Completed Sub Area Name: Not reported  
Completed Document Type: Site Screening  
Completed Date: 11/02/1994  
Comments: Completed Site Screening. On December 13, 1989, the SF Regional Water Quality Control Board (RWQCB) issued Order No. 89-182 addressing site investigation cleanup of the soil and groundwater pollution. From 1993 to 1999, a combined soil vapor and groundwater extraction operated on the site. The cleanup plan did not meet expectations. Removal efficiency was low and there were a number of operational difficulties due to site soil conditions. The RWQCB issued an amended order, requiring excavation of vadose zone soil that exceeds the risk based cleanup goals; and monitored natural attenuation for impacted groundwater.

Completed Area Name: PROJECT WIDE

Completed Document Type: Site Screening  
Completed Date: 01/29/1990  
Comments: Completed Site Screening. During the investigation of groundwater, free product containing toluene and hexane was discovered in one monitoring well. The free product is believed to be the result of an overflow from an underground sump connected to the solvent recovery system.

 File Location: All Files are on GeoTracker or in the Local Agency Database  
 Local Case Number: 06S1E19E02f  
 Potential Media Affect: Other Groundwater (uses other than drinking water)  
 Potential Contaminants of Concern: Gasoline

Site History: In 2003, the Santa Clara Valley Water District and Regional Water Quality Control Board requested a subsurface investigation of MTBE at the subject property due to the fact it has operating underground storage tanks located within 2000-feet of a water supply well. Three monitoring wells were installed to monitor the MTBE concentration in the groundwater on a quarterly basis. MTBE was detected in groundwater and subsequent investigations defined the extent of contamination both on and off-site. In 2013, based results of periodid monitoring, the levels on contamination have been reduced enough to qualify for closure under the State Water Resources Control Board Low-Threat Underground Storage Tank Case Closure Policy. The subject property is located in a commercial I retail/ industrial part of City of San Jose in the County of Santa Clara, California. It is located on the southwest corner of Montague Expressway and 0' Toole Avenue in the City of San Jose, California. For additional information related to the case, please visit the County of Santa Clara's DEH website for the case here:

Violation Description: Failure to comply with one or more of the following: Failure to install or maintain a liquid-tight spill bucket. Have a minimum capacity of five gallons. Have a functional drain valve or other method for the removal of liquid from the spill bucket/spill container. Be resistant to galvanic corrosion.  
Violation Notes: Returned to compliance on 10/10/2016. The Diesel UST fill spill spill bucket failed, apparently due to a leaking drain valve (no leakage into the fill sump was observed). Disregard the comment below regarding cessation of filling of the tank, but repair the bucket as soon as possible. No permit is required to replace drain valve or fittings, but a repair permit is required prior to replacing the bucket itself if that is necessary.

Violation Description: Failure to construct, operate, and maintain primary containment as product-tight.

Violation Notes: Returned to compliance on 09/21/2017. 1) The hard, pressurized product piping in the dispenser is leaking Diesel HPR. Liquid and old diesel residue was noted both on the piping and at the bottom of the dispenser. 2) Such a significant fuel odor emanated from the diesel HPR STP sump that the immediate vicinity of the sump had to be evacuated when the sump was opened, in order to allow the sump to ventilate. After 2 hours of ventilation, the sump was determined by the service technician to still be unsafe for entry and the sumps' communication could not be tested during inspection. NOTE: For VPH systems, G product tight means impervious to the liquid and vapor of the substance that is contained, or is to be contained, so as to prevent the seepage of the substance from the containment.G Evaluate the source of the leaks and submit a work plan to HMCD for review. Depending on the scope of work, a retrofit/repair permit from our office may be needed.

Violation Description: 40, Chapter 1, Section(s) 262.34(d)(5)(iii)  
Failure to ensure that all employees are thoroughly familiar with proper waste handling and emergency procedures, relevant to their responsibilities during normal facility operations and emergencies.

