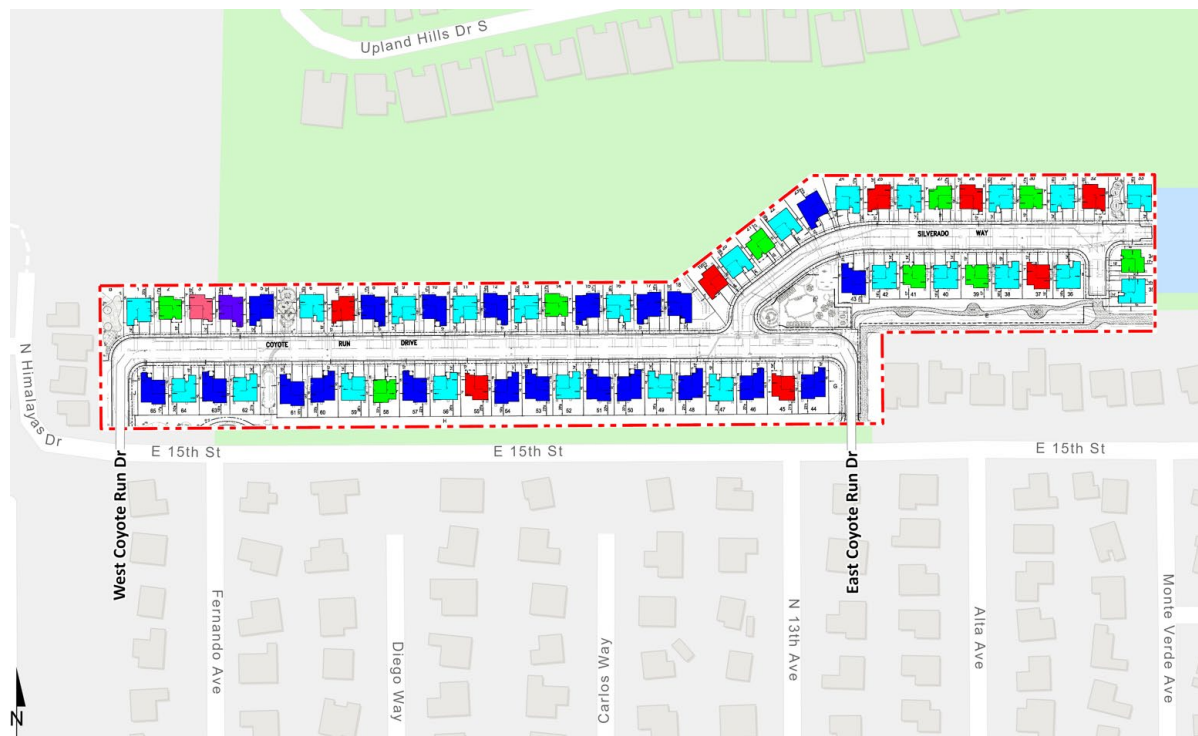

Mr. Brian A. Bush,

Urban Crossroads, Inc. is pleased to provide the following Vehicle Miles Traveled (VMT) Screening Evaluation for the Villa Serena development (**Project**) which is located northeast of Fernando Avenue and E 15th Street in the City of Upland.

PROJECT OVERVIEW

It is our understanding that the project is to consist of 65 single family detached residential dwelling units. Preliminary site plan as shown below in Exhibit 1.

EXHIBIT 1: PRELIMINARY SITE PLAN

¹ Pub. Resources Code, § 21064.3 ("Major transit stop" means a site containing an existing rail transit station, a ferry terminal served by either a bus or rail transit service, or the intersection of two or more major bus routes with a frequency of service interval of 15 minutes or less during the morning and afternoon peak commute periods;").

² Pub. Resources Code, § 21155 ("For purposes of this section, a high-quality transit corridor means a corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours;").

- Has a Floor Area Ratio (FAR) of less than 0.75;

project:

Consistent with guidance identified in the City Guidelines, projects located within a Transit Priority Area (TPA) (i.e., within ½ mile of an existing "major transit stop"¹ or an existing stop along a "high-quality transit corridor"²) may be presumed to have a less than significant impact absent substantial evidence to the contrary. However, the presumption may not be appropriate if a

STEP 1: TPA SCREENING

significant impact.

