Potential Media Affected: Other Groundwater (uses other than drinking water), Soil
Potential Contaminants of Concern: Tetrachloroethylene (PCE), Other Chlorinated Hydrocarbons, Trichloroethylene (TCE), Vinyl chloride
Site History: The 1.5-acre site is located downgradient from the Montwood properties and within Teledyne-Spectraphysics Superfund site plume. After conducting source remediation through soil vapor extraction, the Responsible Parties commenced on- and off-property groundwater extraction and treatment (GWET). Extraction from off-site downgradient well OEX11 at approximately 5 gallons per minute effectively captures intermediate groundwater zone that generally encompassed the former contaminant source area in the northwest corner of 1098 Alta Avenue and specifically encompassed well PA7 with the highest contaminant concentrations. Higher Shallow-Zone groundwater-CVOC levels in the southeast half of the property indicate a possible source at the upgradient Montwood properties. However, consultants for the Montwood properties are presently finalizing their off-property groundwater plume definition report. .

Site History:

The Teledyne property is part of a two-property Superfund site along with the adjacent Spectra-Physics property. The responsible parties (RPs) for the Teledyne/Spectra-Physics site completed a Monitored Natural Attenuation (MNA) study in the off-property area north of and downgradient of the site. The MNA study concluded that natural breakdown of the chlorinated volatile organic compounds of concern is occurring naturally and at the same rate as groundwater extraction. As a result, only a few of the off-property downgradient extraction wells were operating mainly to maintain hydraulic control of the plume. The RPs completed a pilot study to test the feasibility of enhanced reductive dechlorination (ERD) and concluded that ERD is feasible with bioaugmentation of the Shallow Zone. Within the last ten years, the RPs detected elevated source areas at the Teledyne property using high resolution technology and continuously logged and screened ERD injection well boreholes. Implementing a full-scale ERD treatability study, they have been and are currently remediating the property with groundwater-CVOC levels dropping from as much as over 80,000 ug/l to low multiples of MCLs. Several rounds of ERD injections successfully cleaned up most of the Shallow Zone at the Teledyne property and the adjacent Spring Street residential area to drinking water standards and the treatability study was even more successful in the underlying Upper and Lower Intermediate Zones. More recently, the RPs also assertively evaluated potential IA VI in the off-property commercial North Bayshore and residential Spring Street

areas to conclude that IA VI is not occurring in most of the commercial area and is occasionally occurring in several homes in the residential area. The RPs installed sub-slab depressurization systems in the impacted on-property commercial buildings and offered the affected off-property residents crawl space fans to address the issue.

Background Info: Teledyne Semiconductor has operated a semiconductor manufacturing facility at this one-acre site since 1962. Chemicals used in the manufacturing process and wastes generated by the process are handled and stored onsite.
In 1982, Teledyne notified the RWQCB that soil and groundwater near underground solvent storage tanks was contaminated. Further study revealed that a groundwater contaminant plume had migrated northward and contaminated forty private domestic wells. The contaminants identified in soil and groundwater include trichloroethylene (TCE), dichloroethylene (DCE), Freon-113, dichlorobenzene (DCB), perchloroethylene (PCE), and xylene.
About 270,000 people residing within three miles of the site depend on groundwater as a source of drinking water. The groundwater contamination represents a potential threat to municipal and other wells.

Project Revenue Source Desc: Teledyne, the responsible party, has been conducting remedial activities under and order issued by the RWQCB. DHS has budgeted \$50,000 for development, review and approval of a RAP and will seek to recover all actual costs from the responsible parties.
Site Description: Teledyne Semiconductor has operated a semiconductor manufacturing facility at this one-acre site since 1962. Chemicals used in the manufacturing process and wastes generated by this process are handled and stored onsite.
Hazardous Waste Desc: In 1982, Teledyne notified the RWQCB that soil and ground water near underground solvent storage tanks was contaminated. The contaminants identified in soil and ground water are trichloroethylene (TCE), dichloroethylene (DCE), Freon-113, dichlorobenzene (DCB), perchloroethylene (PCE) and xylene.
Threat To Public Health & Env: About 270,000 people residing within 3 miles of the site depend on ground water as a source of drinking water. The ground water contamination represents a potential threat to municipal and other wells.
Site Activity Status: An investigation conducted in June, 1984, revealed that solvents had contaminated private wells to the north of the site. Contaminated wells were closed and an alternate drinking water supply was provided to affected residents. A ground water extraction system was installed onsite and began operating in October, 1986. Characterization of soil and ground water contamination is continuing.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.

Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Background Info: Facility size is approx. 7.06 acres. Sites include a grease rack and vehicle wash rack. A draft PA was completed in February 1999 and a final SI work plan was prepared in August 2000. The grease rack was constructed in the early 1950s and is no longer used. The Army considers the wash rack to be a compliance (RCRA) issue for funding purposes. Minimal shallow soil sampling was conducted in 1997 around the grease rack. Contaminants of concern are primarily grease oil, fuels, and solvents. Groundwater is shallow, approx 15 ft below ground surface. Impacts to groundwater are u

 Potential Media Affected: Soil Vapor
 Potential Contaminants of Concern: Trichloroethylene (TCE)
 Site History: Google voluntarily approached the Regional Water Board to oversee the environmental regulation of this multi-story redevelopment underlain by an offsite upgradient groundwater-TCE plume. The Regional Water Board provided comments on a number redevelopment preparation documents including a Soil and Groundwater Management Plan. Soil- and groundwater-PCBs were encountered during redevelopment. The RP stabilized the PCB source area with carbon injections and installed monitoring wells downgradient from the source area to verify long-term stabilization.