Violation Notes: Returned to compliance on 12/20/2017. During the diesel release on 8/17/2017, it was observed that employees are not appropriately trained on proper waste handling, the location of all required emergency response equipment, how to properly complete a hazardous waste label, and the quantity of hazardous waste containers on-site. Propel employees relied on HMCD inspectors and the neighboring business to instruct them on how to appropriately respond and manage the hazardous waste. Provide additional hazardous waste training to all employees who handle hazardous waste to ensure that hazardous waste is properly handled and managed.

Violation Description: Failure of leak detection equipment to be located such that equipment is capable of detecting a leak at the earliest possible opportunity.

Violation Notes: Returned to compliance on 09/21/2017. Diesel HPR Fill Sump: Approximately two cups of brine and a plastic trash bag were observed in the sump during inspection. Significant staining on the outside of the sensor reservoir, from brine spilling from the reservoir, was also observed. During the inspection, free-flowing quantities of brine continued to flow from the sensor reservoir and into the bottom of the sump. The service technician could not remove the sensor from the reservoir without brine continuously spilling out of the reservoir. The plastic trash bag was located just below the sensor reservoir where the brine was spilling. Pools of brine were noted both on the bag and in the low points of the sump. Containment Solutions sump installation manual states that the proper monitoring fluid level in the reservoir is 1.5 inches from the inside bottom of the reservoir. Any additional brine volume would not allow for a leak to be detected at the earliest opportunity. Remove the excess brine from the sumpG s [Truncated]

Violation Description: Failure to properly complete the Uniform Hazardous Waste Manifest.  
Violation Notes: Returned to compliance on 12/20/2017. As noted in the comments section of the UST systems inspection report, Propel FuelsG contact, Will Faulker, was instructed to and confirmed that Propel would identify the waste diesel that was cleaned up by Fremouw Environmental Services by its proper DOT description and applicable waste code (e.g. 343) on the manifest used for transport and not make a waste determination based on the commingled waste stream (i.e. water, diesel, sediment), but the waste diesel was shipped on manifest # 017607642JJK (Ship Date: 8/18/2017) as G non-RCRA hazardous waste, liquid (oily water)G and identified by waste code 223 (unspecified oil-containing waste). Per the dieselG s SDS, the DOT proper shipping name for the diesel is G UN 1202 DIESEL FUELG and the proper state waste code would be either 343 or 331, depending on the specific waste stream. (Note that per the SDS, renewable diesel has a flash point higher than 140 degrees fahrenheit and does not meet the ignitability characteristic).

Violation Notes: Returned to compliance on 12/20/2017. Propel Fuels employees on-site during inspection were not aware of the number of drums currently being used to accumulate hazardous waste generated by the facility and had to be informed by the neighboring business as to what drums belonged to Propel. The drums were also observed to be incompletely labeled, obstructed by equipment and debris, and accumulating cobwebs. Eval Notes: The following minor violations were observed, but corrected at the time of inspection: G020C: Three 55 gallon drums of hazardous waste were not marked with the initial accumulation date and the proper physical state (marked as solid when containing liquids) G110C: Equipment and debris blocked access to the hazardous waste accumulation area and spill control equipment. On-site to conduct a routine hazardous waste inspection. The facility is an un-staffed motor vehicle fueling station with two underground storage tanks (USTs) that dispense diesel HPR and E-85 flex fuel from one dispenser. Hazardous wastes are generated from customer spills and drive-offs, as well as maintenance and repairs on the UST system. Waste streams include but are not limited to spilled fuel, used fuel filters, absorbent contaminated/saturated with fuel, spill bucket and sump liquid waste, and spent dispenser hoses. During this inspection, approximately 50-100 gallons of diesel HPR was from [Truncated]

Eval Notes: On-site on Thursday 8/17/2017, to complete the Annual Monitoring System Certification (AMC) that began on 8/11/2017, with Tank-Tek service technician, Robert Slunaker. Mr. Slunaker has a current ICC service technician certification, Veeder-Root certification, and VMI LDT-890 certification. TodayG s follow-up inspection was to test the hydrostatic interstitial communication for all four sumps and the diesel HPR line leak detector that could not be tested during the original 8/11/2017 AMC, as noted in the previous inspection report. Propel District Operations Manager of Northern California, Mike Karaer, was on-site at the beginning of inspection and remained nearby during the inspection. The Veeder Root 848480-001 line leak detector (PLLD) was tested with a simulated leak right at 3.0 gallons per hour at 10 psi three times, but failed to detect a leak and shut off the flow of product through the piping when a leak is detected. To investigate the cause of the failure, the [Truncated]

