Completed Sub Area Name: Not reported  
 Completed Document Type: Site Screening  
 Completed Date: 12/06/1991  
 Comments: Completed Site Screening. Soil samples detected dichloroethylene in the soil beneath the floor. Over 8 cubic yards of soil was excavated and disposed off-site. Analyses of soil samples taken from the bottom of the excavation indicated levels less than 100 ppb. Based on this information, the SF Regional Water Quality Control Board (RWQCB), the lead agency, decided that the remaining contaminant no longer posed a threat to groundwater and no further action was required. The soil level is below residential standards.

Potential Contaminants of Concern: 1,1,1-Trichloroethane (TCA), Acetone, Other Chlorinated Hydrocarbons, Tetrachloroethylene (PCE), Trichloroethylene (TCE), Vinyl chloride  
Site History: Site is under Water Board Order No. 91-138. Information from: Second Five-Year Status Review Vopak USA Inc. Page 2 San Jose, California February 27, 2002 1.1 PROJECT OVERVIEW( On April 2, 2001, Van Waters & Rogers, Inc. became Vopak USA Inc. (Vopak). Vopak operates a warehouse and distribution facility (the site) at 2256 Junction Avenue in San Jose, California. The principal operations at the site, which began in 1976, include bulk chemical transfer between tank trucks, railroad tank cars, and chemical blending and packaging. In the past, 37 underground storage tanks (USTs) have been used to store chlorinated and petroleum hydrocarbons. All 37 USTs have since been removed and currently, chemicals are stored in aboveground storage tanks (ASTs). Site Characterization Subsurface investigations began at the site in late 1982 at the request of the RWQCB. Site characterizations have identified two water-bearing zones, referred to as the "A-" and "B-" aquifers. The A-aquifer, which is present between depths of 10 and 45 feet below ground surface (bgs), has been further subdivided into the A-1 and A-2 zones. The A-1 zone is characterized by silty clays and clays. The underlying A-2 zone consists of sandy clays and clayey sands. The B-aquifer, which extends to about 90 feet below grade and consists of permeable sands and gravels, has been subdivided into the B-1 and B-2 zones. The B-1 and B-2 zones are similar but are separated by a thin stratum of silty clay and clayey silt. By February 2002, 43 wells and 2 deep exploratory borings have been installed at the site, 36 of which remain active. Historical ground water monitoring data have shown the past and/or continued presence of a number of dissolved organic compounds in soil and in the A- and B-aquifer wells. These compounds may be categorized as either volatile organic compounds (VOCs) or soluble oxygenated compounds, such as alcohols, glycols, and ketones. After several phases of subsurface characterization, a remedial investigation/feasibility study (RI/FS) report was submitted by Geosystem Consultants, Inc. (Geosystem, February 13, 1991) to the

U.S. Environmental Protection Agency (EPA) and the RWQCB. In the RI/FS, seven compounds were selected as chemicals of concern (COCs) based on frequency of detection, maximum concentration, and health risk potential. The list of COCs included: Acetone 1,1-Dichloroethene (1,1-DCE) cis-1,2-Dichloroethene (cis-1,2-DCE) Methylene chloride Tetrachloroethene (PCE) Trichloroethene (TCE) Vinyl chloride An eighth chemical, 1,1,1-trichloroethane (1,1,1-TCA), was added in the final list for target cleanup because of its designation as an indicator chemical. Other indicator chemicals were PCE and cis-1,2-DCE. These indicator chemicals have been used to simplify data evaluation and interpretation. Recent data, however, have demonstrated that 1,1,1-TCA concentrations have been reduced to levels which are no longer of concern.

closure of the treatment operation in a July 2, 2001 letter. A Facility Closure Report - Request for No Further Action Determination, dated July 6, 2001, was submitted to the Regional Water Quality Control Board (RWQCB) that summarized sampling and removal of petroleum hydrocarbon-impacted soil as part of the closure. RWQCB issued a no further action letter on February 8, 2002. DTSC concluded in the site screening that based on RWQCB's issuance of the no further action letter the site status in Envirostor should be "Refer: RWQCB".

Environmental Interest/Information System:

AIR EMISSIONS CLASSIFICATION UNKNOWN  
California Hazardous Waste Tracking System - Datamart (HWTS-DATAMART) provides California with information on hazardous waste shipments for generators, transporters, and treatment, storage, and disposal facilities.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Eval Notes: Cyanide treatment unit unit consists of two 80 gallon nalgene tanks and one holding/transfer sump tank. cyanide rinses and equipment rinses are currently batched treatment in two stages using hypochlorite. Prior to transfer to settling tank to commingle with other wastes, ORP is measured to ensure breakdown of cyanide. Waste min processes include extended length use of primary static rinse and 2 stage spray rinsing of all cyanide plated parts. Splash boards noted between rinses to direct rinsate to tank, not containment. Site has indicated in its notification that it is treats cyanide wastes greater than 5000 mg/l under "permissible dilution" allowances. This is not a practice of the facility per personnel. SUGGEST MODIFYING NOTIFICATION TO REFLECT THIS. Operating logs are kept noting volumes of waste to be discharged with final (pre-discharge) concentrations of nickel, copper, cyanide, and pH Phase I filed 9/22/08 Reviewed CERS submitted information (2/15/17) [Truncated]