 Site History: In approximately 2016/2017, Calvano developed the approximately 7.3-acre site with a commercial office building (30,000 square feet) and then sold the property. Soil vapor and groundwater contamination has been reported on the site and a vapor barrier (EPRO e.BASE 205, EPRO e.spray, and EPRO e.SHIELD 205) was installed beneath the new building foundation as a precautionary measure to help prevent vapor intrusion and protect future building occupants. The DEH requires ongoing soil vapor monitoring at the site in order to evaluate current and future vapor intrusion risk. Potential Contaminants of Concern: * Solvents
Site History: Digital Equipment Corporation (DEC) operated a manufacturing facility at the subject site between 1969 and 1983. The facility performed nickel and copper plating of discs. As part of this operation, DEC stored and used hazardous materials including TCA and acetone, and operated an acid neutralization tank whose effluent discharged to the sanitary sewer. After operations were discontinued, DEC removed the acid neutralization tank and received regulatory closure from the Mountain View Fire Department. The Department approved final facility closure for chemical storage in 1990. DEC was acquired by Compaq in 1998; Compaq in turn was acquired by Hewlett Packard in 2002. DEC voluntarily reported a possible release of chlorinated solvents in 1984. This report was based on onsite groundwater monitoring that appeared to show chlorinated solvents in groundwater above drinking water levels. DEC later concluded that these results were false positives, due to laboratory contamination, and that no release of chlorinated solvents to soil or groundwater had occurred. Terra Bella Office Partners, LLC, the landowner, performed a comprehensive soil, soil vapor, and groundwater investigation in 2010. VOCs were either non-detect or in a few cases detected below regulatory standards (e.g., MCLs). Metals were detected but at concentrations consistent with background conditions. Water Board staff concludes that no condition of pollution exists at the site and the case should be closed.

 Project Revenue Source Addr: Not reported
 Project Revenue Source City,St,Zip: Not reported
 Project Revenue Source Desc: This site is proposed for the National Priority List. The RWQCB will continue to have lead responsibility for monitoring the RP's remedial activities. Until such time as the RWQCB refers the site to DHS for follow-up using Bond funds, no money will be budgeted from the fund for this site.

Site Description: CTS Printex Corporation (Printex) is located on 5.6 acres of land at 1950 Colony Street in Mountain View, California. Currently, the site is inactive. From 1966 to 1985 Printex operated a printed circuit board manufacturing facility onsite.

Hazardous Waste Desc: Soil under the site contains elevated levels of copper, lead, trichloroethylene (TCE) and 1,1,1-trichloroethane (TCA). Contaminants in the ground water include TCA, TCE and 1,1-dichloroethylene (DCE).

Threat To Public Health & Env: Roughly 188,000 people in Mountain View depend on ground water drawn from the aquifer of concern for their drinking water. The nearest municipal well drawing from the aquifer, Mountain View #10, is 1.1 mile from the site. The alternative surface drinking water sources appear to be inadequate to supply the large population currently relying on local ground water.

Site Activity Status: Site investigation and remediation activities at the Printex facility were started in December, 1984. Organic chemical contamination appears to have resulted from the wet floor operation. Approximately 255 cubic yards of soil from the wet floor area were excavated for offsite disposal. A quarterly monitoring program has been in implementation for all existing wells. The down gradient spread of chemicals has tentatively been established at approximately 600 feet beyond the property boundary. Ground water extraction facilities have been designed and wells constructed in order to contain the spread of contaminants in ground water. The Regional Water Quality Control Board issued a cleanup and abatement order in March, 1987.

Site History: The Site is a former Texaco-branded service station located at the intersection of North Shoreline Boulevard and Terra Bella Avenue in Mountain View, California. Former station features include one 6,000-gallon gasoline underground storage tank (UST), four 4,000-gallon gasoline USTs, and one waste oil UST. In 1992, the six USTs, associated product piping, and dispensers were removed, and the Site was redeveloped as a restaurant. Twelve groundwater monitoring wells have been installed on or near the Site to-date. Eight groundwater monitoring wells (MW-22A, MW-22B, MW-22D, and MW-22L through MW-22P) were installed on-site, and four groundwater monitoring wells (MW-22E through MW-22H) were installed at off-site locations to assess the lateral extent of petroleum hydrocarbons in groundwater. Groundwater monitoring has been performed at the Site since 1988. Historically, groundwater flow at the Site has been towards the north.