Eval Date: 06-07-2018  
Violations Found: No  
Eval Type: Other, not routine, done by local agency  
Eval Notes: On site with Ethan McDermott to conduct a hazardous waste permit investigation of Eugenus Inc. after they submitted an HMBP to CERS declaring hazardous waste generation. Facility is R&D for semiconductors equipment. Facility has been operating on site since September 2017. Facility walk through was conducted with Joel Custodio, EH&S Manager. Mr. Custodio stated that they have been accumulating hazardous waste since January 2018. Facility has had no hazardous waste pick-ups. The following hazardous waste streams were observed on site: IPA saturated wipes contaminated piping and valves - coming from chemical vapor deposition The facility will be permitted for hazardous waste generation based on these observations. Notes: EPA ID is active on time of visit. Facility treats waste water coming from wet bench where new wafers are being cleaned, and is later discharged into POTW. Treatment unit receives ammonia- hydrogen peroxide- water mixture or HF-water Expired [Truncated]

Eval General Type: Other/Unknown  
Eval Date: 06-13-2018  
Violations Found: Yes  
Eval Type: Other, not routine, done by local agency  
Eval Notes: INSPECTION COMMENCED ON 6/11/2018 AND CONCLUDED TODAY. ON SITE WITH JOEL CUSTODIO TO CONDUCT A LIMITED WALK THROUGH OF THE FACILITY AND NEUTRALIZATION UNIT. THE FACILITY OPERATES ONE WET BENCH WHERE WAFERS ARE CLEANED IN BATH MIXES OF 200:1 AND 100:1 HYDROGEN FLUORIDE. ONCE BATHS BECOME SPENT A VALVE BELOW THE WET BENCH IS OPENED TO ALLOW FLOW TO A LIFT STATION, SUBSEQUENT RINSES AUTOMATICALLY FLOW THE LIFT STATION AS WELL. ONCE THE LIFT STATION REACHES A SPECIFIC LIQUID LEVEL, THE LIQUID IS PUMPED VIA PIPE TO THE NEUTRALIZATION TANK. WASTE NEUTRALIZATION OCCURS ONCE LIQUID WASTE ENTERS THE TANK.

Environmental Interest/Information System:

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

The installed "snap taps" indicate that annual testing of the Vaporless Manufacturing model 2000 mechanical line leak detector (MLLD) installed on the Red Jacket turbine has been done by simulating a 3.0 gallon-per-hour leak at the master GasBoy dispenser. Testing the lines at this point is not in conformance with the testing procedure specified by the MLLD's manufacturer, Vaporless Manufacturing, which requires that testing be done at the dispenser located farthest from the MLLD location. Furthermore, since the fuel dispensers at this facility consist of a central master dispenser with two satellite dispensers which appear to be supplied by the master dispenser, testing at the master dispenser does not demonstrate that the MLLD is also capable of monitoring the piping running between the master dispenser and the satellite

Eval Notes: Onsite to witness secondary containment testing (SB989) for a Underground Storage Tank system. Testing conducted by Balch Petroleum Inc. System is single tank with fill and STP sumps. Single product line feeds three dispensers. Vent line also present. STP and fill sumps will filled with water to above highest product piping penetration and tested using the Caldwell accelerated test method. Both technicians (E Mortera and R Henninger) had valid Caldwell certifications. -- Sumps passed, showing no loss over 30 minutes. Product piping containment was pressurized to 3.8 psi for one hour without loss Vent piping containment was pressurized to 3.0 psi for