Eval Notes: Facility is metal finishing job shop that primarily nickel plates aluminum parts. Also does copper, silver plating as well as limited alodining. Associated processes include mask/demask, de greasing/parts cleaning and acid/caustic based cleaning and surface prep. Facility utilizes onsite batch treatment of most dilute wastes (rinses). Wastes are send directly from spent rinse baths to treatment without interim management or holding, and as such are exempt from counting under federal rule (40 CFR 261.5(c)(5)). Process generates sludge which carries F006 waste code. Routinely generates and treats onsite 300 gal per day batches of dilute metal bearing (mostly Ni, Cu), cyanide, and acid/caustic rinses and wastes. Last documented hazardous waste training provided 6/2016. This is more than one year ago, please arrange for training as soon as possible. Completed Date: 04/16/2014  
Comments: DTSC performed a site screening to determine whether any releases of hazardous substances or wastes have occurred at the site that require corrective actions. In 1985, Foxboro/ICT, determined that an UST had leaked. Two groundwater extraction wells were operational from 1987 to 1999. In 2000, the Regional Water Quality Control Board, San Francisco Bay Region (SFRWQCB) authorized the indefinite shutdown of the extraction wells. In 2008, soil samples were collected to address the potential historical contamination from pesticides. Two areas were identified with elevated arsenic concentrations. Five soil gas probes were also added. Laboratory analysis reported that volatile organic compounds were detected below the SFRWQCB Environmental Screening Levels in all the soil gas samples that were collected. Approximately 70 tons of arsenic-impacted affected soil was excavated. On October 10, 2013, SFRWQCB issued a letter of No Further Action and Case Closure Summary indicating that no further action related to the pollutant releases at the Site is required.

 Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.  
 Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

 Project Revenue Source Desc: To date, the entire investigation and soil removal has been conducted by the owner, the responsible party. DHS will be issuing an order or entering into an enforceable agreement with the RP. DHS has budgeted \$220,000 for oversight of the RP's cleanup actions. DHS will recover 100 percent of its direct costs plus staff costs and overhead related to the project. The RP will continue to fund remedial investigation and cleanup actions.

Site Description: This site is the location of an ongoing tile manufacturer. It is located in an industrial area of the City of Milpitas.

Hazardous Waste Desc: Approximately 600 cubic yards of lead-contaminated soil remains onsite. Ground water contamination has not been confirmed by samples taken and analyzed to date.

Threat To Public Health & Env: The Primary threats to the public health and environment are surface water migration and subsequent direct contact. The site is fenced, and access is limited to workers only. Lead absorption by both man and animals could occur through direct contact with the contaminated soils. Lead contaminated soil may migrate offsite with draining storm water.

Site Activity Status: Site soil sampling and removal has been conducted several times. This iterative approach is ongoing. Approximately 600 cubic yards of contaminated soil remain onsite. Ground water samplings show metals in normal concentrations. The RP is studying the feasibility of capping the site for commercial use.

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

**Number of Days to Update:** Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

### ***Federal NPL site list***

#### **NPL: National Priority List**

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

#### **Proposed NPL: Proposed National Priority List Sites**

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

#### **NPL LIENS: Federal Superfund Liens**

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

## ***Federal CERCLIS NFRAP site list***

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

# GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

##### US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

## EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

## 2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

## RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

## RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

## EDR HIGH RISK HISTORICAL RECORDS

### ***EDR Exclusive Records***

#### EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

#### EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

**Sensitive Receptors:** There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

## TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General NNW

## SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

# GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

## HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

## **HYDROGEOLOGIC INFORMATION**

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

### GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

### GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps. The following information is based on Soil Conservation Service STATSGO data.

Soil Component Name: BOTELLA

Soil Surface Texture: clay loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

### USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

### STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

### SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

## EXECUTIVE SUMMARY

### DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1922 through 2017. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.

Since joining ENGEO in 1985, Shawn has been managing groundwater supply evaluations, hydrogeologic studies, chemical assessments, Phase I and II Site Assessment projects, UST site investigations, risk based corrective action (RBCA), VOC remediation, and agricultural impact evaluations. He serves as Principal-in-Charge or Project Manager for environmental and hazardous materials projects involving groundwater hydrology, contaminant fate and transport, and remediation. He is Principal-in-Charge of the environmental components of our on-call contracts with the City of Sacramento and the County of Sacramento.

**Select Project Experience**

**14234 Saratoga Sunnyvale Road—Saratoga, CA**

*Project Geologist.* Shawn performed Principal review of ENGEO's environmental documents. This 2.2-acre townhome site is planned for a new multi-family development comprising up to 20 units in 8 buildings. The site immediately borders Saratoga Creek and contains numerous mature trees, many of which are to be saved. Site challenges include shallow groundwater, creek bank stability, and the potential for liquefaction and lateral spreading.

**Lenihan Dam Outlet Modification—Los Gatos, CA**

*Principal Geologist.* Shawn provided technical advice, coordination, consultation, and review of ENGEO's documents to provide quality mitigation measures. The findings were presented to SCVWD and it was concluded that the stockpile was sufficient for transportation. This analysis led to significant project budget savings by avoiding removal and disposal at a solid waste disposal facility. The project consisted of a stockpile approximately 6,000 cubic yards that required profiling as requested by Santa Clara Valley Water District before use of as site backfill.

**199 River Oaks Parkway—San Jose, CA**

*Principal in Charge.* Shawn provided principal oversight, data analysis, and consultation regarding site characterization, risk evaluation, and demolition observation plans. The project consists of a proposed six-story podium structure with one level to be constructed below grade. The property is a former semiconductor facility that has received conditional closure from the Regional Water Quality Control Board and is approved for construction.