Within the last ten years, Responsible Parties (RPs) for the Teledyne/Spectra-Physics site completed a Monitored Natural Attenuation (MNA) study in the off-property area north of and downgradient of the site. The MNA study concluded that natural breakdown of the chlorinated volatile organic compounds of concern is occurring naturally and at the same rate as groundwater extraction. As a result, only a few of the off-property downgradient extraction wells are operating mainly to maintain hydraulic control of the plume. The RPs completed an extended pilot study to test the feasibility of enhanced reductive dechlorination (ERD) and concluded that ERD is feasible with bioaugmentation of the Shallow Zone. Within the last several years, the RPs detected on-property groundwater-CVOCs and higher than expected levels but under 1,000 parts per billion and are about to impelment an on-property treatability study. When sub-slab depressurization (SSD) systems have been installed under the potentially impacted buildings, the RPs will move forward on an in-situ treatability study. Within the last seven years however, IA VI was evaluated in several of the on-property commercial buildings to find that IA-CVOCs were over ESLs. The RPs installed SSD systems at several of the buildings. The RPs also assertively evaluated potential IA VI in the off-property commercial North Bayshore and residential Spring Street areas to conclude that IA VI is occurring in one of the off-property commercial area buildings and in several homes in the residential area. The RPs were in the process of installing a sub-slab depressurization system in the commercial building and offered the affected residents crawl space fans to address the issue.

 Case Worker: GOR
 Local Agency: SANTA CLARA COUNTY LOP
 RB Case Number: Not reported
 File Location: All Files are on GeoTracker or in the Local Agency Database
 Potential Media Affected: Soil
 Potential Contaminants of Concern: DDD / DDE / DDT, Other Insecticides / Pesticide / Fumigants / Herbicides, Arsenic, Lead
 Site History: DEH was notified on June 25, 2019 by the City of Mountain View that the project entitlement expired. Development will not move forward without going through a new entitlement process with the City. The Phase I Environmental Site Assessment dated May 15, 2015 indicates that site was previously used for agricultural purposes (orchard) and for storage of commercial construction equipment. Residual contamination may remain at the site that could pose an unacceptable risk under certain conditions such as digging, grading, or change in land use. If a property development is pursued in the future, additional assessment of residual contamination is recommended in order to determine potential contaminant exposure risk. The DEH and the appropriate planning and building department shall be notified prior to any changes in land use, grading activities, or excavation.

As the lead regulatory agency for the Site, DTSC had approved a Removal Action Workplan for the Site on October 30, 1998. It was noted in the Site Inspection Re-Assessment that implementation of the Removal Action Workplan had been significantly delayed due to the City of Mountain View's building permit process and the Site owner's funding problem for construction of the multifamily residential buildings. Based on the Site Inspection Re-Assessment it was determined the Site did not qualify for further remedial site assessment under the Comprehensive Environmental Response, Compensation, and Liability Act.

Comments: NASA entered into a VCA for AOI 11, for DTSC oversight. AOI 11 encompasses 11 underground storage tanks, which were investigated to determine if a release of hazardous substances could be determined and if remedial action would be required. Soil and groundwater around these tanks were sampled and analyzed. After the samples were analyzed, two tanks required further remedial action, Tank U14 and Tank 7. The area surrounding U14 is an undeveloped gravel lot that stretches east from the PG&E substation West N-225A to Parsons Avenue. In this area, groundwater can be found at eight feet below ground surface. Trichloroethylene (TCE) was not detected in the soil samples around Tank U14. Groundwater samples near the tank detected concentrations of TCE and dichloroethylene (DCE), above the California Maximum Contaminant Levels (MCLs) in drinking water. The

highest concentrations were found in the monitoring wells up gradient from the site, 270 micrograms per liter (ug/l) of TCE and 120 ug/l of DCE. The sampling data suggests that the source of the contamination may be the Orion Park area, under Navy investigation or the MEW plume, under the oversight of the US EPA. Tank 7 is used to store jet fuel. The current tank replaced a tank, which was leaking. Remediation of the released hydrocarbons identified as TPH-JP5, has already occurred, but a fuel spill in the area occurred in 1995. Soil and groundwater contamination was investigated in 1999, identifying that both soil and groundwater are impacted with petroleum hydrocarbon concentrations above the cleanup levels. NASA is currently developing a workplan that focuses on the source(s).

Soil samples from the Orion Park area also revealed the presence of TCE and DCE. Based on this data NASA has concluded that the TCE and DCE contamination found in the AOI 4 groundwater is from a source upgradient of the NASA property. The source could be either the Orion Park housing area or the Middlefield-Ellis-Whisman (MEW) plume. The groundwater investigation has been referred to the RWQCB.

removed. Dissolved petroleum hydrocarbons in the groundwater will be monitored quarterly until such time that four consecutive quarters of data are analyzed indicating that the TPH concentrations are below cleanup levels and stable. A source point for the TCE concentrations detected in the groundwater was not discovered during the remedial investigation phase of the project. Therefore, it is believed that the source of the TCE detected in the groundwater is from an off-site source. Groundwater TCE contamination will be investigated separately from the AOI 4 project. Petroleum hydrocarbon contaminated soils exceeding the identified remediation levels (400 mg/kg) were planned to be excavated. Excavated soil with concentrations under 1,000 mg/kg was to be bioremediated and reused. Soil exceeding 1,000 mg/kg was to be disposed of offsite. Additional soil sampling conducted in 1999 indicated that the level of petroleum hydrocarbons in the soil and groundwater were lower than originally identified; they were below or close to the established cleanup goals. The sampling was repeated and the results confirmed; the soil excavation proposed in the RAW was not implemented.