Eval Notes: On-site to witness annual monitoring certification and to perform an inspection of the underground storage tank system. Testing today is performed by Elmer Mortera of Blach Petroleum Contractors & Builders, Inc. Mr. Mortera has current certifications required to test system components (ICC service tech, franklin fueling systems FMS installation and programming, VMI LDT-890 LLD tester). System performed as designed with no exceptions. VMI LD 2000 Mechanical Line leak detector was tested at both satellite dispensers to confirm that the master dispenser is configured to facilitate line pressure communication between the main dispenser and the satellite dispensers. Going forward, testing will always be performed at the furthers (north) satellite dispenser. Failed spill bucket from testing on 6-15-17 was replaced today at time of inspection like-for-like. A 5 gallon calibration can was used to ensure bucket has a minimum of 5 gallon in capacity. Tested for 1 hour [Truncated]

**Environmental Interest/Information System:**

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Environmental Interest/Information System:**

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Violation Description: Failure to properly label hazardous waste accumulation containers with the following requirements: "Hazardous Waste", name and address of the generator, physical and chemical characteristics of the Hazardous Waste, and starting accumulation date.

Violation Notes: Returned to compliance on 03/20/2017. Facility failed to mark the solvent and hydrofluoric acid tank with the words "hazardous waste". Pickup dates are available in a consolidated record stored in the middle of the treatment area. Place the accumulation start date and "hazardous waste" marking on or as near as possible to each corresponding waste tank. REPEAT VIOLATION FROM INSPECTION PERFORMED ON 3-25-14.

assessment dated 11-13-2019 had the following issues: 1) System age identified as 23 years old which makes this tank a "new tank"; however, facility failed to ensure the system was assessed as a new tank (66265.192(k)(1)-(11)) 2) Assessment inaccurately describes the system was modified as follows: "Two additional holding tanks, one (1) for wastes with high acid concentrations, low pH, and one (1) for wastes with high base concentrations, high pH, were added to the system to help prevent system slugging and to reduce the use of neutralizing chemicals." These two holding tanks have been acquired, but have not been used or incorporated into the system in any way. 3) Report misidentifies Ammonium Hydroxide (NH4OH) as Ammonium Nitrate and indicates it is one of the waste waters received by the treatment system.

Eval Notes: 1 acid waste neutralization system on-site. Corrosive waste (concentrated and dilute forms) from the fab and scrubber system is sent to the waste treatment system for pH adjustment. Concentrated corrosive baths, rinses including metal and hydrofluoric acid, and corrosives from container rinsing are sent via gravity to the 1st of 3 tanks in an below grade tank. pH adjustment occurs in 3 tanks. All three tanks and final sample point have independent pH probes that are calibrated and cleaned monthly (log reviewed). pH that is out of specification (outside pH 6.5-11.5 parameters) in tank 3 triggers a text to the facility and maintenance team's phones. Further deviations from this pH results in an audible alarm. pH that doesn't meet POTW discharge allowance is detected via the tank 3 probe and will activate a rejection mode, closing off flow to the POTW and collecting in multiple 100+ gallon sized backup tanks which are piped to return waste to tank 1.  Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Citation: 22 CCR 12 66262.11 - California Code of Regulations, Title 22, Chapter 12, Section(s) 66262.11  
Violation Description: Failure to determine if wastes generated are hazardous waste by using generator knowledge or applying testing method.  
Violation Notes: Returned to compliance on 08/22/2019. Perform hazardous waste determinations on the following: Metals from the fine filters located in some of the larger CNC machines, and from the coolant recycling influent filter. Filters currently are emptied into the scrap metal stream. Determine if particles less than 100 microns are in these filters; if so, determine if they meet hazardous waste criteria. 13x5 gal containers of oil, some marked "good", and some marked "used". Spent filters from the downdraft/vacuum sanding deburring tables. Used generator knowledge (eg mill spec sheets) or perform analytical testing on the spent filters. If testing, perform a totals CAM 17 TTLC (and STLC if TTLC numbers indicate). Small amount of metal particles and turnings in multiple trash containers throughout the building.