**Riverside Avenue Property—Roseville, CA**

*Principal in Charge.* Shawn provided principal oversight of a Phase II Environmental Site Assessments and site

characterization. The project site consists of an active auto sales and service facility. The historic use of the facility for industrial purposes resulted in soil and groundwater impacts beneath the site. The City of Roseville revised its plans for acquiring and redeveloping the site due to the identified soil and groundwater impacts.

**1301 Standard Oil Ave—Pittsburg, CA**

*Principal in Charge.* Shawn provided principal oversight of a Phase II Environmental Site Characterization. The property is an abandoned wastewater treatment plant with processing buildings, clarifier tanks, and sludge beds.

**Pleasant Hill BART Station—Walnut Creek, CA**

*Principal in Charge.* Shawn provided oversight, data analysis and consultation during the preparation of a Phase II Environmental Site Assessment. The property is an existing BART station that encompasses 20 acres, including the platform/station area, electrical facilities, a parking garage and additional paved parking areas.

**County Crossings Property—Antioch, CA**

*Principal in Charge.* Shawn provided environmental consultation and data review with regard to soil and groundwater contamination. Constituents of concern include petroleum hydrocarbons, nitrates and manganese. The approximately 264-acre site includes several former industrial facilities and petroleum pipelines. Soil and groundwater at the site has been impacted with petroleum hydrocarbons, nitrates and manganese. Planned uses include commercial, residential, retail, and a BART-oriented transit village. The center, which is currently in the entitlement phase, is estimated to break ground in 2011.

**620 North Ninth Street—San Jose, CA**

*Principal in Charge.* Shawn provided oversight of soil, groundwater and soil gas characterizations, risk evaluations and Remedial Action Plan preparation. Shawn also closely interacted with RWQCB staff to achieve approval for residential development. The property is a former fruit packing plant and food preparation facility. The proposed development consists of a single-family residential subdivision.

**Westshore—Richmond, CA**

*Project Manager.* Shawn conducted Phase I and II Site Assessments, risk evaluations and prepared a soil management plan. The property was a former automotive manufacturing plant proposed for a multi-unit condominium development, including a 6-story podium structure to include five residential floors with 269 units and one parking floor.

**Mills Ranch—King City, CA**

*Principal in Charge.* Shawn provided principal oversight of Phase I/II Environmental Site Assessments and risk evaluations. The approximate 80-acre property is used for agricultural cultivation and commercial uses. The proposed mixed-use development includes over 400 single-family residential lots.

**Select Foods Site/Cross Creek—Hayward, CA**

*Principal in Charge.* Shawn provided principal oversight, consultation, and data analysis. The property was a former processed food facility, a drum recycling business, battery manufacturing operation and a bus assembly plant. Following completion of soil remediation under RWQCB oversight, the property was developed into a single-family residential subdivision.

**Arroyo Crossing—Livermore, CA**

*Principal in Charge.* Shawn provided oversight, data analysis and regulatory consultation while ENGEO provided geotechnical and environmental engineering services for this 34-acre site. This former corporation yard and quarry site was developed into a single-family residential subdivision.

**Renaissance Square—Concord, CA**

*Project Manager.* Shawn provided consultation, data analysis, and field observation. This former automotive dealership was redeveloped as a five-story multi-family residential structure supported on slab-on-grade foundations, with two levels of below-grade parking. Petroleum hydrocarbon-impacted soil was encountered during excavation of the parking structure, which required characterization and remediation. Soil impacts were attributed to former sumps, USTs and hydraulic lifts.

**Union Pacific Railroad Corridor—San Jose, CA**

*Project Manager.* Shawn prepared a Phase I and II Environmental Site Assessment. Work included a site reconnaissance, historical records research and recovery of soil samples with laboratory analysis. Lead impacted soil was identified which required risk evaluation. This former 1800 lineal foot section of the former Union Pacific Railroad Corridor was proposed for mixed-use development.

**Former SFPP Alignment—Concord, CA**

*Project Manager.* Shawn prepared a Phase I and II Environmental Site Assessment. The site was a former ±6,500-foot corridor formerly occupied by the Southern Pacific Railroad. Kinder Morgan petroleum pipelines existed within an easement along the property. The southern portion of the site was crossed by East Bay Municipal Utilities District water distribution lines and a multi-lane highway overpass. The corridor was developed as a self-storage facility. Work included the recovery of soil and groundwater samples along the SP right of way.

**Hercules Property—Hercules, CA**

*Project Manager.* Shawn provided oversight of a Phase I Environmental Site Assessment, site asbestos survey, site characterization, and demolition observation/contaminant assessment. The project area consists of ±167 acres located near and along the southeastern shore of San Pablo Bay in Hercules. The property was once a portion of a 1300-acre manufacturing facility that was operated by DuPont from 1879 to 1913 and Hercules Incorporated from 1913 to 1979. The planned development includes single/multi-family residential development with some commercial components.

**Highlands Ranch—Antioch, CA**

*Principal in Charge.* Shawn provided oversight, data analysis, and collaboration with RWQCB personnel. The project site consists of a 140-acre portion of the former Chevron Los Medanos Tank Farm located in Pittsburg, California. The site was historically occupied by 24 crude oil tanks and four wax ponds. Remediation of the crude oil tank and wax pond locations was conducted according to a remedial action plan (RAP) and oversight was provided by the CRWQCB. Remediation was performed over a period of four months and consisted of excavating approximately 110,000 cubic yards of impacted soil and placing the material in windrows for ex-situ bioremediation.