Comments: Signed VCA. DTSC is providing oversight for the AOI 5 which is not under the oversight of the U.S. EPA. The VCA outlined the oversight duties of DTSC, including additional investigations and remediation of the site. AOI 5 includes six buildings used as biosciences laboratories, the biomedical research facility and two electrical substations. AOI 5 also includes a drum storage area and one underground storage tank that were previously located within the site boundaries. The drum storage area was closed in the middle 1980s and the tank was removed in 1990. Analyses of soil and groundwater samples detected petroleum hydrocarbons, PCBs, and VOCs. Investigations conducted in 1998 and 1999 indicated two separate groundwater plumes. The western plume contains PCE up to 72 micrograms per liter (ug/l). The eastern plume contains primarily TCE up to 80 ug/l. NASA is currently evaluating some in-situ remedial methods as an alternative to pump and treat for any groundwater contamination found.

Comments: Signed VCA for AOI 8. AOI 8 is located at the northwest corner of the NASA Ames Research Center, adjacent to the wetlands and formerly known as Mavarro Farms. AOI 8 is used for recycling and storage of excess vehicles and equipment. The site contains one building, and a bioremediation pad. Soils contaminated with total petroleum hydrocarbons (TPH) as diesel and oil and grease have been identified at the site. An above ground diesel tank was formerly located on the site and spilled 100 gallons of fuel in 1987. Soil samples detected TPH-diesel at 10,000 milligrams per kilogram (mg/kg) and TPH-oil and grease was 16,000 mg/kg. Other chemicals such as pesticides and VOCs have been detected at the site, but the concentrations have been low and not considered significant. Elevated levels of TPH concentrations in the groundwater have been detected during sampling events in the past, but have not been elevated for the past five years. Groundwater is being monitored by wells both up gradient (two wells) and down gradient (one well).

Comments: Approved RAW requiring the excavation and disposal of soil contaminated with PCBs. After excavation, concrete will be used to backfill the hole. The remedial goal for PCB contamination is 50 mg/kg, for restricted areas, in accordance with 40 CFR regulations pursuant to TSCA. For soil contaminated with petroleum, biological nutrients will be injected 2 to 4 feet into the ground to promote bioremediation. Bioremediation will continue until the petroleum concentrations are below 400 mg/kg in the soil. Access to the site is restricted and appropriate signage will be posted. Due to the need to have the substations de-energized during the remediation, the tasks of cleaning up substations N221C and N227D were divided.

Comments: The PCB and TPH contamination soil removal action at N227D Unitary Substation has been completed. Approximately 36 cubic yards of contaminated soil has been excavated and disposed of. Comments: Approved RA for the N221C area. The PCB contaminated soil was excavated to the depth of seven feet below the ground surface. Verification sampling indicated PCB concentrations were reduced to less than 1 mg/kg (0.61 mg/kg). Concrete was used to backfill the excavation. The completion of the N221C Substation remedial activities do not complete the remedial action for AOI 10 as described in the approved Final RAW (January 2001). The shut down of the N227D Substation and remediation of the total petroleum hydrocarbon (TPH) and polychlorinated biphenyls (PCBs), remain to be implemented.

Completed Date: 08/08/2005
Comments: NASA requests the change to the selected alternative to assist in the overall reduction in non-source point PCB contaminated storm runoff at the Ames Research Center. The implementation of Alternative 2 would allow NASA to forego the bioremediation technology at the N227D substation of AOI 10 and excavate the TPH contaminated soil along with the PCB contaminated soil. DTSC has determined that the request is an insignificant change and will not have a significant impact on the scope, performance, or cost of the remedy.

Comments: Signed VCA for AOI 10. AOI 10 consists of three electrical substations; N227 Unitary Substation, N238 Arc Jet Substation, and N221C substation located in the central part of the NASA Ames Research Center. The substations are fenced and access is limited to operation and maintenance personnel. There is no vehicular traffic through these areas. Concrete pads in each of the substations support transformers and other equipment. The ground surface surrounding the concrete pads is covered with two to six inches of gravel. The primary objectives of the work proposed for AOI 10 is to investigate the soil within the electrical substations for the presence of PCBs and extractable hydrocarbons (TEPHs). Transformer oil containing PCBs was historically used in many of the transformers at NASA Ames. The N227 Unitary Substation was constructed in the mid 1950s to supply power to three wind tunnels. TEPHs were detected in concentrations above cleanup levels (400 mg/kg) in areas directly east and west of one of the transformer pads. The concentrations are the highest nearest the surface and are below cleanup levels at depths of five feet below. In identifying the extent of contamination, soil samples were collected near the substation. Concentrations of TEPHs were detected as high as 1200 mg/kg and the median was 83 mg/kg. Of those samples, only one detected PCB concentrations that exceeded the residential cleanup levels (1 mg/kg) at 2.1 mg/kg. No PCBs were detected at N238 Arc Jet Substation more than 0.2 mg/kg. TEPH was detected in soil samples collected at this location from 72 mg/kg to 160 mg/kg, which are all below the cleanup level. Only trace concentrations of TEPH were detected (maximum of 6.8 mg/kg) in the area of N221C. PCBs were found in one sampling location, measuring 310 mg/kg at 1.5 feet below the ground surface (bgs) down to 7.4 mg/kg at 5.5 feet. Two additional sampling events were conducted in January and February, 2001 to further evaluate the extent of the PCBs contamination. During the February sampling event, PCB concentrations of 330 mg/kg at 3 feet and 520 mg/kg at 4 feet were detected.