Eval General Type: Compliance Evaluation Inspection  
Eval Date: 08-02-2019  
Violations Found: Yes  
Eval Type: Routine done by local agency  
Eval Notes: State ID # CAL000417788 is active. Facility generates more than 1,000kg/mo of hazardous waste and is a California Large Quantity Generator. Facility performs machines parts mostly consisting of aluminum and stainless steel. No high pressure or fine misting machines observed. Some CNC machines utilize a fine filter to remove metals from the coolant that is being recirculated. Deburring is performed manually over a downdraft table. No tumbling or media blasting occurs on-site. Facility reclaims coolant used on site via a tank that provides for particle filtration and phase separating of oil from coolant. Separated oil is skimmed and disposed of as hazardous

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Potential Media Affected: Aquifer used for drinking water supply, Other Groundwater (uses other than drinking water), Soil, Surface water  
Potential Contaminants of Concern: Aviation, Diesel, MTBE / TBA / Other Fuel Oxygenates, Gasoline  
Site History: SFPP owns and operates a bulk petroleum storage and distribution terminal at the site. This facility was originally constructed in the 1950s and has since been expanded several times. The current facility consists of 33 aboveground storage tanks used to store diesel, gasoline, and aviation fuels. Seven loading rack facilities where transport trucks are filled with petroleum product are also present at the site. SFPP has conducted numerous subsurface assessments to evaluate soil and groundwater conditions at the site since the late 1980s, including the installation of 33 groundwater monitoring wells and the advancement of 88 soil borings; and semi-annual groundwater monitoring currently takes place.

**Environmental Interest/Information System:**

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that

discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
  
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Citation: HSC 6.67 25270.4.5(a) - California Health and Safety Code, Chapter 6.67, Section(s) 25270.4.5(a)  
Violation Description: Failure to comply with one or more of the following requirements: 1. Have record of inspections and integrity tests signed by the appropriate supervisor or inspector. 2. Keep written procedures and records of inspections and integrity tests for at least three years. 3. Keep comparison records.  
Violation Notes: Returned to compliance on 04/20/2018. Overfill prevention inspection frequencies in the SPCC plan mention monthly inspection/testing but record documents showed more than one month, and one full calendar month in which no inspections were conducted on the following occasions: SJ-31: 11/21/2016-1/5/17 SJ-32: 11/21/2016-1/5/17 SJ-33: 10/17/16- 12/11/16 SJ-33: 10/17/16- 12/8/16 SJ-13: 2/7/16- 4/3/16 SJ-29: 6/27/16- 8/5/16 and no notation of inspection in January, 2016 API 653 annual exterior inspection sheets often marked boxes with an asterisk, which according to the forms instructions should be accompanied by a comment or corrective action. Some reports did include the "FP" indicators for flaking paint, but other sections, including 4.2 which is used to note defect to tanks steel (cracking, denting, bulging, corrosion) were marked as "YES" without explanation. Citation: 22 CCR 11 66261.7 - California Code of Regulations, Title 22, Chapter 11, Section(s) 66261.7  
Violation Description: Failure to manage empty containers greater than 5 gallons in capacity that previously held a hazardous material/waste in accordance with 22 CCR 11 66261.7 including but not limited to the following: (e)(2)By reclaiming its scrap value onsite or shipping the container or inner liner to a person who reclaims its scrap value; or (3) By reconditioning or remanufacturing the container or inner liner onsite for subsequent reuse, or shipping the container or inner liner to a person who reconditions or remanufactures the container or inner liner; or (4) By shipping the container or inner liner to a supplier or to another intermediate collection location for accumulation prior to managing the container or inner liner pursuant to subsections (e)(2) or (e)(3) of 22 CCR 11 66261.7; or (i) By shipping the container or inner liner back to the supplier for the purpose of being refilled. (f) A container or an inner liner removed from a container larger than five gallons in capacity which is managed pursuant to subsection (e) of 22 CCR 11 66261.7 shall be marked with the date it has been emptied and shall be managed within one year of being emptied.  
Violation Notes: Returned to compliance on 04/20/2018. Observed approximately 15 empty, unlabeled drums that were of unknown original use stored along fence line in "boneyard" adjacent to the burner. Personnel indicated that the drums had no current use and their original contents were unknown. The drums had been identified as having been stored at this location for longer than one year.