## EXECUTIVE SUMMARY

ENGEO conducted a phase I environmental site assessment for the parcels located north of the intersection of Montague Expressway and Seely Avenue, in San Jose, California (Property). The approximately 22-acre Property consists of two parcels; the northern parcel is identified by Assessor's Parcel Number (APN) 097-15-033 (681 East Trimble Road) and the southern parcel is identified by APNs 097-15-034 and a portion of 097-066-008.

The southern parcel is currently occupied by two residential structures, barns and other storage structures, a fruit stand, agricultural land (orchards, fruits, and vegetables), and miscellaneous debris (barrels/tanks, farming equipment, tires, pipes, and other debris) in several locations across the Property. The northern parcel is currently vacant. Review of historical records indicates that the Property has been in its current configuration since the late 1990s.

This assessment included a review of local, state, tribal, and federal environmental record sources, standard historical sources, aerial photographs, fire insurance maps and physical setting sources. A reconnaissance of the Property was conducted to review site use and current conditions to check for the storage, use, production or disposal of hazardous or potentially hazardous materials and interviews with persons knowledgeable about current and past site use.

The site reconnaissance and records review identified evidence of soil or groundwater impairments associated with the use or past use of the Property. A review of regulatory databases maintained by county, state, tribal, and federal agencies found no documentation of hazardous materials violations or discharge on the Property and did not identify contaminated facilities within the appropriate American Society for Testing and Materials (ASTM) search distances that would reasonably be expected to impact the Property.

Based on the findings of this assessment, no historical Recognized Environmental Conditions (RECs) and no controlled RECs were identified for the Property. The following RECs were identified for the Property.

- One small underground storage tank (UST) was discovered during the site reconnaissance. According to the Property owner, the UST is estimated to be a 200-gallon heating oil tank. We understand that that the tank has not been used in 20 years and is believed to be empty.
- Historical records indicate that portions of the Property have been utilized for orchards and row crops since at least the late 1930s. Soil sampling conducted at the Property indicated concentrations of lead and arsenic exceeding their corresponding background levels and/or the residential screening levels within certain portions of the Property. These impacts to shallow soil appear to result from common agricultural chemicals used in connection with the orchards and row crops.

Based on the review of regulatory databases and site reconnaissance, we present information on features of potential environmental concern that were either contained in the databases or observed on the Property. These features were not considered to be RECs. We briefly discuss each feature below.

- Two small above-ground storage tanks (ASTs) were observed during the site reconnaissance. According to the Property owner, the ASTs were previously filled with diesel and gasoline and had been used to fuel farming equipment.

- Miscellaneous small storage tanks of varying sizes and drums were observed within certain portions of the Property.
- One water supply well was observed on the Property during our reconnaissance and five water supply wells (two active and three standby) were identified during agency file review.

ENGEO has performed a phase I environmental site assessment in general conformance with the scope and limitations of ASTM E1527-13 and the standards and practices of the All Appropriate Inquiry – Final Rule (40 Code of Federal Regulations Part 312).

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC.

This assessment has revealed evidence of RECs and environmental concerns in connection with the Property. ENGEO recommends the following.

Preparation of a soil mitigation plan to provide protocols to handle and manage any impacted soil encountered during future site development activities.

- Completion of a building material survey for the structures prior to demolition or significant renovation.
- Proper decommissioning of the water wells in conformance with local and state regulations if their operation is not to be continued in the future.

## 1.0 INTRODUCTION

### 1.1 PURPOSE OF PHASE I ENVIRONMENTAL SITE ASSESSMENT

This assessment was performed at the request of Hanover R.S. Limited Partnership for the purpose of environmental due diligence during property acquisition. The objective of this phase I environmental site assessment is to identify Recognized Environmental Conditions (RECs) associated with the Property. As defined in the ASTM Standard Practice E1527-13, an REC is “the presence or likely presence of any hazardous substances or petroleum products in, on, or at a property: (1) due to release to the environment; (2) under conditions indicative of a release to the environment; or (3) under conditions that pose a material threat of a future release to the environment.”

### 1.2 DETAILED SCOPE OF SERVICES

The scope of services performed included the following.

- A review of previous environmental reports prepared for the Property.
- A review of publicly available and practicably reviewable standard local, state, tribal, and federal environmental record sources.
- A review of publicly available and practicably reviewable standard historical sources, aerial photographs, fire insurance maps, and physical setting sources.
- A reconnaissance of the Property to review site use and current conditions. The reconnaissance was conducted to check for the storage, use, production or disposal of hazardous or potentially hazardous materials.
- Interview with client.
- Preparation of this report with our findings, opinions, and conclusions.

### 1.3 SITE LOCATION AND DESCRIPTION

The Property is located north of the intersection of Montague Expressway and Seely Avenue, in San Jose, California (Property) (Figures 1 and 2). The approximately 22-acre Property consists of two parcels, the northern parcel is identified by Assessor’s Parcel Number (APN) 097-15-033 (681 East Trimble Road) and the southern parcel is identified by APNs 097-15-034 and a portion of 097-066-008 (Figure 3).

### 1.4 CURRENT USE OF PROPERTY AND ADJOINING PROPERTIES

The southern portion of the Property consists of agricultural land, two residential homes, barns and other storage structures, and debris. An estimated 200-gallon heating oil underground storage tank (UST) is currently on the Property. Small tanks and barrels were observed within certain portions of the Property. Surrounding properties consist of commercial to the south and east, and undeveloped land to the west and north.