A land use project need only meet one of the above screening criteria to result in a less than

- Step 1: Transit Priority Area (TPA) Screening
- Step 2: Low VMT Area Screening
- Step 3: Project Type Screening

steps:

The City Guidelines identify Projects that meet certain VMT screening criteria may be presumed to result in a less than significant transportation impact. It is our understanding the City of Upland utilizes the San Bernardino County Transportation Authority (SBCTA) VMT Screening Tool (**Screening Tool**). The Screening Tool allows users to select an assessor's parcel number (APN) to determine if a project's location meets one or more of the screening thresholds for land use projects identified in the City Guidelines. The City Guidelines lists the following VMT screening

VMT SCREENING

Guidelines.

Guidelines) (2). This VMT screening evaluation has been developed based on the adopted City and thresholds, as documented in the City of Upland Traffic Impact Analysis Guidelines (**City Technical Advisory**, the City of Upland has developed and adopted their own VMT methodologies Transportation Impacts in CEQA (December of 2018) (**Technical Advisory**) (1). Based on the Office of Planning and Research (OPR) released a Technical Advisory on Evaluating This statewide mandate went into effect July 1, 2020. To aid in this transition, the Governor's level of service (**LOS**) as the measure for identifying transportation impacts for land use projects. 2018, which require all lead agencies to adopt VMT as a replacement for automobile delay-based Changes to California Environmental Quality Act (CEQA) Guidelines were adopted in December

BACKGROUND

Additionally, the City Guidelines state that small projects generating fewer than 250 daily vehicle trips may be presumed to have a less than significant impact, subject to discretionary approval by the City. Trips generated by the Project's proposed land uses have been estimated based on trip generation rates collected by the Institute of Transportation Engineers (ITE) Trip Generation Manual, 11th Edition, 2021 (4). A Project of this size is anticipated to generate 614 daily vehicle

contrary. The Project, as intended, does not contain any local serving uses. The City Guidelines identify that local serving retail less than 50,000 square feet or other local serving essential services (e.g., day care centers, public schools, medical/dental office buildings, etc.) are presumed to have a less than significant impact absent substantial evidence to the

STEP 3: PROJECT TYPE SCREENING

Low VMT Area screening criteria is met.

The City Guidelines state that projects may be presumed to have a less than significant VMT impact if located in an already low VMT generating traffic analysis zones (TAZs) that generates a VMT per service population (SP) that is better than the City of Upland General Plan Buildout VMT (SBTAM) to measure VMT performance within individual TAZs within the region. The Project's physical location based on parcel number is selected in the Screening Tool to determine the TAZ in which the Project will reside. The Project's TAZs VMT per service population was compared to City's adopted threshold of 35.3 VMT per SP. The parcel containing the proposed Project was selected and the Screening Tool was run for origin-destination (OD) VMT per service population. The Project's TAZ 53656201 generates 31.4 VMT per SP, which is better than the City's adopted threshold Citywide average VMT per SP under buildout conditions. The Project is located within a low VMT generating zone (See Attachment A).

As noted in the City Guidelines, consistent with the Technical Advisory, "Residential and office projects that locate in areas with low VMT and that incorporate similar features (density, mix of uses, and transit accessibility) will tend to exhibit similarly low VMT."

STEP 2: LOW VMT AREA SCREENING

TPA screening criteria is not met.

The Screening Tool was utilized to locate the Project site and its proximity to a TPA. Results, as shown in Attachment A, identifies the Project Site is not located within 1/2 mile of an existing major transit stop or along a high-quality transit corridor.

- Includes more parking for use by residents, customers, or employees of the project than required by the jurisdiction (if the jurisdiction requires the project to supply parking);
- Is inconsistent with the applicable Sustainable Communities Strategy (as determined by the lead agency, with input from the Metropolitan Planning Organization); or
- Replaces affordable residential units with a smaller number of moderate- or high-income residential units.

trips. Therefore, the Project generates daily vehicle trips exceeding the 250 daily vehicle trip threshold (See Attachment B).

Project Type screening criteria is not met.

CONCLUSION

In summary, the Project was found to meet Low VMT Area screening criteria. The Project's impact on VMT is presumed to be less than significant; no further VMT analysis is required.