Comments: During the course of site investigations of AOI4, trichloroethene (TCE) and 1,2-dichloroethene (DCE) were detected in the groundwater. No connection with an on-site source of these chemicals could be found. Further investigations on the Orion Park housing area, upgradient of A014, revealed elevated concentrations of TCE and DCE in the groundwater. Soil samples from the Orion Park area also revealed the presence of TCE and DCE. Based on this data NASA has concluded that the TCE and DCE contamination found in the A01 4 groundwater is from a source upgradient of the NASA property. The source could be either the Orion Park housing area or the Middlefield-Ellis-Whisman (MEW) plume. The groundwater investigation has been refered to the RWQCB.

Comments: Completed Removal Action. Skimming pumps were planned to be installed in two monitoring wells (one existing well and one new well) to extract free product floating on the water table. Additional sampling data conducted in 1999 indicated that there is no longer free product in the shallow aquifer near Tank 1 and Tank 5. Based on this information skimming pumps were not required and proposed new groundwater monitoring well was not installed. Both Tank 1 and 5 were removed. Dissolved petroleum hydrocarbons in the groundwater will be monitored quarterly until such time that four consecutive quarters of data are analyzed indicating that the TPH concentrations are below cleanup levels and stable. A source point for the TCE concentrations detected in the groundwater was not discovered during the remedial investigation phase of the project. Therefore, it is believed that the source of the TCE detected in the groundwater is from an off-site source. Groundwater TCE contamination will be investigated separately from the AOI 4 project. Petroleum hydrocarbon contaminated soils exceeding the identified remediation levels (400 mg/kg) were planned to be excavated. Excavated soil with concentrations under 1,000 mg/kg was to be bioremediated and reused. Soil exceeding 1,000 mg/kg was to be disposed of offsite. Additional soil sampling conducted in 1999 indicated that the level of petroleum hydrocarbons in the soil and groundwater were lower than originally identified; they were below or close to the established cleanup goals. The sampling was repeated and the results confirmed; the soil excavation proposed in the RAW was not implemented.

Comments: Approved RAW specifying the following actions: 1) removal of free product hydrocarbons from the groundwater using skimming pumps; 2) excavation and on-site bioremediation of petroleum contaminated soil; 3) off site disposal of soil not meeting cleanup levels; and 4) on-going groundwater monitoring for contaminants of concern.

Completed Date: 11/03/1995
Comments: Signed VCA for AOI 4. The VCA includes the National Full Scale Aerodynamics Complex, a large wind tunnel for testing the aerodynamic characteristics of large-scale models. Twelve underground storage tanks were originally located within AOI 4; leaking tanks were removed. Subsequent sampling events identified four primary locations, Tank 1, Tank 5, and SB4-6, located in the drum storage area. Soil and groundwater samples from these areas detected petroleum hydrocarbons and trichloroethylene (TCE).

Comments: Signed VCA. DTSC is providing oversight for the AOI 5 which is not under the oversight of the U.S. EPA. The VCA outlined the oversight duties of DTSC, including additional investigations and remediation of the site. AOI 5 includes six buildings used as biosciences laboratories, the biomedical research facility and two electrical substations. AOI 5 also includes a drum storage area and one underground storage tank that were previously located within the site boundaries. The drum storage area was closed in the middle 1980s and the tank was removed in 1990. Analyses of soil and groundwater samples detected petroleum hydrocarbons, PCBs, and VOCs. Investigations conducted in 1998 and 1999 indicated two separate groundwater plumes. The western plume contains PCE up to 72 micrograms per liter (ug/l). The eastern plume contains primarily TCE up to 80 ug/l. NASA is currently evaluating some in-situ remedial methods as an alternative to pump and treat for any groundwater contamination found.

Comments: Signed VCA for AOI 8. AOI 8 is located at the northwest corner of the NASA Ames Research Center, adjacent to the wetlands and formerly known as Mavarro Farms. AOI 8 is used for recycling and storage of excess vehicles and equipment. The site contains one building, and a bioremediation pad. Soils contaminated with total petroleum hydrocarbons (TPH) as diesel and oil and grease have been identified at the site. An above ground diesel tank was formerly located on the site and spilled 100 gallons of fuel in 1987. Soil samples detected TPH-diesel at 10,000 milligrams per kilogram (mg/kg) and TPH-oil and grease was 16,000 mg/kg. Other chemicals such as pesticides and VOCs have been detected at the site, but the concentrations have been low and not considered significant. Elevated levels of TPH concentrations in the groundwater have been detected during sampling events in the past, but have not been elevated for the past five years. Groundwater is being monitored by wells both up gradient (two wells) and down gradient (one well).

Comments: Approved RAW requiring the excavation and disposal of soil contaminated with PCBs. After excavation, concrete will be used to backfill the hole. The remedial goal for PCB contamination is 50 mg/kg, for restricted areas, in accordance with 40 CFR regulations pursuant to TSCA. For soil contaminated with petroleum, biological nutrients will be injected 2 to 4 feet into the ground to promote bioremediation. Bioremediation will continue until the petroleum concentrations are below 400 mg/kg in the soil. Access to the site is restricted and appropriate signage will be posted. Due to the need to have the substations de-energized during the remediation, the tasks of cleaning up substations N221C and N227D were divided.