## 1.5 SITE AND VICINITY CHARACTERISTICS

According to published topographic maps, the Property ranges in elevation from approximately 34 feet above mean sea level (msl) in the north to approximately 29 feet above msl to the south. Review of the Geologic Map of Milpitas quadrangle, Alameda, and Santa Clara Counties found that the Property is underlain by surficial sediments of alluvial gravel, sand, and clay (Qa).

Geocheck – Physical Setting Source Summary of the Environmental Data Resources, Inc. (EDR) report (Appendix A) indicated 2 Federal United States Geological Survey (USGS) and 174 State wells located within 1 mile of the Property. Groundwater measurements were not reported. The Physical Setting Source Summary did not provide hydrogeologic information for use as an indicator of groundwater flow direction in the immediate area.

We reviewed the Department of Water Resources On-line Water Data Library for depth to water in the vicinity of the Property. The website identified two wells within 1 mile of the Property. Well Number 06S01W13C009M is mapped approximately 0.2 mile northwest of the Property. Reported groundwater measurements for this well were between 21 and 26 feet below the ground surface. Well Number 06S01W24H015M is mapped approximately 0.9 mile southeast of the Property. Reported groundwater measurements for this well were between 1 and 183 feet below the ground surface.

During previous investigations conducted at the Property, groundwater was observed at approximate depths of 12.5 to 13.5 feet below ground surface. Fluctuations in groundwater levels may occur seasonally and over a period of years due to variations in precipitation, temperature, irrigation and other factors.

We reviewed the Department of Conservation, Geologic Energy Management (CalGEM), formerly the Department of Conservation, Division of Oil, Gas, and Geothermal Resources (DOGGR), website and map database to determine if any historical oil and/or gas wells were located within the Property. No wells were mapped within 1 mile of the Property.

## 2.0 PREVIOUS ENVIRONMENTAL REPORTS

MFG, Inc., Soil and Groundwater Investigation Report, Sakauye Property, Montague Expressway at Seely Road, San Jose, California, Project Number 030197.1, June 26, 2013

In June 2003, MFG, Inc. conducted a soil and groundwater investigation for the Property. The scope of work included the following activities: (1) to assess the potential for environmental impact in the immediate vicinity of the sheds, leach field, and USTs located near the lot line that separates the two parcels; and (2) to assess the overall presence of pesticides on Parcel A using a statistically based sampling program.

Four soil borings were located near the proposed lot line, three of which were near the former locations of the metal sheds and septic tank. One boring was located further towards Coyote Creek.

Select soil samples were analyzed for total purgeable petroleum hydrocarbons (TPPH) (EPA Method 8015), herbicides and pesticides (EPA Method 8081A, 8141, and 8151), volatile organic compounds (VOCs) (EPA Method 8260) and Title 22, Method 17 Metals.

TPPH as gasoline and volatile organic compounds were not detected in the soil borings. No pesticides or herbicides were detected in Borings B-1 through B-3. In B-4, 4,4 DDE and 4,4 DDT were detected at 1.5 feet below ground surface (bgs) at concentrations of 0.56 and 0.16 milligrams per kilograms (mg/kg), respectively. Arsenic was detected in one sample (B-4 at 1.5 feet bgs) at a concentration of 14 mg/kg. Arsenic was not detected in any of the other soil samples. All other metals were below the US EPA Region IX Preliminary Remediation Goals for an industrial setting. No significant environmental impact from historical operations in the vicinity of the sheds, leach field, or former USTs was indicated, based on the results of the soil and groundwater sampling. Concentrations of all constituents were below the US EPA preliminary remediation goal values for an industrial/commercial setting at the time of this report. Four grab groundwater samples were analyzed for TPPH as gasoline, pesticides, and VOCs. None of the analytes were detected in the groundwater samples.

Based on the findings of this assessment, there appeared to be no significant environmental impact from historical operations in the vicinity of the sheds, leach field, or former UST locations the Property.

ENGEO, Phase I Environmental Site Assessment, 681 East Trimble Road, San Jose, California, DRAFT: March 8, 2021

ENGEO conducted a phase I ESA for the southern parcel in March 2021. ENGEO's findings in March 2021 were consistent with those in this report.

Based on the findings of this assessment, ENGEO recommended the following:

- Groundwater sampling at the Property to evaluate groundwater conditions at the Property.
- Surficial soil sampling to evaluate soil conditions in light of the orchards and row crop operations at the Property and around structures.
- Completion of a building materials survey for the structures prior to demolition or significant renovation.
- Proper decommissioning of the water wells in conformance with local and State regulations if their operation is not to be continued in the future.

ENGEO, Phase I Environmental Site Assessment, Hanover North San Jose, San Jose, California, DRAFT: July 12, 2021

ENGEO conducted a phase I ESA for the northern parcel in July 2021. Based on the findings of this assessment, no Recognized Environmental Conditions (RECs), no historical RECs, and no controlled RECs were identified for the Property. The following feature of potential environmental concern was identified.

- According to historical aerial photographs, the Property has been utilized as orchards since at least the late 1930s.

ENGEO recommended the following:

- Soil sampling to evaluate soil conditions in light of the former orchards at the Property.

ENGEO, Phase II Environmental Site Assessment, Trimble Road Parcels, San Jose, California,  
December 15, 2021

ENGEO conducted sampling activities at the Property in March, June, and July 2021. The purpose of this assessment was to evaluate potential impacts from past agricultural use of the Property, as well as to characterize groundwater at the Property. Groundwater samples were collected from the southern parcel. Total petroleum hydrocarbons as gasoline (TPH-g) and volatile organic compounds (VOCs) were not detected in the grab groundwater samples. TPH as diesel (TPH-d) was detected at a concentration exceeding the screening level in one sample.