Violation Description: Failure of the generator to prepare and maintain onsite, for a period of five years, adequate records to demonstrate that requirements and conditions of the grant of conditional authorization are met.  
Violation Notes: Returned to compliance on 03/22/2018. Facility does not have analytical data to demonstrate that the influent to the holding tanks does not exceed 750 ppm total of potentially regulated organic constituents (mainly benzene). IGNORE THE CORRECTIVE ACTION BELOW AND IMMEDIATELY COLLECT REPRESENTATIVE SAMPLES OF EFFLUENT FROM THE OIL WATER SEPARATOR TO DEMONSTRATE THAT TOTAL ORGANIC CONCENTRATION OF REGULATED SPECIES DOES NOT EXCEED 750 PPM. Citation: 22 CCR 45 67450.3(c)(9)(F) - California Code of Regulations, Title 22, Chapter 45, Section(s) 67450.3(c)(9)(F)  
Violation Description: Failure of generator to obtain assessment or reassessment every five (5) years or the remaining service life of the tank system, as stated in the engineer's assessment, whichever is less. This assessment applies to onground or aboveground tank systems containing only non-RCRA hazardous wastes generated onsite, and tank systems authorized under Permit-by-Rule, Conditional Authorization, and Conditional Exemption or for a small quantity generator onground or aboveground tank systems containing RCRA hazardous wastes generated onsite.  
Violation Notes: Returned to compliance on 04/20/2018. The periodic tank assessment conducted in December, 2015 does not address the seismic bracing of the tanks, not does is specifically demonstrate that the containment for the tanks is adequately sized.

Violation Description: Failure to determine if the waste generated is a hazardous waste.  
Violation Notes: Returned to compliance on 04/20/2018. (1) SFPP/Kinder Morgan has classified and currently manages multiple sources of petroleum "product" as transmix. Two of said "products"; pipeline interface transmix and gathering line transmix are specifically noted with the FERC tariff rules and regulations. Other petroleum is also handled as transmix, but it not specifically called out in this agreement/regulation. Examples of such items include petroleum separated from oily water mixtures in an onsite oil water separator, washdown of dispensed product from loading racks (this material can additionally contain blended additives unlike pipeline materials, biodiesel, and potentially degreasing solvent BCS T-26), and samples taken from tanks and pipelines. IGNORE THE CORRECTIVE ACTION NOTED BELOW AND PROVIDE AN EXPLANATION OF WHY MATERIAL/WASTES NOTED BUT NOT INCLUDED IN THE FERC REGULATION ABOVE, BUT MANAGED AS TRANSMIX ARE NOT WASTES, HAZARDOUS WASTES, AND/OR EXCLUDED RECYCLABLE MATERIALS. Eval Notes: Inspection began 3/13, completed 3/22, report delivered 3/26. Inspection conducted with Molly Pritz, Hazardous Materials Specialist II. Facility operates under EPA ID CAD063566152. Facility is identified as a RCRA LQG, and generally generates waste in larger episodic events or more than 1000 kg in a month rather than routinely. SFPP/Kinder personnel identified site as location where they own the infrastructure used to store fuels, but they don't actually own the product. Site generates wastes which area managed by placing them in the "transmix" tanks. Three main feeds to the transmix tanks are (1) pipeline interfaces; (2) batch wastes "from Concord"; (3) products floated in the Oil Water Separator. Additional smaller quantity feeds include dump station at jet fuel/biodiesel load rack, sink at pipeline sample 'shack', --SFPP/KinderMorgan has made claim that the transmix is not owned by them, but by its customers. The contents of the transmix tanks is allocated to its [Truncated]

Eval Notes: Inspection walkthrough conducted 3/13, review of documentation took place 3/22. Facility has SPCC plan dated April 2016. Plan was originally produced June, 2003. 5 year review and modifications noted 10/31/08, 6/13/13, 10/5/15, and 4/20/16. Each amendment accompanied by PE recertification. 5-year review signed and approved by management. Site has buried pipeline which carried various petroleum products underground to site, where it comes aboveground and is routed to various storage tanks. Storage tanks then distribute to series of loading racks, with different rack loading areas assigned or dedicated to certain products. Site also stores series of petroleum based additive materials which are blended with stored fuels at the loading racks. Generally, fuel storage tanks are located within one of two containment structures, with earthen floors and cinderblock walls. Site has completed and SPCC references soil compaction data to demonstrate impermeability. -Drainage of [Truncated]