Comments: Approved RA for the N221C area. The PCB contaminated soil was excavated to the depth of seven feet below the ground surface. Verification sampling indicated PCB concentrations were reduced to less than 1 mg/kg (0.61 mg/kg). Concrete was used to backfill the excavation. The completion of the N221C Substation remedial activities do not complete the remedial action for AOI 10 as described in the approved Final RAW (January 2001). The shut down of the N227D Substation and remediation of the total petroleum hydrocarbon (TPH) and polychlorinated biphenyls (PCBs), remain to be implemented.

 Comments: NASA requests the change to the selected alternative to assist in the overall reduction in non-source point PCB contaminated storm runoff at the Ames Research Center. The implementation of Alternative 2 would allow NASA to forego the bioremediation technology at the N227D substation of AOI 10 and excavate the TPH contaminated soil along with the PCB contaminated soil. DTSC has determined that the request is an insignificant change and will not have a significant impact on the scope, performance, or cost of the remedy.

 Comments: The cleanup activities for this project are confined within the fenced perimeter of two electrical substations. The contaminated soil will be excavated, disposed of off site, and backfilled. The project has no possibility of significant effect on the environment.

Completed Area Name: PROJECT WIDE
 Completed Sub Area Name: Not reported
 Completed Document Type: Standard Voluntary Agreement
 Completed Date: 04/08/1996
 Comments: Signed VCA for AOI 10. AOI 10 consists of three electrical substations; N227 Unitary Substation, N238 Arc Jet Substation, and N221C substation located in the central part of the NASA Ames Research Center. The substations are fenced and access is limited to operation and maintenance personnel. There is no vehicular traffic through these areas. Concrete pads in each of the substations support transformers and other equipment. The ground surface surrounding the concrete pads is covered with two to six inches of gravel. The primary objectives of the work proposed for AOI 10 is to investigate the soil within the electrical substations for the presence of PCBs and extractable hydrocarbons (TEPHs). Transformer oil containing PCBs

was historically used in many of the transformers at NASA Ames. The N227 Unitary Substation was constructed in the mid 1950s to supply power to three wind tunnels. TEPHs were detected in concentrations above cleanup levels (400 mg/kg) in areas directly east and west of one of the transformer pads. The concentrations are the highest nearest the surface and are below cleanup levels at depths of five feet below. In identifying the extent of contamination, soil samples were collected near the substation. Concentrations of TEPHs were detected as high as 1200 mg/kg and the median was 83 mg/kg. Of those samples, only one detected PCB concentrations that exceeded the residential cleanup levels (1 mg/kg) at 2.1 mg/kg. No PCBs were detected at N238 Arc Jet Substation more than 0.2 mg/kg. TEPH was detected in soil samples collected at this location from 72 mg/kg to 160 mg/kg, which are all below the cleanup level. Only trace concentrations of TEPH were detected (maximum of 6.8 mg/kg) in the area of N221C. PCBs were found in one sampling location, measuring 310 mg/kg at 1.5 feet below the ground surface (bgs) down to 7.4 mg/kg at 5.5 feet. Two additional sampling events were conducted in January and February, 2001 to further evaluate the extent of the PCBs contamination. During the February sampling event, PCB concentrations of 330 mg/kg at 3 feet and 520 mg/kg at 4 feet were detected.

Comments: NASA entered into a VCA for AOI 11, for DTSC oversight. AOI 11 encompasses 11 underground storage tanks, which were investigated to determine if a release of hazardous substances could be determined and if remedial action would be required. Soil and groundwater around these tanks were sampled and analyzed. After the samples were analyzed, two tanks required further remedial action, Tank U14 and Tank 7. The area surrounding U14 is an undeveloped gravel lot that stretches east from the PG&E substation West N-225A to Parsons Avenue. In this area, groundwater can be found at eight feet below

ground surface. Trichloroethylene (TCE) was not detected in the soil samples around Tank U14. Groundwater samples near the tank detected concentrations of TCE and dichloroethylene (DCE), above the California Maximum Contaminant Levels (MCLs) in drinking water. The highest concentrations were found in the monitoring wells up gradient from the site, 270 micrograms per liter (ug/l) of TCE and 120 ug/l of DCE. The sampling data suggests that the source of the contamination may be the Orion Park area, under Navy investigation or the MEW plume, under the oversight of the US EPA. Tank 7 is used to store jet fuel. The current tank replaced a tank, which was leaking. Remediation of the released hydrocarbons identified as TPH-JP5, has already occurred, but a fuel spill in the area occurred in 1995. Soil and groundwater contamination was investigated in 1999, identifying that both soil and groundwater are impacted with petroleum hydrocarbon concentrations above the cleanup levels. NASA is currently developing a workplan that focuses on the source(s).

Comments: Site characterization completed. VOC groundwater contamination was determined to be from an offsite source. Remediation of the groundwater contamination will not be included as part of the Removal Action Workplan (RAW). The RAW will focus on the mitigation of residual soil VOC and TPH contamination associated with the Catch Basin. The results of the Site groundwater investigation indicates that the source(s) of the VOC groundwater contamination is from off-site and conveyed through the utility corridor.