Based on the review of the laboratory test results, concentration of lead and arsenic exceeding the background levels and/or the residential screening levels were observed at the Property up to depths of 30 inches. The cumulative concentrations of DDD/DDT/DDE exceeded the total threshold limit concentration (TTL) established by Title 22 of the California Code of Regulations (CCR) in two composite surface soil samples. A soil mitigation plan was recommended to provide protocols to handle and manage any impacted soil encountered during future site development activities.

### 3.2 HISTORICAL RECORD SOURCES

The purpose of the historical record review is to develop a history of the previous uses or occupancies of the Property and surrounding area in order to identify those uses or occupancies that are likely to have led to RECs on the Property.

#### 3.2.1 Historical Topographic Maps/Aerial Photographs/Sanborn Maps

Historical USGS topographic maps and aerial photographs maps were reviewed to determine if discernible changes pertaining to the Property had been recorded. EDR provided the following maps and photographs, presented in Appendices C and D. EDR did not report any Sanborn maps for the Property. The summary report is provided in Appendix E.

**TABLE 3.2.1-1: Historical Review Summary**

HISTORICAL MAP/PHOTOGRAPH	YEARS
Topographic Maps	1889, 1897, 1899, 1953, 1961, 1968, 1973, 1980, and 2012
Aerial Photographs	1939, 1940, 1948, 1950, 1956, 1963, 1968, 1974, 1979, 1982, 1993, 1998, 2006, 2009, 2012, and 2016
Sanborn Maps	N/A

In the 1889 to 1899 topographic maps, the Property appears to be developed with three structures on the southeastern portion. Coyote Creek borders the Property to the north and trends northwest to southeast. A northeast-southwest-trending road is visible to the southeast of the Property. Railroad tracks are mapped east of the Property.

In the 1939 aerial photograph, the Property is developed with a residential structure, barn/storage sheds, and orchards. Surrounding properties appears to be in utilized for agricultural purposes.

No significant changes are observed until the 1968 aerial photograph. A large rectangular structure has been developed on the property, located directly southeast of the Property. Large circular tanks are visible further east-southeast. In the 1974 aerial photograph, further development has occurred south-southeast of the Property. No significant changes are observed on the Property until the 1993 aerial photograph, when orchards on the eastern portion of the Property have been removed. Development has occurred west of the Property. In the 1998 aerial photograph, the eastern portion of the Property has been developed with row crops, and orchards have been removed from the western portion of the Property. The Property appears to be in its current configuration in the 2006 aerial photograph. No significant changes are observed until 2016.

#### 3.2.2 City Directory

City directories, published since the 18th century for major towns and cities, list the name of the resident or business associated with each address. A city directory search conducted by EDR is located in Appendix F. The Property had previously been identified with 2620 Seely Avenue. No listings were found for 651 E. Trimble and 2620 Seely Avenue.

Listings for 2655 Seely Avenue are for Cadence Design Systems located across the road from Seely Avenue and not for the Property. Following is a summary of listings in the vicinity of the Property.

HKN Partnership (T0608500971)

The facility is located at 691 Montague Expressway in San Jose. The facility is located adjacent to the Property, approximately 50 feet southeast. The facility is listed as a Leaking Underground Storage Tank (LUST) Cleanup site that received closure in December 1999. In 1990, three USTs, and three ASTs were removed from the facility. In November 1992, over-excavation around the former location of a 550-gallon UST was conducted, with 2,400 cubic yards of contaminated soil removed and stockpiled. The stockpile was aerated, and 2,100 of the 2,400 cubic yards was confirmed to not exhibit contaminants of concern (COCs) concentrations above respective detection limits. In 1998, groundwater was analyzed for fuel oxygenates and found to be below detection limits. The Santa Clara Valley Water District (SCVWD) and the San Francisco Bay Area Regional Water Quality Control Board (RWQCB) issued closure letters in 1999. This site would not be expected to affect the subject Property.

Quebecor Printing/San Jose Inc. (SL20252870)

The Quebecor Printing/San Jose Inc. facility is located approximately 845 feet south of the subject Property. The facility is listed as a cleanup program site and received case closure in 2012. Two source areas were identified during site investigation; southern area – leakage from an underground sump connected to a solvent storage tank used to store a petroleum-based solvent consisting of primarily of toluene, n-heptane, and methylcyclohexane, and releases of TPH-g and TPH-d; and the western area – leakage from a metals plating operation and associated wastewater pre-treatment system. In 2000, the owner, Quebecor World Inc., ceased operations to undertake closure activities with the oversight of the San Jose Fire Department. During the closure, infrastructure such as USTs, ASTs, trenches, and the wastewater pre-treatment system were removed. Contaminated soil was excavated and removed to the extent feasible in both source areas. Excavations of the USTs in the southern source area were advanced to 14 feet below the ground surface. Groundwater was monitored as part of a monitored natural attenuation (MNA) program after excavation of source area soil. A dissolved metals plume migrated approximately 100 feet west from the source area, but it was determined that the remaining dissolved metals were expected to adsorb to the soil matrix, ceasing migration. This site would not be expected to affect the subject Property.

Based on the distances to the identified database sites, regional topographic gradient, and the EDR findings, it is unlikely that the above-stated database sites pose an environmental risk to the Property. Properties that are on the “Orphan Summary” list appear to be located beyond the ASTM recommended radius search criteria.