Eval Notes: System is three tank, two containers used to remove excess organic materials from previously treated waste water. Oil water separator in front of two holding tanks would be exempt from regulation as a treatment unit so long as the petroleum fraction which is recovered from it is recycled. Remaining water flows to two hold tanks, through a series of in-pipe particulate filters (up to 10 micron), then through two carbon canisters in series. Upon release from carbon bed, pH is measured and caustic soda is injected into piping to ensure liquid meets discharge range. pH meter during inspection read 4.9 at meter nearest carbon and 6.25 at second pH meter prior to sample box. Facility uses surity bond for financial assurance, since closure costs estimated at over \$10,000 Reviewed CERS submittal dated 2/28/2018 - Application -Financial Assurance and closure cost estimate The following documents were requested and reviewed onsite: Waste treatment logs 2016-2018. Comments: PCE and gasoline spills in June '84 and December '85 recently triggered county involvement. Preliminary assessment of 1987 recommended DTSC (then DHS) and city of San Jose review permit to upgrade spill containment. But also says No Further Action (NFA). No further action per EPA preliminary assessment for the site only determined that the hazard ranking score (HRS) would not admit it into National Priority List (NPL). DTSC's recommendation on re-evaluation of the site reflects the departments own criteria. Recommendation is County Lead. Limited DTSC involvement anticipated.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
  
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

facilities.  
 US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.  
**HAZARDOUS AIR POLLUTANT MAJOR**  
 RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.  
**HAZARDOUS WASTE BIENNIAL REPORTER STATE MASTER**  
 ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Site History: The Equilon site (formerly Shell Oil) is an operating petroleum product distribution terminal, which is used to store gasoline, diesel fuel, and fuel additives. The 9.6-acre site is located on the northeast side of Coyote Creek in a commercial area of San Jose. The site began operation in the mid 1960s, as it was constructed from 1964 to 1965. The site includes four (4) aboveground fuel tanks, three (3) aboveground fuel additive tanks, a (1) below-grade 4,000-gallon transmix tank, a four-lane fuel loading rack, three (3) aboveground wastewater tanks, and several buildings. The plant stores and distributes three (3) grades of gasoline from the truck loading rack.

Environmental Interest/Information System:

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

**Project Revenue Source Desc:** Van Waters and Rogers, Inc., the responsible party is conducting cleanup activities under the direction of the RWQCB. The RWQCB will continue to have lead responsibility for monitoring Van Waters and Roger's progress under an existing cooperative agreement between the RWQCB, EPA and DHS. The RWQCB is conducting the work with support from the EPA through a cooperative agreement. Until such time as the RWQCB refers the site to DHS for follow-up using Bond funds, no money will be budgeted from this fund for this site.

**Site Description:** Van Waters and Rogers is a division of Univar which operates a chemical blending, storage and distribution facility. The site encompasses about 12 acres in the City of San Jose. The facility contains about 36 underground tanks which store a variety of organic compounds.

**Hazardous Waste Desc:** In 1982, soil and ground water contamination was discovered at the site. This contamination was caused by spillage, inadequate handling practices and/or leakage from tanks and piping. The following contaminants have been detected: trichloroethane (TCA), perchloroethylene (PCE), dichloroethane (DCA), dichloroethylene (DCE), methylene chloride, vinyl chloride, toluene, ketones, xylene and alcohols.

**Threat To Public Health & Env:** Ground water contamination at the site represents a potential threat to public health and the environment. Domestic wells are located one-half mile downgradient of the site.

**Site Activity Status:** Van Waters and Rogers, Inc, has installed and is operating a ground water extraction system. The lead responsibility within DHS for oversight of remedial activities at this site has been transferred to the regional facilities permitting unit.

Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Acetone, Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride  
Site History: Site is under Water Board Order No. 91-138. Information from: Second Five-Year Status Review Vopak USA Inc. Page 2 San Jose, California February 27, 2002 1.1 PROJECT OVERVIEW( On April 2, 2001, Van Waters & Rogers, Inc. became Vopak USA Inc. (Vopak). Vopak operates a warehouse and distribution facility (the site) at 2256 Junction Avenue in San Jose, California. The principal operations at the site, which began in 1976, include bulk chemical transfer between tank trucks, railroad tank cars, and chemical blending and packaging. In the past, 37 underground storage tanks (USTs) have been used to store chlorinated and petroleum hydrocarbons. All 37 USTs have since been removed and currently, chemicals are stored in aboveground storage tanks (ASTs). Site Characterization Subsurface investigations began at the site in late 1982 at the request of the RWQCB. Site characterizations have identified two water-bearing zones, referred to as the "A-" and "B-" aquifers. The A-aquifer, which is present between depths of 10 and 45 feet below ground surface (bgs), has been further subdivided into the A-1 and A-2 zones. The A-1 zone is characterized by silty clays and clays. The underlying A-2 zone consists of sandy clays and clayey sands. The B-aquifer, which extends to about 90 feet below grade and consists of permeable sands and gravels, has been subdivided into the B-1 and B-2 zones. The B-1 and B-2 zones are similar but are separated by a thin stratum of silty clay and clayey silt. By February 2002, 43 wells and 2 deep exploratory borings have been installed at the site, 36 of which remain active. Historical ground water monitoring data have shown the past and/or continued presence of a number of dissolved organic compounds in soil and in the A- and B-aquifer wells. These compounds may be categorized as either volatile organic compounds (VOCs) or soluble oxygenated compounds, such as alcohols, glycols, and ketones. After several phases of subsurface characterization, a remedial investigation/feasibility study (RI/FS) report was submitted by Geosystem Consultants, Inc. (Geosystem, February 13, 1991) to the

U.S. Environmental Protection Agency (EPA) and the RWQCB. In the RI/FS, seven compounds were selected as chemicals of concern (COCs) based on frequency of detection, maximum concentration, and health risk potential. The list of COCs included: Acetone 1,1-Dichloroethene (1,1-DCE) cis-1,2-Dichloroethene (cis-1,2-DCE) Methylene chloride Tetrachloroethene (PCE) Trichloroethene (TCE) Vinyl chloride An eighth chemical, 1,1,1-trichloroethane (1,1,1-TCA), was added in the final list for target cleanup because of its designation as an indicator chemical. Other indicator chemicals were PCE and cis-1,2-DCE. These indicator chemicals have been used to simplify data evaluation and interpretation. Recent data, however, have demonstrated that 1,1,1-TCA concentrations have been reduced to levels which are no longer of concern.

 Completed Date: 02/24/2016  
 Comments: DTSC performed a site screening to determine whether any releases of hazardous substances or wastes have occurred at the site that require DTSC to pursue corrective actions. Schlage Lock Company - ADF was a tenant and operated a light manufacturing facility at the site from 1983 to 2001. Schlage Lock operated three hazardous waste treatment units under the Conditionally Authorized permitting tier, a primary treatment unit, filter press, and evaporator. Schlage Lock ceased operation and closed the facility in 2001. The company submitted a Post Closure Report to the Santa Clara County Department of Environmental Health, Hazardous Materials Division, who acknowledged

closure of the treatment operation in a July 2, 2001 letter. A Facility Closure Report - Request for No Further Action Determination, dated July 6, 2001, was submitted to the Regional Water Quality Control Board (RWQCB) that summarized sampling and removal of petroleum hydrocarbon-impacted soil as part of the closure. RWQCB issued a no further action letter on February 8, 2002. DTSC concluded in the site screening that based on RWQCB's issuance of the no further action letter the site status in Envirostor should be "Refer: RWQCB".

Completed Sub Area Name: Not reported  
 Completed Document Type: Site Screening  
 Completed Date: 12/06/1991  
 Comments: Completed Site Screening. Soil samples detected dichloroethylene in the soil beneath the floor. Over 8 cubic yards of soil was excavated and disposed off-site. Analyses of soil samples taken from the bottom of the excavation indicated levels less than 100 ppb. Based on this information, the SF Regional Water Quality Control Board (RWQCB), the lead agency, decided that the remaining contaminant no longer posed a threat to groundwater and no further action was required. The soil level is below residential standards.

facilities.  
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.  
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.