Treat To Water: Minor Threat to Water Quality. A violation of a regional board order should cause a relatively minor impairment of beneficial uses compared to a major or minor threat. Not: All nurds without a TTWQ will be considered a minor threat to water quality unless coded at a higher Level. A Zero (0) may be used to code those NURDS that are found to represent no threat to water quality.
Complexity: Category C - Facilities having no waste treatment systems, such as cooling water dischargers or those who must comply through best management practices, facilities with passive waste treatment and disposal systems, such as septic systems with subsurface disposal, or dischargers having waste storage systems with land disposal such as dairy waste ponds.

Eval Type: Routine done by local agency
Eval Notes: On-site to conduct a routine hazardous waste inspection. The facility specializes in gold and electroless nickel plating for small to medium sized metal products made of aluminum, copper, stainless steel, and other metals. Wastes generated include waste plating solutions, waste rinse baths and spray rinse water (e.g. wet floors), filter cake from hazardous waste treatment unit, solvent-contaminated wipes, contaminated personal protective equipment, and universal wastes from general building maintenance and upkeep. Metal plating solutions, filter cake, and waste hydrofluoric acid are collected and managed as hazardous waste. Rinse water baths are re-used until spent and then treated on-site. Spray rinses directed over the plating baths to minimize waste generation are also used. Plating Area: Main plating area consists of two rooms with grated wet floors. Wet floors are designed to drain to their designated lift station (one for cyanide rinse water, one for G heavy metalG [Truncated])

Eval Notes: Unit 1 of three fixed treatment units on-site and identified as HM001 via CERS. Non-cyanide containing rinse waters, referred to as G heavy metal rinse watersG that are hazardous for corrosivity and metal concentration, are generated from the rinse tanks and non-cyanide wet floor drainage. Rinse water gravity flows through its own piping run (that shares a trench with the secondarily-containing CN rinse water pipe) to a designated sump that continuously pumps the heavy metal rinsewater to the equalization tank. The equalization tank is a poly tank with integral secondary containment that is fitted with an overflow alarm and, per Mr. Walker, a leak detection sensor in the interstitial space of the tank. Heavy metal rinse water is continuously pumped to the G AcidG and then the G pH ControlG tanks where the rinsewaters are pH adjusted with caustic soda, polymer is added as a flocculant, and ferrous sulfate is added as a precipitant. The caustic soda, polymer, and ferrous [Truncated]

Eval Notes: Unit 3 of three fixed treatment units on-site and identified as HM003 via CERS. Unit 3 is used to batch treat waste acid and alkaline cleaners, including nitric acid, Tech SC, Tech Etch, Desmuitt B10, Bright Dip, and Bright Dip rinse. The waste acid and alkaline cleaners are stored in one of the twelve 55 gallon Nalgene containers in the bermed container containment pad. Per facility staff, the acid and alkaline cleaners are stored for anywhere between one week and three months before being pH neutralized and the metals allowed to precipitate out of solution. The sludge is stored in a metal holding tank where it gravitationally separates from the liquid fraction.

Eval Notes: Inspection today was to discuss changes to facility with management team from Hammon and to observe noted changes to the layout of the facility regarding the location of batch treatment of cyanide bearing zincate rinses. Onsite with Michelle Santos, HMSII and Max Potter, City of Palo Alto Public Works. Observed change to process of treating zincate cyanide rinses. Wastes no longer treated in tank within the electroless nickel room, but now transferred to a series of nalgene containers on the building's exterior. Process as described by site personnel is that zincate rinses are moved daily to the "old" batch treat tank. From there, waters are moved as needed to nalgene drums in the bermed covered area exterior the building. Bleach is added, and solution is stirred with approximatley 8 hour retention time. Site then uses a colorimetric indicator vial to measure the bleach content of the solution, under the assumption that if excess bleach is noted, all cyanide will be [Truncated]

Eval Notes: Limited inspection in response to items noted in 8/25/15 NOI which were not noted as corrected as of date of inspection as well as POTW referral. On February 1, Palo Alto Regional Water Quality Control Senior Industrial Waste Inspector James Stuart shared information obtained through sampling showing that cyanide was being found commingled with acidic nickel containing wastestreams. Data provided by Mr. Stuart showed the presence of cyanide in the the plating area transfer sump as well as in the first stage of the treatment system AFTER cyanide treatment. On Feb 2, I met with Hammon Plating to discuss the possible sources of contamination. Hamman has undertaken the following potential remedies: -Replacement of cyanide management area containment pan piping to larger piping to better facilitate removal of standing liquids and prevent overflow and spill to non-cyanide areas. -Isolation and repair of piping from containment sump trench to lift stations. Eval Notes: Inspection to discuss changes to facility with management team of Hammon Plating. Inspector was made aware of changes to configuration and placement of cyanide batch treatment tank. Visited site on Thursday, April 14 for confirmation and photograph. Tank has been moved from its longstanding location within the building to a containment area outside. Tank is now placed on top of shallow containment structure within a bermed area. Bermed area also holds up to 10x70 gallon nalgene containers used for the neutralization of strong acid and caustic solutions. Two nalgene containers share a single shallow containment structure within the berm. In order for authorization to treat (1) Cyanide bearing wastes and/or (2) concentrated acid solutions, the bermed areas must first be segregated. - Title 22, CCR, section 66265.193(e)(1)(A) requires an "external liner system" to be able to contain 100% of the capacity of the largest tank within its boundary IN ADDITION TO THE [Truncated]