### 3.5 INDOOR AIR QUALITY

An evaluation of indoor air quality, mold, or radon was not included as part of the contracted scope of services. The California Department of Public Health has conducted studies of radon risks throughout the state, sorted by zip code. Results of the studies indicate that 37 tests were conducted within the Property zip code, with no tests exceeding the current EPA action level of 4 picocuries per liter (pCi/L)<sup>1</sup>.

In accordance with ASTM E2600-15 (Tier 1) (*Standard Guide for Vapor Encroachment Screening on Property Involved in Real Estate Transactions*); there are potential petroleum hydrocarbon sources for vapor intrusion within 1/10 mile of the Property. The Property currently has an estimated 200-gallon heating oil underground storage tank, one diesel AST, one gasoline AST, and multiple other abandoned remnant storage tanks within certain portions of the Property. However, these tanks will be removed prior to future development of the Property.

## 4.0 SITE RECONNAISSANCE

### 4.1 METHODOLOGY

ENGEO conducted a reconnaissance of the Property on January 25, 2021, and on December 8, 2021. The reconnaissance was performed by Divya Bhargava, Senior Engineer of ENGEO. The Property was viewed for hazardous materials storage, superficial staining or discoloration, debris, stressed vegetation, or other conditions that may be indicative of potential

sources of soil or groundwater contamination. The Property was also checked for evidence of fill/ventilation pipes, ground subsidence, or other evidence of existing or preexisting underground storage tanks. Photographs taken during the site reconnaissance are presented in Figure 4.

The former residences, barns, and storage structures were not entered due to safety concerns.

## 4.2 EXTERIOR OBSERVATIONS

The following table summarizes our observations during the reconnaissance:

**TABLE 4.2-1: Exterior Site Observations**

FEATURE TYPE	OBSERVATIONS
Structures	Eight structures were observed during the site reconnaissance.
Hazardous Substances and Petroleum Products in Connection with Identified Uses	We identified one approximately 200-gallon heating oil UST. We observed one diesel above-ground storage tank (AST) and one gasoline AST. The ASTs reportedly have not been filled in 20 years and were formerly used to store fuel for farming equipment.
Storage Tanks (underground and above-ground)	Two ASTs were observed and reportedly previously filled with diesel and gasoline. A fill port to the estimated 200-gallon underground storage tank was observed during the site reconnaissance.
Odors	No odors indicative of hazardous materials or petroleum material impacts were noted at the time of the reconnaissance.
Pools of Potentially Hazardous Liquid	No pools of potentially hazardous liquid were observed within the Property at the time of our reconnaissance.
Drums	Drums were observed within certain portions of the Property at the time of the reconnaissance.
Polychlorinated Biphenyls (PCBs) Containing Equipment	No potential PCB-containing equipment, including transformers, were observed within the Property during our site reconnaissance.
Hazardous Substances and Petroleum Product Containers	Hazardous substances or petroleum product containers were observed on the Property at the time of our reconnaissance.
Pits, Ponds, and Lagoons	No pits, ponds, or lagoons were observed within the Property at the time of our reconnaissance.
Stained Soil/Pavement	No stained soil or pavement was observed within the Property at the time of our reconnaissance. Soil underneath some of the abandoned tanks was observed, which did not exhibit staining or odors.
Stressed Vegetation	No signs of stressed vegetation were observed on the Property at the time of our reconnaissance.
Solid Waste/Debris	Disposal of solid waste was observed at the Property. Multiple tanks, pipes, tires, and other debris was observed on the northern and central portions of the Property.

### 4.3 INTERIOR OBSERVATIONS

The interiors of the structures were not observed due to safety concerns.

### 4.4 ASBESTOS, LEAD, AND PCB-CONTAINING MATERIALS

An asbestos, lead, and PCB-containing building material survey was not conducted as part of this assessment.

## 5.0 INTERVIEWS

Ms. Kristen Gates completed an environmental site questionnaire pertaining to Client-related applicable environmental information regarding the Property. In the questionnaire, Mrs. Gates did not identify potentially environmentally related issues with the Property. The questionnaire is presented in its entirety in Appendix G. A summary is provided below. Ms. Gates is unaware of commonly known, reasonably ascertainable, or specialized knowledge indicative of releases or threatened releases that is material to the potential presence of RECs. Ms. Gates has indicated that the purchase price of the Property is reflective of fair market value of the Property.

We did not receive a completed Key Site Manager-based environmental questionnaire at the time of report publication.

## 6.0 FINDINGS AND CONCLUSIONS

This assessment included a review of local, state, tribal, and federal environmental record sources, standard historical sources, aerial photographs, fire insurance maps and physical setting sources. A reconnaissance of the Property was completed to review site use and current conditions to check for the storage, use, production, or disposal of hazardous or potentially hazardous materials and to conduct written/oral interviews with persons knowledgeable about current and past site use.

The site reconnaissance and records review identified evidence of soil or groundwater impairments associated with the use or past use of the Property. A review of regulatory databases maintained by county, state, tribal, and federal agencies found no documentation of hazardous materials violations or discharge on the Property and did not identify contaminated facilities within the appropriate American Society for Testing and Materials (ASTM) search distances that would reasonably be expected to impact the Property.

Based on the findings of this assessment, no historical Recognized Environmental Conditions (RECs) and no controlled RECs were identified for the Property. The following RECs were identified for the Property.

- One small underground storage tank (UST) was discovered during the site reconnaissance. According to the Property owner, the UST is estimated to be a 200-gallon heating oil tank. We understand that that the tank has not been used in 20 years and is believed to be empty.
- Historical records indicate that portions of the Property have been utilized for orchards and row crops since at least the late 1930s. Soil sampling conducted at the Property indicated concentrations of lead and arsenic exceeding their corresponding background levels and/or the residential screening levels within certain portions of the Property. These impacts to

shallow soil appear to result from common agricultural chemicals used in connection with the orchards and row crops.