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly known as CERCLIS, renamed to SEMs by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

WDR: Waste Discharge Requirements Listing

In general, the Waste Discharge Requirements (WDRs) Program (sometimes also referred to as the "Non Chapter 15 (Non 15) Program") regulates point discharges that are exempt pursuant to Subsection 20090 of Title 27 and not subject to the Federal Water Pollution Control Act. Exemptions from Title 27 may be granted for nine categories of discharges (e.g., sewage, wastewater, etc.) that meet, and continue to meet, the preconditions listed for each specific exemption. The scope of the WDRs Program also includes the discharge of wastes classified as inert, pursuant to section 20230 of Title 27.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: Also known as Superfund, the National Priority List database is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund program. The source of this database is the U.S. EPA.

A review of the NPL list, as provided by EDR, and dated 10/20/2021 has revealed that there are 4 NPL sites within approximately 1 mile of the target property.

EXECUTIVE SUMMARY

Lists of Federal sites subject to CERCLA removals and CERCLA orders

SEMS: SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the SEMS list, as provided by EDR, and dated 10/20/2021 has revealed that there is 1 SEMS site within approximately 0.5 miles of the target property.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be potential NPL site.

A review of the SEMS-ARCHIVE list, as provided by EDR, and dated 10/20/2021 has revealed that there are 4 SEMS-ARCHIVE sites within approximately 0.5 miles of the target property.

CA ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the CA ENVIROSTOR list, as provided by EDR, and dated 07/22/2021 has revealed that there are 10 CA ENVIROSTOR sites within approximately 1 mile of the target property.

Summary Details:

Conditions at proposal April 10, 1985): Moffett Naval Air Station covers 8,700 acres in Sunnyvale, Santa Clara County, California. In the past, various solvents and sludges were disposed on-site into ponds and landfills and onto the ground. As a result, soil and ground water on-site are contaminated. The major contaminants in ground water are volatile organic compounds. About 272,000 people depend on wells within 3 miles of the station as a source of drinking water. Moffett Naval Air Station is participating in the Installation Restoration Program (IRP), established in 1978. Under this program, the Department of Defense seeks to identify, investigate, and clean up contamination from hazardous materials. The Navy has completed Phase I (records search) of the program and is beginning Phase II (remedial investigation). Moffett Naval Air Station is in the South Bay Area of San Francisco. In October 1984, 19 non-Federal sites in the area were proposed for the NPL. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take site-specific action as necessary. Status July 22, 1987): In May 1985, the California Regional Water Quality Control Board adopted Waste Discharge Requirements for Moffett Naval Air Station. The requirements outline specific tasks and compliance dates Moffett must follow to define the full extent of contamination in soils and ground water. In April 1986, the Navy released the final report for the verification step of Phase II. Moffett is revising the quality assurance project plan and sample plan for the characterization step of Phase II. Within the boundaries of this Federal facility, including this specific site, there are no areas subject to the Subtitle C corrective action authorities of the Resource Conservation and Recovery Act. Therefore, this Federal facility site is being placed on the Federal section of the NPL.

Summary Details:

Conditions at proposal October 15, 1984): Teledyne Semiconductor has manufactured semiconductors on a 1-acre site in Mountain View, Santa Clara County, California, since 1962. In December 1982, Teledyne reported to the California Regional Water Quality Control Board (CRWQCB) that soil and ground water near an underground storage tank were contaminated with solvents, including trichloroethylene. An investigation in June 1984 revealed that the contaminants had migrated to the north and affected approximately 50 private domestic wells. Local agencies and the company have provided alternative sources of drinking water for the affected residences. About 116,000 people depend on wells within 3 miles of the site as a source of drinking water. The company is working with CRWQCB to determine the extent of the contamination and to develop interim hydraulic controls to prevent further migration of the contaminants. The facility received Interim Status under Subtitle C of the Resource Conservation and Recovery Act (RCRA) when the company filed Part A of a permit application. This is one of 19 sites in the South Bay Area of San Francisco. Facilities at these sites have used a variety of toxic chemicals, primarily chlorinated organic solvents, which

contaminate a common ground water basin. Although these sites are listed separately, EPA intends to apply an area-wide approach to the problem as well as take specific action as necessary. Status February 1986): CRWQCB, in conjunction with EPA and the California Department of Health Services, is considering various response actions at the site. This site remains in proposed status until EPA implements the appropriate elements of its final policy for placing RCRA-related sites on the NPL and then applies the policy to this site. Status July 22, 1987): Subsequent investigation revealed that this site is not subject to the Subtitle C permitting requirements of RCRA. Its score on the Hazard Ranking System, which EPA uses to evaluate sites for the NPL, is above the cutoff point of 28.50, and EPA received no information that prevents placing the site on the NPL. Therefore, it is being placed on the NPL. Teledyne is planning on pumping the contaminated ground water in the upper aquifer to the surface for subsequent treatment.