Based on the review of regulatory databases and site reconnaissance, we present information on features of potential environmental concern that were either contained in the databases or observed on the Property. These features were not considered to be RECs. We briefly discuss each feature below.

- Two small above-ground storage tanks (ASTs) were observed during the site reconnaissance. According to the Property owner, the ASTs were previously filled with diesel and gasoline and had been used to fuel farming equipment.
- Miscellaneous small storage tanks of varying sizes and drums were observed within certain portions of the Property.
- One water supply well was observed on the Property during our reconnaissance and five water supply wells (two active and three standby) were identified during agency file review.

ENGEO has performed a phase I environmental site assessment in general conformance with the scope and limitations of ASTM E1527-13 and the standards and practices of the All Appropriate Inquiry – Final Rule (40 Code of Federal Regulations Part 312).

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC. This assessment has revealed evidence of RECs and environmental concerns in connection with the Property. ENGEO recommends the following.

- Preparation of a soil mitigation plan to provide protocols to handle and manage any impacted soil encountered during future site development activities.
- Completion of a building material survey for the structures prior to demolition or significant renovation.
- Proper decommissioning of the water wells in conformance with local and state regulations if their operation is not to be continued in the future.

## **7.0 LIMITATIONS**

### **7.1 SIGNIFICANT ASSUMPTIONS OR DEVIATIONS FROM ASTM STANDARD PRACTICE**

No significant assumptions or deviations from ASTM standard practice were encountered.

### **7.2 OPINIONS AND DATA GAPS**

It is our opinion that the findings of this study are based on a sufficient level of information obtained during our contracted scope of services to render a conclusion as to whether additional appropriate investigation is required to identify the presence or likely presence of a REC. The following data gap was identified:

- We did not receive a completed Key Site Manager-based environmental questionnaire by the time of report publication.

The data gap identified during this process does not affect the conclusions as to the presence or lack of presence of RECs at the Property.

### 7.3 LIMITATIONS AND EXCEPTIONS OF ASSESSMENT

The professional staff at ENGEO strives to perform its services in a proper and professional manner with reasonable care and competence but is not infallible. The recommendations and conclusions presented in this report were based on the findings of our study, which were developed solely from the contracted services. The findings of the report are based in part on contracted database research, out-of-house reports, and personal communications. The opinions formed by ENGEO are based on the assumed accuracy of the relied upon data in conjunction with our relevant professional experience related to such data interpretation. ENGEO assumes no liability for the validity of the materials relied upon in the preparation of this report.

This document must not be subject to unauthorized reuse; that is, reuse without written authorization of ENGEO. Such authorization is essential because it requires ENGEO to evaluate the document's applicability given new circumstances, not the least of which is passage of time. The findings from a phase I environmental site assessment are valid for one year after completion of the report. Updates of portions of the assessment may be necessary after a period of 180 days after completion.

This phase I environmental site assessment is not intended to represent a complete soil, soil gas, or groundwater characterization, nor define the depth or extent of soil, soil gas, or groundwater contamination. It is intended to provide an evaluation of potential environmental concerns associated with the use of the Property. A more extensive assessment that would include a subsurface exploration with laboratory testing of soil, soil gas, and groundwater samples could provide more definitive information concerning site-specific conditions. If additional assessment activities are considered for the Property and if other entities are retained to provide such services, ENGEO cannot be held responsible for any and all claims arising from or resulting from the performance of such services by other persons or entities. ENGEO can also not be held responsible from any and all claims arising or resulting from clarifications, adjustments, modifications, discrepancies or other changes necessary to reflect changed field or other conditions.

### 7.4 SPECIAL TERMS AND CONDITIONS

ENGEO has prepared this report for the exclusive use of our client, Hanover R.S. Limited Partnership. It is recognized and agreed that ENGEO has assumed responsibility only for undertaking the study for the Client. The responsibility for disclosures or reports to a third party and for remedial or mitigative action shall be solely that of the Client.

Laboratory testing of soil, soil gas, or groundwater samples was not within the scope of the contracted services. The assessment did not include an asbestos survey, an evaluation of lead-based paint, an inspection of light ballasts for polychlorinated biphenyls (PCBs), or a mold survey. A radon evaluation was not performed.

This report is based upon field and other conditions discovered at the time of preparation of ENGEO's assessment. Visual observations referenced in this report are intended only to

represent conditions at the time of the reconnaissance. ENGEO would not be aware of site contamination, such as dumping and/or accidental spillage, that occurred subsequent to the reconnaissance conducted by ENGEO personnel.

## SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

## STANDARD ENVIRONMENTAL RECORDS

### **Federal CERCLIS NFRAP site list**

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 07/29/2021 has revealed that there are 3 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

### ***Federal RCRA CORRACTS facilities list***

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/22/2021 has revealed that there are 3 CORRACTS sites within approximately 1 mile of the target property.

### ***Federal RCRA generators list***

RCRA-LQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

A review of the RCRA-LQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 5 RCRA-LQG sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/22/2021 has revealed that there are 16 RCRA-SQG sites within approximately 0.25 miles of the target property.

## EXECUTIVE SUMMARY

### **State- and tribal - equivalent CERCLIS**

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 04/23/2021 has revealed that there are 42 CA ENVIROSTOR sites within approximately 1 mile of the target property.
